kings had initiated a rebellion; but he brought their sons as hostages to Samaria and Jerusalem. All the latter turned from idolaters into worshipers of the God of Israel (Tanna debe Eliyahu, i. 9). Each of his seventy sons had an ivory palace built for him. Since, however, it was Ahab's idolatrous wife who was the chief instigator of his crimes (B. M. 59*a*), some of the ancient teachers gave him the same position in the world to come as a sinner who had repented (Sanh. 104*b*, Num. R. xiv). Like Manasseh, he was made a type of repentance (I Kings, xxi. 29). Accordingly, he is described as undergoing fasts and penances for a long time; praying thrice a day to God for forgiveness, until his prayer was heard (Pirḳe R. El. xliii). Hence, the name of Ahab in the list of wicked kings was changed to Ahaz (Yer. Sanh. x. 28*b*; Tanna debe Eliyahu Rabba ix, Zuṭṭa xxiv.). K.

AHAB, SON OF KOLAIAH.—Biblical Data: One of the first captives deported by Nebuchadnezzar to Babylonia. As a false prophet he incurred the displeasure of Jeremiah, who wrote to the exiles denouncing him. He was to be "roasted in the fire" (Jer. xxix. 21, 22) by Nebuchadnezzar, perhaps for inciting the people to revolt. J. F. McC.

——**In Rabbinical Literature:** According to rabbinical tradition (Sanh. 93*a*; Tan., Lev. ed. Buber, p. 7; Pirḳe R. El. xxxiii.; Pesiḳ. 25), the false prophet who together with Zedekiah, son of Maaseyah, wanted to lure Semiramis, the wife (or the daughter) of King Nebuchadnezzar, to sin under the pretext that she would become the mother of great kings and prophets hostile to Israel. Consequently Ahab and Zedekiah were cast by the king into the furnace and "roasted alive." See Brüll's "Jahrb." iii. 9, *s.v.* "Susanna." K.

AHABAH RABBAH (אהבה רבה, "Great Love") and **AHABAT 'OLAM** (אהבת עולם, "Everlasting Love"): The initial words, and hence the names, of the two benedictions that precede the SHEMA'; the former used in the morning service of the German ritual, the latter in the evening service of both rituals and in the morning service of the Sephardic. The difference in the formulas goes back to the time when Rab and Samuel arranged (not composed, as is often erroneously stated) the prayers for the Babylonian schools; for we find Samuel insisting on that of Ahabah Rabbah, against the general tannaitic tradition, which favored the Ahabat 'Olam formula, claiming that the Ahabah Rabbah was the prayer recited by the priests in the Temple at the morning service after the leader's call, ברכו, and before the decalogue and the Shema' (Ber. 11*b*, Mid. v. 1). According to Tos. Ber. 11*b*, Ahabah Rabbah was the formula adopted for the morning service, Ahabat 'Olam for the evening. Thus it is also found in the Siddur of Amram Gaon; but the Maḥzor Vitry, following the Sephardic ritual and the Geonim, has Ahabat 'Olam also for the morning. The phraseology of the latter seemed preferable, it being more in accord with the Biblical verse (Jer. xxxi. 3), as pointed out in Ber. 11*b*; still, to distinguish the evening from the morning prayer, the German ritual adhered to Ahabah Rabbah. The benediction itself, like Yoẓer Or, the one that precedes it, is very old and probably dates from the time of the institution of the Shema' by the founders of the Synagogue (the men of the Great Synagogue), Yoẓer Or being the thanksgiving for the light of the day, Ahabah Rabbah the thanksgiving for the special love of God for Israel, manifested in the light of Revelation (Torah). Asher of Lunel, quoted by "Kol Bo," viii., and by Abudraham, says: "The sun gives light only in the daytime, the Torah by day and by night; as Ps. xix. praises God first for the sun and then for the Torah which enlightens the mind, so should we also give praise in these two benedictions." Compare Philo, "De Vita Contemplativa" (On a Contemplative Life), ed. Mangey, ii. 475:

> "They [the Therapeutæ] are accustomed to pray twice every day: at morning, when the sun rises, they pray to God for the day of true happiness, because their minds are filled with the light of heaven; and at sunset they pray that their soul, being altogether lightened and relieved of the burden of the senses and outward things, be all the more able to trace out truth in its own resort and council-chamber."

There is a strain of profound love and zeal for God and the Law echoed in the benediction, which could only emanate from souls the very keynote of whose life is love and piety, such as was that of the ancient Ḥasidim, the Essenes (Rapoport, "Bikkure ha-'Ittim," x., on Kalir, 119). But, as is the case with all the prayers, individuals and generations occasionally added a word or a sentence, and the sixty-two words which Zunz ("G. V." p. 369) claims for the original Ahabah Rabbah were increased to one hundred and two in the German, one hundred and forty-one in the Sephardic Siddur, and one hundred and forty-two in the Maḥzor Vitry. A Genizah fragment from Cairo (Egypt), reproduced here, contains the Ahabah Rabbah version, which has some German and some Sephardic features, and aggregates one hundred and seventeen words. The following is a translation of the main benediction, the later interpolations being omitted:

MORNING BENEDICTION: "With abounding [Sephardic ritual: "with everlasting"] love, hast Thou loved us, O Lord our God [Jer. xxxi. 3]. With great and exceeding compassion hast Thou taken compassion on us [compare Isa. lxiii. 9]. Our Father, our King, for the sake of our fathers who trusted in Thee and whom Thou taughtest the statutes of life, be gracious unto us, and be Thou also our teacher. Enlighten our eyes in Thy law, and make our hearts cleave to Thy commandments; render our hearts one that we may love and fear Thy name, and not be ashamed. For in Thy holy name we trust; we rejoice and exult in Thy salvation. For Thou art the God who worketh salvation, and Thou hast chosen us from all peoples and tongues and brought us nigh unto Thy great name (Selah) in truth, that we give praise unto Thee and proclaim Thy unity in love. Blessed art Thou, O Lord, who hast chosen Thy people Israel in love" [compare the high priest's benediction, Yoma, vii. 1, Rashi and Asheri].

EVENING BENEDICTION [probably of later origin, as shown by the difference in style, and lack of rhythm]: "With everlasting love hast Thou loved the house of Israel Thy people; the Law and the Commandments, the statutes and ordinances hast Thou taught us. Therefore, O Lord our God, when we lie down and when we rise up, we will meditate on Thy statutes and rejoice in the words of Thy law and in Thy commandments forever. For they are our life and the length of our days; and on them we shall meditate day and night. Let not, therefore, Thy love ever fail us. Blessed art Thou, O Lord, who lovest Thy people Israel."

K.

AHABAH (AHAWAH, AḤA, AḤWA) B. ZEIRA (ZERA): Palestinian amora of the fourth century, who taught at Cæsarea (Yer. Ḥal. i. 57*a*; Yer. Pes. ii. 29*b*), son of R. Zeira (Zera) I. His fame as a halakist spread beyond his native land, even reaching Babylonia, and sages consulted him on the ritual. Inquiries concerning his father's decisions were made of him (Yer. Ber. 3*d*), and even during his father's lifetime Ahaba transmitted the paternal Halakot to his colleagues ('Er. 96*b*, R. H. 30*b*). He is also favorably known in midrashic literature. Commenting on Ps. xxviii. 3, he points out a characteristic difference between Joseph's brothers and Absalom. He remarks that the good qualities of the sons of Israel may be gathered from the mention of their faults. Thus, it is said of them (Gen. xxxvii. 4), "And they hated him [Joseph], and could not speak peaceably unto him," which shows that what they felt in their hearts they expressed with their mouths. Of

Absalom, however, it is said (II Sam. xiii. 22), "Absalom spoke to Amnon neither good nor bad," hiding his feelings in his heart (Midr. Teh. xxviii.; Gen. R. lxxxiv.; Yalḳ., Gen. § 141). On Solomon's comparison of his beloved to the apple-tree (Song Sol. ii. 3) he remarks: "as the apple-tree sends forth its buds before the appearance of its leaves, so Israel expressed faith before hearing the purport of the divine message. Thus it is written (Ex. iv. 31), 'And the people believed and heard.' Also at Sinai (Ex. xxiv. 7), they promised first to do all the Lord should command and then to hearken to His voice" (Cant. R. ii. 3). Other homiletic remarks of his occur in Yer. Ber. v. 8*d*; Gen. R. lxxxiv; Lam. R. ii. 17; Eccl. R. iii. 11, ix. 11.

S. M.

AḤADBOI: Babylonian amora of the sixth and seventh generations. He was president of the academy of Sura in its declining days, but filled the office for only six months. His death was then caused by an earthquake on the Day of Atonement in the year 822 of the Seleucidan era = 511. The name is a contraction of Aḥa de-Abba or De-Abboi ("Father's Brother") and corresponds with Ahab of the Bible.

S. M.

AḤADBOI B. AMMI: Babylonian amora of the fourth generation (fourth and fifth centuries), a disciple of Rab Ḥisda and Rab Sheshet (Pes. 75*a*; B. M. 91*a*; Sanh. 55*a*; Bek. 39*a*; Niddah, 37*b*). While the latter was discussing some intricate point of ritual, Aḥadboi, by facetious remarks, confused his teacher. The teacher felt grieved, and the disciple suddenly lost his power of speech. This was considered as a visitation from heaven for putting his master to shame. Thereupon Aḥadboi's mother, who had been Rab Sheshet's nurse, appealed, on behalf of her afflicted son, to her former foster-child to pardon the indiscretion of his pupil and pray for his recovery. At first Rab Sheshet refused her petition; but after she had pointed to her breasts, which formerly nourished him, and entreated him to be merciful on their account, he complied, and soon afterward Aḥadboi recovered his speech. His colleagues then stigmatized Aḥadboi as "the babe that confounded his mother's ways" (B. B. 9*b*; see Tos. *ad loc.* According to Rashi it was Rab Sheshet's own mother who interceded in behalf of Aḥadboi). Aḥadboi reports in R. Eleazar's name an observation calculated to encourage beneficence toward the poor. Quoting the prophet's metaphor (Isa. lix. 17), "He put on righteousness [*ẓedaḳah*—used in later Hebrew for "charity"] as a breastplate," he says: "That coat is composite in its nature; scale being joined to scale till the armor is completed. Similarly, with regard to ẓedaḳah, farthing is added to farthing; and ultimately there is a large amount to the giver's credit in heaven's register" (B. B. 9*b*). S. M.

AḤADBOI B. MATNAH: Babylonian amora of the fourth generation, and contemporary of Raba b. Joseph (Shab. 24*a*, 60*b*). His sister, being ill, willed her belongings to a brother, Rab Tobi, it being customary to give a learned heir the preference over one unlearned. Aḥadboi represented to her that the world would say, "That one is a learned man; this one [himself] is not!" So the sister altered the will in his favor. The story ends with the statement that a lawsuit followed, and Rab Naḥman decided that as the testatrix, in the event of her recovery, would have had the right to annul her will, she had also the right to change it during her illness; hence, Aḥadboi was declared the legitimate heir (B. B. 151*a*). S. M.

AḤAI: An appellation given to several rabbis who ordinarily bear the prænomen Aḥa, under which name they are grouped; while others better known by the name of אחי (or אחאי) are as follows: **1.** A Palestinian amora of the third century, contemporary of R. Ammi and R. Assi. He was judge of a divorce court (Giṭ. 5*b*). **2.** A distinguished Babylonian teacher who flourished during the closing days of the amoraic period and at the beginning of the saboraic epoch. During his time the compilation and editing of the Babylonian Talmud, begun by Rab Ashi, gradually neared completion. His fame was not confined to his birthplace, Be-Ḥatim, or to his native country; for even in Palestine he was recognized as a great authority. Thus when the substance of a ritualistic controversy between him and Samuel b. Abbahu was submitted to a Palestinian academy for final adjudication, the rabbis decided in favor of the latter's opinion; but they added the significant warning, "Be careful of the views of R. Aḥai, for he is the light of the diaspora" (Ḥul. 59*b*). So, while but few of the sayings and teachings of his contemporaries are quoted in the Talmud, not less than ten distinct opinions of Rab Aḥai are incorporated in its pages (Yeb. 24*a*, 46*a*; Ket. 2*b*, 10*a*, 47*a*; Ḳid. 13*a*; Shebu. 41*b*; Zeb. 102*b*; Ḥul. 65*b*; Bek. 5*a*, 6*a*; Niddah, 33*a*). Rab Aḥai died in 506 ("Letter of Sherira"; Grätz, "Gesch. d. Juden," 1st ed., iv. 473). Brüll, "Jahrb." ii. 25 *et seq.*, identifies him with Rab Aḥai b. Ḥanilai; but the great majority of ancient and modern rabbinical chronicles identify him with Rab Aḥai b. Huna. S. M.

AḤAI B. JOSIAH: Tanna of the fourth and fifth generations (second century). His father, Josiah, was probably the well-known tanna R. Josiah, a pupil of R. Ishmael. The following legend, intended to demonstrate the consciousness of the dead, and citing a conversation between an amora of the fourth century and Aḥai's ghost, incidentally points out the place of Aḥai's sepulcher:

> Grave-robbers engaged in digging in soil belonging to Rab Naḥman suddenly heard a groan issuing from the ground. They hastened to report this to R. Naḥman ben Isaac [see MS. M. in "Diḳduḳe Soferim," *ad loc.*], who immediately repaired to the scene. The following dialogue tells the rest: *Naḥman*: Who art thou, sir? *Ghost*: I am Aḥai ben Josiah. *N.* Did not Rab Mari declare that the bodies of the pious dead returned to dust? *Gh.* Who is Mari? I know him not. *N.* Well, then, it is written in the Bible [Eccl. xii. 7]: The dust shall return to the earth as it was. *Gh.* Evidently he who hath taught thee the Book of Ecclesiastes did not teach thee the Book of Proverbs. There it is stated [xiv. 30]: Envy is rottenness of the bones. Whoever cherishes envy in his breast, his bones will become rotten; but he who doth not nourish envy in his breast, his bones shall not rot. [Here Naḥman touched the ghost, and finding it substantial, addressed it]: Arise, my master! and come into my house. *Gh.* Thou betrayest thy ignorance even of the Books of the Prophets; for there it is said [Ezek. xxxvii. 13]: Ye shall know that I am the Lord, when I have opened your graves, O my people, and brought you out of your graves. Until then the dead can not rise. *N.* But is it not written [Gen. iii. 19]: Dust thou art and unto dust shalt thou return? *Gh.* That will come to pass shortly before the Resurrection [Shab. 152*b*].

Now, as Naḥman ben Isaac (compare "Diḳduḳe Soferim" to *l.c.*) was a Babylonian, and his land lay in Babylonia, Aḥai's body, resting in Naḥman's ground, was also in Babylonia. Moreover, there is other evidence of Aḥai's having been in Babylonia during the course of his life. Judah I. states that there were some fishermen who violated the Sabbath by plying their trade on that day; and that Aḥai b. Josiah, observing this, excommunicated them. This happened in Birta de-Saṭia, in Babylonia (Ḳid. 72*a*). Further, we are informed that he had some personal property in Babylonia, while he himself was in Palestine; for the Talmud relates: R. Aḥai b. Josiah owned a vessel of silver which was in Nehardea. He commissioned Dositai ben Jannai and Jose ben Kippar to reclaim it and, on their return to Palestine, to bring it to him (Giṭ. 14*a*). From all these data it is evident that Aḥai ben Josiah was buried in Babylonia, where he had spent his last days; that he had been in that country before the death of Judah I., and that he had some personal property in Babylonia, even while he himself was in Palestine. There is, in fact, little doubt that Aḥai spent his riper years on Babylonian soil and with Babylonian scholars. This accounts for the failure to find him mentioned in the Palestinian Talmud or the Palestinian Midrashim; while he is referred to in the Babylonian Talmud and in the halakic Midrashim compiled by the disciples of Rab (Be-Rab) in Babylonia ('Er. 13*a*, Giṭ. 45*a*, Mek. Bo, 3—twice; *ibid.* Baḥodesh, § 7; compare *ibid.* Ki Tissa; Sifre, Num. 106, 126).

As an ethical teacher, Aḥai tried to impress the strictest morality on the people. "Whoever eyes woman will eventually fall into sin; and whoever watches her step will rear unworthy children" (Ned. 20*a*). On domestic economy he observed:

"Whoso purchases breadstuff in the market is like the infant whose mother is dead, and who is therefore carried from door to door to suckle at strangers' breasts, never getting its fill. Whoso purchases bread in the market is like one interred. But whoso eats of his own store is like the child raised on its own mother's breasts." He also remarked, "As long as a man supports himself he enjoys peace of mind; but when he is dependent, even on his own parents or on his own children, he has no peace of mind: still less so when he depends on strangers" (Ab. R. N. xxxi. [ed. Schechter, xxx.]; compare Men. 103*b*, Yer. Sheḳ. iii. 51*a*, and parallels).

AHARAH. See Ahiram.

AḤARONIM (אחרונים "The Later Ones"): A technical term used in later rabbinical literature generally to indicate authorities who are contemporaries of the person quoting them or who belong to the generation immediately preceding him. It is especially applied to the rabbinical authors following the age of the "Shulḥan 'Aruk"—the end of the sixteenth century.

The religious mind is prone to accept the testimony of the past, and remoteness in time adds weight to an authority. Even in the time of Ecclesiastes there were people who believed "that the former days were better than these" (Eccl. vii. 10). In the Talmudic literature we rarely find an attempt to set aside the authority of former teachers. For example, none of the Amoraim is permitted to contradict the words of the Tannaim. It is said that Rab's words may contradict a Mishnah because he is a tanna (Ket. 8*a*). As a rule, it is taken for granted that past generations were superior to the present. The following from the Talmud may serve to illustrate this:

Says Rabbi Zeira in the name of Raba bar Zimona: "If our ancestors [ראשנים] were angels, we are human beings; and if they were human beings, we are asses" (Shab. 112*b*). Says Rabbi Johanan: "The finger nail of the ancestors is better than the whole body of the descendants." Said Resh Laḳish to him: "On the contrary, the descendants are greater; for, in spite of their oppression, they study the Law." Said he (Johanan) to Resh Laḳish: "The Temple will decide the question; for it was restored to the ancestors and not to the descendants" (Yoma, 9*b*). Says Rab Papa to Abaye: "Why were miracles done to the ancestors [ראשנים] and not to us?" Said Abaye: "The ancestors sacrificed their lives for the sanctification of the Name [the service of God], and we do not" (Ber. 20*a*).

With reference to the Mishnah (Mid. i. 2), which speaks of the heavy punishment meted out to the guards of the Temple who were found sleeping while on duty, Johanan says: "Blessed are our ancestors [ראשנים], who were punished even for succumbing to sleep" (Tamid, 28*a*). From all these passages it is apparent that even in Talmudic times the ancient authorities were considered superior in religious conduct to those of later generations.

This belief in the authority of the past, and, consequently, the lack of confidence in the present age and its immediate predecessors, are strongly upheld in the age of the Geonim and by the more strict observers down to our own era. Sherira Gaon, in the tenth century, says: "One who opposes a single word of the teachings of the Talmud is like one opposing God and His Law; for the words of the rabbis are the words of the living God" ("Sha'are Ẓedeḳ," introduction; see Weiss, "Dor," iv. 166). In the twelfth century R. Tam writes to R. Samson of Sens, who objected to a passage in Rashi's works: "God forbid that one should think for a moment of opposing the angel of our Creator" ("Sefer ha-Yashar," quoted by Azulai in "Shem ha-Gedolim" under "Samson of Sens"). Israel Isserlein of Marburg in the fifteenth century says: "No one has a right to contradict the rabbinical works that have been accepted by the majority of Israel" ("Terumat ha-Deshen," Pes. No. 241). Similar expressions of a strict belief in the authority of the past, on the ground that past ages were always superior to all succeeding generations, are found in rabbinical literature.*

A typical expression of the deference shown to the earlier authorities is found in a letter of Aaron Samuel Kaidanower (seventeenth century) to Samuel ha-Levi of Bamberg. He writes:

"You have given attention to the later authorities, David ha-Levi of Ostrog [died 1667] and Shabbethai Cohen [died about 1662]. This is not my method. My studies are limited—thank God!—to the Talmud and older authorities [פוסקים הראשנים]. And why should we nibble at the bones of the later authors when we can feast on the meat upon the golden table of the Talmud, Alfasi, Maimonides, Asher, the nails on which everything hangs [see Isa. xxii. 23]; for the later writers [אחרנים] confuse man's mind and memory. The good which is found in their works comes from our teacher, Rabbi Hoeschl of Cracow [died 1663]; and in that which is their own I can show any number of mistakes on every page. You would therefore do better to sell their books and buy an edition of the 'Tur' with Joseph Caro's commentary" ("Naḥalat Shib'ah," No. 50; Fünn, "Ḳiryah Neemanah," p. 81; Dembitzer, "Kelilat Yofi," p. 62*a*, Cracow, 1880).

The absence of a dictionary covering the post-Talmudic Hebrew and rabbinical literature renders it impossible to trace the usage of the word "Aḥaronim" in the sense in which it is now understood; but the only exception which can be found is in the work on Talmudic methodology, "Halikot Eli," by

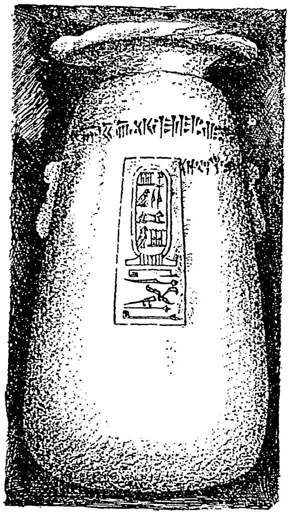
---

Warsaw, 1881, § 112, p. 177*b*, who attacks Jacob ben Asher for his criticism of Solomon ben Adret, "to whom all the paths of heaven were known"; Menahem Mendel Krochmal (died 1661), "Ẓemaḥ Ẓedeḳ," No. 6; Lipmann Heller (1577-1654), in his commentary on the Mishnah 'Eduy. v. 1, who says: "Every religious authority is, as a matter of course [מן הסתם], superior to the succeeding generations": Menahem di Lonzano (died 1620), in his preface to "Derek ha-Ḥayyim," quoted by David Pardo in the preface to "Mizmor le-David" (Leghorn, 1818), and by Solomon Ḥazan in "Ha-Ma'alot li-Shelomoh" (Alexandria, 1894), p. 64*a*; Azulai, "Shem ha-Gedolim," under "Moses ben Naḥman"; Israel Landau, in the "'Aruk," edited by his son, M. I. Landau, under the title, "Rabbinisch-Aramäisch-Deutsches Wörterbuch" (Prague, 1835), ii. 206; Moses Sofer (1762-1839), in his responsa on "Eben ha-'Ezer," ii. 156; Lubetzki, rabbi in Paris, in his "Bidḳe Batim" (Paris, 1896), p. 44*b*; Eliezer Papo, in his dictionary of religious ethics, "Pele Yo'eẓ," under "Epiḳoros."

Solomon Algazi (No. 206, Smyrna, 1663), where, according to Isaac Lampronti's Talmudic dictionary, "Paḥad Yiẓḥaḳ," under "Aḥaronim," the word is used with reference to the Tosafists. On the question of the relative value of the Aḥaronim in the Halakah, which differs somewhat from the mere deference shown to the Rishonim, see notes to Samuel ha-Nagid's "Mebo ha-Talmud," and Authority.

D.

AHASUERUS.—Biblical Data: 1. Persian king, identical with Xerxes (486–465 B.C.). The Book of Esther deals only with one period of his reign. It tells us that he ruled over one hundred and twenty-seven provinces—"from India, even unto Ethiopia" (Esth. i. 1). In the third year of his reign he made a feast to show his riches and splendor; "the power of Persia and Media, the nobles and princes of the provinces, being before him" (*ibid.* i. 3). After this feast, which lasted one hundred and eighty days, he made another of seven days, to which "all the people . . . great and small" were invited. At the same time Vashti the queen gave a banquet to the women (i. 9). On the seventh day (i. 10) Ahasuerus summoned the queen to appear before him, and the banqueters, too, so that all might see her beauty. This Vashti naturally refused to do (i. 12); but the king, angered at her disobedience, took the advice of his counselors and set the queen aside. At the same time he sent proclamations throughout the land, declaring the husband the ruler in every household (i. 22). Between the events of the first chapter and those of the second some years may be supposed to intervene, during which Ahasuerus is busy with his attempt at enslaving Greece. He fails, and returns to Persia. On his return a second consort is found for him, and in the tenth month of the seventh year of his reign (ii. 16) Esther becomes queen. The Biblical account then introduces what must have been a very common episode in the life of Persian monarchs. Two eunuchs, Bigthan and Teresh (Persian, Bagatana and Tiris; Jules Oppert, "Commentaire Historique et Philologique du Livre d'Esther," p. 22), form a conspiracy against Ahasuerus, which might have succeeded, had not Mordecai (through a Jewish slave of one of the conspirators, suggests Josephus, "Ant." xi. 6, § 4; but through Mordecai's knowledge of seventy languages, suggests the Targum) discovered it to Esther, who in turn told Ahasuerus. The conspirators are hanged, and the account of the conspiracy and its discovery entered in the chronicles. Later on the king rewards Mordecai for his fidelity (Esth. vi. 2–12). Haman now comes to the front as the chief adviser of Ahasuerus (iii. 1). Mordecai will not do reverence to Haman, who thereupon, scorning to lay hands on Mordecai alone, plots to destroy all the Jews throughout the kingdom. The king gives his consent (iii. 11), but withdraws it on the intercession of Esther, puts Haman to death, and raises Mordecai to the position that Haman held. Fresh proclamations are sent out ordering the Jews to defend themselves and to take vengeance on their enemies (viii. 13). No further information about Ahasuerus is given in the Bible. Only once more is he mentioned—in Ezra, iv. 6. See Esther, Haman, Mordecai, Purim.



Alabaster Vase with Name of Xerxes in Persian, Susian, Assyrian Cuneiform and Egyptian Hieroglyphics.

(From the Louvre, Paris.)

2. Father of Darius the Mede (Dan. ix. 1).

G. B. L.

——**In Rabbinical Literature:** Ahasuerus, the Persian king of the Book of Esther, being identified by the rabbis with the one mentioned in Dan. ix. 1 as father of Darius, king of Media, and with the one mentioned in Ezra, iv. 6, is counted as one of the three kings of Biblical history who ruled over the entire globe, the other two being Ahab and Nebuchadnezzar (Meg. 11*a*; Targ. Sheni on Esth. i. 2 has four, counting also Solomon among them; see Meg. 11*b*). He was wicked from the beginning to the end of his reign. Upon the slanderous report of the Samaritans he stopped the work, begun under Cyrus, of the rebuilding of the Temple (Ezra, iv. 6; Esther R. intro.). Whether he was a wise ruler or a foolish one is a matter of dispute between Rab and Samuel (Meg. 12*a*). According to R. Gamaliel II., he was simply whimsical and vacillating (*ib.* 12*b*); according to another tradition which was handed down by Abba Gorion, he was so unstable that he sacrificed his wife to his friend, and his friend to his wife (Mid. Abba Gorion i. 1), probably meaning the emperor Domitian, of whom this statement was true (compare Bacher, "Ag. Tan." i. 96 *et seq.*). In his ambition Ahasuerus wanted to sit on King Solomon's wonderful throne, described in the Midrash and the Targum to Esther, but he could not. His "showing the riches of his glorious kingdom" to his princes (Esth. i. 4) was especially sinful, as he had all the sacred vessels from the sanctuary taken out of his royal treasure-house to the banquet in order to boast of these possessions, thus committing an offense against God and the Jews. He heaped up great treasures and in his miserliness hid them. Cyrus, his successor, found them, and offered them to the Jews in order that they might rebuild the Temple therewith. These are "the treasures of darkness" promised to Cyrus in Isa. xlv. 3 (Esther R. i. 4). The restlessness of Ahasuerus on that night which decided the fate of the Jews was caused by the archangel Michael (Gabriel), who knocked him to the ground 366 times, and then brought before him a company of butchers, bakers, and butlers, to whom the king in his anger said: "You have poisoned me!" They replied: "See whether Esther and Haman, who ate and drank with you, are poisoned." When Ahasuerus found that they were well he sent for the book of the chronicles, and there learned of Mordecai's unrewarded act (Midr. Abba Gorion).

Pirḳe Rabbi Eliezer, xi., in accordance with Targ. Sheni on Esther, at the beginning, counts ten kings as rulers over the entire globe: God, Nimrod, Joseph, Solomon, Ahab, Ahasuerus, Nebuchadnezzar, and Alexander the Great; then, as the ninth, the Messiah; and last, God Himself again. It is also said there that Ahasuerus was the wealthiest of all the kings of Persia and Media; that he is mentioned in Daniel (xi. 2), where it is said: "The fourth shall be far richer than they all"; and also that he set up couches of gold and silver in the thoroughfare of his capital to show all the world his riches; all the dishes and vessels he used were of gold, while the pavement of his palace was entirely of precious stones and pearls.

K.

——**Critical View:** Despite the fact that both Josephus ("Ant." xi. 6) and the Septuagint refer to Ahasuerus as Artaxerxes, modern scholars, such as Keil ("Commentary to Esther"), Bertheau, and Ryssel ("Commentary to Esther"), Wildeboer ("Kurzer Hand-Kommentar," 1898), Sayce ("Higher Criticism and the Monuments," p. 469), and Schrader ("K. A. T." p. 375), are agreed that Xerxes and none other is meant by Ahasuerus, and this for various reasons: (1) Ahasuerus is the attempt of the Hebrew to represent the Persian Khshayarsha, the aleph being prosthetic just as it is in Aḥashdarpenim (Esth. iii. 12), where the Persian is Kschatrapawan (Wildeboer, *in loco*). The Greek represents it by Xerxes. (2) The description that Herodotus gives of the character of Xerxes corresponds to the Biblical and, later, the midrashic picture—vain, foolish, fickle, and hot-tempered. (3) The king must be a Persian; for the whole atmosphere is Persian. The court is at Shushan, and the officers are Persian. (4) Between the third and seventh years of his reign Ahasuerus is lost to view in the Biblical account; but that was just the time when Xerxes was engaged in the invasion of Greece.

There can therefore be no doubt that the monarch whose name passed among the Hebrews as Ahasuerus was the one known as Khshayārshā in the Persian inscriptions and among the Greeks as Xerxes. The Babylonian tablets spell his name Khisiarshu, Akhshiyarshu, etc. An Aramaic inscription ("C. I. S." ii. 1, 122) spells it חשיארש.

Whether there are any references to Ahasuerus in the Old Testament which are really historical is a serious question. The Ahasuerus of Dan. ix. 1, the father of Darius "of the seed of the Medes," is as unknown to history as is his son. Probably both are the confused ideas about Persian kings of a badly informed writer (see "Journal of Bibl. Lit." xvii. 71). In like manner the reference to Ahasuerus in Ezra, iv. 6 occurs where Cambyses or Darius is to be expected, if the statement is historical, and is no doubt the result of the ignorance of a late writer.

Concerning the references to Ahasuerus in the Book of Esther various opinions are entertained, and ultimate judgment depends upon the estimate of the book itself. See Esther, Book of.

AHASUERUS, THE LEGEND OF. See Wandering Jew.

AHAVA: A river—possibly a canal or branch of the Euphrates—upon the banks of which Ezra halted his expedition on its march from Babylon to Jerusalem (Ezra, viii. 15–31), to fast and to humble themselves before the Lord. From the fifteenth verse of the same chapter one might infer that Ahava was also the name of a village or town. In I Esd. viii. 41, 61, it is called Theras.

AḤAWA. See Achawa.

AHAZ, King of Judah (735–719 B.C.).—**Biblical Data:** Son of King Jotham. His reign is memorable as that in which Judah first became vassal to Assyria, and Assyrian (Babylonian) modes of worship were first introduced into the official worship at Jerusalem. The Hebrew authorities know only the form of his name given above, but the Assyrians called him Yauhazi (= Jehoahaz: "Whom YHWH has held fast"); the former name being a contraction of the latter, like Nathan for Elnathan or Jonathan. Immediately upon his accession Ahaz had to meet a combination formed by northern Israel, under Pekah, and Damascus (Syria), under Rezin. These kings apparently wished to compel him to join them in opposing the Assyrians, who were arming a force against Syria and Palestine under the great Tiglath-Pileser III. (Pul). To protect himself he called in the aid of the Assyrians. Through their interference, and as a result of their invasion and subjection of the kingdom of Damascus and of Palestine outside of Judah, Ahaz was relieved of his troublesome neighbors; but his protector henceforth claimed and held suzerainty over his kingdom. This war of invasion lasted two years (734–732 B.C.), and ended in the capture and annexation of Damascus to Assyria and of the territory of Israel north of the border of Jezreel. Ahaz in the meanwhile furnished auxiliaries to Tiglath-Pileser. This appeal to Assyria met with stern opposition from the prophet Isaiah, who counseled Ahaz to rely upon the Lord and not upon outside aid. The sequel seemed to justify the king and to condemn the prophet. Ahaz, during his whole reign, was free from troubles with which the neighboring rulers were harassed, who from time to time revolted against Assyria. Thus it was that, in 722, Samaria was taken and northern Israel wholly incorporated into the Assyrian empire. But what was externally a blessing proved to be inwardly a curse. Ahaz, who was irresolute and impressible, yielded readily to the glamour and prestige of the Assyrians in religion as well as in politics. In 732 he went to Damascus to swear homage to Tiglath-Pileser and his gods; and, taking a fancy to an altar which he saw there, he had one like it made in Jerusalem, which, with a corresponding change in ritual, he made a permanent feature of the Temple worship. Changes were also made in the arrangements and furniture of the Temple, "because of the king of Assyria" (II Kings, xvi. 18). Furthermore, Ahaz fitted up an astrological observatory with accompanying sacrifices, after the fashion of the ruling people. In other ways Ahaz lowered the character of the national worship. It is recorded that he even offered his son by fire to Moloch. His government must be considered, on the whole, disastrous to his country, especially in its religious aspects; and a large part of the reforming work of his son Hezekiah aimed at undoing the evil that Ahaz had wrought.

J. F. McC.

——**In Rabbinical Literature:** According to the rabbis, who refer to II Chron. xxviii. 19–25, Ahaz was the king who persisted in his wickedness even in the face of all the trials to which he was subjected, and would not repent (Sanh. 103*a*, Meg. 11*a*). Worse than this, he threatened Israel's religion to its very foundation, in order to destroy all hope of regeneration. He closed the schools and houses of worship so that no instruction should be possible, and the Shekinah (or Glory of God) should abandon the land. It was for this reason that Isaiah had to teach in secret (Yer. Sanh. x. 28*b*; Gen. R. xlii.), though Ahaz always humbly submitted to the prophet's rebukes—his only redeeming feature (Sanh. 104*a*).

K.

AHAZIAH, King of Judah: Son and successor of Jehoram, and grandson of Jehoshaphat. His reign, like that of his namesake of Samaria, was very brief, lasting but a year (843–842 B.C.). Shortly after his accession he went to the help of Joram, king of Israel, against the Syrians of Damascus. Being related to the kingly house of Israel through his mother Athaliah, the daughter of Jezebel and Ahab, he was fully in sympathy with it, politically and religiously. Joram, having been wounded in battle, returned to Jezreel to recuperate. Ahaziah also left the field of conflict in Gilead, and, after a visit to Jerusalem, came to Jezreel for a conference with Joram. Meanwhile the great uprising under Jehu had begun. Joram was surprised by him and slain. Ahaziah fled by way of the "house of the garden." He was overtaken by Jehu's soldiers and wounded in his chariot; but the stroke was not immediately fatal. Ahaziah escaped southward, and died on reaching Megiddo. His body was taken to Jerusalem and buried in the royal sepulcher there (II Kings, viii. 25 *et seq.*; ix. 27, 28).

Such is the account given in the Book of Kings, which is more credible and consistent than the parallel narrative in II Chron. xxii. The anarchy which followed the death of Ahaziah greatly weakened the monarchy of Judah; but it was a necessary step in the purgation of the kingdom from the taint of Baal-worship. J. F. McC.

AHAZIAH, King of Israel: Son and successor of Ahab, king of northern Israel. In his brief reign of less than two years (853–852 B.C.) he continued his father's military activity. He hoped also to increase the wealth of Israel by taking part, with Jehoshaphat, king of Judah, in the Red Sea traffic with the land of Ophir. By his close relations with Phenicia he was in a position to furnish the king of Judah with better seamen than those that had suffered shipwreck at the head of the Elamitic gulf. Jehoshaphat declined the partnership, and the enterprise appears to have been given up (I Kings, xxii. 48, 49; Hebrew text, 49, 50). The early death of Ahaziah was due to a fall from a window of an upper room of his palace in Samaria. In his sickness he sought counsel of the oracle of Baal-zebub in Ekron. For this impious and disloyal act, as it appeared to Elijah, the prophet denounced him three times and predicted his death. His readiness to resort to an alien god and his persistence in foreign cults show the traits which marked the rulers of the house of Omri, and more than neutralized their energy and political patriotism. J. F. McC.

AḤER. See Elisha ben Abuyah.

AHIAB. See Herod.

AHIAH. See Ahijah.

AHIAM: Son of Sharar the Hararite. He was one of the thirty mighty men of David (II Sam. xxiii. 33). In I Chron. xi. 35, he is called "the son of Sacar." G. B. L.

AḤIASAF: A Hebrew annual, published in Warsaw by the "Aḥiasaf" Publication Society. It was founded in 1893, and had immediate success, both literary and financial. Though an almanac in form, its chief merit rests upon the literary portion forming the bulk of the annual.

The "Aḥiasaf" is one of the agents at work in Russia aiming to bring about a revival of the ancient Hebrew tongue and to build up a modern Hebrew literature. Most of the best Hebrew writers, men like "Aḥad-ha-'Am" (A. Ginzberg), Lillienblum, Brainin, and others, are among its regular contributors. M. Ra.

AHIEZER ("Kinsman is Help"): **1.** Son of Ammishaddai, chief of the tribe of Dan in the second year after the Exodus (Num. i. 12), who brought his offering to the dedication of the Tabernacle on the tenth day (Num. vii. 66–71). **2.** Chief of the men who came to David at Ziklag (I Chron. xii. 3). G. B. L.

AHIJAH (THE PROPHET).—Biblical Data: A prophet from Shiloh, who foretold to Jeroboam that he would become king (I Kings, xi. 29). Later he prophesied the downfall of Jeroboam's house and of the kingdom of Israel (I Kings, xiv. 1–18). Beginning with the latter passage, the prophet's name is written in the Hebrew text "Ahijahu." Both narratives seem to be derived from a series of "Tales of the Prophets" by various hands. It is not clear whether, in II Chron. ix. 29, reference is made to these tales or to a later work ascribed to Ahijah. J. D. P.

——**In Rabbinical Literature:** Ahijah, the prophet of Shiloh, instigated Jeroboam's secession and predicted the downfall of his kingdom. The Midrash, basing itself on the fact that, according to II Chron. ix. 29, Ahijah is described as extremely aged in Jeroboam's time (I Kings, xiv. 4), and with no pedigree, identified him with Ahiah, son of Ahitub, the oracle-giving priest at Shiloh in King Saul's time (I Sam. xiv. 3). He is accordingly singled out by rabbinical tradition as one of the seven long-lived saints whose successive lives extend over the whole history of mankind; each having transmitted the sacred lore from his predecessor to the one succeeding him, while shielding the generations of his time by means of his piety. These saints are: (1) Adam; (2) Methuselah; (3) Shem (Tanna debe Eliyahu R. xxiv.); (4) Jacob (Gen. R. xciv.); (5) Serah, the daughter of Asher, or, as others have it, Amram, the father of Moses; (6) Ahijah of Shiloh; (7) Elijah the prophet, who lives until the coming of the Messiah (Ab. R. N. version B. xxxviii., Seder 'Olam R. i., and B. B. 121*b*). For the underlying idea, see Ḥag. 12*b*, and Yoma, 38*b*, with reference to Prov. x. 25, *Heb.*, "The righteous is the foundation of the world," and Prov. ix. 1, "Wisdom hath hewn seven pillars." According to this tradition Ahijah lived over six hundred years, having received his "wisdom" from either Amram, the father of Moses (see Amram), or from Serah, the daughter of Asher (see Serah).

If from Serah, his age was considerably less, since she was supposed to have lived for more than four hundred years, until the days of David (Yalḳ., Sam. § 152). The reason why Ahijah was regarded as having attained so unusual an age seems to be that, according to II Chron. ix. 29, the history of Solomon's reign was written by him; and that he was supposed to be identical with Ahijah the Levite, who was placed by King David in charge of the treasures of the house of God and of the treasures of the dedicated things (I Chron. xxvi. 20; see B. B. 121*b*, Rashi).

Simon ben Yoḥai is reported to have said: "The world must have thirty righteous men to serve as its pillars. I and my son are counted among these . . . and if Abraham would carry the past generations by his merit, I will carry the future generations until the advent of the Messiah. And if Abraham would not, I would count Ahijah of Shiloh with me, and we together would carry the world by our merits" (Gen. R. xxxv.; see Suk. 45*b*, in which King Jotham is given in place of Abraham and Ahijah).

That Ahijah, though one of the pillars of righteousness, should have been sent to Jeroboam with a divine message inducing him to establish his idolatrous kingdom is explained by the rabbis in the following manner: They say that he was entrapped by a ruse of Jeroboam's idolatrous friends, who circulated a document requesting Jeroboam to become king and stipulating that, if he were elected, he set up a golden calf at Dan and Beth-El. Ahijah signed this document, believing firmly that Jeroboam would not belie his trust. Herein he was mistaken in his pupil. Jeroboam had shown great wisdom and learning, and appeared to Ahijah "as pure as the new garment" he wore when Ahijah saw him coming out of Jerusalem (I Kings, xi. 29). Moreover, as he excelled all the rest of the pupils, he had been initiated by Ahijah into the innermost secrets of the Law (Sanh. 101*b* *et seq.*). Just as the words said of Isaac, "his eyes were dim, so that he could not see" (Gen. xxvii. 1), are taken to refer to spiritual blindness, because he favored his wicked son Esau, so the words, "Ahijah could not see, for his eyes were set by reason of his age" (I Kings, xiv. 4), imply spiritual blindness on the part of Ahijah, who favored a wicked pupil and set him up as ruler (Gen. R. lxv.). It was, however, only Jeroboam's son Abijah, and his friends, who, starting the rebellion against Rehoboam, followed Ahijah and called themselves "the children of Belial" (II Chron. xiii. 7), as if Ahijah were Belial. For this reason Ahijah was stricken with the plague (Gen. R. lxv., Yer. Yeb. xvi. 15*c* and parallels).

Maimonides, in his introduction to "Yad ha-Ḥazaḳah," says, rather inaccurately:

> "Ahijah was a Levite, a disciple of Moses, one of those who went out of Egypt—the tribe of Levi not being included in the divine decree of death in the wilderness [see B. B. 121*b*], and also a disciple of David [Abraham ben David of Posquières, in his notes, corrects this, and says instead, "a member of David's court of justice"]; and finally he became the teacher of Elijah before his death."

K.

AHIJAH, AHIAH, AHIJAHU (אחיה, אחיהו): Etymology of the name uncertain. **1.** Youngest son of Jerahmeel; or it is possible to take the name as that of his first wife; Atarah, the second, being given in the next verse (I Chron. ii. 25). **2.** A Benjamite chief (I Chron. viii. 7). **3.** Priest at Shiloh, son of Ahitub, and great-grandson of Eli; was with Saul at Gibeah in the battle with the Philistines (I Sam. xiv. 3, 18); he had charge of the Ark of the Lord. **4.** The Pelonite, one of the "thirty" of David (I Chron. xi. 36). **5.** A Levite, who "was over the treasures of the house of God and over the treasures of the dedicated things" (I Chron. xxvi. 20). The text here is corrupt and the Septuagint reading, "the Levites their brethren," is preferable.

6.—Biblical Data: Son of Shisha, scribe for Solomon. His brother Elihoreph held a similar position (I Kings, iv. 3).

G. B. L.

——In Rabbinical Literature: Concerning the deaths of Ahiah and his brother Elihoreph, the two scribes of Solomon, the Haggadah relates that Solomon once met the Angel of Death, who was very sad. Being asked for the reason of his sadness, the angel replied that he had been commanded to take the lives of his (Solomon's) two Ethiopians (Ahijah and his brother). As soon as Solomon heard this he dispatched the brothers to Luz, where the Angel of Death was supposed to have no power (see Luz). Ahijah and his brother were, however, overtaken by death when just at the gates of the town. The angel afterwards explained to Solomon that it had been a ruse on his (the angel's) part to induce the king to send the brothers to Luz; it having been destined that they should meet their death at its gates, and that there only he could fulfil his task. To this explanation Solomon replied: "The feet of man are his fate: wherever he is wanted, thither do they lead him!" (Suk. 53*a*).

L. G.

7. Father of Baasha, who conspired against Nadab, killed him, and reigned in his place (I Kings, xv. 27, 33; xxi. 22). He was of the tribe of Issachar. **8.** One of the men who sealed the covenant with Nehemiah (Neh. x. 26).

G. B. L.

AHIJAH: A leader among the Babylonian Jews of the second century, perhaps a *resh galuta* (exilarch). He was the chief ally of Hananiah, the nephew of Joshua ben Hananiah, in his endeavor to emancipate the Jews of Babylonia from the intellectual domination of those of Palestine. The following words of the messengers sent by the Palestinian patriarch Simon ben Gamaliel from Palestine to Babylon, to dissuade the leaders there from their intention of introducing a calendar independent of that of Palestine, refer to this activity of Ahijah: "If ye persist in your intention, seek for yourselves another hill, where Ahijah can build you another temple, where Hananiah can play the harp for you [he was of the Levites who were the musicians of the Temple], and confess openly that ye have no more share in Israel's God" (Ber. 63*a*). Since Ahijah figures here as the sarcastically proposed builder of an illegal temple, and Hananiah as the priest in the same, it would seem that the former was considered as representing political rather than spiritual power. Geiger's suggestion ("Urschrift," p. 154), based upon Yer. Ned. vi. 40*a*, and Yer. Sanh. i. 19*a*, where the name is read Nehunian, that this is a reference to Onias, the builder of the well-known temple bearing his name, does not seem to be well founded (see Hananiah, nephew of Joshua). A. Krochmal's suggestion ("Scholia," p. 8, Lemberg, 1881), that this Ahijah was the father of the celebrated tanna R. Nathan, also lacks foundation.

Bibliography: Geiger, *Urschrift*, pp. 154 *et seq.*; Grätz, *Gesch. d. Juden*, iv. 202, 478; Bacher, *Ag. Tan.* i. 390.

L. G.

AHIKAM: Son of Shaphan, the scribe, and father of Gedaliah. He was sent by King Josiah to consult Huldah, the prophetess, about the book of the Law. Later, in the reign of Jehoiakim, he protected Jeremiah from the hands of the enraged people (Jer. xxvi. 24; II Chron. xxxiv. 20; II Kings, xxii. 12, 14, and xxv. 22).

G. B. L.

AḤIḲAR: Hero of a wide-spread legend, and supposed author of a number of proverbs. His name has been variously distorted, but probably was originally אחיקר (אֲחִי־יָקָר or אַחִיָּקָר 'Αχιάκαρυς; compare יקר, the name of a tosafist, which survives among Jews to-day; the name איקא, in the Babylonian Talmud, is probably an abbreviation of it).

Mentioned in Greek Literature.

The earliest mention of Aḥiḳar is in the Book of Tobit (i. 21 *et seq.*, ii. 10, xi. 18, xiv. 10 *et seq.*). According to these passages, Aḥiḳar was a relative—the texts vary as to the precise relationship—and friend of Tobit, and at the same time was lord chancellor of the Assyrian empire under Sennacherib. Mention is also made there of a certain Nadab whom Aḥiḳar adopted, and who sought to repay the latter's kindness by burying him alive; "but God made good his dishonor in His sight and Aḥiḳar returned to the light, but Nadab went into darkness everlasting" (Tobit, xiv. 10, 11, according to the Codex Sinaiticus). Aḥiḳar is not unknown in the literature of the Greeks. Clement makes the statement ("Stromata," i. 15; ed. Migne, p. 772)—whether correctly or not is immaterial here—that Democritus obtained his wisdom in part from the Babylonian Akikarus. Probably identical with this Akikarus is the Achiakarus who, according to Strabo

("Geography," xvi. 2, § 39, p. 762), received almost divine honors from the inhabitants of Borsippa (*βορσιππηνοί* should undoubtedly be read, with Rendel Harris, instead of the impossible form *βοσπορηνοί*). A work of Theophrastus ("Diogenes Laertius," v. 50) also bears the name of Akicharus—probably another reference to the Babylonian sage. Finally, in a mosaic at Treves ("Antike Denkmäler des Archäologischen Instituts," i. 47), at the side of the muse Polyhymnia, there is the form of a man holding a scroll in his hand, whose name was deciphered by Studemund ("Archäologische Jahrbücher," v. 2 *et seq.*) as "Accicar."

None of the above statements by Greek writers concerning Aḥiḳar affords an explanation of the circumstances referred to in the Book of Tobit. It was reserved for recent research to discover that the Arabic, Armenian, Rumanian, Slavonic, and Syriac literatures have preserved references to a certain Aḥiḳar, which are not only of value for the comprehension of the references in Tobit, but are important in the consideration of the whole range of Jewish apocryphal literature, and also of the whole fund of Jewish folk-lore and legend. The credit of demonstrating the connection between the Aḥiḳar of the Book of Tobit and the hero of the Oriental legends grouped around the same name belongs to Georg Hoffmann ("Auszüge aus Syrischen Acten Persischer Märtyrer," pp. 182 *et seq.*), who was closely followed by Meissner and Lidzbarski with further investigations. Thanks to the publication and translation of the Oriental texts of Aḥiḳar by Conybeare, Rendel Harris, and Mrs. A. S. Lewis ("The Story of Aḥiḳar," London, 1898), and to the critical introduction to the last-named book, the subject may now be more fully discussed. The legend of Aḥiḳar, as current in the above-mentioned languages, is somewhat as follows:

Chancellor of Sennacherib.

Aḥiḳar was the wise and powerful chancellor of the Assyrian king Sennacherib, son of Esar-haddon (in II Kings, xix. 37 Esar-haddon is the son, and not the father, of Sennacherib; but compare, for a similar anachronism, Sanh. 94*a*: indeed the later Jewish legend did not always adhere strictly to Biblical accounts). He was sixty years of age, had sixty wives (compare Cant. vi. 8; in the Aramaic folk-lore of the Talmud the number sixty is a favorite one and usually denotes any large number: B. Ḳ. 92*b*, twice; B. B. 91*a*; Sanh. 7*a*; Ḥul. 58*b*), and no child had been born to him. The gods, to whom he brought many offerings, announced to him at last that he would never have a child; and they therefore desired him to adopt his sister's son, the lad Nadan (meaning "gift," like Nathan, but also possibly with a contemptuous secondary meaning, as in Ezek. xvi. 33). Rearing him tenderly, Aḥiḳar himself undertook the lad's instruction.

Nadan seemed a promising youth indeed, physically and intellectually, and Aḥiḳar might have rejoiced at such return for all his care; but morally the lad was thoroughly corrupt, and paid not the slightest heed to the wise counsels and maxims of his uncle. Not only was he offensively domineering in Aḥiḳar's household—so much so indeed that the latter had eventually to forbid him the house—but at court, too, where Aḥiḳar had presented him as his future successor in office, he used his influence with a view to destroying his benefactor. By means of forged letters and subtle intrigues Nadan succeeded in having Aḥiḳar accused of high treason and condemned to death. Only through the friendship of the executioner Nabusamak (compare the Hebrew name "Elisamak") did Aḥiḳar escape. Nabusamak concealed him in a subterranean hiding-place, and showed the body of a decapitated slave as that of Aḥiḳar. Nadan's triumph, however, was of short duration. The king repeatedly deplored the loss of the wise counsel of his former chancellor. Waiting his opportunity, Nabusamak came forward and declared himself able to produce the missing sage. This was done, much to the king's gratification; and the latter received his lost friend with great honor.

Architect for Pharaoh.

But Aḥiḳar had then no time to punish his rascally nephew; for he had to build for the king of Egypt a castle between heaven and earth, besides giving him other illustrations of Assyrian wisdom. It appears that Pharaoh had demanded of Sennacherib an architect competent to erect such a castle, and had promised to pay a large sum annually for several years if he could provide one; failing which, Sennacherib was to pay him tribute. Aḥiḳar not only performed his task in Egypt successfully, but at the same time gave so many instances of his superior wisdom that Pharaoh declared he could not compete with him, and dismissed him with rich rewards for himself and handsome presents for his master. On his return home the king delivered Nadan into Aḥiḳar's hands for punishment. Aḥiḳar loaded him with chains and threw him into prison, where, in contrast with the scanty food doled out to him, he was richly regaled with selections from his uncle's wise proverbs—the same that he had so spurned in his youth, and for the practical utilization of which he had now no opportunity. He died miserably in prison: "for he who digs a pit for his brother shall fall into it; and he who sets up traps shall be caught in them" (Arabic text, end; compare Ps. vii. 16; Eccl. x. 8).

The foregoing brief abstract of the legend is nearly the same in all the above-mentioned versions. But there is great diversity as regards the maxims and fables that form the beginning and the close of the legend, so that it is desirable to consider the development of the legend apart from that of the maxims.

It is evident, in the first place, that the Arabic version has come directly from the Syriac, and that it retains many Syriac expressions (compare, for instance, תטול רוחך, "Thou shalt have patience," p. 2, end, which is a literal translation of the Syriac אגר רוחך, p. 39, line 12; and p. 27, line 4 from bottom, the Syriac word סין is transliterated into the Arabic and left untranslated). The Armenian text also is derived from the Syriac; while the Slavonic version, from which the Rumanian is a translation, has the medieval Greek version for its foundation.

Versions of Legend Compared.

Much more intricate is the problem of the connection with the so-called "Life of Æsop," by Maximus Planudes (ed. Eberhard, "Fabulæ Romanenses," i. 225 *et seq.*), which relates of Æsop events similar to those ascribed to Aḥiḳar. Meissner, therefore, maintains that the Aḥiḳar legend in its present form is simply an elaboration of Planudes' "Life of Æsop," and claims to have detected traces of its Greek origin in the Semitic version. The nature of these supposed traces, however, is sufficiently indicated by one example. In the riddle of the years, occurring in both the Aḥiḳar legend and the "Life of Æsop," mention is made of two cords, one white and one black, representing day and night. Meissner claims that this proves the Indo-Germanic origin of the story; for Semites would have said "one black and one white," because they commence the day with the evening. Unfortunately for this ingenious hypothesis, in the Old Testament—the Semitic character of which probably no one will deny—the expression "day and night" occurs nearly fifty times; while the inverted phrase is found only fourteen times. Indeed, if one were to judge simply from such external evidence, the Syriac version would undoubtedly be recognized as a direct translation from the Hebrew; for in the whole range of Syriac literature there is no work of such strongly marked Hebrew cast as this Aḥiḳar legend. The following examples will illustrate this: In the Syriac the expression "Bat Kol" (p. 38, line 4) is exactly the Neo-Hebrew בת קול (a voice from heaven), meaning in Syriac simply a word; on p. 38, line 10, "if thou," etc., is an imitation of Gen. xv. 3, the Hebrew הן of which is badly rendered by the Syriac אן; on p. 38, line 16, "linen and purple" is a reminiscence of Esth. viii. 15; on p. 39, line 1, there is a trace of Dan. ii. 4, and on p. 56, line 9, one from Dan. ii. 11. Such examples, which might easily be multiplied, show at least how closely the Syriac version follows Biblical style. In view of the fact that the narrative itself has no point of contact with Biblical literature, this close resemblance can be explained only by the assumption that the author of the Syriac version had a Hebrew original before him. This assumption becomes almost a certainty when it is perceived how deeply the Aḥiḳar legend is indebted to Jewish literature for many of its essential features, though it is by no means meant to be implied that the work itself is genuinely Jewish.

Syriac Follows Hebrew Original.

In its details the contest of wits between Aḥiḳar and the Egyptian sages resembles closely that in the Talmud (Bek. 8*b*) between Rabbi Joshua ben Hananiah and the Athenian wise men; and this resemblance exists not only in the individual details, but likewise in the general fashion of replying to one question impossible of solution with another question of exaggerated impossibility. For instance, the wise men of Athens require Joshua to sew together the fragments of a broken millstone and receive in reply the request for a few threads made of the fiber of the stone (see also Lam. R. to i. 1); exactly the same question and answer are recorded of Aḥiḳar in the Syriac version (p. 65) and in the Arabic (p. 24). The incident of the ropes of sand, mentioned in all the versions of the Aḥiḳar legend, is found in its simplest form in the Talmud: Joshua declares himself ready to transport an outlying well into the city if his questioners will supply him with ropes of bran. The form of Aḥiḳar's repartee seems a little too artificial. The resemblance between the account of Pharaoh's indebtedness to Sennacherib and a similar pleasantry related of Joshua has been pointed out by Meissner, who also demonstrates that Aḥiḳar's greatest triumph—the boys, upborne by eagles, who were to build a tower between heaven and earth—is also related of Joshua, though in a strongly Judaized form. The construction of a similar air-castle plays a great part also in the Hiram legend (Yalḳ. to Ezek. xxviii. 2, § 367; "B. H." v. 111 *et seq.*). It is to be remarked that the Aḥiḳar legend is in many respects similar to that concerning Hiram; thus, Hiram's self-deification (see Ginzberg, in "Monatsschrift," xliii. 542 *et seq.*) seems to be mildly paralleled in the colloquy between Aḥiḳar and Pharaoh, where the former refers to the Egyptian monarch's weakness and insignificance as compared with his almost divine Babylonian master, Sennacherib. The sarcasm of this comparison is intensified when one recollects that, according to Jewish legend, it was the Egyptian king who, like Hiram, claimed divine honors for himself (Mek., Shirah, § 8; Tan., ed. Buber, ii. 31).

Sources of the Proverbs and Fables.

Investigation as to the sources of the proverbs and fables in the Aḥiḳar legend is more difficult. Not only do the different versions differ widely in number and contents, but, from the very nature of legends, such material is extremely liable to modification and elaboration. Taking those in the Syriac version, the following numerous parallels to Aḥiḳar's maxims, culled from the Bible and Talmud, may throw some light upon the connection:

No. 1. Ab. iv. 17, Eccl. R. to xii. 11.

No. 2. Ecclus. (Sirach), xix. 10 (Syriac); Ab. ii. 14.

No. 5. Ecclus. (Sirach), xxv. 21 (Syriac). The Aḥiḳar text probably needs correction here.

No. 7. This is probably a pun upon the Hebrew word שקד, which means both "almond-tree" and "to hasten."

No. 8. Here, too, according to Halévy, is a play upon the Hebrew words עִיר (city) and עַיִר (ass).

No. 9. A play upon the words בקע עצים (to split wood) and קבע סעודה (to sit down to a meal).

No. 10. For the expression "to pour wine upon graves" compare Ecclus. (Sirach), xxx. 18.

No. 12. Compare Prov. xiii. 19, a maxim widely prevalent in various forms throughout Jewish literature; see Dukes, "Rabbinische Blumenlese," Nos. 180, 181, 600.

No. 13. Found literally in Gen. R. xliv. 12.

No. 15. Originally contained a play upon חֵלֶק (portion) and חָלַק (to quarrel).

No. 16. In place of "evil eye" (Prov. xxiii. 6) we have "a shameless one"; probably through confusion of the late Hebrew חמצן (see Ḳid. 53*a*) with the Syriac אתחמצן (to be ashamed).

No. 20. Matt. v. 44.

No. 21. Prov. xxiv. 16.

No. 23. Ecclus. (Sirach), xxx. 12 (compare Syriac).

No. 34. "Son" should probably be read here instead of "slave" (see Armenian version, No. 42), in agreement with Shab. 10*b*.

No. 40. "Alphabet of Ben Sira," letter *Lamedh*: "The wise man needs a nod; the fool requires a blow."

No. 43. Ecclus. (Sirach), xxxii. 11.

No. 44. Eccl. ix. 16.

No. 46. B. B. 98*b*, quoted as a saying of Sirach; identical with the Aḥiḳar maxim as to substance, but contradictory in form.

No. 49. Prov. xxvii. 10.

No. 50*a*. Ecclus. (Sirach), xxx. 17, xli. 2.

No. 50*b*. Eccl. vii. 2-4: the divergence is probably owing to an erroneous contraction of the verses in Ecclesiastes.

No. 51. To Eccl. R. iv. 6, quoted as a popular adage; see also a similar maxim in Pes. 113*a*.

No. 52. Ecclus. (Sirach), xxvii. 16.

No. 53. Ecclus. (Sirach), xx. 18, xxi. 16.

No. 54. Ecclus. (Sirach), xix. 10.

No. 55. Mek., Mishpaṭim, § 6.

No. 57. Prov. xxvii. 10, the word "not" is to be supplied.

No. 58. Ab. vi. 5.

No. 60. Prov. xxiv. 17, Ab. iv. 26; compare also No. 17 of the Aḥiḳar maxims.

No. 61. Lev. xix. 31.

No. 62. Pirḳe Rabbenu ha-Ḳadosh, ed. Schönblum, p. 22*b*; ed. Grünhut, p. 65.

No. 65. Ecclus. (Sirach), iv. 26, according to the text given in "Wisdom of Ben Sira," ed. Schechter; compare also Gen. R. xliv. 15, Meg. 16*b*, Ber. 7*b*.

No. 66. Eccl. i. 8, a play upon the Hebrew word עַיִן, which means both "eye" and "fountain"; compare Tamid, 32*b*.

No. 71. "Alphabet of Ben Sira," end, where the text needs correction.

No. 73. Ps. cxli. 5, probably according to the Septuagint.

No. 74. Prov. xxv. 17.

The exhortations at the end of the Aḥiḳar legend, which borrow their imagery mainly from the animal world, may be also paralleled in rabbinical literature. The following is an illustration: Aḥiḳar refers to the relations between himself and his nephew when he says, "I have seen colts that were the slayers of their parents" (Syriac text, p. 70). The context seems to demand an opposite sentence; namely, that young colts sometimes die before their parents—a form which is actually found in Sanh. 52*a*, Lev. R. xx. 10. A comparison with the latter passage shows that the Syriac translator read the word שמיחין erroneously as שוחטין (slayers), thus giving it the opposite sense. It is interesting to note the almost complete agreement between Aḥiḳar (Syriac, p. 19) and Gen. R. xxvi. 5. The fable of the man and the wood, known both to Greeks and Indians (see Æsop's Fables), is also found in all forms of the Aḥiḳar legend as well as in Gen. R. v. 10. It may also be mentioned that those maxims that do not occur in the Syriac version, but are met with in the others, may also be paralleled by rabbinical sayings (compare, for instance, the Slavonic version, No. 27, with Sanh. 112*b*, and the Armenian, No. 100, with Pes. 89*b*).

From all the preceding it seems fair to conclude that the Aḥiḳar maxims represent some ancient collection of Jewish popular proverbs, which at a later period were combined with the legend of the Babylonian sages. Legends and proverbs then traveled together through Europe and Asia. In addition to the above-mentioned versions of the Aḥiḳar story, the Hindus, like most of the European nations, possess the legend, as Benfey has shown; although he, unacquainted with the true facts, designated India as the original home of the story. It is remarkable in this connection that the Hindu version betrays many points of resemblance with the Talmudic material—points which obtain in no other forms of the story. Thus, for instance, one of Viçakha's problems was to determine the sex of two serpents which had no distinctive marks about them: both task and solution are found in the Midrash on Proverbs (i. 1) related of King Solomon. In the Hindu form of the legend and in cognate forms, it is considered the highest triumph of the sage to distinguish which end of a wooden rod was situated downward in the tree in which it grew, and which end upward. In the Jewish Solomon legend the same question is described as being the last and the most difficult of those propounded by the queen of Sheba to the king, and its solution is exactly in accord with that of the Hindu version (see the Yemen Midrash described by Schechter, in "Folk-Lore," 1890, pp. 349-358).

Relation to the Hindu Version.

Although the weight of the preceding testimony is in favor of the suggestion that the Aḥiḳar legend and the system of legends and maxims connected therewith point to a Jewish substratum, the material extant hardly warrants the conclusion that it is a product of genuine Jewish folk-lore. For a purely Jewish work there is too little religious material in it; a fact which in the postexilian period—for this is the earliest date possible—is somewhat surprising. The Aḥiḳar of the Book of Tobit and the Aḥiḳar of the legend have many points of similarity; but it can not be said with certainty that they are identical. That the Aḥiḳar legend finds employment in the New Testament is true only to the extent that some proverbial sayings of the Aḥiḳar collection appear in the latter in a somewhat modified form, which may really only show the extent to which the legend had spread, and not a strictly literary connection. Of the Aḥiḳar legend proper, the New Testament contains absolutely no traces, Halévy and Rendel Harris to the contrary notwithstanding.

A Jewish Substratum.

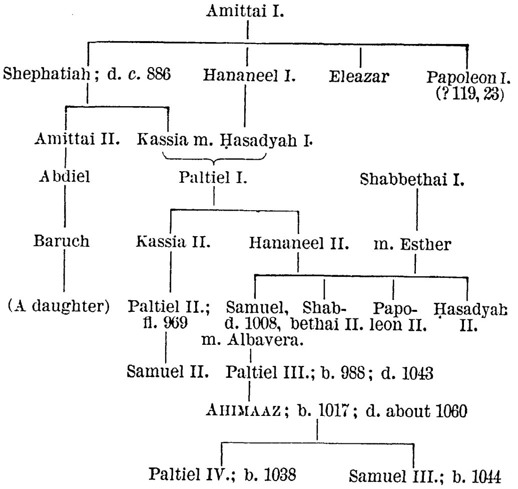
AHIMAAZ ("Brother of Anger"): **1.** Father of Ahinoam, wife of Saul (I Sam. xiv. 50). **2.** Commissary-general of Solomon in Naphtali, who married Basmath, the daughter of Solomon (I Kings iv. 15). **3.** Son of Zadok, who, with Jonathan, the son of Abiathar, brought David the news from the camp of Absalom and, after the battle between the king's forces under Joab and those of Absalom, hastened to tell David of the victory, outrunning the Cushite who had started some time before him (II Sam. xv. 36, xvii. 17-20, xviii. 19 *et seq.*; I Chron. v. 34 *et seq.* He is mentioned in the list of high priests).

G. B. L.

AHIMAAZ BEN PALTIEL: Liturgical poet, and author of a family chronicle; born in Capua, Italy, 1017; died about 1060 in Oria. Very little is known about his life. He came of a family some of whose members are well known in Jewish literature as scholars and poets; for example, Hananeel, and his nephew Amittai ben Shephatiah. Ahimaaz had two sons, Paltiel and Samuel. The following family tree, reaching up to the middle of the eleventh century, is based on data given by Ahimaaz in his "Chronicle":



Benjamin of Tudela mentions an Ahimaaz ben Paltiel in Amalfi in southern Italy, in the year 1162 (see his "Travels," ed. Asher, i. 13, 14). This may well have been a descendant of his earlier namesake; for it is known that two brothers of the grandfather of Ahimaaz ben Paltiel were sent with presents to Paltiel by the prince of Amalfi (see "Rev. Ét. Juives," xxxii. 147). In a list of twenty-two *seliḥah* (elegiac) poets (Italy, fifteenth century?), Ahimaaz ben Paltiel is mentioned as the author of two poems; and a Maḥzor of the Roman rite attributes to him a seliḥah for the Feast of Esther.

Ahimaaz is better known as the compiler of the "Chronicle" mentioned above, which, though intended merely to glorify his own immediate ancestors, gives much important information in regard to the history of the early Jewish settlements in such towns as Oria, Bari, Otranto, Gaeta, Benevente, Capua, Amalfi, and Pavia in southern Italy. Written about one hundred years before Abraham ibn Daud, it covers a period (850-1054) our knowledge of which is extremely scanty; the only information hitherto having been obtained from a few inscriptions and from notices in the works of Shabbethai Donolo, who also was a native of Oria. Only one manuscript of the "Chronicle" is known to exist; it is in the library of the

The Chronicle of Ahimaaz.

cathedral at Toledo, Spain. It bears the title "Sefer Yuḥasin" (Book of Genealogies; compare Neubauer's ed., pp. 111–113, 132, 133), and is written in the peculiar rimed prose which the Arab Al-Hamdani had, in the *makamat*, brought into prominence fifty years before Ahimaaz, and which Hariri perfected fifty years after him: the same style that in Hebrew literature was affected by Judah Alḥarizi and Immanuel of Rome.

According to the traditions preserved by Ahimaaz, his family had its origin among the captives whom Titus brought to Italy after the destruction of the Temple. The first person he mentions is Amittai of Oria, whom he calls *sabbar* and *payyat*, a man versed in Talmudic law and a writer of liturgical poetry. In the "Chronicle" are given the first authentic data concerning the wonder-working Aaron of Babylon, the reputed teacher of Kalonymus of Lucca; also through an account by R. Silano additional information is gleaned about the Jewish community of Venosa, some epitaphs from which place had previously been published by G. J. Ascoli. Of the sons of Amittai, the "Chronicle" dwells especially upon Shephatiah, one of the earliest and most prolific liturgical poets (about 850-860), and gives some reliable data on the persecutions which the Byzantine Jews had to suffer under Basil I.; on the Saracen invasion of Sicily and Italy (872); on another liturgical poet, Amittai ben Shephatiah; and on the disputation which Hananeel ben Amittai was forced to hold with the archbishop of Oria. The author is obviously proud of the honor done to his family by one of its members, Paltiel, the vizier of Al-Muizz and 'Abd al-Manẓur (962–992) of Egypt; perhaps the first of the Egyptian *nagids*, whom De Goeje has tried to identify with Jauhar al-Rumi or al-Saḳlabi. Ahimaaz closes with short accounts of Hananeel, of his son Samuel in Capua, and of Paltiel ben Samuel (988–1043), father of the author himself.

The unique manuscript in Toledo bears the name of Menahem ben Benjamin in its signature. It is uncertain whether the word used there, נשלם ("finished"), refers to the composition or to the copying of the work. This signature is also in rimed prose; and it seems probable that at least part of page 132 (lines 12–23) in Neubauer's edition is by Menahem and not by Ahimaaz, for it contains an account of the author in language that one would not expect an author to use of himself.

There is no evidence that Ahimaaz made use of any literary records: he simply gathered together traditions that had been current in his family. In describing the activity of the vizier Paltiel, he refers to the "Chronicles of Egypt" as containing further data on the subject. Even in this case it is improbable that he has any individual work in mind. The body of the "Chronicle" contains no dates: a few are to be found in the last two sections, part of which may be, as stated above, a later addition.

Popular Beliefs and Superstitions.

The "Chronicle of Ahimaaz" is, however, of interest from another point of view. It is full of accounts of wonderful deeds and of superhuman efforts; and gives an interesting picture of the popular beliefs and superstitions of the author's day. It narrates the exploits of Aaron, who is able to lock up an evil spirit in a chest by means of the *Shem* (ineffable name of God); how his pupil Shephatiah is able miraculously to cover a great distance in a very short time so as to avoid profaning the Sabbath day; how Shephatiah is able to save the life of a child that two female demons had determined to put to death; how Hananeel is able to bring his cousin to life again; how heaven directly helps the same Hananeel; and how the moon remains obscured for a whole night in order to cover up an error made in an astronomical calculation. The tale is told of the "Sefer ha-Merkabah," a wonderful book from which Shephatiah draws his knowledge of heaven's mysteries: before this book a light burned upon the Sabbath day. In order that the book should not fall into the hands of those that were unworthy to use it, it was put into a case of lead and thrown to the waves, which receded perceptibly and carried away the mysterious gift. The power of Paltiel as an astrologer is dwelt upon; it was this power which, in a measure, insured for him the friendship of the conqueror of Egypt. In this "Chronicle" are also found the first traces of the story of the "Wandering Jew." Filled as it is with these legends, one would be tempted to disregard the "Chronicle" as a historical source. But the naïveté with which the story is told shows that there is no attempt at historical reconstruction; and one can feel certain that the basis upon which Ahimaaz's work rests is reliable family tradition.

The language in which the "Chronicle" is written bears out this view. In its formation of new nouns and verbs, in its biliteral roots, its peculiar plural endings, and in its use of the construct state, it recalls the style of Donolo and of the liturgical poets of the school of Kalir. Nor are evidences wanting of the influence of the Arabic and the Romance languages. From the rime one can also learn the pronunciation of Hebrew in the days of the author. The "Chronicle" contains a poetical elegy on Paltiel, which has a double alphabetic acrostic, as well as an acrostic upon the full name of the author.

BIBLIOGRAPHY: For Ahimaaz as a liturgical poet, see Zunz, *Literaturgesch.* pp. 264, 626. The first accounts of the manuscript of the *Chronicle* (Nos. 86, 25 in the catalogue of the library of the Cathedral of Toledo) were given by Neubauer, in *Rev. Ét. Juives*, xxiii. 236; idem, in *Jew. Quart. Rev.* iv. 614 *et seq.* Neubauer published the full text in his *Mediæval Jew. Chron.* ii. 111–132, from a facsimile and a photograph of the original. A complete résumé of the contents is given by Kaufmann, in *Monatsschrift*, 1896, pp. 462–473, 496–509, 529–554, together with emendations of the text, a discussion of its linguistic peculiarities, and a reprint of the elegy in a poetical form (not recognized as such, however, by Neubauer). Further corrections of the text may be found in the reviews by Brody, *Zeit. f. Hebr. Bibl.* iii. 159 *et seq.*; Bacher, in *Rev. Ét. Juives*, xxxii. 144–151. On the identity of Paltiel, see Kaufmann, *Beiträge zur Gesch. Aegyptens aus Jüd. Quellen*, in *Z.D.M.G.* li. 436–442; De Goeje, *Paltiel-Djaubar*, *ib.* lii. 75–80. On the general value of the *Chronicle*, see Steinschneider's remark in *Monatsschrift*, xliv. 239.

G.

AHIMELECH ("Brother is King").—**Biblical Data: 1.** Son of Ahitub, grandson of Phinehas, and great-grandson of Eli. He was priest at Nob during David's halt in his flight from Saul (I Sam. xxi. 1–9). Owing to his friendship for David he was slain by Doeg the Edomite by order of Saul (I Sam. xxii. 11–19). The identity of Ahiah (I Sam. xiv. 3, 18) with Ahimelech is not established.

I. M. P.

——**In Rabbinical Literature:** The interview between Ahimelech and David concerning the hallowed bread hinges upon the following Halakah: David reached the priestly city on the Sabbath, and, finding the priests baking this bread, remarked to them that such work was fitting for the week-days only (the rabbinical interpretation of the words והוא דרך חל, "and it is in a manner common," I Sam. xxi. 5, 6); for the setting up of the showbread was permitted on the Sabbath day (Lev. xxiv. 8), but not the baking of it (Men. 95*b*, Yalḳ. Sam. 130). Concerning Ahimelech's hesitation to give up the bread, tradition states that David informed the priest that he was famishing, and that in such extremity all food was permitted to him (*l.c.*).

Similarly, the interview between Ahimelech and Saul turned upon a halakic point. Saul was of the opinion that the right to interrogate the Urim and Thummim belonged to the king exclusively, so that Ahimelech had made himself liable to the death penalty when he consulted them in David's behalf. Ahimelech, on the contrary, maintained that interrogation by anybody was justified when the affairs of state demanded it, and that David, as general of the Jewish army, certainly had the right to interrogate them. This question divided the scholars of Saul's court: Abner and Amasa sided with the priest, Doeg against him. The last-named was accordingly deputed to execute the sentence upon Ahimelech (Yalḳ. Sam. § 131). L. G.

2. A Hittite officer in the service of David (I Sam. xxvi. 6). I. M. P.

AHIN. See Ḥayyim.

AHIN, BENDICH (ברוך חיים): Mathematician and physician at Arles during the second half of the fourteenth century. Nostradamus says that Ahin was an excellent mathematician, well versed in Arabic, Greek, and Latin; that, because he was prudent, loyal, and very experienced in the art of medicine, he was appointed physician to Joanna of Anjou, queen of Naples (1369), was lodged in the royal palace, and was exempted, both for himself and his posterity, from all special taxes laid upon the Jews. Ahin seems also to have busied himself with astrology, as it is said that he predicted the tragic end of the queen. M. Kayserling has tried to identify Bendich with מאשטרי בנדיט (Maëstro Bendit), one of the ten men to whom Kalonymus ben Kalonymus dedicated his "Eben Boḥan"; but the identification is by no means certain.

Bibliography: Nostradamus, *L'Histoire et Chronique de Provence*, p. 427; Kayserling, *Eben Boḥan*, Budapest, 1877; Depping, *Les Juifs dans le Moyen Âge*, p. 334; Carmoly, *Histoire des Médecins Juifs*, p. 108; Landau, *Gesch. d. Jüd. Aerzte*, p. 45; Nübling, *Judengemeinden des Mittelalters*, p. 86. In these last authorities the name is wrongly spelled "Abin." Compare Gross, *Gallia Judaica*, p. 85. G.

AHINOAM ("Brother is Pleasantness"): **1.** Daughter of Ahimaaz and wife of Saul, first king of Israel (I Sam. xiv. 50). **2.** The Jezreelitess captured by David while at war with Saul (I Sam. xxv. 43); she became his wife. The Amalekites subsequently carried her away from Ziklag, but David soon rescued her (I Sam. xxx. 5, 18). At Hebron Ahinoam gave birth to Amnon, David's first-born (II Sam. iii. 2). I. M. P.

AHIRAM ("Brother is Exalted"): Son of Benjamin (Num. xxvi. 38; called Ehi in Gen. xlvi. 21). In the corresponding list of I Chron. viii. 1 he appears as Aharah. His family is referred to as that of the Ahiramites (Num. xxvi. 38). G. B. L.

AHISHAR: The overseer of Solomon's household (I Kings, iv. 6), whose position was one of responsibility similar to that of Joseph in Potiphar's house (Gen. xxxix. 4) and of Obadiah in Ahab's palace (I Kings, xviii. 3). I. M. P.

AHITHOPHEL.—Biblical Data: A native of Giloh in the highlands of Judah, and privy councilor to David. He was a man of extraordinary sagacity and insight in political affairs (II Sam. xv. 12, xvii. 21–23), but showed himself devoid of principle by his participation in the rebellion of Absalom and by his evil counsel regarding the royal harem. His advice to pursue the fleeing king in hot haste was wise from a military point of view, but was not accepted by Absalom; and the preference then shown to Hushai's counter-recommendation of delay offended him so sorely that he withdrew to his native city, Giloh, where he hanged himself. I. M. P.

——In Rabbinical Literature: The Talmud speaks of this councilor of David as "a man, like Balaam, whose great wisdom was not received in humility as a gift from heaven, and so became a stumbling-block to him" (Num. R. xxii.). He was "one of those who, while casting longing eyes upon things not belonging to them, lose also the things they possess" (Tosef., Soṭah, iv. 19). Ahithophel was initiated into the magic powers of the Holy Name, by means of which he could replace the foundation-stone of the world, removed by King David in his search for the great abyss, in the exact spot above which the Temple was to be built. And being thus familiar with all the secret lore as imparted through the Holy Spirit, he was consulted as an oracle like the Urim we-Tummim (II Sam. xvi. 23, Yer. Sanh. x. 29*a*, Suk. 53*a et seq.*). But he withheld his mystic knowledge from King David in the hour of peril, and was therefore doomed to die from strangulation (Tanna debe Eliyahu R. xxxi., Mid. Teh. iii. 7; Ex. R. iv., Mak. 11*a*). "Ahitophel of the house of Israel and Balaam of the heathen nations were the two great sages of the world who, failing to show gratitude to God for their wisdom, perished in dishonor. To them the prophetic word finds application: 'Let not the wise man glory in his wisdom,' Jer. ix. 23" (Num. R. xxii.). Socrates was said to have been a pupil of his. K.

The Haggadah states that Ahithophel, who was the grandfather of Bath-sheba (Sanh. 69*b*), was misled by his knowledge of astrology into believing himself destined to become king of Israel. He therefore induced Absalom to commit an unpardonable crime (II Sam. xvi. 21), which sooner or later would have brought with it, according to Jewish law, the penalty of death; the motive for this advice being to remove Absalom, and thus to make a way for himself to the throne. His astrological information had been, however, misunderstood by him; for in reality it only predicted that his granddaughter, Bath-sheba, the daughter of his son Eliam, would become queen (Sanh. 101*b*, Yalḳ. Sam. § 150). David, during his reign, had many disagreeable encounters with Ahithophel. Shortly after his accession the king seems to have overlooked Ahithophel in his appointments of judges and other officials. Consequently, when David was in despair concerning the visitation upon Uzzah during the attempted transport of the ark (II Sam. vi. 6; see Uzzah) and sought counsel of Ahithophel, the latter mockingly suggested to him that he had better apply to his own wise men. Only upon David's malediction, that whoever knew a remedy and concealed it should surely end by committing suicide, did Ahithophel offer him some rather vague advice, concealing the true solution, which was that the ark must be carried on the shoulders of men instead of upon a wagon (Num. R. iv. 20, Yer. Sanh. x. 29*a*).

Curse upon Ahithophel.

Ahithophel rendered a service to David upon another occasion; not, however, until he had been again threatened with the curse. It appears that David excavated too deeply for the foundations of the Temple, with the result that earth's deepest floods (תהום) broke forth, and nearly inundated the earth. None could help but Ahithophel, who withheld his counsel in the hope of seeing David borne away upon the flood. When David again warned him of the malediction, Ahithophel counseled the king to throw a tile, with the ineffable name of God written upon it, into the cavity; whereupon the waters began to sink. Ahithophel is said to have defended his use of the name of God in this emergency by reference to the practise enjoined by Scripture (Num. v. 23) to restore marital harmony; surely a matter of small importance, he argued, compared with the threatened destruction of the world (Suk. 53*a*, *b*). David's repeated malediction that Ahithophel would be hanged was finally realized when the latter hanged himself.

Ahithophel's death was a great loss to David; for his wisdom was so great that Scripture itself (II Sam. xvi. 23) avoids calling him a man; in the passage quoted the Hebrew word for man, איש, is omitted in the text, being supplied only by the Masorah. Indeed, his wisdom bordered on that of the angels (Yer. Sanh. x. 2; Yalḳ. II Sam. § 142). His learning in the Law was also extensive, so that David did not scruple to call him "master" (Abot, vi. 2; the two things which David is there said to have learned from Ahithophel are more closely described in "Kallah," 16*a* (ed. N. Coronel). Ahithophel's disposition, however, was a jealous one; and he always sought to wound David by mocking remarks (Pesiḳ. ii. 10*b*; Midr. Teh. iii. 3, and parallel passages in Buber, note 68). His devotion to the study of the Law was not founded on worthy motives (Sanh. 106*b*). Ahithophel was thirty-three years old when he died (*l.c.*). In his will he left warning to his children never to side against the royal Davidic family, and to take no part in their dissensions (Yer. *l. c.*). Ahithophel is counted among those that have no share in the world to come (Sanh. xi. 1; B. B. 147*a*). L. G.

AHITHOPHEL LOOSBUCH: A book of fate used in popular divination and named after Ahithophel. In Jewish legends of the Middle Ages Ahithophel plays a rôle somewhat similar to that of Mephisṭopheles (see Steinschneider, "Pseudepigraphische Literatur," p. 80, note 2). Cassel would even translate "Ahithophel" as "the Brother of the Evil One"; regarding *tofel* as an ancient formation of *diabolus*, in support of which he cites the Germanic *tiuval* and *tievel-teufel* (compare "Mischle Sindbad," p. 330, Berlin, 1888). R. Moses Isserles, again, relates having read in a "very old book," in which were contained the philosophies and the portraits of various thinkers, that Socrates had received his wisdom from Asaf the Korahite and Ahithophel ("Torat ha-'Olah," i. xi.). In accordance with the popular view of Ahithophel's character, as being at once diabolic and omniscient, in the Middle Ages the authorship of a cabalistic work, "Sefer Goralot" (Book of Lots), was attributed to him. According to its preface, it discloses the "great secret of securing an answer without the drawing of lots or computation, by indifferently putting one's hand on a tablet containing the numbers one to ninety, or eighty-nine." The book furthermore is said to have lain hidden in Alexandria, and afterward to have been used in Tiberias and elsewhere, "the usual legend concerning pseudepigraphic writings," as Steinschneider puts it. Compare Lots, Books of.

Bibliography: Steinschneider, *Hebr. Uebers.* p. 870.

H. G. E.

AHITUB: **1.** Father of Ahimelech, priest of Nob (I Sam. xxii. 9–19). The name Ahitub means, properly, "good friend," "good brother"; and is significant in connection with the fact that the house of Ahitub, through the acting priest, Ahimelech, was friendly to David at the risk of incurring King Saul's displeasure (*ibid.* 10). Ahitub was a son of Phinehas and an elder brother of Ichabod, of the house of Eli, and a direct descendant of Aaron (*ibid.* xiv. 3). It is doubtful whether Ahitub was ever high priest, since that is nowhere mentioned; but his house was certainly of high dignity—so much so that Saul, king of Israel, had to reckon with it—and it was a power in aiding David to secure the throne of the Hebrew nation.

2. Possibly the same as No. 1. He is referred to in II Sam. viii. 17 as the father of Zadok, a priest in the time of David. Ahitub is mentioned in several genealogical lists as the son of Amariah and the father of Zadok (I Chron. v. 33, 34; *ibid.* xviii. 16; Ezra, vii. 2).

3. A priest; descendant (in the seventh generation) of the preceding. He, also, had a son named Zadok (I Chron. v. 38, 39).

4. A priest; father of Meraioth. In the time of Nehemiah he was "the ruler of the house of God" (I Chron. ix. 11, Neh. xi. 11).

5. Ancestor of Judith (Judith, viii. 1, R. V.; A. V., "Acitho"). G. A. D.

AHLAB: A city which Asher failed to conquer (Judges, i. 31). Perhaps this is identical with the later Gush Halab, which is the same as Gischala (see Neubauer, "G. T." p. 230). G. B. L.

AHLWARDT, HERMANN: One of the most notorious of anti-Semitic agitators; born December 21, 1846, at Krien, near Anklam, in the province of Pomerania, Prussia. After having filled various positions as a teacher he was in 1881 appointed rector (school principal) in Berlin. His inability to manage his affairs involved him in financial difficulties, from which he tried to extricate himself by the aid of money-lenders. He was extricated from these and other difficulties by Jewish friends and lawyers, and for a time claimed to be a friend of the Jews.

In a letter dated January 25, 1885, published in "Mittheilungen aus dem Verein zur Abwehr des Antisemitismus," 1893, p. 192, he says: "Antisemitism is illogical; I have always condemned it, and shall continue to condemn religious intolerance until my last breath." As he did not find within the ranks of the Conservative party that success which he had hoped for, Ahlwardt joined the anti-Semitic movement, publishing such venomous pamphlets against the Jews as "Der Verzweiflungskampf der Arischen Völker mit den Juden," 1890; "Eid Eines Juden," 1891; and "Jüdische Taktik," 1892. These pamphlets did not rise above the average anti-Semitic literature; but an immense sensation was created by his two pamphlets, "Judenflinten," 1892, in which he made the statement that Ludwig Loewe & Company had furnished worthless guns to the army, and had been hired by the "Alliance Israélite Universelle" to cheat the commissary department in order to defeat Germany in her next struggle with France.

Ahlwardt's object was to demonstrate that the Jews possessed no patriotism; and the charges seemed the weightier since Ludwig Loewe, the founder of the firm in question, had been a member of the Reichstag. Although Chancellor von Caprivi declared these charges to be unfounded, and the leaders of all parties in the Reichstag expressed their condemnation of the tactics which destroyed the confidence of the soldiers in their leaders, Ahlwardt gained steadily in popularity. In spite of the protest of the Conservative party, he was nominated as a representative for the Reichstag from the district of Friedeberg-Arnswalde; and he was elected December 5, 1892, while still on trial for libel in a suit brought against him by Ludwig Loewe & Company. Four days later Ahlwardt was sentenced to five months' imprisonment.

Neither this punishment nor subsequent sentences for libeling public officials seemed to injure his popularity. His public lectures on "Jewish Guns" and similar subjects, for which an admission fee was charged, were attended by large audiences; and in the general elections of 1893 he was returned to the Reichstag by two constituencies. In 1895 he visited America with the view of starting an anti-Semitic agitation there; but, although he remained in the country about a year, he failed in his object. Discharged from his position as rector, Ahlwardt edited various newspapers, among others the "Bundschuh"; but neither his journalistic nor his commercial enterprises were successful, though he employed the unscrupulous tactics which he claimed were practised by prominent Jews in the business world. He conducted a cigar-store under the name of his son-in-law in order to avoid attachments by creditors. In Germany his name, like that of Drumont in France, symbolizes the worst form of anti-Semitism.

AḤMED HAMDI, PASHA. See Hamdi, Aḥmed.

AḤMED-PASHA: Turkish vizier and viceroy of Egypt under Solyman II., the Magnificent (1520–1566). He received these honors as rewards for valor displayed at the conquest of Rhodes (1523). But Aḥmed had hoped to be made grand vizier, and in his disappointment planned to detach Egypt from Turkey and to declare himself its independent ruler. He sought to induce the Jewish farmer of the mint Abraham de Castro to place his name on the coins. De Castro pretended compliance, and obtained a written order to that effect over Aḥmed's signature. With this evidence he secretly left Egypt for Constantinople and informed Solyman of Aḥmed's treason. Foiled thus in his plans, Aḥmed avenged himself upon the Jews of Cairo; he imprisoned some of them, and gave over the Jewish quarter to the Mamelukes to pillage, but recalled this permission when his adviser Mani reminded him that the Jews' property should by right belong to him and not to the plunderers. He then summoned to his palace twelve prominent Jews and ordered them to pay an exorbitant sum of money (200 silver talents) within a short time, under penalty of death to all the Jews of the city. For security he retained them as hostages. To a request for delay he gave no heed, but reiterated his threats. In this desperate condition the Jews instituted a public fast and day of prayer and penitence. Samuel Sidillo gathered children under the age of twelve to pray in the synagogue. In the meanwhile a large sum of money, amounting to about a tenth part of the sum demanded, was collected and offered as payment on account. Aḥmed's private secretary Zada, in reply, gave orders to put the collectors in irons, and announced that they and all the rest of the Jews would be put to death as soon as the viceroy should leave the bath where he then was. At the very moment when this threat was uttered, Aḥmed was attacked in the bath and severely wounded by a band of conspirators headed by one of his viziers, Mohamed Bey. Aḥmed escaped from his assailants, but was subsequently captured and beheaded (in Rebiul-Achir). These events, taking place in March, 1524 (Adar 27, 28), were long afterward commemorated by the Egyptian Jews as the Cairo Purim (Purim al Miẓriyin). A "Megillah" (Purim narrative) detailing them was drawn up.

AHOLIBA. See Oholiab.

AHOLIBAMAH. See Oholibamah.

AḤOT ḲEṬANNAH, אחות קטנה ("The Little Sister," Song Sol. viii. 8): A *pizmon* (ritual poem) of eight stanzas, signed with the acrostic of Abraham Ḥazan, and sung in the Sephardic ritual before the commencement of the New-year's evening prayer, the refrain running, "May the year end with her woes!" changed in the last stanza to "May the year begin with her blessings!" The author, a cantor who was born in Salonica in 1533, was probably also the composer of its beautiful melody in the hypo-dorian mode (minor scale without the leading note) which has been slightly developed in the course of tradition.

This melody has many striking points of similarity to contemporary airs from the region of the Greek archipelago, such as those analyzed by Bourgault-Ducoudray, which, he remarks, possess a certain amount of Italian coloring. In the present melody the Italian Jews have obviously modified the original air in the direction of a more definite coloring of this nature, but the Dutch, English, and West Indian Sephardim have retained some Oriental peculiarities that give their version the appearance of a more faithful tradition than the Italian. The music follows on page 295. F. L. C.

AHRIMAN (Angro-mainyush; identical with Satan, the Devil, Armilus): In the Mazdian religion, the evil deity, who has his real opposite in Spenta Mainyu, "the beneficent [holy] spirit." The latter was identified at a later period, if not originally, with Ahuramazda. Ahriman would seem to have existed as long as Ahuramazda; for, according to the conceptions of the Mazdian religion, immeasurable space has always existed, with its two hemispheres of light and darkness; each with its particular spirit: the one, that of light or life, and the other that of darkness or death—the spirits, in short, of good and of evil. Ahuramazda, however, is the real originator of this present world, for Ahriman created only the harmful and unclean animals, diseases, evil spirits (dævas), sin and death; and he seeks continually to destroy the whole good creation.

Ahura-mazda and Ahriman.

Ahriman's might, too, is very terrible in the eyes of the faithful believer of the Mazdian faith; for he possesses a whole kingdom of evil beings, who are obedient tools in his hands for annihilating the creations of Ahuramazda and for bringing men to violent destruction. Among these evil spirits there are six that are in intimate contact with his person, just as there are six Ameshaspentas that surround Ahuramazda. The number six may be an invention of a later period for the sake of arriving at a counterpart to Ahuramazda's body-guard. But it is certain that Ahriman, too, according to the testimony of the Mazdian religion in its earliest epoch, is surrounded by an army of evil beings like-minded with himself. The whole history of the world is one long-continued struggle between Ahuramazda and Ahriman. The course and outcome of the struggle are, however, settled beforehand. The conflict is to proceed for 12,000 years, divided into four periods of 3,000 years each.

At the close of the last period, the Saoshyat or Sosiosh, the Messiah of the Parsees, will arise and make an end of Ahriman's dominion, not, however, until he has been allowed to exercise his sway to an extent before unknown. Sosiosh will at the same time raise all the dead to life, hold final judgment upon the earth, and inaugurate the regeneration of the present world.

This tenet of the Persian religion has not been without its influence upon the ideas of later Judaism. As late a writer even as the Deutero-Isaiah (Isa. xlv. 7) expresses himself in such a way as to exclude beyond question any dualism in religion, if we are not to interpret his words as being a direct attack on the Parsee doctrine, a god of light and a god of darkness.

“Satan” in the Bible.

But after the Exile the Jewish mind becomes unable to refer to God, as formerly, everything that has happened and continues to happen in the world. As early as the prologue to the Book of Job, and in Zech. iii., Satan is spoken of in terms that show that he is no longer merely a servant of YHWH, but is, rather, a persecutor of man, actuated by personal motives in making mankind evil and in checking God's work. In I Chron. xxi. 1, where the word “Satan” appears without the article, we have a new step in the development of his character, in that the figure of Satan is employed to explain a matter hitherto ascribed without further thought to God (compare II Sam. xxiv. 1). Satan acts (according to I Chron. xxi. 1) entirely on his own account in enticing David to commit sin. According to the Book of Daniel—composed about the year 168 B.C.—the whole of the history of the non-Jewish world, from the point when the Babylonian power first comes into contact with Israel down to Antiochus Epiphanes, constitutes merely an outburst of the ill-will and enmity of the kingdoms upon the earth against God and His chosen people.

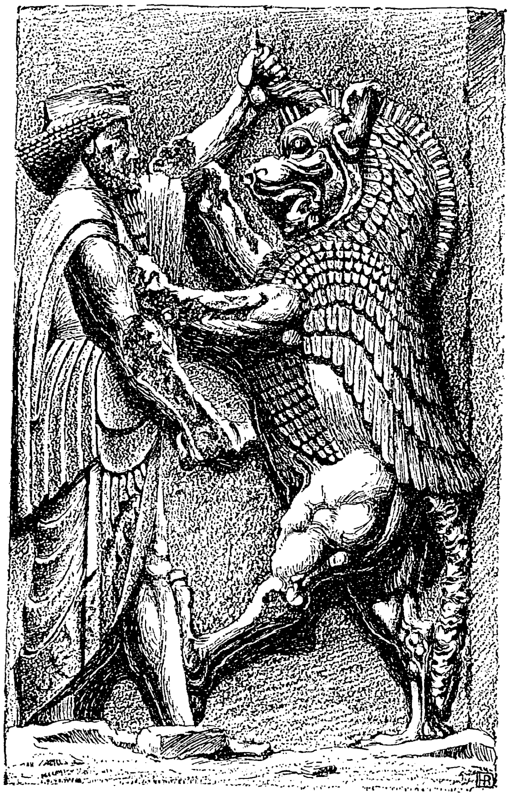
Rise of Dualism.

Dualism is even more clearly marked in the Book of Daniel than it is in the Parsee religion, for the divine and the secular kingdoms are unable to exist side by side. The use that is made in I Chron. xxi. 1 of the figure of Satan as an explanation of a certain historical event is continued in such passages as Book of Wisdom, ii. 24, where, in allusion to Gen. iii., it is stated that “by the envy of the devil death entered into the world.” In agreement therewith the serpent in the Garden of Eden too becomes identified with Satan or the devil, or is said to have been his tool (compare the Jewish portions of Rev. xii. 9, xx. 2). Thus Satan (the devil) is here employed as an explanation of the origin of evil in mankind. In conjunction with this, and as a development from I Chron. xxi. 1, we have the version given in the Book of Jubilees of the story in Genesis; for there Satan (or Mastema, as he is there named) has repeatedly—whenever it is necessary to remove any feature that might give offense to Jewish conceptions of that later time—to assume a part that in Genesis was assigned to God Himself. At the same time he is given an ever-increasing army of evil spirits to serve him: the ancient popular belief in harmful—not exactly evil—spirits becomes transformed into a belief in a dominion of evil under the sway of its head, the devil.

Consequently Satan (or the devil) obtained for Jewish ideas almost the same significance as Ahriman for Persian. Indeed, in certain respects he developed greater power than his Persian counterpart, inasmuch as he succeeded in corrupting the immediate followers of God, whereas Ahriman, in his contest with Ahuramazda, did not achieve such success. The Jews tried to preserve the monism that was their original view by explaining the rise of dualism as due to a fall among the originally good spirits. The author of the Book of Enoch (chaps. vi. *et seq.*) attributed the question of the origin of evil to the conception of a fall of the angels who seduced the daughters of men (compare Gen. vi.), becoming thus the authors of all earthly sins, and especially of the demons, who, according to the same author, are descended from the giants which the daughters of men bore to the fallen angels. In accordance with another doctrine, the devil was said to have been actively present in the Serpent in the Garden of Eden (see above); while still another maintains that the principles of good and evil were opposed to each other from the very beginning.



The Ahriman Dragon.
(From Fergusson, "History of Architecture.")

Just as the dominion of the evil spirits was, in the Parsee theory, to come to an end with the advent of Sosiosh, so is the Messiah, according to the Jewish faith, to destroy the devil and his kingdom. Just as, again, Ahriman, in the Persian belief, was to do mankind terrible injury shortly before his end, so too, in the Jewish view, great tribulations were to precede the Messiah's coming. The Jews would seem to have expected an evil Messiah, an Antichrist; consequently, the teaching of the New Testament in this direction does not imply anything new. This Antichrist is, moreover, to be, on the hypotheses of several writers, nothing else than an incarnation of the devil himself. In consequence of the hatred of the Jews toward Rome, even after it had accepted Christianity, this Antichrist was also called Armilus, a Jewish rendering of Romulus; thus, in Pseudo-Methodius, "Romulus qui est Armilus" (compare W. Bousset, "Antichrist," pp. 33, 67).

Antichrist the Incarnation of Satan.

Bibliography: E. Stave, *Einfluss d. Parsismus auf das Judentum*, 1898; W. Bousset, *Der Antichrist*, 1895; Sieffert, *Antichrist*, in A. Hauck's *Realencyklopädie für Protestantische Theologie u. Kirche*; J. Darmesteter, *Ormuzd et Ahriman*, Paris, 1877; Jackson, *Dualism*, in Geiger and Kuhne, *Grundriss der Iranischen Philologie*, ii. 626-631.

E. S.

——**In Rabbinical Literature:** Ahriman (Angromainyush) is mentioned in Sanhedrin, 39*a*: Amemar, on being told by one of the Magi, "The upper half of thy body belongs to Ormuzd [הורמין], the good principle; the lower to Ahriman [אהורמין], the evil principle," replies satirically, "Why, then, does Ahriman permit Ormuzd to carry the water (the excreta) through his province?" The whole conception of Ahriman as the antagonist of the divine principle of goodness permeated Judaism in many ways. Just as Ahriman appears in the guise of a serpent and casts poison into man with the aid of Jeh, the personification of menstrual impurity ("Bundahish," iii.; in West, "Sacred Books of the East," vi. 6; Windischmann, "Zoroastrische Studien," p. 61), so does Samael, the fallen angel-prince, select the Serpent as the seducer of Adam (Pirḳe R. El. xiii.), and the poison of impurity in Eve is his work—*zohamo shel naḥash*—(Shab. 146*a*; Yeb. 103*b*; 'Ab. Zarah, 22*b*). "In the future the Holy One—blessed be His name—shall bring the Evil Spirit and slay him in the presence of the righteous and the wicked ones: the righteous will shed tears of joy at their victory over the gigantic foe, and the wicked will weep at their inability to defeat so small a power as he will then appear to them" (Suk. 52*a*).

Defeat of the Arch-fiend.

This end of the archfiend goes back to an older form than is presented in "Bundahish," xxx. 30-33, according to which Ahuramazda at the last day with his seven archangels goes to war with Ahriman and the seven archfiends; each archangel crushing the archfiend opposed to him, until finally only Ahriman and the Serpent remain. Against these Ahuramazda rises as high priest with the magic girdle in his hand, and, assisted by Sraosha, brings final defeat upon them; so that the Serpent is burned in the molten metal of the nether world, into which Ahriman, too, casts himself to be consumed along with the whole infernal region, which is then purified and added to the regenerated world of Ahuramazda. The older view of the defeat of Ahriman may be learned from the sculptural presentations of Darius and Xerxes, in which there is the image of Ahuramazda stabbing a monstrous animal called, as a rule, the Ahrimanian beast, but which is, in point of fact, Ahriman himself. This is a repetition of the old Babylonian myth of Bel Marduk and the Tiamat (see illustrations from the

Persepolis hall of one hundred columns, in Mme. Ragozin's "Media," p. 402, and in Justi's "Persien," p. 108, following Ker Porter's "Travels in Georgian Persia"; compare Nöldeke, "Gesch. d. Artachsir i Papakan," pp. 29, 55 *et seq.*: the story of Bel and the Dragon is repeated in the legend of the Persian king). This Evil Spirit was believed to be alluded to also in Joel, ii. 20: "I will remove far off from you הצפוני [the Concealed One—in the human heart; not, as the A. V. has it, "the northern army"], and drive him into a land barren and desolate, with his face toward the east sea, and his hinder part toward the utmost sea, and his stink shall come up, and his ill savor shall come up, because he hath done great [insolent] things" (Suk. 52*a*; see Merx, "Die Prophetie des Joel," p. 213, who finds a Judæo-Mohammedan tradition identifying the "Northern One" with the Mohammedan Antichrist, Al-Dajjal—the Liar). But there is direct proof that the big monster slain and cast off as offensive is none other than Ahriman.

His Death Fulfils Prophecy.

According to Targ. Yer. Deut. xxxiv. 3, Moses was before his end shown the history of Israel's tribulations, ending with the punishment of Armalgus the Wicked (ארמלגום רשיעא), the war of Gog and Magog, and the appearance of Michael as his triumphant combatant. Compare with this the battle of Gabriel with the Leviathan at the end of days (B.B. 74*b*), and the Antichrist stories in Jellinek, "B. H." v. 127; "Assumptio Mosis," 10. Thus the Messianic prophecy (in the Targum to Isa. xi. 4), "With the breath of his lips [mouth] will he slay the wicked," refers to Armalgus—as the manuscripts have it, or as our printed edition has it, Armilus, which is the same as Armalyus = Armainyus. Bacher ("Targum zu den Propheten," in "Z. D. M. G." 1873, p. 31, note) has shown that all the manuscripts to Isa. xi. 4 have the נ, either ארמלגון or אדמלגון or ארמלגום. He has also called especial attention to the tyrant Armalinus, the mythical builder of Memphis in Arabian folk-lore, who, according to Professor Fleischer, is Armalgus, whom Bacher also identifies with Angro-mainyush. Jellinek, "B. H." vi. xxx., found, in the Leipsic manuscript containing "Milḥamot ha-Mashiaḥ," the name written ארמינוס. Saadia ("Amunât," ed. Landauer, p. 239) calls him ארמליוס Armalyos.

Owing to the identification of Rome's angel with Samael, chief of the evil spirits, Armilus in the course of time was identified with Romulus (see Bousset's "Antichrist," pp. 66, 67). The name given to Armainyush in other Jewish eschatologies was Belial (Beliar, II Cor. vi. 14; Sibylline Books, ii. 6,15, iii. 63; Testaments of the Twelve Patriarchs, Dan. v.), the same as "spirit of hell" (see Ps. xviii. 5 and Bäthgen's Comm.), hence the "son of perdition" (II Thess. ii. 3) and the "man of sin," that is, *rasha'*, "the Wicked" (Isa. xi. 4). Thus the Serpent is spoken of as *Ha-rasha'*, "the Wicked One," in Gen. R. xx., Bek. 8*a* (compare Targ. Yer. Gen. iii.13); and Rome as the wicked kingdom, *Malkut ha-resha'ah* (Gen. R. lxxvi.).

His Guises and Names.

In the Hebrew apocalyptic literature (Midr. Wayosha'; Book of Zerubbabel; Otot ha-Mashiaḥ; The Secrets of Simon b. Yoḥai; and the Elijah Apocalypse in Jellinek, "B. H." i. 56, ii. 56, 60, iii. 65–80) Ahriman appears in many forms that gave rise to all kinds of conjectural interpretations: ארמילאוס, explained by Jellinek ("B. H." iii. xviii.) as Heremolaos; according to Grätz, in Levy, "Wörterbuch zu den Targumim," *s.v.*, a supposed translation of בל־עם, Bala 'am = "Destroyer of the people"; ארמילוס explained by Zunz, "G. V." p. 295 (who declares the passage in Targ. Yer. to Isa. xi. 4 to be a late interpolation), as a combination of Romulus and Remus; and by Hitzig (in his "Commentary on Daniel," p. 125) as referring to Caligula, whom Suetonius (chap. xxv.) represents as appearing *armillatus*. Then there are also the forms הרמלת and תרמילא, which convey no sense at all; and finally he is introduced as "Armilus whom the nations of the world will call Antichristus," a name which appears again in distorted forms as הכשרת and הרתחשסתא (see Elijah Apocalypse in Jellinek, "B. H." iii. 65). He is described as a monstrous figure of immense size, with one small and one large eye; with leprosy on his forehead; with one ear open and one closed; the left arm small, and the right very long; and of his origin the strange story is given that he is the son of Satan, and that a stone is his mother. There is in Rome a marble block "not made by human hands," in the shape of a beautiful maiden; and under the guiles of Satan the youths of Rome are filled with lust at sight of it; the stone gives birth to the monstrous giant who becomes king and Messiah of the Romans. It is he who leads the whole army of heathendom in battle against the Messiah, the son of Ephraim, and conquers him. His reign lasts, however, only forty or forty-five days, and he is at last defeated by the Messiah from the house of David, with the aid of Michael the archangel and Elijah.

That this legend—evidently connected with that of Virgil, and with the stone of Rhea, brought to Rome in 204 B.C., and the impure cult of Sabazius, whose symbol was the serpent (see Preller, "Griechische Mythologie, "i. 531, 576, 578)—has nothing to do with Romulus is clear. Nor can the Armilus-Antichrist legend be the product of the Arabic-gaonic age, as Zunz ("G. V." 2d ed., p. 295) thought, for Bousset in his work on Antichrist has clearly shown that it is of pre-Christian origin. Already Saadia (in "Emunot we-De'ot," viii. 122 *et seq.*) speaks of it as an ancient tradition. The Mandæans also speak of an Antichrist, *Nebu Mesiha*, as one full of lasciviousness and stricken with leprosy ("Right Genza," section ii., p. 59; Brandt, "Mandäische Schriften," pp. 95, 97 *et seq.*), who, with the aid of Ruha, his mother, casts the spirit of lust and fornication into the world. He is called the deceiver or Roman (Nöldeke prefers the latter translation; see Brandt, "Mandäische Religion," p. 228, and "Mandäische Schriften," p. 95, note 2). He is identical with the Mohammedan Al-Dajjal (The Deceiver or Liar), whose reign lasts forty days (see Bousset, p. 74, and compare ANTICHRIST).

K.

AHRONY, ISAAC. See COURLAND.

AHRWEILER: Town of Rhenish Prussia, twenty-three miles northwest of Coblenz, on the river Ahr. It is mentioned in the year 1248 as containing a Jewish colony. In 1255 and 1262 a number of Jews of Ahrweiler acquired property at Cologne; some of them are referred to as living at Bacharach at the beginning of the fourteenth century. Wolfram, archbishop of Cologne in 1335, ordered the same measures to be applied to the Jews of Ahrweiler, in regulating the meat trade, as were already in force among the Jews of Bonn. The community suffered greatly from the persecutions which broke out in the Rhine districts in 1348, during the prevalence of the black death, and in the archbishopric of Cologne alone no less than forty-four communities were annihilated. At the beginning of the fifteenth century

Ahrweiler was attacked by the soldiery of Brabant and Holland, and the Jewish community barely escaped destruction. Of its rabbis, a certain **Isaac of Ahrweiler** addressed ritual questions to Jacob Mölin of Worms (d. 1427), and wrote a commentary on the Pentateuch. In Ahrweiler was also Rabbi Issachar, whose daughter Frommet, the wife of Rabbi Samuel ben Moses, was so learned that she copied Samuel Schlettstadt's "Ḳiẓẓur Mordecai," in 1454, for her husband. The manuscript is now in the Bibliothèque Nationale in Paris. In the "Judenschreinsbuch der Laurenzpfarre" of Cologne there are mentioned as coming from Ahrweiler: Joseph and his wife, Richa, 1248–55; Gumpert, son of the preceding, 1270–75; Saul and his wife, Reggelin, 1318–26; Joseph and his wife, Genanna, 1291–1336. In the Palatinate records are to be found in addition: Simon, son of Vifanz (= Ḥayyim), 1346; Hanne (in Bacharach), 1367, widow of the preceding; to which may be added Baruch ben Simon, physician, poet, and glossarist (flourished in the fifteenth century). Ḥayyim Treves, son of Johanan Treves who wrote a commentary upon the Maḥzor and who succeeded Ruben Fulda in the rabbinate of Cologne, died at Ahrweiler in 1598. His son-in-law, Isaac ben Ḥayyim, also lived there. During the seventeenth century (1641 *et seq.*) we find the name of **Herz Ahrweiler** as one of the "Rabbinatsassessoren" at Frankfort-on-the-Main. His son Mattithiah Ahrweiler became rabbi of Heidelberg in 1708. The family name Ahrweiler occurs also at Prague and Worms. After this every trace of the community disappears.

The present Jewish community dates from the middle of the nineteenth century. In 1899 there were eighty-two Jewish families there. The new synagogue was built in 1895.

A. F.

AHRWEILER, MATTITHIAH: German rabbi; born about 1650 at Frankfort-on-the-Main; died at Heidelberg, September 19, 1728. At the time of his birth his father, Herz, was dayyan. Mattithiah officiated as rabbi at Bingen (Jacob Popper, "Responsa," ii., No. 8, Frankfort, 1742), and subsequently at Mannheim, where he taught in the college (see Klaus) founded by Lemle Moses. In 1708 he took part in the dedication of the Lemle Institute. Shortly afterward he was called to Heidelberg as rabbi to the congregation of that city, with jurisdiction over all the congregations in the Palatinate, which position he held until his death. The local memorial book praises his piety and learning.

AHUDI, SOLOMON. See Solomon b. Jacob ibn Ayub.

AHURAMAZDA. See Ormuzd.

AI (or **HA-'AI,** probably from עי = "The Ruin"): A royal Canaanitish town, eastward from Beth-el in the northern part of the territory of the tribe of Benjamin, the seat of a king, destroyed by Joshua (Josh. viii.) after one unsuccessful attack (Josh. vii.). In Josh. viii. 28 it is described as "a ruin unto this day." It must have been rebuilt before the time of Isaiah, as it is mentioned in Isa. x. 28, where the name is given as Aiath. "Men of Beth-el and Ai" are mentioned after the Exile (Ezra, ii. 28); Aija and Beth-el were peopled by Benjamites (Neh. xi. 31). Ayya (as in many Hebrew manuscripts and the better Septuagint manuscripts, instead of Azzah-Gaza), in the latter passage, is a border city of Ephraim, I Chron. vii. 28. Aiath may be understood thus or as the northernmost city of Judea. According to Gen. xii. 8, xiii. 3, Abraham encamped on a mountain between Ai and Beth-el; and in Josh. vii. 11 Joshua's army is said to have pitched on the north side of Ai with a valley between that place and Ai. Ai is generally identified, according to Van de Velde, with the modern Tell el-Hajar, between Betin and Där Diwan; and, according to Robinson, with Khirbet Ḥayan, directly south of the latter.

W. M. M.

AIBU (IBU): By this name, unaccompanied by patronymic or cognomen, are known four amoraim, three of whom were members of the family of Abba Arika (Rab) in Babylonia, and the remaining one was a distinguished Palestinian. **1.** The father of Rab, and elder half-brother of Ḥiyya the Great, a lineal or lateral descendant of the royal house of David (Ket. 62*b*; Yer Ta'anit, iv. 68*a*; Gen. R. xcviii.). After the birth of Aibu, his father, having become a widower, married a widow who had a daughter, and from that union came Ḥiyya. Aibu married his step-sister, and was thus related to Ḥiyya as both half-brother and brother-in-law (Sanh. 5*a*, Pes. 4*a*). Aibu was a disciple of Eleazar b. Zadok (Suk. 44*b*); and Ḥiyya, speaking to Rab, often addressed him as Bar Paḥate (Son of Nobles; Ber. 13*b*), thus testifying to the noble gifts of his elder half-brother. **2.** A son of Rab, who inherited his name from his grandfather, but not his scholarly capacity. His father, seeing that Aibu was not endowed with great mental gifts, advised him to turn his attention to secular pursuits, and furnished him with a number of practical rules of conduct. Aibu became a farmer; and some had occasion to criticize him for not observing a rabbinical enactment (Pes. 113*a*; B. M. 93*b*; 'Ab. Zarah, 35*b*). **3.** A grandson of Rab (Suk. 44*b*). So little was he known as an authority on the Halakah, that the name of his Palestinian contemporary Abbahu was sometimes substituted for his (Pes. 46*a*, Ḥul. 122*b* *et seq.*). **4.** See following article. S. M.

AIBU (IBU): A prominent haggadist of the fourth amoraic generation (fourth century), contemporary of Judah (Judan) b. Simon (b. Pazzi; Midr. Teh. to viii. 2, cxiii. 1). He was versed in the Halakah, in which he often reported opinions in behalf of Rabbi Yannai (Ket. 54*b*, 104*b*; Ḳid. 19*a*, 53*a*; Zeb. 103*a*); but no original decisions have come down from him. In the field of the Haggadah, on the contrary, while we find him repeating observations of his predecessors (Gen. R. xliv., lxxxii.; Midr. Teh. to ci. 8), he is generally original in his remarks. Commenting on Jacob's order to Joseph, "Go and see whether it be well with thy brethren and well with the flock" (Gen. xxxvii. 14), the question is raised, Do flocks of sheep appreciate human greetings? Whereunto Aibu replies: "It is man's duty to pray for and look after the well-being of the dumb animal that contributes to his welfare" (Tan., Wayesheb, 13, ed. Buber; see Gen. R. lxxxiv.). In specifying the number of men that escorted Abraham on his journey to Moriah (Gen. xxii. 3), and Saul on his visit to the witch of En-dor (I Sam. xxviii. 8), Scripture, according to R. Aibu, intends to convey the practical lesson, that man when traveling should be accompanied by at least two servants, or else he may himself become his servant's servant (Lev. R. xxvi.).

In his Biblical exegesis, he aims to reconcile variations in Scriptural expressions. Thus, Aibu explains the reason assigned for God's mercies in the passage, "The Lord will not forsake his people for his great name's sake" (I Sam. xii. 22), and the omission of that reason in the similar message, "The Lord will not cast off his people" (Ps. xciv. 14), by applying the latter to the times of the people's piety, and the former to the days of heedlessness. God is always good: when the people are deserving of His goodness He showers it upon them for their own sake; when, on the contrary, they are not deserving, He forsakes them not for His great name's sake (Ruth R. to i. 6). Similarly, he explains the variation in the version of the Fourth Commandment, "Remember the Sabbath day" (Ex. xx. 8), and "Keep the Sabbath day" (Deut. v. 12). According to Aibu (on behalf of Resh Laḳish) the term "remember" applies to cases when one is not able to rest on the Sabbath day, as, for instance, when one is on a sea voyage, and only remembering is possible; the term "keep" applies to ordinary circumstances, when "keeping" is obligatory (Pesiḳ. R. xxiii.).

Dwelling on the verse (Ps. viii. 4 [A.V. 3]), "When I consider thy heavens, the work of thy fingers," etc., Aibu remarks:

> "There are three classes of men: (1) those who are contented with admiring the grandeur of the sky, with the moon and stars and planets; (2) those who pray to God to reserve all the good due to them for heaven in the hereafter; and (3) a class of lazy workingmen who say, 'Whatever thou wilt give us, give us now, both what may be our due and whatever may be bestowed upon us through our fathers' merits: give us whatever thy fingers have wrought'" (Midr. Teh. to Ps. viii. 4).

Elsewhere he says: "No man departs from this world having realized even half of his desires. When a man has acquired a hundred pieces of gold, he longs to increase them to two hundred; and when he has two hundred, he is anxious to double these again" (Eccl. R. i. 13, iii. 10). Aibu's homiletic observations are numerous, both those related in his own name and those reported in his behalf by the haggadists of his own and subsequent generations (compare Pesiḳ. i., iii., v., xvii., xxv., xxvii.; Pesiḳ. R. ed. Friedman, index; Tan., ed. Buber, index; Midr. Teh. ed. Buber, index; Bacher, "Ag. Pal. Amor." iii. 63–79). S. M.

AIBU (IBU) B. NAGGARI: A Palestinian amora of the fourth generation (fourth century), disciple of Hila, and contemporary of Judah b. (Simon b.) Pazzi. He reports Halakot in behalf of many of his predecessors (Yer. Sheḳ. iv. 48*c*, Yer. Meg. i. 70*a*, Yer. Yeb. i. 2*c*), and also advances opinions of his own. Several of his homiletic observations are preserved. One of these makes the scriptural verse "When he shall be judged, let him be condemned" (Ps. cix. 7) the basis for the often-cited rabbinic doctrine that Satan is always ready to accuse at a man's critical moment (Yer. Shab. ii. 5*b*; Yalḳ., Gen. § 31). Another, and the one most frequently quoted, is that which exonerates David from the imputation that he really "sat before the Lord" (compare II Sam. vii. 18), whereas sitting in the Temple was strictly prohibited. Aibu interprets the Hebrew term *wayesheb* ("he sat") as if it were *wayasheb* ("he settled," or "prepared himself"), and interprets it as signifying that David composed himself for praying before the Lord (Yer. Pes. v. end, 32*d et al.*; the reading Bun b. Nagdi, in Midr. Sam. xxvii., is obviously a copyist's error). That Aibu received instructions directly from Johanan, as seems to be intimated in the Babylonian Talmud (R. H. 21*a*), is doubtful, since he was known to have been a disciple of Hila (see Frankel, "Mebo," pp. 63*a*, 75*b*; Bacher, "Ag. Pal. Amor." iii. 559–560). S. M.

AIN ("Fountain"): **1.** A city given to the Levites in the tribes of Judah and Simeon (Josh. xv. 32, xix. 7, xxi. 16; Neh. xi. 29). The Septuagint reading connects Ain and Rimmon and gives them as one; although the context of I Chron. iv. 32 is in favor of the supposition that they at least were regarded as distinct. The place corresponds to the modern Umm-er Rammamiu (Buhl, "Geogr. d. Alten Palestina," p. 183). **2.** A place on the northern boundary of Canaan, west of Riblah. Its identity is the subject of much dispute. Both the Jerusalem Targums refer it to the fountain in the grove of Daphne, near Antioch. Later geographers prefer the source of the Orontes; others identify it with a well at the foot of Mt. Hermon (Num. xxxiv. 11; Bacher, "Ag. Pal. Amor." iii. 659 *et seq.*). G. B. L.

AIN KADES: A well near the Arabah, first seen by Rowlands in 1842. He identified it with the KADESH BARNEA of the Bible. It was not seen again by Europeans till 1881, when it was visited by Trumbull, who has shown conclusively that Ain Kades and Kadesh Barnea are the same. See KADESH.

BIBLIOGRAPHY: Trumbull, *Kadesh Barnea*, pp. 272–275, 309–321, New York, 1884.

G. B. L.

AIN MUSA ("Spring [or "Springs"] of Moses"): A small oasis, about seven or eight miles southwest of Suez, Egypt. It is about 250 acres in extent, with luxuriant gardens and groups of palms and tamarisks. The water of some of its springs is undrinkable, while that of others has only traces of salt, so that the popular identification of it with MARAH (Ex. xv. 23) is not very plausible. Modern scholars have, more frequently, connected Ain Musa with ELIM (Ex. xv. 27). W. M. M.

AIRE: A fortified town on the river Adour, in southern France. There is no certainty that a Jewish community ever existed here; but about the middle of the thirteenth century a Hebrew poet composed a eulogy on his native town which, from its Hebrew spelling (איירש), would seem to have been Aire. This poet was ISAAC BEN ABRAHAM HA-GORNI. The appellation Ha-Gorni ("he of the threshing-floor") is derived from the modern name of Aire, which signifies a barn or threshing-floor; and by a play on words, the poet applies this name to his native place. He mentions several of his fellowtowns men: one Samuel, whom he describes as "prophet," and Aaron, a learned Talmudist, besides a number of private individuals.

M. S.

AIX, or **AIX-EN-PROVENCE:** A town in the department of Bouches-du-Rhône, France, the Aquæ Sextiæ of the Romans, and for a short period the capital of Provence. It is variously transcribed in Hebrew, and is sometimes translated in Hebrew literature by "'Ir ha-Mayim."

The first mention of Jews in Aix appears in a document of the year 1283, preserved in the annals of the Church of Aix, wherein it is stated that the community, in return for the yearly payment of two pounds of pepper, was permitted to have a synagogue and a cemetery. The greater part of the Jews of Aix inhabited the rue Venel, in the quarter of Saint-Sauveur, which was then known as the

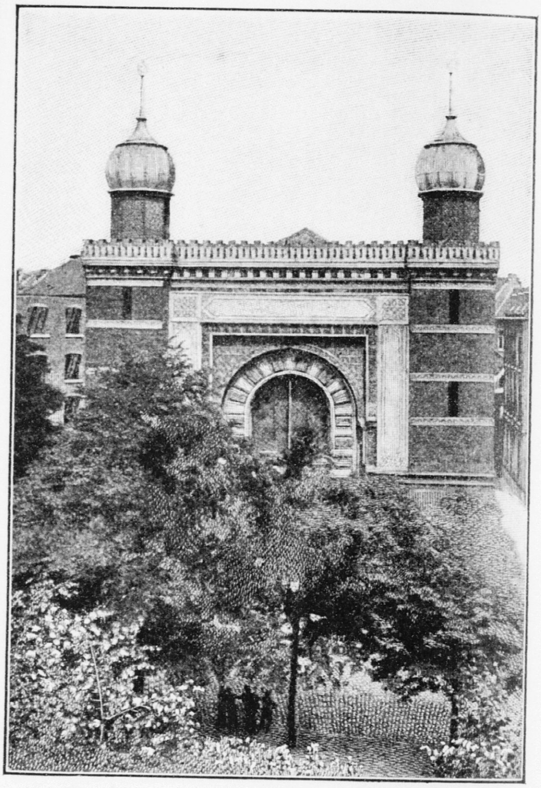
"Jews' Street." Their chief trade seems to have been in spices, silks, and wax. The exact number of Jewish families that made up the community can not be ascertained, except for the year 1341, when Aix contained 1,211 Jews, of whom 203 were landed proprietors. The ordinances against the Jews throughout Provence were rigorously applied to those of Aix, and were the cause of many complaints on the part of the Jewish community. They could not, for instance, testify against a Christian; nor were they allowed to visit the public baths on any day during the week but Friday, which was set aside for their exclusive use; they were forbidden to do work on Sundays; no Jew could embark for Alexandria, and only four could take passage by the same boat for any of the other ports of the Levant. This latter enactment often compelled Jewish merchants to send Christian messengers on their commercial expeditions. The failure, on the part of Jew or Jewess, to wear the distinguishing yellow toque, or the round patch, was severely punished. A local ordinance prohibited the Jews from engaging in dice-throwing with Christians. It is probable that the inquisitorial commission of Dominican friars, instituted in 1198 by Pope Innocent III., against the Albigenses, became likewise a source of annoyance to the Jews of Aix and of the other large cities of Provence; for, in 1276, Charles I. of Anjou promulgated an edict which abolished the right of this commission to molest the Jews within his territory.

With Charles I. the Jews of Aix, together with those of other towns of Provence, lost their protector. Charles II. (1285–1309) issued ordinances according to which the Jews were forbidden, on pain of a fine of two silver marks, to have a Christian servant, to hold a public office, and to lay aside the distinguishing yellow badge. The first half of the fourteenth century was relatively a happy epoch for the Jews of Aix, under the reign of Robert of Anjou, who showed them every kind of protection; but the second half was a very dark one. The presence of the wicked Joanna on the throne of Provence gave scope to the enemies of the Jews, and the most barbarous rescriptions were issued. In 1344 the Jews of Aix had much to suffer from the riots following the blood accusation against Samson of Reylhane.

Execution of Astruc de Léon.

An incident fraught with frightful consequences to the Jews of Aix and Pertuis took place in the year 1436, during the otherwise tranquil reign of René of Anjou. A Jew of Aix, Astruc de Léon, was accused of having blasphemed the name of the mother of Jesus, and a fine of 100 livres was imposed upon him for this crime. But the populace considered this punishment too light, and demanded and obtained his death; and, not content even with this, a wholesale massacre of the Jews was begun which extended over a considerable area. The execution of Astruc took place near the Church of the Oratory, as proved by a commemorative column said to have been still in existence at the end of the eighteenth century. In the account given by Depping, it is related that 20,000 livres were offered by the Jews to René as a ransom for the accused, and that finally he was executed by disguised noblemen of Aix; but these statements are based chiefly upon very unreliable documents. Joseph ha-Kohen, in his "Emeḳ ha-Baka," speaks of a massacre of the Jews of Aix during the year 1430, and states that in this uprising of the populace seventy-four Jews accepted baptism; but it is highly probable that there is an error of dates here, and that the massacre mentioned by Joseph ha-Kohen is the same as the incident of 1436. This massacre is also mentioned, though vaguely, in the "Shebeṭ Yehudah" of Solomon ibn Verga; but Wiener, in his edition, p. 114, erroneously has "Agen" for "Aix."

On the 10th of May, 1484, a band of marauders from the Dauphiné and Auvergne provinces pillaged the Jews of Aix ("Rev. Ét. Juives," xxxix. 110). When, in 1492, a convoy of Spanish Jews was brought to Marseilles to be sold into slavery, the Jews of Aix associated themselves with those of that city and procured their release, becoming in part responsible for them ("Rev. Ét. Juives," ix. 67).



The Synagogue at Aix-la-Chapelle (see p. 301).
(From a photograph.)

Aix now belongs to the Consistory of Marseilles. It has also an aid association.

Among the few more or less eminent persons associated with the town of Aix may be mentioned: R. Isaiah ben Samuel, poet and savant, who lived about the end of the thirteenth century and who maintained a lively controversy, largely upon personal matters, with the poet Isaac Gorni; Abraham ben Joseph ben Neriya, rabbi at Aix toward the end of the thirteenth century and the beginning of the fourteenth, whose reputation for learning and wisdom spread throughout Provence, and who sided with Abba Mari ben Moses of Lunel and Solomon ben Adret in the theological conflict that took place in the south of France, from 1303 to 1306; Solomon ben Nathan Orgueiri, who, according to Johanan Alemanno, translated from the Latin into Hebrew a book of mysticism and superstition by "Apollonius" (about 1390); and Simon ben Joseph, a learned rabbi, originally of Perpignan, who settled at Aix during the expulsion of the Jews from northern France (1306). The term "of Aix" is appended to names found in various manuscripts, as, for instance, "Don

Bendig of Aix," in manuscript No. 2550 of the Bodleian Library, Oxford. See also NOSTRADAMUS.

W. M.

AIX-LA-CHAPELLE (AACHEN): A city in Rhenish Prussia, in which a Jewish settlement flourished during the time of the Roman empire. In the Carlovingian period there was a colony of Jews near the royal palace; and the Jewish merchants of Aix-la-Chapelle are referred to in a capitulary of the eighth century. In 802 Isaac, who had accompanied the ambassador of Charlemagne to the calif Harun-al-Raschid, made his ceremonial entrance into the royal residence of Aix-la-Chapelle. Among the Jews of Aix-la-Chapelle in 828, a certain David is mentioned, who had admired the wonderful cures of Einhard (Eginhard). For the next four hundred years the records are silent concerning the Jews; and not till 1227 is there another important entry. In that year Frederick II. presented the Jews to Count Wilhelm of Jülich as an imperial fief. The records of the Church of St. Mary show many Jewish converts in the thirteenth century. In 1247 a Jew of Aix-la-Chapelle, Mannis (also called Troist), acquired half a house called "Aquis" (that is, Aachen) at Cologne. An Isaac of Aachen and his son Jacob are mentioned in the "Judenschreinsbuch" of Cologne, 1270–75; also a Solomon of Aachen and his son Vivis, 1280–81. In the fourteenth century the presence of Jews at Aix-la-Chapelle is probable, though not certain. At the coronation of Maximilian I. (1486), the Jews offered homage and gave him magnificent presents. It is certain that Jews resided at Aix-la-Chapelle during the sixteenth and seventeenth centuries, and that they contributed largely to the state treasury. The expulsion of the Jews in 1629 caused the serious loss to the city in tax receipts of 136 gold guilders. In 1667, against the protest of the city council, six Jews were allowed to return. In 1777, the duke of Jülich yielded to the city of Aix-la-Chapelle the Jewish tax, which had been his prerogative. On May 16, 1815, the Jewish congregation, dating from about the end of the eighteenth century, offered homage in its synagogue to the Prussian king Friedrich Wilhelm III. The present synagogue was built in 1860 (see illustration opposite). A cemetery was acquired in 1851. The office of rabbi was held by Dr. Rothschild from 1847 to 1859; by Dr. Wolffsohn, 1861 to 1875; and by Dr. Taubes, 1876. Dr. Jaulus is the present rabbi. In 1900 there were 2,100 Jewish residents at Aix-la-Chapelle.

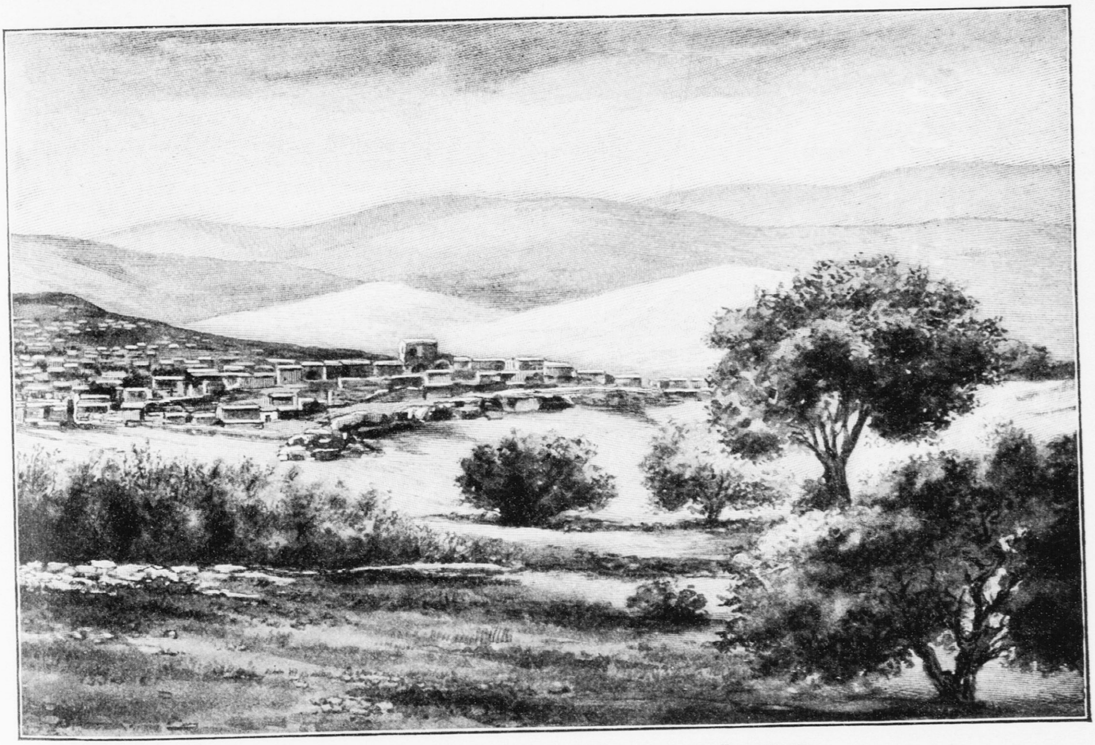
J. F.

AJALON: A city in Palestine, from which the adjacent "Valley of Ajalon" took its name (Josh. x. 12). Its location is identical with that of the present Yâlo, a small village on the western spur of the south Ephraimitic mountain range (Robinson, "Researches," ii. 253; iii. 145; Guérin, "La Judée," i. 290; Pal. Explor. Fund, "Memoirs," iii. 19). The valley of Ajalon is either the fertile plain Merj ibn Umâr or the valley Wady Salmân, which lies west of Gibeon and leads to Ajalon. The city is mentioned in the El-Amarna tablets under the names Aialuna and Ialuna (Winckler, in "Keilinschrift. Bibliothek,"



GENERAL VIEW OF YÂLO—THE ANCIENT AJALON—PALESTINE.
(From a photograph.)

vol. v., Nos. 173, 180). According to Judges, i. 35, the Danites failed to conquer Ajalon; and it remained Canaanitic until subdued by the Ephraimites. It is included in the Danite territory referred to in Josh. xix. 42, xxi. 24 (compare I Chron. vi. 54); but in I Chron. viii. 13 it appears as a city of the Benjamites. Under the name of Aijurun it is mentioned by the Egyptian king Shishak, in the list of cities conquered by him in the time of Rehoboam (W. M. Müller, "Asien und Europa," p. 166). According to II Chron. xi. 10 it was fortified by Rehoboam, and II Chron. xxviii. 18 states that it was taken by the Philistines from Ahaz. Whether it occurred in the original text of I Sam. xiv. 31 is doubtful. Ajalon must not be confused with Aijalon in the territory of Zebulun (Judges, xii. 12). F. Bu.

AJAS. See Ayas.

AKABAH, PALESTINE. See Eloth.

'AKABIA BEN MAHALALEL: A religious teacher, probably of the second tannaitic generation (first and second centuries). Of his early history nothing is known; his teachers are nowhere named; and of his sayings comparatively few have been preserved (Mishnah 'Eduy. v. 6, 7; Mishnah Bek. v. 4; Mishnah Niddah, ii. 6; Mishnah Neg. i. 4, v. 3). The Mishnah portrays him as a man who, even in cases where different traditions were held by the majority of his colleagues, fearlessly and persistently maintained opinions on some Halakot, because those opinions were founded on traditions he had received from his learned predecessors. On one occasion the majority demanded that he renounce his divergent opinions, but he refused. It was even intimated to him that, in the event of his compliance, he would be elevated to the dignity of Ab bet din (president of the court); but 'Akabia rejected the proposition, remarking, "I would rather be called a fool all my lifetime than be a sinner for one moment."

In the course of the discussion of the Halakah concerning the administration of "the water of jealousy" (Num. v. 11–31), 'Akabia declared that, if the subject of the test was not a free-born Jewess, the test-water was not to be administered; while the majority declared a proselyte or an emancipated slave to be the equal of a free-born daughter in Israel. In support of their view the majority cited a case in point, where the former associate presidents of the Sanhedrin, Shemaiah and Abtalion, had the test made on a freed woman; whereupon 'Akabia disdainfully exclaimed, "Dugma hishkuha." This might mean "To one like themselves they gave to drink," and may be construed as an allusion to an old rumor to the effect that these associate presidents were themselves lineal descendants of proselytes (Git. 57*b*); or it might mean "They gave her a sham to drink." The memory of those chiefs being held in esteem, 'Akabia's insinuation gave offense; wherefore the sentence of *nidduy* (isolation, excommunication) was passed on him. This he bore to the end of his days rather than violate his convictions. However, before his death, he admonished his son to submit to the views of the majority, even in the cases where he himself had shown such persistent opposition. His son expressing surprise at so apparent an inconsistency, the dying sage replied: "I have received my tradition from a majority of a school in my days, and so have my opponents. I was bound to conform to the tradition I had received; and so are they bound by their tradition. But thou hast heard the traditions both from myself and from my opponents; from a minority and from a majority, and it is proper for thee to reject the opinions of the individual and adopt the views of the majority" ('Eduy. v. 7).

Another characteristic trait of 'Akabia was the great stress he laid on personal merit. When, on his deathbed, he was requested by his son to recommend him to the sages, he declined to do so. His son inquired whether his father had discovered in him any trait which rendered him unworthy of such recommendation; and 'Akabia's reply was, "No! but thine own deeds will make thee welcome, or thine own deeds will make thee obnoxious" ('Eduy. v. 7).

'Akabia's motto in life was: "Remember whence thou hast come, whither thou goest, and before whom thou must be prepared to render an account of thy doings" (Ab. iii. 1; compare Ab. R. N. xix; Yer. Soṭah, ii. 18*a*; Derek Ereẓ R. iii). Beyond this maxim and the Halakot enumerated above, nothing from him has been transmitted. As to his epoch scholars are divided. While some place him in the patriarchate of Hillel I. (30 B.C. to 10 of the present era), and even somewhat earlier, others bring him down to the first tannaitic generation (10–80); still others believe that he flourished during the patriarchate of Gamaliel II. (80–117). The circumstances and scholastic achievements of the second tannaitic generation render 'Akabia's excommunication more reasonable.

The decree of excommunication failed to obscure 'Akabia's merited fame; for his name reached subsequent generations surrounded by such a halo of glory as to throw doubt on the decree itself. "God forbid," exclaims Judah b. Ilai, one of the tannaim of the fourth generation (139–165), "that we should think that 'Akabia was excommunicated, for the Temple gates were never closed behind a man in Israel so great in wisdom and in the fear of sin as was 'Akabia ben Mahalalel" ('Eduy. *l.c.*). This expression, which is based on the law forbidding an excommunicated person to enter the Temple court, was in later days taken literally, and gave rise to forced halakic discussions and comments (Ber. 19*a*, Pes. 64*b*), as well as to hypothetical speculations about the age of 'Akabia. Elsewhere (Sifre, Num. 105) it is said, "Whoever asserts that 'Akabia was ever excommunicated will have to answer before the tribunal of heaven." This observation is wrongly attributed to Judah b. Betera I. (compare Shab. 97*a*); and conclusions as to 'Akabia's early age are erroneously deduced therefrom.

AKBARITES. See Okbarites.

AḲDAMUT (אקדמות): A mystical poem, written in Aramaic by Meir ben Isaac Nehorai, which is in the Ashkenazic usage interpolated after the opening verse of the lesson from the Law on the first day of the Feast of Weeks. It is traditionally associated with two melodies of different dates. The older (A) is a chant, used also for "calling up" the *ḥatan Torah* (bridegroom of the Law) on the Feast of the Rejoicing of the Law. It is an interesting example of the eighth (hypomixolydian) mode in the medieval, or plain-song, system, which is the tonality of much of the older recitative music of the Synagogue. The other traditional melody (B) for this hymn is of much later origin. There is no reason to suppose it other than the composition of a ḥazan of Middle Germany in the eighteenth century. It has been elevated to the dignity of a representative theme for the festival (compare Addir Hu), and as such is quoted extensively in the rendering of the Hallel (Ps. cxvi. 16–19, cxvii.). Probably its finest musical treatment has been that by J. L. Mombach, written about 1870 for the Great Synagogue of London—a composition of great interest.

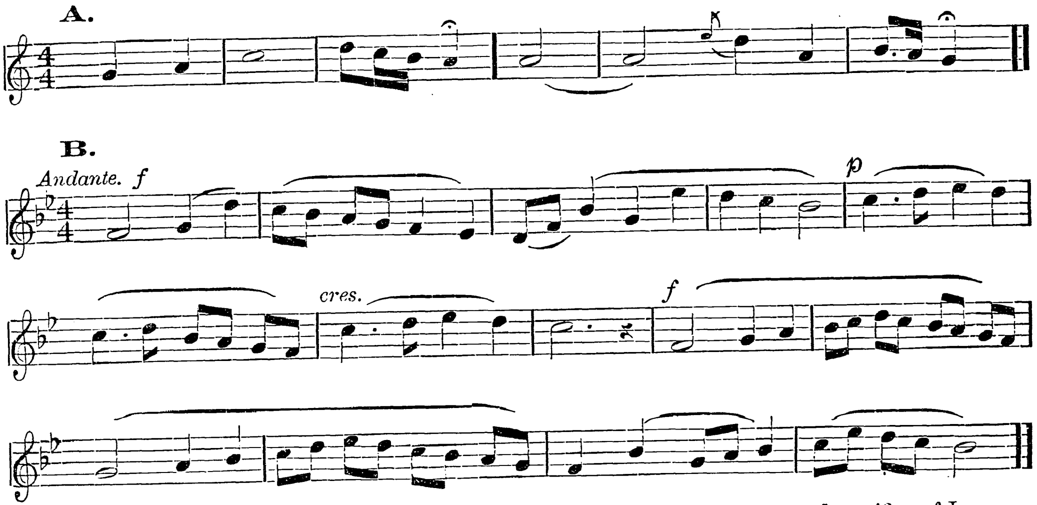
AḲDAMUT



'AḲEDAH, עקידה ("The binding or sacrifice of Isaac"): This Biblical incident plays an important part in the Jewish liturgy. The earliest allusion to it in prayer occurs in the Mishnah (Ta'anit, ii. 4) in the litany for public fast-days, "May He who answered Abraham on Mount Moriah listen to our supplication." In the Gemara (R. H. 16*a*) the use of a ram's horn on New-year's Day is explained as a reminder of the ram which was offered in place of Isaac. Hence the following passage was inserted in the *musaf* arranged by Rab in the third century (Zunz, "S. P." p. 81; B. Beer, "Leben Abraham's," p. 186) for that day (see Gen. R. lvi.; Lev. R. xxxvi.):

> "Remember in our favor, O Lord our God, the oath which Thou hast sworn to our father Abraham on Mount Moriah; consider the binding of his son Isaac upon the altar when he suppressed his love in order to do Thy will with a whole heart! Thus may Thy love suppress Thy wrath against us, and through Thy great goodness may the heat of Thine anger be turned away from Thy people, Thy city, and Thy heritage! . . . Remember to-day in mercy in favor of his seed the binding of Isaac."

Gen. xxii. was taken as the Biblical lesson for the second day of the New-year festival (Meg. 31*a*; compare Rashi, *ad loc.*).

In the course of time ever greater importance was attributed to the 'Aḳedah. The haggadistic literature is full of allusions to it; the claim to forgiveness on its account was inserted in the daily morning prayer; and a piece called "'Aḳedah" was added to the liturgy of each of the penitential days among the German Jews.

Before the first blasts of the shofar are sounded there is sung in the Sephardic liturgy a hymn which narrates the 'Aḳedah; this was written by Judah ben Samuel ibn Abbas, rabbi in Fez in the twelfth century.

This turn given to the attempted sacrifice of Isaac is certainly in conflict with the prophetic spirit. The occurrence is never again mentioned in the Bible; and even in the Talmud voices are raised in condemnation of its conception as a claim to atonement. The injunctions in Jer. xix. 5 and in Micah, vi. 7 against the sacrifice of children are explained as referring to the sacrifice of Isaac (Ta'anit, 4*a*; Yalḳ., Micah, § 555).

These protests were silenced by the persecutions in which Jewish fathers and mothers were so often driven to slaughter their own children in order to save them from baptism. This sacrifice is regarded as a parallel to that of Abraham (Zunz, "S. P." pp. 136–138). The influence of the Christian dogma of atonement by vicarious suffering and death, it has been suggested, induced the Jews to regard the willingness of Isaac also to be sacrificed in the light of a voluntary offering of his life for the atonement of his descendants (Geiger's "Jüd. Zeit." x. 170; "Nachgelassene Schriften," v. 352).

From the point of view of some advocates of reformed Judaism the great importance of the Biblical story of Abraham's attempted sacrifice of Isaac consists in the lesson that God does not desire such a sacrifice; accordingly many American reform rituals have abolished the 'Aḳedah prayers. At the same time stress is laid even by reformers on the typical character of the story as expressing the spirit of martyrdom which permeates Jewish history and has maintained the Jewish faith.

M. L.

AKERMAN, RACHEL: The earliest Jewess to write German poetry; born probably at Vienna, 1522; died at Iglau, Moravia, 1544. She appears to have received an excellent education, having studied both Latin and Greek. She soon exhibited poetical powers, and began to exercise them at an early age. On account of her poem, "Geheimniss des Hofes" (The Mystery of the Courts), in which she described the intrigues of courtiers, Rachel and her father were expelled from Vienna, where they had lived. She died heartbroken at this treatment. M. K.

AKHALTZYK (meaning, in the Georgian language, "New Castle"): A fortified town of Transcaucasia, in the government of Tiflis, on an affluent of the Kur, 110 miles west of Tiflis. Of the 26,000 inhabitants about 3,000 are Jews; some of them being very old settlers, while others emigrated from Abas-Tuman in the middle of the nineteenth century, owing to persecution by the Mohammedans of that region. They have a synagogue and schools, and are mainly cotton-weavers and small traders.

H. R.

AKIBA BAER BEN JOSEPH (SIMON, AKIBA BAER): Son of Joseph Ḥanoks, a Talmudist and cabalistic writer, one of the refugees who, at the expulsion of the Jews from Vienna in 1670, went to Bavaria, to promote Talmudical learning among their brethren in their new home. Being thus reduced in circumstances he at first had to wander from town to town through Bohemia and parts of Germany as a teacher, highly reputed for his Talmudic and cabalistic knowledge as well as for his eloquence as a preacher. As the son-in-law of Veitel Isserles, rabbi of Kremsier, nephew of Gerson Ashkenazi and David ben Isserles in Trebitsch, a relative of Aaron Teomim of Worms and Menahem Mendel Bacharach in Bamberg, he was received everywhere with open arms. For six years he occupied the position of rabbi in the small community at Zeckendorf near Bamberg, and having found in the learned Parnes, Isaac Seligman ben Meir Levi, a congenial coworker, he published as the fruit of their common studies a small midrashic encyclopedia, based on the Midrashim Rabbot, under the title (taken from II Kings, ii. 9) of "Pi Shenayim" (A Double Share; Sulzbach, 1702), printed by Aaron ben Uri—also a Vienna refugee and friend of Akiba. His reputation as author, however, is due chiefly to a cabalistic commentary on the daily prayers, entitled "'Abodat ha-Boreh" (Worship of the Creator; Wilmersdorf, 1688), and divided into five sections corresponding with the five letters of his name AKIBA, at which he worked for a year while rabbi at Burgpreppach, Bavaria (1688). The book met with such general approval that he felt encouraged to issue a second edition (Berlin, 1700), and finally an enlarged third edition, comprising also a commentary on the Sabbath and holy-day prayers (Sulzbach, 1707). He then accepted a call to the rabbinate of the large community of Schnaitach, extended to him through the influence of Chief Rabbi Baerman of Ansbach; but owing to the political turmoil he failed to find there the looked-for rest. Upon a false accusation he was cast into prison, but, being soon released, he left and became rabbi of Gunzenhausen and assistant rabbi of his relative and benefactor, Rabbi Baerman at Ansbach, where he also won the friendship of Model Marx, the wealthy court Jew. Akiba was eminently a writer for the people, compiling rabbinical and cabalistic legends, and not even disdaining the use of the Judæo-German vernacular for the purpose of disseminating this quaint knowledge. The two works of this class that he published are: "Abir Ya'ḳob," a haggadic history of the Patriarchs, based upon the first forty-seven chapters of Genesis (Sulzbach, 1700), since reedited many times, and "Ma'aseh Adonai" (The Deeds of the Lord), a collection of miraculous tales, compiled from the "Zohar," Isaac Luria, and other cabalistic writers (Frankfort-on-the-Main, 1691; afterward republished with addenda). His son Joseph was rabbi of Schaffa and Gewitsch in Moravia, then rabbi of the schoolhouse at Cleves, and afterward assistant rabbi at Amsterdam.

AKIBA BEN JOSEPH: Palestinian tanna; born about 50; martyred about 132. A full history of Akiba, based upon authentic sources, will probably never be written, although he, to a degree beyond any other, deserves to be called the father of rabbinical Judaism (Yer. Sheḳ. iii. 47*b*, R. H. i. 56*d*). Legend, which delights in embellishing the memory of epoch-marking personages, has not neglected Akiba (see AKIBA BEN JOSEPH IN LEGEND); but, despite the rich mass of material afforded by rabbinical sources, only an incomplete portrait can be drawn of the man who marked out a path for rabbinical Judaism for almost two thousand years.

Parentage and Youth.

Akiba ben Joseph (written עקיבא in the Babylonian style, and עקיבה in the Palestinian—another form for עקביה), who is usually called simply Akiba, was of comparatively humble parentage (Yer. Ber. iv. 7*d*, Bab. *ibid.* 27*b*).* Of the romantic story of Akiba's marriage with the daughter of the wealthy Jerusalemite, Kalba Sabu'a, whose shepherd he is said to have been (see AKIBA BEN JOSEPH IN LEGEND), only this is true, that Akiba was a shepherd (Yeb. 86*b*; compare *ibid.* 16*a*). His wife's name was Rachel (Ab. R. N. ed. Schechter, vi. 29), and she was the daughter of an entirely unknown man named Joshua, who is specifically mentioned (Yad. iii. 5) as Akiba's father-in-law. She stood loyally by her husband during that critical period of his life in which Akiba, thitherto the mortal enemy of the rabbis, an out-and-out *'am ha-areẓ* (ignoramus) (Pes. 49*b*), decided to place himself at the feet of those previously detested men. A reliable tradition (Ab. R. N. *l.c.*) narrates that Akiba at the age of forty, and when he was the father of a numerous family dependent upon him, eagerly attended the academy of his native town, Lydda, presided over by Eliezer ben Hyrcanus. The fact that Eliezer was his first teacher, and the only one whom Akiba later designates as "rabbi," is of importance in settling the date of Akiba's birth. It is known that in 95–96 Akiba had already attained great prominence (Grätz, "Gesch. d. Juden," 2d ed., iv. 121), and, further, that he studied for thirteen years before becoming a teacher himself (Ab. R. N. *l.c.*). Thus the beginning of his years of study would fall about 75–80. Earlier than this, Johanan ben Zakkai was living; and Eliezer, being his pupil, would have been held of no authority in Johanan's lifetime. Consequently, if we accept the tradition that Akiba was forty when beginning the study of the Law, he must have been born about 40–50. Besides Eliezer, Akiba had other teachers—principally Joshua ben Hananiah (Ab. R. N. *l.c.*) and Nahum of Gimzo (Hag. 12*a*). With Rabban Gamaliel II., whom he met later, he was upon a footing of equality. In a certain sense, Ṭarphon was considered as one of Akiba's masters (Ket. 84*b*); but the pupil outranked his teacher, and Ṭarphon became one of Akiba's greatest admirers (Sifre, Num. 75). Akiba probably remained in Lydda (R. H. i. 6), as long as Eliezer dwelt there, and then removed his own school to Bene Berak, five Roman miles from Jaffa (Sanh. 32*b*; Tosef., Shab. iii. [iv.] 3). Akiba also lived for some time at Ziphron (Num. xxxiv. 9), the modern Zafrân (Z. P. V. viii. 28), near Hamath (see Sifre, Num. iv., and the parallel passages quoted in the Talmudical dictionaries of Levy and Jastrow). For another identification of the place, and other forms of its name, see Neubauer, "Géographie," p. 391, and Jastrow, *l.c.*

---

* A misunderstanding of the expression "Zekut Abot" (Ber. *l.c.*), joined to a tradition concerning Sisera, captain of the army of Hazor (Giṭ. 57*b*, Sanh. 96*b*), is the source of another tradition (Nissim Gaon to Ber. *l.c.*), which makes Akiba a descendant of Sisera.

His Relations with Bar Kokba.

The greatest tannaim of the middle of the second century came from Akiba's school, notably Meir, Judah ben Ilai, Simeon ben Yoḥai, Jose ben Ḥalafta, Eleazar b. Shammai, and Nehemiah. Besides these, who all attained great renown, Akiba undoubtedly had many disciples whose names have not been handed down, but whose number is variously stated by the Haggadah at 12,000 (Gen. R. lxi. 3), 24,000 (Yeb. 62*b*), and 48,000 (Ned. 50*a*). That these figures are to be regarded merely as haggadic exaggerations, and not, as some modern historians insist, as the actual numbers of Akiba's political followers, is evident from the passage, Ket. 106*a*, in which there are similar exaggerations concerning the disciples of other rabbis. The part which Akiba is said to have taken in the Bar Kokba war can not be historically determined. The only established fact concerning his connection with Bar Kokba is that the venerable teacher really regarded the patriot as the promised Messiah (Yer. Ta'anit, iv. 68*d*); and this is absolutely all there is in evidence of an active participation by Akiba in the revolution. The numerous journeys which, according to rabbinical sources, Akiba is said to have made, can not have been in any way connected with politics. In 95–96 Akiba was in Rome (Grätz, "Gesch. d. Juden," iv. 121), and some time before 110 he was in Nehardea (Yeb. xvi. 7); which journeys can not be made to coincide with revolutionary plans. In view of the mode of traveling then in vogue, it is not at all improbable that Akiba visited en route numerous other places having important Jewish communities (Neuburger in "Monatsschrift," 1873, p. 393); but information on this point is lacking. The statement that he dwelt in Gazaka in Media rests upon a false reading in Gen. R. xxxiii. 5, and 'Ab. Zarah, 34*a*, where for "Akiba" should be read "'Uḳba," the Babylonian, as Rashi on Ta'anit, 11*b*, points out. Similarly the passage in Ber. 8*b* should read "Simon b. Gamaliel" instead of Akiba, just as the Pesikta (ed. Buber, iv. 33*b*) has it. A sufficient ground for refusing credence in any participation by Akiba in the political anti-Roman movements of his day is the statement of the Baraita (Ber. 61*b*), that he suffered martyrdom on account of his transgression of Hadrian's edicts against the practise and the teaching of the Jewish religion, a religious and not a political reason for his death being given.

Akiba's death, which, according to Sanh. 12*a*, occurred after several years of imprisonment, must have taken place about 132, before the suppression of the Bar Kokba revolution; otherwise, as Frankel ("Darke ha-Mishnah," p. 121) remarks, the delay of the Romans in executing him would be quite inexplicable. That the religious interdicts of Hadrian preceded the overthrow of Bar Kokba, is shown by Mek., Mishpaṭim, 18, where Akiba regards the martyrdom of two of his friends as ominous of his own fate. After the fall of Bethar no omens were needed to predict evil days. Legends concerning the date and manner of Akiba's death are numerous; but they must all be disregarded, as being without historical foundation (see AKIBA BEN JOSEPH IN LEGEND).

His Personal Character.

Before proceeding to a consideration of Akiba's teaching, a word or two as to his personal character will be in place. According to the customary conception of the Pharisees, one would imagine him as being a typically proud and arrogant rabbi, looking down with contempt upon the common people. How modest he was in reality is shown by his funeral address over his son Simon. To the large assembly gathered on the occasion from every quarter, he said:

> "Brethren of the house of Israel, listen to me. Not because I am a scholar have ye appeared here so numerously; for there are those here more learned than I. Nor because I am a wealthy man; for there are many more wealthy than I. The people of the south know Akiba; but whence should the people of Galilee know him? The men are acquainted with him; but how shall the women and children I see here be said to be acquainted with him? Still I know that your reward shall be great, for ye have given yourselves the trouble to come simply in order to do honor to the Torah and to fulfil a religious duty" (Sem. viii., M. Ḳ. 21*b*).

Modesty is a favorite theme with Akiba, and he reverts to it again and again. "He who esteems himself highly on account of his knowledge," he teaches, "is like a corpse lying on the wayside: the traveler turns his head away in disgust, and walks quickly by" (Ab. R. N., ed. Schechter, xi. 46). Another of his sayings, quoted also in the name of Ben 'Azzai (Lev. R. i. 5), is specially interesting from the fact that Luke, xiv. 8–12, is almost literally identical with it: "Take thy place a few seats below thy rank until thou art bidden to take a higher place; for it is better that they should say to thee 'Come up higher' than that they should bid thee 'Go down lower'" (see Prov. xxv. 7). Though so modest, yet when an important matter and not a merely personal one was concerned Akiba could not be cowed by the greatest, as is evidenced by his attitude toward the patriarch Gamaliel II. Convinced of the necessity of a central authority for Judaism, Akiba became a devoted adherent and friend of Gamaliel, who aimed at constituting the patriarch the true spiritual chief of the Jews (R. H. ii. 9). But Akiba was just as firmly convinced that the power of the patriarch must be limited both by the written and the oral law, the interpretation of which lay in the hands of the learned; and he was accordingly brave enough to act in ritual matters in Gamaliel's own house contrary to the decisions of Gamaliel himself (Tosef., Ber. iv. 12).

Akiba and Gamaliel II.

Concerning Akiba's other personal excellences, such as benevolence, and kindness toward the sick and needy, see Ned. 40*a*, Lev. R. xxxiv. 16, and Tosef., Meg. iv. 16. In this connection it may be mentioned that Akiba filled the office of an overseer of the poor (Ma'as. Sh. v. 9, and Ḳid. 27*a*).

Eminent as Akiba was by his magnanimity and moral worthiness, he was still more so by his intellectual capacity, by which he secured an enduring influence upon his contemporaries and upon posterity. In the first place, Akiba was the one who definitely fixed the canon of the Old Testament books. He protested strongly against the canonicity of certain of the Apocrypha, Ecclesiasticus, for instance (Sanh. x. 1, Bab. *ibid.* 100*b*, Yer. *ibid.* x. 28*a*), in which passages קורא is to be explained according to Ḳid. 49*a*, and חיצונים according to its Aramaic equivalent ברייתא; so that Akiba's utterance reads, "He who reads *aloud* in the synagogue from books not belonging to the canon as if they were canonical," etc. He has, however, no objection to the private reading of the Apocrypha, as is evident from the fact that he himself makes frequent use of Ecclesiasticus (Bacher, "Ag. Tan." i. 277; Grätz, "Gnosticismus," p. 120). Akiba stoutly defended, however, the canonicity of the Song of Songs, and Esther (Yad. iii.

5, Meg. 7*a*). Grätz's statements ("Shir ha-Shirim," p. 115, and "Kohelet," p. 169, respecting Akiba's attitude toward the canonicity of the Song of Songs are misconceptions, as Weiss ("Dor," ii. 97) has to some extent shown. To the same motive underlying his antagonism to the Apocrypha, namely, the desire to disarm Christians—especially Jewish Christians—who drew their "proofs" from the Apocrypha, must also be attributed his wish to emancipate the Jews of the Dispersion from the domination of the Septuagint, the errors and inaccuracies in which frequently distorted the true meaning of Scripture, and were even used as arguments against the Jews by the Christians.

Aquila was a man after Akiba's own heart; under Akiba's guidance he gave the Greek-speaking Jews a rabbinical Bible (Jerome on Isa. viii. 14, Yer. Ḳid. i. 59*a*). Akiba probably also provided for a revised text of the Targums; certainly, for the essential base of the so-called Targum Onkelos, which in matters of Halakah reflects Akiba's opinions completely (F. Rosenthal, "Bet Talmud," ii. 280).

Akiba as Systematizer.

Akiba's true genius, however, is shown in his work in the domain of the Halakah; both in his systematization of its traditional material and in its further development. The condition of the Halakah, that is, of religious praxis, and indeed of Judaism in general, was a very precarious one at the turn of the first Christian century. The lack of any systematized collection of the accumulated Halakot rendered impossible any presentation of them in form suitable for practical purposes. Means for the theoretical study of the Halakah were also scant; both logic and exegesis—the two props of the Halakah—being differently conceived by the various ruling tannaim, and differently taught. According to a tradition which has historical confirmation, it was Akiba who systematized and brought into methodic arrangement the MISHNAH, or Halakah codex; the MIDRASH, or the exegesis of the Halakah; and the HALAKOT,[*] the logical amplification of the Halakah (Yer. Sheḳ. v. 48*c*, according to the correct text given by Rabbinowicz, "Diḳduḳe Soferim," p. 42; compare Giṭ. 67*a* and Dünner, in "Monatsschrift," xx. 453, also Bacher, in "Rev. Ét. Juives," xxxviii. 215.)

The *δευτερώσεις τοῦ καλουμένου ‘Ραββὶ ’Ακιβά*[†] mentioned by Epiphanius ("Adversus Hæreses," xxxiii. 9, and xv., end), as well as the "great Mishnayot of Akiba" in the Midr. Cant. R. viii. 2, Eccl. R. vi. 2, are probably not to be understood as independent Mishnayot (*δευτερώσεις*) existing at that time, but as the teachings and opinions of Akiba contained in the officially recognized Mishnayot and Midrashim. But at the same time it is fair to consider the Mishnah of Judah ha-Nasi (called simply "the Mishnah") as derived from the school of Akiba; and the majority of halakic Midrashim now extant are also to be thus credited. Johanan bar Nappaḥa (199-279) has left the following important note relative to the composition and editing of the Mishnah and other halakic works: "Our Mishnah comes directly from Rabbi Meir, the Tosefta from R. Nehemiah, the Sifra from R. Judah, and the Sifre from R. Simon; but they all took Akiba for a model in their works and followed him" (Sanh. 86*a*). One recognizes here the threefold division of the halakic material that emanated from Akiba: (1) The codified Halakah (which is Mishnah); (2) the Tosefta, which in its original form contains a concise logical argument for the Mishnah, somewhat like the "Lebush" of Mordecai Jafe on the "Shulḥan 'Aruk"; (3) the halakic Midrash. The following may be mentioned here as the halakic Midrashim originating in Akiba's school: the Mekilta of Rabbi Simon (in manuscript only) on Exodus; Sifra on Leviticus; Sifre Zuṭṭa on Numbers (excerpts in Yalḳ. Shim'oni, and a manuscript in Midrash ha-Gadol, edited for the first time by B. Koenigsberger, 1894); and the Sifre to Deuteronomy, the halakic portion of which belongs to Akiba's school.

Akiba's Halakah.

Admirable as is the systematization of the Halakah by Akiba, his hermeneutics and halakic exegesis—which form the foundation of all Talmudic learning—surpassed it. The enormous difference between the Halakah before and after Akiba may be briefly described as follows: The old Halakah was, as its name indicates, the religious practice sanctioned as binding by tradition; to which were added extensions, and, in some cases, limitations, of the Torah, arrived at by strict logical deduction. The opposition offered by the Sadducees—which became especially strenuous in the last century B.C.—originated the halakic Midrash, whose mission it was to deduce these amplifications of the Law, by tradition and logic, out of the Law itself. It might be thought that with the destruction of the Temple—which event made an end of Sadduceeism—the halakic Midrash would also have disappeared, seeing that the Halakah could now dispense with the Midrash. This probably would have been the case had not Akiba created his own Midrash, by means of which he was able "to discover things that were even unknown to Moses" (Pesiḳ., Parah, ed. Buber, 39*b*). Akiba made the accumulated treasure of the oral law—which until his time was only a subject of knowledge, and not a science—an inexhaustible mine from which, by the means he provided, new treasures might be continually extracted. If the older Halakah is to be considered as the product of the internal struggle between Phariseeism and Sadduceeism, the Halakah of Akiba must be conceived as the result of an external contest between Judaism on the one hand and Hellenism and Hellenistic Christianity on the other. Akiba no doubt perceived that the intellectual bond uniting the Jews—far from being allowed to disappear with the destruction of the Jewish state—must be made to draw them closer together than before. He pondered also the nature of that bond. The Bible could never again fill the place alone; for the Christians also regarded it as a divine revelation. Still less could dogma serve the purpose, for dogmas were always repellent to rabbinical Judaism, whose very essence is development and the susceptibility to development. Mention has already been made of the fact that Akiba was the creator of a rabbinical Bible version elaborated with the aid of his pupil, Aquila, and designed to become the common property of all Jews; thus Judaizing the Bible, as it were, in opposition to the Christians. But this was not sufficient to obviate all threatening danger. It was to be feared that the Jews, by their facility in accommodating themselves to surrounding circumstances—even then a marked characteristic—might become entangled in the net of Grecian philosophy, and even in that of Gnosticism. The example of his colleagues and friends, ELISHA BEN ABUYAH, BEN 'AZZAI, and BEN ZOMA strengthened him still more in his conviction of the necessity of providing some counterpoise to the intellectual influence of the non-Jewish world.

---

[*] For this meaning of Halakah, see especially Tosef., Zab. i. 5. מסדר הלכות means to find logical foundation for the Halakot.

[†] In the second passage Rabbi Akiba has been corrupted into Barakiban, as also in Jerome's "Epistola ad Algasiam," 121, where, instead of Barachibas, Rab Achibas should be read. The statement in Epiphanius's "Adversus Hæreses," xlii. (ed. Migne, p. 744), that Akiba was born shortly before the Babylonian exile, is based upon the confusion of Akiba with Ezra, who was considered by Jewish authorities the founder of tradition (Suk. 20*a*), and as whose successor Akiba is designated (Sifre, Deut. 48).

Akiba's Hermeneutic System.

Akiba sought to apply the system of isolation followed by the Pharisees (פרושים = those who "separate" themselves) to doctrine as they did to practise, to the intellectual life as they did to that of daily intercourse, and he succeeded in furnishing a firm foundation for his system. As the fundamental principle of his system, Akiba enunciates his conviction that the mode of expression used by the Torah is quite different from that of every other book. In the language of the Torah nothing is mere form; everything is essence. It has nothing superfluous; not a word, not a syllable, not even a letter. Every peculiarity of diction, every particle, every sign, is to be considered as of higher importance, as having a wider relation and as being of deeper meaning than it seems to have. Like Philo (see Siegfried, "Philo," p. 168), who saw in the Hebrew construction of the infinitive with the finite form of the same verb—which is readily recognizable in the Septuagint—and in certain particles (adverbs, prepositions, etc.) some deep reference to philosophical and ethical doctrines, Akiba perceived in them indications of many important ceremonial laws, legal statutes, and ethical teachings (compare Hoffmann, "Zur Einleitung," pp. 5–12, and Grätz, "Gesch." iv. 427). He thus gave the Jewish mind not only a new field for its own employment, but, convinced both of the unchangeableness of Holy Scripture and of the necessity for development in Judaism, he succeeded in reconciling these two apparently hopeless opposites by means of his remarkable method. The following two illustrations will serve to make this clear: (1) The high conception of woman's dignity, which Akiba shared in common with most other Pharisees, induced him to abolish the Oriental custom that banished women at certain periods from all social intercourse. He succeeded, moreover, in fully justifying his interpretation of those Scriptural passages upon which this ostracism had been founded by the older expounders of the Torah (Sifra, Meẓora', end, and Shab. 64*b*). (2) The Biblical legislation in Ex. xxi. 7 could not be reconciled by Akiba with his view of Jewish ethics: for him a "Jewish slave" is a contradiction in terms; for every Jew is to be regarded as a prince (B. M. 113*b*). Akiba therefore teaches, in opposition to the old Halakah, that the sale of a daughter under age by her father conveys to her purchaser no legal title to marriage with her, but, on the contrary, carries with it the *duty* to keep the female slave until she is of age, and then to marry her (Mek., Mishpaṭim, 3). How Akiba endeavors to substantiate this from the Hebrew text is shown by Geiger ("Urschrift," p. 187). How little he cared for the letter of the Law whenever he conceives it to be antagonistic to the spirit of Judaism, is shown by his attitude toward the Samaritans. He considered friendly intercourse with these semi-Jews as desirable on political as well as on religious grounds; and he permitted—in opposition to tradition—not only eating their bread (Sheb. viii. 10) but also eventual intermarriage (Ḳid. 75*b*). This is quite remarkable, seeing that in matrimonial legislation he went so far as to declare every forbidden union as absolutely void (Yeb. 92*a*) and the offspring as illegitimate (Ḳid. 68*a*). For similar reasons Akiba comes near abolishing the Biblical ordinance of Kilaim; nearly every chapter in the treatise of that name contains a mitigation by Akiba. Love for the Holy Land, which he as a genuine nationalist frequently and warmly expressed (see Ab. R. N. xxvi.), was so powerful with him that he would have exempted agriculture from much of the rigor of the Law. These examples will suffice to justify the opinion that Akiba was the man to whom Judaism owes preeminently its activity and its capacity for development.

Religious Philosophy.

Goethe's saying, that "in self-restraint is the master shown," is contradicted by Akiba, who, though diametrically opposed to all philosophical speculation, is nevertheless the only tanna to whom we can attribute something like a religious philosophy. A tannaitic tradition (Ḥag. 14*b*; Tosef., Ḥag. ii. 3) mentions that of the four who entered paradise, Akiba was the only one that returned unscathed. This serves at least to show how strong in later ages was the recollection of Akiba's philosophical speculation (see Elisha b. Abuya). Akiba's utterances (Abot, iii. 14, 15) may serve to present the essence of his religious conviction. They run: "How favored is man, for he was created after an image; as Scripture says, 'for in an image, Elohim made man'" (Gen. ix. 6). "Everything is foreseen; but freedom [of will] is given to every man." "The world is governed by mercy . . . but the divine decision is made by the preponderance of the good or bad in one's actions." Akiba's anthropology is based upon the principle that man was created בצלם, that is, not in the image of God—which would be בצלם אלהים—but after an image, after a primordial type; or, philosophically speaking, after an Idea—what Philo calls in agreement with Palestinian theology, "the first heavenly man" (see Adam Ḳadmon). Strict monotheist that Akiba was, he protested against any comparison of God with the angels, and declared the traditional interpretation of כאחד ממנו (Gen. iii. 22) as meaning "like one of us" to be arrant blasphemy (Mek., Beshallaḥ, 6). It is quite instructive to read how a contemporary of Akiba, Justin Martyr, calls the old interpretation—thus objected to by Akiba—a "Jewish heretical one" ("Dial. cum Tryph." lxii.). In his earnest endeavors to insist as strongly as possible upon the incomparable nature of God, Akiba indeed lowers the angels somewhat to the realms of mortals, and, alluding to Ps. lxxviii. 25, maintains that manna is the actual food of the angels (Yoma, 75*b*). This view of Akiba's, in spite of the energetic protests of his colleague Ishmael, became the one generally accepted by his contemporaries, as Justin Martyr, *l.c.*, lvii., indicates.

Freedom of Will.

Against the Judæo-Gnostic doctrine ("Recognit." iii. 30; Sifre, Num. 103; Sifra, Wayikra, 2), which teaches that angels—who are spiritual beings—and also that the departed pious, who are bereft of their flesh, can see God, the words of Akiba, in Sifra, *l.c.*, must be noticed. He insists that not even the angels can see God's glory; for he interprets the expression in Ex. xxxiii. 20, "no man can see me and live" (וחי), as if it read "no man or any living immortal can see me." Next to the transcendental nature of God, Akiba insists emphatically, as has been mentioned, on the freedom of the will, to which he allows no limitations. This insistence is in opposition to the Christian doctrine of the sinfulness and depravity of man, and apparently controverts his view of divine predestination. He derides those who find excuse for their sins in this supposed innate depravity (Ḳid. 81*a*). But Akiba's opposition to this genetically Jewish doctrine is probably directed mainly against its Christian correlative, the doctrine of the grace of God contingent upon faith in Christ, and baptism. Referring to this, Akiba says, "Happy are ye, O Israelites, that ye purify yourselves through your heavenly Father, as it is said (Jer. xvii. 13, *Heb.*), 'Israel's hope is God'" (Mishnah Yoma, end).

God's Two Attributes.

This is a play on the Hebrew word מקוה ("hope" and "bath"). In opposition to the Christian insistence on God's love, Akiba upholds God's retributive justice elevated above all chance or arbitrariness (Mekilta, Beshallaḥ, 6). But he is far from representing justice as the only attribute of God: in agreement with the ancient Palestinian theology of the מדת הדין ("the attribute of justice") and מדת הרחמים ("the attribute of mercy") (Gen. R. xii., end; the *χαριστική* and *κολαστική* of Philo, "Quis Rer. Div. Heres," 34 Mangey, i. 496), he teaches that God combines goodness and mercy with strict justice (Ḥag. 14*a*). The idea of justice, however, so strongly dominates Akiba's system that he will not allow God's grace and kindness to be understood as arbitrary. Hence his maxim, referred to above, "God rules the world in mercy, but according to the preponderance of good or bad in human acts."

Eschatology and Ethics.

As to the question concerning the frequent sufferings of the pious and the prosperity of the wicked—truly a burning one in Akiba's time—this is answered by the explanation that the pious are punished in this life for their few sins, in order that in the next they may receive only reward; while the wicked obtain in this world all the recompense for the little good they have done, and in the next world will receive only punishment for their misdeeds (Gen. R. xxxiii.; Pesiḳ. ed. Buber, ix. 73*a*). Consistent as Akiba always was, his ethics and his views of justice were only the strict consequences of his philosophical system. Justice as an attribute of God must also be exemplary for man. "No mercy in [civil] justice!" is his basic principle in the doctrine concerning law (Ket. ix. 3); and he does not conceal his opinion that the action of the Jews in taking the spoil of the Egyptians is to be condemned (Gen. R. xxviii. 7). From his views as to the relation between God and man he deduces the inference that he who sheds the blood of a fellow man is to be considered as committing the crime against the divine archetype (דמות) of man (Gen. R. xxxiv. 14). He therefore recognizes as the chief and greatest principle of Judaism the command, "Thou shalt love thy neighbor as thyself" (Lev. xix. 18; Sifra, Ḳedoshim, iv.). He does not, indeed, maintain thereby that the execution of this command is equivalent to the performance of the whole Law; and in one of his polemic interpretations of Scripture he protests strongly against the contrary opinion of the Christians, according to whom Judaism is "simply morality" (Mek., Shirah, 3, 44*a*, ed. Weiss). For, in spite of his philosophy, Akiba was an extremely strict and national Jew. His doctrine concerning the Messiah was the realistic and thoroughly Jewish one, as his declaration that Bar Kokba was the Messiah shows. He accordingly limited the Messianic age to forty years, as being within the scope of a man's life—similar to the reigns of David and Solomon—against the usual conception of a millennium (Midr. Teh. xc. 15). A distinction is, however, to be made between the Messianic age and the future world (עולם הבא). This latter will come after the destruction of this world, lasting for 1,000 years (R. H. 31*a*). To the future world all Israel will be admitted, with the exception of the generation of the Wilderness and the Ten Tribes (Sanh. xi. 3, 110*b*). But even this future world is painted by Akiba in colors selected by his nationalist inclinations; for he makes Messiah (whom, according to Ezek. xxxvii. 24, he identifies with David) the judge of all the heathen world (Ḥag. 14*a*).

The Messianic Age and the Future World.

Legends.

A man like Akiba would naturally be the subject of many legends (see Akiba ben Joseph in Legend). The following two examples indicate in what light the personality of this great teacher appeared to later generations. "When Moses ascended into heaven, he saw God occupied in making little crowns for the letters of the Torah. Upon his inquiry as to what these might be for, he received the answer, 'There will come a man, named Akiba ben Joseph, who will deduce Halakot from every little curve and crown of the letters of the Law.' Moses' request to be allowed to see this man was granted; but he became much dismayed as he listened to Akiba's teaching; for he could not understand it" (Men. 29*b*). This story gives in naive style a picture of Akiba's activity as the father of Talmudical Judaism. The following account of his martyrdom is on a somewhat higher plane and contains a proper appreciation of his principles: When Rufus—"Tyrannus Rufus," as he is called in Jewish sources—who was the pliant tool of Hadrian's vengeance, condemned the venerable Akiba to the hand of the executioner, it was just the time to recite the "Shema'." Full of devotion, Akiba recited his prayers calmly, though suffering agonies; and when Rufus asked him whether he was a sorcerer, since he felt no pain, Akiba replied, "I am no sorcerer; but I rejoice at the opportunity now given to me to love my God 'with all my life,' seeing that I have hitherto been able to love Him only 'with all my means' and 'with all my might,'" and with the word "One!" he expired (Yer. Ber. ix. 14*b*, and somewhat modified in Bab. 61*b*). Pure monotheism was for Akiba the essence of Judaism: he lived, worked, and died for it. See also Akiba ben Joseph in Legend.

L. G.

——**In Legend**: Akiba, who sprang from the ranks of the "plain people," loved the people; and they testified their admiration of his extraordinary accomplishments in the language of the people—in legend. The Haggadah, embodying the rabbinical legend—beginning with that all-important change in Akiba's life when, in the prime of life, he commenced to study—dwells upon every phase of his career and does not relinquish him even in death. Legendary allusion to that change in Akiba's life is made in two slightly varying forms, of which the following is probably the older:

Akiba, noticing a stone at a well that had been hollowed out by drippings from the buckets, said: "If these drippings can, by continuous action, penetrate this solid stone, how much more can the persistent word of God penetrate the pliant, fleshly human heart, if that word but be presented with patient insistency" (Ab. R. N. ed. Schechter, vi. 28).

Akiba and His Wife.

According to another legend, it would appear that Akiba owed almost everything to his wife. Akiba was a shepherd in the employ of the rich and respected Kalba Sabu'a, whose daughter took a liking to him, the modest, conscientious servant. She consented to secret betrothal on the condition that he thenceforth devote himself to study. When the wealthy father-in-law learned of this secret betrothal, he drove his daughter from his house, and swore that he would never help her while Akiba remained her husband. Akiba, with his young wife, lived perforce in the most straitened circumstances. Indeed, so poverty-stricken did they become that the bride had to sell her hair to enable her husband to pursue his studies. But these very straits only served to bring out Akiba's greatness of character. It is related that once, when a bundle of straw was the only bed they possessed, a poor man came to beg some straw for a bed for his sick wife. Akiba at once divided with him his scanty possession, remarking to his wife, "Thou seest, my child, there are those poorer than we!" This pretended poor man was none other than the prophet Elijah, who had come to test Akiba (Ned. 50*a*).

By agreement with his wife, Akiba spent twelve years away from her, pursuing his studies under Eliezer ben Hyrcanus and Joshua ben Hananiah. Returning at the end of that time, he was just about to enter his wretched home, when he overheard the following answer given by his wife to a neighbor who was bitterly censuring him for his long absence: "If I had my wish, he should stay another twelve years at the academy." Without crossing the threshold, Akiba turned about and went back to the academy, to return to her at the expiration of a further period of twelve years. The second time, however, he came back as a most famous scholar, escorted by 24,000 disciples, who reverently followed their beloved master. When his poorly clad wife was about to embrace him, some of his students, not knowing who she was, sought to restrain her. But Akiba exclaimed, "Let her alone; for what I am, and for what we are, to this noble woman the thanks are due" (Ned. 50*a*, Ket. 62*b et seq.*).

Akiba and the Matrona.

Akiba's success as a teacher put an end to his poverty; for the wealthy father-in-law now rejoiced to acknowledge a son-in-law so distinguished as Akiba. There were, however, other circumstances which made a wealthy man of the former shepherd lad. It appears that Akiba, authorized by certain rabbis, borrowed a large sum of money from a prominent heathen woman—a *matrona*, says the legend. As bondsmen for the loan, Akiba named God and the sea, on the shore of which the matrona's house stood. Akiba, being sick, could not return the money at the time appointed; but his "bondsmen" did not leave him in the lurch. An imperial princess suddenly became insane, in which condition she threw a chest containing imperial treasures into the sea. It was cast upon the shore close to the house of Akiba's creditor; so that when the matrona went to the shore to demand of the sea the amount she had lent Akiba, the ebbing tide left boundless riches at her feet. Later, when Akiba arrived to discharge his indebtedness, the matrona not only refused to accept the money, but insisted upon Akiba's receiving a large share of what the sea had brought to her (Commentaries to Ned. *l.c.*).

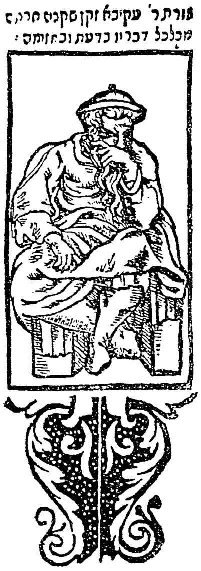
His Favorite Maxim.

This was not the only occasion on which Akiba was made to feel the truth of his favorite maxim ("Whatever God doeth He doeth for the best"). Once, being unable to find any sleeping accommodation in a certain city, he was compelled to pass the night outside its walls. Without a murmur he resigned himself to this hardship; and even when a lion devoured his ass, and a cat killed the cock whose crowing was to herald the dawn to him, and the wind extinguished his candle, the only remark he made was, "This, likewise, must be for a good purpose!" When morning dawned he learned how true his words were. A band of robbers had fallen upon the city and carried its inhabitants into captivity, but he had escaped because his abiding place had not been noticed in the darkness, and neither beast nor fowl had betrayed him (Ber. 60*b*).

Akiba's many journeys brought numerous adventures, some of which are embellished by legend. Thus in Ethiopia he was once called upon to decide between the swarthy king and the king's wife; the latter having been accused of infidelity because she had borne her lord a white child. Akiba ascertained that the royal chamber was adorned with white marble statuary, and, basing his decision upon a well-known physiological theory, he exonerated the queen from suspicion (Num. R. ix. 34). It is related that during his stay in Rome Akiba became intimately acquainted with the Jewish proselyte Ḳeṭia' bar Shalom, a very influential Roman—according to some scholars identical with Flavius Clemens, Domitian's nephew, who, before his execution for pleading the cause of the Jews, bequeathed to Akiba all his possessions ('Ab. Zarah, 10*b*). Another Roman, concerning whose relations with Akiba legend has much to tell, was Tinnius Rufus, called in the Talmud "Tyrannus" Rufus. One day Rufus asked: "Which is the more beautiful—God's work or man's?" "Undoubtedly man's work is the better," was Akiba's reply; "for while nature at God's command supplies us only with the raw material, human skill enables us to elaborate the same according to the requirements of art and good taste." Rufus had hoped to drive Akiba into a corner by his strange question; for he expected quite a different answer from the sage, and intended to compel Akiba to admit the wickedness of circumcision. He then put the question, "Why has God not made man just as He wanted him to be?" "For the very reason," was Akiba's ready answer, "that the duty of man is to perfect himself" (Tan., Tazri'a, 5, ed. Buber 7).

Akiba and the Dead.

A legend according to which the gates of the infernal regions opened for Akiba is analogous to the more familiar tale that he entered paradise and was allowed to leave it unscathed. (Ḥag. 14*b*). There exists the following tradition: Akiba once met a coal-black man carrying a heavy load of wood and running with the speed of a horse. Akiba stopped him and inquired: "My son, wherefore dost thou labor so hard? If thou art a slave and hast a harsh master, I will purchase thee of him. If it be out of poverty that thou doest thus, I will care for thy requirements." "It is for neither of these," the man replied; "I am dead and am compelled because of my great sins to build my funeral pyre every day. In life I was a tax-gatherer and oppressed the poor. Let me go at once, lest the demon torture me for my delay." "Is there no help for thee?" asked Akiba. "Almost none," replied the deceased; "for I understand that my sufferings will end only when I have a pious son. When I died, my wife was pregnant; but I have little hope that she will give my child proper training." Akiba inquired the man's name and that of his wife and her dwelling-place; and when, in the course of his travels, he reached the place, Akiba sought for information concerning the man's family. The neighbors very freely expressed their opinion that both the deceased and his wife deserved to inhabit the infernal regions for all time—the latter because she had not even initiated her child into the Abrahamic covenant. Akiba, however, was not to be turned from his purpose; he sought the son of the tax-gatherer and labored long and assiduously in teaching him the word of God. After fasting forty days, and praying to God to bless his efforts, he heard a heavenly voice (*bat ḳol*) asking, "Wherefore givest thou thyself so much trouble concerning this one?" "Because he is just the kind to work for," was the prompt answer. Akiba persevered until his pupil was able to officiate as reader in the synagogue; and when there for the first time he recited the prayer, "Bless ye the Lord!" the father suddenly appeared to Akiba, and overwhelmed him with thanks for his deliverance from the pains of hell through the merit of his son (Kallah, ed. Coronel, 4*b*, and see quotations from Tan. in Aboab's "Menorat ha-Maor," i. 1, 2, § 1, ed. Fürstenthal, p. 82; also Maḥzor Vitry, p. 112). This legend has been somewhat elaborately treated in Yiddish under the title, "Ein ganz neie Maase vun dem Tanna R. Akiba," Lemberg, 1893 (compare Tanna debe Eliyahu Zuṭṭa, xvii., where Johanan b. Zakkai's name is given in place of Akiba).



Akiba ben Joseph.
(From the Mantua Haggadah, 1860.)

Akiba's martyrdom—which is an important historical event—gave origin to many legends. The following describes his supernatural interment:

Akiba's Death.

Contrary to the vision (Men. 29*b*), which sees Akiba's body destined to be exposed for sale in the butcher's shop, legend tells how Elijah, accompanied by Akiba's faithful servant Joshua, entered unperceived the prison where the body lay. Priest though he was, Elijah took up the corpse—for the dead body of such a saint could not defile—and, escorted by many bands of angels, bore the body by night to Cæsarea. The night, however, was as bright as the finest summer's day. When they arrived there, Elijah and Joshua entered a cavern which contained a bed, table, chair, and lamp, and deposited Akiba's body there. No sooner had they left it than the cavern closed of its own accord, so that no man has found it since (Jellinek, "Bet ha-Midrash," vi. 27, 28; ii. 67, 68; Braunschweiger, "Lehrer der Mischnah," 192–206).

L. G.

AKIBA BEN JOSEPH, ALPHABET OF (called also **Otiot de-Rabbi Akiba, Midrash** or **Haggadah de-R. Akiba**): The title of a Midrash on the names of the letters of the Hebrew alphabet. Two versions or portions of the same exist: **Version *A*,** considered by Jellinek to be the older form, by Bloch thought to be of a much more recent origin, introduces the various letters as contending with each other for the honor of forming the beginning of creation (*bereshit*). It is based upon Gen. R. i. and Cant. R. on v. 11, according to which *Aleph* complained before God that *Beth* was preferred to it, but was assured that the Torah of Sinai, the object of creation, would begin with *Aleph* (*Anoki* = I am); it, however, varies from the Midrash Rabbot. The letters, beginning with the last, *Tav*, and ending with *Beth*, all assert their claim to priority. First *Tav*, as being the initial letter of Torah: it is told that it will be the mark on the forehead of the wicked (Ezek. ix. 4, Shab. 55*a*). Then *Shin*, as the initial letter of *Shem* ("the Name") and *Shaddai* ("Almighty"), puts in its claim: it is told that it is also the first letter of *sheḳer* ("falsehood"). *Resh* as the initial letter of *rosh* ("the beginning of thy word is truth," Ps. cxix. 160) and of *Raḥum* ("the Merciful One") next makes its demands; but it is told that *rosh* or *Resh* also occurs in evil things (Num. xiv. 4, Dan. ii. 32, *Heb.*) and is the initial also of *resh'a* ("wickedness"). Next comes *Ḳoph*, as the beginning of *ḳadosh* ("holy"); but it is also the first letter of *ḳelalah* ("curse"). So all the rest complain; each having some claim, which is, however, at once refuted, until *Beth*, the initial letter of *berakah* ("blessing" and "praise"), is chosen. Whereupon *Aleph* is asked by the Most High why it alone showed modesty in not complaining; and it is assured that it is the chief of all letters, denoting the oneness of God, and that it shall have its place at the beginning of the Sinaitic revelation. This competition is followed by a haggadic explanation of the form of the various letters and by interpretations of the different compositions of the alphabet: AT BSH, AḤS BṬ'A, and AL BM.

Version *B* of "Alphabet."

Version *B* is a compilation of allegoric and mystic Haggadahs suggested by the names of the various letters, the component consonants being used as acrostics (*notarikon*). Thus *Aleph* (אָלֶף = אמת לִמד פִּיךָ, "Thy mouth learned truth") suggests truth, praise of God, faithfulness (*emunah*), or the creative Word of God (*imrah*) or God Himself as *Aleph*, Prince and Prime of all existence; at this point chapters from mystic lore on Meṭaṭron-Enoch, etc., are inserted. *Beth* (here named after the Arabic form *Be*) suggests house (*bayit*), blessing (*berakah*), contemplation (*binah*), which is prized as superior to the study of the Law. *Gimel* suggests *gemilut ḥasadim* (benevolence), especially God's benevolence, and the rain (*geshem*) of God's mercy and His majesty (*gaawah*) in the heavens. *Daled* (Arabic, instead of the Hebrew form *Daleth*) suggests care for the poor (*dal*). *He* recalls God's name, so does *Vaw* (see Shab. 104*a*), *Zayin* the key of sustenance (*zan*) in God's hand (also Shab. 104*a*), and a chapter follows on Zerubbabel at the unlocking of the graves for the resurrection. Here follows a chapter on Hell and Paradise continued in *Ḥet* = *ḥeṭ* = sin; *Teth* suggests *ṭiṭ*, the clay of earth, and hence, resurrection; *Jod* ("the hand") suggests the reward of the righteous; *Caph* ("hollow of the hand"—"palm"), the clapping of hands, and the congregation of Israel (*ḳeneset*) led by Meṭaṭron to Eden. *Lamedh* recalls *leb* ("the heart"); *Mem*, the mysteries of the *merkabah* ("the heavenly chariot") and God's kingdom (*malkut*); *Nun*, *ner*, "the light (*ner*) of God is the soul of man" (Prov. xx. 27, *Heb.*); *Samek*, "God sustaineth (*somek*) the falling" (Ps. cxlv. 14, *Heb.*), or Israel, the Sanctuary or the Torah, inasmuch as the word *samek* has several different meanings. *Ayin* ("the eye") suggests the Torah as light for the eye; *Pe* recalls *peh*, the mouth, as man's holy organ of speech and praise; *Ẓade* suggests Moses as *Ẓaddiḳ*, the righteous; *Ḳoph*, also Moses as the one who circumvented the stratagems of Pharaoh. *Resh* suggests God as the *rosh*, the head of all; *Shin*, the breaking of the teeth (*shen*) of the wicked (Ps. iii. 8, *Heb.*) and *Tav* the insatiable desire of man (*taawah*) unless he devotes himself to the Torah, the Law.

Both versions are given as a unit in the Amsterdam edition of 1708, as they probably originally belonged together. Version *A* shows more unity of plan, and, as Jellinek ("B. H." vi. 40) has shown, is older. It is directly based upon, if not coeval with, Shab. 104*a*, according to which the school-children in the time of Joshua b. Levi (the beginning of the third century) were taught in such mnemonic forms which at the same time suggested moral lessons. Jellinek even thinks that the Midrash was composed with the view of acquainting the children with the alphabet, while the Shabu'ot festival (Pentecost) furnished as themes God, Torah, Israel, and Moses. On the other hand, version *B* (which Grätz, "Monatsschrift," viii. 70 *et seq.*, considered as being the original, and the Hebrew "Enoch," and the "Shi'ur Ḳomah" as sections of it) shows no inner unity of plan, but is simply a compilation of haggadic passages taken at random from these and other cabalistic and midrashic works without any other connection than the external order of the letters of the alphabet, but also based on Shab. 104*a*. Jellinek has shown the time of its composition to be comparatively modern, as is evidenced by the Arabic form of the letters and other indications of Arabic life. It has, however, become especially valuable as the depository of these very cabalistic works, which had come near falling into oblivion on account of the gross anthropomorphic views of the Godhead expressed therein, which gave offense to the more enlightened minds of a later age. It was on this account that the Alphabet of R. Akiba was made an object of severe attack and ridicule by Solomon ben Jeroham, the Karaite, in the first half of the tenth century. Version *A* was likewise known to Judah Hadassi, the Karaite, in the thirteenth century (see Jellinek, "B. H." iii., xvii. 5).

Critical Estimate of Versions.

As to Akiba's authorship, this is claimed by the writers of both versions, who begin their compositions with the words, "R. Akiba hath said." The justification for this pseudonymous title was found in the fact that, according to the Talmud (Men. 29*b*), Moses was told on Sinai that the ornamental crown of each letter of the Torah would be made the object of halakic interpretation by Akiba ben Joseph, and that according to Gen. R. i., he and R. Eliezer as youths already knew how to derive higher meaning from the double form of the letters מנצפך.

In fact, there exists a third version, called Midrash de-R. Akiba 'al ha-Taggin we-Ẓiyunim, a Midrash of R. Akiba treating on the ornamentations of the letters of the alphabet with a view to finding in each of them some symbolic expression of God, Creation, the Torah, Israel, and the Jewish rites and ceremonies. This version is published in Jellinek's "B. H." v. 31-33.

Bibliography: Bloch, in Winter und Wünsche's *Jüd. Lit.* iii. 225-232, where specimens in German are given; on the various editions see Steinschneider, *Cat. Bodl.* col. 519; S. Wiener, *Bibliotheca Friedlandiana*, p. 71; Imber, *Letters of Rabbi Akiba; or, the Jewish Primer as it Was Used in the Public Schools Two Thousand Years Ago*, in *Report of U. S. Commissioner of Education*, *1895-96*, pp. 701-719, Washington, 1897.

K.

AKIBA [BEN JOSEPH]'S BOOK ON LETTER-ORNAMENTS (ס" התגין): According to the Haggadah (Men. 29*b*), Akiba found a significance in every little ornament or flourish upon the letters of the Torah; to him therefore a Midrash has been ascribed, which treats of the little curves or embellishments upon the extremities of Hebrew letters, and also of the single letters found in the Hebrew text of Scripture of a different size from the others. This small Midrash forms a kind of supplement to Akiba's Alphabet, which treats of the names and shapes of the letters, and it is not improbable that both of them are portions of a larger work of which other parts are lacking.

The date of this Midrash can not be later than the beginning of the ninth century, seeing that a Karaite, Solomon ben Jeroham—Saadia's opponent—attacked the authenticity of the "Alphabet." The book itself does not give the slightest indication of its date; nor does its literary style. The following may serve as a sample of its method:

> "ב (Beth) has two strokes connected by a stalk, representing the earthly and the heavenly judgment places (bet din), which, despite intervening time and space, are yet but one.
>
> "ל (Lamedh), the tallest letter, has its head bent downward, thus representing God, who is exalted above all and still looks down upon us.
>
> "Why is the י (Yod) in יגדל (Num. xiv. 17) written large? In order to indicate that God's mercy is so great that it extends over all the inhabitants of the earth."

The first edition appeared in Abraham Portaleone's "Shilṭe ha-Gibborim," p. 177, Mantua, 1613, with annotations by the editor. It is also to be found in Bartolocci's "Bibliotheca Rabbinica," iv. 275, edited from a manuscript belonging to the duke of Parma. These two editions, together with that published in Jellinek's "B. H." v. 31-33, from a manuscript of the year 1398, contain only the portion concerning the ornaments of the letters. It has been published complete, and with an introduction by Senior Sachs, from a manuscript belonging to Baron Günzburg, in "Sefer Taghin," by J. L. Bargés, Paris, 1866.

L. G.

AKIBA BEN JUDAH LOEB: A German rabbi, who lived at Lehren-Steinsfeld, Württemberg, in the beginning of the eighteenth century. He wrote "Ha-Ohel 'Olam" (Everlasting Tent), containing novellæ on the Talmudic treatise Ketubot (Frankfort-on-the-Main, 1714). Appended to it are four responsa as well as an essay from his unpublished works, on Seder Zera'im. In addition to these he left two books on Seder Ṭaharot, which are still extant in manuscript.

Bibliography: Steinschneider, *Cat. Bodl.* col. 729; Benjacob, *Oẓar ha-Sefarim*, p. 124.

D.

AKIBA HA-KOHEN, OF OFEN: An eminent scholar, who lived in Hungary and Bohemia in the second half of the fifteenth century; died at Prague 1496. His learning, wealth, and benevolence secured for him the title "Nasi" (Prince), and an influential position at the court of King Matthew of Hungary about 1480. This promotion excited the envy of the nobles to such a degree that they slandered him to the king, and he was compelled to leave the country. He settled at Prague and there established a large Talmudic college, at which he himself lectured. Here, too, jealous enemies persecuted him, and even attempted his life. In grateful memorial of three fortunate escapes, he presented three of the synagogues of Prague with costly curtains for the Ark of the Law. Akiba, who was a kohen (a descendant of Aaron, the high priest), had twelve sons and thirteen daughters: twelve of the latter he gave in marriage to kohens. He was proud of the fact that with his sons and sons-in-law, aggregating, with himself, twenty-five (which number is represented by the Hebrew word כה, "thus"), he could fulfil literally the commandment of the priestly benediction (Num. vi. 23, Heb. version): "*Thus* shalt thou bless the people." His daughter Jochebed, who married Shabbethai b. Isaiah Hurwitz, became the ancestress of a family renowned for its learned men; and his son Gerson was the progenitor of a noteworthy family of printers of that name.

M. K.

AKIBA TRANI B. ELIJAH OF METZ: Glossarist who lived in the eighteenth century. A collection of his casuistic glosses to the Talmudic treatises Zebaḥim and Menaḥot, still extant, was published in Metz, 1767, under the title "Ma'yan Ganim" (The Fountain of Gardens; Cant. iv. 15). Carmoly ("Itinerarium," p. 225) writes the name "Trenel," probably because it occurs among French Jews (Steinschneider, "Cat. Bodl." col. 729).

Bibliography: Benjacob, *Oẓar ha-Sefarim*, p. 349.

AKKAD. See Accad.

AKKERMAN: District, town, and village in the government of Bessarabia, Russia, on the right bank of the Dniester estuary, twenty-seven miles southwest of Odessa. The Jewish population in the town in 1897 was 4,846, in the village 1,136, in the district 5,241. Akkerman has two public synagogues, three private prayer-houses, and seven Hebrew schools.

H. R.

AKKEZ. See Hakkez.

AKKUB: **1.** Son of Elioenai, of the Judean royal family (I Chron. iii. 24). **2.** A Levite, porter at the east gate of the Temple (I Chron. ix. 17; Neh. xi. 19, xii. 25). Children of Akkub are found (Ezra, ii. 42, 45; Neh. vii. 45) in the list of the Levites and their offices. Akkub is called Dacubi in I Esd. v. 28. **3.** A Levite who helped Ezra expound the Law (Neh. viii. 7), and who is mentioned in the account of I Esd. ix. 48, where he is called Jacubus—perhaps the same as the preceding.

G. B. L.

'AKKUM (עכ"ום): An abbreviation formed by the initial letters of עובד כוכבים ומזלות ("worshiper of stars and constellations"). 'Akkum therefore came to be the Talmudical designation for heathen or idolater, and was originally applied to Chaldean star-worshipers. The term, however, plays quite a conspicuous rôle in the history of the calumniation of the Jews; for it has frequently been claimed that wherever harsh expressions or intolerant rules are given in the Talmud touching the 'Akkum, it is the non-Jew in general who is intended, and therefore the Christian as well. This, however, is erroneous, and every edition of the Talmud bears upon its front page the solemn declaration of contemporary rabbis that wherever either of the terms "'Akkum" or "Nokri" ("Stranger") was used, it referred only to the idolatrous nations of antiquity or of distant lands, but never to such as believe in divine revelation and worship the Lord who created heaven and earth, among whom the Jews would live at peace, recognizing their righteousness and praying for their welfare. Censors often substituted "'Akkum" for "Nokri" or "Goy," and thus the attacks were chiefly directed against the former word. But calumniators persisted in their malevolent misrepresentations of the Talmud. An instance of the extent of such misrepresentations was afforded by Professor Rohling of Prague, who, in his pamphlet "Meine Antwort an die Rabbinen" (1883), p. 18, had the effrontery to declare that 'Akkum in the "Shulḥan 'Aruk" is the abbreviation of 'Obed Christum u-Maria ("worshiper of Christ and Mary"). 'Akkum is, according to H. L. Strack in article "Talmud" in Herzog's "Encyclopedia," xviii. 320, note, and "Nathaniel," 1900, p. 128, note, not found in the oldest edition or manuscripts of the Mishnah, Talmud, "Yad ha-Ḥazaḳah," and "Shulḥan 'Aruk," but has been put there by the censors in place of the words "Goy," "Nokri," and "'Abodah Zarah."

AKNIN, JOSEPH BEN JUDAH IBN. See Joseph ben Judah ibn Aknin.

AKRA, ABRAHAM IBN. See Abraham ibn Akra.

AKRABAH (עקרבה): A city situated one day's journey north from Jerusalem (Ma'as Sheni, v. 2; Beẓah, 5*a*, where the spelling is עקרבא). It is probably identical with Akrabattene mentioned by Josephus ("B. J." iii. 3, § 5), which in the years preceding the destruction of Jerusalem was the scene of many sanguinary conflicts between the Judeans and the Samaritans. The Munich manuscript and early editions have עקרבת (Akrabat) for עקרבה (Akrabah).

This district must not be confused with the Biblical Akrabbim, which lies on the southeastern border of Judea.

Bibliography: Neubauer, *G. T.* pp. 76, 159; Grätz, *Gesch. d. Juden*, 2d ed., ii., second part, p. 354.

M. B.

AKRABBIM ("The Scorpion Ascent"): This is mentioned in connection with the southeastern boundary of Judah (Num. xxxiv. 4; Josh. xv. 3; Judges, i. 36). It is probably one of the passes which lead from the northern slope of the great Wadi-el-Fikre to the desert plateau and which afford communication between Edom and Judah. Though it is not possible to identify it absolutely with any particular pass, the suggestion that it is identical with the Nakb-el-Safa has two points in its favor; viz., (1) the evident antiquity of the pass, and (2) the traces of a path cut in the rock (Robinson, "Researches," ii. 120). Akrabbim may, however, be the Nakb-el-Yemen, which lies farther to the west, but is apparently an easier road (Trumbull, "Kadesh-Barnea," plate III.). From this pass the surrounding region derived the name of Akrabattene (Josephus, "Ant." xii. 8, § 1; "B. J." ii. 22, § 2; iv. 9, § 4; I Macc. v. 3). This region must not be confused with the mountain district of Akrabattene, which lies to the north of Beth-el (Josephus, "B. J." ii. 20, § 4; iii. 3, § 5; iv. 9, § 9; Eusebius, "Onomastica Sacra," ed. Lagarde, 214–261).

F. Bu.

AKRISH, ISAAC B. ABRAHAM: Scholar, bibliophile, and editor; born in Spain about 1489; died after 1578. The Arabic form of the name, as Steinschneider has pointed out, occurs in a manuscript of Algiers. In a list of forty-eight Jewish families living at Saguntum in 1352 (published by Chabret, "Hist. de Sagunte," ii. 186) the name Içach Acrix occurs, which Loeb ("Rev. Ét. Juives," xix. 159) rightly interprets as Isaac Akrish. No mention of Akrish is found in the medieval Jewish chronicles; not even in Sambari's historic sketch, where allusion to him in the annals of Egyptian Jewry might be expected. Some autobiographic data, however, are contained in his writings. The introduction to his edition of a triple commentary on the Song of Solomon informs us that he belonged to those exiles from Spain (1492) who, having settled at Naples, were afterward compelled to leave it also (1495). Though lame in both legs, he was a wanderer well-nigh throughout his life, among peoples "whose tongues he knew not, and who regarded neither old men nor children." The course of his tiresome travels at length brought him to Cairo, Egypt. There he was taken into the house of R. David ibn Abi Zimra, an immigrant who had attained to a high communal position. For about ten years (about 1543–53) Akrish remained at Cairo as private tutor to David's children and grandchildren, until his patron's emigration to Palestine caused him again to take up the wanderer's staff. This time Constantinople was apparently his goal; but before he reached it he must have rested a while at Candia. According to his own testimony in the preface to Efodi's "Letter," he was at Candia when his beloved library was confiscated by the Venetian government "in the year of the burning of the Talmud" (the latter part of 1553).

When Constantinople was finally reached Akrish found in it a haven of safety and rest. The Jewess Esther Chiera, philanthropist and patron of art and letters, became his benefactress, and supported the wayworn Akrish liberally, especially after the extensive fire at Constantinople (1569), which devoured almost the whole Jewish quarter. Later Akrish was taken into the house of Joseph, duke of Naxos, where his scholarly inclinations and his love of books at last found ample field for activity. Record exists of his stay there as late as the year 1578, when Jacob Catalani Shem-Ṭob copied for him Ibn Shaprut's polemic work "Eben Boḥan."

Jewish literature is indebted to Akrish for the preservation of several important historic treasures. While at Constantinople, about 1577, he edited a collection of ten documents (afterward called "Ḳobeẓ Wikkuḥim"), containing notably the satirical letter addressed by Profiat Duran (Efodi) to his former friend David En-Bonet, "Al tehi ka-Aboteka" (Be Not Like Thy Fathers), which, as Akrish points out in his introduction, was so deceptive in its irony that Christians for a long while considered it a vindication of Christianity, citing it as "Alteca Boteca." The same volume contained, also, the proselyting epistle of the apostate Astruc Raimuch (Franciscus Dioscarne) to his young friend En-Shaltiel Bonfas, as well as the satirical reply to it by Solomon Bonfed.

He then edited (about 1577) a second collection of documents, largely of a historical character. The first part bore the title "Ma'aseh Bet David," and contained the history of Bostanai, the exilarch; the second, that of "Ḳol Mebasser." This last comprised the correspondence between Ḥasdai ibn Shaprut and the king of the Chazars; an account, by a certain Mohammedan named Ali, of the Jews who lived near the Sambation river (see Neubauer, in "Jew. Quart. Rev." i. 420), translated into Hebrew by Moses Ashkenazi of Crete; and the letter of Elijah of Ferrara. (German translations of this work appeared at Basel, 1600–9; Amsterdam, 1685; Prague, 1705; a Judæo-German one made its appearance under the title "Ein Wunderlich Geschächtniss . . . von einen der hot Geheissen Bostanai," Prague, about 1686–90.) In addition to other works, Akrish is said to have edited a triple commentary upon the Song of Songs.

H. G. E.

AKRON, Ohio: Capital of Summit county, forty miles from Cleveland. This city was first settled by Jews in 1850. The Akron Hebrew Congregation (Reform) was organized on April 2, 1865, and was incorporated September 16, 1866. On the latter date the burial-ground was purchased; the present synagogue building was acquired in April, 1885, and it was dedicated August 30 of the same year. The rabbis of the congregation were: Nathan Hirsch, October 1, 1865; N. L. Holstein, August 15, 1867; T. Jesselson, 1869; A. Schreier, 1876; D. Burgheim, 1878; S. M. Fleischman, 1880; B. Rabbino, 1886; M. Wasserman, 1889; B. Wohlberg, 1892; D. Klein, 1894; Isador G. Philo, 1896 to date. Other communal organizations are: the Schwesterbund (benevolent society), organized 1865; Montefiore Society (literary and social), organized 1883; Chautauqua Circle, organized 1899; Akron Hebrew Sabbath School (free); Francis Joseph Society, and a Hungarian Charity Association. Akron has also an orthodox congregation, which in 1900 purchased a lot on which to erect a synagogue.

In a total of about 50,000 Akron has 225 Jewish families. The vocations followed are those of merchant, bookbinder, public-school teacher, mining engineer, cigarmaker, physician, lawyer, foundryman, and bookkeeper.

A.

AKSAI (TASHKICHA): A village in the province of Tersk, in the Caucasus, which has a Jewish community of about 1,000 persons. These Jews claim to be descendants of the exiles of Shalmaneser. Their progenitors emigrated in early days from Persia to Daghestan, and thence, in the seventeenth century, to the village of Andrei, where their old burial-grounds are to be found on the Dzuhot-tuba, "the hill of the Jews." As they suffered much from the persecution of the Mohammedans, they moved to Aksai in 1844. They are mainly merchants, butchers, and tanners.

H. R.

AKSAKOV, IVAN SERGYEYEVICH: Russian Panslavist leader; born October 7, 1823; died at Moscow, February 8, 1886. Aksakov was one of the founders at Moscow of a circle of Slavophils, whose aim was to restore Russia to the position it had held in the days prior to Peter the Great—a position independent of all West European civilization. As a logical consequence, they were opposed to all the foreign elements in the population of Russia—Germans, Poles, and, above all, Jews. Though, at first, Aksakov showed some signs of a liberal attitude toward the Jews, he as early as 1862 protested in his paper, the "Den," against the admission of Jewish graduates to the civil service; but at that time he was willing to grant them full civil rights, including that of residence throughout Russia. Later, his editorials in the same paper discussed the Jewish question from the religious (August 8, 1864) and economic (July 15, 1867) points of view. Aksakov's attention was again drawn to the Jewish question by the riots in South Russia in 1881; and he became leader of the reactionary movement which followed the death of Alexander II. He regarded the persecutions as a just revenge for the privileges granted to the Jews ("Rus," July 1, 1881), and vehemently supported the policy of General Ignatiev in promulgating the May Laws (*ib.* June, 1882).

At this time Aksakov's influence was paramount with both the government and the press; and there is no doubt that his attitude toward the Jews assisted Russia in her stubborn resistance to the protest of civilized Europe and America against her treatment of her Jewish population. One incident of Aksakov's campaign against the Jews deserves to be particularly mentioned. In 1883 he published in

"Rus" (No. 21) an article on the "Yevreiskaya Internatzionalka i Borba s Yevreistvom v Yevropye" (The Jewish International, and the Struggle with Judaism in Europe), in which he accused the Alliance Israélite of being a secret organization of the whole Jewish world to obtain control of all governments. This naturally aroused a considerable amount of protest; and the Alliance published a detailed refutation, which Aksakov reprinted in "Rus," No. 24.

H. R.

AKSENFELD, ISRAEL: A Judæo-German writer; born in Russia in the last quarter of the eighteenth century; died about 1868. He passed the first period of his life among the Ḥasidim, being himself a disciple of R. Naḥman Bratzlaver (of Bratzlav) and the companion of Nathan Bratzlaver, the editor and publisher of Naḥman's works. Later he abandoned his early associations, and removed to Odessa. By self-education he acquired a wide knowledge of law, literature, and science. He practised as a notary public, and was also a prolific writer of fiction. Like nearly all Russo-Jewish novelists, Aksenfeld was a realist. He derived the themes of his works from contemporary Jewish life, describing with the pen of an artist the conditions, manners, and customs of the Russian ghetto at the beginning of the eventful reign of Czar Nicholas I. He was the author of about twenty works, of which only five—one novel and four dramas—were printed; the others are still in manuscript, in the possession of a Polish family in St. Petersburg; and it is hoped they may soon be published. The most important of his dramatic works is "Der Erste Jüdische Rekrut," 1862, a tragedy which presents a remarkably vivid picture of the terrible commotion in the Russian ghetto when, in 1827, the ukase compelling the Jews to do military service was enforced for the first time. His novel, "Das Sterntüchel," describes the seamy side of Ḥasidism, its intolerance, bigotry, and hypocrisy, and contrasts it with the fair-mindedness and honesty of progressive Judaism.

AKYLAS. See Aquila.

ALABAMA: One of the southern states of the United States; admitted Dec. 14, 1819; seceded Jan. 11, 1861; and was readmitted July, 1868.

No definite date can be assigned to the first settlement of Jews in the state of Alabama. It is known, however, that Jews were settled in the district of Mobile, in the southwestern part of the state, as early as 1724. Mobile was then one of the nine districts of the French colony of Louisiana, over which Bienville had been placed as governor. In March, 1724, he, in the name of the king, issued his celebrated "Black Code," one of the provisions of which was that all Jews must leave the colony, and that the Roman Catholic religion would be the only religion tolerated there.

A searching investigation has been made with a view to discovering records referring to the Jews of the Mobile district, but no such records have been found. Not until about a half-century later is the name of a Jew found, and then in connection with incriminating charges preferred against Governor Farmer. By the treaty of Paris in 1763, the Mobile district became a part of the British possessions of North America; and the British authorities appointed Major Farmer governor of the district. He held the office until 1776, when he was charged with being guilty of "sending flour for the king to New Orleans or attempting to sell it there by means of Pallachio, a Jew." Nothing has been found in these accounts which would incriminate Pallachio.

Early Settlements.

In 1785 Abram Mordecai left Pennsylvania to settle in Alabama, in Montgomery county, where he was the pioneer Jewish settler. Albert James Pickett, in his "History of Alabama," refers to Mordecai as an "intelligent Jew, who lived fifty years in the Creek nation." He established a trading-post two miles west of Line creek, carrying on extensive trade with the Indians, and "exchanging his goods for pinkroot, hickory-nut oil, and peltries of all kinds." Mordecai believed that the Indians were originally Jews. Pickett is authority for Mordecai's assertion that in their green-corn dances he had often heard the Indians utter, in grateful tones, "Yavoyaha! Yavoyaha!" He was always informed by the Indians that this meant Jehovah, or the Great Spirit, and that they were then returning thanks for the abundant harvest with which they had been blessed. In October, 1802, Abram Mordecai established a cotton-gin, which was the first built in the state and which seems to have been constructed by two Jews, Lyons and Barnett of Georgia, "who brought their tools, gin-saws, and other material from that state on packhorses."

The First Congregation.

Jews settled in the towns of Claiborne and Uniontown as early as 1840, and in Selma, Huntsville, and Demopolis about 1850. There does not seem to have been a concerted movement toward the formation of a congregation in Alabama until 1841. In that year a number of Jews of Mobile united for the purpose of purchasing a plot of ground for a cemetery. The court records show that the congregation Sha'arai Shomayim purchased from the city authorities four lots for burial purposes at thirty dollars each. The deed was signed by the mayor of the city, Edward Hall, and attested by the clerk, H. P. Ensign, June 22, 1841. Religious services were held by the members of this congregation during the years 1842 and 1843 at the residence of B. L. Tim; but not until Jan. 25, 1844, was the congregation duly incorporated. Its constitution and by-laws, with the name of the organization printed in Hebrew letters, were then recorded in the probate court at Mobile.

Montgomery was the next city to form a permanent congregation, which was organized and incorporated under the name Kahal Montgomery, April 12, 1852. It dedicated its first synagogue March 8, 1862. According to G. Jacobson, of Mobile, a congregation with an officiating rabbi was organized in Claiborne in 1855. Most of the Jews left Claiborne, however, and the congregation passed out of existence.

Jewish congregations have since been formed in Selma, Birmingham, Huntsville, Demopolis, Anniston, and Uniontown. All of them have well-equipped Sabbath-schools and organized benevolent societies, which distribute annually among the poor more than $10,000. During the year 1900 the cities of Huntsville and Selma dedicated new synagogues; and in Montgomery one was in course of construction.

Educational and literary societies are connected with the congregations in Birmingham, Montgomery, and Mobile, each of which cities has a local section of the Council of Jewish Women. The aim of the congregational societies and the sections of the Council of Jewish Women is to foster a closer study of the Bible and a deeper knowledge of Jewish history and literature. The order B'ne B'rith is represented in Birmingham, Montgomery, Mobile, Selma, Huntsville, Anniston, Demopolis, and Uniontown. Sheffield, with about 3,000 inhabitants, has a Jewish cemetery and a Sabbath-school.

Educational Institutions.

When Sheffield was laid out in 1884 by a land company, two Jewish brothers by the name of Moses, of Montgomery, were among the prime movers in the enterprise. Capt. Alfred H. Moses, who had been in the Confederate service, was the first manager of the company; and under his able administration the undertaking prospered. At the outset lots were set apart for a Jewish house of worship; and separate grounds for a Jewish cemetery were laid out. The first postmaster of Sheffield was Morris Nathan, who received his appointment from President Cleveland.

Prominent Jews.

Philip Phillips was a prominent Jew who lived in Alabama about twenty years. He was a native of Charleston, S. C., and removed to Mobile in 1835. He was elected to the legislature in 1844; the next year he published a digest of the decisions of the supreme court; in 1851 he was returned to the legislature, and two years later was elected to Congress over Hon. Elihu Lockwood, of Mobile county. Mr. William Garrett in his "Reminiscences of Public Men in Alabama" says that "Philip Phillips left Congress with a national reputation of which any man might feel proud." Judah P. Benjamin was a resident of Montgomery during the years 1862–65. He was appointed attorney-general of the provisional government of the Southern Confederacy in 1861, and in August of the same year was appointed acting secretary of war; but on being censured by a congressional committee he resigned his office after having held it for six months. He continued to retain the confidence of Jefferson Davis, and was by him appointed secretary of state. Solomon Heydenfeldt, who was a native of Charleston, S. C., moved to Alabama, Tallapoosa county, when that county was first settled. He was chosen judge of the county court of Tallapoosa in 1840, and soon after moved to Russell county, where he practised law for several years. He then went to California, where he became justice of the supreme court. His brother, Elkin Heydenfeldt, was also an attorney of some standing in Tallapoosa county. Adolph Proskauer, who had been major in the Confederate army, served one term in the legislature in the year 1868, as did Nathan Straus in 1870. Solomon Block, of Camden, was a member of the state senate for several terms.

Jews of Alabama have been appointed to the highest offices in the gift of their respective communities. They are found as mayors, presidents of chambers of commerce and of cotton exchanges, of the boards of education and of the public schools, members of the council, and in many similar important positions. Benjamin M. Mayer was, in 1900, editor of the "Birmingham Age-Herald," and Emil Lesser was editor of the "Birmingham Courier" (German). Emanuel Lehman, the philanthropist, lived for many years in Montgomery, Ala. Robert Loveman, a resident of Tuscaloosa during 1890-93, is a lyric poet of acknowledged merit. During his residence at Tuscaloosa the Burton Printing Company of that city printed for him two small collections of poems; see Stedman's "American Anthology," 1900.

In his book, "The American Jew as Patriot, Soldier, and Citizen," Simon Wolf has recorded the names of about one hundred and fifty Jews of Alabama who fought in the Confederate army, and of more than forty Jews who volunteered in the state regiments during the Spanish-American war of 1898. Philip Stern, of Montgomery, has held various posts in the regular army, and is now (1901) captain of the Twenty-ninth Alabama infantry, serving in the Philippines.

Statistics.

The population of Alabama, according to the census of 1900, is 1,828,697, which total includes 6,000 to 7,000 Jews. Jews are found in almost every occupation in which other citizens of the state are engaged.

Very few articles and no books are published which bear upon the Jews or the Jewish congregations and institutions of Alabama; and the early congregational records have, in the majority of instances, been lost. In cases where the latter have been preserved they have been so imperfectly kept that few correct or important data can be gathered from them.

BIBLIOGRAPHY: In 1895 Peter J. Hamilton, in an article on *The Pioneer Churches of Mobile*, in the *Hy Shy Ny*, a publication of the Young Men's Christian Association of Mobile, republished in the *Mobile Register*, makes passing reference to the formation and progress of the Jewish congregation at Mobile. The *Jewish Ledger* of New Orleans, May 19, 1899, published a Mobile edition of its paper, containing articles by Henry Hanan, S. Richards, and Dr. Mark J. Lehman on the early history of the Sha'arai Shomayim congregation and on the work of its various organizations. The *Jewish Ledger*, in a Birmingham edition, May 18, 1900, described the religious, charitable, and other organizations of the Jews of Birmingham; see also *Statistics of the Jews of the United States*, published by the Union of American Hebrew Congregations, 1880; and *American Jewish Year Book* for 5660 and 5661.

T. S.

ALABARCH: The title of an official who stood at the head of the Jewish population of Alexandria during the Grecian period. The etymology of the word ἀλαβάρχης (*alabarches*), and, therefore, the original nature of the office, is obscure. In former times it was customary to derive it from ἅλς (*hals*, sea), which derivation might indicate dominion over the sea. The word is, however, also written ἀραβάρχης, and in Latin *arabarches*, for which reason some think the term indicates dominion over Arabia—the old name of the part of Egypt east of the Nile. It is hard to understand how a Jew, even if he were the most prominent man of the congregation of Alexandria, could be called ruler of Arabia. The trend of modern opinion is to connect it with the Greek term for ink, ἄλαβα (*alaba*), taking ink in the sense of writing (*scriptura*), which, in those days, was a token for tax (*vectigal*). Such a derivation would imply that the Alabarch was a farmer of taxes, certainly from the time of the Ptolemies; and, judging by inscriptions which give a similar title to an office of the Thebaid in Egypt, he must also have collected the toll on animals passing through the country. Strabo (quoted by Josephus, "Ant." xiv. 7, § 2), who was in Egypt about 24 B.C., calls the governor of the Jews "ethnarch" (ἐθνάρχης), and remarks that he ruled over the Jews as over an autonomous community (ὡς ἂν πολιτείας ἄρχων αὐτοτελοῦς). If the term as used by Strabo is correct, then the Alabarch must have been known among the heathen as ethnarch; so that one would surmise that the term ἀλαβάρχης was used only by the Jews. Strabo's ethnarch is usually identified with the Alabarch, without further question; but Franz is of the opinion ("C. I. G." iii. 291*a*) that the Alabarch was only a subordinate functionary of the ethnarch. Grätz ("Monatsschrift," xxx. 206) considers the alabarchs to be descendants of the priest Onias, who emigrated to Egypt; and he includes the generals Hilkias and Ananias among the alabarchs, though authority for this is lacking.

The following alabarchs are known by name: **1.** Alexander Lysimachus. **2.** Julius Alexander Lysimachus, son of the preceding. The name Julius was also borne by his brother Tiberius (Julius) Alexander (who afterward became prefect of Egypt), probably in honor of the imperial family of the Julii. The Herodians belonged also to the gens Julia; and Berenice, daughter of Agrippa I., who bore the cognomen Julia, was married to Marcus, son of the Alabarch Alexander. This Marcus appears to have died early ("Ant." xix. 5, § 1), for Berenice immediately after married another. **3.** Demetrius ("Ant." xx. 7, § 3).

Philo relates that after the death of one of the Alabarchs, the Emperor Augustus appointed a Council of Elders (*γερουσία*) for the Jewish community of Alexandria: but in an edict of Claudius it is stated that, after the death of one of the Alabarchs, he permitted the appointment of a successor. Philo was himself descended from the Alabarch family ("Ant." xviii. 8, § 1), and was either the brother or the nephew of Alexander Lysimachus. It is impossible to fix the date of either the beginning or the end of the line of Alabarchs. It may have ceased during the disturbances under Trajan. The brothers Julianus and Pappus, the leaders of the Jews during this revolt, were indeed natives of Alexandria, but were not Alabarchs. Tannaites of the second century would appear to allude to the Alabarchs (see Sifre, Deut. 1, end; Yalḳ. Deut. § 792). In the Talmud there is no mention of them. Grätz has made it probable that the Nikanor after whom certain gates of the Temple—often mentioned in the Mishnah, Talmud, and Midrash—were named, and who was, therefore, a public benefactor and undoubtedly a wealthy man, belonged to the family of the Alabarchs.

Reinach, in *Rev. Ét. Juives*, 1893, xxvii. 80.

S. Kr.

ALABASTER: The Alabaster of the ancients was the stalagmitic variety of carbonate of lime, and differed from what now is commonly known as Alabaster, which is sulphate of lime. From this material vases were made to hold unguents (see Matt. xxvi. 7; Mark, xiv. 3; Luke, vii. 37). Gradually the vases themselves were called Alabasters; and this is the explanation of the Septuagint translation, *alabastron*, in II (IV) Kings, xxi. 13. Alabaster is still obtained from mines in the province of Oran in Algeria; it was found also in Thebes and on the western side of the Tigris. In Assyria it was used in bas-relief and was called *pilu*, though this term was a general one applied to various kinds of hard stones. Its employment can be traced back beyond the ninth century B.C.; and it may be assumed that even at an earlier period there was trade in Alabaster in Babylonia, since the mineral is not found in southern Mesopotamia. It was usually grayish and striated in appearance. G. B. L.

ALAISH: The name of a Spanish-Jewish family, which occurs in various forms; usually preceded by "abu." Abu-al-'aish means in Arabic "Father of Life" or "Father of Bread." In the form Bolaix (compare the Arabic Belcasem for Abu al-Kasim) it occurs in the list of Barcelona Jews of the year 1391 ("Rev. Ét. Juives," iv. 70). A Çag Abenayx (Isaac ibn al-Aish) was *almojariff* of Queen Maria (*ib.*). A Solomon ibn Aish is cited in a manuscript which once belonged to Carmoly, as well as in Samuel Zarza's "Meḳor Ḥayyim" (fol. 54). He is probably identical with the physician Solomon ibn Gais ben Baruch, who died in Seville, Siwan, 5105 (= 1345) ("Hebr. Bibl." xix. 93). Joseph ibn Alaish was rabbi in Alcala ("Algaish" of Wiener and Kayserling). Menaḥem ben Aaron ben Zerah tells us in his "Ẓedah la-Derek" that he "studied with Joseph particularly the Tosafot of R. Perez, which were greatly in vogue in his day" (Gross, "Gallia Judaica," pp. 566 *et seq.*). According to the text in Neubauer ("Mediæval Jewish Chronicles," ii. 244), Joseph died in the year 1349, and not 1361 (Wiener, "'Emeḳ ha-Baka," p. 185; Kayserling, "Juden in Navarra," p. 84). An Abolays is the supposed translator into Arabic of a Chaldean book on the magic powers of various stones (Steinschneider, "Hebr. Uebers." p. 238; "Z. D. M. G." xlix. 268). The modern form of the name is Belais or Balaiss.

Bibliography: Steinschneider, *Hebr. Bibl.* xvi. 61; *Jew. Quart. Rev.* xi. 481. On a somewhat similar name, Yaez, see *Hebr. Bibl.* xix. 93.

G.

ALAMAN, ASHKENAZI, or **DEUTSCH:** Name of a many-branched and wide-spread Jewish family in the Turkish empire, whose ancestor, **Joseph ben Solomon of Ofen** (Buda), Hungary, is said to have been at the head of a deputation to hand over the keys of the citadel of Ofen to the sultan Solyman I., who was then advancing against it with his army (1529). Joseph, who afterward settled in Constantinople, received for himself, his sons **Satina** and **Joseph,** and their posterity, the privilege of exemption from all taxes and duties, and from compulsory service for all time to come. The privilege was confirmed by a firman, and has been successively ratified by all Ottoman rulers up to the present time (1901). Descendants of the Alamans, numbering about four hundred and fifty, still live in Constantinople, Adrianople, Brusa, Damascus, Gallipoli, Cairo, and several places in Bulgaria.

ALAMETH: Son of Becher and grandson of Benjamin (I Chron. vii. 8). G. B. L.

ALAMI, SOLOMON: An ethical writer who lived in Portugal in the fourteenth and fifteenth centuries; contemporary of Simon ben Ẓemaḥ Duran (רשב"ץ). He is known through his ethical treatise "Iggeret Musar," which he addressed, in the form of a letter, to one of his disciples in 1415. He was an eye-witness of the persecutions of the Jews of Catalonia, Castile, and Aragon in 1391. Alami considers these and other severe trials inflicted upon the Spanish Jews as the effect of, and a punishment for, the moral and religious decadence into which his coreligionists had fallen; and he holds before his brethren a mirror of the moral degeneration extending through all circles of Jewish society.

"Let us search," he says in his book, "for the source of all these trials and sufferings, and we shall find that a state of dissolution prevails in the midst of us; that an evil spirit pervades our camp, which has split us into two parties. There are those of our brethren who expend all their energies in solving Talmudic problems and in writing numberless commentaries and novellæ dealing in minute distinctions and interpretations, full of useless subtleties as thin as cobwebs. They diffuse darkness instead of light, and lower respect for the Law. Others, again, clothe the Torah in strange garments, deck it with Grecian and other anti-Jewish ornaments, and endeavor to harmonize it with philosophy, which can only be detrimental to religion and lead ultimately to its decay. Worse than these, however, are the frivolous persons who have not acquired substantial knowledge, but, relying upon the smattering of Greek that they possess, venture to ridicule tradition and to contemn the commandments

> of the Holy Law. Such frivolity prevails, above all, among the wealthy. We find these evil qualities among the proud representatives of the congregations, who have grown rich through dealing in money. They cast off everything that reminds them of their Judaism; they seek to dazzle by princely luxury; their wives and daughters array themselves in jewels like princesses; and, swelled with pride, they deem themselves the princes of the land. Therefore the great punishment came: it was inevitable. How much our rich coreligionists could learn from their Christian neighbors! The Christian princes and grandees rival one another in efforts to promote and uphold their religion and to train their youth in the pious sentiments of their ancestors. Our Jewish rich despise their faith, and permit the teachers of religion to eat the bread of sorrow and poverty."

The Hebrew style of the letter is dignified and impassioned; and its moral admonition reveals the noble courage of Alami. Each section of the "Iggeret Musar" is preceded by a Biblical verse suggesting its contents.

Zunz published an abridged German translation of part of it in Busch's "Jahrbuch für Israeliten," iv. (Vienna, 1844), and this also appeared in his "Gesammelte Schriften," ii. 177. An earlier edition appeared in Venice in 1712, as "Iggeret ha-Ḥokmah weha-Emunah" (Letter on Wisdom and Faith); but the name of the author was corrupted to Solomon ben Laḥmi. The best edition now extant of Alami's work is that issued by Jellinek (Vienna, 1872). Extracts of the "Iggeret" are given in "Or ha-Ḥayyim" of Joseph Jaabez and in Reggio's "Ha-Torah weha-Philosophia." On the name Alami, see Steinschneider, "Jew. Quart. Rev." xi. 486.

S. B.

ALASHKAR: A Spanish-Jewish family whose name was probably derived from an Arabic word meaning "red."

The first member of the Alashkar family whose name has been handed down is **Samuel**, the physician, who lived at Seville toward the middle of the fourteenth century. His son **Judah**, also a physician, and, like his father, an influential member of the Jewish community of Seville, claimed to have received, in a dream, a visit from an angel, who predicted for the month of Siwan, 5151 (=1391), the downfall of the town and the ruin of all the Jews in Spain. On the advice of this angel, Judah emigrated, with his son **Moses**, to "Malaca on the seacoast"—that is, to Malaga—and his family remained there until the expulsion of the Jews from Spain. In 1492 **Judah** and **Joseph**, sons of Moses, emigrated to Algeria; the former settling at Mostaganem, and the latter at Tlemçen, where he soon became the chief of the rabbinical school. Joseph is the author of several treatises and commentaries, of which one has been lost; the others are still unpublished.

Moses b. Isaac Alashkar, member of another branch of the family, lived in Egypt, but subsequently resided in Jerusalem, during the latter part of the fifteenth century and at the beginning of the sixteenth. He was prominent among contemporaneous rabbis; and his opinions were held in esteem throughout the Levant, and even in Italy. In a letter to Elijah ha-Levi—the teacher of Elijah Mizraḥi—he complained that his large correspondence deprived him of much of the time due to his professional duties. The two following are the most important of his works: (1) "Hassagot" (Critical Notes), in which he demolishes the whole dogmatical structure built up in Shem-Ṭob ben Shem-Ṭob's "Sefer ha-Emunot"; (2) "Responsa," 121 in number. Both were printed together at Sabbionetta, 1553. A separate edition of the "Hassagot" appeared three years later at Ferrara. This collection, which reached even distant Jewish communities, is of importance for the geographical names in rabbinical writings and in bills of divorce.

Abraham b. Moses Alashkar: A Talmudic scholar; lived in Egypt in the first half of the sixteenth century. He carried on a correspondence on ritual topics with his father, Moses Alashkar, in whose "Responsa" he is often mentioned: and likewise with Joseph Caro, who answered him in his "Responsa Eben ha-Ezer" and in the "Abḳat Rokel."

W. M.—M. B.

ALATINO: A notable family of Jews that settled in Italy in the second half of the sixteenth century, and occupied an important position in the history of literature and of science. Its prominence originated with three brothers, Jehiel, Vitale, and Moses, who dwelt in the city of Spoleto, where they distinguished themselves in the practise of medicine, and also pursued the study of philosophy. Both Vitale and Moses are favorably mentioned in Tiraboschi's "Storia della Letteratura Italiana."

Bonajuto (Azriel Pethahiah) Alatino was not only a distinguished physician, but he also acquired no inconsiderable reputation as a rabbi, which office he accepted in 1600. His notes upon the "Shulḥan 'Aruk" are quoted as authoritative ("Pisḳe Recanati ha-Aḥaronim," xxiv.). He also showed himself a valiant defender of the faith by advocating the Jewish side in a public debate on the immutability of the Mosaic law. This disputation, which took place in April, 1617, was ordered by the pontifical legate in Ferrara; and Alatino's opponent was the Jesuit Alfonso Ceracciolo. When the writer of the present article first published this debate, "Wikkuaḥ 'al Niẓḥiyut ha-Torah" (Debate on the Eternity of the Law), Leghorn, 1876, he was not able to identify the learned Israelite, but a few years later, when he removed to Ferrara, he had the good fortune to find another copy of the manuscript, upon which was noted "A Debate held at Ferrara by the learned physician Rabbi Azriel Alatino זצ״ל" (The memory of the righteous be blessed!). In 1621 Alatino was a member of a delegation sent by the Jewish community of Ferrara to the legate, with the view of preventing the closing of the Ghetto.

Nepi-Ghirondi ("Toledot Gedole Yisrael," p. 290), the authority here, referring to Alatino's death by the formula זצ״ל, mentions among his works one under the title "Torat ha-Muḳẓeh," dealing with the laws of Sabbath and festivals, and a *pesaḳ* (rabbinical decision), in which he opposes the opinion of R. Nathaniel Trabotti. No other notices of him are known to exist. His son **Moses Amram** apparently succeeded him in the rabbinical office; for in the list of rabbis of Ferrara there occurs, under date of 1648, the name of Moses Amram, son of R. Azriel Alatino. Under date of 1645 we read the name of **Moses**, the son of Ḥayyim Alatino, who appears to have been the son of the above-mentioned Vitale.

Two members of this family distinguished themselves in the eighteenth century: **Giuseppe Benedetto Alatino** (died 1736) established a fund from which two Jewish women of Ferrara were to receive annually a dower (Pesaro, "Appendice alle Memorie Storiche," etc., p. 31); while **Bonajuto Alatino** was a much-admired preacher in Padua, in the synagogue of R. Isaac Raphael Finzi.

G. J.

Jehiel Alatino, probably the eldest of the three, established himself in Todi, where his nephew David de Pomis found him in 1532 in comfortable circumstances, as he states in the preface to his Hebrew "Ẓemaḥ David." He describes Alatino as a renowned physician, and states that he learned a great deal through intercourse with him. When De Pomis wrote this (1587), Jehiel was already dead, since he adds, in mentioning his name, ז"ל ("of blessed memory").

Moses Alatino, born in 1529, was the half-brother of Jehiel (see preface to "Ẓemaḥ David"). Moses' version of Themistius' paraphrase of the four books of Aristotle's "De Cœlo," printed at Venice, 1574, by Simone Galignano, gives several important facts. In the dedication to Cardinal Luigi d'Este (Aug. 1, 1573) Moses relates how, at the time that he studied philosophy at Perugia under Francesco Piccolomini, he came into possession of an ancient Hebrew manuscript, containing a version of Aristotle's "De Cœlo," and, overjoyed by so precious a discovery, showed it to Bartolomeo Eustacchio, the professor of medicine, who was also a Hebrew scholar, and to his own brother Vitale. Both were greatly pleased with the discovery.

In the course of the next five years (1568–73), Moses applied himself to the task of translating this Hebrew paraphrase into Latin, fully confident that he would thereby produce a work of much value to students. Owing, however, to protracted ill-health, he was unable to complete the work. On his recovery he was urged by several scholars to finish his task, among whom Benedetto Mangiolli of Modena, then in the service of Cardinal d'Este, may be mentioned. Following the dedication of this work is a preface addressed particularly to students of philosophy. Here Alatino gives briefly the history of this important paraphrase, which in the time of Averroes (Ibn Roshd) was translated into Arabic and afterward into Hebrew. He referred also to the many difficulties overcome in turning it into Latin, particularly the finding of clear interpretations for obscure passages, as well as for the Arabic expressions used by the Hebrew translator. Fortunately Alatino obtained the assistance he desired from a physician and philosopher, Elia Nolano, or Elijah ben Joseph of Nola, as has been shown by Kaufmann ("Rev. Ét. Juives," xxxv. 296 *et seq.*). N. Brüll has published some fragments of this dedication, together with the preface ("Central-Anzeiger für Jüdische Litteratur," Frankfort-on-the-Main, 1891, pp. 135 *et seq.*). But he omits, among other things, the beginning of the preface, which reads: "Last year I went to the hot springs of Padua in company with my illustrious and most worthy master, Camillo Varani, for the purpose of freeing myself of a peculiar and chronic disease, and when the cure was effected nothing was more agreeable to me than to go to the magnificent lord Francesco Piccolomini, the philosopher learned in every species of science and my most renowned and beloved teacher of philosophy, in order to greet him." Some time previously Piccolomini had been transferred from Perugia to Padua, and Alatino, his old pupil, visited him, in order to show him his version of Themistius' "De Cœlo," although as yet not corrected, and to obtain his opinion of it. Piccolomini examined a number of passages and encouraged Alatino to complete the work. Camillo Varani was one of the sons of Ercole (Hercules), last duke of Camerino; and it is significant that Moses Alatino always earned the respect of his masters and the confidence of distinguished persons. De Pomis states that all Ferrara held Alatino in great esteem, and that he also derived much satisfaction from his own son. The son, whom De Pomis does not mention by name, was doubtless the learned physician and rabbi **Bonajuto. Emanuel Alatino,** also a son of Moses, can only have been a child at this time, since he died a young man in 1605 ("Luḥot Abanim," p. 125). The version of the Canons of Avicenna (Ibn Sina) does not appear ever to have been completed, but Moses and Bonajuto were still busily occupied with it in July, 1592, as is stated in the *licentia medendi* (physician's diploma) conferred upon each of them by Pope Clement VIII. ("Rev. Ét. Juives," xix. 135). Moses subsequently became intimate with Josef Zarphati, a Moroccan Jew, who afterward renounced Judaism, and, as Andrea de Monte, became one of the most notorious inquisitors. Relying upon their former friendship, Alatino in 1577 wrote to the monk, telling him of his own studies, and succeeded in inducing De Monte to deal more magnanimously with Hebrew books. This letter, with two others written subsequently, is in the possession of Dr. S. H. Margulies, of Florence.

A certain Moses Amram Alatino writes to his brother Baruch Abram in such a manner as to convey the idea that he was a Marano and desired to enter the Abrahamic covenant, even at an advanced age. But in all probability he is not to be identified with the celebrated physician and philosopher. Moses Alatino, the brother of Vitale and Jehiel, must be identical with the Moses Amram whose epitaph is given in "Luḥot Abanim," No. 45. The date of the epitaph, Nisan 29, 5365, corresponds with the date April 17, 1605, in the mortuary record of the Jewish community of Venice, which mentions a Moses Alatino. Alatino translated the commentary of Galen on the work of Hippocrates, "De Aëre Aquis et Locis," from the Hebrew of Solomon b. Nathan ha-Meati into Latin. Several editions of this translation have been published (Steinschneider, "Cat. Bodl." No. 1768).

Vitale Alatino was known as of high repute in Spoleto, and throughout Umbria, as De Pomis states in his "De Medico Hebræo," where he records that among the various persons treated by Vitale were Pope Julius III. (1550–55) and a certain Bartolomeo Eustacchio, a physician and anatomist, who called Vitale to Perugia. G. J.

ALATRI, CRESCENZO: Italian writer; born at Rome, 1825; died February 12, 1897. He was educated in the Talmud Torah of his native city, and graduated as rabbi, but never held any office. Alatri was the author of a "History of the Jews in Rome," several extracts of which were published in the "Educatore Israelita" (1856), pp. 262 *et seq.* This work is still extant in manuscript. He is often mentioned as the Italian and French translator of Moses Hazan's Hebrew poems, and as one of the founders of the Società di Fratellanza, the aim of which was to educate poor Jewish children and to promote arts and handicrafts among the Jewish population.

Bibliography: Vogelstein and Rieger, *Gesch. der Juden in Rom*, ii. 372, 404.

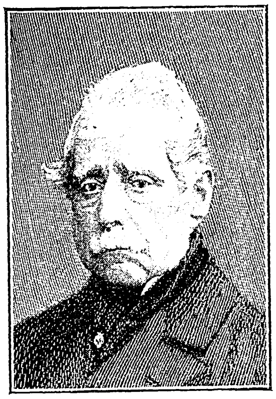
M. B.

ALATRI, GIACOMO: Italian banker and philanthropist; son of Samuel Alatri; born at Rome in 1833; died there March 9, 1889. He was for several years president of the Banca Romana, which position he resigned when, in 1881, his propositions for the reorganization of the bank were rejected. The subsequent history of that institution, its ultimate bankruptcy in 1893, and the grave political disturbances occasioned by it throughout Italy, fully justified the courageous stand taken by Alatri. His chief philanthropic efforts were directed toward organizing kindergartens for the Jewish poor, to the success of which he devoted all his energies. Alatri died at the age of fifty-six—two months before his father. His work on bank reform, entitled "Sul Riordinamento delle Banche d'Emissione in Italia," was published in Rome in 1888.

Bibliography: Berliner, *Gesch. der Juden in Rom*, ii. 185, 209, 212-213.

M. B.

ALATRI, SAMUEL: Italian politician, communal worker, and orator; born at Rome in 1805; died there May 20, 1889. For more than sixty years he led the Jewish community of his native city, and bore the brunt of its contests for religious and political freedom. His public career began at an early age. When only twenty-three years old he was called upon to enter the council of the community, the material and spiritual interests of which he thereafter served with zeal and devotion. From 1840 to 1865 he made annual tours to foreign countries, coming thereby in contact with prominent Jews in France and in England, who inspired him with new hopes and encouraged him to persevere in the struggle for justice. Knowing, however, that, in order to lead to happiness, freedom must be supplemented by education, Alatri devoted his special attention to foreign scholastic institutions, accumulating experience which he used for the benefit of the Talmud Torah in Rome. The Roman Jews looked upon him as their legitimate leader and chose him spokesman of the deputations that annually waited on the pope (Gregory XVI.). The latter, though hostile to all progress, could not help being charmed by the oratorical gifts of Alatri, whom he nicknamed "our Cicero," and to whom, on one occasion, he said: "Whenever you have to defend a case of liberty and humanity, come to me." Alatri's influence with the pontiff proved effective only in individual cases, the general position of the Jews remaining as precarious as before.



Samuel Alatri.

With the accession of Pius IX., who at first showed himself a friend of progress, Alatri redoubled his activities and entered into association with some of the most influential men of Rome. In appreciation of his intellectual and moral qualities he was elected a director of the Pope's Bank, later the Banca Romana; and it is an undisputed fact that the crisis which threatened that institution in 1853 was warded off by Alatri's foresight.

Alatri's efforts on behalf of his brethren were crowned with success in 1870, when King Victor Emmanuel entered Rome and put an end to the temporal power of the pope. On Oct. 2 of that year a deputation, of which Alatri was a member, handed over to the king the result of the plebiscite by which the inhabitants of the Papal Territories declared in favor of annexation to the kingdom of Italy. Alatri was then appointed one of the commissioners to reduce to order the chaotic finances of the city. He acquitted himself with conspicuous success, and was elected to Parliament by the second district of the city of Rome. Here he was entrusted with the task of adjusting the Italian budget. Party life, however, was not congenial to him, and after a few years of parliamentary activity he returned to the narrower sphere of the city and the Jewish community.

The services rendered by Alatri to his native city were acknowledged by the syndic of Rome, who at Alatri's funeral said: "The city of Rome loved him like a father, and now she mourns his death like that of a father." The following are some of his published speeches: "Discorsi al Dottor Albert Cohn," 1870; "Discorso Pronunziato nella Scuola del Tempio il 23 Aprile, 1881"; "Parole in Occasione della Professione di Fede," 1883; "Per la Inaugurazione del Collegio Rabbinico Italiano Celebrata il 15 Gennaio, 1887, nella Scuola del Tempio."

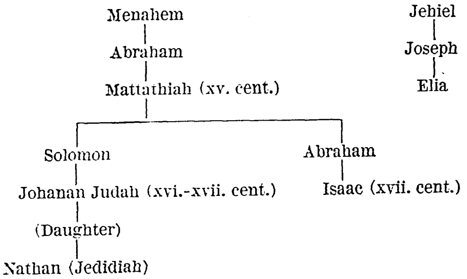
M. B.

ALATRINI: Name of a distinguished Jewish family in Italy, derived from the name of the town Alatri. It has been often transcribed as **Alterini** and **Aletrini**. **Alatrino** and **Degli Alatrini** are other forms often occurring.

The following are the known members of this family:



The first known mention of an Alatrini is that of **Menahem ben Solomon,** who lived at Fermo, a small town in the vicinity of Ancona, in 1295. **Abraham ben Menahem Alatrini** is mentioned in manuscript sources as living, between 1420 and 1433, in central Italy.

Elia ben Joseph ben Jehiel Alatrini: Rabbi at Macerata, Italy, during the second half of the fourteenth century. He wrote (1372) a work on education, "Sefer ha-Ḥinnuk," still in manuscript; and in 1389 he copied a manuscript for Moses ben Daniel at Forli.

Isaac ben Abraham Alatrini: Rabbi at Cingoli, in the vicinity of Macerata, at the beginning of the seventeenth century; teacher and friend of Eliakim b. Samuel Sanguine. During the Easter holidays, 1605, he preached at Modena a sermon on the Song of Solomon, which was used by him later as a basis for his "Kenaf Renanim" (The Song-birds' Wing). The work is a sort of haggadic philosophical commentary, in five parts, on the Song of Solomon. As the author states in the preface, he has incorporated in his work parts of the "Dialoghi di Amore" of the "learned man and philosopher Judah Rofe," that is, Leo Hebræus. The "Kenaf Renanim" is still unpublished; a manuscript copy is in the Bodleian Library, Oxford.

Bibliography: Benjacob, *Ozar ha-Sefarim*, p. 244; Neubauer, *Cat. Bodl. Hebr. MSS.* cols. 765, 767; *Literaturblatt des Orients*, v. 407, 439; Mortara, *Indice Alfabetico*, p. 2; Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 214.

Johanan Judah (Angelo) Alatrini ben Salomon: Poet of the sixteenth and the seventeenth centuries. He was the author (1563) of a Hebrew poem on the commentary of his grandfather Mattathiah Alatrini, to the "Beḥinat 'Olam." Several of his other Hebrew poems are in manuscript in the Bodleian Library, Oxford (see Neubauer, "Cat. Bodl. Hebr. MSS." col. 680). His chief work is the adaptation into Italian verse of Baḥya's famous prayer, ברכי נפשי or תוכחה, which, together with the text of the original and a Hebrew translation of the Italian version by the author's grandson, Nathan (Jedidiah) b. Eliezer of Orvieto, was published at Venice in 1628. This poem, called by Angelo in a pun on the Italian form of his prænomen, "L'Angelica Tromba" (The Angel Trumpet), seems to have enjoyed a certain popularity in the Jewish communities of Italy. It is written in the terza-rima, and it renders into graceful and almost faultless meter the sentiment, though not always the sense, of Baḥya's prayer. In the Hebrew translation by Isaac Alatrini's grandson, called "Shir Barki Nafshi," an attempt was made to preserve in the Hebrew the metrical construction of the Italian poem.

Bibliography: Steinschneider, *Cat. Bodl.* cols. 783, 1397, 2035; Benjacob, *Oẓar ha-Sefarim*, pp. 87, 578; *Monatsschrift*, xliii. 321; Mortara, *Indice Alfabetico*, etc., p. 2.

Mattathiah ben Abraham Alatrini: Rabbi in Italy during the second half of the fifteenth century, called the "Gaon," in the preface to the "Kenaf Renanim" of Isaac Alatrini. He wrote a commentary on Penini's "Beḥinat 'Olam," a manuscript copy of which is in the Bodleian Library, Oxford (Mortara, "Indice Alfabetico," p. 2).

W. M.

ALBA, JACOB DI: Italian rabbi; lived at the end of the sixteenth and beginning of the seventeenth century. He was rabbi in Florence, and author of homilies on the Pentateuch, entitled "Toledot Ya'aḳob" (Generations of Jacob), Venice, 1609.

Bibliography: Wolf, *Bibl. Hebr.* i. 580, 611; iii. 440, 519; Steinschneider, *Cat. Bodl.* col. 1179; Mortara, *Indice Alfabetico*, p. 2.

W. M.

ALBAGAL, SOLOMON IBN (called also **Don Culema aben Albagal**): A Spanish farmer of taxes who lived in Villa-Real or Ciudad-Real, and held office during the reign of Maria de Molina (1300–10). He was the owner of a large fulling-mill, named "Batanejo," in Guadiana, which, when disposed of by the Knights of Calatrava, brought the sum of 15,000 gold maravedis (about $51,000, or £10,200). For many years he was in litigation with his partner, Israel Alhadad, with regard to a large sum of money. The queen finally referred the dispute for settlement to R. Asher ben Jehiel of Toledo ("Resp." § 107, No. 6). The name of Albagal's wife was Joanila. Of their two children, a son, Samuel ibn Albagal, lived in Villa-Real, and a daughter, Dinah, was married to Abraham ben Xuxen (Susan), also a farmer of taxes, and died of the plague at Toledo in the year 1349.

ALBALAG, ISAAC: A philosopher of the second half of the thirteenth century, who, according to Steinschneider ("Hebr. Uebers." pp. 299–306), probably lived in northern Spain or southern France. Graetz, without good reason, makes him a native of southern Spain. His liberal views, especially his interpretations of the Biblical account of the Creation in accordance with the Aristotelian theory of the eternity of the world, stamped him in the eyes of many as a heretic. Apart from this he showed little originality, and was eclectic in tendency. This is illustrated by the fact that though he was an unreserved follower of Aristotle, he showed a leaning toward the Cabala, the excesses of which, however, he energetically opposed, especially its arbitrary Biblical interpretations based on the assumed numerical values of the letters (see Gemaṭria). His most characteristic work was a translation (1292) of a part of Al-Ghazzali's "Maḳaẓid al-Falasifa" (Tendencies of the Philosophers), which embraces only two parts of the original; namely, logic and metaphysics. Albalag did not confine himself therein to the work of a translator, but often corrected the views of other philosophers as formulated by Al-Ghazzali, who intended to refute them himself in his later work entitled "Tahafut al-Falasifa" (Destruction of the Philosophers). Albalag remarked that Al-Ghazzali did not refute the philosophers, but his own errors, into which he had fallen by obtaining information not from Aristotle himself, but from his commentators, such as Ibn Sina (Avicenna) and others. According to Albalag, this charge applies also to Maimonides when attempting to refute Aristotle, as, for instance, on the eternity of the world.

In the composition of his work Albalag made it his main object to counteract the wide-spread popular prejudice that philosophy was undermining the foundation of religion. Religion and philosophy agree on the fundamental principles of all positive religion—which are "the belief in reward and punishment, in immortality, in the existence of a just God, and in Divine Providence"—and they both follow the same aim; namely, to render mankind happy. It is, no doubt, quite true that philosophy, which addresses itself to the individual, differs, in its mode of establishing those truths, from religion, which appeals to the great masses. Philosophy demonstrates; religion only teaches. Albalag, however, by no means asserts that the doctrines of the philosophers must entirely coincide with those of religion; and it is exactly in his conception of their mutual relation that his peculiar standpoint manifests itself. The idea, already expressed by Maimonides, that the naked philosophical truth is often harmful for the masses, and that therefore the Holy Scriptures had often to adapt themselves to the intellectual level of the people, was so strongly emphasized by him that it is probable he was influenced by Ibn Roshd (Averroes), who made this idea the central point of his book, "Theology and Philosophy"—"therefore, he errs doubly who rejects a philosophical truth on account of its apparent contradiction of Scripture: first, because he misses the true meaning of Scripture; second, because thereby he declares the real arguments of philosophy to be inconclusive."

In cases where an adjustment is absolutely impossible Albalag brings forward a very strange solution; namely, that the teaching of the philosopher is true from the speculative standpoint, and at the same time the utterance of Scripture is true from a higher, supernatural point of view—the philosophical mode of knowledge being altogether different from the prophetic. And as the philosopher is only intelligible to his compeers, so the prophet can be understood only by prophets. This view resembles the theory of double truth (the theological and the philosophical), originated and chiefly developed in the thirteenth century at the University of Paris (Lange, "Gesch. des Materialismus," 3d ed., i. 181). There is no evidence, however, of any direct influence of the Parisian thinkers on Albalag, as he could have come to his view by a more natural process; viz., by combining the two opposite influences of Ibn Roshd and Al-Ghazzali, whose idea of the difference between philosophical and prophetical knowledge is at the bottom of the latter's work, the "Munkid." Accepting these two influences, the view of the double truth necessarily follows. It may be added that Albalag interpreted the Biblical account of the Creation as signifying that the six days represent the relative order of things, while he conceives the seventh day as pointing to the world of ideals.

ALBALIA: Name of one of the more ancient Jewish families in Spain. The tradition among its members was that they were descended from Baruch, the friend and companion of the prophet Jeremiah, or, according to more numerous and also more plausible accounts, from a noble family of Judea, one of whose members, Baruch, was sent by the emperor Titus to Merida at the request of the Roman proconsul, in order to establish silk-culture there. The family at a very early period settled in Cordova.

The name Albalia may be the Arabic al-Bali ("Jew. Quart. Rev." x. 137). A Solomon Albala is mentioned in a Barcelona document (Jacobs, "Sources," p. 20). Kaufmann ("Jew. Quart. Rev." viii. 222) suggests that there may be some connection between the names Albalia and Abrabalia. A Joseph and a David Albali are probably meant in Schiller-Szinessy's "Catalogue of Hebr. MSS. in the University Library of Cambridge" (No. 19, p. 30), where the spelling is אלבעלי. The following two members of the family were conspicuous:

Baruch ben Isaac Albalia: Talmudist, born at Seville in 1077; died in 1126. After the death of his father, and by his advice, he, being then only seventeen years old, went to Isaac Alfasi, who conducted a large rabbinical school at Lucena. Alfasi had long been hostile to Isaac Albalia; but he received his son Baruch with the utmost friendliness and promised to be a father to him. Baruch was not averse to the secular sciences. He was a fellow pupil of Joseph ibn Migash; and, like the latter, became the head of a celebrated rabbinical school.

Isaac ben Baruch Albalia: Mathematician, astronomer, and Talmudist; born at Cordova, 1035; died in Granada, 1094; father of Baruch ben Isaac Albalia.

He was educated by a Jew from Perigord. His favorite subjects were Talmudic literature, mathematics, and astronomy. When barely thirty years old Isaac began to write קופת הרוכלים ("The Store of the Merchant"), a commentary on the most difficult passages of the Talmud. He was devoted to the study of mathematics and astronomy. Among his patrons were Samuel ibn Nagdilah and his son Joseph Nagdilah, to whom in 1065 he dedicated his astronomical work "'Ibbur," on the principles of the Jewish calendar. After the death of Joseph Nagdilah, Albalia settled at Cordova, where he became acquainted with Mohammed Abu-al-Ḳasim al-Mu'tamid, the Arab ruler, who appointed him astrologer at his court in Seville and made him *nasi* of all the Jewish congregations of his realm. Isaac also acted as rabbi of the Jewish congregations of Seville; and, with the books that he acquired from his patron Joseph as a nucleus, accumulated a large library, thus making Seville a center of Jewish learning.

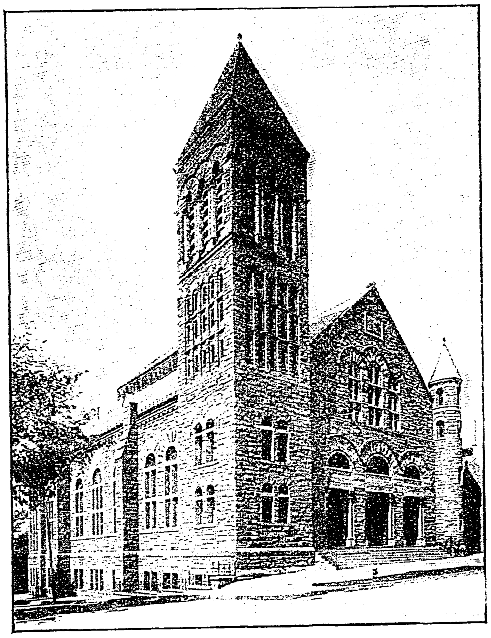
ALBANY, New York: Capital of the state of New York and of Albany county, situated on the west bank of the Hudson river. As early as 1661, when Albany was but a small trading post, a Jewish trader, named Asser Levi (or Leevi), became the owner of real estate there. Then the settlement was known both as Fort Orange and Beverwyck. To trade in the colony in those days it was necessary to acquire burghers' rights, and one of the conditions essential to the acquisition of such rights was the ownership of real estate. This probably accounts for the ownership at that time of real estate in Albany by this Jewish trader (see S. W. Rosendale in "Publications of Am. Jewish Historical Society," No. 3, pp. 61 *et seq.*; Daly's "Settlement of the Jews in North America"—edited by M. J. Kohler—note, p. 22). While Asser Levi seems to have been a resident of New York city, his carrying on trade at Albany at that early date in the history of the American colonies is worthy of note.



Albany Synagogue.

(From a photograph.)

First Congregation.

But the promiscuous trading of Asser Levi has little or no connection with the settling of a Jewish community at Albany. For the foundation of a Jewish settlement there one must look to much more recent times. During the early years of the nineteenth century a number of German Jews, principally from Bavaria, settled there; but it was not before 1838 that the Congregation Beth-El was organized (March 25), having its meeting-place first in Bassett and afterward in Herkimer street. The congregation had no rabbi regularly officiating at its services until the fall of 1846, when the Rev. Isaac M. Wise, then just entering upon his career, was gladly welcomed to the place. He remained at Albany eight years, during which time he introduced many reforms in the service of the synagogue. These reforms, and the frank utterances in his sermons in defense of them, produced such violent opposition on the part of some of the members of the congregation, that at the end of the fourth year of his incumbency the opposition had grown very bitter, even to personal violence, and caused a division in the congregation. The adherents of Dr. Wise organized the Congregation Anshe Emeth on

October 11, 1850, and, having seventy-seven members, appointed him its rabbi. This congregation purchased a piece of property on South Pearl street, formerly used as a church, and converted it into a synagogue. Dr. Wise continued here until April 19, 1854, when he accepted the position of rabbi of the B'ne Yeshurun Congregation at Cincinnati, O. It was during his last year at Albany that Wise published the first volume of "The History of the Israelitish Nation from Abraham to the Present Time, Derived from the Original Sources." He was succeeded by the Rev. Elkan Cohn, who remained until 1862, and was followed by Dr. Myer. In 1864 the Rev. Max Schlesinger succeeded the latter. With Dr. Schlesinger as its rabbi the Anshe Emeth Congregation continued until 1885, when it consolidated with that of Beth-El, the united congregation being named the Beth-Emeth. This merging of the two congregations necessitating a larger place of worship, a handsome synagogue, costing $145,000, was built at the corner of Lancaster and Swan streets, and it was dedicated on May 24, 1889.

The members of the old Beth-El Congregation who would not follow Dr. Wise, nor adopt the reforms advocated by him, remained in Herkimer street until 1865, when they built a synagogue at the corner of South Ferry and Franklin streets. There they continued until 1885, when they joined with the Anshe Emeth Congregation as stated above. During that time their religious services were conducted by Revs. S. Falk, Gotthold, H. Birkenthal, Son, and Friedman.

Eleemosynary Institutions.

The principal charitable societies of the Jewish community of Albany are: The Hebrew Benevolent Society, a general charity, organized September 20, 1855, and incorporated April 5, 1869; two *chevras*, or societies—one for men and the other for women—being mutual aid associations, giving aid in cases of sickness and death; the Ladies' Sewing Society—also a general charity; the Jewish Home, having a permanent fund, and caring mainly for the aged poor by paying their board in families whose circumstances are such that they also need aid, thus helping both; the Albany Branch of the Alliance Israélite Universelle, established in 1865; the local branch of the Council of Jewish Women, which raised a fund to be devoted to defraying the expenses of establishing and maintaining a school for the education and training of children.

Although in the Jewish community of Albany merchants predominate, a great many persons are engaged in the manufacture of anilin dyes, potash, and clothing. In the legal and medical professions the Jewish community of Albany has had many distinguished representatives. Joseph Lewi practised medicine for many years in the city, and exerted a wide influence in the community. The population of Albany (1900) is about 100,000, of which upward of 4,000 are Jews. G. H. ALBAS, MOSES BEN MAIMON: Cabalist of the sixteenth century; lived in northwest Africa. He was the author of the cabalistic work "Hekal ha-Ḳodesh" (The Holy Temple), which he began in 1575. It is a commentary on the prayer-book, compiled from the Zohar and other cabalistic works, and was published with an introduction by Jacob Sasportas, in 1653, at Amsterdam. M. K.

ALBAS, SAMUEL: Rabbi at Fez; born 1697; died 1749. He was well read in the Talmud and in rabbinical literature, and was highly esteemed by Ḥayyim ibn Atar and other of his contemporaries. He composed novellæ on the treatise 'Abodah Zarah of the Babylonian Talmud, which still exist in manuscript.

AL-BATALJUSI. See Bataljusi, Al-.

ALBELDA (formerly Albeilda): A town of Old Castile, in the vicinity of Logroño, which was inhabited by Jews as early as the eleventh century. The Jewish congregation there was subject to the authority of the bishop of Calahorra, and by order of Alfonso X. it paid taxes either to the bishop or to the chapter. In the thirteenth century the congregation, consisting of thirty-five families, was obliged to deliver to the chapter thirteen hens three days before each Ash Wednesday; and to the bishop, whenever he visited the city, a sufficient quantity of linen for himself and his suite. The chapter, to whom belonged all fines imposed upon the Jews, occasionally had them imprisoned. The Jewish congregation of Albelda, together with that of Alfacel, was obliged to pay an annual tax of 11,648 silver maravedis. Several Jewish scholars bore the name of Albelda.

M. K.

ALBELDA (sometimes erroneously written Albilda and Albeylda), MOSES: A Bible commentator (died 1549) who took his name from the town of Albelda, whence it is thought he or his ancestors must have come. About the beginning of the sixteenth century he settled at Salonica, Turkey, where he resided until his death at an advanced age. A supercommentary upon Rashi's Pentateuch commentary was written by him and published, presumably at Constantinople, about 1525, though neither place nor date of publication is mentioned in the work. M. K.

ALBELDA, MOSES BEN JACOB: Preacher and philosopher, grandson of the preceding; flourished in Turkey in the sixteenth century. He was a distinguished preacher, first at Valona, Turkey, and afterward at Salonica. After ten years of service in the community at Valona, one of his pupils disrespectfully demanded permission to deliver a religious discourse in one of the four synagogues not occupied at the time by Albelda; the latter refused. The congregation, which revered its rabbi, thereupon referred the matter to Abraham de Boton at Salonica, and he advised that the young man should not be permitted to preach (see Abraham de Boton's responsa "Leḥem Rab," No. 73). Albelda, who as a preacher was rather verbose, with a marked inclination to philosophizing, was also a very prolific writer. He published a series of theological treatises on providence, repentance, and similar themes (Venice, 1583), under the title "Reshit Da'at" (Beginning of Knowledge); and an ethical work, entitled "Sha'are Dim'ah" (The Gates of Tears), on the vanity of the world and the sufferings of human beings, together with a commentary on Lamentations (Venice, 1586). After his death his sons, Judah and Abraham Albelda, published under the title "'Olat Tamid" (The Perpetual Offering) his commentary upon the Pentateuch (Venice, 1601); and one year later his only surviving son, Judah, published under the title "Darash Mosheh" (What Moses Preached) his sermons delivered in various synagogues on Sabbaths, festivals, and other occasions (Venice, 1602).

M. K.

ALBERTI, CONRAD (pseudonym for **CONRAD SITTENFELD**): German novelist, dramatist, critic, and actor; born at Breslau, July 9, 1862. Having finished his education in his native city, he went to Berlin, where he became an actor. After a few years he returned to his studies and devoted himself entirely to literary work. He was one of the pioneers of naturalism in Germany, which introduced realism into literature, sociological aspects into literary criticism, and which culminated in Sudermann and Hauptmann.

Among Alberti's many critical books and pamphlets may be mentioned: "Gustav Freytag" (1884; 2d ed., 1886), "Bettina von Arnim" (1885), "Ludwig Börne" (1886), "Ohne Schminke" (1887), "Der Moderne Realismus in der Deutschen Litteratur" (1889), "Natur und Kunst" (1891); among his novels: "Riesen und Zwerge" (1887; 2d ed., 1889), "Plebs" (1887), "Der Kampf ums Dasein" (a series of novels, 1888–94), "Fahrende Frau" (1895); among his dramas: "Brot!" (1888), "Ein Vorurteil" (1891), "Bluff" (1893), "Die Französin" (1894); and among his political writings: "Norddeutsche Reichspolitik" (1896), "Türkische Zustände" (1896).

ALBERTUS MAGNUS (Count of Bollstadt): The most eminent German philosopher and theologian of the Middle Ages and the real founder of the scientific tendency within the order of Dominicans; born at Lauingen, Bavaria, 1193; died at Cologne on the Rhine in 1280. During his sojourn in Paris, whither he went in 1245 to acquire the degree of master of theology, he took part in the conference ordered by Pope Innocent IV. in 1248, which decreed the burning of the Talmud, a work which Albertus Magnus utilized through the instrumentality of Jewish authors, and to which he owed many useful suggestions (Joël, "Verhältniss des Albertus Magnus zu Maimonides," p. xiv.). In wide reading and versatility of knowledge he was hardly surpassed by any of his contemporaries. Albertus Magnus devoted special attention to Jewish literature so far as it was accessible to him. The famous Jewish physician and philosopher Isaac Israeli the elder, whose views, mostly taken from his works, "De Definitionibus" and "De Elementis," Albertus often quotes, and to whom he ascribes the identification adopted by the philosophers of ethereal spirits with the angels of the Bible ("Summa Theologiæ," ii. 2, quæstio 8; ed. Leyden, 1651, xviii. 76), is considered by him as a chief representative of the Jewish philosophy of Maimonides ("Metaphysica," xiii. quæstio 76; ed. Leyden, iii. 375).

Albertus Magnus devoted special study to the "Fons Vitæ" of Avicebron (Solomon ibn Gabirol). In a critical survey of the views of the elder philosophers, which is found at the beginning of his work "De Causis et Processu Universitatis," not only the doctrines of the Epicureans, of the Stoics, of Socrates, and of Plato, but also those of Avicebron, are thoroughly examined.

Although he contests very strongly most of the views of Avicebron, from the Peripatetic standpoint, he recognizes the originality of the system sketched out in the "Fons Vitæ." According to Avicebron's philosophy, the unity of the first principle which penetrates the universe was succeeded by a duality; namely, (*a*) the first form, identical with the intelligence, and (*b*) the first matter, by which the form is supported (*ibid.* v. 532). Form can neither exist without matter, nor matter without form (*ibid.* p. 562).

Attitude Toward Avicebron.

Albertus Magnus not only recognizes the originality of Avicebron in his doctrine of the first matter and the first form, but also in his doctrine of human free-will; he shows this by calling Solomon ibn Gabirol the only philosopher who represents the first principle as acting through an individual will (*ib.* p. 549). The strange impression which the doctrine, as outlined in the "Fons Vitæ," produced upon him led him even to suspect that this book was not written by Avicebron himself, but was foisted upon him by some sophist (p. 550; compare "Summa Theologiæ," i. quæstio 20; "De Intellectu et Intelligibili," I. i. chap. 6). This did not hinder him, however, from appropriating in certain points, as for instance in the division of forms, the doctrines outlined in that work ("De Natura et Origine Animæ," i. chap. 2; compare "Fons Vitæ," ed. Bäumker, iv. 32, 255). Quite different from his attitude toward the doctrine of Gabirol is his attitude toward that of Maimonides, the Rabbi Moyses Ægyptus, as he calls him, from whose "Moreh Nebukim," which he quotes under the title "Dux Neutrorum," he not only took single passages, but entire sections, and incorporated them into his works.

Like Maimonides, standing essentially upon the ground of Arabic-Aristotelian philosophy, Albertus Magnus, in his effort to harmonize the doctrines of Biblical revelation, followed in many points the author of "Moreh Nebukim." But, nevertheless, being inferior to the Jewish thinker in the energy and solidity of his conception of the world, he was not able to establish even approximately harmonious relations between reason and revelation as Maimonides had done. The fundamental principle of his doctrine of the knowledge of God was that, as between the finite and the infinite there exists not the least analogy, therefore the same attribute, applied to the finite and to the infinite, does not signify the same thing ("De Causis," p. 551). He was undoubtedly influenced by Maimonides ("Moreh," i. 56) when he agrees expressly with his allegation that, except by divine grace, there is no other knowledge of God possible than by negative qualifications ("De Causis," p. 593; "Moreh," i. 58).

Follower of Maimonides.

Albertus Magnus follows Maimonides in the theory of Creation to a greater extent than any one would suspect even from the lengthy verbatim quotations. World-beginning and eternity, Biblical and Aristotelian cosmogony, are two systems of philosophy that are irreconcilable. Albertus Magnus follows the guidance of Maimonides the more willingly on this point, since the latter had succeeded in shaking the Aristotelian proofs of the eternity of the world, without departing, however, from the principles of Aristotelianism ("Moreh," ii. 13–25; compare i. 74).

What Albertus says about this matter in his "Physics" (viii. 1, chaps. xi., xv.) is derived partly from the ideas contained in the "Moreh," partly from long textual selections taken from the same work. Following Maimonides, who refutes the proofs produced by the Peripatetics concerning the eternity of the world ("Physics," viii. 1, chap. xi.; "Summa Theologiæ," ii. 1, 4, 3; compare "Moreh," ii. 14), Albertus is of opinion that the eternity of the world must be rejected principally for this reason, that, if any one accepts the views of the Peripatetics, the world would have been evolved by natural force, and would, therefore, not be the work of a Creator acting with liberty and intention ("Physics," viii. 1, chap. xiii.; compare "Moreh," ii. 19, 24).

Concerning the laws of a world already in existence, Aristotle committed the error of raising the question whether the world, and consequently these laws, be eternal or be simply evolved; a point explained more fully by a famous simile of Maimonides ("Physics," viii. 1, chap. xiv.; compare "Moreh," ii. 17). Albertus' attitude toward Maimonides' doctrine of prophecy was peculiar; he could scarcely avoid being powerfully influenced by Maimonides' ingenious exposition of this problem. Albertus' explanations concerning the difference between divination in the dream and vision, as well as his explanations of the fundamental diversities in the natural dispositions of men, by which also the varying capacity of different people for knowing the future and hidden things is accounted for ("De Divinatione," chap. iii. *et seq.*), are undoubtedly taken from the "Moreh Nebukim."

But since, according to his distinction between natural and supernatural knowledge, prophecy proper can not belong to the *lumen naturale*, he adopts the view of Maimonides for the explanation of natural prophecy only, as it occurred also in the pagan world. But, on the other hand, Maimonides' profound and penetrative method of bringing nearer to our understanding the historical phenomenon of prophecy, and of representing many visions of the prophets as merely psychical phenomena—which Maimonides supported on passages of the Bible—appears to Albertus but a frivolous attempt to trace back the opinions of the philosophers to the Bible ("Summa Theologiæ," xviii. 76; "De Causis," v. 563). Of the writings of Albertus which did not escape the attention of Italian and Spanish Jews, some were translated into Hebrew at the beginning of the fourteenth century (Steinschneider, "Hebr. Uebers." pp. 277 *et passim*).

J. G.

ALBINUS: Roman procurator of Judea from 61 to 64 (Jos. "Ant." xx. 9, § 1). While on his way from Alexandria to his new post he was met by a delegation of Jews, who demanded the punishment of the high priest Ananias. Albinus sent him a threatening letter, and three months later deposed him. Albinus endeavored sincerely to restore peace in Jerusalem, and had many of the Sicarii executed. Some, however, he permitted to go free on payment of a ransom. In the dispute between Joshua (Jesus) ben Damnai and Joshua (Jesus) ben Gamla concerning the office of high priest, Albinus sided with the former, who sent him presents every day. This description of Albinus by Josephus in the "Antiquitates" is, as Grätz ("Gesch. d. Juden," 4th ed., iii. 445) remarks, much milder than that in the "De Bello Judaico," according to which Albinus administered his office far worse than even his predecessor, Festus. There was no wickedness he would not commit. He robbed individuals of their property, and imposed oppressive taxes upon the people. On receipt of bribes, he liberated Roman decurions who had been imprisoned for deeds of violence. Even the revolutionary elements of the land were able to buy his friendship, so that their number constantly increased. Josephus ("B. J." ii. 14, § 1) does not scruple to call him the robber chief (ἀρχιληστής) and the tyrant of the wicked. Hegesippus ("De Excidio Hierosolymitano," ii. 8) says of him that to the poor he was a tyrant and to the rich a slave. Zonaras, in his "Chronicle" (ed. Pinder, vi. 17), judges him more leniently.

Both Josephus and Hegesippus admit that, when compared with his successor, Gessius Florus, Albinus might be considered good, were it not that through his connivance with the robbers he sowed the seed of the subsequent rebellion. When a certain Jesus, son of Ananias (or Ananos), predicted the destruction of Jerusalem, he was brought before Albinus, who had him cruelly tortured; but when the procurator saw that the prophet would not recant, he allowed him to go free as a harmless madman (Josephus, "B. J." vi. 5, § 3; Hegesippus, v. 44). Lucceius Albinus, who was appointed to the governorship by Nero and subsequently to that of Tingitana by Galba, and previously by Nero to that of the province of Mauretania Cæsariensis (Tacitus, "Historia," ii. 58, 59), and who, together with his wife and intimate friends, was executed by order of Vitellius, is, according to all accounts, identical with Albinus. S. Kr.

ALBO, JOSEPH: Spanish preacher and theologian of the fifteenth century; known chiefly as the author of the work on the fundamentals of Judaism "'Iḳḳarim" (Principles). Little is known of the details of his life. Monreal, a town in Aragon, is generally assumed to have been his birthplace; but this surmise rests upon doubtful evidence. Astruc, in his report of the prolonged religious debate held at Tortosa in 1413-14, mentions Albo as one of the Jewish participants, and says that he was the delegate of the congregation of Monreal. But in the Latin account of the great verbal battle no reference is made to this locality; and there is, consequently, good ground for doubting the correctness of the assertion. Graetz believes that Albo could not have been less than thirty years of age when he was sent to take part in the disputation referred to, and he accordingly places the date of Albo's birth not later than 1380. It seems to be certain that he died in 1444, although some have been of the opinion that his death occurred in 1430. He is mentioned, however, as preaching at Soria in 1433.

The use Albo makes of medical illustrations creates the presumption that he was an adept in medical science, which suggests that he may have practised medicine, thus emulating the excellent tradition of earlier Jewish writers on philosophical subjects. He shows himself also fairly well versed in the systems of Arabic Aristotelians, though his knowledge of their works was in all probability only second-hand and obtained through Hebrew translations. His teacher was Ḥasdai Crescas, the well-known author of a religio-speculative book, "Or Adonai." Whether Crescas was still living when Albo published his "'Iḳḳarim" has been one of the disputed points among the recent expounders of his philosophy. Albo's latest critic, Tänzer ("Die Religionsphilosophie des Joseph Albo," Presburg, 1896), clearly establishes the fact that the first part of the work must have been composed before the death of Albo's master.

The opinions of modern students of medieval Jewish philosophy are divided as to the intrinsic worth of Albo's expositions. Munk, while conceding that "'Iḳḳarim" marks an epoch in Jewish theology, is exceedingly careful to accentuate its lack of value as a philosophical production (see Munk, "Mélanges," p. 507). Graetz is still more pronounced in

His Significance.

his refusal to credit the book with signal qualities calling for recognition. He charges the author with shallowness and a fondness for long-spun platitudes, due to his homiletic idiosyncrasies, which would replace strict accuracy of logical process by superabundance of verbiage (Grätz, "Gesch. d. Juden," viii. 157). Ludwig Schlesinger, who wrote an introduction to his brother's German translation of the "'Iḳḳarim" (Frankfort-on-the-Main, 1844), avers that Albo did little more than schedule, on a new plan, the articles of faith of Maimonides. On the other hand, S. Back, in his dissertation on Joseph Albo (Breslau, 1869), places him on a high pedestal as "the first Jewish thinker who had the courage to coordinate philosophy and religion, or even to make both identical." "Albo," says Back, "did not merely give the Jewish religion a philosophical foundation; he made philosophy preeminently religious in its contents." The purpose of the book was neither to coordinate religion and philosophy nor to build up a strictly logical system of dogmatics. Much fairer to the vital intentions of the author is the theory developed by Tänzer, that the "'Iḳḳarim" constitutes in reality a well-conceived contribution to the apologetics of Judaism.

His "'Iḳkarim."

The work was not composed in its entirety at once. The first part was published as an independent work. It develops the gist of Albo's thought; and it was only when its publication brought down upon him a perfect deluge of abuse and criticism that he felt impelled to add to it three more sections—by way, as it were, of amplification and commentary on the views advanced in the first. In his preface to the second part Albo delivers himself of a vigorous sermon on the subject of his censors: "He that would criticize a book should, above all, know the method employed by its author, and should judge all the passages on a certain subject as a whole." He castigates the hasty and careless procedure of those who will pass judgment on an author without remembering this fundamental requirement of sound criticism. Albo's opponents certainly did not handle him delicately. He was accused, among other things, of plagiarism. It was maintained that he appropriated the thoughts of his teacher Crescas especially, without giving him due credit. This accusation has been repeated, even in modern times, by no less a scholar than M. Joël. Examination of the incriminating evidence, however, does not substantiate the indictment. Crescas having been Albo's teacher, the similarities are only such as might be reasonably expected in the writings of both preceptor and disciple.

Philosophy and Apologetics.

Popular as the loose statement is, that Albo was actuated to write his "'Iḳḳarim" by a desire to reduce to a more handy number the thirteen articles of faith drawn up by Maimonides, it must be dismissed as erroneous. The enumeration of fundamental dogmas or principles of religion is an incidental result of Albo's inquiry, not the primary and essential motive. It is an open question how far the claim may be pressed that Judaism has produced an independent philosophy of religion. But whatever labor was devoted to this field by Jewish thinkers was, in every case, primarily prompted and inspired by the ardent desire to defend the citadel of Jewish faith against the assaults of its enemies. Taking a broad survey of the whole field, it may safely be said that at four different periods Judaism must have been under the stress of this duty. When, in Alexandria, Greek thought laid siege to the fortress of Judaism, the consequent urgency of a sufficient resistance produced Philo's system. The second reasoned exposition of Judaism was produced at the time of the controversies with Karaism and under the influence of the polemics of the Mohammedan schools. Maimonides, in turn, represents the reaction exerted by the Arabic Aristotelian schoolmen. And, finally, Albo enters the lists as Judaism's champion under the challenge of Christian doctrine. This characteristic element, in the genesis of whatever system of philosophical dogmatics Judaism evolved, must be constantly borne in mind in judging any phase or feature of the system, and especially in forming an estimate of Albo's method.

Distinctive Features of Albo's Scheme.

Times of controversy concerning spiritual things call, naturally, for the systematization of one's own fund of philosophy. Much has been written on the subject of the dogmatic or undogmatic nature of Judaism. Certain it is that the inclination for elaborating creeds has tempted the Jewish theologians to frame dogmas only in critical times of heated controversy. Albo had many predecessors in this field, both among the Rabbinites and the Karaites. But, strange as it may seem, he only followed the example of Abba Mari ben Moses ben Joseph of Lunel, one of the most outspoken leaders of the anti-Maimonists (in his "Minḥat Ḳenaot"), and of Simon ben Ẓemah Duran (in his "Magen Abot"), in limiting the fundamental "roots" to three—namely, the belief in the existence of God; in revelation; and in divine retribution, or, if it be preferred, in immortality. In the formulation of other articles of faith the controversies to which the compilers had been exposed, and in which they had taken part, influenced, to a large extent, both the selection of the specific principles to be accentuated and the verbal dress in which they were arrayed. Similarly in the case of Albo, his selection was made with a view to correct the scheme of Maimonides in those points where it seemed to support the contentions of the Christian dogmatists and controversialists. Maimonides himself had been influenced by a desire to obviate certain Christian and Mohammedan contentions. His emphasis upon the absolute incorporeality of God only finds its true light when the doctrine of the incarnation is borne in mind. His Messianic expectation, with the stress upon the constancy with which its future fulfilment is to be looked for, had also an anti-Christian bearing. But this very point, the Messianic dogma, had in turn—soon after Maimonides—become a source of grave anxiety to the Jews, forced, as they were, to meet in public disputations the champions of the regnant and militant Church. Among the spokesmen of the Church not a few were converts from Judaism. These were not slow to urge this Messianic dogma of Maimonides as far as they might, to embarrass the defenders of Judaism. Before Maimonides the question of the corporeality of the Messiah appears not to have been among the problems discussed and debated in the polemics between the Church and the Synagogue. But half a century after him, when his Messianic doctrine had been accepted as one of the essential articles of the faith, it is this very point that is pushed into the foreground of the discussions. Having participated in one of these public disputations, Albo must have become conscious of the embarrassment which the Maimonidean position could not but occasion to the defenders of Judaism. In his scheme, therefore, the Messiah is eliminated as an integral part of the Synagogue's faith. In its stead he lays stress upon the doctrine of divine retribution. Graetz has argued that Albo was prompted by a desire to

Christianize Judaism. The contrary is the truth. In order to deprive the Christian disputants of their favorite weapon, and with the clear purpose of neutralizing Maimonides in this respect, Albo ignores the Messianic hope.

This apologetic interest marks his disquisition in its entirety. The title of his book indicates his method at the very outset. Basic to his investigation is the recognition that "human happiness is conditioned by knowledge [עיון] and conduct." But "human intellect can not attain unto perfect knowledge and ethical conduct, since its power is limited and soon exhausted in the contemplation of the things the truth of which it would find; therefore, of necessity, there must be something above human intellect through which knowledge and conduct can attain to a degree of excellence that admits of no doubt." The insufficiency of human intellect postulates the necessity of divine guidance; and thus it is the duty of every man to know the God-given law. But to know it is possible only if one has established the true principles, without which there can be no divine law. Seeing that on this vital theme there are so much divergence, confusion, and shallowness, Albo resolves to erect a structure for the true religion.

Fundamental Principles.

His great criterion in this his search is the question, What principles are indispensable to a religion that is both divine and true? All revealed religions—and it is in behalf of revealed religion that he sets out on his excursion—recognize three fundamental principles. But would the identity of these three principles in revealed religions not entitle the devotees of each to claim their own as the one true religion? No, replies Albo: these three principles may be alike indispensable to the so-called revealed religions, and, therefore, basic to any religion claiming to be revealed; but only that religion is the true one that understands these basic thoughts correctly. And the test for this correctness of understanding he holds to be the further recognition of certain other truths and inferences that must follow logically from the acknowledgment of the three fundamentals. Unless a revealed religion accept all of these inferences, it is not to be recognized as the one true religion. Now Judaism is not only based upon the three fundamental principles, but it acknowledges also the binding force of the inferences from them. As a consequence, Judaism is the true revealed religion. Having drawn this conclusion, Albo has attained the end for which he undertook his investigation. His purpose, as this analysis of his introduction shows, was not to place Judaism upon a solid philosophical foundation, but to vindicate for Judaism, as opposed to the other revealed religions, the right to the distinction of being the true revealed religion. His argument may be open to serious objection. It is certainly true that he starts with a *petitio principii*. He assumes that religion is revealed; and writes as a theologian, not as a philosopher. But his theology is triumphant. Granting his premises, one can not but concede the consistency of his deductions.

His Peculiar Terminology.

Albo's terminology is probably original with him. The three fundamentals he designates *'iḳḳarim*, or roots (*'iḳḳar shorashim*; Dan. iv. 12 [15], 20 [26]). Hence the title of his work. The (eight) derived and necessary truths—upon the recognition and correct application of which depends whether the revealed religion prove itself to be the true religion—he calls *shorashim*, or secondary roots. Both of these—the 'iḳḳarim and the shorashim—are indispensable to the subsistence of the trunk of the tree. The branches, however, are not in this category. Traditional customs and other outgrowths, of which there are a great number in every religion—the *'anafim* (twigs), as he calls them—are not absolutely necessary to the life of religion. They may be removed or may die off, and still the trunk will subsist. Since the three 'iḳḳarim are the same in all religions, Albo calls them also the *'iḳḳarim kolelim* (the universal principles or roots; see Tänzer's work quoted above). The eight shorashim he styles sometimes *'iḳḳarim peraṭiyim*, as well as, in some cases, *'iḳḳarim meyuḥadim* (specialized or particular roots). But his terminology is not consistent throughout the work.

In the elaboration of his scheme Albo finds ample opportunity to criticize the opinions of his predecessors. He seems to be anxious to keep all heresy-hunting within proper bounds. Accordingly, he endeavors to establish the boundary-lines between which Jewish skepticism may be exercised without risk of forfeiture of orthodoxy. His canon for distinguishing heterodoxy from orthodoxy is the recognition of the truth of the Torah. But a remarkable latitude of interpretation is allowed; so much so, that it would indeed be difficult under Albo's theories to impugn the orthodoxy of even the most liberal. He rejects the assumption that creation *ex nihilo* is an essential implication of the belief in the Deity; and criticizes with a free hand the articles of faith by Maimonides, and also the six that Crescas had evolved. He shows that neither Maimonides nor Crescas keeps in view his own fundamental criterion; namely, the absolute indispensability of a principle without which the trunk of the tree could not subsist; and on this score he rejects most of their creed.

According to Albo, the first of his fundamental root-principles—the belief in the existence of God—embraces the following shorashim, or secondary radicals: (1) God's unity; (2) His incorporeality; (3) His independence of time; and (4) His perfection: in Him there can be neither weakness nor other defect. The second root-principle—the belief in revelation, or the communication of divine instruction by God to man—leads him to derive the following three secondary radicals: (1) The appointment of prophets as the mediums of this divine revelation; (2) the belief in the unique greatness of Moses as a prophet; and (3) the binding force of the Mosaic law until another shall have been divulged and proclaimed in as public a manner (before six hundred thousand men). No later prophet has, consequently, the right to abrogate the Mosaic dispensation. Finally, from the third root-principle—the belief in divine retribution—he derives one secondary radical: the belief in bodily resurrection. According to Albo, therefore, the belief in the Messiah is only a twig or branch. It is not necessary to the soundness of the trunk. It is, hence, not an integral part of Judaism. Nor is it true that every law is binding. Though every single ordinance has the power of conferring happiness in its observance, it is not true that every law, or that all of the Law, must be observed, or that through the neglect of one or the other law, or of any part of the Law, the Jew violates the divine covenant. The anti-Paulinian drift and point of this contention are palpable.

The style of Albo's work is rather homiletic. His phraseology suffers from prolixity; and his argumentation is at times exceedingly wearisome. Nevertheless, his book has come to be a standard popular treatise, and notwithstanding the severe polemics against Albo, made by Isaac Abravanel and others, it has wielded considerable influence in shaping the religious thoughts and confirming the religious beliefs of the Jews.

[The first edition of the "'Iḳḳarim" appeared at Soncino, 1485; it was published with a commentary under the title of "Ohel Ya'aḳob," by Jacob ben Samuel Koppelman ben Bunem, of Brzesc (Kuyavia), Freiburg, 1584, and with a larger commentary ("'Eẓ Shatul") by Gedeliah ben Solomon Lipschitz, Venice, 1618. From the later editions the passages containing criticisms on the Christian creed, in Book III. chaps. xxv., xxvi., have been expunged by the censor, while Gilbert Genebrard wrote a refutation of the same with valuable notes. This refutation was published with his own remarks by the renegade Jew Claudius Mai, Paris, 1566 (see Schlesinger's translation, notes on p. 666). The "'Iḳḳarim" has been translated into German by Dr. W. Schlesinger, rabbi of Sulzbach, and his brother, L. Schlesinger, wrote an introduction to the same, Frankfort-on-the-Main, 1844.

A very favorable view of Albo's work is expressed by L. Löw, "Ha-Mafteaḥ" (Gross-Kanizsa), pp. 266–268; Karpeles, "Gesch. der Jüd. Lit." pp. 815–818; Brann, "Gesch. der Juden," ii. 208, and Bloch, in Winter and Wünsche, "Gesch. der Jüd. Lit." ii. 787–790. As to Albo's dependence on Crescas, Simon Duran, and others, see M. Joël, "Don Chasdai Crescas' Religionsphilosophische Lehren," pp. 76–78, 81, Breslau, 1866; Jaulus, in "Monatsschrift," 1874, pp. 462 *et seq.*; Brüll, in his "Jahrbücher," iv. 52; and Schechter, in "Studies in Judaism," pp. 167, 171, 352, and notes 19 and 24. E. G. H.

ALBY (ALBI): Ancient cathedral town, capital of the department of Tarn, France, forty-two miles northeast of Toulouse. It gave its name to the famous Christian sect, the Albigenses, whose struggles against the Church of Rome were so fatal to the Jews of southern France. At the council held at Alby in 1254 for the purpose of exterminating the adherents of that sect, the most barbarous decrees were promulgated against the Jews. In 1320 the small Jewish community of Alby, together with the communities of Bordeaux and other towns, was annihilated during the PASTOUREAUX riots. The Jews, informed of the advance of the Pastoureaux, took refuge in Castel-Narbonnais. Hearing that the Pastoureaux had been arrested by the count of Toulouse, they left the castle. The mayor despatched to them a relation of his in order to shelter them in the fortified town of Carcassonne; but the messenger, animated by a hatred of the Jews, delivered them to their enemy, who slaughtered them all.

I. BR.

ALCALÁ DE GUADAIRA: A town seven miles east of Seville, Spain. At one time it had a small Jewish community, whose synagogue was razed by order of Archdeacon Ferrand Martinez, in December, 1390. Its members soon after were put to the sword. M. K.

ALCALÁ DE HENARES: A walled town in New Castile, Spain, situated on the right bank of the Henares, about seventeen miles from Madrid; birthplace of Cervantes (1547). In the Middle Ages its Jewish community was under the jurisdiction of the archbishop of Toledo, who exercised the right to nominate its rabbis and appropriated part of the taxes that the Jews were obliged to contribute, which, in 1291, amounted to 6,800 maravedis (about $23,000) in gold. The Ordinance of Alcalá, issued, in 1348, by Alfonso XI. of Castile, is well known for its important influence on Spanish-Jewish history. The community of Alcalá possessed several synagogues; the largest stood on the Calle de la Xinoga ("Synagogue Street"), in which, as well as in the Calle Mayor ("High Street"), the Jews had their dwellings. In the courtyard of a large house in the Calle Mayor was a small synagogue; and between the Calle Mayor and the Calle de Santiago the Jewish slaughter-house was situated. Menahem b. Zerah lived here as rabbi from 1361–68.

A convert, Pero Ferrus, who delighted in writing satirical verses upon his former coreligionists, once lampooned the rabbis of Alcalá. Equal to the occasion, the rabbis answered him in good Castilian poetry (Kayserling, "Sephardim," p. 73; Grätz, "Gesch. d. Juden," 2d ed., viii. 82). From the University of Alcalá the famous Polyglot Bible was issued during the years 1514–17. Many renegade Jews had a share in the compilation of this extraordinary work, which, from the proximity of Complutum—an ancient Roman town—was called also the Complutensian Bible. The most prominent among the Jewish collaborators were Alfonso de Zamora, who lived here from 1514 to 1544; and Paulo Coronel and Alfonso de Alcalá, who made the Latin translation. The magnificent palace built here by Cardinal Ximenez of Cisneros, at whose expense the work was undertaken, until recently contained the state records; and in its spacious halls were to be found, admirably arranged, the records of the victims of the Inquisition. There are several other cities in Spain that bear the name Alcalá.

M. K.

ALCALÁ LA REAL: A town in Jaen, Spain, which sheltered a few Jews in the Middle Ages, and was the birthplace of Alfonso de Alcalá, so prominent in the preparation of the Polyglot Bible. M. K.

ALCAN, EUGÈNE: French litterateur, painter, and poet, who embraced Christianity; born in Paris in 1811; died about 1898. He was a brother of Alphonse Alkan; but the reason for the difference in the orthography of the family name has never been explained. Alcan was the author of the following works: (1) "La Légende des Âmes: Souvenirs de Quelques Conférences de Saint Vincent de Paul" (1879); (2) "La Flore Printanière: Souvenirs du Berceau et de la Première Enfance" (1882); (3) "La Flore du Calvaire: Traits Caractéristiques de Quelques Voies Douloureuses" (1884); (4) "Les Cannibales et Leur Temps: Souvenir de la Campagne de l'Océanie sous le Commandant Marceau, Capitaine de Frégate" (1887); (5) "Les Grands Dévouements et l'Impôt du Sang" (1890); and (6) "Récits Instructifs du Père Balthazar" (1892).

F. H. V.

ALCAN, FÉLIX: French publisher and scholar; born at Metz, March 18, 1841; grandson of Gerson Lévy, author of "Orgue et Pioutim," and son of a well-known publisher at Metz. Having finished his studies at the lyceum of his native city, he entered the École Normale Supérieure of Paris in 1862. When he left it in 1865 he became a lecturer on mathematics till 1869, when he undertook the management of his father's publishing business at Metz. In 1872 he went to Paris, where in the following year he entered the old publishing-house of Germer-Baillière, of which he became the head in 1883. In 1880 he originated a series of school-books for use in the lyceums; this series embraced works on science, history, and philosophy. The publications of his firm include the most considerable works on philosophic subjects published in France. In 1895 he was created knight of the Legion of Honor. He is a member of the Central Committee of the Alliance Israélite Universelle.

I. B.

ALCAN, MICHEL: French engineer, politician, and author; born at Donnelay, in the department of Meurthe-et-Moselle, France, 1801; died at Paris, 1877. During his youth his merits as a mechanical engineer were recognized by the Society of the Friends of Labor, which awarded to him its silver medal. In Paris he took part in the political events connected with the revolutions of 1830 and 1848. In the latter year he was elected to the National Assembly, and voted with the advanced political party called "The Mountain." After a brilliant political career, he resumed his early studies and graduated from the École Centrale as engineer. In 1845 he was appointed professor of the arts of spinning and weaving in the Conservatoire des Arts et Métiers, which position he occupied until his death. In 1859 he was elected a member of the Jewish Consistory of Paris; in 1867, a member of the Central Consistory in place of Salomon Munk.

Among his works are: "Essai sur l'Industrie des Matières Textiles," 1847; 2d ed., 1859; "La Fabrication des Étoffes, Traité Complet de la Filature du Coton," 1864; "Traité du Travail des Laines," 1866; "Traité du Travail des Laines Peignées," 1873, etc.

J. W.

ALCAN, MOŸSE: French publisher and litterateur; born in 1817; died in Metz, May 14, 1869; father of the Parisian publisher Félix Alcan. He was a member of the Jewish consistory of Metz and one of the judges of the Tribunal of Commerce. Alcan contributed to the "Archives Israélites" and the "Revue d'Austrasie" a number of poems, sonatas, and cantatas, such as "Noéma" (1841); "Ruth," a Biblical hymn, dedicated to Carmoly (1843); and "Spartacus," a cantata performed at the public concert of the Société de l'Union des Arts, at Metz in 1852, and at Damascus, 1860. J. W.

ALCAÑIZ: A town in the province of Teruel, Aragon, Spain; situated sixty-three miles southeast of Saragossa. As early as the thirteenth century Jews were resident there. The grand master of the Order of Calatrava, to whom, in 1306, the king of Aragon had presented the town, received under his care, with the king's permission, thirty Jewish families, presumably refugees from France (Jacobs, "Sources," No. 914, p. 52, and the other documents listed, *ibid.* p. 245). To aid in the conquest of Naples, the Jews of Alcañiz loaned King Alfonso V. the sum of 2,225 florins (about $1,120, or £224) in gold. At the disputation in Tortosa, in 1413, they were represented by Don Joseph Ardot and Don Meir Alcoya. In Alcañiz there existed a law which imposed a fine of seven sueldos upon any Jew who wished to leave the city for the purpose of settling elsewhere.

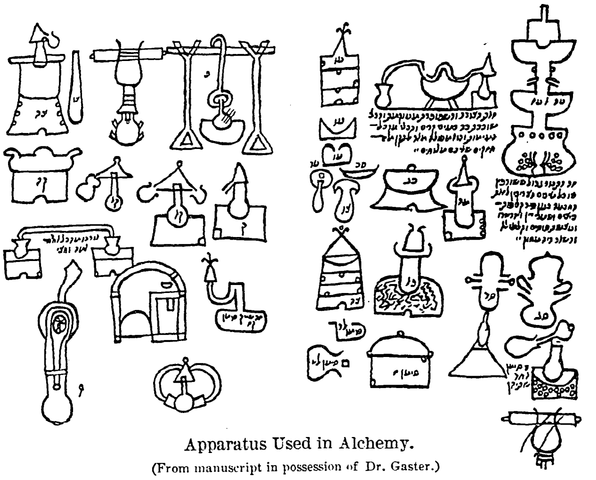
M. K.

ALCHEMY: The undeveloped chemistry of the Middle Ages, characterized by belief in the transmutation of base metals into gold, the discovery of a panacea, etc. Traces of the connection of Jews with the science of Alchemy are very scanty in Hebrew literature. Not a single distinguished adept is found who has left in a Hebrew form traces of his knowledge of the subject. There is, however, scarcely a single important ancient work upon the science which is not directly related to the Jews, with their traditions and their science. Alchemy, like others of the exact sciences, suffered from the introduction of foreign elements, and developed from a more or less secret science belonging to a particular craft, into a mysterious science dealing with changes in the organic as well as the metallic world. From the art of gilding, it became that of the gold-maker; passing from the simple solutions and chemical baths used in the goldsmith's workshop, it aimed at compounding the elixir of life and the philosopher's stone. In the evolution of Alchemy there are at least three epochs: The first, the Greek and Egyptian period; the second, the Arabic of the Middle Ages; and the last, or modern, period, extending from the sixteenth century to the present day. Undoubtedly the home of Alchemy was Egypt; and the researches of Berthelot show conclusively that the ancient Egyptian tradition concerning Alchemy has survived political changes and been preserved in a surprisingly correct form in Greek, old Roman, and medieval tradition.

Pseud-epigraphic Writings.

Alchemy had already in the second or third century assumed a mystical and magical character, exemplified in such recipes as appear in the magic papyri. The whole syncretism of the East—Jewish and Egyptian gnosis, Greek mysteries, and Ophite speculations—combined to produce a current of thought which affected every mental production of the age. They were all thrown into the same alembic; and the result was expected to be another kind of philosopher's stone—a stone that could change this base mundane life into one of ethereal spirituality. Alchemy partook of the same peculiarity. Gods of the Pantheon, with Hermes at their head, the gods of Egypt, the patriarchs and prophets were pressed into the service of magic and Alchemy. A whole series of so-called pseudepigraphic writings exist, though they are not all of a purely religious character. To be great in one department meant to be great in every department—in the knowledge of all the mysteries. Hence all of the sages of the past were credited with such knowledge, and were considered as authors of books containing the information sought. Adam and Abraham have in their turn been described as authors of alchemistic treatises, and Moses is repeatedly met with as the author of such works. To Moses are ascribed the Greek treatise known as "Diplosis" (that is, the art of doubling the weight of gold), and the treatise "The Chemistry of Moses" (dealing with metallurgy), published by Berthelot in his "Collection des Anciens Alchimistes Grecs," Paris, 1887–88, ii. 300–315, iii. 287–301. In the Greek manuscript of St. Mark of the ninth century Zosimos quotes long passages from "The Chemistry of Moses."

More important than these texts is the one preserved in the magical papyri of Leyden, especially papyrus *W*, which contains many such chemical recipes, probably the oldest known. Among other powers and gods are mentioned Abraham, Isaac, Jacob, the angel Michael, and the Temple of Jerusalem. This work is the so-called "Eighth Book of Moses," or "The Key of Moses": the prototype for so many subsequent magical *claviculæ*, containing recipes intermingled with invocations and incantations. These recipes in the papyrus and in the "Book of Moses" are identical with those attributed to Pseudo-Demetrius, and belong to a particular class of practical recipes (Berthelot, *l.c.* iii. 288, note). Many of these recipes of practical metallurgy are to be found in the Latin *compositiones* of the eighth century. The date of the above-named papyrus is of the second or third century (compare Berthelot, "La Chimie au Moyen-Âge," i. 67). Berthelot refers to this work and to similar ones in order to show the Jewish origin of some portions of it (Berthelot, "Les Origines de l'Alchimie," pp. 53–57, Paris, 1885). King Solomon also comes in for a share in the history of Alchemy; and his "Labyrinth" is one of the old formulæ which have survived. Johanan Alemanno, in his "Ḥeshek Shelomoh" (Solomon's Desire) mentions a book of Alchemy as the work of Solomon (see Steinschneider, "Cat. Bodl." under "Solomon," col. 2296). One who lived much earlier had been credited with the knowledge of changing copper into gold: The name of Me-zahab, R. V. ("Waters of Gold"; Gen. xxxvi. 39), was interpreted to mean—according to Ibn Ezra in his commentary on the passage—that "he transmuted copper into gold."



Apparatus Used in Alchemy.

(From manuscript in possession of Dr. Gaster.)

Maria the Jewess.

Of a far less legendary character than all these seems to have been the Jewess Maria, who, according to Hoefer, made one of the most important discoveries in chemistry, for she is said to have discovered hydrochloric acid. Her name survives in the *balneum mariæ*, the *bain-marie*—a water-bath extensively used in chemical processes in which gentle heat is necessary; see cut, page 331. Manget, in his "Bibliotheca Chemica Curiosa" (Geneva, 1702), publishes (vol. ii., plate viii., fig. 6) the *symbolon* of "Maria Hebræa Moysis Soror" (see cut on next page). She is thus identified with Miriam, the sister of Moses. On the other hand, Ostanes, one of the oldest Greek writers, mentions her as "the daughter of the king of Saba" (Berthelot, "La Chimie au Moyen-Âge," iii. 125). In the Alexander book (2d part) of the Persian poet Nizami, Maria, a Syrian princess, visits the court of Alexander the Great, and learns from Aristotle, among other things, the art of making gold (see Bacher, "Leben und Werke Nizami's," ed. 1871, p. 76). Whatever the epoch of Maria may have been, her existence is a positive fact; and since she was mentioned by Ostanes, she belongs thus to the first period. Very extensive abstracts of her alchemistic works are given by Zosimus, the greatest of the Greek alchemists.

Syriac translations from the Greek (Berthelot, "Collection des Anciens Alchimistes Grecs," ii. 107, iii. 252), and then into Arabic—or, as it is often stated, into Hebrew—lead from the first to the second period. Kalid b. Jasiki—that is, Khalid b. Yazid (died 708)—figures as the oldest alchemist; and Berthelot does not question his existence. The following work is attributed to him: "Liber Secretorum Artis . . . ex Hebræo in Arabicum et ex Arabico in Latinum versus Incerto Interprete." This treatise has often been reprinted; in Manget, "Bibliotheca Chemica," ii. 183, and in the "Theatrum Chemicum," v. 186, Strasburg, 1660. Steinschneider ("Hebr. Uebers." pp. 852, 853) doubts the existence of a translation from "the Hebrew into Latin," as he has not seen it, and believes the statement to be an invention of the alchemists. Such a translation may have been made from the Arabic into Hebrew, as other treatises are in existence of which heretofore not the slightest indication had been found.

The Jewish writers of the Middle Ages were acquainted with this science. Judah ha-Levi mentions it in his "Cuzari" (iii. chap. liii.). Maimonides knew the writings of Hermes ("Moreh," iii. chap. xxix., where also other similar pseudepigraphic treatises are mentioned); in the same chapter Maimonides speaks of the Sabeans, whose statues of the planets correspond to the seven metals and the seven climates.

Gerson b. Solomon, the author of the compendium "Sha'ar ha-Shamayim," gives a succinct description of the fundamental theory of "Alkiminiya" (ii. chap. ii.), being the science of changing base metals into gold. Gerson derived all his knowledge on the subject from Hebrew translations of Arabic writings (see Steinschneider, "Hebr. Uebers." pp. 9 *et seq.*).

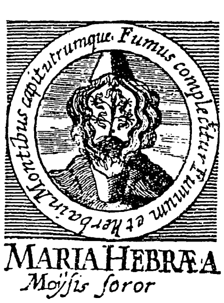
Known to Jewish Writers.

Of the next important Arabic writer, Abul Kasim Majriti (tenth century), only a fragment of the Hebrew translation has been preserved in the Munich manuscript, No. 214, תכלית החכם ("The Aim of the Wise")—a kind of a compendium made by an anonymous writer of the fourteenth century containing merely the magical portion, and omitting the first part, which dealt with Alchemy (see Steinschneider, "Zur Pseudepigraphischen Literatur," pp. 28–51, and "Hebr. Uebers." pp. 853–854). This manuscript contains, in addition, an alchemistic treatise ascribed to Maimonides, and briefly described by Steinschneider ("Zur Pseudepigraphischen Literatur," pp. 26–27). It is in the form of a letter, as so many alchemists' writings often are.

At the bottom of the last page (the whole numbering four leaves: folio, 29*b*–33*b*) there is a note by the Spanish owner of the manuscript describing a method of transmutation of silver into gold, which he claims to have taken from an old book. This manuscript—which, according to Steinschneider, belongs to the fifteenth century—contains, furthermore, a treatise on divination by means of the palm-tree, ascribed to a certain Abu Aflah al-Sarakusti; it is described in detail by Steinschneider (p. 14). He was known in the fourteenth century to Profiat Duran and especially to Johanan Alemanno, the teacher of Pico di Mirandola, of the fifteenth century. Abu Aflah states that he derived his knowledge from the writings of King Solomon the Jew, thus connecting his science with old Hebrew tradition. From the same author a treatise on Alchemy is mentioned, by Alemanno, of which he made a copy in his "Likkutim" (Collectanea) in the Hebrew translation. From this, Abraham Jagel—end of the sixteenth century; afterward called Camillo Jagel, author of the well-known Hebrew catechism "Lekah Tob" (The Good Doctrine)—made an abstract in his manuscript "Bet Ya'ar ha-Lebanon." I. S. Reggio, the first possessor of this manuscript, published a portion of this alchemistic treatise of Abu Aflah in "Kerem Hemed," ii. 46–48, v. 41–53, limiting himself to the historical introduction, in which it is set forth that the work is really that of a certain "Smn" (סמן) who had married the daughter of the king of Saba; his widow is the Biblical queen of Sheba, and she brought the knowledge of this stone—or other material which changed everything into gold—to Solomon, who then wrote it down in the book now translated by Abu Aflah.

Abul Kasim and Abu Aflah.

Jagel also wrote a chapter on the philosopher's stone in the same work, part iv., quoted above (see "Bikkure ha-'Ittim," 1828, ix. 14). The translation of the book on the palm-tree was, according to Steinschneider ("Hebr. Uebers." p. 849), made in the fourteenth century. It is dated 1391, and the author may have been the same who translated Majriti's work (*ib.* p. 854); in both cases the translation has evidently been made from the Arabic. The treatise ascribed to Plato in the same Munich manuscript is of a magic character. Steinschneider mentions further, in "Codex Berlin," 70, 2, a short treatise of only three pages on a subject somewhat akin to Alchemy, "Maleket Me ha-Zahab" (The Art of the Waters of Gold). See "Cat. Berlin," i. 46, and Steinschneider, "Hebr. Uebers." p. 967.



Fumus complectitur Fumum et herbam in Montibus capitutrumque.
MARIA HEBRÆA
Moÿſis ſoror

The Inventor of the Bain-Marie.

(From Manget, "Bibliotheca Chemica Curiosa.")

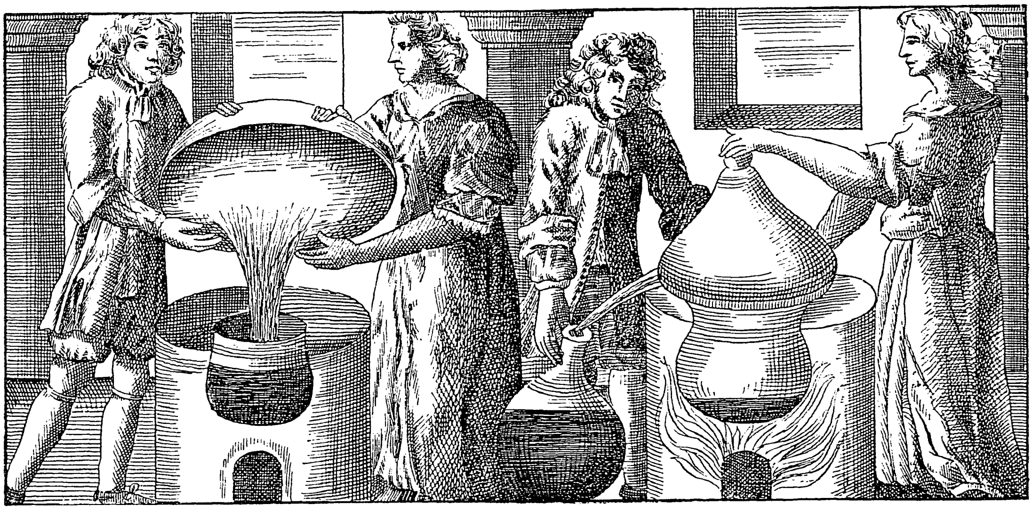
The "Codex Paris," No. 1207, contains, on some blank leaves, made by a late author, a Hebrew translation of the treatise "Quinta Essentia," written by a certain "Roman." Steinschneider ("Hebr. Uebers." p. 824) thinks it identical with the treatise of Pseudo-Raymond Lully, "Liber de Secretis Naturæ," or "Quintæ Essentiæ." His alchemistic writings—that is to say, those ascribed to him—are printed in full by Manget, "Bibliotheca Chemica Curiosa," i. 707–911. With Abraham de Portaleone's "De Auro, Dialogi Tres" (Venice, 1514), the end of all that has hitherto been written on the subject is apparently reached.

An Important Manuscript.

An important manuscript has, however, come into possession of the writer of this article which turns out to be a complete collection of alchemistic works. This manuscript—written in 1690, somewhere in the East or possibly Morocco, in a fine Spanish hand—is as complete a *bibliotheca alchemica Judaica* as one could desire. It is evidently a copy of a much older manuscript, as the copyist has often suggested corrections on the margin. It consists of two parts: the first embracing the Greek-Arabic period, with possibly one exception; the second, the alchemists of the Latin world. A large number of alchemists are mentioned here of whom no mention is made elsewhere, and the identification either of the authors or of the works of which abstracts are given in the Hebrew compilation is extremely difficult. In not few cases they have defied identification. The trend of the work is more in the direction of practical chemistry and of precise indications of the manner in which chemical operations are conducted. It resembles the so-called "Avicenna" of medieval Latin texts. Its completeness merits a tolerably full description. Passing through many hands, the original names have been corrupted, and thus the difficulty of identification is increased. That this compilation is old is shown by the fact also that we find here the alchemistic treatise of Abu Aflah al-Sarakusti, of which Alemanno had made the abstract mentioned above. It agrees absolutely with the manuscript.

The manuscript begins with a short note about the "Moon." In alchemistic terminology the moon is equivalent to silver, and the sun to gold. The next chapter deals with "Moon and Sun"; not a few treatises ascribed to Geber have the same title (compare "De Massa Solis et Lunæ," "Theatrum Chemicum," v. 429). Then follows a prescription entitled "La'alot ha-Zahab" (evidently a recipe for making gold, a "chrysopoiæa"). Now comes the treatise of Abu Aflah in full, with all the details that Reggio omitted when publishing Jagel's abstract. The next chapter is by the author of many anonymous—and, as a rule, old—treatises found in Manget and in the "Theatrum Chemicum." The chapter following is ascribed to a certain Johanan "Ashprmantt." This curious name seems to indicate the Greek alchemist "Johannes Archipresbyter," or according to medieval Greek, "Archiprětt." After these follows a compendium of fourteen books, counted as such, and each one taken from a different author. The first is called "Astuta," a name elsewhere unknown, but which may be identical with the mythical "Sastiton" mentioned in connection with another alchemistic or mystical work ascribed to King Solomon and quoted by Alemanno (see Steinschneider, "Cat. Bodl." col. 2297). This "Sastiton" is probably "Ostanes," the great alchemist, whose name is often written in medieval Latin texts "Astanes." The last two letters were afterward misread in the Hebrew into one by the copyist or by the writer of the older original. In this treatise is mentioned a master called "Humash" or "Homesh"; unquestionably Hermes is meant. The corruption was due to the Hebrew transliteration (המש=הרמש). About Ostanes, see Berthelot ("Chimie au Moyen-Âge," iii. 13, 116). Book ii. is ascribed to "Aliberto Manyo" (Albertus Magnus). The oldest Latin manuscript of Alchemy of the fourteenth century—studied in detail by Berthelot (*l.c.* vol. i.)—shows a marked similarity with this compilation (*ibid.* pp. 290 *et seq.*).

Book iii. is ascribed to "Spros" (unknown); Book iv., to "Aristotle"; Simon Duran (died 1425) knew a treatise written by Aristotle on four hundred stones and chemical preparations (see Steinschneider, "Zur Pseudepigraph. Lit." p. 82, Nos. 1 and 8). For a treatise of "Aristotle" agreeing more with this text, see Manget ("Bibliotheca," i. 638–650; and also "Theatrum Chemicum," v. 880–893). The sixth book is ascribed to "Yeber," the Pseudo-Geber (compare Manget, "Summa Perfectionis Magisterii," i. 519; and also Berthelot, "Chimie au Moyen-Âge," iii. 149). Of the authors of the following books, "Arcturus" (book vii.) is unknown. "Archelaos" (book viii.) is, on the contrary, often mentioned by ancient alchemists. Book ix. is the book of "Light." It may be the translation of "Speculum," a name borne by many works, such as Roger Bacon's and Geber's; or it may be the "Liber Lucis" of Joan de Rupescissa (Manget, ii. 84–87; and "Theatrum Chemicum," 1659, iii. 284–292). Book x. is by "Irimans of Kostantina"—probably Morienus, or by his full name, Morienus Romanus. Book xi. deals with the "Thirty Paths." Book xii., "Avisina," is Avicenna. A methodical practical treatise in the old Latin manuscript of the fourteenth century bears his name (Berthelot, *l.c.* i. 293). This Latin text—which is, according to Berthelot, the source of the alchemistic sections in Vincentius of Beauvais's work "Speculum Naturale"—is of special interest, as in it is found an interpolated list of alchemists, among whom are "Isaac the Jew," and a certain "Jacob, a philosopher," who played important rôles. A pope is also mentioned; and among the authors in the manuscript is also "The Pope."



Bain-Marie as Used by Alchemists.
(From Manget, "Bibliotheca Chemica Curiosa.")

The book of "Razis"—here book xiii.—is found also in the old Latin manuscript; only the text has been divided into two sections, of which the first is ascribed to "Abubacar" and the second to "Razis" (Berthelot, *l.c.* i. 306–310, 311). The second treatise is identical with the one that goes under the name of Aristotle in "Theatrum Chemicum" (iii. 56) as "De Perfecto Magisterio," while Razis' treatise has the title "Lumen Luminis," and that of Abubacar "Liber Secretorum." The last book, xiv., is ascribed to Plato. In the Latin manuscript of the fourteenth century an alchemistic treatise was ascribed to Plato under the name of "Anagnensis," probably connected with the "Nomes" of Plato (see Steinschneider, "Zur Pseudepigraphischen Literatur," p. 52, and his "Hebr. Uebers." p. 849). In "Theatrum Chemicum," v. 101 *et seq.*, is also published "Platonis Libri Quatuor cum Commento Hebuhabes Hamed: Explicatus ab Hestole." It differs somewhat from the Hebrew text, and is mentioned here because Berthelot, in speaking of this treatise of Plato (found also in the old Latin manuscript), pointed to the "Aron noster," referred to in the commentary as being a Jew. This is doubtful, however, as he is not mentioned as "Judæus."

A double glossary of Arabic and Greek words concludes this first part of the manuscript, in which, with the exception of Albertus Magnus, all the authors mentioned belong to the Greek-Arabic period as reflected in compilations of the thirteenth century.

Contents of Second Collection.

To a later period belong the authors of the second "Collection" (כלל), as it is called in the manuscript. It must suffice to mention merely the names, as only a few of them are prominent and known elsewhere as authorities in Alchemy. The list begins with "Mestre Arnaldes"—Arnaldus de Villanova (flourished 1300). Many of his works have been translated into Hebrew (see Steinschneider, "Hebr. Uebers." pp. 778 *et seq.*, under "Arnaldes" in the index), but outside of this manuscript no trace has been found of the alchemistic writings. For the Latin texts, see Manget, *l.c.* i. 662–706; "Theatrum Chemicum," 1659, iii. 118–136, and iv. 515 *et seq.* "Joane Ashkenazi" is then mentioned; perhaps "Theodonicus" or "Theotonicus," whose name was afterward changed by popular etymology into "Teutonicus" (see Berthelot, *l.c.* i. 71). "Messir Piero Dabano" is none other than the famous Petrus Bonus, author of the "Margarita Pretiosa" (Manget, *l.c.* ii. 1–79; "Theatrum Chemicum," 1660, v. 507). Less known, or perhaps unknown, are the following names mentioned in this part of the manuscript (accompanying each some short abstract is given): Nicolo d'Inglitera, "who had left England together with his art"; Mestero Ermano de Normandia; Messer Andrea de Napoli; Bartolomeo dal Tempio; Messer Guaspare della Bolonya; Cristofano della Bolonya; Messer Joane Botrio; Frate Elia ("Helia," "Alia," occurs very often; a certain Ylia is mentioned in Plato's "Quartorum"); Messer Simone Reco, who had "made the white vestment"; Gulielmo da Monte Polaseno. The last on the list is a certain "Romito," who speaks on the "Partikolare." This name is the only one that might help to fix the time and place of this compilation. In folio 130*b* the following statement appears: "These artifices were given me by Mestro Yacopo Davinisia (*i.e.*, Jacob of Venice), who performed them in Rome before the Cardinal della Colonna, and I have given him, for teaching them to me, sixty florins." Unfortunately there were fourteen cardinals of the name Colonna between the years 1230 and 1665—the latest possible date for this manuscript, which is a copy made in 1690. The reference to Rome, though explicit enough, may refer only to the place where Yacopo had been, but is not sufficient to place the author of the compilation: it points to Italy, at any rate, as his possible home. The manuscript was evidently compiled by a man who knew one or more of the Romance languages besides Latin: Italian and Latin words occur throughout the book. It is shown besides in the form of the proper names of the authors, and of the names of ingredient metals, etc., although they may just as well be considered as Catalan or even Provençal. It is an admitted fact that some of the oldest translations of alchemistic writings have been in these languages. In the works attributed to Lully, quotations in Provençal are found. In fact, all the oldest translations were made in Spain or Provence (see Berthelot, *l.c.* i. 66, and note), and in the twelfth or thirteenth century. One of the oldest is that made by Morienus, in 1182, while no Latin manuscripts earlier than 1300 are known to exist (*ibid.* p. 232). Undoubtedly the first books forming the foremost part of the manuscript were translated in Spain, either from Arabic or from Latin. Probably all the rest were translated from the latter language, at a period prior to the time of Johanan Alemanno, or before the end of the fifteenth century; for, as stated above, he copied the portion of Abu Aflah in his collectanea. Another proof of an earlier period than the fifteenth century for the original compilation lies in the fact that not a single alchemist who is known to have lived after that time is mentioned in the text. The absence of all the magic symbols is another proof for the early date of the compilation, as these symbols found in old Greek manuscripts disappear from the Latin and Arabic writings up to the fifteenth century (Berthelot, *l.c.* iii. 10). Its date must therefore be placed between 1300 and 1450. Moreover, the author must have been an adept; for on one occasion he remarks (folio 136*b*) that Cristofano della Bolonya "had operated in our house." One might feel inclined to ascribe this compilation to Alemanno, were it not for the fact that he would not in that case have copied the same text separately into his collectanea; besides which there is the fact that a profound difference exists between these alchemistic treatises and Picodella Mirandola's "Opus Aureum" (Manget, *l.c.* ii. 558–585; "Theatrum Chemicum" (1602), ii. 357; (1659), pp. 312 *et seq.*). Pico knows and quotes only classical writers, and, with the exception of Albertus Magnus and Vincentius, not one single name of the whole host of Greek and Arabic alchemists is given. It would at least be surprising, considering that he was the pupil of Alemanno, that the latter should not have communicated to him or drawn his attention to these alchemists.

Date of Compilation.

The closing pages of the manuscript are devoted to the description of alchemic alembics, retorts, furnaces, and other instruments. The drawings very closely resemble those made by Albertus Magnus, Lully, and Isaac Hollandus, which again confirms the date suggested for the compilation. An alphabetical index of names and subjects concludes this manuscript, which contains 181 small folios, written in an Eastern Sephardic hand, and dated in the year (5)450 [1690].

More modern writers from the time of Theophrastus combine Alchemy with cabalistic notions, derived, no doubt, from the Cabala literature, but not a single Jewish author is mentioned. The sixteenth century is the period of this cabalistic Alchemy, notably in the "Monas Hieroglyphica" of the London doctor, John Dee, "Theatrum Chemicum" (1602), ii. 203 *et seq.*; (1659), pp. 178 *et seq.*; and still more pronounced in the "Ars et Theoria Transmutationis Metallicæ" of Johannes Augustinus Pantheus (*ibid.* pp. 459, 528 *et seq.*). Jews themselves apparently took no more interest in the science of Alchemy, deprived, as they were, from that period on, of any further intercourse with the world of science.

M. Ga.

ALCIMUS (called also **Jakim**): Leader of the antinational Hellenists in Jerusalem, under Demetrius I. Soter of Syria (Josephus, "Ant." xi. 9, § 7); born about 200 B.C.; died at Jerusalem 160. He was of priestly family (I Macc. vii. 14). In consequence of the national movement under the Hasmoneans, and of the martial successes of Judas Maccabeus (164–163), the party lost influence and was partially expelled from Jerusalem. Immediately after Demetrius ascended the throne, Alcimus presented himself as a supporter of the imperiled authority of Syria in Judea, and requested the punishment of Judas Maccabeus. Demetrius entrusted Bacchides, the governor of Cœle-syria, with this task, and sent him to install Alcimus in the office of high priest, the object of his ambition. In Judea, because of his priestly rank, Alcimus obtained the confidence of the scribes and the rigidly pious (Assideans), who objected to the conflict on general principles, and, therefore, asked him to bring about peace. Yet, in spite of pledges of safety, he put many of them to death in order to intimidate the rest. Bacchides himself massacred all the followers of Judas Maccabeus who fell into his hands; and committing Judea, with a force sufficient for garrison duty, to the care of Alcimus, he returned to Syria. Alcimus, united now with his Jewish partizans, took up arms against the Maccabees to fight for the supremacy in Judea and for the post of ἀρχιερωσύνη (high-priesthood). He could not maintain his position, however, and repaired to the king for assistance (I Macc. vii. 5–25; "Ant." xii. 10, §§ 1, 3; II Macc. xiv. 1–10). In order to restore him to the office of high priest (II Macc. xiv. 13), Demetrius, in the same year (162), despatched his general Nicanor, who was defeated and killed in an encounter with Judas; and the anniversary, Adar 13, was celebrated in Jerusalem as the Nikanor Day (I Macc. vii. 26–50; "Ant." xii. 10, § 4; II Macc. xiv. 12–xv. 36). Soon after, Alcimus appeared before Jerusalem with Bacchides, who attacked Judas at Eleasa in such superior numbers that Judas was defeated and slain.

Alcimus and the Maccabees.

Alcimus and the Hellenists now assumed control in Judea and reveled in the persecution and slaughter of nationalist Jews. Herein Bacchides assisted effectively by continued war on the Hasmoneans Jonathan and Simon, and by the erection of a number of fortifications in Judea (I Macc. ix. 1–53; "Ant." xii. 11, § 1; xiii. 1, § 5). Alcimus does not appear in the account of these struggles; only his death (160) is reported in connection with his attempt to tear down the wall of the court of the inner Temple (I Macc. ix. 54; "Ant." xii. 10, § 6). He held office for three years ("Ant." xii. 10, § 6; xx. 10, § 3), and, as early as 163 under Antiochus V., was appointed successor to Menelaus ("Ant." xii. 9, § 7; xx. 10, § 3; II Macc. xiv. 3). It is possible that what is related in I Maccabees (vii. 5–25) occurred in the time of Antiochus V. (Schlatter, "Jason von Kyrene," p. 40).

Without doubt Alcimus held some office, as appears from I Macc. vii. 9; "Ant." xii. 9, § 7; xx.

As High Priest.

10, § 3. The position which he strove for was expressed by the terms *ἱερατεύειν* (I Macc. vii. 5) and *ἀρχιερωσύνη* (I Macc. vii. 21, II Macc. xiv. 13); and as Josephus always refers to him as high priest, Alcimus is recognized as such by all authorities. A fact conflicting with this is that he mentions his *ἀρχιερωσύνη* to the king as being inherited from his ancestors (II Macc. xiv. 7); yet, without question, the members of another family up to this time had had uninterrupted possession of the high-priesthood. He could have meant only a higher priestly office, hereditary in his family for some generations. From the fact that the scribes and Assideans gave him their confidence only because he was priest of Aaron's family, it follows that his official position is to be sought elsewhere than in the high-priesthood.*

As Civil Governor.

There are no facts bearing on the relations of Alcimus as high priest to the Temple at Jerusalem, unless the destruction of the wall of the court of the inner Temple be regarded as evidence thereof. It may be noted that the wall was not destroyed, as is generally accepted, in order to give the pagans entrance to the sanctuary hitherto closed to them; but to deprive the nationalist Jews of their last refuge—the fortress-like Temple. On the other hand, much is said about his rule in Judea that is not at all in accord with the position of high priest. These data seem to point to the fact that Alcimus was not high priest of the Temple at Jerusalem, but the civil ruler of the province of Judea, appointed by the king of Syria, and that *ἱερεύς* or *ἀρχιερεύς* was the official Syrian designation for his position. His expulsion from Jerusalem involved, therefore, resistance to the king, and the governor of the entire province of Cœle-syria was sent to reinstate and protect him.

The governor, as his superior, led him to Judea twice, and remained there till his death. The circumstance that Alcimus was the immediate successor to Menelaus, who was not of priestly stock, confirms this view. Alcimus' rule differed from that of Menelaus in that no opportunity was afforded him to make inroads upon the Temple treasury (since it was empty), nor to wound the religious susceptibilities of the Jews; for the terms of peace concluded between the Jews and Antiochus V. (162), to whom Alcimus probably owed his first appointment, had assured them religious liberty; and from that time on the struggle turned only on the supremacy of the Nationalists or of the Hellenists. The misleading title *ἀρχιερεύς* occurred in the sources drawn upon by Josephus; in I Maccabees, which evinces thorough knowledge of what happened in Judea, without any keen political insight; and in II Maccabees, which describes with accuracy occurrences at the Syrian court and camp, but in regard to Judean affairs gives free play to fancy. The ambiguity involved in Alcimus' title gave rise to the error that Alcimus was high priest, and this carried other errors in its train. Mention must be made of the legendary account in the Midrash (Gen. R. lxv. 22, and in Midrash Teh. to xi. 7) of Jakim of Ẓerorot (Ẓeredah), nephew of Jose, son of Joezer of Ẓeredah. He is probably identical with Jakim-Alcimus, and is represented as being present when his uncle, who may have been one of the scribes put to death by Alcimus, was led to execution. When he threatened his nephew with the tortures of hell for his faithlessness, Jakim killed himself.

ALCOHOLISM: The morbid condition resulting from the excessive or prolonged use of alcoholic beverages.

Alcoholism and Nervous Disease.

In chronic Alcoholism, or dipsomania, alcoholic liquors have been taken in excessive quantities for long periods of time, and the drug acts as a slow poison, and causes disease in various organs of the body. Bright's disease of the kidneys is so frequent a result of chronic alcoholic poisoning that, according to Pitt, Guy's Hospital reports show that 43 per cent of chronic drinkers are affected by it. Nervous disease, ending in insanity, is a common sequel to alcoholic indulgence; and Savage states, as the result of the examination of 4,000 insane persons at the Bethlehem Hospital, that Alcoholism was the admitted and direct cause in at least 7 per cent of the cases.

Alcoholism is an important factor in the causation of disease; and in all diseases alcoholics are bad patients. In epidemics the mortality among drinkers is excessive; and the general power of resistance to disease, injury, and fatigue is diminished. Dr. Charles H. Hughes, editor of the "Alienist and Neurologist," estimates that 15 per cent of nervous, 10 per cent of digestive, and 10 per cent of heart diseases are due to it.

The mortality from Alcoholism is great, though exact figures are not attainable. Dr. B. W. Richardson estimated the annual number of deaths from intemperance in England and Wales at 50,000, or 10 per cent of the entire mortality ("Cyclopedia of Temperance and Prohibition," Funk & Wagnalls Co., New York, 1891). Alcoholism lessens the chance of life: the English life-insurance companies found that the presumptive length of life of non-drinkers was about twice that of drinkers. Neisson ("Contributions to Vital Statistics," 1857) compared the mortality of 6,111 drinkers with the general mortality of England, and found that there were 58.4 deaths per 1,000 per annum in the former, as against 19 in the latter category. On the other hand, the superior biostatics of Jews under normal conditions is well known, and may be connected with the absence of Alcoholism among them.

The close relationship of Alcoholism and crime is well known; and the statistics of Baer ("Der Alcoholismus," Berlin, 1878), Kurella ("Naturgeschichte des Verbrechens," 1893), Gallavardin ("Alcoholisme et Criminalité," Paris, 1889), and Sichart ("Ueber Individuelle Faktoren der Verbrechens," in "Zeitschrift für die Gesammte Staatswissenschaft," 1890, x.), show that from 25 to 85 per cent of all malefactors are drunkards. The rate of suicide varies with the general rate of consumption of alcohol in different countries (Morselli, "Der Selbstmord, ein Kapitel aus der Moralstatistik," 1881). On the other hand, Jews are little liable to this form of alienation (see Suicide). Intemperance is a contributing cause in 20 to 24 per cent of divorce cases; and its relation to pauperism is a matter of common experience.

The evil effects of Alcoholism are evident in the drunkard's posterity. Sichart found Alcoholism in the parents in 16 per cent, Peula in 30 per cent, and Marro in 46 per cent of large numbers of criminals examined. Epilepsy, insanity, idiocy, and various forms of physical, mental, and moral degeneracy are very disproportionately prevalent among the offspring of alcoholics. These diseases are also very frequent among Jews, but are certainly not due in their case to Alcoholism.

---

* The older view as to Alcimus' high-priesthood is, however, still held by scholars to-day. See, *e.g.*, Reinach, *Rev. Ét. Juives*, xl. 99; Schürer, *Theologische Literatur Zeitung*, 1900, No. 12, cols. 364, 635.—R. G.

Rarity Among Jews.

Alcoholism prevails all over the world, and is probably increasing, more especially among the northern nations. But among the Jews it is almost an unknown affection. Their sobriety is proverbial; and the experience among Jewish medical practitioners is unanimously to the effect that occasion to observe the disease in the person of a Jew is of excessive rarity. The Jews are undoubtedly subject to nervous diseases to a greater extent than the general community; but this is due to the social and hygienic conditions under which many of them live, and not to Alcoholism. The rate of suicide is far less in Jewish than in other communities; and this is undoubtedly connected with the absence of Alcoholism. Attention has already been called to the intimate connection of the two. It has been suggested that the absence of Alcoholism among contemporary Jews is due to the fact that those addicted to it in the past left families which have died out; but there is no evidence of any prevalence of Alcoholism among Jews at any period.

Statistics confirm the general opinion of Jewish sobriety. Selecting two typical hospitals, as possessing the most trustworthy records, a comparative investigation may be made as to the prevalence of Alcoholism among their patients. The Boston City Hospital has a general clientele in a town that does not contain a disproportionately large number of Hebrews. In 1899 there were 7,104 cases treated there; and of these, 226, a little over 3 per cent, were admitted for Alcoholism. The Beth Israel Hospital of New York city has an entirely Jewish clientele, the proportion of non-Jews treated there being a negligible quantity—not over one-fourth of 1 per cent. Its records show 4 cases of Alcoholism, or diseases directly attributable to it, in 3,000 cases that applied for admission during the last few years. This is a little over one-tenth of 1 per cent. Hence, the records show that Alcoholism is at least thirty times as prevalent among the general community, including the Jews, as in that race itself.

Dr. Norman Kerr, one of the highest authorities upon Alcoholism, says, in regard to drink among the Jews ("Inebriety, Its Etiology," etc., Lewis, London, 1889):

> "Extensive as my professional intercourse with them has been, I have never been consulted for inebriety in the person of a Jew; while my advice has been sought for this complaint by a very large number of Christians. . . . In my opinion their general freedom from inebriety in almost every clime and under all conditions (there are a few exceptions to this rule), is as much due to racial as to hygienic influences, and more to racial than to religious influences. This extraordinary people has, amid wondrous vicissitudes, preserved a variety of distinctive characteristics; and I can not help thinking that some inherited racial power of control, as well as some inherited racial insusceptibility to narcotism, strengthened and confirmed by the practise of various hygienic habits, has been the main reason for their superior temperance. Even among those Jews in whom there has been an unusual amount of alcohol-drinking (though they were not 'drunk'), when there has been slight thickening of the speech, glibness of tongue, and unwonted exuberance of spirits, evidencing a certain amount of alcoholic poisoning, I have never detected the existence of the disease inebriety. Of this strong impulse to alcoholism or other narcotism, I have never seen a case amongst this distinctive people."

Other authorities believe that the sobriety of the Jews is rather dependent upon their social condition. Thus Samuelson ("A History of Drink; A Review, Social, Scientific, and Political," Trübner, London, 1880) says:

> "Little need be said of the drinking habits of the modern Jews. They are notoriously a sober race, both in England and elsewhere; and their temperance is mainly due to two causes. First, they are a small community; and their partial isolation from other religious denominations has a tendency to make them careful of their morals. The most important reason, however, is that they do not follow any avocations which necessitate great physical exertion. Thus we seldom find them working as artisans or day-laborers; so that there is no great bodily waste to be repaired; and they are, moreover, removed from the temptations to excessive drinking to which the great mass of our working-people are exposed. Among Jews of the middle classes there is more intemperance. . . . As already remarked, however, on the whole, the Jews are a sober and exemplary race, whose habits in this respect are well worthy of universal imitation."

W. S. G.

ALCOLEA (אלקוליעא): City in the province of Jaen, Andalusia, the Jewish congregation of which, like many others of the country, enjoyed special privileges. According to the records of the congregation, a standing committee composed of twelve members was selected, whose duty it was to tax the members in accordance with their financial ability, a procedure which caused frequent quarrels and divisions. Any one who obtained remission of his taxes from the governor or prince was at once placed under the congregation's ban for a year. It appears that the Jews in Alcolea were of such overthrifty disposition that they at one time insisted that their cantor (synagogue-reader) should likewise be taxed toward the congregational expenses and even the payment of old congregational debts. The matter came to a lawsuit. In the earlier part of the year 1414 the small Jewish community of Alcolea accepted baptism. This wholesale conversion was but an episode in the triumphal evangelizing march of Vincente Ferrer.

ALDABI, MEIR IBN: Writer of the fourteenth century; son of Isaac Aldabi, "He-Ḥasid" (The Pious); grandson of Asher ben Jehiel, and a descendant of the exiles from Jerusalem. His name (erroneously spelled Albadi, Albalidi, Alrabi, and Altabi) is ascertained from his chief work, "Shebile Emunah," wherein a poem is found in which every line begins with a letter of his name; and there it reads "Aldabi." In the preface to his book occurs the expression, "of the exiles of Jerusalem." This, together with Aldabi's statement that he was exiled from his country (Andalusia), caused Graetz to assume that he was banished to Jerusalem. Graetz failed to take into account Aldabi's words, "He [God] led me into a waste land," which he would not have used in reference to Jerusalem.

Aldabi belonged to the class of popular writers who, possessing extensive theological and scientific knowledge, commented upon the assertions of their predecessors with a clear understanding, expressing here and there their own opinions, and presenting some subjects from the standpoint of the Cabala. Aldabi was also one of those Talmudists whose conception of religion was wholly spiritual and who revered the Cabala: he can not, however, be called a true cabalist. In 1360 he wrote "Shebile Emunah" (The Paths of Faith), an exhaustive treatise on philosophical, scientific, and theological subjects. To judge from the many editions that appeared from time to time, it was for centuries a favorite book with the educated.

"Shebile Emunah" is divided into ten chapters, which treat respectively of: (1) The existence of God, His attributes, His immateriality, unity, and immutability, which is not affected by prayer or even by miracles—introducing in each case a cabalistic discussion of the names of the Deity; (2) the creation of the world, which does not necessitate any change in God or any plurality in His nature; an explanation of the Biblical account being given, followed by a dissertation on the seven climates or zones of the earth as then conceived, the spheres, the stars, the sun and moon and their eclipses, and on meteorology; (3) human embryology and the generative functions; (4) human anatomy, physiology, and pathology; (5) rules for health and long life; (6) the soul and its functions; (7) the exaltation of the soul, which, through the fulfilment of the Law, becomes one with the Creator—the chapter being devoted chiefly to an explanation of the ethical value of the Mosaic commandments; (8) explanatory notes on the truth of the Law and of oral tradition, elucidating some of the Haggadot on the same lines as Solomon ben Adret; (9) reward and punishment, paradise and hell, immortality of the soul and its transmigration in man; (10) the redemption of Israel, the resurrection, and the world to come after resurrection; a general résumé of the book, followed by a poem.

[Steinschneider ("Hebr. Uebers." pp. 9–27) has shown Aldabi's "Shebile Emunah" to be a compilation from various older sources, chiefly from Gerson b. Solomon of Arles' encyclopedic work, "Sha'ar ha-Shamayim," of the thirteenth century. From Gerson's work the chapter on the members of the human body (§ 2, chap. iii.) is taken, and in part verbally. So are Aldabi's "Ten Questions on the Soul" (§ 6), interspersed with passages borrowed literally from Joseph ibn Zaddiḳ and Hillel b. Samuel, only a modified form of the "Ten Discussions on the Soul," which Gerson himself adapted from a book on the soul, probably written by Ibn Gabirol. Against the charges of plagiarism raised in Brüll's "Jahrb." ii. 166–168, see Steinschneider, "Hebr. Bibl." 1876, p. 90. K.]

J. L. S.

ALDEAS DE LOS JUDÍOS (Jewish villages): The name given to the villages Aznalfarache, Aznalcazar, and especially Paterna, situated in the neighborhood of Seville, presented by Alfonso X. (The Wise) of Castile, while still infante after the conquest of Seville (1248), to those Jews who had taken an active part in the battles against the Moors, or who in any other way had rendered assistance to the conqueror. Other valuable gifts, such as fields, olive- and fig-orchards, etc., were bestowed upon the *almoxarifes* (tax-farmers), Don Zag (Isaac) and his sons, Don Moses and Don Abraham, upon several of the Alfaquin family, an unnamed rabbi, Don Joseph of Lisbon, and upon many others. Paterna was known for a long time as Aldea de los Judíos (J. Amador de los Rios, "Hist. de los Judíos," i. 370 *et seq.*). According to the accounts of Gedaliah ibn Yaḥyah, Don Yaḥyah ibn Yaish, the progenitor of the Portuguese Jewish family Ibn Yaḥyah, received as presents from the king of Portugal, who highly esteemed him, several *aldeas*, such as Priala (see Kayserling, "Gesch. d. Juden in Portugal," p. 2). Similarly, the Jews on the island of Majorca received as a present from King Don Jaime of Aragon, the conqueror of the island, several *alquerías*, which word is identical with *aldeas*; also called *almudeynas de los Judíos.*

Bibliography: For the partition of Majorca (not exact in De los Rios, *Historia de los Judíos en España*, i. 399), *Colleccion de Documentos Inéditos de Aragon*, 1856, ix. 14, 18, 20 *et seq.*

ALDERMEN. See Municipal Officers.

ALDROPHE, ALFRED-PHILIBERT: A French architect; born in Paris, February 7, 1834. He attended the National School of Design and was a favorite pupil of Bellangé. His first position was in the employ of the Eastern Railroad of France, but he also took an active part in the organization of the two French international exhibitions of 1855 and 1867. Among other distinctions he was appointed one of the judges on the committee of awards at the London Exhibition of 1862, and was created an officer of the Legion of Honor in 1867. In 1871 he became the official architect of the eleventh arrondissement of Paris. When the new synagogue in the Rue de la Victoire was projected, Aldrophe was selected as architect, as also for that at Versailles. He is the designer of the Thiers and Isidore monuments in the cemetery of Père-la-Chaise, and the architect of numerous private residences in the French capital, including that of Baron Gustave de Rothschild on the Avenue de Marignan. S.

ALDUBI (ALBUBI, also possibly **Alrabbi), ABRAHAM BEN ISMAIL:** Talmudic scholar and author, who flourished in Spain in the first half of the fourteenth century. He was a pupil of Solomon ben Adret and the teacher of Jeroham ben Meshullam. He wrote many novellæ and responsa, which, however, are known only from the numerous quotations contained in the works of his pupil Jeroham. His chief work appears to have been "Seder 'Abodat Yom ha-Kippurim" (The Order of the Service on the Day of Atonement), an epitome of which was published in Jeroham's "Toledot Adam wa-Ḥawwah." Some novellæ and a commentary on Baba Batra are mentioned in Moses Alashkar's decisions, No. 39.

Bibliography: Michael, *Or ha-Ḥayyim*, No. 54.

M. B.

ALDUS MANUTIUS: Italian publisher; born at Bassiano in 1449 or 1450; died at Venice, Feb. 6, 1515. Aldus studied the Latin classics at Rome under the direction of Caspar of Verona and Domizio Galderino, and afterward attended the lectures on Greek literature of Guarini at Ferrara. He became tutor to one of the children of Prince Carpi. With the assistance of Carpi's influential family, Aldus was enabled to execute the project, long cherished by him, of establishing a printing-house; and he began, in 1494, with the publication of Latin and Greek works, to which he prefixed learned introductions of his own.

Besides his Latin and Greek studies, Aldus cultivated Hebrew. In 1501 he published, as an addition to his Greek and Latin manuals, an abridged Hebrew grammar under the Latin title "Introductio per Brevis ad Linguam Hebraicam," or, under another title, "Introductio Utilissima Hebraice Discere Cupientibus." In the preface he says that he had studied the Hebrew from the "Doctrinale Alexandri de Villa Dei," a work written in barbarous verse in 1210, which was in vogue in the thirteenth, fourteenth, and fifteenth centuries; but having seen the uselessness of that book, he decided to compose another. Aldus' work was the first printed Hebrew grammar, and was intended for Christian students. It contained the Hebrew alphabet, the manner of reading, the character of the vowels and their combination with the consonants, and a sermon in Hebrew translated into Latin. The Hebrew type which he used was probably cut by Maëstro Francesco of Bologna, the same who worked for Gerson Soncino. This will explain the similarity in the type used in both offices. This addition was reprinted at least eight times by the Aldine Press.

Aldus nourished kindly feelings toward the Jews, and had many Jewish friends, among whom was his colleague, the printer Gerson Soncino. This spirit of toleration he transmitted to his children. His son **Aldus Manutius the Younger** congratulated David de Pomis upon the publication of his "Apologia pro Medico Hebræo."

ALEKSANDRIA: District, town, and village in the government of Kherson, Russia, on the Ingulетz river. In 1897 the Jewish population was: district, 3,857; town, 4,794; village, 1,916. The town has two synagogues and two schools. H. R.

ALEKSANDROVSK: District and town in the government of Ekaterinoslav, Russia, on the left bank of the Dnieper, below the rapids. In 1897 the Jewish population of the town was 884, and of the district 5,316. The Jewish community has two synagogues and three schools. H. R.

ALEKSEI: Russian archpriest; convert to Judaism; born probably in Novgorod, 1425; died in Moscow, 1488. In the last quarter of the fifteenth century, when a schism arose in the Russian Orthodox Church and many new sects sprang up, Aleksei became a convert to Judaism. Some of the new sects had shown a decided tendency to revert to the old Mosaic law. This probably suggested to the influential Jew Skhariyah (Zechariah), of Kiev, the idea of spreading Judaism among the Russians of Pskov and Novgorod. Skhariyah belonged to the suite of Prince Michael Olelkovich, who came to Novgorod in 1471 as the king's vicegerent. The first convert in Novgorod was the priest Dionis, who introduced to Skhariyah his colleague, the archpriest (*protopapas*) Aleksei. The latter was the most zealous of the new converts, and did successful missionary work among all classes, especially among the clergy. The new community appreciated his labors so highly that the name of Abraham was conferred upon him, while his wife's name was changed to Sarah.

When the grand-duke of Russia, Ivan Vasilyevich, visited Novgorod in 1480, Aleksei found favor in his eyes. The grand-duke took Aleksei with him to Moscow and put him at the head of the Church of the Assumption, while his friend Dionis was at the same time appointed priest of the Church of the Archangel Michael in the same city. Aleksei enjoyed the confidence of the grand-duke in a high degree and had free access to him. He succeeded in converting his secretary, Feodor Kuritzyn, the archimandrite Sosima, the monk Zechariah, the princess Helena, daughter-in-law of the grand-duke, and many other prominent personages. The grand-duke at first, probably for political reasons, protected the heretics, but later on was constrained to persecute them.

H. R.

ALEKSYEYEV, ALEKSANDER (called also **Wolf Nachlass**): Author and convert to the Greek Catholic Church; born in 1820, at Nazarinetz, government of Podolsk, Russia, of poor Jewish parents. At the age of ten he was impressed into military service by the press-gang (*poimshchiki*) of Emperor Nicholas I., and sent away to the distant city of Volsk, government of Saratov. Nicholas I. believed that he could convert the Jews to the Orthodox Greek Church by taking the sons from their parents while young and placing them in military service. For a long time Aleksyeyev remained faithful to the religion of his forefathers, and the officials considered him a most stubborn subject.

However, about 1845, he changed his views entirely, and not only became a member of the Orthodox Russian Church, but managed to convert more than five hundred Jewish CANTONISTS, for which he was promoted in 1848 to the rank of a non-commissioned officer, and was honored by the emperor's thanks. About 1855 Aleksyeyev was so unfortunate as to lose the use of his legs. He then settled in Novgorod, and during his long illness wrote the following works on ethnographic and missionary topics: (1) "Torzhestvo Christianskavo Ucheniya nad Ucheniem Talmuda, ili Dushepolyezny Razgovor Christianina s Iyudeyem o Prishestvii Messii" (The Triumph of Christian Teaching over the Talmudic Teaching, or a Soul-saving Conversation of a Christian and a Jew on the Coming of the Messiah), St. Petersburg, 1859. (2) "Bogosluzhenie, Prazdniki i Religioznye Obryady Nynyeshnikh Yevreyev" (Religious Service, Holidays and Religious Rites of the Jews of To-day), Novgorod, 1861; 3d ed., 1865. (3) "Obshchestvennaya Zhizn Yevreyev, ikh Nravy, Obychai i Predrazsudki" (The Public Life of the Jews, their Habits, Customs, and Prejudices), Novgorod, 1868. (4) "Besyedy Pravoslavnavo Christianina Snovoobrashchennym," etc. (Colloquies of an Orthodox Christian with a Newly Converted Jew), St. Petersburg, 1872; 2d ed., Novgorod, 1875. (5) "Byvshi Yevrei za Monastyri i Monashestvo" (A Former Jew for Monasteries and Monasticism), Novgorod, 1875. (6) "Obrashchenie Yudeiskavo Zakonnika v Christianstvo" (The Conversion to Christianity of an Observer of the Jewish Law), Novgorod, 1882. (7) "Upotreblyayut li Yevrei Christianskuyu Krov?" (Do the Jews Use Christian Blood?), Novgorod, 1886; and several others.

His works are not devoid of interest; he was the first Jew in Russia to give a description of the life and customs of his coreligionists there. He refuted the absurd blood-accusation. But his attitude toward the Jewish religion and the Jewish rabbis remains a very hostile one.

ALEMETH: **1.** Son of Jehoadah, in the genealogy of Benjamin (I Chron. viii. 36). In I Chron. ix. 42 he is called the son of Jarah. **2.** For Alemeth in I Chron. vi. 45 [A.V. 60] see ALMON. G. B. L.

'ALENU: The last prayer of the daily liturgy in most congregations, so called from its initial word, "'Alenu," which means "It is incumbent upon us,"

Original Form of the Prayer.

or "It is our duty." It is one of the most sublime prayers of the entire liturgy, and has a remarkable history, almost typical of the race from which it emanated. It became the cause of slanderous accusation and persecution, as a result of which it was in part mutilated through fear of the official censors. But having been thus mutilated, it is difficult to present it in its original form. To restore it and render it at least intelligible, recourse must be had to old books and documents. The following is a literal translation from the original so far as it can be restored:

> "It is incumbent upon us to give praise to the Lord of the Universe, to glorify Him who formed creation, for He hath not made us to be like the nations of the lands, nor hath He made us like the families of the earth; He hath not set our portion with theirs, nor our lot with their multitude; . . . for they prostrate themselves before vanity and folly, and pray to a god who can not help. . . . But we bend the knee and prostrate ourselves and bow down before the King of the Kings of Kings, the Holy One, blessed be He! For it is He who stretched forth the heavens and laid the foundations of the earth, and the seat of His glory is in the heavens above, and His mighty dwelling-place (Shekinah) is in the loftiest heights. 'He is our God, and there is none other.' In truth, He is our King, there is none besides Him, as it is written in His Torah: 'And thou shalt know this day and lay it to thine heart that the Lord is God in heaven above and upon the earth beneath: and there is none other.'
>
> "Therefore do we wait for Thee, O Lord our God, soon to behold Thy mighty glory, when Thou wilt remove the abominations from the earth, and idols shall be exterminated; when the world shall be regenerated by the kingdom of the Almighty, and all the children of flesh invoke Thy name; when all the wicked of the earth shall be turned unto Thee. Then shall all the inhabitants of the world perceive and confess that unto Thee every knee must bend, and every tongue be sworn. Before Thee, O Lord our God, shall they kneel and fall down, and unto Thy glorious name give honor. So will they accept the yoke of Thy kingdom, and Thou shalt be King over them speedily forever and aye. For Thine is the kingdom, and to all eternity Thou wilt reign in glory, as it is written in Thy Torah: 'The Lord shall reign forever and aye.' And it is also said: 'And the Lord shall be King over all the earth; on that day the Lord shall be One and His name be One.'"

Evidently this prayer was originally recited with the prostration of the whole assembled congregation before their departure from the house of God, or after the benediction given by the priests. In such solemn language (drawn from Jer. x. 6–16; Isa. xxx. 7, xlv. 23, li. 13; Deut. iv. 39) the congregation gives expression to its faith in the One Universal Ruler of the World, and to its hope for His universal kingdom when all the idolatrous nations around Israel shall have been converted to His truth. The omission of a personal Messiah from the expression of the Messianic hope points to a pre-Christian era; and the very title, "King of the Kings of Kings"—found in Dan. ii. 37—shows that the formula used at the prostration goes back to Persian times when kings bore the title of King of Kings.

Additions to 'Alenu.

The 'Alenu prayer had already been in use when there were attached to it the three portions of the liturgy of the New-year: (1) the Malkiyot (the Glorifications of God as King); (2) the Zikronot (the Divine Remembrances); and (3) the Shofarot (the Trumpet-blasts): these were probably originally prayers of the Hasidim (Watiḳim), recited on public fast-days (see Ta'anit, ii. 3, and R. H. iv. 5, 6). Zunz and his followers—who ascribe the prayer to Rab, simply because in his school the Jewish liturgy received its permanent form—disregarded the fact that it stands in no organic connection with the rest of the New-year's prayer. An old tradition, referred to by Simon ben Ẓemaḥ Duran in his responsa on Prayer 253; by Eleazar of Worms, in his "Roḳeaḥ"; and afterward in Aaron ben Jacob ha-Kohen of Lunel's "Orḥot Ḥayyim," in "Kol Bo," i. 17, claims that it was written by Joshua upon his entrance into Canaan. Manasseh b. Israel, in his "Vindiciæ Judæorum," iv. 2, ascribes the 'Alenu to the men of the Great Synagogue. Moses Mendelssohn also, in his memorandum (see below), declares the 'Alenu to be one of the oldest prayers of the nation, adducing as proof of its ancient and pre-Christian character the fact that no mention is made in it of the restoration of the Jewish Temple and state, which would scarcely have been omitted had it been composed after their destruction. It was obviously written, he says, at the time when the Jews still lived in their own land. The fact that neither Maimonides nor Abudarham mentions its separate recital at the close of the daily prayers, as does the Maḥzor Vitry, merely proves that it was not generally recited as part of the service. On the other hand, it is indisputable that during the Middle Ages it was invested with especial solemnity and awe.

Its Use by Martyrs.

The following is related by Joseph ha-Kohen in his "'Emeḳ ha-Baka" (ed. Wiener, p. 31), based upon contemporary records: During the persecution of the Jews of Blois, France, in 1171, when many masters of the Law died as martyrs at the stake, an eye-witness wrote to R. Jacob of Orleans that the death of the saints was accompanied by a weird song resounding through the stillness of the night, causing the Christians who heard it from afar to wonder at the melodious strains, the like of which they had never heard before. It was ascertained afterward that the martyred saints had made use of the 'Alenu as their dying song. It is quite probable, then, that it became the custom in those tragic days for the martyrs to chant the 'Alenu song in order to moderate the agonies of their death.

Calumnies Directed Against It.

But this very fact seems to have given a welcome pretext to maligning persecutors, who claimed that the 'Alenu was a malicious attack upon the Church, whose Savior was characterized therein as "a god who can not help" and as "vanity and folly."

An apostate, Pesach Peter, in 1399 went so far as to assert that in the word וריק ("and folly"), (ישו) Jesus was alluded to, because the Hebrew letters of both words are equal in numerical value, amounting to 316. Antonius Margarita, in 1530, was the next to repeat this charge, in a book entitled "The Belief of the Jews." Seventy years later Samuel Friedrich Brenz, a converted Jew, repeated it in a book to which he gave the characteristic title "Jüdischer Abgestreifter Schlangenbalg" (The Jewish Serpent Slough). In vain did the leading rabbis, Solomon Ẓebi Uffenhausen in his "Theriaḳ" and Lippman Mühlhausen in his "Nizzaḥon," protest against such misinterpretation of their ancient prayer, composed long before Jesus was born, and having solely idolaters in view. Even the learned Buxtorf in his "Bibliotheca Rabbinica" repeated the charge; but he was successfully refuted by Manasseh b. Israel, who devotes a whole chapter of his "Vindiciæ Judæorum" to the 'Alenu; and relates among other things that Sultan Selim, on reading the 'Alenu in the Turkish translation of the Jewish liturgy presented to him by his physician Moses Amon, said: "Truly, this prayer is sufficient for all purposes; there is no need of any other." But the acme of misrepresentation was reached by Eisenmenger ("Entdecktes Judenthum," i. 84), who pointed out that the words, "they bow to a god who does not help," were accompanied by spitting as a sign of utter contempt, and he asserted that reference was thereby intended to Jesus. In consequence of this charge, the indecorous practise of spitting while reciting the prayer was denounced by Isaiah Horwitz and other rabbis. But the charge was renewed again by Professor Kypke, government inspector of the Königsberg Synagogue, in a memorandum presented to the government in 1777, on the occasion of a memorial service held by the Königsberg Jews in honor of the Russian empress. This was refuted by Mendelssohn in a counter-memorandum presented to the government, the result of which was that, despite Kypke's protest, the matter was laid *ad acta*. Both documents were afterward published from the archives by L. E. Borowsky, pastor of Königsberg, in 1791 (see Mendelssohn, "Gesammte Schriften," vi. 418; Jost, "Gesch. der Israeliten," ix. 38).

Coincidence in the Early Christian Church.

Singularly enough, in the early Christian Church, converts before being baptized had to step forward at the end of divine service, and make public confession by first turning backward, renouncing the kingdom of Satan and spitting out as a sign of contempt; then turning forward in the name of the Creator of the world and of man, they took the oath of allegiance to Jesus as the Son of God (see Höfling, "Taufe," i. 381; Cyril, "De Mysteriis," i. 2). Possibly the prayer for the conversion of all heathen nations, contained in the latter portion of the 'Alenu, has some connection with the practise adopted by the Church of admitting proselytes at the end of the service.

K.

'ALENU (עלינו), MUSIC OF: The traditional melody to which the 'Alenu prayer is chanted, while of comparatively late origin, is of suitable breadth and dignity. It consists essentially of the opening phrase, several times repeated, with the addition of a strain from the cantor's introduction of the 'AMIDAH and a passing reminiscence of the KOL NIDRE. The version given on the opposite page is somewhat simpler in detail than that favored by most cantors, some of whom prefer also to quote a strain from the melodies of the preceding evening prayers instead of the one here instanced.

F. L. C.

ALEPH (א): The first letter of the Hebrew alphabet. For its symbolic meaning, see Mishnah Shabbat, i. It was employed as a numeral to mark No. 1 of the shekel-boxes in the Temple (Sheḳ. iii. 2). Aleph and Tav being the first and the last letters of the alphabet, the expression "from Aleph to Tav" signifies "from beginning to end." Hence, "the observers of the Law from Aleph to Tav" are those that keep the Law in its entirety. See ALPHABET; ALPHA AND OMEGA.

K.

ALEPPO (Arabic. **Haleb**; Hebrew. חליפו, אחלב, חלב, but generally ארם צובה, or abbreviated אר"ץ or צובה): Town of ancient and of modern Syria, and capital of a Turkish vilayet of the same name, between the Orontes and Euphrates rivers; situated on the banks of a little desert stream, Nahr-el-Haleb, seventy miles east of Alexandretta, its seaport on the Mediterranean. Formerly it derived its importance from being on the route to Bagdad and southern Persia; and it is said to have contained at one time as many as 200,000 souls. It can boast of sheltering one of the oldest Jewish communities, mentioned in Ps. lx. Though only ten days' journey north of Damascus, it was traditionally regarded, in letters of divorce (see GET), as the most northerly point a Palestinian Jew might visit without being considered a traveler, the southern limit being Alexandria in Egypt. In the sixteenth century one of the routes to India still passed through it, and on account of this the city became one of the great attractions for the Jews who traveled eastward.

Though the synagogue in Aleppo has many modern additions, Abbé Chagnot is of opinion that portions of it were erected as early as the fourth century. It contains several inscriptions, some carved in its walls, others painted on them; one dating as early as 833, another as late as 1861; the former in a chapel (קבה) said to have been erected by Ali ben Nathan ben Mebasser ben הארם. The date is furnished in the usual way by starring letters in a Biblical quotation. The chief peculiarity of the structure is a raised pulpit, known as Elijah's Seat. Several chapels surround the main building; the one on the extreme west, behind the Ark, and corresponding to the lady-chapel of a European cathedral, is a damp shrine, with a stone sarcophagus, in which are preserved four Biblical manuscripts, the pride of the Aleppo Jews.

The Aleppo Code and Other Manuscripts.

The greatest superstitious reverence is attached to the codex now in Aleppo, which is ascribed to AARON BEN ASHER; it bears note of its dedication to the בעלי תלמוד and ישראל הרבנים, that is, to the Rabbinites of Jerusalem, and of its subsequent delivery to the Jerusalem Synagogue of Cairo, as well as of its having originally belonged to an inhabitant of Bassora, and to the Karaite community of Jerusalem.

The codex, from its accentuation and general character, can hardly be of earlier date than the twelfth century; nor can it be the original written in 922. The epigraphs must have been copied from another manuscript, itself perhaps not the first. The other three manuscripts are: (1) Pentateuch (text and Targum) with full Masoretic lists, finished (probably in Italy) on the 15th of Tammuz, 1101 (1341); (2) Pentateuch with the commentary of Rashi in the margin and sundry additions of Ibn Ezra, Naḥmanides, and Joseph Caro; (3) a huge but beautifully illuminated Masoretic Pentateuch with the Hafṭarot and the five Megillot. The synagogue is also the meeting-house of the congregants. On an upper floor is the rabbinical school with a fairly good Hebrew library. Stored near the roof of one of the chapels is a *genizah*, from which, in times of drought, the dust is removed and carried with much ceremony to the Jewish cemetery and there buried with fervent prayers for rain. There are said to be about 10,000 Jews in Aleppo, each of whom must pay a poll-tax.

Modern Aleppo.

Besides the various primary schools, where Hebrew and Arabic are taught, there is a boys' school, founded by the Alliance Israélite Universelle in 1869, with 250 pupils, of whom 96 pay for tuition. There is also a school for girls, with 195 pupils, of whom 79 pay. The latter was founded in 1889.

In the matter of dress the Jewesses of Aleppo adopt a costume resembling that of their Mohammedan sisters—a long black cloak enveloping them from head to foot, the face alone being visible. The girls in the Alliance school wear European dress.

Books are very rare in the city, but manuscripts abound, fifteen Hebrew ones having been recently collected there in two days. One was a unique diwan of secular poetry by Eleazer ha-Bable probably composed in Aleppo ("Jew. Quart. Rev." xi. 682). A printing-press for Hebrew was set up in Aleppo in 1898. In a private library there a Masoretic Bible, finished in 1307, has been found; this library also contains a cabalistic work, ם" הקנה, written in Cochin in 1497.

Prominent Members of the Community.

Benjamin of Tudela visited Aleppo in 1173, when he found a Jewish community of 1,500 souls with three noteworthy rabbis attending to their spiritual needs: Moses Alconstantini, Israel, and Seth. Petahiah of Ratisbon was there between 1170 and 1180, and Alḥarizi fifty years later. The former calls the citadel the palace of King Nour-ed-din, and says that there were 1,500 Jews in Aleppo, of whom the chief men were Rabbis Moses Alconstantini, Israel, and Seth. Alḥarizi, author of the "Taḥkemoni," like Maimonides, has much to say of the Aleppo Jews (Makamat, Nos. 18, 46, 47, 50). In 1195 the leading Jew was Joseph ibn Aknin, who had migrated from Europe by way of Egypt, where he was the friend of Maimonides, who wrote for him the "Moreh Nebukim." Other men of learning were Azariah and his brother Samuel Nissim, the king's physician Eleazer, Jeshua, Jachin Hananiah, and Joseph ben Ḥisdai. Alḥarizi thought very little of the Aleppo poets, of whom he mentions Moses Daniel and a certain Joseph; the best was Joseph ben Ẓemah, who had good qualities but wrote bad verse. Their piety must have been extreme, for Eleazer is held up to scorn for having traveled on the Sabbath, although at the sultan's command.

In 1401 the Jewish quarter was pillaged, with the rest of the city, by Tamerlane; and a Jewish saint died there after a fast of seven months. In the sixteenth century Samuel Laniado ben Abraham and in the seventeenth century Ḥayyim Cohen ben Abraham were representative authors. The "Meḳor Ḥayyim" of the latter was published at Constantinople in 1649, and at Amsterdam by Menasseh ben Israel in 1650. Other Aleppo worthies are Isaac Lopes in 1690, Isaac Berakah in the eighteenth century, and Isaac Athia about 1810.

For four centuries the Jews of Cochin (India) have been in close relation with those of Aleppo. Wessely, in his edition of Farrisol's travels, publishes as an appendix a letter by Ezekiel Rechabi to Tobias Boas, relating how his father came to Cochin in 1646.

Aleppo was in touch with Italy as well as with India. Many Aleppo books were published in Italy; notably the ritual of the Aleppo Jews, recently discovered by A. Berliner and described in his "Aus Meiner Bibliothek." E. N. A.

Early History.

ALESSANDRIA: Fortified town, situated in a province of the same name, in northern Italy, and founded, in 1168, by citizens from Cremona, Milan, and Piacenza. The earliest mention of a Hebrew community in Alessandria occurs in the last years of the fifteenth century, after the expulsion of the Jews from Spain, when the name of a certain Clemens (Kalonymus) Cohen Vitali of Valencia appears in the city records as one of the first Jewish settlers. Alessandria was then a dependency of Milan, and when it fell into the hands of Charles V. the Jews soon resented his intolerant treatment. Joseph ha-Kohen narrates, in his "'Emeḳ ha-Baka," that, in 1558, when the inquisitor confiscated a number of Hebrew books—though they contained nothing objectionable—and at the same time demanded a large sum for their redemption, the Jews of Alessandria petitioned the duke of Sessa, governor of Milan, to cause the return of their property. The duke immediately ordered that restitution be made. By command of Philip II. of Spain, the governor of Milan was directed to expel the Jews from that duchy in 1566, but no attempt was made to carry out the decree till 1592. About this time Rabbi Samuel Cohen of Alessandria went to Spain to petition the king in behalf of his oppressed coreligionists. He succeeded in interesting many influential persons at court and even gained the favor of Philip II. himself, who annulled the decree of expulsion issued in 1566. Notwithstanding this, in 1597 there remained in the duchy of Milan only two Jewish families at Cremona, and about as many at Lodi and Alessandria, whereas previously the Jewish population of these cities had reached 456 at Cremona, 130 at Lodi, and 103 at Alessandria. Though numerically insignificant, the Jews of Alessandria can not be considered unimportant. Gedaliah ibn Yaḥyah spent much of his time in Alessandria between the years 1576 and 1585, and it was in this city that he began to write several of his works (see his "Shalshelet ha-Ḳabbalah," ed. Venice, pp. 67, 68).

Later History.

Little is known of the later residents of this community beyond the fact that about the middle of the seventeenth century the city of Alessandria owed its safety to the loyalty of a Jew, who had discovered a new process of refining gunpowder which economized its use. As a result of his discovery, he was summoned to Alessandria so that his invention might be used in the defense of the city, which the French, under the duke of Modena, were threatening to besiege. The duke intercepted the Jew and tried to bribe him to destroy all the powder in the fortress. The Jew pretended to accept the duke's proposition, but as soon as he gained the city he disclosed the whole plot to the officials (see "Efemeridi Alessandrini," July 14, 1647, reprinted in "Educatore Israelitico" for 1858).

Freed from the Spanish yoke in 1706, Alessandria became a part of Sardinia, only to be plunged into a still more deplorable condition until 1848, when, by the decree of March 29, civil rights were accorded to the Jews of Alessandria, and they were admitted even to the army and public service.

Rabbis of Alessandria.

The names, with outlines of the achievements, of the various rabbis of Alessandria, are as follows: (1) Joseph b. Michael Ravenna, who flourished in the seventeenth century, was an authority on the Jewish ritual and an accomplished Hebrew poet. He is also credited with a responsum inserted in Lampronti's "Paḥad Yiẓḥaḳ," under the article "Ḳeriat Sefer Torah," written about 1641. Zunz mentions him in his "Literaturgeschichte," p. 444, but as the author of a *pizmon*, or liturgical poem. The date 1701, given by him, refers to the edition of the pizmon, and not to Joseph's rabbinate.

(2) Benjamin Cohen, rabbi of Reggio, was a native of Alessandria, and became rabbi in the latter city in 1675; he continued in office till called to Reggio in 1682. (3) Joel Uzziel ben R. Nathan Pincherle, rabbi of Alessandria in 1714 (see "Milḥamah la-Adonai"), resided there with his father in 1729 (see Richi, "Adderet Eliyahu," part ii.). One of his ritual decisions on *tefillin* (phylacteries) which appeared in Morpurgo's responsa (1716) is also found in the "Paḥad Yiẓḥaḳ" of Lampronti. After Pincherle, the distinguished family of Levi de Veali held the rabbinical office in Alessandria, son succeeding father for several generations. (4) Elijah, son of Raphael Solomon, was the first to adopt the name of De Veali, and held the office of rabbi from 1738 to 1792. Nepi eulogizes him, and cites his works. (5) Moses Zacuto, son of Elijah, occupied the rabbinate of Alessandria for twenty years. In 1812 the consistory of Paris elected him rabbi in Casale-Monferrato (see L. Della Torre, "Ṭal Yaldut," § 25). (6) Mattathias di Moses Zacuto succeeded his father in 1812. On June 5, 1835, together with 47 persons, including Rabbi Raphael Amar, he perished in the collapse of a building during a wedding celebration. (7) Elijah, son and successor of Mattathias (1836–80), was esteemed by G. B. de Rossi. He was created a knight of the crown of Italy.

During the last two decades the community of Alessandria has grown steadily smaller, and in 1900 numbered only 370 souls. Its members observe the Italian ritual, and support several religious and charitable institutions.

G. J.

ALETRINO, ARNOLD: A Dutch physician and professor of criminal anthropology at the University of Amsterdam; also served officially as surgeon to the city police and fire departments; born in Amsterdam, April 1, 1858. He is one of the leaders, in company with Professors Winkler and Jelgersma, in the Dutch school of anthropology which follows methods quite distinct from the French and Italian scientists. He contributed the following articles to the "Psychologische en Neuralgische Bladen":

"Over Uranisme" in 1897, "Over Elmira Reformatory" and "Beschouwingen over de Vrouwenkwestie" in 1898, and "Over Ontoerekenbaarheid" in 1899. In 1898 he published a volume of collected essays upon criminal anthropology.

He is also known as a writer of fiction, belonging to the modern realistic school which has flourished in Holland since 1880. Besides a number of smaller contributions to "De Nieuwe Gids," the first monthly organ of this school, he has published "Uit den Dood," 1890; "Zuster Bertha," 1891; "Martha," 1895; and a volume of short stories, 1895. J. Vr.

ALEX, EPHRAIM: Founder of the Jewish Board of Guardians, London; born in Cheltenham, 1800; died in London, Nov. 13, 1882. He was a successful business man, which fact eminently fitted him for the great charitable work to which he chiefly devoted his attention—that connected with the well-known Jewish Board of Guardians in London. To his ingenuity were due the practical steps which led up to the establishment of that institution; and to his zeal and public spirit, which he imparted to the community, were due its rapid development and perfect organization. A suggestion had indeed been made as early as 1802 by Joshua Van Oven to replace the loose and imperfect arrangement between the three German synagogues by a definite board of guardians for the Jewish poor. This suggestion was, however, lost sight of until 1858, when Alex was overseer of the Great Synagogue, and he became impressed with the inadequacy of the system for outdoor charity then prevailing. He ventilated the subject energetically before his own council and vestry as well as on various public occasions.

In February, 1859, he issued a circular proposing "a scheme for a board of guardians for the relief of the necessitous foreign poor." This scheme exhibited a great insight into the needs of the poor, as well as a comprehensive idea of the machinery necessary adequately to relieve them. The keynote of the circular and scheme was organization, and the subsequent development of the board has been strictly on the lines of Alex's original conception.

He was not a man of commanding intellect, but he possessed a genial and tactful disposition which attracted young men to the undertaking. He was the first president of the board, over which he continued to preside till 1869, when his physical infirmities compelled his retirement; as a member of the board, however, he continued to take part in its deliberations till the year of his death. He was also a life-member of the Council of the United Synagogue, and a member of the Committee of the Jews' Hospital in Mile End.

Bibliography: *Jew. Chron.* and *Jew. World*, Nov. 17, 1882. G. L.

ALEXA (or **LEXA**): **1.** A foreign jurist of the third century, who discussed with the Palestinian amora R. Mana II. the question of collecting disputed debts in the absence of the debtor, as practised under the rabbinic law in Palestine and under the law of his own country. The conversation is preserved in two somewhat mutilated versions (Yer. Ket. ix. 33*b*, Yer. Shebu. vii. 38*a*), and it reads as follows:

> "Alexa: We do better than you. We enter judgment: and if the debtor comes and disproves the claim, well and good—we annul the judgment; but if he does not come, we confirm the judgment on his property. Mana: We do likewise. We give notice through the public crier for thirty days [every Monday and Thursday of each week, see B. Ḳ. p. 113*a*]; if he appears before the court, good; otherwise we confirm the judgment on his property. A.: But suppose he is far away, and fails to hear of the notice in time to allow of his appearing within the thirty days? M.: We send after him three notices at intervals of thirty days, one in thirty days [after giving judgment], another thirty days thereafter, and a third thirty days later. If he comes, well; if he does not come, we declare the judgment on his property final" (compare B. Ḳ. p. 112*b*).

Margoliot ("Pene Mosheh" on Yer. Shebu. *l.c.*) maintains that this Alexa was a Babylonian amora; Frankel ("Mebo," p. 64*a*, on the authority of Rapoport in "'Erek Millin") considers him a Gentile judge. **2.** An amora of the third generation (third and fourth centuries), mentioned in the Jerusalem Talmud (Yer. Ket. v. 29*c*). R. Jacob b. Aḥa reports a Halakah in Alexa's name, transmitted by Ḥizkiah (b. Ḥiyya Roba). He is probably identical with R. Alexandri II. S. M.

ALEXANDER THE GREAT: The celebrated conqueror of the East, 356–323 B.C. By introducing Hellenic culture into Syria and Egypt, he had probably more influence on the development of Judaism than any one individual not a Jew by race. Yet, curiously enough, there are no personal details which connect him with Jewish history, except that after the siege of Tyre, 332 B.C., he marched through Palestine unopposed, except in the case of Gaza, which was razed to the ground. He is mentioned by name only in the Apocryphal I Macc. (i. 1–8, vi. 2). It is supposed that the Book of Daniel alludes to Alexander when it refers to a mighty king that "shall stand up, that shall rule with great dominion," whose kingdom shall be destroyed after his death (Dan. xi. 3). The vision of the "fourth beast, dreadful and terrible, and strong exceedingly," devouring and breaking all in pieces (*ibid.* vii. 7), may also be an allusion to Alexander. I. B.

The only historical event connecting Alexander the Great with the Jews is his visit to Jerusalem, which is recorded by Josephus in a somewhat fantastic manner. According to "Ant." xi. 8, §§ 4–6, Alexander went to Jerusalem after having taken Gaza. Jaddua, the high priest, had a warning from God received in a dream, in which he saw himself vested in a purple robe, with his miter—that had the golden plate on which the name of God was engraved—on his head. Accordingly he went to meet Alexander at Sapha ("View" [of the Temple]). Followed by the priests, all clothed in fine linen, and by a multitude of citizens, Jaddua awaited the coming of the king. When Alexander saw the high priest, he reverenced God (Lev. R. xiii., end), and saluted Jaddua; while the Jews with one voice greeted Alexander. When Parmenio, the general, gave expression to the army's surprise at Alexander's extraordinary act—that one who ought to be adored by all as king should adore the high priest of the Jews—Alexander replied: "I did not adore him, but the God who hath honored him with this high-priesthood; for I saw this very person in a dream, in this very habit, when I was at Dios in Macedonia, who, when I was considering with myself how I might obtain dominion of Asia, exhorted me to make no delay, but boldly to pass over the sea, promising that he would conduct my army, and would give me the dominion over the Persians." Alexander then gave the high priest his right hand, and went into the Temple and "offered sacrifice to God according to the high priest's direction," treating the whole priesthood magnificently. "And when the Book of Daniel was shown him [see Dan. vii. 6, viii. 5–8, 20–22, xi. 3–4], wherein Daniel declared that one of the Greeks [מלך יון] should destroy the empire of the Persians, he supposed that he was the person intended, and rejoiced thereat. The following day Alexander asked the people what favors he should grant them; and, at the high priest's request, he accorded them the right to live in full enjoyment of the laws of their forefathers. He, furthermore, exempted them from the payment of tribute in the seventh year of release. To the Jews of Babylonia and Media also he granted like privileges; and to the Jews who were willing to enlist in his army he promised the right to live in accordance with their ancestral laws. Afterward the Samaritans, having learned of the favors granted the Jews by Alexander, asked for similar privileges; but Alexander declined to accede to their request. The historical character of this account is, however, doubted by many scholars (see Pauly-Wissowa, "Realencyclopädie," i. col. 1422). Although, according to Josephus ("Contra Ap." ii. 4, quoting Hecatæus), Alexander permitted the Jews to hold the country of Samaria free from tribute as a reward for their fidelity to him, it was he who Hellenized its capital (Schürer, "Gesch." ii. 108). The Sibylline Books (iii. 383) speak of Alexander—who claimed to be the son of Zeus Amon—as "of the progeny of the Kronides, though spurious." K.

——**In Jewish Legend:** All the accounts which the Talmud and Midrash give concerning Alexander Muḳdon (the Macedonian) are of a legendary character. Some of them pretend to be historical, as the following Baraita in Yoma, 69*a* (identical with Megillat Ta'anit, iii.):

> "When the Samaritans had obtained permission from Alexander to destroy the Temple in Jerusalem, the high priest Simon the Just, arrayed in his pontifical garments and followed by a number of distinguished Jews, went out to meet the conqueror, and joined him at Antipatris, on the northern frontier. At sight of Simon, Alexander fell prostrate at his feet, and explained to his astonished companions that the image of the Jewish high priest was always with him in battle, fighting for him and leading him to victory. Simon took the opportunity to justify the attitude of his countrymen, declaring that, far from being rebels, they offered prayers in the Temple for the welfare of the king and his dominions. So impressed was Alexander that he delivered up all the Samaritans in his train into the hands of the Jews, who tied them to the tails of horses and dragged them to the mountain of Gerizim; then the Jews plowed the mountain [demolished the Samaritan temple]."

Samaritan Intrigue.

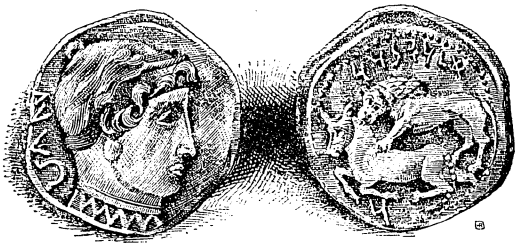
It is evident that this account wrongly assigns to the times of Alexander an event which occurred two centuries later, in the reign of John Hyrcanus I. It must therefore have been written at a late period, when the memory of historical incidents had become confused. The legend presents a striking resemblance to the narrative of Josephus ("Ant." xi. 8, § 1 *et seq.*). The point of the fable is the honor conferred by Alexander upon the high priest and the cause thereof; and, furthermore, the contrast between his good-will to the Jews and his hostility to the Samaritans. Both the narrative in the Talmud and that of Josephus are derived from an "Apology" of the Jews which aimed at discrediting the members of the Samaritan sect. It is even possible that this apology, as Büchler thinks ("Rev. Ét. Juives," lxxxvi. 1), had its origin in Alexandria, where the attitude of Alexander was of decisive importance in the eyes of the Greek public:

> "In Gen. R. (lxi., end) the Samaritans are accused of playing a rôle equally despicable with that imputed to them in the above legend. When Alexander advanced toward Jerusalem, they informed him that the Jews would forbid his entrance to the Holy of Holies. A Jew, Gebi'ah ben Kosem [identical with Gebia ben Pesisa, a legendary character], asked the king, on the hill of the Temple, to remove his shoes and to put on the slippers ornamented with precious stones that he had brought for him, lest he should slip on the pavement of the Temple. Alexander complied with the request, and thus avoided a violation of the rabbinic law. When they arrived at the Holy of Holies, Gebi'ah said to the king, 'We are not permitted to proceed farther' (neither we nor you). 'When I have left the Temple,' replied the king, 'I will straighten your hump' (Gebi'ah signifies humpback). 'If you do,' answered Gebi'ah, 'you are a great physician, and deserving of high remuneration.'"

This anecdote is one of those naive inventions of which many are found in Midrash Ekah Rabbati, and which aim at exhibiting the ingenuity of the Jews in repartee. Alexander is made to play merely the part of a stage-king.

The same Gebi'ah appears in a narrative of quite a different type. Alexander is here represented as the great conqueror to whom the nations appeal for arbitration of their differences:

> "The Arabs accuse the Jews of illegally withholding the heritage of their ancestor Ishmael; the Canaanites complain of having been wrongly deprived of their territory; and the Egyptians claim indemnity for the vessels that the Israelites had taken from them on leaving their country. Gebi'ah meets all these charges with great success: against the Egyptians he proves that it is they that are indebted to the Jews, whom they had exploited without paying them for their work, and Alexander was fully satisfied with the refutation" (Sanh. 91*a*, Gen. R. *l.c.*).



Coin with Aramaic Inscription.

These pretended discussions, similar to those reported to have taken place between the Samaritans and the Jews before Ptolemy Philometor (Josephus, "Ant." xii. 1, § 10; xiii. 4, § 4), are the echo of the accusations against the Jews by pagan readers of the Bible at Alexandria. These imputations were taken up later by the Gnostics, who were the pupils of the Alexandrians, and especially by the Marcionites. Tertullian replied to Marcion, who had brought the same reproach against the Bible for the "larceny" committed by the Jews, by repeating the words of Gebi'ah; he even mentions the discussions between the Jews and the Egyptians ("nam et aiunt ita actum per legatos utrinque; Ægyptiorum quidem repetentium vasa; Judeorum vero reposcentium operas suas, et tandem vasis istis renuntiaverunt sibi Ægyptii"; "Adversus Marcionem," ii. 20).

Another group of legends is of a more popular character; they have nothing specifically Jewish, and are connected with the general legendary tales of Alexander. They may be given as follows:

The Ten Questions of Alexander to the Sages of the South (Tamid, 31*b et seq.*): This account is written in certain parts in a classical Aramaic, proving that it was borrowed from some written record; it is quite analogous to the conversations which, according to Plutarch ("Life of Alexander"), Alexander was reported to have had with ten gymnosophists who had rebelled against him; there the account continues with ten questions, some of which are identical with those of the Talmud. This episode seems, therefore, to be the fragment of a non-Jewish narrative, parallel with that of the Greek historian.

Alexander's Journey to the Regions of Darkness (Tamid, 32*a*): Alexander makes a journey into the region of darkness riding on young Libyan asses. There he stops at a fountain, which reanimates a dead fish that he has dipped into it. The same story is found in Pseudo-Callisthenes, II. chaps. xxxix.–xli. (version *B*). The legend as reproduced in the Talmud is the popular altered form of a later period.

The Amazons (Tamid, *ibid.*; Pesiḳ. ix. 74, 74*a et* *seq.*; Lev. R. xxvii.; Tan., Emor, 6; Ḥibbur Ma'asiot): Alexander comes to a place which is inhabited only by women. They say to him: "If you kill us, people will accuse you of murdering women. If we kill you, people will say: Behold a king who was overcome by women!" This is the well-known story of the Amazons, but reduced to its simplest expression. In the Pesiḳta the town inhabited by the women is called Ḳartagene, derived by folk-etymology from the Aramaic *ḳarta* (town) and the Greek *γυνή* (woman).

The Gold Bread (*ibid.*): Alexander asked the Amazons for bread, and they brought him, on a golden table, a loaf of gold bread. "Do you eat gold bread?" the king then said. "Well, if your desire be for ordinary bread, could you not get it in your own country without coming hither?" answered the Amazons. This satire on the ambition of conquerors recurs frequently in Jewish legends. It does not appear in Pseudo-Callisthenes and in the accounts derived from it; but is found in Plutarch's essay on the virtuous deeds of women. Pythes, a rich Greek in the times of Xerxes, who forces his fellow citizens to work for him in a gold-mine, is served by his wife with gold bread to demonstrate the absurdity of his greed. This moral is connected with Alexander also in another form: instead of the Amazons it was the king Kaẓia who gave the lesson to Alexander.

King Kaẓia and His Judgment (Yer. B. M. ii. 8*c*; Gen. R. xxxiii.; Pesiḳ.; Lev. R.; Tan., Emor, as above): King Kaẓia (ruler of a country situated behind the "Dark" mountains) invited Alexander to hear a lawsuit. The plaintiff declared that he had bought a piece of land and found in it a treasure; he wanted to return the treasure to the original owner, since, he claimed, he had bought the field only. The defendant replied that he had sold the field with everything that it contained. Then the king inquired of one of them: "Have you a son?"; of the other, "Have you a daughter?" "Marry them, and let the treasure be theirs." Alexander laughed at this judgment. "Is my decision a wrong one?" inquired the king. "No; but in our country we would have put the two parties to death and confiscated the treasure." "Do you have rain in your country?" "Yes." "And have you animals also?" "Yes." "Then it is surely for their sake and not for yours that the rain falls and the sun shines upon you." This satirical account seems to be of Jewish origin, although it is, in part, based on a popular theme—marriage as the solution of a lawsuit (compare a Cambodian tale in "Revue des Traditions Populaires," xv. 133). The Jewish form of the fable was embodied in the "Dicta Philosophorum" of Abu al Wafa Mubashshir ibn Faḳih (1053–54), a work which was translated into Spanish, Latin, English, and French (see Knust, "Mittheilungen aus dem Eskurial," Tübingen, 1879). In other Arabic texts the trial takes place before David and Solomon (Weil, "Biblische Legenden," p. 215). The anecdote seems to have been brought to Europe by a priest in 1083 ("Chronique de l'Abbaye de St. Hubert"; Pertz, "Monumenta Germanica, Scriptores," viii. 599).

Alexander at the Gate of Paradise; the Eye: The Talmud (Tamid, 32*b*) concludes with this narrative: Alexander arrived at the gate of paradise and asked that it be opened to him. "Only the just can enter here," came the reply. "I am a renowned king; present me with something." A little ball was given to him. He put it in a scale; and it outweighed all the gold and silver in his possession. In his astonishment he turned to the rabbis, who explained to him that it was an eyeball, which could never be satiated; but if covered with a handful of dust (buried) it would weigh nothing. This satire on greed, or the ambition to acquire wealth, seems likewise to be genuinely Jewish. This allegory, as it appears in the Talmud, is reproduced in better shape in "Alexandri Magni Iter ad Paradisum," a little work of the twelfth century, which has even preserved traces of its Jewish origin. In this it is an old Jew, of the name of Papas, who lectures the king. Both forms of the legend are evidently connected with a lost original.

Alexander's Ascent into the Air (Yer. 'Ab. Zarah, iii. 42*c*; Num. R. xiii.): This appears to be a reminiscence of a narrative in Pseudo-Callisthenes (II. xli.).

Alexander's Descent into the Sea (Ps. R. 103; compare Pseudo-Callisthenes, II. xxxviii.): In the Middle Ages the Jews confined themselves to translations of the romance of Alexander from the Arabic or the Latin, particularly in the form which it had received in the "Historia de Proeliis." A Hebrew translation of this work, made by an unknown writer after an Arabic version, was edited and published by Israel Lévi under the title "Toledot Alexander" (Life of Alexander), Paris, 1887. Another translation from a Latin text, by Immanuel ben Jacob de Tarascon, exists only in manuscript. A recension, the origin of which has not yet been clearly ascertained, was surreptitiously included in certain manuscripts of the Josippon (perhaps by Judah Mosconi). Another romance of Alexander, quite different from the rest, was written by a Jew in the west of Europe before the thirteenth century; it was published by Israel Lévi in Steinschneider's "Festschrift." Some portions of the legend were known to scholars by the Hebrew translation of "Sod ha-Sodot" (Secret of Secrets) and of "Musare ha-Filosofim" (Dicta of the Philosophers), containing whole chapters touching upon the legendary life of Alexander.

ALEXANDER I., of Judea. See ALEXANDER JANNÆUS.

ALEXANDER II., of Judea: Born about 100 B.C.; died 47 B.C. He was the eldest son of Aristobulus II. and son-in-law of Hyrcanus. Upon the conquest of Jerusalem by Pompey in 63, he and his parents, brothers, and sisters were sent to Rome as prisoners of war. Alexander escaped on the way, and, returning to Judea, endeavored to throw off the Roman yoke by force of arms. Taking advantage of the straits in which the Romans just then found themselves in having to confront disturbances among the Arabs, Alexander took measures to restore the fortifications of Jerusalem destroyed by Pompey, though his action was opposed by the Roman garrisons in the country and by the weakling monarch Hyrcanus. He next secured possession of the fortresses of Alexandrion, Hyrcanion, and Machærus. When he had gathered around him a force of 10,000 heavy infantry and 1,500 horsemen he declared open war against Rome in the year 57 B.C. Gabinius, who had just arrived in Syria as proconsul, immediately sent his lieutenant Mark Antony (the subsequently celebrated triumvir) against him, and then followed with his main army, whose numbers were swelled by Romanized Jews, led by the half-Jew Antipater. Alexander endeavored in vain to avoid a pitched battle. Near Jerusalem 3,000 of his followers died upon the field, while as many again were made captives, and he with a small remnant escaped to the fortress of Alexandrion. Although promised full pardon, he rejected Gabinius' summons to surrender; and only after a brave defense against the united efforts of Gabinius and Mark Antony did he capitulate upon condition of retaining his liberty. This result of his futile resistance to the Romans was followed by no further personal suffering for him; but it was different with the Jewish people. Even the nominal independence which Judea had hitherto enjoyed under its quasi-kings was now at an end; Gabinius deprived Hyrcanus of all political standing, and left him only the charge of the Temple. Thus the struggle of the brave Maccabees ended in the total loss of even the semblance of independence.

Alexander, however, had not yet given up all hope, and in the year 55, after the escape of his father and his brother Antigonus from Roman captivity (56), he again meditated opposition to the Romans. While Gabinius was temporarily absent from Palestine, Alexander gathered around him a considerable force, with which he vanquished such Roman detachments as opposed themselves to him, and compelled the enemy to withdraw to Mount Gerizim. Gabinius hastened back to Palestine from Alexandria, and upon his arrival fortune once more deserted Alexander. A considerable proportion of his force was detached from allegiance by the craftiness of Antipater, leaving him with only 30,000 men, who were unable to withstand Gabinius' attack, and fled from the battle-field of Itabyrium, leaving one-third of their number dead on the field. Alexander seems to have escaped to Syria, where, however, the unfortunate fate which pursued his unhappy family overtook him. In the year 49–48 B.C., just when the good star of the Maccabees, through the favor of Cæsar, seemed once again to be in the ascendant, Alexander, by direct command of Pompey, was beheaded at Antioch by Q. Metellus Scipio, Pompey's father-in-law, who was at the time proconsul of Syria.

L. G.

ALEXANDER, Son of Herod: Born about 35 B.C.; died about 7 B.C. His mother was the Hasmonean princess Mariamne. The unfortunate fate which persistently pursued the Hasmonean house overtook this prince also. As heir presumptive to the throne by right of descent on his mother's side, he was sent to Rome for his education in the year 23 B.C. He remained there in the household of Asinius Pollio until about the year 17 B.C., when Herod himself brought him and his younger brother Aristobulus, who had been with him, home to Jerusalem. Shortly afterward Alexander received in marriage Glaphyra, daughter of the Cappadocian king Archelaus. But then the clouds began to gather around him. From his mother he inherited both the personal excellences and the failings of the Hasmonean house. His handsome presence and frank bearing made him a favorite with the people, and they fairly longed for the day when this noble scion of the house of the Maccabees should mount the throne instead of the usurper and half-Jew Herod. But, on the other hand, a certain degree of vanity and a spirit of vindictiveness, which marked him no less than his prepossessing qualities, rendered him extremely unpopular with the partizans of Herod, who had much to fear from a future King Alexander. Salome in particular incessantly warned Herod of the danger threatening him from Alexander and his brother Aristobulus. The king's evil conscience, on the one hand, convinced as he was by this time of Mariamne's innocence (see Mariamne), suggested that it was not impossible that her sons meditated revenge for her unjust execution; and on the other hand, the open antipathy expressed by them against their father combined to open the king's ear to the calumnies of Salome and her fellow-plotters. Herod's attempt to humiliate Alexander by restoring to honor Antipater, an older son by another wife, resulted disastrously. Antipater's insidious plotting and the open enmity to Herod shown by Alexander widened the breach between father and son to such an extent that in the year 12 B.C. Herod felt himself constrained to bring charges against his sons before Augustus. A reconciliation was brought about, but it was of short duration; and shortly afterward (about 10 B.C.) Alexander was thrown into prison upon the evidence of a tortured witness who accused him of planning the murder of Herod. Intercepted letters were produced which only too fully revealed Alexander's bitterness against his father. In vain did Archelaus, Alexander's father-in-law, endeavor to bring about better relations between them; the reconciliation was again but a brief one, although effected with great cleverness, so that once more the intrigues of Antipater and Salome succeeded in securing the incarceration of Alexander and Aristobulus (about 8 B.C.). Herod lodged formal complaint of high treason against them with Augustus, who put the matter into Herod's own hands, with the advice to appoint a court of inquiry to consist of Roman officials and his own friends. Such a court of hirelings and favorites was naturally unanimous for conviction. The attempts of Alexander's friends, by means of petition to King Herod, to avert the execution of the sentence, resulted in the death of Tero—an old and devoted servant of Herod who openly remonstrated with the king for the enormity of the proposed judicial crime—and of 300 others who were denounced as partizans of Alexander. The sentence was carried out without delay; about the year 7 B.C., at Sebaste (Samaria)—where thirty years before Mariamne's wedding had been celebrated—her sons suffered death by the cord.

ALEXANDER II., POPE (1061-73): Family name Anselmo Baggio; born at Milan; died April 20, 1073. He became pope in 1061, succeeding Nicholas II., and ruled until 1073. He was elected upon the proposal of Hildebrand, who later became his successor, and throughout his pontificate was guided by Hildebrand's policy and spirit. His election was contested by the imperial house, which caused an antipope, Honorius II., to be chosen. The latter, however, was later deposed by a council at Mantua. In spite of his multifarious duties, Alexander devoted considerable thought to the Jews. In all emergencies he was ready to extend to them his protection. On one occasion he commended the action of the Viscount Berengar of Narbonne, who vigorously thwarted an incipient anti-Jewish outbreak in 1063, and simultaneously he addressed an epistle to Bishop Wilfred of Narbonne bidding him to offer protection to the Jews in the future, if occasion should demand. Two years later he reprimanded Prince Landulph of Benevento for having forced certain Jews into baptism, referring both to the un-Christlike nature of forced conversions and to the edict prohibiting them which had been issued by Gregory the Great.

ALEXANDER III., POPE. See Popes, Attitude of.

ALEXANDER IV., POPE (1254–61): Was Count Rinaldo di Segni prior to his elevation to the pontifical throne in 1254, at a time of great turbulence; he ruled until his death, at Viterbo, Italy, May 25, 1261. He attempted to unite the Greek and Latin churches, and to annex the kingdom of Sicily to the papal domain; he established the Inquisition in France in 1255, and encouraged the orders of mendicant friars. Owing to the factional struggles in Rome and the undisputed sway of the senator Brancaleone, the pope's position was exceedingly weak, but none the less his influence did not remain unfelt in Jewish history. An edict which Alexander issued throws light on the contemporary position of the Jews in Rome. It is in this document that, for the first time in about 750 years, the names of Roman Jews (Angelus, Sabbatorius, Museus, Salamon, Consiliolus) appear in a papal manifesto. A number of prominent Jewish merchants seem to have stood in commercial relations to the papal court, as, indeed, the Jewish tradesmen almost always appear to have done. On February 1, 1255, the pope relieved these merchants of all road-taxes throughout the papal possessions. A similar franchise was granted on March 5 to the Roman citizens and merchants in general, and on April 6 to several Roman citizens mentioned by name. While it is true that this document bears witness to the distinction which existed between the Jews and the other Roman citizens and merchants, the former, no doubt, having been excluded from the common commercial gilds, it proves, also, that the Jewish merchants conducted their business in common with their Christian fellows, and that, as a rule, they were granted the same rights by the papal government. Nor was the granting of such privileges necessarily inspired by a real friendliness toward the Jews; it was due rather to the commercial indispensability of the latter. That Alexander IV. was swayed in his concessions by no motive of love for the Jews is evidenced by history. On Sept. 3, 1257, he reissued the edict concerning the Jewish badge, which, though it eventually fell into abeyance, seems at the outset to have been enforced throughout Italy and to have been the cause of a great deal of depression among the people, as is depicted in a liturgic elegy of a contemporary, Benjamin b. Abraham Anav. Alexander, likewise, in a bull addressed to the duke of Burgundy and the count of Anjou and Provence, ordered the confiscation of the Talmud, as containing "errors against the Catholic faith, and horrible and intolerable blasphemies."

ALEXANDER VI., POPE. See Popes, Attitude of.

ALEXANDER VII., POPE. See Popes, Attitude of.

ALEXANDER VIII., POPE. See Popes, Attitude of.

ALEXANDER I., PAVLOVICH, Emperor of Russia: Born at St. Petersburg, Dec. 23, 1777; died at Taganrog, Dec. 1, 1825. During his reign (1801–25) more measures for internal reform were inaugurated than under any of his predecessors, from the days of Peter the Great (died 1725). He prepared the way for the emancipation of the serfs, and promoted education, agriculture, commerce and manufactures, literature and the fine arts.

Attitude toward the Jews.

Catherine II. (died 1796) had already exhibited a certain degree of liberality toward the Jews; and when Alexander succeeded to the throne, on the assassination of his father, Paul, in 1801, the liberal—or, rather, radical—disposition of the young ruler and of his advisers soon permeated all departments of the government and extended even to the public at large. Such a liberal spirit could not fail to prove beneficial to the Jews (Orshanski, "Iz Noveishei Istorii Yevreyev v Rossii," in "Yevreiskaya Biblioteka," 1872, ii. 218). At that time Michael Berr, the first French privy councilor of Jewish origin, issued an appeal to all sovereigns and nations, in the name of the "European inhabitants of the Jewish faith," urging that full justice be shown to the Jews, which appeal probably induced Alexander to attempt to ameliorate the condition of his Jewish subjects. For this purpose a special commission was summoned, by a ukase issued Oct. 9, 1802, to draft a set of regulations, which resulted in the "Enactment concerning the Jews" of Dec. 9, 1804. Under this enactment the Russian Jews obtained the right to buy and rent land in all the western and southern provinces (this led to the foundation of the first Jewish Agricultural Colonies in Russia); to enter all the elementary and high schools and universities; to establish factories in all the provinces in which they were permitted to dwell; and to visit all other provinces of Russia on business, upon the condition that they and their families adopted the German style of dress, in order that they might not differ from the natives in outward appearance. They were promised all the rights of citizens as soon as they should have shown diligence and skill in agriculture and handicrafts. Alexander even offered the Jews land in the neighborhood of St. Petersburg and Moscow, provided they were willing to confine themselves to agricultural pursuits.

Eleemosynary Donations.

In 1805 Alexander showed his friendly disposition toward the Jews by contributing 3,000 rubles (about $1,500, or £300) toward the erection of a Jewish hospital in Wilna; and in 1806 he ordered 2,500 rubles (about $1,250, or £250) to be annually contributed from the public treasury to the same hospital. In 1809 the scheme of a forcible concentration of the Jews from rural districts into cities was referred to a special commission under the chairmanship of Popov. In the following year permission was granted them to live in Kiev; and at the same time the government established in Kremenchug a factory for carpet-making in order to promote that industry among them.

In 1815 a census of the Jews was taken, and surnames were given to all Jewish families. Alexander issued a ukase (1818) directing the election of three deputies from among the Jews, who should reside in St. Petersburg, and be empowered to bring all Jewish affairs before the government. At the general meeting called for the election of deputies, at Wilna, the following persons were elected: Sundel Sonnenberg, of Grodno: Beinash Baratz, of Vitebsk, and Michael Eisenstadt, of Mohilev on the Dnieper. As vice-deputies, Samuel Katzenellenbogen, of Wilna; Mordecai Lipler, of Vitebsk, and Eleazar Dillion, of Minsk, were elected. To cover the expenses of the deputies in St. Petersburg, estimated at 3,660 ducats (about $8,235, or £1,647) per annum, it was resolved to take the silver ornaments from the *kittels* (shrouds) worn on the Day of Atonement and Passover Eve (S. J. Fünn, "Kiryah Neemanah," 1860, p. 34, and note, p. 47).

That Alexander was at this time much in earnest in his endeavors to ameliorate the position of the Jews is shown by his remark: "If, through my efforts to improve their condition, I should succeed in bringing forth only one Mendelssohn from among the Russian Jews, I shall be abundantly rewarded."

At that time the Russian government did not know much about the habits and the needs of the Jews, who were subjected to the influence of the conditions prevalent under the old Polish rule (Bäck and Brann, "Istoriya Yevreyev," Russian translation with supplement and addition by S. M. Dubnov, ii. 444, Odessa, 1897. While Jewish agriculturists received some privileges, Jews were prohibited from innkeeping and from renting country property, for which reason they were even forbidden to dwell in villages. The Pale, or territory assigned to the Jews, was limited, as before, to the provinces taken over from Poland, where the Jewish population was much crowded in cities; the *kahal*, or board of administration of the community, retained its old power, although it was placed under the control of the local authorities. The "Regulations" of 1804 present a system of reform, which, however, was afterward counteracted by reactionary tendencies.

Congress of Aix-la-Chapelle.

At the Congress of Aix-la-Chapelle (1818) Alexander brought forward the question of the condition of the Jews; being perhaps influenced in this by the enthusiastic and prophetic appeal of the English philanthropist Lewis Way, who had traveled in Poland to study the condition of the Jews there, and who was convinced that the Jewish nation would once more be restored to the land of its fathers.

After the Congress Alexander altogether abandoned his former liberal ideas and adopted a reactionary policy. Owing to this, the following restrictive measures characterized the closing years of the czar's reign: The rescript of May 4, 1820, forbidding Jews to keep Christian servants; that of Aug. 10, 1824, prohibiting foreign Jews from settling permanently in Russia; and the edict of Jan. 13, 1825, removing the Jews from villages to towns and cities in the governments of Mohilev and Vitebsk.

H. R.

ALEXANDER II., NIKOLAIEVICH, Emperor of Russia: Born at St. Petersburg, April 29, 1818; assassinated there March 13, 1881. He succeeded his father, Nicholas I., March 2, 1855, before the end of the Crimean war, and when peace was concluded reforms of all kinds were initiated by him,

His Reforms.

the most important being the emancipation of the serfs in 1861. He also abolished capital punishment and the hereditary rights of the clergy, reorganized the administration of justice, gave an impetus to autonomy in various districts, cities, and provinces of the empire, abridged the term of military service, introduced some humane reforms into the army discipline, and enjoined universal conscription. Under his reign the press and public opinion developed to an extent previously unknown in Russia, by reason of the limitations placed upon the censorship; and every form of industry and commerce, art, science, and literature received a new impulse.

Nicholas I. had tried in his own harsh, autocratic way to Russianize the Jews. Among other austere measures he introduced the cantonists' school for the military education of Jewish minors, who were forcibly torn from their parents. They had to pass through a rough discipline and were often compelled to join the Greek Orthodox Church. Aware of the mistakes his father had made in his despotic policy toward the Jews, Alexander endeavored to correct them, and early manifested a friendly disposition toward his Jewish subjects. He abolished the cantonists' school, admitted Jews to the high schools and universities, and by the laws of March 16,

Favorable Treatment of Jews.

1859, and of Nov. 27, 1861, he granted to Jewish scholars, university graduates, wholesale merchants, manufacturers, and (1865) artisans the privilege of settling, under certain conditions, outside of the Pale, in the interior provinces of Russia (Demidov San-Donato, "The Jewish Question in Russia," p. 36, St. Petersburg, 1883). It should not be overlooked, however, that the emancipation of the Jews had at that time been completed in most of the countries of western Europe; and that these privileges were granted only to certain classes of Jews in Russia for political and economic reasons, the object of the government being to promote the commercial and industrial interests of the interior provinces. For the masses of the Jewish population these reform laws accomplished little, since the 2,500,000 Jews within the Pale, not belonging to the privileged class, were still debarred from the right of settlement and could not emigrate from the overcrowded provinces of Poland and Lithuania.

These half-hearted measures, together with the numerous ambiguities in the new laws, left to corrupt officials plenty of room for abuse, and as a consequence Jewish artisans were always exposed to annoyances from them, and even liable to expulsion from their newly founded homes. Nevertheless, the Russian Jews fully appreciated the good intentions of the czar and have always regarded him as their liberator. It is remarkable how quickly they availed themselves of the opportunity to become Russianized, especially in St. Petersburg and Moscow,

Effect of Milder Legislation.

in the centers of Jewish learning as Wilna, Kiev, and Odessa, and throughout southern Russia. For the first time there were published Jewish periodicals in the Russian language: "Razsvyet" and "Sion," and later "Den," "Yevreiskaya Biblioteka," and "Voskhod"; and Russians were greatly surprised at the superior style of Osip Rabinovich, Pinsker, Soloveichick, Levanda, and many others who in the vernacular endeavored to acquaint the intelligent Russian public with the condition of the Jews, and to defend their rights. From among the orthodox Jews also there sprang up a number of liberal-minded men, young and old, who tried to enlighten the orthodox masses and to awaken in them patriotic sentiments and a love for liberal education and European culture by means of Hebrew periodicals, "Ha-Meliz," "Ha-Karmel," and "Ha-Ẓefirah," the first journals published in the Hebrew language in Russia. It was certainly not the fault of the Jewish masses that some of the quickly Russianized Jewish students and other youths took an active part in the revolutionary movement of the seventies. Alexander knew and always appreciated the loyalty of the great majority of his Jewish subjects, and on many occasions rewarded them for their services to the country. When the assassination of Alexander by nihilist conspirators became known, the Jews of Russia deeply mourned the loss of the benevolent czar and liberator.

H. R.

ALEXANDER III., ALEXANDROVICH,

Emperor of Russia: Born at St. Petersburg, March 10, 1845; died at Livadia, Nov. 1, 1894. He ascended the throne March 14, 1881, the day after the assassination of his father, Alexander II. The terrible fate of the latter produced an awful impression upon Alexander, but instead of continuing the reforms of the "Czar-Emancipator," as was expected, he at once gave proof of his reactionary tendencies by discharging the liberal minister Loris Melikov, and by his first manifesto, wherein he made it evident that he was determined to maintain his autocratic power against all attacks. In internal politics he followed the advice of his former teacher Pobiedonostzev, and ruled with rigorous absolutism, favoring the principles of the Panslavists. He permitted, and even encouraged, the oppression of the various foreign residents in Russia, and was particularly harsh in his persecution of the Jews. The participation of some Jewish youths in the revolutionary movement of the Nihilists was made use of to lead the Russian people to believe that the Jews were connected with the conspiracy which had resulted in the murder of Alexander II. Hostility against the Jews was fostered in order to divert the attention of the discontented elements, and if possible to suppress the revolutionary movement.

His Reactionary Tendencies.

Soon after Alexander III. had ascended the throne, anti-Jewish riots (Pogromy) broke out in Elizabethgrad (April 27, 28), Kiev (May 8–11), Shpola (May 9), Ananiev (May 9), Wasilkov (May 10), Konotop (May 10), and, during the following six months, in one hundred and sixty other places of southern Russia. In these riots thousands of Jewish homes were destroyed, many families reduced to extremes of poverty; women outraged, and large numbers of men, women, and children killed or injured. It was clear that the riots were premeditated ("Voskhod," May 24, 1881, p. 75). To give but one example—a week before the *pogrom* of Kiev broke out, Von Hubbenet, chief of police of Kiev, warned some of his Jewish friends of the coming riots. Appeals to the authorities for protection were of no avail. All the police did was to prevent the Jews from defending their homes, families, and property. "The local authorities," says Mysh in "Voskhod," 1883, i. 210, "surrounded the pillagers with an honorary escort, while some of the rabble shouted approval." To a delegation of the Jews of Kiev, Governor-General Drentelen said that he could do nothing for them; "for the sake of a few Jews he would not endanger the lives of his soldiers" ("Zeitung des Judenthums," May 31, 1881). On May 18, Baron Horace de Günzburg was received in audience by Grand Duke Vladimir, who declared that the motive of the anti-Jewish agitation was not so much resentment against the Jews as a general tendency to create disturbances ("London Times," May 19, 1881). On May 23, a deputation of the Jews of St. Petersburg waited upon the czar at Gachina. It consisted of Baron Günzburg, Sack, Pasover, Bank, and Berlin. The emperor assured its members that the Jewish question would receive his attention, that the disturbances were the work of anarchists, and he advised them to address a memorandum on the subject to the minister of the interior. Both the emperor and the grand duke Vladimir expressed their belief that race-hatred was not the real cause, but only the pretext, of the recent disorders. In accordance with the promise of the czar, an edict was issued Sept. 3, 1881, ordering the appointment of local commissions from all the governments to be under the direction of the governors, for the solution of the Jewish question. But on the same day, General Ignatiev by order of the czar issued a circular to the governors, in which he pointed out that the Jews had been exploiting the Slav inhabitants of the empire, and that this was the real cause of the riots. This contradiction may explain the conduct of Attorney-General Stryelnikov, who during the trial of the rioters before the court-martial at Kiev, instead of incriminating the guilty parties, turned upon the Jews and endeavored to cast the whole blame upon them. These persecutions, added to the distressing economic conditions then prevailing, gave rise to the emigration movement, which soon assumed extensive proportions. The intelligent classes of Russia condemned the medieval barbarities against the Jews, but the anti-Semitic propaganda of the "Novoe Vremya," "Kievlyanin," and other organs hostile to the Jews, did not cease even after the riots. The constant Jew-baiting of Aksakov, Suvorin, and Pichno had its effect on that class of the Russian people which was entirely unfamiliar with Jewish life, and therefore believed all the charges brought against the Jews by the agitators. That the South Russians especially had no cause for complaints against the Jews may be seen from the following statement made by the Russian economist Chicherin: "Those who have lived in Little Russia, which is densely inhabited by Jews, and have compared the conditions of the peasant there with those existing in the provinces of Great Russia, know how exaggerated are the accusations against the Jews. If there is a difference in the condition of these peasants, it is in favor of the Little Russians."

Popular Outbreaks Against Jews.

Further Persecutions.

The second series of persecutions began with the riots of Warsaw on Christmas, 1881, and lasted for three days. Twelve Jews were killed, many women outraged, and two million rubles' worth of property destroyed. In the neighboring Lithuanian provinces the disturbances were slight, owing to the precautions taken by Count Todleben, governor-general of Wilna, who was not one of Ignatiev's disciples. Order was also maintained by General Gurko, governor-general of Odessa, and thus the riots in Odessa and vicinity were prevented from assuming great proportions. In Nyezhin the soldiers, who were called out to quell the riots, killed and pillaged a wealthy Jewish family. Other riots occurred in Kuzmintzy, Plitovich, Klimov, Okhrimotzy, and, on March 23, in Lubny, where three soldiers killed a Jewish family of six. Balta was the scene of another series of riots (Easter, 1882) resulting in the death of eight and the wounding of more than two hundred persons. Over a thousand houses were demolished and property to the value of over one million dollars was destroyed. These disgraceful acts aroused the public indignation of

The "May Laws."

all Europe. Meetings were held by the citizens of New York and London, February 1, 1882, expressing sympathy with the persecuted Jews in the Russian empire, and protesting, "in the name of civilization, against the spirit of medieval persecution, thus revived in Russia." The only response to these friendly appeals was the issue of the "Temporary Laws" of May 15, 1882. These laws made the condition of the Russian Jews almost unbearable. They established a pale within the "Pale," positively prohibiting the Jews of the fifteen western governments from living outside of towns and cities, and canceling all mortgages and leases held by Jews on landed estates. Hundreds of thousands of Russian Jews removed to the United States of America, where they found a new home. Some went to Palestine and founded agricultural colonies. On June 12, 1882, Ignatiev retired from office. He is said to have been dismissed because convincing proof was furnished to the czar that he was using the persecution of the Jews to extort blackmail, and that he had taken advantage of his position to exempt his own estates from the disastrous effects of the May Laws, while those of the imperial family suffered (Harold Frederic, "The New Exodus," pp. 125–130). According to official statements, however, he was discharged because of a resolution of the senate that he "had not taken the necessary steps to prevent the riots" ("Voskhod," January, 1883, p. 53). He was succeeded by Count D. A. Tolstoi, who issued a circular, June 21, urging the governors to do their duty in preserving order and putting a stop to the riots. The circular had a good effect, yet some outbreaks occurred as late as the middle of August, 1882. Incendiary fires now ravaged the country and destroyed the property of over thirty thousand Jewish families in various towns and villages of the northwestern provinces. This fire-crusade was continued with more or less intensity until the end of Alexander's reign.

The May Laws were supplemented and partly enforced by the regulations of Jan. 7, 1885, and then followed a whole series of orders restricting the number of Jewish students in high schools and universities, and curtailing the rights of Jewish university graduates. Many other rigorous measures directed against the Jews betokened an entire reversal of the liberal policy inaugurated in the sixties. In 1890, Mr. Gladstone wrote to the "Jewish Chronicle" that he had "read with pain and horror the various statements respecting the sufferings of the Jews in Russia, and that the thing to do, if the facts could be established, was to rouse the conscience of Russia and Europe in regard to them." At a meeting at the Guildhall, London, December 10, 1890, it was resolved: "That a suitable memorial be presented to the Emperor of all the Russias, respectfully praying his Majesty to repeal all the exceptional and restrictive laws and disabilities which afflicted his Jewish subjects, and begging his Majesty to confer upon them equal rights with those enjoyed by the rest of his Majesty's subjects." This memorial was not even read by the czar, and was returned unopened to the lord mayor of London.

H. R.

ALEXANDER: An English family of printers and translators that flourished during the latter part of the eighteenth century and at the beginning of the nineteenth. The founder of the firm was probably **A. Alexander (ben Judah Loeb)**, whose first publication seems to have been the Haggadah (1770). He printed prayers for the fast-days (Sephardic rite), in 1776, and (for the German rite) in 1787; the Pentateuch, 1785; and daily prayers with English translation (Spanish rite), 1788, together with a special work on the Hosannas, in 1807. In 1817 he brought out a prayer-book on the Hamiltonian or interlineary system, called "Alexander's Interpreting Tefillot."

His son and successor, **Levy**, published a complete edition of the Bible in Hebrew and English in 1824. The translations were very slovenly pieces of work, displaying ignorance alike of English and Hebrew. Levy seems to have been of a somewhat quarrelsome disposition. A pamphlet of his, "The Axe Laid to the Root" (1808), dealt in somewhat indecorous terms with the conduct of Chief Rabbi Herschell; while his "Memoirs of the Life and Commercial Connections of the Late B. Goldsmid of Roehampton," of the same year, is little less than the *chronique scandaleuse* of the London community of the time.

Levy continued his abuse of the chief rabbi on the fly-leaves of the separate fascicles of his translation of the Bible, which are now very rare.

ALEXANDER: An amora. See Alexandri (Alexandra).

ALEXANDER OF APHRODISIAS: Greek commentator on Aristotle; flourished at the end of the second century and at the beginning of the third, in the reign of the emperors Septimus Severus and Caracalla. He was surnamed "the Exegete" and "Aphrodisiensis"; the latter designation being derived from his birthplace, Aphrodisias in Caria. His authority was equally high among the Arabians and the Greeks; and Maimonides, in a letter to Ibn Tibbon, the Hebrew translator of his "Guide to the Perplexed," especially recommends to him the study of the commentaries of Alexander ("Letters and Responsa of Maimonides," ed. Leipsic, p. 27).

His Idea of Intellect.

Besides the commentaries, which for the most part have been translated into Arabic, Syriac, and Hebrew—the latter version has been of service in the reconstruction of the Greek text—Alexander paraphrased Aristotle's book on "The Soul." In this work, Alexander evolves a new theory of intellect, which theory was the subject of much controversy between the Mohammedan and Jewish philosophers. According to Alexander, intellect (*νοῦς*) in its primitive state is nothing but an aptitude associated with the other faculties of the soul, the formative principle of the organism. This primitive intellect, which has only a potential existence, is called *νοῦς ὑλικὸς* (the material intellect), because, like matter, it is capable by development of transformation and of assuming a distinctive form. In fact, this faculty passes from a potentiality into an actuality, and commences to have an effective existence when, by study and reflection, it acquires ideas, with which it identifies itself; for the act of thinking can not be separated from the object of the thought. This new intellect, which is, accordingly, the primitive intellect recast by experience, is called the acquired intellect (שכל הנקנה). But what is the motive force that causes the material intellect to pass from a potentiality into an actuality? It is the universal spirit, which, indeed, is God Himself. But as the relation between the soul and God is only temporary, this intervention, this illumination by the Divinity, ceases at death; and the acquired intellect relapses into nothingness.

This system of psychology naturally aroused the strongest opposition on the part of the Arabian and Jewish philosophers, who, moved by sentiments of religion, sought to deaden the blows struck at the fundamental dogma of Islamism and Judaism: the immortality of the soul. Averroes (Ibn Roshd), in his treatise on the intellect, enunciates the opinion that the human intellect, so long as it is in the body, is virtually nothing but a potentiality, a mere capability, but that it becomes an intelligent agent, an actual substance, as soon as it relinquishes the body.

Influence on Jewish Philosophers.

Maimonides, in declaring the unity of souls, was certainly influenced by Alexander. Maimonides says on this subject: "But you know that these separate things—I mean those that are neither bodies nor faculties in a body, but pure intelligences—admit of no multiplicity, except in the sense that some among them are the cause of the existence of others, so that they are distinguished only by the fact that some are causes and others effects. But whatever survives the individual named 'Zeid' is neither the cause nor the effect of that which survives the individual named 'Amr'; this is why the aggregate is a unity" ("Moreh," i. 434, Munk's translation). The theory of Alexander, therefore, is that the finite intellect is nothing but a capacity moved by the Universal Soul, that is, God; and that it (the finite intellect) does not admit, accordingly, of any numerical or specific differentiation. The adversaries of Maimonides were justified, therefore, in accusing him of denying the immortality of the soul; for without an individual soul there can be no immortality.

Levi ben Gerson and Alexander.

Levi ben Gerson devotes a large part of his work, "Milhamot ha-Shem" (The Wars of the Lord), to this important question of the human intellect, and after having passed in review all the opinions on this subject, ranges himself on the side of Alexander. But, in order to avoid the danger of seeming to deny immortality, he developed the conception further. The rational soul, he says, which is born with man, is but a mere disposition (הכנה) that has for its substratum the imaginative soul, allied to the sentient or animal soul. The different souls, or the different faculties of which the human soul is composed, are only a chain of "entelechies," or corporeal perfections, the one superior to the other, which have alternately played the rôle of matter and of form.

Moses of Narbonne, a contemporary of Levi ben Gerson, published a special work on Alexander's book, entitled "Alexander's Treatise on the Intellect, According to the Interpretation of Ibn Roshd." Not having the brilliant dialectic and philosophic qualities of Levi ben Gerson, he wavers between the theory of Alexander and that of Ibn Roshd, without being able to give a satisfactory solution of the problem of immortality.

In fine, Alexander was the pivot on which turned all the discussions of the scholastic circles of the Middle Ages.

ALEXANDER BALAS, King of Syria: Date of birth unknown; died 145 B.C. A youth of lowly origin, he was set up as a pretender to the throne of Syria as being the son of Antiochus Epiphanes, in 153 B.C., in opposition to the Seleucid Demetrius Soter. The imposition was aided by his remarkable likeness to the Syrian king Antiochus V., Eupator, son of Antiochus IV., Epiphanes, which resemblance induced many to believe him a son of the last-named. His first official act, on being crowned in Ptolemais as king, was to send an embassy to the ruler of the Jews, Jonathan the Hasmonean, which ran as follows: "King Alexander to his brother Jonathan, greeting! We have heard of thee, that thou art a mighty man of valor, and meet to be our friend. And now we have appointed thee this day to be high priest of thy nation and to be called 'the King's Friend'—[and he sent unto him a purple robe and a crown of gold]—and to take our part and to keep friendship with us" (I Macc. x. 18–21). Jonathan did not hesitate to declare at once for Alexander Balas, and rejected all overtures made to him by Demetrius, which overtures in truth conveyed no such prospects of reward as those of Alexander. In addition, the political probabilities of the time were altogether in Alexander's favor.

Alexander's embassy was especially significant to the Jews, inasmuch as in accordance with it, on the Feast of Tabernacles, 152 B.C., Jonathan assumed the holy garb of the high-priesthood, and therewith became the spiritual head of the Jewish people. Indirectly, Alexander thus became the actual cause of the final displacement of the pro-Hellenic party in Judea. Jonathan on his side showed himself an able and faithful ally, being the only one who stood firmly by Alexander, when, a little later, he was hard pressed by the partizans of Demetrius II., son of Demetrius Soter. When one of them, Apollonius, governor of Cœle-syria, openly took up arms against Alexander, it was Jonathan who, in 147 B.C., successfully brought him to terms. He drove out a garrison which Apollonius had thrown into Joppa, and defeated the army led against him at Ashdod. In recognition of these services Alexander presented him with the town of Ekron and its adjoining district. In addition to this he loaded Jonathan with many personal marks of his esteem. On the occasion of his marriage with the daughter of Ptolemy Philometor of Egypt, 150 B.C., he invited Jonathan to the festivities, and placed him, arrayed in the royal purple, at his side, conferring upon him at the same time the titles of *strategos* and *meridarchos* (general and provincial-governor). When delegates from the Greek party came from Judea and laid complaint against Jonathan, he dismissed them unheard. Alexander Balas thus contributed to the advancement of the Jews, both in their internal and external affairs; and this attitude of his accounts satisfactorily for the love and devotion shown by them toward him; as the chronicler says, "he was the first that spake words of peace unto them" (I Macc. x. 47).

The name Balas seems to have been his own, and not a surname as Josephus ("Ant." xiii. 4, § 8) states. It may possibly be a Grecized form of some Aramaic name compounded with Baal (compare Septuagint, Jer. xl. 14, *Βααλις*).

L. G.

ALEXANDER, BERNHARD: Hungarian writer and professor of philosophy and esthetics; born at Budapest April 13, 1850. He was educated in his native town, and later attended German universities, pursuing chiefly the study of philosophy, esthetics, and pedagogy. Upon his return to Hungary he was appointed to a professorship in a *real-schule* of Budapest, and in 1878 was admitted as a docent into the faculty of philosophy at the University of Budapest, where he became professor in 1895. Since 1892 he has been lecturing on dramaturgy and esthetics at the National Theater Academy, and on the latter science and the history of civilization at the Francis Joseph Polytechnicum. He is a corresponding member of the Hungarian Academy of Science and a member of the Kisfaludy Society. His chief works are: "A Filosafia Történetének Eszméje Tekintettel a Történetre Általában" (Budapest, 1878); "Kant Élete, Fejlödése és Filosofiája" (crowned by the Academy of Science, 1889); "A XIX. Ázszad Pessimismusa, Schopenhauer és Hartmann" (Budapest, 1884, prize essay). Alexander, together with Prof. Józef Bánóczi, is now editing the "Filosofiai Irók Tára" series. Among the ten volumes already published there are his popular translations, to which he has added annotations, of Descartes, Hume, and the "Prolegomena" to Kant. Conjointly with Bánóczi he translated Kant's "Kritik der Reinen Vernunft." He has also been a very active writer on pedagogical subjects. From 1882 to 1886 Alexander edited the pedagogical journal "Magyar Tanügy," and in 1891 the review "Országos Közepiskolai Tanárok Közlönye."

ALEXANDER, THE FALSE: A pretender to the throne of Judea. About 4 B.C., a Jewish youth living in Sidon and reared by a Roman freedman claimed the throne. He asserted that he was Alexander, the son of Herod and Mariamne, pretending that the assassins who had been instructed by Herod to slay both his sons, Alexander and Aristobulus, had taken pity on them, allowed them to escape, and substituted two corpses in their place. The striking resemblance borne by the pretender to the real Alexander deceived even those who had known the latter closely. It seems, however, that the youth was in reality the tool of a man intimately acquainted with the Herodian court, who hoped by placing his creature upon the throne, though for only a short interval, to secure enough plunder and then to disappear. The deceivers appeared first in circles in which Alexander had not been personally very well known. Thus he was welcomed in Crete and in Melos by the Jews, who willingly furnished him with ample funds and a royal equipment to undertake the journey to Rome, necessary to substantiate his claims with the emperor. The Jews in Rome likewise received him with open arms, and offered public thanks to God for the wonderful preservation of a scion of the beloved Hasmonean house. Augustus himself, however, was not so credulous. He knew Herod too well to believe that he would have allowed one he had condemned to death to escape; he was also closely acquainted with Alexander's features. On seeing the young man's robust form and toil-marked hands he was convinced of the fraud, and sought to move the pretender to confession by solemnly pledging him his life. The youth acknowledged the deception and told how his accomplice had led him to it. The emperor kept the promise to spare his life, but sent him to the galleys. The instigator of the plot was executed (see Josephus, "Ant." xvii. 12, and "B. J." ii. 7, §§ 1–3).

L. G.

ALEXANDER DE FRANCISCIS, HEBRÆUS: Author and bishop at Forli; lived in Rome in the sixteenth century. His Jewish name was Elisha de Roma. After his baptism he entered the order of the Dominican friars, in which he distinguished himself as an orator. Pope Clement VIII. appointed him proctor, then vicar-general, and, finally, bishop of Forli, which office he held from 1594 to 1597. The latter part of his life he spent as a civilian in Rome. He wrote: (1) Hebrew notes on Genesis and Exodus, with special reference to the text of the Vulgate; (2) a book entitled "De Tempore et de Sanctis."

ALEXANDER THE GREAT. See page 341.

ALEXANDER OF HALES (Alexander Alensis): An English theologian and a member of the Franciscan order; born in the county of Gloucester; died in Paris, 1245. He was educated at the latter place, where he afterward became a teacher. Alexander may be considered as the originator of the reformation of Christian scholasticism of the thirteenth century. In his "Summa Universæ Theologiæ" he for the first time made extensive use in the systematic treatment of Christian theology of Aristotle's "Logic" and such other works of this philosopher as were accessible in Latin translations. The dialectic method, which was afterward employed in the works of Christian scholastics, was probably developed and improved by him, whence he acquired among his contemporaries the title of "Doctor irrefragabilis et theologorum monarchus." Although steadfast in his theological convictions, he was not in the least intolerant toward other denominations; indeed, toward the Jews he exhibited exceptional clemency and impartiality. As to the question whether Jews and pagans with their religious practises should be tolerated among Christians, he deprecates the classing of Jews with pagans or Saracens who "usurp the Holy Land," and maintains that the Jews should be treated with forbearance for the reason that through them the Christians received the Law; Jesus of Nazareth was descended from their race, and their preservation is enjoined by Holy Writ.

In answer to an argument against the toleration of the Jews—namely, that the Talmud in many places slanders Jesus and his mother—he maintained that the Jews committed no wrong in writing such statements, as it was their religious belief that the Messiah had not yet come. He justified the punishment of Jews when they were guilty of public defamation or blasphemy, claiming, however, that even then it should not be more severe than the punishment of Christians committing like offenses; but all books containing revilings he held should be burnt ("Summa Universæ Theologiæ," book ii. p. 179, § 1). This verdict reflects the state of mind prevailing at that time in Paris, occasioned by the discussions and proceedings then pending relative to the burning of the Talmud. Relying upon a decision of the Council of Toledo (589), and moved by other motives as well, Alexander was opposed to constraining the Jews by punishment and menaces to embrace the Christian faith (*ibid.* book ii. p. 179, § 4). Unlike other theologians of his time who eagerly sanctioned the confiscation or plundering of the property of the Jews, he contended that though the estates of Saracens or heretics might properly be seized by the government, the property of Jews ought not to be confiscated at all, since if the Jews were permitted to live, they should not be deprived of the means of living (*ibid.* book iii. 36, § 3).

In the "Summa Universæ Theologiæ"—the first fundamental work inaugurating the golden era of Christian scholasticism—are found traces of the two Jewish philosophers who exerted great influence upon the scholasticism of the thirteenth century—namely, Solomon ibn Gabirol (Avicebron) and Moses ben Maimon. Alexander affirms that not only corporeal but also spiritual substances—particularly the human soul—are composed of matter and form (*ibid.* book ii. ch. 12, § 1), a doctrine the logical consequences of which gave its original stamp to the system of Avencebrol (the name under which Gabirol is quoted by the scholastics), and which became from the time of John Duns Scotus (1274?-1308) the distinctive doctrine of the Franciscans as contrasted with that of the Dominicans. More numerous still are the instances of agreement with the "Moreh Nebukim" of Maimonides. The demonstration of Alexander that per se there is a knowledge of God, and that in addition to this independent knowledge there is a cognition of God from His acts, is undoubtedly taken from Maimonides. Referring to Ex. xxxiii. 23, he explains that to apprehend God from His acts is to see Him "from behind"; whereas to recognize God's essence as it is, is to know Him "face to face" (*ibid.* book i. ch. 2, § 1, art. 4; compare "Moreh," i. 21, 38, 54).

Alexander seems to have followed Maimonides both in his exposition of the proofs adduced by philosophers (*i.e.*, the Peripatetic school) regarding the eternity of the world, and in the refutation of the same ("Summa Universæ Theologiæ," book i. p. 12, § 8; compare "Moreh Nebukim," ii. 14, 17, 18). The proposition that from the beginning of Creation the force necessary to produce not only natural but also supernatural things was inherent in the universe, and that consequently the law in nature was not broken by miracles, recalls other well-known passages of the "Moreh" (ii. 42, 5, § 5; compare "Moreh," ii. 29).

Maimonides' explanation of the Mosaic legislation—which constitutes the chief contents of the third part of the "Moreh"—seems to have produced as great an impression upon Alexander as it did upon the later scholastics. Beneath the ceremonial laws, he says, must lie a deeper spiritual meaning, since the passage (Deut. iv. 6), "This is your wisdom and your understanding in the eyes of the nations," can not be construed to mean that on account of the mere strict observance of the law this people should be considered wise and intelligent (iii. 54, § 2; compare "Moreh," iii. 31).

His reference likewise to the opinion of the Jewish teachers of the law, that all commandments, the reason for which is not known to us, were given to the Jews for the purpose of keeping them from idolatry, plainly indicates the influence of Maimonides (iii. 28, § 2, art. 1; compare "Moreh," iii. 29, 52), and the same is the case with his assertion that the sacrifices were designed after the spread of idolatry, to serve as protection against this aberration (iii. 58; compare "Moreh," iii. 46).

Instability of His Character.

ALEXANDER JAGELLON: Grand duke of Lithuania and king of Poland; born 1460; died at Wilna, 1506. He was the son of King Casimir IV. He ascended the throne of Lithuania in 1492, and that of Poland upon the death of his brother, John Albert, in 1501. More prodigal even than the other Jagellons—noted for their extravagance—and weak in character, he was much swayed by his successive favorites, so that his attitude toward the Jews exhibits a wavering instability. Immediately upon ascending the throne, December 1, 1492, he not only confirmed the privileges granted to the Jews by his predecessors, but even added new ones, giving to the Jews of Troki the full rights of burghers; and the collection of taxes was farmed out to them as heretofore. He also repaid to the Jews the large indebtedness incurred by his father; and there was nothing that seemed to indicate the coming storm—the first persecution of the Jews in Lithuania. In 1495 Alexander, as grand duke of Lithuania, issued without warning an edict in the following terms: "The Jews must leave the country."

The Lithuanian Jews at that time apparently were far more refined than their Polish coreligionists. They spoke and wrote the Russian language, did business in partnership with their Christian fellow citizens, and had social intercourse with them. At the end of the fifteenth century many among them bore Russian names, as, for instance, Zubetz, Ryabchik, Olsheika, Glukhoi, Mamotlivy, Kravchik (see article Names). They occupied themselves not only in commercial enterprises, but were also engaged in agriculture and the handicrafts. The majority of the Lithuanian Jews were not wealthy, but those leaseholders and tax-collectors among them who had become rich purchased estates from the nobility and developed into gentlemen farmers. Some of these Jews or their heirs finally embraced Christianity.

Neubauer ("Aus der Petersburger Bibliothek," p. 121) gives an account of two *kinot* (elegies) contained in Caleb Afendopolo's work "Mar 'Ober" (extant in manuscript in the St. Petersburg Public Library), dealing with the expulsion of "God's people" from Spain, Russia, and Lithuania, and giving the date of their expulsion from Lithuania as 1493, instead of the actual year, 1495. Etza Nisanowicz, the court physician of Prince Radziwill (who lived between 1595 and 1666), gives in the notes to his medical work the correct date, 1495, but names King Albert instead of Alexander as the one who brought the Jews back from Ratno, Poland, to Lithuania in 1503.

Works on Expulsion.

Among the Jewish writers who treat of the subject of the expulsion of the Jews from Lithuania, Prof. A. Harkavy refers to the following (Bershadski's article in "Voskhod," pp. 5 *et seq.*, January, 1892): In the work "Shushan-Sodot," written by Moses ben Jacob of Russia in April, 1495, and published in Venice, 1650 (2d ed., Koritz, 1784), it is said: "Our time is the time of calamities for the lost sheep [of the house of Israel]." Abravanel, in 1497, speaks of the hard times in store for the Jews of Germany, Lombardy, and Russia. Solomon ibn Verga, enumerating in "Shebeṭ Yehudah" the epochs calamitous to the Jews, puts the ninth epoch of their misfortunes in the year 1490, when the Jews were driven from Savoy, Piedmont, Sicily, and Russia. In the preface to the prayer-book of the Crimean Jews, living in Kaffa and Karassu-Bazar, published in 1735, it is said that this prayer-book was arranged by Moses ha-Goleh (the Exile), who came with a great number of banished Jews from Russia to Constantinople.

Banished Jews Return.

According to Bershadski, the Jews were banished from the cities and districts of Brest, Troki, Wilna, Lutzk, Vladimir, and Kiev. They were admitted into Poland by Alexander's brother King John Albert, and remained in Ratno and vicinity until 1503, when they again returned to Lithuania by the order of Alexander.

As King of Poland.

In 1501 Alexander, after the death of his brother John Albert, was elected king of Poland. In his new dominions dwelt the Jews who had previously been expelled by him from Lithuania. As it was difficult for him to banish them from Poland owing to their wealth, their great numbers, and the protection of the influential Polish nobility, he found it politic to "permit" them to return to Lithuania. The colonists from Germany and Sweden, who were to have taken the place of the banished Jews, had failed to come; the new tax-collectors did not meet his expectations; and the war with Moscow required great sums of money. Accordingly the Jews were "permitted" to return to Lithuania in March and April, 1503, on the following conditions: They were to settle in the same places where they had lived before; and all their houses, stores, gardens, fields, meadows, etc., were to be sold back to them at the prices paid by the present owners. In their turn the Jews had the right to collect all outstanding debts not paid to them at the time of their banishment; they were obliged to furnish 1,000 horsemen for the army, and to pay a considerable annual amount to the authorities. Probably not long before the end of Alexander's reign the Jews contrived to have the obligation touching the 1,000 horsemen abolished, and had to pay taxes and additional imposts like all other burghers instead.

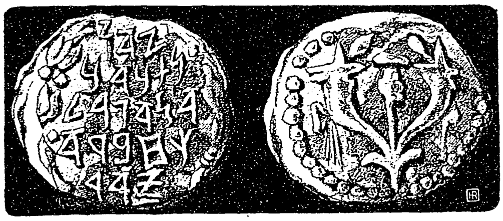
H. R.

ALEXANDER JANNÆUS (Jonathan): King of Judea; born about 126 B.C.; died 76 B.C. He was the third son of John Hyrcanus, by his second wife, and ascended the throne in the year 102 B.C. He was always badly treated by his father in order thereby to enhance the prestige of the heir apparent, Aristobulus I., and of his brother Antigonus—both children of Hyrcanus' former marriage. Aristobulus, when he became king, deemed it necessary for his own security to imprison his half-brother; and it was his queen, Salome, who first set him at liberty. Aristobulus died after a reign of one year, and Alexander, as the oldest living brother, had the right not only to the throne but also to Salome, the widow of his deceased brother, who had died childless; and, although she was thirteen years older than he, he married her. As, according to Pharisaic conceptions the dignity of high priest was not a hereditary one, the son of a deceased high priest could not claim the succession by right (Sifra, Aḥare Mot, viii.). [It has been suggested that the Alexandra whom Alexander married was not the widow of Aristobulus: Deutsch, in Rahmer's "Literaturblatt, 1900."] Alexander, accordingly, did not conflict with Pharisaic views when he married a widow and later took possession of the high priest's office. Besides the Talmud itself (Yeb. 20*b*) considers the prohibition against a high priest's contracting a levirate marriage as a later prescription of the rabbis, as a "preventive" (גזירה) which possibly in Alexander's time had not even been theoretically considered. It is certain that the Sadducees, adhering to the literal conception of the Law (Lev. xxi. 13), considered the levirate marriage as inapplicable to the case of a high priest; so that the first public act of this new king—the marriage of his brother's widow—was one of anti-Sadducaic tendency. But in the beginning of his reign Alexander had no time to occupy himself with matters of internal political importance; and the statement that on his accession he put to death a brother whom he feared as a possible rival is therefore highly improbable. Such a step would certainly have alienated a considerable proportion of the people. Moreover, the plans of conquest that he cherished demanded large supplies of soldiers, which could certainly not be obtained, especially among Pharisaic Jews, by blood-stained hands.



Copper Coin of Alexander Jannæus.
(After Madden, "History of Jewish Coinage.")

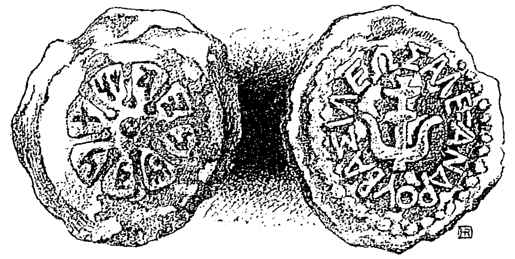
His Wars.

Alexander's chief aim was to make Judea great and powerful; to this he devoted his life. His first expedition was against the city of Ptolemais (Acre). This campaign seems to have been well timed politically; for just then the two Antiochi of Syria, the eighth and ninth of that name, were actively engaged against each other, so that neither could lend any assistance to the beleaguered city. Help, however, came to the citizens of Ptolemais from Ptolemy Lathurus, who had been cast out by his mother, Cleopatra, queen of Egypt, and had founded for himself a kingdom in Cyprus. He landed a large army for the relief of the town; but Alexander met him with treachery, arranging an alliance with him openly while secretly he sought to obtain the help of his mother against him. As soon as Ptolemy learned of this intrigue, he marched against Asochis, near Sepphoris, which, together with 10,000 prisoners and much plunder, he captured upon a Sabbath. A similar attack upon Sepphoris failed; but in a later battle at Azophon on the Jordan, Alexander with his whole army suffered a woful defeat at the hands of Ptolemy with a much smaller force. To this defeat of the Jews Alexander's own temerity contributed not a little; for, relying upon his own strength, he allowed the enemy to cross the river unimpeded, in order that, as he thought, he might the more easily catch him between his army and the stream. He saw his error only when it was too late. The enemy fell upon the Jewish camp, women and children were struck down, their corpses were hacked to pieces, flung into caldrons and boiled, so that the people thought they were dealing with cannibals. Alexander might easily have lost his crown and Judea its independence as the result of this battle, had it not been for the assistance extended by Egypt in this extremity. Cleopatra's two Jewish generals, Helkias (חלקיה) and Ananias (חנניה), represented so vividly the dangers of allowing her banished son Ptolemy to remain victorious that she entrusted them with an army against him. As a result Ptolemy was forced to withdraw to Cyprus, and Alexander was saved. The Egyptians, it is true, as compensation for their aid, desired to annex Judea to their country; but considerations touching the resident Egyptian Jews, who were the main support of her throne, induced Cleopatra to modify her longings for conquest. The Egyptian army withdrawn, Alexander found his hands free; and forthwith he planned new campaigns. His operations in northeastern Palestine ended scarcely less disastrously. He captured Gadara and the strong fortress Amathus on the Jordan; but, in an ambush set for him by Theodorus, ruler of Amathus, he lost the whole of the rear-guard of his army—10,000 men—together with his baggage. He was more successful in his expedition against Philistia, capturing Raphia, Anthedon, and finally, in the year 96, the ancient city of Gaza, which he occupied through treachery, and gave up to be pillaged and burned by his soldiery.

Internal Dissensions.

Scarcely, however, had peace been restored in external affairs, when civil strife began to rage within. The newly adopted policy of the Hasmoneans, inaugurated by John Hyrcanus and zealously continued by his sons, which consisted in greater prominence being given to political interests and the repression of religious considerations, led at last to open conflict between the ruling dynasty and the Pharisees, who represented and ruled popular sentiment. The latter, the spiritual successors of the Maccabeans, sided with the Hasmonean princes when it was a matter of the defense of Palestine, inasmuch as a free country afforded the best opportunity for what lay closest to their hearts; namely, the free and untrammeled observance of Judaism. But with a policy of conquest they would have nothing to do; rightfully appreciating the course of events, they had no ambition to take part in the world's politics, reserving all their attention and energy for the ethical and religious development of the ancestral faith. This friction—which would have brought about dangerous results in the time of Hyrcanus I., had it not been for the strong personality and good luck of that prince, which enabled him to hold the balance between parties—came to a positive rupture in the reign of his son. The relations between Alexander and the Pharisees were probably never very cordial; though, according to the statement of the Talmud, Simon b. Sheṭaḥ, the head of the party, was a brother of the queen and a frequent guest at the palace. The inscription upon his coinage, יהונתן המלך, *Βασιλεὺς Ἀλέξανδρος* (King Alexander), must in itself have offended Pharisaic sensibilities; for them the house of David was the only legitimate royal house, all others being usurpers of the royal title. Even the phil-Hellenic Aristobulus I. took this into consideration when he permitted only Hebrew inscriptions upon his coins, and contented himself with the title of high priest upon them.

Possibly had Alexander's warlike undertakings been slightly more successful, the Pharisees might have pardoned him even worse transgressions than this. His continuous campaigns from 104–98 B.C. inflicted such hardships upon Palestine as to make his conquest of a few Philistine towns seem comparatively trivial. As a result of this warlike policy, Alexander felt compelled to maintain friendly relations with that class of the people most deeply interested in national political aggrandizement—the Sadducees, the aristocratic class. In order to show his affinity with the Sadducees, he, in his capacity of high priest, while offering the prescribed water libation on the Feast of Tabernacles, allowed the water to run upon his feet, thus expressing his contempt for this purely Pharisaic ceremony. The people present were so incensed at this demonstration against the Pharisees, with whom they in the main sided, that they pelted the king with the citrons which they carried in accordance with one of the customs of this festival. They assailed him with loud cries, and styled him "son of the captive," thus resurrecting the old Pharisaic charge against the members of the Hasmonean house and their eligibility to the priesthood (see JOHN HYRCANUS). Alexander summoned his Pisidian and Cilician mercenaries and let them loose upon the people, slaying then and there 6,000 Pharisees.



Copper Coin of Alexander Jannæus.
(After Madden, "History of Jewish Coinage.")

His Cruelty.

But the matter did not end here. Returning from an unsuccessful expedition against Obedas, the king of the Arabs, he found his people, incited by the Pharisees, armed and arrayed against him; and for six years thereafter a state of actual war prevailed between the people and the royal troops, costing the lives of no less than 50,000 Jews. When, finally, Alexander, realizing his impotence, sought peace with the Pharisees, he was met with the response that the first and only condition of lasting peace was his death. His brutal cruelty in massacring the defenseless multitude in the sacred precincts of the Temple robs the reply of its harshness; and the Pharisees felt themselves justified in their bitterness. No excuse, however, can be found for their treasonable negotiations with the Syrian king Demetrius III., son of Demetrius Eucærus, whom they summoned to fight against their monarch. The rule of a foreigner, with free exercise of their religion, seemed to them a less evil than independence under a Sadducean ruler. Nevertheless, national feeling proved stronger than religious sentiment among the Pharisees, or at least among the Pharisaically inclined; for after the bloody battle near Shechem between Alexander and Demetrius, in which the former lost nearly his whole army, he himself escaping only as a fugitive into the mountains of Ephraim, a large number of the Pharisees who had taken service with the Syrians went over to Alexander, compelling Demetrius to withdraw from Judea. Alexander showed himself on this occasion even more short-sighted than his opponents. Instead of concluding an honorable peace with them, for which the opportunity was certainly at hand, he not only prosecuted his attacks upon hostile Pharisees, but treated them with excessive and inhuman cruelty. Upon the advice of a Sadducee favorite named Diogenes he caused in one day 800 captured Pharisees to be nailed on crosses. This monstrous deed is rendered still more horrible by the legendary statement that he caused the wives and children of the condemned to be executed before their eyes, while he, surrounded by feasting courtiers and courtezans, enjoyed the bloody spectacle. This ruthless act struck terror into the hearts of his Pharisee opponents, and they emigrated, to the number of 8,000, to Syria and to Egypt. Their subsequent fate was equally sad; that of those who settled in Syria especially so, for there the hatred against the Jews was intense and accompanied with violence; the greater part of them were massacred near Chalcis, and only a small remnant found refuge in Bet Zabdai. Of those that escaped to Egypt, one of the most prominent was Judah ben Ṭabbai, while another leader, Simon b. Sheṭaḥ, dragged out a miserable existence among the Arabs.

Last Campaigns.

Alexander found that this semblance of peace at home, dearly bought as it was, by no means added to his strength against outside enemies. Hated by the people, he had to place his main reliance upon hired foreign troops; and yet he could not effectively counteract the increasing power of his nearest neighbor, the Arab king Aretas. When the latter invaded Judea, Alexander was too weak to oppose him, and he purchased the enemy's withdrawal only by means of shameful concessions. The defeat suffered by Alexander at Adida—which commanded the road between Jaffa and Jerusalem—placed the key of the capital in the Arab's hands. But Alexander was not the man readily to admit himself beaten; and he sought to wipe out the disgrace of this defeat by the conquest of petty rulers. His three years' war east of the Jordan (about 85–82) was successful; and he conquered Pella, Dium, Gerasa, Gaulana, Seleucia, and the strong fortress Gamala.

Death.

His life in the field and the inebriety to which he had become addicted combined to bring on a persistent fever, which undermined his strength and rendered the last three years of his life full of suffering. Notwithstanding this, he continued his warlike enterprises until, at the siege of the fortified town Ragaba, he succumbed to his ailment at the age of fifty-one, in the year 78 B.C. His wife, Salome, was present at his death, and by his last will and political testament—as related by Josephus and the rabbis—he entrusted to her the reins of government, and gave her upon his death-bed the following instruction as to her attitude toward the conflicting parties in the nation: "Fear neither the Pharisees nor those that are not Pharisees [namely, the Sadducees], but guard thyself against the dyed ones [hypocrites] who do the deed of Zimri (Num. xxv. 14) and expect the reward of Phinehas" (Num. xxv. 10–13; Ps. cvi. 31; Soṭah, 22*b*). The body of Alexander was brought to Jerusalem and, thanks to the magnanimity of the Pharisees, who cherished no grudge against a dead tyrant, was interred with every mark of respect.

Character and Importance.

Alexander had only one aim in life: to increase the extent of his kingdom to its natural boundaries—the Mediterranean sea and the eastern desert. Its pursuit brought him into conflict with the Pharisees; that is, with the people in general. This opposition was based neither upon religious nor personal grounds, but upon political ones only. Alexander would probably have given way to the Pharisees in everything if they had kept him supplied with soldiers. He seems to have been the victor in this mutual antagonism; for, in spite of all adverse fortune, he approximately attained his goal. He not only maintained his hold upon the towns and fortresses received from his predecessors, but made conquests on both sides of the Jordan. In point of fact, however, Alexander's achievements were but of a temporary character; for as time was not granted to him in which to bind the people steadfastly to the Hasmonean dynasty, and as his cruel persecution of the Pharisees served only to intensify the love and devotion of the people to these, their religious guides; so in reality he did not permanently enlarge the Jewish kingdom, but, instead, undermined its very foundations. Alexander Jannæus must be considered as having contributed by far the largest share to the catastrophe which overtook Palestine soon after his death. Compare the articles Simon b. Sheṭaḥ, Pharisees, and Sadducees.

L. G.

ALEXANDER, LIONEL LINDO: Political and communal worker; born in London May 14, 1852; died Jan. 31, 1901. He was educated at the St. Marylebone's and City of London schools. For nine years (1884–92) he filled the position of honorary secretary to the Jewish Board of Guardians of London. He was a member of several political associations and was active in organizing political campaigns in the metropolitan constituencies. He was president of the Jewish Workingmen's Club and Lads' Institute, vice-president of the Home and Hospital for Jewish Incurables, vice-president of Jews' College, having acted on its council since 1877; on committees of Jews' Infant School (1876), Stepney Jewish Schools (1876), Jews' Hospital and Orphan Asylum (1875), Jewish Board of Guardians (1879). Alexander was considered an authority on economic and sociological questions, and gave evidence before the House of Lords' and House of Commons' select committees on the "Sweating System" and on "Emigration and Immigration." He compiled "Jewish Population Statistics," and as honorary secretary for several years wrote the annual reports of the Jewish Board of Guardians. G. L.

ALEXANDER LYSIMACHUS (known also by his prænomen of **Alexander** alone; Josephus, "Ant." xviii. 6, § 3): Alabarch; brother of the philosopher Philo, and father of Julius Alexander and Tiberius Julius Alexander. He held office under the emperors Tiberius and Claudius. He was imprisoned by Caligula, but was released and restored to office by Claudius, for whose mother, Antonia, he had filled the post of procurator. In Soferim, i. 9, where the editions read תורתו של אלכסנדרום ("the Law of Alexander"), a manuscript reads אלכסנדריים. Graetz ("Jew. Quart. Rev." ii. 102) believes that reference is made to gilded letters in a scroll of the Law, belonging to the alabarch Alexander Lysimachus. This, however, is quite impossible, as Alexander Jannæus is meant. Alexander Lysimachus once refused Herod Agrippa I. (who was always in financial straits) a loan, but accorded it to Agrippa's wife Cypros. The gates of the Sanctuary were decorated by him in gold and silver (Josephus, "B. J." v. 5, § 3). See Alabarch.

ALEXANDER, MAURICE ALEXANDER: An Australian politician; born in London, Nov. 30, 1820; died in Sydney, N. S. W., January 27, 1874. He arrived in Sydney in 1834, and from the year 1863 represented Goulburn in the New South Wales House of Assembly. He acquired a very considerable fortune by careful investment in real estate. At his death, his widow, among other beneficent acts, founded a scholarship in the University of Sydney, and dedicated it to his memory.

ALEXANDER, MICHAEL SOLOMON: First Anglican bishop of Jerusalem; born of Jewish parents at Schönlanke, in the grand duchy of Posen, May, 1799; died at Belbeis, Egypt, November 23, 1845. His training was strictly orthodox, and at the age of sixteen he became a teacher of the Talmud and of the German language. In 1820 he removed to England and lived as a private tutor in various country towns, marrying, in 1821, a Miss Levy, of Plymouth. His study of the New Testament and the Prophets, and the suggestions of several Christian clergymen whom he met, resulted in his conversion to Christianity and his baptism, June 22, 1825, at St. Andrew's Church, Plymouth, in which town he had been officiating as ḥazan to the Hebrew congregation. His wife followed his example six months later, and was baptized in Exeter. Soon afterward, Alexander removed to Dublin, where he became a teacher of Hebrew, was ordained by the archbishop of the diocese, and appointed to a small charge in that city, June 10, 1827. He then became interested in the work of the London Society for the Promotion of Christianity among the Jews, and subsequently proceeded to Danzig, establishing headquarters there, whence he undertook to evangelize the Jews of West Prussia and Posen. In May, 1830, he returned to England, where for nearly twelve years he acted as home missionary of the society. In 1832 Alexander was appointed professor of Hebrew and rabbinical literature in King's College, London, which position he retained till November, 1841. His inaugural address was upon the value of rabbinical literature. He was associated with Dr. Alexander McCaul in the translation into Hebrew of the revised edition of the New Testament, and also took a prominent part in the translation of the Anglican liturgy into the same language. In 1841 Professor Alexander was ordained at Lambeth Palace as bishop of the United Church of England and Ireland at Jerusalem, that he might ameliorate the condition of the Christians in the Holy Land. Into his charge was given the superintendence of the English clergy and congregations in Syria, Chaldea, Egypt, and Abyssinia. He was the first to be appointed to this position, one which had been established by an arrangement between the German, Lutheran, and Anglican churches, and which caused no little embarrassment to the High-church party of the English Church, who would not recognize Lutheran orders. His appointment indeed provoked much opposition from entirely opposite quarters, but especially from the Catholic communion: and it was the first inciting cause of Newman's secession to Rome. The bishop's progress to Jerusalem was conducted with much pomp and ceremony, and he overcame the difficulties of his position with much discretion and prudence. After nearly four years' stay at Jerusalem, during which he made partial tours of his extensive diocese, Alexander found it expedient, in November, 1845, to pay a visit to England. This he arranged to do by way of Cairo, but near Belbeis, within a few hours' journey of Cairo, he expired of heart disease.

He published "The Hope of Israel," a lecture, 1831; "The Glory of Mount Zion," 1839; "The Flower Fadeth"; "Memoir of Sarah Alexander," 1841.

G. L.

ALEXANDER OF MILETUS (called **Polyhistor** on account of the number of his writings on geography, history, grammar, natural science, rhetoric, and philosophy): Flourished between 105 and 40 B.C. He was the author of a book entitled Περὶ Ἰουδαίων ("Upon the Jews"). This work, of which only a few fragments have been preserved, quoted in the works of Eusebius and Clement of Alexandria, consisted evidently of excerpts from various Jewish, Samaritan, and heathen authors, touching the earlier history of the Jews, strung together with a pretense of chronological order. Although these excerpts reveal their author as nothing but a compiler without taste or judgment, and bereft of all literary ability, they possess, even in their meagerness, a certain value. In his compilation heathen and Jew are cited indiscriminately side by side; and to Alexander, therefore, the world is indebted for information on the oldest Jewish, Hellenic, and Samaritan elaboration of Biblical history in prose or poetry. The epic poet Philo, the tragic writer Ezekiel, the historian Eupolemus, the chronicler Demetrius (the so-called Artapanus), the historian Aristeas, and the Samaritan Theodotus, as well as an unnamed fellow countryman of the latter often confused with Eupolemus, the rhetorician Molon (an anti-Jewish writer)—all of these authors are known to posterity only through extracts from their works which Alexander embodied verbatim in his. Of some interest for the ancient history of the Jews is his account of Assyria-Babylonia, frequently drawn upon by Jewish and Christian authors; in it extracts are given, especially from Berosus, and also from the "Chronicles of Apollodoros" and the "Third Book of the Sibyllines." Josephus made use of the work (see Freudenthal, "Alexander Polyhistor," p. 25), and likewise Eusebius in his "Chronicles." Probably only Alexander's account of the Flood is taken from Berosus, who is confirmed by the newest Assyrian discoveries, while his account of the Confusion of Tongues is probably of Jewish-Hellenic origin. Another work of his seems to have contained considerable information concerning the Jews. What Eusebius quotes ("Præparatio Evangelica," ix. 20, 3) would seem to have been taken from this work, which is no longer extant, except indirectly through Josephus. It may be noted that Alexander twice mentions the Bible, which, however, he knew only superficially, as appears from his curious statement that the Law of the Jews was given to them by a woman named Moso, and that Judea received its name from Judah and Idumea, children of Semiramis. In his above-mentioned work, specifically devoted to the Jews (Περὶ Ἰουδαίων), he furnishes several useful notes touching Jewish history; and its method, or rather want of method, arises entirely from Alexander's lack of literary judgment in compiling haphazard from both heathen and Jewish sources.

The text of the fragments preserved is in very unsatisfactory shape, owing to insufficient collation of the manuscripts. How much of his originals Alexander himself omitted is difficult to say, in view of the corrupt state of the text of Eusebius, where most of his fragments are to be found. Abydenus—the Christian editor of Alexander's works—evidently had a different text before him from that which Eusebius possessed.

Text of the fragments Περὶ Ἰουδαίων is to be found in Eusebius, "Præparatio Evangelica," ix. 17; Clemens Alexandrinus, "Stromata," i. 21, 130, and Müller, "Fragmenta Historicorum Græcorum," iii. 211–230; prose extracts, from a new collation of the manuscripts, in Freudenthal, "Alexander Polyhistor," pp. 219–236.

ALEXANDER (SENDER) BEN MORDECAI: Associate rabbi of Prague in the second half of the seventeenth century. His work, "Sheḥiṭot u-Bediḳot," in Hebrew and Judæo-German (Amsterdam, 1667), deals, as its title implies, with the precepts on the slaughtering of cattle and inspection of the inner organs.

ALEXANDER BEN MOSES ETHAUSEN. See Ethausen, Alexander ben Moses.

ALEXANDER, SAMUEL: Metaphysician and psychologist; born in Sydney, New South Wales, July 6, 1859. He was educated at Wesley College, Melbourne, after which he attended the Melbourne University, where he made an excellent academic record, and in 1877 gained a Balliol scholarship for classics, two years later achieving the distinction of a "double-first." In 1881 he took a first-class in the final school of classical honors and became a fellow in Lincoln College, Oxford. Subsequently he became tutor at Lincoln College, but resigned in 1890 to study experimental psychology under Münsterberg in Freiburg. In July, 1893, he was appointed to the chair of logic and philosophy at Owen's College, Manchester, and in 1896 became one of the examiners in philosophy at London University. Alexander's attainments as a philosopher form a worthy sequel to his distinguished university career. He is at once metaphysician and psychologist, and has assimilated both the English and the German methods. His book, "Moral Order and Progress," 1889, is a distinct contribution to ethics; in it Professor Alexander makes an attempt to combine evolutional with Hegelian ethics. He has also written several articles of importance for "Mind."

ALEXANDER SEVERUS: Roman emperor from 222 to 235; was especially friendly to both Jews and Christians. It was on this account, and not because of his Syrian descent, that the mocking inhabitants of Antioch and Alexandria, while celebrating their festivals, called him a Syrian synagogue-overseer and a high priest (*Syrum archisynagogum et archierum*; see Ælius Lampridius in his biography of Alexander Severus, chap. xxviii.). It seems that the emperor was accustomed to announce in advance the names of those whom he would appoint to important positions of state, in the same manner as the Jews and Christians used to call out in their synagogues and churches the names of their candidates for public office (*ibid.* chap. xlv.).

His Liberal Attitude.

Either from Jews or Christians he had learned the golden rule, "Do unto others as thou wouldst have them do unto thee" (Hillel, Shab. 31*a*); and he adopted it as his motto, inculcating it upon his subjects whenever they were about to inflict a wrong on any one (*ibid.* Ælius Lampridius, li.). He caused this maxim to be inscribed also upon his palace and upon public buildings (*ibid.*). In his private chapel (*lararium*), where he was accustomed to pray every morning, he had, besides the images of Apollonius, Orpheus, and Jesus, also an effigy of Abraham (*ibid.* chap. xxix.). The reign of Alexander Severus was, indeed, a happy period for the Jews as well as for the whole Roman empire. He continued all former privileges of the Jews (*Judæis privilegia reservavit*, ibid. chap. xxii.). The verse in Dan. xi. 34, "Now when they shall fall, they shall be holpen with a little help," was interpreted by the Jews, says Jerome, as referring to Severus and Antoninus (*De Severo et Antonino*), "whom the Jews loved very much." Grätz, in his "Gesch. d. Juden," 4th ed., iv. 452, explains the words of Jerome as referring to one emperor only, Alexander Severus, whom he identifies with the Antoninus of whose friendly attitude toward Judaism and of his friendship for Judah the Patriarch the Talmudic sources frequently speak. Jerome refers very probably to Alexander Severus and to Antoninus Pius, whom he mentions after Alexander because he treats history retrogressively.

In the Talmud.

Alexander Severus is mentioned also in the Talmud and Midrash, but in the confused manner not uncommon in these authorities. A certain Justina, daughter of "Severus, son of Antoninus," is said to have told "Rabbi" that she was married at an extraordinarily early age (Niddah, 45*a*). "Severus, the son of Antoninus," became, according to the Talmud ('Ab. Zarah, 10*a*), emperor during the life of his father, and through the efforts of the latter. At this time Antoninus promised "Rabbi" that Tiberias should be raised to the rank of a colony. Since Severus appears in these passages to have been friendly toward the Jews, it is rather surprising that the selection of his reign as an era to count from was looked upon as a punishment on Israel (Midrash Shir ha-Shirim Zuṭṭa, ed. Buber, i. 6, Berlin, 1894; also "Jew. Quart. Rev." vi. 685). He is mentioned in this account as having reigned eighteen years, although he actually reigned only thirteen. Other passages in the rabbinical writings, in which אסוירוס is mentioned, refer perhaps to Verus.

The Severus Synagogue.

The ambitious mother of Alexander Severus, Mammæa, seems also to have found a place in rabbinical literature. A passage in the Hebrew Apocalypse of Elijah (published by M. Buttenwieser, Leipsic, 1897, and previously in Jellinek's "Bet ha-Midrash," iii. 65-68), wherein a Roman emperor is called, in veiled words, the son of a slave named Gigit, appears to refer to Mammæa, whose name may be construed to mean a "pipe" or "tube." Mammæa, who, while in Antioch, was wont to discuss religious matters with Origen (Gibbon, "Decline and Fall of the Roman Empire," chap. xvi.), probably took an interest in Jewish matters also, and in this way became known to the Jews. A synagogue in Rome was called the Synagogue of Severus (דאסוירום, also כנישתא דסוירום). It was so called either out of gratitude to Severus, or because a scroll of the Law, presented by Alexander Severus to the Temple in Jerusalem, was preserved here. Variants of this scroll from the Masoretic text are contained in "Bereshit Rabbati" (see A. Epstein, in "Monatsschrift," 1885, pp. 337 *et seq.*; "Recueil des Travaux Rédigés en l'Honneur de D. Chwolson," pp. 49 *et seq.*, Berlin, 1899). Although it is proved beyond a doubt that Alexander Severus was favorably inclined toward the Jews, nevertheless the opinion of Grätz (4th ed., iv. 224), that the Talmudic tradition which describes "Rabbi" and "Antoninus" as on terms of intimate friendship refers to Alexander Severus (in which case "Rabbi" would mean Judah II.), is open to serious doubt. For in the first place it is historically certain that Alexander Severus refused to bear the name of Antoninus; secondly, the Talmudic passages quoted above distinguish between Severus, son of Antoninus, and Antoninus himself; and thirdly, Christians were just as much favored by Alexander as Jews; he was tolerant toward all. See ANTONINUS. S. KR.

ALEXANDER (SENDER) SHOR. See SHOR, ALEXANDER.

"Aguddah."

ALEXANDER SUSLIN HA-KOHEN OF FRANKFORT: One of the most important Talmudists of his time; flourished in the first half of the fourteenth century. He was rabbi first in Cologne and Worms, and then moved to Frankfort-on-the-Main, where he died some time before 1349. Alexander was the author of the book "Aguddah" (Collection), the contents of which justify its title. In concise fashion it enumerates the most important legal decisions, based on Talmudic law, made by preceding rabbinical authorities. Its purpose is to render such decisions accessible for guidance in their practical application. A comparison of the "Aguddah" with Jacob b. Asher's "Ṭur," written at the same time in Spain, reveals the deficiencies of the German Jews of that day in matters of method and systematization. While Jacob b. Asher, in spite of the fact that he partially discards Maimonides' order and method, exhibited in his "Yad ha-Ḥazakah," presents a comparatively concise compendium of the *dinim* (laws) in use, the "Aguddah" shows a conglomeration of legal enactments and personal comments on the Talmud—in which much foreign matter is interspersed—so that it would have proved actually worthless for the practical purpose for which it was intended. Among the German Jews, however, the "Aguddah" received a cordial welcome, while Sephardic Jews have almost absolutely ignored it. Such authorities of the beginning of the fifteenth century as Jacob Mölln (Maharil) and Jacob Weil consider Suslin's judgments to be decisive. Its reputation is also shown by the fact that extracts from the same were made a hundred years later (Hanau, 1610), under the title of "Ḥiddushe Aguddah" (Novellæ from the "Aguddah"), comprising a selection from Alexander's own explanations in the "Aguddah." Characteristic of the author, his work, and the period in which he lived is his decision—upon Ḥul. i. 32—that the תלמיד חכם ("pupil of the wise") of the present day can not claim the rights and privileges of the class thus named in the Talmud, because nowadays there is no longer any true *talmid ḥakam*. Alexander evidently acknowledged by this the decadence of Talmudical learning in his time and was conscious of his own inferiority.

ALEXANDER SÜSSKIND BEN MOSES OF GRODNO: A great cabalist of the eighteenth century; died at Grodno, Lithuania, in 1794. He wrote "Yesod we-Shoresh ha-'Abodah" (The Essence and Root of Worship), Novydvor, 1782, a work frequently republished. It contains directions for the right use and comprehension of the ritual, the daily prayers, and those for the Sabbath and holy days; also divers exegetical articles on Rashi's commentary on the Prophets and Hagiographa, and articles on the Holy Land and the Temple. Alexander left also an ethical will to his sons, which contains admonitions regarding divine service. This work was published in Grodno in 1794.

J. L. S.

ALEXANDER SÜSSKIND BEN MOSES KANTSHIGER: Biblical scholar of the eighteenth century. He was the author of "Miẓnefet Bad" (The Linen Miter), Zolkiev, 1747, a series of dissertations on the arrangement of the Pentateuch, divided according to the weekly sections. He should not be confounded with Alexander Süsskind ben Moses of Grodno. Fürst and Benjacob, in their bibliographical works, have Moses as the patronymic of the author of "Miẓnefet Bad."

J. L. S.

ALEXANDER SÜSSKIND BEN SAMUEL ZANWIL: A grammarian and cabalist; born at Metz about the end of the seventeenth century. In 1717-18 he published at Köthen (Anhalt, Germany) a work on Hebrew grammar, entitled "Derek ha-Ḳodesh" (The Sacred Way); appended to it is a Judæo-German essay on the Hebrew accents. In manuscript No. 90 of the Leyden collection three works are found of an Alexander ben Samuel, whom Steinschneider identifies with this Alexander Süsskind. They are: (1) "Yedi'at Elohim" (Knowledge of God), on the existence of God, immortality, etc.; (2) "Meleket ha-Mibṭa," a work on Hebrew grammar; (3) "Ẓori ha-Yehudim," or "Theriaca Judaica," a Hebrew translation of a German work by Solomon Uffenhausen. In 1758 he lived at Leyden, where he wrote for Prof. Philip Puseal a treatise on the Cabala under the title "Reshit Ḥokmah" (The Beginning of Wisdom), which is still extant in manuscript at Frankfort-on-the-Oder.

J. L. S.

ALEXANDER, TIBERIUS JULIUS: Roman general of the first century; son of the alabarch Alexander, who gave him the name of Tiberius, probably in honor of the emperor Tiberius; but he himself assumed the name of Julius out of compliment to the reigning family of the Julii. Alexander, who was a nephew or cousin of Philo, forsook the faith of his ancestors and rose to high rank. In the year 46 he was appointed by Claudius procurator of Judea (Josephus, "Ant." xx. 5, § 2; *idem*, "B. J." ii. 11, § 6). Nero afterward made him a Roman knight, and, in the war against the Parthians, assigned him to the post of civil governor by the side of the military official, the general Corbulo (Tacitus, "Annales," xv. 28). He received from Nero the important post of prefect of Egypt; and Agrippa hastened from Jerusalem—where the rebellion had just broken out—to Alexandria, in order to congratulate Alexander.

The appointment of this apostate from Judaism to this exalted position was destined to be fatal to the Jews of Alexandria; for when they began their struggle with the Alexandrians in order to maintain their rights, Alexander ordered out the Roman legions, and they devastated the Delta, the quarter inhabited by the Jews, and slew about fifty thousand of them ("B. J." ii. 18, §§ 7, 8). In the contest between Vespasian and Vitellius for the position of emperor, Alexander, on receipt of a letter from Vespasian, caused (July 1, 69) the Egyptian troops to swear the oath of allegiance to the latter ("B. J." iv. 10, § 6; Tacitus, "Hist." ii. 79; Suetonius, "Vespasian," vi.). This was probably done at the instigation of Berenice, who was a relative of Alexander. As a reward for this service the latter was appointed to accompany Titus in the Jewish war as *præfectus prætorio*—"general of the army" ("B. J." v. 1, § 6), probably the highest military office to which a Jew ever attained. In the council of war before Jerusalem Alexander voted for the preservation of the Temple (Renier, "Conseil de Guerre Tenu par Titus," in "Mémoires de l'Institut," 1867, xxvi. 294; Grätz, "Gesch. d. Juden," 4th ed., iii. 531).

In 1838 an inscription was found in Aradus, in which the council and the people of Aradus pay homage simultaneously to Pliny the Elder and to Alexander ("Corpus Inscriptionum Græcarum," iii. 1278, No. 4536 *et seq.*). The dignities of Alexander are stated in this inscription as follows: *ἀντεπίτροπος* (this appellation is found here only, and is equivalent to vice-procurator; see Mommsen in "Hermes," xix. 640); eparch of the Jewish host; governor of Syria; eparch of the twenty-second legion in Egypt. The stone bearing this inscription was brought to Paris in 1864 (Renan, "Mission en Phénicie," 1864, p. 29).

ALEXANDER ZABINAS: King of Syria, 124–122 B.C. He was the young son of a merchant, but he allowed himself to be proclaimed by the Egyptian king Ptolemy Physcon as an adopted son of King Antiochus VII., Sidetes, of Syria, and became the ruler of the country. In the active political intrigues of the time, Alexander found it to his advantage to secure the interest of the Jewish king Hyrcanus; and, in compensation, he rendered various services to the state of Judea.

ALEXANDER THE ZEALOT: One of the chiefs of the political party of Zealots about the year 50 of the common era. Led by him and his colleague Eleazar, an armed body of Jews fell upon the city of Samaria, pitilessly massacring old men, women, and children of the Samaritans, and burning their villages. The motive for this sanguinary deed was revenge for the murder, in the Samaritan village of Gema (Ginæa), of a number of Galilean Jews who were on a pilgrimage to Jerusalem. The Roman governor Cumanus immediately went in pursuit of the Zealots; but Alexander seems to have escaped unharmed, while many of his followers were either slain or carried to Rome. See also Cumanus, Felix, Zealots.

ALEXANDERSOHN, JONATHAN: German rabbi; born at Grätz, in Posen, about the beginning of the nineteenth century; died at Altofen (Old Buda), Hungary, Nov. 24, 1869. About 1830 he was rabbi in Schwerin-on-the-Warthe, whence he removed to Hungary. Here Götz Kohn, rabbi of Baja and a native of Schwerin, recommended him to the congregation of Csaba, in the county of Borsod, which elected him rabbi in 1833. His violent temper soon made him many enemies. He pronounced a decree of divorce which brought upon him the enmity of the rabbi of Szántó, Eleazar Löw, whose contention was that no divorce had ever been pronounced in Csaba, because of the uncertainty of the Hebrew transliteration of the name, and therefore it was not lawful to grant a divorce in this place (see Divorce). Alexandersohn's enemies were encouraged by this contention to bring charges against him, and prevailed upon Löw to try him for heresy and for violations of the dietary and ritual laws. He was accused of disbelieving in a hereafter; of saying that he would take a lenient view in all legal questions; of sleeping bareheaded; of walking four cubits from his bed without washing his hands; and of other violations of Jewish rites. In 1835 a court, composed of three rabbis, declared him unworthy of the rabbinical office.

Moses Sofer, chief rabbi of Presburg, and Moses Teitelbaum, rabbi of Ujhely, the leader of the Ḥasidim in Hungary, confirmed this decision. Alexandersohn appealed to the civil courts in vain; but Solomon Rosenthal, a prominent member of the congregation in Budapest, and his old friend Götz Kohn of Schwerin, took up his case, and appointed a committee of five rabbis to consider it. The committee cleared him of all charges, and ordered the congregation to pay him 800 florins damages. Alexandersohn would not accept this indemnity, but demanded to be reinstated in his office. He brought other lawsuits against the congregation, and traveled through Germany, Belgium, France, England, and Italy in order to interest other rabbis and laymen in his behalf. Among those who defended him was Zacharias Frankel, then rabbi of Dresden, who addressed a letter to Moses Sofer, urging the latter to rescind his decision. All these efforts were unsuccessful, and in 1846 Alexandersohn published, in German and Hebrew, the documents relating to his case. He was finally reduced to beggary and thrown on public charity for his support, living the life of a tramp. He died in the Jewish hospital of Altofen, Nov. 24, 1869.

D.

ALEXANDERSON (BEN ALEXANDER), DANIEL: Theological writer of the seventeenth century. He embraced the Christian faith at Rouen (France) on April 21, 1621, and wrote in Syriac (rabbinic?) an open letter, setting forth the reason of his abandoning Judaism and calling upon his former coreligionists to do likewise. The letter was translated into several European languages and went through two English editions (London, 1688 and 1703).

ALEXANDRA: Daughter of King Aristobulus II.; brought to Rome with her parents and brothers as prisoners of war by Pompey in the year 63 B.C. She was liberated by the senate in the year 56 B.C., it being held sufficient to detain Aristobulus only. Upon the death of her father, who was poisoned by the partizans of Pompey in the year 49 B.C., she found refuge with her mother and her brother Antigonus at the court of Ptolemy, prince of Chalcis. She married Philippion, Ptolemy's son. Unfortunately her father-in-law was entranced by her beauty, and, having secured the death of his son, espoused his widow.

L. G.

ALEXANDRA: Daughter of Hyrcanus II., and wife of Alexander, son of Aristobulus II. She was one of the strongest and shrewdest supporters of the Hasmoneans at the court of Herod. When Hyrcanus was humiliated by Herod, on the occasion of the latter's entry into Jerusalem, Alexandra sought to stay the destruction of her father's house by betrothing her daughter Mariamne to the Idumean conqueror. And when Herod, as king of Judea, appointed to the high-priesthood the obscure Ḥananel, she protested publicly against this injustice, and claimed the post for her young son Aristobulus. Upon the advice of Delius, the friend of Antony, who had assured her that nothing would be refused to the mother of two such pretty children, Alexandra even sent the pictures of Aristobulus and Mariamne to Antony and Cleopatra, begging them to aid her in obtaining her rights.

Herod must have realized that he had committed a grave error; for, upon learning of the step Alexandra had taken, he installed the sixteen-year-old Aristobulus in the high-priesthood (B.C. 35), stating that his reason for not having done so in the first place was the extreme youth of his brother-in-law. But he publicly charged Alexandra with conspiracy against him; and it was only through her consummate hypocrisy that she extricated herself from the inculpation. When the unfortunate Mariamne was condemned to death, Alexandra again escaped her doom by publicly denouncing her own daughter as a proud and vile woman and an enemy of Herod. This action, however, seems to have displeased all who witnessed the scene.

In the end, Alexandra shared the fate of her two children. Herod, after the execution of Mariamne, whom he had dearly loved, became addicted to fits of fury and was attacked by a dangerous malady. Alexandra thought this an opportune moment for the usurpation of power, and attempted to persuade the authorities of Jerusalem to surrender to her and to her sons the citadel and the Temple, lest at Herod's death they should fall into the hands of some other ruler. Her words were reported to Herod, and he decreed her execution (B.C. 28).

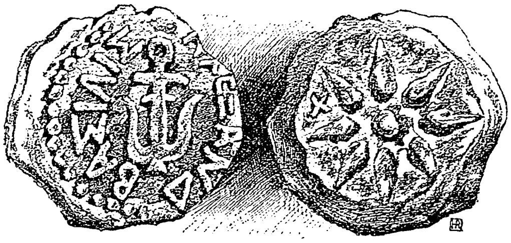
W. M.

ALEXANDRA (Aramaic form of **Alexander**): Palestinian haggadist of the fourth century, contemporary of R. Levi. Commenting on Cant. iii. 1, R. Levi observes: "The congregation of Israel says to the Holy One—blessed be He!—'Lord of the Universe! In the past Thou wert wont to grant me intervals of light between nights; thus there was such an interval between the night I had spent in Egypt and the night I spent in Babylon, between that night and the one of Media [persecution of Haman], and between the Median and the Grecian nights, and between the Grecian and the Roman nights; but in these present times—naught but nights!'" Thereupon R. Alexandra says, "Yea, because I am asleep, neglectful of the study of Thy Law and the observance of Thy commandments, nights follow nights" (Cant. R. to *l.c.*). It is chronologically possible that this R. Alexandra is identical with R. Alexandra of Zadoḳa, of whom R. Zeira I. sought legal advice (Yer. Dem. ii. 22*c*); they stand, however, too isolated to allow of identification with each other or with Alexandri. As to the name Alexandra, an Aramaic form of Alexander, the Midrashim inform us that in those days Jews used to adopt the name Alexandra as an equivalent of Benjamin (Cant. R. to iv. 12, for which Lev. R. xxxii. reads Alexandri). S. M.

ALEXANDRA (SALOME [acc. to Eusebius *Σαλίνα*]; full Jewish name **Shalom Zion):** The only Jewish queen regnant with the exception of the usurper Athaliah; born 139 B.C.; died 67 B.C.; she was the wife of Aristobulus I., and afterward of Alexander Jannæus.* The statement, made by Josephus ("Ant." xiii. 11, §§ 1, 2), that during the reign of Aristobulus she brought about the death of the young prince Antigonus I., because she saw in him a rival of her husband, lacks confirmation. On Aristobulus' death (103 B.C.), she liberated his brother Alexander Jannæus, who had been held in prison. During the reign of Alexander, who married her shortly after his accession, Alexandra seemed to have wielded only slight political influence, as is evidenced by the hostile attitude of the king to the Pharisees. The frequent visits of the chief of the Pharisaic party, Simon ben Sheṭaḥ, who was said to be the queen's brother, to the palace, must have occurred in the early years of Alexander's reign, before he had openly broken with the Pharisees. Alexandra does not seem to have been able to prevent the cruel persecution of that sect by her lord; nevertheless the married life of the royal pair seems to have been a happy one, and on his deathbed Alexander entrusted the government, not to his sons, but to his wife.



Copper Coin of Alexandra Salome.
(After Madden, "History of Jewish Coinage.")

Her Political Ability.

This last political act of the king was his wisest; for the queen fully justified the confidence reposed in her. She succeeded especially in quieting the vexatious internal dissensions of the kingdom that existed at the time of Alexander's death; and she did this peacefully and without detriment to the political relations of the Jewish state to the outside world. Alexandra received the reins of government (76 or 75 B.C.) at the camp before Ragaba, and concealed the king's death until the fortress had fallen, in order that the rigor of the siege might be maintained. Her next care was to open negotiations with the leaders of the Pharisees, whose places of concealment she knew; and, having been given assurances as to her future policy, they declared themselves ready to give Alexander's remains the obsequies due to a monarch. By this step she astutely avoided any public affront to the dead king, which, owing to the embitterment of the people, would certainly have found expression at the interment, and might have been attended with dangerous results to the Hasmonean dynasty.

The queen's accession brought freedom to hundreds whom Alexander had sent to languish in dungeons, and liberty to return home to thousands

---

*That Alexandra, the widow of Aristobulus I., was identical with her who married his brother Alexander Jannæus, is nowhere explicitly stated by Josephus, who no doubt took it for granted that the latter performed the levirate marriage prescribed by the law for the widow of a childless brother deceased. Josephus' statement ("Ant." xv. 6, § 3), that Hyrcanus, Jannæus' eldest son, was eighty years old when he was put to death by Herod, in 31 B.C., must be erroneous, for that would set the year of his birth as 111 B.C., and Jannæus himself was born in 125, so that he could have been but fourteen when Hyrcanus was born to him. It is difficult to understand how a thirteen-year-old boy married a widow of thirty.

Reestablishment of the Sanhedrin.

whom the same cruel monarch had driven into exile. The Pharisees, who had suffered such misery under Alexander, now became not only a tolerated section of the community, but actually the ruling class. Alexandra installed as high priest her eldest son, Hyrcanus II.—a man wholly after the heart of the Pharisees—and the Sanhedrin was reorganized according to their wishes. This body had hitherto been, as it were, a "house of lords," the members of which belonged to the aristocracy; but it lost all significance when a powerful monarch was at the helm. From this time it became a "supreme court" for the administration of justice and religious matters, the guidance of which was rightfully placed in the hands of the Pharisees. Thus, the reign of Alexandra marks a most important epoch in the history of Jewish internal government.

Her Internal and External Policy.

That the Pharisees, now that the control of affairs was in their hands, did not treat the Sadducees any too gently is very probable; although the execution of Diogenes, by whose advice King Alexander had 800 Pharisees nailed on the cross, speaks rather for their moderation than for their cruelty, inasmuch as the special reference to the execution of this reprobate shows that such acts of revenge must have been few. It was rather the evil conscience of the Sadducees that moved them to petition the queen for protection against the ruling party. Alexandra, who desired to avoid all party conflict, removed the Sadducees from Jerusalem, assigning certain fortified towns for their residence. Here, again, her shrewdness was displayed in so arranging that the important fortresses of Hyrcania, Alexandrion, and Machærus were not entrusted to their somewhat uncertain keeping. Alexandra's sagacity and tact succeeded in accomplishing what all the military genius of her husband had failed to effect; namely, to make Judea respected abroad. She increased the size of the army, and carefully provisioned the numerous fortified places; so that neighboring monarchs were duly impressed by the number of protected towns and castles which bordered the Palestinian frontier. Nor did she abstain from actual warfare; for she sent her son Aristobulus with an army to raise the siege of Damascus, then beleaguered by Ptolemy Menneus. The expedition was without result. The peril threatening Judea in the year 70 B.C. from the Armenian king Tigranes, in whose hands Syria then lay, fortunately passed over, as Alexandra's shrewd politics kept him away from Palestine. Only the last days of her reign were tumultuous. Her son Aristobulus endeavored to seize the government; and only her death saved her from the sorrow of being dethroned by her own child.

Rabbinical legend still further magnifies the prosperity which Judea enjoyed under Alexandra. The Haggadah (Ta'anit, 23*a*; Sifra, Ḥukkat, i. 110) relates that during her rule, as a reward for her piety, rain fell only on Sabbath (Friday) nights; so that the working class suffered no loss of pay through the rain falling during their work-time. The fertility of the soil was so great that the grains of wheat grew as large as kidney-beans; oats as large as olives; and lentils as large as gold denarii. The sages collected specimens of these grains and preserved them to show future generations the reward of obedience to the Law. See PHARISEES, SADDUCEES.

[The name "Shalom Zion" is variously modified in rabbinical literature: see Kraus, "Lehnwörter," *s.v.*; it occurs also in inscriptions; see Lidzbarski, "Handbuch der Nord-Semitischen Epigraphik," *s.v.*, and art. ALPHABET in this vol., p. 443.]

ALEXANDRE, ALBERT: Chess-player; born at Hohenfeld-on-the-Main, Germany, about 1766; died in London, Nov. 16, 1850. Most of his life was spent in Paris, where he was one of the most frequent habitués of the Café de la Régence; but he returned for a short time to his native country in 1843, and afterward paid a visit to Egypt. A member of the French Chess School at the height of its predominance, he was distinguished for his brilliant combinations and his skill in solving problems, though not in the foremost rank as a player. He published (1) "Encyclopédie des Échecs" (Paris, 1837) and (2) "Collection des Plus Beaux Problèmes d'Échecs," giving 2,120 examples (Paris, 1846).

J.

ALEXANDRE, ÉDOUARD: French organ manufacturer and inventor; born in Paris December 4, 1824; died, 1888. He learned his trade in the factory established by his father, Jacob Alexandre, at Ivry near Paris, and in 1844 received an interest in the business. Father and son were the originators of the "piano-organ," the "piano-Liszt," and the "organ-melodium," called also "Alexandre organ." In 1856 the firm of Alexandre was awarded the medal of honor at the Paris Exhibition for its popular instruments, which had contributed much to the spread of a taste for music throughout France. Édouard was created chevalier of the Legion of Honor in 1860.

S.

ALEXANDRI (-DRA, -DRAY, -DROS, forms of ALEXANDER): There were probably two amoraim of this name, unaccompanied either by patronymic or cognomen; and as both were Palestinians, and both cultivated the field of the Haggadah, it is impossible to distinguish their respective teachings except in a few instances.

1. Two Midrashim preserve the following anecdote: R. Jannai was expounding the Law, when a trader was heard inviting the people to buy an elixir of life. The people crowded about the trader, and even R. Jannai was curious to see such a medicament. The trader was invited to approach the rabbi and to exhibit his wares; but he told the rabbi that neither he nor the like of him stood in any need of it. Importuned, however, to exhibit the elixir, the supposed trader produced the Book of Psalms, and pointing to a passage therein (Ps. xxxiv. 12–14), he read aloud: "What man is he that desireth life and loveth many days, that he may see good? Keep thy tongue from evil, and thy lips from speaking guile. Depart from evil, and do good; seek peace and pursue it" (Lev. R. xvi.; Tan., Meẓora', ed. Buber, 5). Elsewhere ('Ab. Zarah, 19*b*) the same anecdote is related, but instead of R. Jannai's name, that of the trader is given as R. Alexandri. Putting the several versions of the anecdote side by side, it is evident that Alexandri flourished in the first amoraic generation (third century), contemporaneously with R. Jannai, a junior contemporary of R. Judah I.

In the name of this R. Alexandri, R. Joshua b.

Levi reports an interpretation harmonizing certain seemingly contradictory passages in the Pentateuch. In one place (Deut. xxv. 19) the Lord is represented as commanding, "Thou shalt blot out the remembrance of Amalek"; and in another (Ex. xvii. 14–16, *Heb.*), as saying, "I will utterly put out the remembrance of Amalek from under heaven. . . . Yea, a hand on the throne of Yah: the Lord will have war against Amalek from generation to generation." By the first, says Alexandri, we are to understand that, as long as Amalek lays no hand on God's throne, thou must strive against him; by the second, when he lays hands on God's throne, the Lord Himself will blot out Amalek's remembrance, waging war against him from generation to generation (Tan. Ki Teẓe, 11; Pesiḳ. R. xii, 51*a*. Here the name appears as Alexandros).

Interpretation of Prayers.

Another of R. Alexandri's interpretations reported by the same R. Joshua suggests a Biblical support for the rabbinic enactment of blowing the *shofar* (trumpet) during the *musaf* (additional service) of the New-year, and not during the *shaḥarit* (morning service), by pointing out that in his prayer (Ps. xvii. 2) the Psalmist said, "Let my sentence come forth from thy presence," only after using several terms expressive of prayer and meditation. These terms he construes as follows: "Hear the right, O Lord," represents the recital of the Shema' (the declaration of God's unity); "Attend to my cry," the reading of the Law; "Give ear to my prayer" refers to that part of the service generally called Tefillah (prayer); "which I offer with unfeigned lips" refers to the additional prayer (Yer. R. H. iv. 59*c*; compare Pesiḳ R. xl.; Midr. Teh. on the verse). It is the same R. Alexandri in whose name R. Huna b. Aḥa (Roba) reports this observation: Come and see how great is the influence of those who perform pious deeds: generally where the Bible uses the term *hishkif* (to look toward or down, as in Gen. xix. 28, Ex. xiv. 24), a curse is implied, while when used in connection with the discharge of duty, it means blessing, as in the prayer recited after the offering of tithes (Deut. xxvi. 12–15), which concludes with the expression: "Look down from thy holy habitation, from heaven, and bless" (Yer. Ma'as. Sh. v. 56, where the author's name is written Alexandra. Compare Tan. Ki Tissa, 14; Ex. R. xli; see Frankel, Mebo, 64*a*; Weiss, "Dor," iii. 53).

2. In the legendary portrayal of R. Ḥanina (Ḥinena) b. Pappa's life and death, the following incident is told: R. Ḥanina b. Pappa was dead, and people were ready to pay him the last honors; but a pillar of fire suddenly appeared and impeded their approach to the remains. At last R. Alexandri came near, and addressing the deceased, said, "Order the obstruction away, out of respect for the assembled sages"; but the deceased paid no attention to this demand, not even when requested to grant it out of respect for his own father (whose memory also would be honored by reverence shown to him). "Then do it out of respect for thyself," said R. Alexandri, whereupon the pillar disappeared (Ket. 77*b*). This legend, evidencing the popular esteem in which Alexandri was held, is also of chronological interest, because of its reference to Alexandri's presence at the funeral of an amora of the third generation (fourth century). Elsewhere (Ned. 41*a*) Alexandri reports sayings of R. Ḥiyya b. Abba. It is this R. Alexandri, who reports some Haggadot and Halakot in the name of Joshua b. Levi (Yoma, 53*b*, Sanh. 98*a*), and it is probably the same in whose name R. Aḥa III. reports (Tan. Lek Leka, ed. Buber, 1; Midr. Teh. on Ps. cii. 18).

Specimen of Haggadah.

Among the numerous homiletic observations coupled with the name of Alexandri, which may be the production of either of the two personages discussed above, are the following: The expression (Ps. x. 15), "Break thou the arm of the wicked," is applied to those who monopolize the market and raise the price of breadstuffs (Meg. 17*b*). From the tautology in the verse (Isa. xxvii. 5), "Let him take hold of my strength, that he may make peace with me: peace may he make with me," the doctrine is deduced, that, whosoever applies himself to the study of God's law—which is called עז strength—for its own sake, effects peace in heaven and peace on earth (Sanh. 99*b*). The reason for calling the same heavenly visitors "men" when in Abraham's company (Gen. xviii. 2), and "angels" when they visited Lot (Gen. xix. 1), is because with Abraham angels' visits were common occurrences, therefore the visitors were in his eyes only men; while to Lot—"the common man"—they were angels (Tan., Wayera, ed. Buber, 20; compare Gen. R. l.). The proverb (Prov. xi. 17), "He that is cruel troubleth his own flesh," refers to him who in hours of rejoicing neglects to invite his relatives because they are poor (Lev. R. xxxiv.). David is justified in applying to himself the term *ḥasid* (pious—Ps. xvi. 10, lxxxvi. 2) because whosoever hears himself reviled and resents not, when it is in his power to resent, is a partner of God, who is blasphemed by idolaters and resents not; and since David heard himself reviled when he could resent, and did not (II Sam. xvi. 5–12), he had the right to call himself ḥasid (Midr. Teh. lxxxvi. 1, and xvi. 10). With reference to the Psalmist's saying (Ps. li. 17), "A broken and a contrite heart, O God, thou wilt not despise," R. Alexandri remarks, "When a common man uses a broken vessel he is ashamed of it, but not so with the Holy One. All the instruments of His service are broken vessels." "The Lord is nigh unto them that are of a broken heart" (*ibid.* xxxiv. 19); "He healeth the broken in heart" (*ibid.* cxlvii. 3); "A broken and a contrite heart, O God, thou wilt not despise" (Ps. li. 17); therefore, Hosea exhorts the Israelites, saying (Hosea xiv. 1), "O Israel, return unto the Lord thy God; for thou hast fallen by thine iniquity" (Pesiḳ. R. xxv. 158*b*).

Two Alexandris, one of whom is surnamed "b. Haggai" (or Hadrin) and the other "Ḳarobah" (the liturgical poet), the former reporting a homiletic observation in the name of the latter, are also mentioned (Lev. R. xix., Cant. R. to v. 11). Their relation to the two Alexandris of this article must be a matter of conjecture only. As to the equivalent of the name, see Alexandra.

S. M.

ALEXANDRIA, Egypt—Ancient: Historic city situated on the Mediterranean sea: fourteen miles west of the Canopic mouth of the Nile.

The history of the Jews of Alexandria dates from the foundation of the city by Alexander the Great, 332 B.C., at which they were present (Josephus, "Contra Ap." ii. 4; "Ant." xix. 5, § 2). From the very beginning their numbers seem to have been considerable: at all events, they formed a very large portion of the population under the successors of Alexander. A separate section of the city was assigned to them by the first Ptolemies, so that they might not be hindered in the observance of their laws by continual contact with the pagan population ("B. J." ii. 18, § 7). The site of this ancient Jewish quarter—the existence of which is testified to also by Strabo ("Ant." xiv. 7, § 2)—can be fixed with tolerable accuracy: for Apion derisively refers to the Jews as a people living on a harborless shore: whereupon Josephus rejoins that this is a very excellent situation; for, as a consequence, they resided in the vicinity of the Royal Palace ("Contra Ap." ii. 4). The palace was built on the spit of land called Lochias, and the harbor was in proximity to it, west of Lochias. Therefore the Jews must have inhabited that part of the city that extended eastward from the palace. Moreover, the whole city was divided into five districts, which were named after the first five letters of the Greek alphabet. Of these five districts two were denominated Jewish districts, because the majority of their inhabitants were Jews (Philo, "Contra Flaccum," § 8; ed. Mangey, ii. 525). From this quite a clear conception of the strength of the Jewish population may be formed.

The Jewish Quarter.

According to Josephus, the fourth or "delta" district was populated by the Jews ("B. J." ii. 18, § 8); which fact warrants the inference that this isolation was already in existence in the time of Josephus (compare also "Ap." ii. 4). At that time, however, this isolation was not strictly enforced; for, according to Philo, there were many Jewish dwellings scattered throughout the city. There were even synagogues distributed all over the city (Philo, "De Legatione ad Cajum," § 20; ed. Mangey, ii. 565). As regards number and position, the Jews in Alexandria enjoyed a greater degree of political independence there than elsewhere. While the Jewish inhabitants of other cities of the Roman empire, without any political separation, formed private societies for religious purposes, or else became a corporation of foreigners like the Egyptian and Phenician merchants in the large commercial centers, those of Alexandria constituted an independent political community, side by side with that of the heathen population. Strabo thus describes their constitution ("Ant." xiv. 7, § 2): "At their head stands an ethnarch, who rules and judges the people; and, like the archon of an independent city, gives special attention to the proper fulfilment of the duties and to the compliance with the various regulations."

Government.

At the time of Augustus, a *gerusia* (council of elders) seems to have stepped into the place of this individual ruler. It appears indeed from a decree of the emperor Claudius that upon the death of the Jewish ethnarch, during the governorship of Aquila, Augustus permitted the appointment of an ethnarch ("Ant." xix. 5, § 2); but Philo distinctly states that at the time of Augustus the gerusia assumed the position of the *genarch*—this is the word he uses for ethnarch ("Contra Flaccum," § 10; ed. Mangey, ii. 527 *et seq.*). Since Philo mentions another governor than the one referred to by Claudius, it might be supposed that Augustus promulgated two different decrees upon this subject, and that during Aquila's tenure of office—the ethnarch having died—the emperor consented to a new election; but later, during the term of Magnus Maximus, the office of ethnarch again becoming vacant through death, he replaced it by the gerusia. But in this decree of Claudius, which gives a retrospect of the constitutional rights of the Alexandrian Jews, some mention of such a second decree would have been made. It is evident that Claudius refers to an ordinance which was still in force. Nor do the different names of the governors prove that there were different ordinances.

Soon after the death of the ethnarch, under the governorship of Aquila, a change took place in the governors, and the decree of Claudius was sent to Magnus Maximus, the successor of Aquila. As this occurred before his installation, it must refer to the same decree. Claudius intends only to make it apparent that Augustus permitted the Jews to retain their own government. Philo relates, more particularly, that the ethnarch was replaced by a gerusia. To the latter he frequently alludes in another passage of his work. The gerusia was presided over by archons, chief magistrates (Philo, "Contra Flaccum," § 10; ed. Mangey, ii. 528 *et seq.*). It numbered, as in Jerusalem, seventy-one members (Tosef., Suk. ed. Zuckermandel, iv. 198; Yer. Suk. v. 1). Josephus, also, refers occasionally to the "chiefs of the gerusia" ("B. J." viii. 10, § 1).

In consequence of their isolation, the Jews of Alexandria were unhampered in the exercise of their ceremonies, and were also enabled to regulate their civil affairs independently. The only restriction from which they suffered was due to official supervision delegated to royal, and afterward to imperial, representatives. The Jews of Alexandria, however, were quite independent of the council and civil government of the city proper. They formed a smaller political corporation by the side of the larger one. Moreover, there was no such thing as a council (*βουλή*) during the first two centuries of the Greek domination; this having been abolished by the Ptolemies, or, at the very latest, by Augustus, and only revived under Septimius Severus.*

Civil Rights.

In spite of the political isolation of the Jews of Alexandria they did not lose their franchise as citizens. The doubts that have been expressed in connection with this by a few modern scholars are not supported by decisive evidence, but are based upon a general mistrust of Josephus, whose testimony, however, on all material points, is corroborated by Philo as well as by the decree of Claudius. Josephus says ("Ap." ii. 4): "Alexander gave them a place in which to live, and they also received the same rights as the Macedonians [Greeks], and up to the present their race has retained the appellation Macedonians." In another place ("B. J." ii. 18, § 7) he declares: "Alexander permitted them the same rights as the Greeks. This privilege they preserved under the successors of Alexander, who permitted them to call themselves Macedonians. Nay, when the Romans took possession of Egypt neither the first Cæsar nor his successors suffered the rights, which had been bestowed upon the Jews by Alexander, to be diminished." The decree by which Augustus confirmed the rights of the Jews, especially the civil rights of those in Alexandria, was engraved upon a tablet of brass which still existed at the time of Josephus ("Ap." ii. 4; "Ant." xiv. 10, § 1). Philo also gives prominence to the fact that the Jews enjoyed the civil rights of the Alexandrians (that is, of the Alexandrian citizens), and not those of the Egyptians ("Contra Flaccum," § 10; ed. Mangey, ii. 528).

In the persecutions that occurred during the reign of Caligula, Flaccus, governor of Alexandria, issued an edict in which he called the Jews "aliens and residents" ("Contra Flaccum," § 8; ed. Mangey, ii. 528).

---

*Dio Cassius, li. 17; Spartianus, in his biography of Severus, ch. xvii. Concerning the constitution of Alexandria, compare Strabo, xvii. p. 797; Kuhn, "Die Städtische und Bürgerliche Verfassung des Römischen Reiches," ii. 476 *et seq.*; Marquardt, "Römische Staatsverwaltung," 1881, i. 451 *et seq.*; Lumbroso, "Recherches sur l'Economie Politique de l'Egypte sous les Lagides," pp. 212 *et seq.*, Turin, 1870; Wilcken, "Observationes ad Historiam Ægypti Provinciæ Romanæ, pp. 7 *et seq.*, Berlin, 1885; Mommsen, "Römische Geschichte," v. 555–558; Jung, "Die Römischen Verwaltungsbeamten in Aegypten" ("Wiener Studien," 1892, xiv. 227–266).

But Claudius, the successor of Caligula, soon after his accession took pains to restore to them their old rights. In this last decree, especial reference is made to the rescripts and ordinances of the preceding emperors, from which it may be seen that the Jews had equal rights with the other citizens of Alexandria ("Ant." xix. 5, § 2). Finally, even Vespasian had occasion to interfere on behalf of the Jews, when he denied the petition of the Alexandrians to deprive them of their civil rights in the city ("Ant." xii. 3, § 1). The Jews not only enjoyed civil rights in Alexandria, but in public life occupied a more influential position than anywhere else in the ancient world. There they did not form the lower classes, as in many other towns; but by their riches and education constituted a large and influential portion of society; possessing the confidence of the ruling powers, they attained also to public offices and posts of honor. The conduct of the Ptolemies toward them certainly varied, but that of the first members of that dynasty was uniformly favorable ("Contra Ap." ii. 4).

Jews as Soldiers.

In connection with the alleged modern disinclination of the Jews to military service in foreign countries, it is curious to notice that they were often employed as soldiers in Egypt, and even attained to high military positions. Ptolemy I., Lagi, is said to have distributed 30,000 Jewish soldiers over the land as garrisons (Pseudo-Aristeas, ed. Wendand, 1900, § 13). Jewish camps have been found in several places in Egypt, which were without doubt the barracks of those Jewish troops; such a *castra Judæorum* was on the eastern side of the Delta ("Notitia Dignitatum Orientis," chap. xxv.), and a Ἰουδαίων στρατόπεδον on the western side of the Delta ("Ant." xiv. 8, § 2; "B. J." i. 9, § 4; compare Schürer, "Gesch." 3d ed., iii. 98). In an inscription found at Athribis in the southern part of the Delta, the first name on the list of those who built the synagogue is that of a "captain of the police" ("Rev. Ét. Juives," xvii. 235). Ptolemy VI., Philometor, and his consort, Cleopatra, "entrusted their whole kingdom to Jews, and the generals-in-chief of the army were the two Jews Onias and Dositheus ("Contra Ap." ii. 5). Another Cleopatra, their daughter, in a war that she waged against her son Ptolemy Lathyrus, also appointed two Jews as generals in her army, Helkias and Ananias, sons of the high priest Onias, who built the temple at Leontopolis ("Ant." xiii. 10, § 4; 13, § 1).

Jews as Public Officials.

Under the Romans, rich Jews occasionally held the office of alabarch, as for example Alexander, the brother of the philosopher Philo, and later a certain Demetrius (see for Alexander, "Ant." xviii. 6, § 3; 8, § 1; xix. 5, § 1; xx. 5, § 2; Demetrius, *ib.* xx. 7, § 3). This office must not be confounded with that of the Jewish ethnarch; it was a civic trust, and probably identical with the *arabarch*, the chief tax-collector on the Arabian or eastern shore of the Nile (Schürer, "Gesch." 3d ed., iii. 88 *et seq.*). Such an office could only be filled by one who controlled a large capital, but it also provided a source from which great profit might be drawn.

Josephus' remark ("Contra Ap." ii. 5, end) that the Roman emperors continued the Jews of Alexandria "in the positions of trust bestowed upon them by the former kings—namely, 'the control of the river'"—refers probably to the frequent employment of the Jews as alabarchs. By "control of the river" must be understood the collection of taxes from the commerce thereon.

From these facts it may be concluded that the Ptolemies, as well as the Roman emperors, upon the whole, treated the Jews of Alexandria with consideration. Of the Ptolemies, according to Josephus, Ptolemy VII., Physcon, formed the only exception in his hostility toward them; and his conduct was not influenced by any dislike of the Jewish religion, but was due to their attitude in party politics. When Ptolemy VII. strove to wrest the throne of Egypt from Cleopatra—the mother of Ptolemy VI.—the Jews, led by the general Onias, fought on the side of Cleopatra. It is said that Ptolemy VII., angered by their opposition, ordered those Jews that remained in Alexandria to be put in chains and cast before elephants. Contrary to expectations, the animals turned upon the enemies of the Jews, and Ptolemy VII. was persuaded by one of his concubines to undertake no further repressive measures against them ("Contra Ap." ii. 5). The same story is told of Ptolemy IV. in the third book of Maccabees, which, however, can not be considered a trustworthy source. Josephus (*l.c.*), as well as the third book of the Maccabees (vi. 36), makes note of a thanksgiving festival, annually celebrated in Alexandria in commemoration of this miraculous preservation of the Jews. That the latter enjoyed perfect religious freedom under the Ptolemies is not gainsaid. Some of their synagogues even seem to have exercised the right of asylum on an equality with the heathen temples. There is in the Egyptian Museum at Berlin a Greek inscription of the later Roman period ("Corpus Inscriptionum Latinarum," t. iii. supplem. n. 6583) found in lower Egypt, which says that the queen and the king (supposed by Mommsen to be Zenobia and Vaballathus) commanded the renewal of an old inscription, the main contents of which were that King Ptolemy Euergetes declared the synagogue inviolable—that is, granted it the right of an asylum. Both Ptolemy III. and Ptolemy VII., Physcon, bore the cognomen Euergetes; but a pronounced friendly attitude toward the Jews is to be expected from the former rather than the latter. Moreover, it is in consonance with the custom prevalent during the reign of Ptolemy VII., that the queen should be mentioned together with himself.

Under the Roman Empire.

Ptolemy VI. also permitted the building of the Jewish temple in Leontopolis. The rights of the Jews were not altered under the Roman emperors. The persecution under Caligula was only a passing episode. The Jews had express permission to discard the practise of the Cæsarean cult, which was so contrary to their religion. Nevertheless, repeated and sanguinary conflicts occurred; but the Roman emperors, Caligula excepted, were not responsible for these unfortunate events, which had their cause largely in the deep-seated antipathy toward each other of the pagan and the Jewish populations. In Roman times this feeling became more intense, and often culminated in bloody strife. This mutual aversion was due to the religious peculiarities of Jews and Egyptians, and was equally strong on both sides. The flame of popular passion burst forth, sometimes on one side and sometimes on the other. These strained relations between the two races existed also in other cities, especially where the Jews enjoyed civil or political rights. In Alexandria, however, the situation was particularly dangerous, because the Jews formed a powerful element in the city. The fundamental causes of the persecutions under Caligula may be traced to this circumstance; though the emperor himself contributed to it in no small degree, by demanding of the Jews that divine veneration which agreed with an ancient custom prevailing since the rule of the Ptolemies, and which the heathen population therefore were quite willing to accord him.

Riot in Alexandria.

The actual conflict was begun by the heathen rabble of Alexandria; in the refusal of the Jews to obey the imperial decree, they saw an excuse for opening up hostilities against them. The persecution broke out in the autumn of the year 38, at the time when the Jewish king Agrippa was on a visit to Alexandria. The king was first made the subject of ridicule in a pantomime, in which an imbecile, named Karabas, was arrayed in imitation royal insignia, and scoffingly hailed as king, with the Syrian title *Maran* (Lord). Once aroused, the populace was not easily satisfied, and demanded that statues of the emperor be erected in the synagogues. Flaccus, the Roman governor, from his knowledge of the emperor's peculiarities, did not dare to oppose them; he acceded to all the demands of the Jew-baiters, who became more importunate with every concession made by the governor. In quick succession, Flaccus ordered the placing of statues in the synagogues; deprived the Jews of civil franchise by an edict; and finally permitted a general persecution of them. The enraged heathens now fell upon the Jewish inhabitants of Alexandria; their dwellings and shops were plundered; the Jews themselves were cruelly maltreated and killed, and their dead bodies mutilated. Some were publicly burned, and others dragged alive through the streets. Some of the synagogues were destroyed, and some desecrated with an image of Caligula. Flaccus not only made no attempt to restrain the violence of the mobs, but of his own initiative instituted barbarous regulations against the Jews. He caused thirty-eight members of the gerusia to be manacled and hurried to the theater, where, before the eyes of their enemies, they were publicly scourged, some of them to death.

Philo's Commission to Rome.

The subsequent events, from the autumn of 38 till the death of Caligula in 41, are not recorded in detail. Flaccus was suddenly recalled in the year 38, and banished to the island of Andros, where he was put to death by order of the emperor. It is highly improbable, however, that the condition of the Jews underwent any favorable change during the reign of Caligula. The commission that proceeded to Rome under the leadership of the philosopher Philo was treated with contempt by the emperor, and seems to have met with utter failure, due, no doubt, to the simultaneous appearance, before the emperor, of another delegation from Alexandria—headed by Apion, the well-known opponent of the Jews—which counteracted the endeavors of the Jewish commissioners. It was only upon the death of Caligula and the accession of Claudius that the Jews were enabled to regain their former rights; and this was followed by a considerable period of quiet.*

---

* On ascending the throne Claudius immediately restored all rights to the Jews ("Ant." xix. 5, § 2), and among those liberated was the alabarch Alexander, who had been imprisoned by Caligula (*ib.* 5, § 1). The chief authority for the history of this persecution are the two works of Philo, "Contra Flaccum" and

Renewed Persecution.

New conflicts arose under Nero and Vespasian, closely connected with the great Jewish uprising in Palestine. In Alexandria a very serious struggle broke out, at about the same time as in Palestine, the cause of which was insignificant, but in which the Jews took such a threatening stand that the governor, Tiberius Alexander, a Jew by birth and a son of the alabarch Alexander, was obliged to call out the Roman troops against them. Peace was restored only after much shedding of blood ("B. J." ii. 18, § 7). A few years later, after the close of the war in Palestine, a serious revolt, instigated by the Sicarii in Alexandria, was suppressed by the more considerate element of the Jewish population. Nevertheless, the governor, Lupus, thought it advisable, after the destruction of the Temple of Jerusalem, to close the one at Leontopolis ("B. J." vii. 10). The great revolt of the Egyptian Jews under Trajan (114–117) was attended by enormous loss of life. At first the Jews had the advantage over the Greeks, who in a battle outside the gates of Alexandria were beaten and compelled to retreat into the city; but here they gained the upper hand, and massacred the Jewish inhabitants.*

Notwithstanding the marked contrast between the views of life held by the Jews and the pagans, the influence of Hellenism did not fail to impress a peculiar stamp upon the intellectual development of the Alexandrian Jews. Indeed, the commingling of the Jewish religious teachings with the spirit of Hellenism nowhere went so far as in that city; though here, as elsewhere, the Jews remained true, in all essentials, to the religion of their forefathers.

Hellenism Influences Judaism.

Of this statement there are many convincing confirmations. Like their brethren in Palestine, they assembled in the synagogue every Sabbath to hear the reading of the Law and the Prophets, and for the other religious services. According to Philo, there were many synagogues (*προσευχαί*) scattered throughout the city of Alexandria. One of them is mentioned by him as being especially large and magnificent ("De Legatione ad Cajum," § 20; ed. Mangey, ii. 568). It is, without doubt, the same synagogue which is described in the rabbinical writings as being constructed in the form of a large basilica. It contained seventy-one golden chairs corresponding with the number of the elders. In the center was a wooden platform, upon which stood the ḥazan, who, at the conclusion of each blessing, gave the signal with a flag for the congregation to respond with the Amen. The worshipers were not indiscriminately seated, but were separated according to their respective trades (Tosef., Suk. iv. ed. Zuckermandel, p. 198; Yer. Suk. v. i.). There can be little doubt that the Alexandrian Jews also observed the new moon and the annual festivities in the same manner as did the other Jews. Two feasts peculiar to the Alexandrians are casually mentioned; one in commemoration of the translation of the Bible into Greek (Philo, "Vita Mosis," ii. § 7; ed. Mangey, ii. 140 *et seq.*), and a second in celebration of the miraculous deliverance from the elephants. Very little reliable information is at hand concerning the part taken by the Alexandrians in the cult of the temple at Leontopolis. It is probable that they offered sacrifices there without in the least neglecting their duties toward the Temple of Jerusalem. Philo remarks incidentally that he himself proceeded to the paternal sanctuary (in Jerusalem) as a delegate to pray and to sacrifice ("De Providentia"; Eusebius, "Præparatio Evangelica," VIII. xiv. 64, ed. Gaisford; according to the Armenian translation in Aucher, "Philonis Judæi Sermones Tres," etc., p. 116).*

Greek in the Ritual.

Although the religion of their forefathers was so faithfully followed, the Jews of Alexandria nevertheless imbibed, to a great degree, the culture of the Greeks. Not many generations after the founding of the community, the Torah was translated into Greek (perhaps under Ptolemy II.; at all events not much later). It was read in Greek in the synagogues; indeed this was the language chiefly used in the service (Schürer, "Gesch." 3d ed., iii. 93–95). Greek must, therefore, have been the vernacular of the lower classes also. The better classes studied Greek literature in the schools, and read Homer, the tragic poets, Plato, Aristotle, and the Stoics. This intimate acquaintance with Greek literature naturally exerted a profound influence upon the Alexandrian Jews. They became Greeks without, however, ceasing to be Jews.

The philosophers whose views were accepted by a few of the highly educated Jews were Plato, Aristotle, and the Stoics. Under such influences the Jews of Alexandria produced an extensive and varied literature. They wrote history and philosophy, as well as epic and dramatic poetry. Apologetics and polemics against the heathen found an important place in their literature, for the battle between the two camps was fought out also in the literary arena. Distinguished Alexandrian literati attacked Judaism very bitterly (Manetho [or Manethon], Lysimachus, Chæremon, and Apion). The Jews, on their side, conducted their defense chiefly in such a manner as to bring out the sublimity of their faith and the grandeur of its history. They sometimes took the offensive, and disclosed the inanity of idolatry and the ethical evils of paganism, exhorting and admonishing the heathen population to conversion. Their favorite method was to attribute such admonitory utterances to pagan authorities, particularly the highly venerated Sibyl (see Hellenic Literature and also Sibylline Oracles).

The constant daily contact of the lower class of Jews with the pagans in Alexandria resulted in the absorption of many superstitions. Among the less intelligent, Jewish and pagan witchcraft joined hands, as did Jewish faith and Greek philosophy among the more enlightened (Schürer, "Gesch." 3d ed., iii. 294–304). This blending of religious ideas prevailed

---

"De Legatione ad Cajum" (compare "Ant." xviii. 8, § 1). The recently discovered papyri throw further light on this subject. They show how Claudius punished the instigators of the persecution. Philo mentions Isidorus and Lampon as the two worst agitators ("Contra Flaccum," §§ 4, 15–17). Both were ordered to Rome by Claudius; and in a solemn council, consisting of twenty-five senators and sixteen of consular rank, they were tried and condemned to death. This appears from a papyrus text, the fragments of which have been carefully published by Th. Reinach ("Rev. Ét. Juives," 1895, xxxi. 161–178). From a casual remark in another papyrus relating to events of a subsequent period, it appears that the sentence was carried into effect ("The Oxyrhynchus Papyri," ed. by Grenfell and Hunt, part I., 1898, No. 33; Deissmann, "Theologische Literaturzeitung," 1898, cols. 602-606).

* These events are recorded by Eusebius ("Hist. Eccl." iv. 2; "Chronicon," ed. Schoene, ii. 164 *et seq.*; "Orosius," vii. 12; the statement also in Yer. Suk. v. i, concerning a massacre caused by Trajan, must refer to these events. Compare Derenbourg, "Essai sur l'Histoire de la Palestine," pp. 410–412). The city itself must have suffered considerably from these contentions, for Hadrian found it necessary to restore it in great part (Eusebius, "Chronicon").

*According to the Mishnah Ḥallah, iv. 10, the Alexandrians also brought their Ḥallah to Jerusalem, which, however, was not accepted. Some Alexandrian Jews submitted various legal questions to Rabbi Joshua ben Hananiah (Neg. xiv. 13; Niddah, 69*b* *et seq.*; compare Bacher, "Ag. Tan." i. 185-187, 1884).

Blending of Religious Ideas.

more or less wherever Jews and Gentiles came into direct contact, but was especially strong and marked in Alexandria (Hadrian, "Letter to Servianus"; in Vopiscus, "Vita Saturnini," chap. viii.; in the "Scriptores Historiæ Augustæ," ed. Peter, 1865, ii. 209). In spite of all this, Judaism retained its peculiar characteristics even here. From Philo's intimation that because of the allegorical interpretation, many had failed to give due value to the literal meaning of the Law, it must not be concluded that large numbers of Jews habitually broke the Law. Philo himself affords proof that even those who most favored the allegorical interpretation still kept to the letter of Scripture ("De Migratione Abraham," § 16; ed. Mangey, i. 450). A certain laxity may indeed have obtained in some quarters; but in its essential points, the law was everywhere observed by the Hellenizing Jews as long as they remained within the pale of the synagogue.

Samaritans.

It may be well to append here whatever is known of the history of the Samaritans in Alexandria and in Egypt (compare Juynboll, "Commentarii in Historiam Gentis Samaritanæ," pp. 38–41, 43–45, Leyden, 1846). Alexander the Great is said to have settled Samaritans in the Thebaid ("Ant." xi. 8, § 6, end). At the time Ptolemy I., Lagi, conquered Palestine, he took with him many prisoners, not from Judea or Jerusalem alone, but also from Samaria and from those living near Mount Gerizim, and settled them in Egypt ("Ant." xii. 1). In a papyrus belonging to the middle of the third century B.C., mention is made of a village called Samaria in central Egypt ("The Flinders-Petrie Papyri," part ii., ed. by Mahaffy, pp. [14] 2, [88] 9, [93] 4, [94] 22, [96] 12, Dublin, 1893). During the reign of Ptolemy VI., Philometor, the Jews and Samaritans in Egypt are said to have brought before the king a dispute as to which was the true center of worship, Jerusalem or Gerizim ("Ant." xiii. 3, § 4; compare xii. 1, end). The existence of the Samaritans in Egypt is also implied in letters of the emperors Valentinian, Theodosius, and Arcadius to the *præfectus Augustalis* ("Codex Theodosianus," ed. Hænel, xiii. 5, 18). It can further be proved that they lived there during the Middle Ages, and even till the seventeenth century (see Juynboll, pp. 43–45; Heidenheim, "Nachrichten über die Samaritaner [in Ægypten] aus einem Handschriftlichen Reisejournale aus dem 15. Jahrhundert" in "Vierteljahrsschrift für Deutsch- und Englisch-Theolog. Forschung u. Kritik," 1867, iii. 354–356; Brüll, "Die Samaritaner in Kairo" in Brüll's "Jahrb." 1885, vii. 43–45). For further reference to Jews in Alexandria in medieval times, see Egypt. E. Sch.

ALEXANDRIA, EGYPT — Modern: The Jewish community of Alexandria, numbering (in 1900) 10,000 persons, is governed by an elective body of prominent men called the "Communità." This body numbers sixteen members, four being elected annually to serve for four years; only those contributing to the congregational treasury have the right to elect. The amount qualifying for the voting privilege ranges from £1 ($5) to £10 ($50) annually, according to the circumstances of the individual. The constitution and by-laws of the community are registered with the Austrian government. The Communità has entire control of the finances and affairs of the several congregations, making no distinction between natives and foreigners, or between Sephardim and Ashkenazim. In the year 1899 there were distributed at Passover 1,700 kilos (3,400 pounds) of mazzot. The Communità is called upon almost every week to provide means of transport for poor travelers. For such cases of illness as do not need hospital treatment, it maintains in the city a dispensary with attendant physicians.

Organization.

The revenues of the community are derived from synagogue dues and offerings, burial fees, and the tax on "kosher-meat," as well as from real estate and the dowry tax. All ecclesiastical matters are in the hands of a chief rabbi.

A printing-house was founded in 1874 by Ḥayyim Mizraḥi, from which numerous prayer-books, sermons, and responsa, and many volumes in Arabic and Hebrew as well as in European languages have been issued. In equipment and in the quality of its work it bears comparison with the best European presses.

With the exception of the blood accusation of March, 1881 (see Fornaraki Affair), which threatened for a time the peace of the community, the condition of the Jews in Egypt has been very satisfactory. They are under no special restrictions. Their trade is with Europe in general, and with England in particular. Many of them are bankers and capitalists; while merchants, commercial travelers, scribes, and artisans are numerous among them. They are also represented among the lawyers and officials of the courts. The languages spoken by the Jews of Alexandria represent many tongues. They are of various nationalities, and include Syrians, Turks, Rumanians, Russians, Austrians, Germans, Italians, and Frenchmen, with all the diverse characteristics and customs of each nation.

Situated as it is on the Mediterranean highway, Alexandria always has a large transient population of poor Jewish emigrants, going east or west, and these often are a heavy tax upon the resources of the community.

Synagogues.

The synagogues are: (1) "Keneset Eliyahu," the most ancient of all, recognized as the synagogue of the community, and so called because it is said that the Prophet dwelt on that spot for some time. In the year 1487 Rabbi Obadiah da Bertinoro visited Alexandria on his journey from Italy to Jerusalem, and referred to this synagogue, stating that there were about twenty-five Jewish families in the city, and two ancient synagogues, in the smaller of which (dedicated to Elijah the prophet) the majority of the community worshiped. About the year 1870, prominent men of the community set about restoring this relic of antiquity; and it is now an elegantly appointed building with marble pillars and pavement, glass windows, and modern sittings. The women's gallery runs round three sides of the auditorium, and the building is situated in a well-kept garden or park. One-storied houses face both sides of the park; and into these sick persons, both Jews and Mohammedans, are taken in the belief that miracles are performed there by the prophet Elijah. This synagogue is well attended by the wealthier portion of the community: on the Day of Atonement as many as five hundred persons worship there. Alongside is a large hall where funeral services are held.

(2) The chief synagogue in Alexandria is known as the "Zeradel." Its antiquity is evidenced by a stone slab inserted in one of its walls, which bears the following inscription in square Hebrew characters: "I, Judah, son of R. Saul of Spain (unto whom be peace), bought this site and built this synagogue for the welfare of my soul and the souls of my family, in the year 1311 after the destruction. . . ." The remainder is obliterated by decay. The lowest

line reads: "These pillars and the lintel came from the door of the sanctuary . . . and this is the door . . . to support it upon them . . . for a memorial." A particular treasure of this synagogue is a Hebrew Bible in elegantly written square characters, the work of a veritable artist. Each column or page is surrounded with elaborate ornamentation consisting of the Masora, both "Great" and "Small," written in the most microscopic Hebrew letters, which are legible only with a magnifying-glass; the readings of Ben-Asher and Ben Naphtali are also given. The last page bears the inscription, "The property of David ha-Kohen, called Kutina, 5127" (1367). The name of the writer and date are unknown. There is also a Pentateuch, together with the early prophets, written upon parchment of larger size, of about the same period. Both these valuable manuscripts are jealously guarded, and are taken from the ark only upon the annual festival of the "Rejoicing of the Law," to be borne around the synagogue in the customary Procession of the Scrolls. In 1880 this synagogue was repaired and restored.

(3) A synagogue named "'Azuz"; date unknown, smaller in size than the "Zeradel." In addition to these there are the following: (4) The Franks' (that is, the European Spanish) synagogue, founded in 1840. The building is hired, not owned, by the congregation. (5) A hired room used as a *bet ha-midrash* (college) and a synagogue by the Moroccan Jews. (6) A bet ha-midrash named after Jedidiah, a former rabbi of the city. (7) The Gohar synagogue founded by Elijah Gohar. (8) Two halls hired by the Ashkenazi Jews for worship according to their own particular rite. (9) The Menasce synagogue, founded in 1878 by Baron J. L. de Menasce: a handsome building with marble ark, pillars, and pavement, costing about £8,000 ($40,000). It is supported by the revenues of two houses set apart by the Baron for this purpose. In 1900 the president was M. Joseph Tilche, who has so carefully managed the funds derived from the synagogue offerings and fees that the interest received from their investment is sufficient to defray the expenses of the school connected with it. (10) A synagogue, projected by Abraham Green, to be erected in a suburb where there has been a steady settlement of Jews for the past twenty-five years. The hall hitherto hired for prayer-meetings becoming too small, M. Green purchased (1900) a site in a suitable location and will erect a building to cost about £5,000 ($25,000).

Schools.

The community possesses several schools, but owing to the lack of those conducted upon modern lines, the children of the upper- and middle-class Jews attend the Christian private schools of the city. The most important Jewish schools are (1) that established by Baron J. L. de Menasce at a cost of more than £5,000 ($25,000). This is pleasantly situated in ample grounds. In 1900 it had 160 pupils, who received free education in the Pentateuch and secular subjects. French, Arabic (the language of the country), and, of course, Hebrew were taught. The director was Joseph Tilche; and associated with him was M. Solomon Barda. School materials are supplied gratuitously to the pupils, the expenses being defrayed from the receipts of the Menasce synagogue. Needy pupils receive clothing twice a year. (2) A Talmud Torah school, called the Aghion School, established about the year 1880 by the brothers Moses and Isaac Aghion, owing to the fact that the Menasce School was unable for want of room to accommodate all applicants. On the death of these brothers their children set aside 20,000 fr. ($3,900) as a sinking-fund for its support; and Moses Jacob Aghion gave an additional sum of 20,000 fr. for a school for girls. In 1900 there were about 280 pupils, of both sexes, who received free education in religion, Hebrew, French, and Arabic. The salaries of teachers and expenses for materials amount to £880 ($4,400) annually; clothing-supplies, shoes, etc., cost £160 ($800) more. (3) Other small elementary schools teaching the Pentateuch, prayer-book, etc., according to the grades of their pupils. (4) A school established about 1896 by the Alliance Israélite Universelle for boys and girls, at which a moderate charge was made for tuition. In its first year the school was attended by more than 200 boys and 150 girls; but owing to frequent changes in the teaching staff, due to a dearth of capable teachers, the attendance fell rapidly. French, English, and Arabic were taught, as well as Hebrew and religious subjects; the girls were instructed additionally in sewing. A new teacher was secured in 1900; and there was then every indication of a return of the school's original prosperity.

Charitable Institutions.

A number of eleemosynary institutions have been founded in the community, and of these the following are the most important: (1) An association, "'Ezrat Aḥim," to aid poor and deserving Israelites, which expends annually £700 ($3,500) in donations of money, flour, and meat. It is supported by 370 members, who contribute three francs or more monthly. The president is Abramino Tilche, and its secretary Ẓemaḥ Amram, a son of Rabbi Nathan Amram. (2) The association "Berit Abraham," founded about 1880, extends assistance in obstetric cases among the poor, who receive medical attendance and small grants of money. It is supported by voluntary contributions. (3) The society "Hakhnasat Orḥim" (Care of Strangers)—founded, 1882, to assist poor travelers: it hires a house as a "refuge" and shelters and feeds them during their sojourn. It was established by subscription, but is now maintained by the Order of B'ne B'rith. (4) The Order of B'ne B'rith, the well-known Jewish-American order, was established here in 1892, with a membership of 150. It opened a trade-school which, however, gradually declined and has now only a feeble support. (5) In 1885 a Dowry Association was established, to assist eight poor girls annually, with a dowry of 500 fr. ($97.50) each. When the annual outlay of 4,000 fr. ($780) was no longer easily obtained from the membership—though, by reason of the growth of population, the number of deserving candidates had increased—Joseph Tilche and Moses Aziz exerted themselves in behalf of the association, and through a collection amounting to £6,000 ($30,000) provided a fund, the income of which secures every year a donation of £10 ($50) to each of forty maidens on her wedding-day. (6) The Menasce Hospital built by Baron J. L. de Menasce and his brother Felix, in memory of their father, Bechor, is a spacious edifice with ample grounds, situated outside the city proper, in a well-selected location. The building and appointments cost £5,000 ($25,000). Annual expenses are 30,000 fr. ($5,850). It is supported by a one-per-cent tax, levied on all marriage dowries of £100 ($500) and over. An annual entertainment is given in its behalf. The hospital is provided with a dispensary for the poor. (7) A Home for the Aged, devoted in part also to the reception of convalescents from the Menasce Hospital, who frequently need more care and nourishment than their own homes afford. At the laying of the corner-stone of the Green Synagogue, the chief rabbi took the opportunity to urge the attention of those assembled to the matter. A subscription was taken up at once and headed by Baron Jacques de Menasce, the president of the community, who was supported by various other generous members. The sum, which amounted to £1,785 ($8,925), has been augmented by later collections. Aged Hebrews without means of support, as well as convalescents from the hospital, are thus provided for in this real "Home": the former for life; the latter until they have regained their strength. E. H.

ALEXANDRIA, Louisiana: City on the south bank of the Red river, 360 miles northwest of New Orleans. The foundation of a Jewish community in Alexandria took place in 1848 when several Jews settled there. The total Jewish population in 1900 was 600, or about one-fourteenth of the entire population of the city. Among the occupations followed by the Jewish citizens are banking, brokerage, and cotton-planting. There are besides a number of tradesmen and a few artisans. The congregation was probably founded in 1864. In 1866 a benevolent association was established here by the Jews, and four years later (1870) the first synagogue was erected. Other institutions were founded after the lapse of a few years. In 1882 a Young Men's Hebrew Association was established, and this was followed by a lodge of the Order of B'ne B'rith, which received its charter in 1884. Further advance in the development of the community was marked by the opening of a Sunday-school and Bible-class in 1890, and a branch of the National Council of Jewish Women in 1896. The following were rabbis of the community of Alexandria from its foundation to 1900: M. Klein, L. Meyer, J. C. M. Chumacciro, S. Saft, I. Heineberg, J. Schreiber, and Alex. Rosenspitz. J. S. R.

ALEXANDRIAN PHILOSOPHY: While there were many earlier settlements of Jewish immigrants in Egypt, it was reserved for King Ptolemy I. to establish a large Jewish colony in Alexandria, either by compulsory deportation or by the encouragement of voluntary settlers, and thereby to lay the foundation of the historically important development of the Jewish diaspora in that part of the world. If Palestinian Judaism, up to the time of the Maccabees, failed to maintain rigid barriers against the powerful onslaught of Hellenism, and found it could not restrain the tide of foreign influences, still less could this distant Alexandrian colony avoid reckoning with Greek culture and intelligence. Constant intercourse with non-Jews would alone have led to the abolition of many religious observances, impracticable under the new conditions, and so have brought about a species of adaptation, voluntary as well as involuntary, leading, moreover, to the modification of all nationalist and separatist conceptions or prejudices.

Influence of Hellenism.

Although such influences would naturally first find expression in the affairs of daily life, particularly through the ensuing neglect of the national language and the adoption of the Greek tongue, higher departments, especially literature, could not long thereafter escape the effect of this contact with foreign culture. From the time of Ptolemy I., Greek writers evince a keen interest in Jewish history and Judaism. And the latter likewise, on its side, for its own edification and for purposes of propaganda, is soon found adopting the outward forms of Greek literature. The Greek translation of the Torah, which is probably the oldest example of Jewish-Hellenic literature, arose essentially, no doubt, out of the religious requirements of the diaspora, and certainly had not that exclusively polemic purpose which later legend loves to see in it. It laid the foundation, however, of the free development of a literature no longer bound to national forms; and in addition it provided the linguistic material for such development. Jewish writers soon began to reproduce and amplify their sacred annals in the approved style of the Greek historians. The oldest fragment of the Jewish "Sibyllines" exemplified, in the middle of the second century B.C., the imitation of Greek poetical forms. Various attempts in epic and even dramatic form soon followed. According to some critics, indeed, the "Sibyllines" themselves were modeled after the considerably older fragments of Pseudo-Hecatæus, likewise composed for the purposes of Jewish propaganda and in the form of forged poetical "extracts" (Schürer, "Gesch." pp. 461 *et seq.*).

Judaism and Hellenism.

It took a long time, of course, for Judaism, under the influence of cosmopolitan Hellenism, to rise to the highest altitudes of Greek intellectual life, and to recast its own world-conceptions in the molds of Greek philosophy. One can readily understand that Judaism felt itself powerfully attracted by Greek philosophy. Wellhausen ("I. J. G." pp. 217, 218) has very rightly noted how the intellectual development of Judaism, with its tendency to become a purified monotheism, moves in the same direction toward which Greek thought tends, in occupying itself with speculative consideration of the universe. In monotheism, as well as in the abstract God-idea of Greek philosophy, the Jew could see the logical result and completion of that which his own great prophets had yearned for and declared. His delight in the purity of the Platonic conception of God, or the strict logic of the Stoic theodicy, would blind him to the fact that both in the Platonic transcendentalism and the Stoic pantheism the living personality of the Deity—a self-understood axiom of his conception—was well-nigh lost. In many respects, Greek philosophy must have appeared to him far superior to anything which the Jewish mind had ever evolved. There, in Judaism, was a scheme of thought concentered in the relation of God to the world and to His chosen people. Here was a philosophy which was not only a theology at the same time, but which, in response to a broader interest felt now by Judaism too, sought to penetrate with its investigations into every department of the universe and of life. There, in Judaism, was a collection of sacred books, of different ages and differing views; a disconnected mass of proverbial wisdom; an abundance of ceremonial usages which were tending more and more to resolve themselves into mere unintelligible customs; a system of casuistry regulated more by ritual than by ethical considerations. Here, on the other hand, was a logical system, ruling moral life through sound and noble principles; there, a sacred literature written in popular and unsophisticated form, without regard to artistic rules or laws of logic; here, a language which exhibited the influence of centuries of artistic development, and whose skilfully constructed periods charmed the ear.

It is, however, a very difficult question to decide just when Judaism attained to the dignity of a systematic idea of the universe (cosmogony) in the sense of the Greek philosophy, and under its influence. We refer, of course, to a perfect adaptation to Greek philosophy, not to the adoption of a few stray conceptions, or of a few trite commonplaces of proverbial wisdom. Let that opinion be first presented which until recently was the generally adopted one (see especially Gfrörer and Dähne: Zeller and Drummond inaugurated a reaction against this view, which still, however, predominates in many quarters). According to this theory, Philo's philosophical

Supposed Antiquity of Philonic Method.

system was already extant, at least in all its fundamentals, in the third century B.C. Underlying a large portion of the Jewish-Hellenic literature, this philosophy maintained itself through three centuries of continuous tradition and then found in Philo its most important, though not always original, exponent. The fundamental principles of this system are the following: the strict transcendence of God; the resulting necessary interposition of "middle causes" between God and the world (whether the same be called "Logos," "Powers," or "Wisdom"); mystic union with the Deity, with asceticism as the means thereunto; finally, the allegorical interpretation of Holy Scriptures, by means of which the truths of Greek wisdom are presupposed and demonstrated to be the true meaning and deeper sense of the divine revelation.

Review of the Literature.

In order to render an intelligent judgment on the theory of the religious philosophy underlying Hellenic Judaism, it will be proper to review the several products of the literature, which would have to be explained under this assumption, and particularly to notice the various objections arising against it.

(*a*) Freudenthal, in opposing the statement that the Septuagint is the oldest exponent of Alexandrian religious philosophy, shows that a whole series of general terms are therein employed, not in the mode of philosophical terminology, but quite in the ordinary and popular use of the words; and that the tendency to avoid all anthropomorphisms does not prove the influence of Greek philosophy ("Jew. Quart. Rev." ii. 205-222).

(*b*) Consideration of the Greek Esdras, II and III Maccabees, Ecclesiasticus, and the "Sibyllines," may be omitted, because only scattered resemblances have been claimed in them, and these, upon closer examination, to some extent disappear; and because, for the earlier periods, only the last two can necessarily be of any service.

(*c*) Whatever opinion be held about the date of the "Letter of Aristeas" (probably the beginning of the first century), it exhibits evidences of the adoption of only the most trivial views and conceptions. It is impossible to speak of any philosophical system in connection with it. But in one particular it is very instructive. It contains an allegorical interpretation of the Jewish dietary laws, such as is repeated in Philo, Aristobulus, and Barnabas, without any evidence that these writers had made use of Aristeas. From this, and from the general lack of independence in Aristeas, it may be concluded that already in his time the allegorical exposition of Scripture (and particularly a moralizing interpretation of the ritual laws) was extant. Philo himself tells us that herein he had tradition before him.

(*d*) Aristobulus would indeed be a witness of the greatest weight, even though a solitary one, as he would prove, not indeed the existence of a continuous tradition, but at least the possible extension of Greek philosophical influence among Alexandrian Jews in the second century B.C. But if Aristobulus is a Christian forgery of the second century (see ARISTOBULUS)—though this is denied by Schürer and many other scholars—he can not be adduced as a witness.

(*e*) The author of the Book of Wisdom betrays the fact that Platonic and Stoic philosophy had greatly influenced him. But he rather disproves the theory of the existence of a definite traditional system. For, though he shows himself closely akin mentally to Philo in general tendency, in fundamentals (as, *e.g.*, Bois demonstrates), he exhibits quite remarkable divergences from him. He is totally unaware of Philo's chief doctrines; and his few utterances concerning the Logos go no further than the Old Testament use of the word. These divergences are of so much the less importance as the book seems to have been written only a short time before Philo, who does not appear to have been acquainted with it.

Not from Essenism.

(*f*) Those who explain Essenism as arising not from an internal Jewish origin and development, but from the influence of Orphic communities, can only claim for it the adoption of the Orphic mode of life and Orphic ritual. That it sprang from Greek philosophical influence can at least not be proved. The Pythagorean circles, from which some authorities insist on tracing many Essenic usages and notions, possessed no philosophical system whatever to transmit. What is told about the allegorical interpretation of Scripture by the Essenes leads no further than what is stated above concerning the "Letter of Aristeas." The mere existence of an esoteric wisdom, and the little one hears of it, do not permit the inference that it arose in essentials from any body of traditional philosophy; nor are its teachings indicated in any extant work, such as Kohler lately attempted to show in his essay on "The Testament of Job" ("Semitic Studies in Memory of A. Kohut," pp. 264-338). The same conclusion holds concerning the Therapeutæ, that neither the connection of this sect with the Essenes, nor the date of its establishment, can be proved. Great caution must always be observed in making use of the biased and Hellenic-colored statements of Philo and Josephus.

It is evident that violence has been done to texts, in order to compel them to testify for Alexandrian philosophy. Freudenthal effectively pointed out the arbitrariness of this procedure, and rightly showed that such testimony, in point of fact, presented rather a motley picture, tinged by the most divergent religious and philosophical conceptions ("Die Flavius Josephus Beigelegte Schrift über die Herrschaft der Vernunft," pp. 38, 39, 109, Breslau, 1869).

Platonic Elements Present.

General considerations would also seem to indicate the improbability of the construction of a definite system by Jewish-Alexandrian philosophy. Both this philosophy in general and Philo, its chief representative, show an admixture of Platonism with Peripatetic and Stoic elements, quite similar to the systems of the later Platonists (see Freudenthal, "Der Platoniker Albinas," Berlin, 1879). It may, therefore, be inferred that Philo drew upon Platonism as it existed in his time. For it is unlikely that he could have embodied the identical admixture of diverse elements accepted by the later Platonists. To make the latter dependent upon Philo, as former writers have attempted to do, is impossible.

The genesis of Philo's attempt to harmonize Biblical revelation and Greek philosophy is only intelligible, if he is considered to have based it, not upon a Platonism of his own construction, but upon the eclectic Platonism of his day, as he learned it perhaps from Areius, Didymus, and Potamon. This eclectic Platonism, like the kindred syncretism of Aristobulus (inconceivable in the second century B.C.), presupposes the approximation of the Middle Stoa to Platonic and Peripatetic views, a breaking down of all scholastic barriers, demonstrable also in the Platonists and Peripatetics of the first century. Such an admixture would only be possible, at the earliest, in the middle of the first century B.C., and it can only be explained by the eclectic spirit of that age. Against placing this movement as early as the third century B.C., the fact obtains that philosophy held no firm footing in Alexandria until a considerably later period.

Philo and the Extremists.

Before Philo there had existed a more or less powerful leavening of the Jewish-Hellenic literature by Greek philosophy, not necessarily limited in its effects to literary productions in Alexandria. But it is only in connection with Philo that an actual system can be indicated. No mention is made of any Jewish-philosophical school in Alexandria, and in a certain sense heathen philosophers should rather be considered to have been Philo's forerunners. One may speak of his Jewish forerunners, of course, but the term can mean only those who followed a similar method of Biblical interpretation with regard to certain loose and disconnected philosophical ideas, and who were not exponents of any complete system of interpretation (Cohn, "Philo von Alexandria," in "Neue Jahrbücher," 1898, i. 514–540, 525 *et seq.*). It has been mentioned above that there existed an allegorical method of Scripture exposition, consisting in the main, probably, of a moralizing, paraphrastic interpretation of ritual laws, long before Philo. Philo himself refers to such. He protests ("De Migratione Abrahami," 89 *et seq.*) against those who regarded the precepts as mere symbols of truths, accepting which they refused obedience to the literal precept. Because the Sabbath points out the working of the creative power in the unformed, and the repose of the formed, universe; or because the festivals are types of rejoicing and of gratitude to God; or because circumcision symbolizes the uprooting of lusts and passions, these ordinances are not by any means to be neglected as such. Adopting thus a twofold meaning for Scripture, Philo stands between the extremists of both sides—those who recognize only the deeper meaning, and those who believe in the letter only, of the Law. The latter of these he frequently reproves. And though he may have indeed chosen his illustrations not from any predecessors, but out of his own consideration of the subject (see the important passage, "De Circumcisione," i., ii. 211), he himself testifies that he had forerunners in the art of allegorical interpretation; and that their method was determined by philosophical influence is in itself quite probable. In the passage "De Abrahamo," xx. 20, Philo mentions allegorists who had interpreted the whole history of Abraham and Sarah as a moral allegory. In "De Specialibus Legibus," iii. 32, 329, he gives a philosophical allegorization of Deut. xxv. 11 *et seq.*, which he ascribes to the venerable men who consider most of the utterances of the Law to be "manifest symbols of things invisible, and hints of things inexpressible."

Many attempts, then, to expound the Law allegorically and to read into it the dicta of Greek philosophy had been made before Philo. That such, however, were the expressions of any regular system of world-conception at all resembling a full-fledged philosophy can not be shown, and is improbable. Philo borrowed a few such expositions; but it can not be said that he adopted the greater part (Dähne, *l.c.* i. 69). What has been said must not be interpreted as a denial that any influence whatever was exercised by philosophy over Hellenic Judaism, but only as negativing the existence of any systematic and well-defined school of Jewish-Alexandrian thought. The degree in which this influence was exercised, and in what directions, will perhaps be best exhibited by the consideration of the two books which are acknowledged to show it most markedly, the Wisdom of Solomon and IV Maccabees. The personification of Wisdom had its origin, of course, in the Jewish mind (compare Prov. i. 20–33); but in the delineation of its characteristics and effects Stoic materials are considerably employed. Wisdom is represented as equivalent to the Stoic πνεῦμα; like it, Wisdom permeates the universe as the original Divine Power. And though the predominant religious bent of the author decks Wisdom out with a multitude of moral attributes, many of them betray the effects of Stoic materialism. He does not consider the problem whether God's wisdom is immanent in the universe, or whether it has an independent existence. The Logos plays a very insignificant part beside Wisdom; the latter, and not, as in Stoic fashion, the Logos, being considered the source of all human reason. What is said of the Logos (Wisdom, ix. 1, xii. 9, 12, xviii. 15) is based far more completely on Biblical foundations than is Philo's philosophy; and how vaguely the Logos is conceived is apparent from the fact that to it is assigned equal value with Wisdom, and that in xvi. 26 the ῥῆμα ϑεοῦ (divine word) appears with identical functions. To these ingredients must be added the Platonic conceptions of formless matter (xi. 17), of the preexistence of the soul (viii. 19, 20), of the body as a clog upon the soul; the four cardinal virtues, the Euhemerus-like criticism of polytheism (xiv. 15–21), and the adoption of Epicurean views in the description of the godless (ii. 3–8; see Usener, "Epicurea," p. 227).

The Wisdom of Solomon.

IV Maccabees.

The author of IV Maccabees presents very faint reflexes of philosophical influence in his conception of the divine beings and attributes; but his psychological and ethical utterances are strongly colored by the later Stoa. In his consideration of the emotions, for instance, he is quite a Stoic — they are to him independent of the intellect — also in his theory of a material soul, in his intellectualism, and in his doctrine of the virtues. Nor are suggestions of other philosophical schools altogether wanting; his view of the immortality of the soul is undoubtedly tinged with Grecian thought.

It can not, therefore, be supposed that either the "Wisdom of Solomon" is a forerunner of Philo, or that IV Maccabees is a disciple of his school. They are both quite independent, and have nothing in common with Philo's characteristic metaphysics. If their intermediary Wisdom reminds one at times of Philo's intermediary Logos, a strong argument against the resemblance is the fact that they are essentially different beings, with only partially similar attributes and influence. Philosophy is here only forcibly interjected into the original Jewish conception of the universe, and shows it, even externally, so to speak, by taking up very little room in it. A firm religious consciousness far outweighs any mere philosophical interest: the national conception of the divine rule of the universe, fortified by historical reflection, permits only scanty consideration of mere speculative questions. Accordingly, only passing references are found herein, only scattered components of Greek philosophy; and other writings of Jewish-Hellenic philosophy, now lost, would probably have given no more. Many works before Philo's time may indeed have exercised a species of preparatory or pioneer influence, providing for the consideration of the Jewish mind both philosophical problems and a strict philosophical phraseology for their discussion; and may have suggested to Jewish thought, moreover, a reconciliation and approximation of Greek and Jewish conceptions. But the first man to formulate such harmonization consistently, and thus to found a system, was undoubtedly Philo.

Possible Hellenic Midrash.

It remains now to examine how these ideas may have come to Philo. He never refers, as Cohn shows, to a written source: he refers to his predecessors only in general terms, never by name. Both Cohn and Freudenthal ("Alexander Polyhistor," pp. 57 *et seq.*, Breslau, 1875; compare also Ritter, "Philo und die Halacha," Leipsic, 1879), starting from quite distinct standpoints, have arrived at the same conclusion; namely, that there must have existed a Hellenic Midrash, containing the most dissimilar elements in gross confusion. Since Greek had displaced Hebrew in the reading from the Law in the Hellenic synagogues, the homiletic addresses founded on it must also have been in Greek. Wittingly as well as unwittingly, Greek conceptions must have been infused into these sermons. In one place, for instance, it might be desired to harmonize two conceptions whose inherent mutual contradiction was hardly suspected, because so much that was new had already been added to the ancestral inheritance, being drawn in daily with the surrounding air. Here would arise at once that mental division, that opposition of parties, which has already been mentioned as being so often testified to by Philo. Traveling teachers and students would effect a lively interchange of Palestinian and Hellenic views on exegesis; and many Greek ideas, no doubt, thus found their way to the Palestinians through the Hellenic Midrash. One can indeed consider Philo's works in part as the precipitated deposit, or crystallization, of these public addresses (just as the Talmud is the great "hold-all" for the discussions of the rabbinical colleges lasting over many centuries; Cohn, p. 525). Some of his writings are actually nothing but such homilies (Freudenthal, "Das Vierte Maccabäerbuch," pp. 6 *et seq.*, 137 *et seq.*).

Philo borrowed his method from the synagogue sermons. The allegorical mode of interpretation was a means toward demonstrating specifically the presupposed identity of Jewish and Greek wisdom; this method was the recognized one in vogue among Greeks, and was the instrument most skilfully employed by the Stoics to reconcile the popular religion with philosophy. It was an excellent instrument wherewith to build a common foundation of Hellenic culture for all that agglomeration of conflicting philosophies and religions, and to make propaganda for cosmopolitanism. It was certainly a priori probable, and, moreover, demonstrable from a whole series of etymologies and allegorical explanations of the names of heathen deities, mentioned by Philo, that he was acquainted with this method of interpretation, as applied philosophically to Greek mythology, and particularly to Homer; just as his Greek successor Origen, according to the testimony of Porphyry, learned of it from the Stoic Chæremon.

System of Philo.

But what distinguishes Philo above all his Jewish predecessors (as far as one can judge of these) is the fact that he collects the scattered elements of this method, and tries to give them a systematic coordination, in his mind, at least; not that he has merely picked up and adopted philosophical ideas from all sides, but that he has consistently molded his whole exegesis upon definite philosophical lines. That his philosophy can be described in its essentials without naming any specifically Jewish constituents as such is the best proof (as has well been observed) how thoroughly he had become saturated with the influence of the dominant thought of his day, though still rooted in Judaism, and remaining the Jew in his own consciousness and in his manner of dovetailing his ideas into Scriptural passages. However essential to the understanding of his mode of thought the consideration of this Jewish homiletic method may be, it is only his thorough permeation by Greek philosophy which makes him the master in it that he is—not master alone indeed, but actually its only literary representative of any account. It is probably not mere accident that no similar literature, either before or after him, is known of. Christian philosophy, germinating in earlier days, and hastening in Alexandria toward its blossoming, owed much to Philo: its nourishment was drawn from his method and his ideas. It is not likely that Christian thinkers, had there been any other considerable representative of this philosophy, would have allowed his thoughts and suggestions to escape them. Philo seems to have been the only one to transmit to the outer world, in skilled literary form, the ideas nurtured by the Synagogue and matured by him.

Hence Alexandrian Philosophy, in the strict sense of the words, seems entirely centered in Philo's name and confined to him. Nor did he found any school. Greek ideas, it is true, penetrated, after him, into Talmudic writings, but probably through other channels than Philo. The prophet had no honor in his own country; his name would have disappeared, because his philosophy led away from the pure monotheism of the Jew, had not his mental bent persisted in the development of Christian doctrine.

P. W.

ALEXANDRIAN SHIPS: The ships of the Alexandrians are mentioned several times in the Mishnah as used by Jews (Kelim, xv. 1; Ohalot, viii. 1, 3). They are described as containing large receptacles for drinking-water for long voyages. These vessels carried grain from Egypt to Rome; such a ship, "Isis," is described by Lucian ("De Navigatione," 1–14). It was a three-masted vessel, 180 feet long, more than 45 feet beam, and 44 feet depth of hold. Mention is often made in Greek and in Roman literature of the large Alexandrian Ships engaged in the grain-trade (see references in "Novum Testamentum Græcum," ed. Wetstein, 1752, ii. 638 on Acts, xxvii. 6; Marquardt, "Das Privatleben der Römer," 1882, ii. 388–399).

E. Sch.

ALEXANDRIANS IN JERUSALEM: In consequence of the active relations of the Alexandrian Jews with Palestine, many of them made their permanent home in Jerusalem. But since they had been accustomed to hearing the synagogue services in Greek, and had brought with them many other peculiar customs, they formed a separate community in Jerusalem, and built a synagogue of their own. There exists double proof of this. According to Acts, vi. 9, there arose against the young Christian congregation "certain of the synagogue which is called the synagogue of the Libertines, and

Cyrenians, and Alexandrians, and of them of Cilicia and of Asia." Rabbinical sources relate that Rabbi Eleazar, son of Zadok, bought a synagogue of the Alexandrians in Jerusalem (Tosef., Meg. iii. [ii.] 6; Yer. Meg. iii. 73*d*). Bab. Meg. 26*a* mentions a "Synagogue of the טורסיים" which modern scholars explain as "Synagogue of the Men of Tarsus or of Cilicia" (Derenbourg, "Essai sur l'Histoire de la Palestine," p. 263; Neubauer, "G. T." pp. 293, 315). The older explanation is, "Synagogue of the Coppersmiths." At all events, the reading of Tosefta and the Jerusalem Talmud is to be preferred to that of the Babylonian.

E. Sch.

ALEXANDRIUM: A fortified castle in Palestine, situated on one of the mountains between Scythopolis and Jerusalem, and, judging from its name, probably founded by King Alexander Jannæus (104–77 B.C.). Alexandra kept her treasures at Alexandrium as well as at Hyrcania and Machærus (Josephus, "Ant." xiii. 16, § 4). When, in the year 64, Pompey marched past Pella and Scythopolis to Coreæ, on the northern boundary of Judea, Aristobulus II. fell back on Alexandrium ("Ant." xiv. 3, § 4; "B. J." i. 6, § 4). Aristobulus' son Alexander was besieged there by Gabinius, and when he saw that he could hold out no longer, he surrendered Alexandrium as well as Hyrcania and Machærus to the Romans, who on the advice of Alexander's mother demolished them, lest they should become strongholds in any subsequent wars ("B. J." i. 8, § 5). Herod's youngest brother, Pheroras, again fortified and provisioned Alexandrium ("Ant." xiv. 15, § 4; "B. J." i. 16, § 3). The fortress was finally destroyed, probably by Vespasian or Titus. Alexandrium is supposed by some to be the present Kefr Stuna; others look for it near Karn Sartabe, on the border of the plain of Jordan, north of Jericho.

S. Kr.

ALEXIS MIKHAILOVICH: Second czar of the Romanof dynasty; born at Moscow, March 29, 1629; died February 9, 1676. He succeeded his father, Michael Fiodorovich, July 26, 1645. During his reign a considerable number of Jews lived in Moscow and the interior of Russia. In a work of travels, written at that time, but published later, and bearing the title, "Reise nach dem Norden" (Leipsic, 1706), the author states (p. 234) that, owing to the influence of a certain Stephan von Gaden, the czar's Jewish physician in ordinary, the number of Jews considerably increased in Moscow. The same information is contained in the work, "The Present State of Russia" (1658–66), by Samuel Collins, who was also a physician at the court of the czar.

From the edicts issued by Alexis Mikhailovich, it appears that the czar often granted the Jews passports with red seals (*gosudarevy zhalovannyya gramoty*), without which no foreigners could be admitted to the interior; and that they traveled without restriction to Moscow, dealing in cloth and jewelry, and even received from his court commissions to procure various articles of merchandise. Thus, in 1672, the Jewish merchants Samuel Jakovlev and his companions were commissioned at Moscow to go abroad and buy Hungarian wine. Again an edict, issued March 17, 1654, instructed a party of Lithuanian Jews to proceed from Kaluga to Nijni-Novgorod, and as a protection they received an escort of twenty sharpshooters ("Polnoe Sobranie Zakonov"—Russian Code—I. No. 148).

Alexis Mikhailovich afterward expelled the Jews from the newly acquired Lithuanian and Polish cities; from Mohilev in 1654; Wilna, 1658; and Kiev in 1660. But this may be ascribed to the desire of the government to conciliate the Christian merchants of that territory. It was not long after the horrible massacre of the Lithuanian Jews by Chmelnicki (1648–49), that the propaganda of Shabbethai Ẓebi—which spread through the south and southwest of the Lithuanian-Polish kingdom—had probably also converted many members of the Greek Orthodox Church. This induced the Little-Russian monk Joanniki Golyatovski to write his book, "Messiya Pravedny" (Messiah, the All-righteous), which is replete with all kinds of accusations against the Jews. So in 1671, the patriarch Nikon, in a letter to Alexis Mikhailovich, complains of the monks among the converted Jews of the Voskresenski monastery, saying that they "again began to foster the old Jewish faith," as well as to demoralize the young friars.

The fact is mentioned in the work of the English Ambassador Carlisle, that under Alexis Mikhailovich, Catholics and Jews were driven from Russia. An edict issued March 19, 1655, refers to the Lithuanian-Jewish prisoners of war, who were to be sent to Kaluga by the boyar Prince Alexis Trubetzkoi. These aggregated 108 families, 3 widows, and 21 single men; and in addition there were 92 Jews to be sent from Bryansk to Kaluga by Prince Volkonski ("Regesty i Nadpisi," No. 957). By the treaty of Andrussev arranged with John Casimir of Poland by Alexis Mikhailovich in 1667, the Jews, who then lived in the towns and districts that became Russian territory, were permitted to remain "on the side of the Russian czar," under Russian rule, if they did not choose to remain under Polish rule ("Regesty i Nadpisi," No. 1055). Jewish wives of Greek Orthodox Russians were permitted to remain with their husbands without being forced to change their religion. Altogether, taking into consideration the hatred of foreigners among the Russian population of his time, it is evident that Alexis Mikhailovich was kindly disposed toward the Jews.

H. R.

ALEXIUS. See Aleksei.

ALFAHAN, DON ZULEMA (SOLOMON): Spanish chief rabbi over the communities under the jurisdiction of the archiepiscopal see of Toledo. Don Pedro Tonorio, the archbishop, removed him from office for neglect of duty in the year 1388, and appointed in his place Ḥayen (Ḥayyim), the archbishop's private physician, described in the document as "a good, prudent, and very learned man, descended from a good family." The deed of appointment is given in J. Amados de los Rios, "Historia de los Judíos," ii. 577 *et seq.*

M. K.

ALFAKAR (Arabic, אלפכאר; Hebrew, היוצר "The Potter"): The name of one of the oldest Spanish-Jewish families, distinguished for its social position and scholarship; originally of Granada, and subsequently of Toledo. An Alfakar, who wrote a treatise "On Salvation," was a contemporary of Abraham ibn Ezra, who mentions him in his commentary on Daniel. Maimonides, a few years before his death, also mentions the venerable Ibn Matka Alfa. Hym or Ḥayyim Alfakar of Granada is referred to by Alfonso de Spina as being physician in ordinary to King Alfonso. At about the same time (1190) there lived in Toledo the physician Joseph Alfakar, "the learned sage, the great *nasi* and physician," who was instrumental in suppressing the Karaites in Spain ("Rev. Ét. Juives," xviii. 62; "Jew. Quart. Rev," xi. 590). He was the father of Judah Alfakar and, probably, also of Abraham Alfakar. These two were considered the most celebrated of their line.

Abraham Alfakar: A highly honored member of the court of Alfonso VIII. of Castile; died in January, 1231 or 1239, in Toledo. He was a master of Arabic, and a versatile poet. He wrote a eulogy (see Makkari, "Analectes sur l'Histoire des Arabes d'Espagne," ii. 355; M. Hartmann, "Das Arabische Strophengedicht," 1896, p. 46) on his royal master, who honored him with a mission to Abu Yakub Almustanẓir, sultan of Morocco.

Not less distinguished was **Judah Alfakar** (died 1235), who is said to have been physician in ordinary to King Ferdinand III. Endowed with a keen intellect, he acquired an excellent scientific education, and exercised great influence in Toledo. In the controversy concerning the writings of Maimonides, he took sides with the opponents of the philosopher. The aged David Ḳimḥi attempted to win him over to the party of Maimonides, and undertook a journey to Toledo for this purpose, but falling ill on the road, Ḳimḥi addressed a letter to Alfakar, which began with the following words: "O Judah, thy brethren offer thee homage from afar; thou art adorned with wisdom, greatness, and modesty." But Judah, who was filled with Castilian intolerance, repelled his advances. A second letter from Ḳimḥi brought from Judah a most emphatic answer, in which he unsparingly condemned the attempt of Maimonides to reconcile the Greek or Aristotelian philosophy with Judaism, and set up a canon which several centuries later was approved by Spinoza. He reproached Maimonides with permitting himself to be influenced by mere philosophical hypotheses. He admitted that Maimonides was a great man, and entitled to much respect for the good he had done; but contended that he was only a human being, and that blindly to accept his errors would be sinful. The harsh manner in which Alfakar treated the universally respected Ḳimḥi aroused the outspoken disapproval even of his own friends.

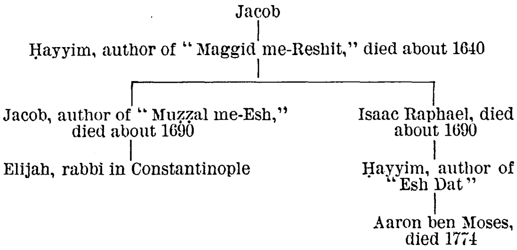
ALFALAS, MOSES. See Alpalas, Moses.

ALFANDARI: A family of eastern rabbis prominent in the seventeenth and eighteenth centuries, found in Smyrna, Constantinople, and Jerusalem. The name may be derived from a Spanish locality, perhaps from Alfambra. The following is a list of the chief members of the family:



Jacob
Ḥayyim, author of "Maggid me-Reshit," died about 1640
Jacob, author of "Muzzal me-Esh," died about 1690
Isaac Raphael, died about 1690
Elijah, rabbi in Constantinople
Ḥayyim, author of "Esh Dat"
Aaron ben Moses, died 1774

Members of this family are to be found to-day in Constantinople and in Beirut. A Portuguese family of the name Alphandéry still exists in Paris and Avignon. At the latter place there was a physician, Moses Alphandéry, in 1506 ("Rev. Ét. Juives," xxxiv. 253) and a Lyon Alphanderic, in 1558 (*ibid.* vii. 280). Compare the names Moses אלפנדריך (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2129) and Aaron אלפנדארק (*ibid.* No. 1080). For a possible explanation of the name, see Steinschneider, "Jew. Quart. Rev." xi. 591. In addition to the persons mentioned below, there is known a Solomon Alfandari (Valencia, 1367), whose son Jacob assisted Samuel Ẓarẓa in translating the "Sefer ha-'Aẓamim" of pseudo-ibn Ezra from the Arabic into Hebrew. A merchant, Isaac Alfandari, was wrecked in 1529 on the Nubian coast (Zunz, "Z. G." p. 425; Steinschneider, "Hebr. Uebers." p. 448).

D.—G.

Aaron ben Moses Alfandari: Talmudic writer; born in Smyrna about 1700; died in Hebron in 1774. He emigrated to Palestine in his old age, where he met Azulai. He was the author of two works: "Yad Aharon" (Aaron's Hand), a collection of notes on "Ṭur Oraḥ Ḥayyim" (the first part of which was published in Smyrna in 1735, and the second in Salonica in 1791) and on "Ṭur Eben ha-'Ezer" (Smyrna, 1756-66); also of "Mirkebet ha-Mishneh" (The Second Chariot), a treatise on the first part of Maimonides' "Yad ha-Ḥazaḳah." His grandson, Isaac Ardit, wrote a eulogy on him in his "Yeḳar ha-'Erek," Salonica, 1836.

Bibliography: Azulai, *Shem ha-Gedolim*, s.v.; Michael, *Or ha-Ḥayyim*, No. 302; Zedner, *Cat. Hebr. Books Brit. Mus.* p. 40.

Elijah Alfandari: Writer on matrimonial law; rabbi at Constantinople in the latter half of the eighteenth and in the beginning of the nineteenth century. He published two works on matrimonial law, "Seder Eliyahu Rabbah we-Zuṭṭa" (The Great and Small Order of Elijah), Constantinople, 1719, and "Miktab me-Eliyahu" (A Letter from Elijah), Constantinople, 1723. His cousin, Ḥayyim Alfandari, the Younger, in a question of law which he submitted to him, refers to him as a great authority in rabbinical law ("Muẓẓal me-Esh," p. 39).

Bibliography: Azulai, *Shem ha-Gedolim*, s. v.; Steinschneider, *Cat. Bodl.* col. 926.

Ḥayyim ben Isaac Raphael Alfandari the Younger: Rabbi in Constantinople during the latter half of the seventeenth and in the beginning of the eighteenth century. In his old age he went to Palestine, where he died. He was the author of "Esh Dat" (A Fiery Law), a collection of homilies printed together with his uncle's "Muẓẓal me-Esh" in Constantinople, 1718. Several short treatises by him are published in the works of others. Azulai speaks very highly of him as a scholar and as a preacher.

Bibliography: Michael, *Or ha-Ḥayyim*, No. 854; Steinschneider, *Cat. Bodl.* col. 821.

Ḥayyim ben Jacob Alfandari the Elder: Talmudic teacher and writer; born in 1588; was teacher at Constantinople in 1618; died in 1640. He was the pupil of Aaron ben Joseph Sason. Some of his responsa were published in the "Maggid me-Reshit" (He Tells from the Beginning), Constantinople, 1710, which contains also the responsa of his son Isaac Raphael, and which was edited by his grandson Ḥayyim ben Isaac Raphael. His novellæ on several Talmudic treatises are still extant in manuscript.

Bibliography: Azulai, *Shem ha-Gedolim*, s. v.; Michael, *Or ha-Ḥayyim*, No. 853; Steinschneider, *Cat. Bodl.* No. 4668.

Isaac Raphael Alfandari: Son of Ḥayyim, and father of Ḥayyim the Younger; died about 1690. He lived in Constantinople in the seventeenth century. Some of his responsa are published in his father's collection, "Maggid me-Reshit," Constantinople, 1710.

Bibliography: Benjacob, *Oẓar ha-Sefarim*, p. 291; Zedner, *Cat. Hebr. Books Brit. Mus.* s.v.

Jacob ben Ḥayyim Alfandari: Talmudic writer and rabbi in Constantinople in the seventeenth century. In 1686 he refers to himself as an old man ("Muẓẓal me-Esh," p. 5). He was the author of a volume of responsa edited by his nephew Ḥayyim the Younger (Constantinople, 1718), entitled "Muẓẓal me-Esh" (Plucked from the Fire), because it was saved from a conflagration which consumed most of the author's manuscripts. Others of his responsa are printed in the collection of his father and in that of Joseph Kazabi (Constantinople, 1736; see Steinschneider, "Cat. Bodl." col. 1179). D.

ALFAQUIN (also **Alfaquein, Alfaqui, Alfuqui**): A surname given in Spain generally to the physician, and also to the secretary and interpreter, of the king. In Spain, Portugal, and Provence it corresponds to the name "ḥakim," which is the Arabic for "physician" or "sage" ("Jew. Quart. Rev." x. 531). M. K.

ALFAQUIN, AARON: A physician at Pamplona, who received from Charles III. of Navarre in 1413 a monthly stipend of 9 florins, as a reward for certain successful cures and as an encouragement for the future.

Bibliography: Jacobs, *Sources*, p. 114, No. 1607.

M. K.

ALFAQUIN, JOSEPH: A physician to Don Sancho of Navarre in the twelfth century, and colleague of Don Moses ben Samuel. In gratitude for his services, the king presented him with a portion of the revenues derived from the Jews of Tudela.

Bibliography: De los Rios, *Historia de los Judios*, ii. 30.

M. K.

ALFAQUIN, MOSSE (MOSES): A physician of Perpignan; mentioned in 1377.

Bibliography: *Rev. Ét. Juives*, xv. 37, xvi. 180.

M. K.

ALFAQUIN, SAMUEL, OF PAMPLONA: A physician who, in 1379, treated an English knight, Sir Thomas Trivet, with such skill and success, that at the instance of the knight the King of Navarre presented him with a house in the Jewry of Pamplona (Jacobs, "Sources," Nos. 1480, 1519).

M. K.

ALFAQUIN, SOLOMON: A physician to King Sancho the Wise of Navarre, who valued the former's art so highly that he presented him with seven acres of land and twelve diets of vineyards at Mosquera and Fontellas (two villages near Tudela), and granted him the "infanzon privileges" (privileges of the nobility) for the whole kingdom. In 1193, his royal master transferred to him the ownership of the baths situated near the Albazares-gate at Tudela (Kayserling, "Gesch. d. Juden in Spanien," i. 20 *et seq.*). M. K.

ALFARABI, ABU NASR MOHAMMED: Arabian philosopher; born in Farab, Turkestan, about 870; died in Damascus about 950. He studied at Bagdad, then the seat of Greek philosophical learning, and traveled in Syria and in Egypt. The influence exerted by his philosophical works impressed itself permanently upon Jewish literature. Some of his writings are extant only in their Hebrew versions. He is the author of many essays on the "Logic" of Aristotle, of an introduction to his "Metaphysics," and of commentaries on his "Physics" and "Nikomachean Ethics." Of his original works the following are the best known: (1) "The Book of Principles" (Sefer ha-Tehalot), translated into Hebrew by Moses ben Samuel ibn Tibbon, 1248, and edited by Filipowsky in the Year-Book "Sefer ha-Asif" (1850–51).

His Works.

This work is a concise presentation of the entire Peripatetic philosophy. In it Alfarabi discusses the six principles of all Being, and the unity of God: (1) The divine principle, or the primary cause,—which is a unity; (2) the secondary causes, or the intellects of the celestial spheres; (3) the active intellect; (4) the soul; (5) form; (6) abstract matter. Only the first of these principles is absolute unity; the others representing multiplicity. The first three principles are not bodies, nor are they in direct relation with bodies; neither are the last three by themselves bodies, they are only united with them. Corresponding to these principles, there are six kinds of bodies: (1) the celestial; (2) the rational-animal; (3) the irrational-animal; (4) the vegetable; (5) the mineral; (6) the four elements. All these principles and bodies combined in a whole form the Universe. He teaches that God can not consist of conceivable parts; that, unlike man, who needs six different things to produce anything, He has no cause for His action but Himself. The problem of prophecy is also treated in this work, prophecy being in his opinion merely a natural manifestation of the intellect, permitting man to predict the future. Alfarabi declares for the freedom of man's will, and protests against the use of astrology. The first, or metaphysical, part of the book is followed by a political one, a dissertation on the various forms of government. The welfare of both individual and state depends upon speculative science. The prince must always be a philosopher. (2) "The Distribution of the Sciences," translated and condensed by Kalonymus ben Kalonymus of Arles (1314), a work that was of much value to Jewish authors because of its encyclopedic presentation of the sciences. (3) A "Treatise upon the Nature of the Soul," translated by Zeraḥiah ben Isaac, probably in 1284, in Rome, and edited by Edelmann in "Ḥemdah Genuzah." (4) ס״ השכל והמושכלות, an essay on the various meanings of the word "intellect" in Aristotle, translated into Hebrew by Jedaiah Bedersi, 1300, and published in 1858 by Michael Rosenstein.

His Logic.

Concerning Alfarabi's value as a philosopher, Maimonides remarks that in order to learn logic one needs occupy himself only with Alfarabi's writings, since all that he wrote, especially the "Book of Principles," is "fine flour"; that he was a distinguished scholar, and hence much could be learned from him. But even before Maimonides' praise of Alfarabi, he was a great favorite among Jewish students. Moses ibn Ezra (1130) quotes from a collection of philosophical aphorisms by Alfarabi, and cites a passage concerning poetry taken from his encyclopedia. The view that all creatures stand related to each other in a determined order of gradation, which is to be found in Judah ha-Levi ("Cuzari," i. 31), seems to have been drawn from Alfarabi's "Principles." It was especially Alfarabi's monotheistic tendency which attracted Jewish minds; with him metaphysics and the unity of God are identical. The idea expressed by Judah ha-Levi, that the limitations of our powers of sight do not permit us to conceive God ("Cuzari," v. 21), is derived from Alfarabi. But

Influence on Jewish Philosophers.

Alfarabi's views concerning prophecy are stoutly contested by Judah ha-Levi. Alfarabi claims that prophecy emanates from a soul of purified reasoning powers; the soul associates itself with the active reason and receives from it aid and instruction. From this naturalistic explanation of prophecy Judah ha-Levi totally dissents, holding the opinion that prophecy is in reality God speaking (i. 87). Nevertheless, Alfarabi's conception of prophecy was shared by Abraham ibn Daud, who speaks of three gradations of reason: reason "in potentia," "in actu," and the "intellectus acquisitus." Maimonides also adopted Alfarabi's views concerning prophecy, while at the same time insisting on the selection by the divine will, and on the prophet's inner preparation by a higher moral standard and imaginative faculty (Moreh, ii. 36) and follows him in his classification of the soul-powers in his "Eight Chapters." From him, too, in all probability, Maimonides borrowed a passage concerning the seven divisions of medical science, which are to be found in Alfarabi's distribution of the sciences. Finally, in his "Moreh," ii. 27, Maimonides has made use of Alfarabi's commentary upon Aristotle's "Physics." Other writers likewise reflect Alfarabi's influence upon Jewish literature; Abraham b. Ḥiyyah Albargeloni, Joseph ibn Aknin, Shem-Ṭob Palquera, and Moses di Rieti knew and availed themselves of Alfarabi's writings.

On Immortality.

While Alfarabi's teachings were generally held in the highest esteem, his view concerning the immortality of the human soul was vigorously combated by Jewish authors. Arabic philosophers endeavored to solve the problem of immortality, left unsettled by Aristotle, by suggesting that during man's life the human intellect combines with the Active Intelligence of the Universe. Alfarabi considers this hypothesis as utterly absurd. Man's supreme aim is rather to elevate his capabilities to the highest degree of perfection attainable. This conception, which was expressed by Alfarabi in the lost commentary on the "Nikomachean Ethics," brought much reproof upon him; and for it Immanuel ben Solomon, in his "Final Judgment" (c. 28), consigns him to the infernal regions.

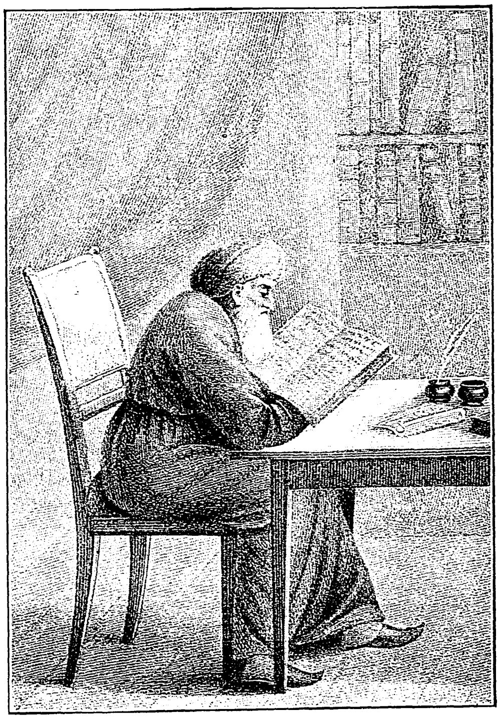
A. Lo.

ALFASI, ISAAC BEN JACOB (called also **ha-Kohen** in the epitaph attached to his "Halakot"): Eminent Talmudist; born in 1013 at Kala't ibn Ḥamad, a village near Fez, in North Africa (whence his surname, which is sometimes attached also to Judah Ḥayyug, the grammarian); died at Lucena, 1103. Five scholars named Isaac, all distinguished Talmudists, flourished about the same time; viz., Isaac ben Baruch Albalia of Seville, Isaac ben Judah ibn Giat of Lucena, Isaac ben Reuben of Barcelona, Isaac ben Moses ibn Sakni of Pumbedita, and Isaac ben Jacob Alfasi. Of these the last-named was the most prominent. He seems to have devoted himself exclusively to the study of the Talmud, under Rabbis Ḥananeel and Nissim, both in Kairwan, the recognized rabbinical authorities of the age. After their death, Alfasi took their place in the estimation of his contemporaries, and was regarded as the chief expounder of the Talmud.

His Career.

Whatever his official position may have been, he had to abandon it in his old age (1088); for two informers, Ḥalfah, son of Alagab, and his son Ḥayyim, according to Abraham ibn Daud, denounced him to the government upon some unknown charge. He left his home and fled to Spain, whither his fame as the author of the "Halakot" ('Er. viii.) had preceded him. He went to Cordova, where he found support and protection in the house of Joseph b. Meir b. Muheyir ibn Shartamikosh. From Cordova he went to Granada, and thence to Lucena. Here he probably acted as the official rabbi of the congregation after the death of Isaac ibn Giat (1089), with whom he had some angry discussions. There was also some ill-feeling between Alfasi and Isaac Albalia. The latter, when on his death-bed, asked his son to go to Alfasi and tell him that he pardoned all his offenses against him, and begged Alfasi to do the same on his part and to be a friend to his opponent's son. Isaac Albalia's wish was fulfilled, and his son found in Alfasi a true friend and a second father.



Isaac Alfasi.

(From a traditional portrait.)

In his capacity as rabbi, Alfasi was both judge and teacher. As a judge he enjoyed the confidence of litigants, and his decisions were carefully studied by other rabbis as guides in similar cases. As a teacher, his great learning attracted a large number of students, eager to listen to his exposition of the Talmud; among them was Joseph ibn Migash, the teacher of Maimonides. Before his death Alfasi designated this Joseph ibn Migash as his successor, passing over his own son, though he likewise was an excellent Talmudic scholar.

Alfasi died, aged ninety years, at Lucena, on Tuesday, the tenth of Siwan (May 19), 1103 (the date given in the epitaph is impossible); and a monument was erected to his memory, whereon were inscribed the following somewhat hyperbolic lines (given at the end of Alfasi, vol. iii.; by Luzzatto in "Abne

Zikkaron" and in "Kerem Ḥemed," iv. 93, vii. 255; also by Geiger in "Divan des Jehudah ha-Levi"):

> "It was for thee that the mountains shook on the day of Sinai;
> For the angels of God approached thee
> And wrote the Torah on the tablets of thy heart:
> They set the finest of its crowns upon thy head."

His "Halakot."

The chief work of Alfasi is his "Halakot," often referred to as the "Rif" (**R. Isaac Fasi**) from the initials of Alfasi's name. Rabad described it as "the little Talmud," because it contains the essence of the Talmud in an abridged form. In the first place, Alfasi eliminated from the Talmud all haggadic comments; that is, the second of its two constituent elements (Halakah and Haggadah, or Law and Homily); in accordance with the title of the book, he retains only the Halakah. He gives the halakic discussions of the Gemara in a condensed form, adding occasionally criticisms on the interpretations and decisions given by post-Talmudic authorities. A further reduction in the bulk of the Talmud was effected in the following way: Alfasi contented himself with collecting practical Halakot only, omitting all treatises that are principally devoted to laws which are only practical in Palestine. The treatises included in Alfasi's work are therefore the following: 1, Berakot; 2, Small Halakot; 3, Shabbat; 4, 'Erubin; 5, Pesaḥim (omitting ch. v.–ix.); 6, Ta'anit; 7, Beẓah; 8, Rosh ha-Shanah (omitting ch. iii.); 9, Yoma (omitting ch. i.–vii.); 10, Sukkah (omitting ch. v.); 11, Megillah; 12, Mo'ed Ḳaṭan; 13, Yebamot; 14, Ketubot; 15, Giṭṭin; 16, Ḳiddushin; 17, Nedarim (only found in recent editions); 18, Ḥullin; 19, Baba Ḳamma; 20, Baba Meẓi'a; 21, Baba Batra; 22, Sanhedrin; 23, Makkot; 24, Shebu'ot (included in ch. ii. hilkot Niddah); 25, 'Abodah Zarah.

Maimonides' Praise of the "Halakot."

Ever since the completion of the Babylonian Talmud, attempts had been made to collect the Halakot it contained, and to elucidate, in each case, the final decision of the halakic discussion of the Gemara. The results of these attempts were such works as the "Halakot Gedolot" of the gaon Simon Kahira, "Halakot Pesuḳot" of the gaon Yehudai, and the "Sheiltot" of the gaon Aḥai of Shabḥa. These collections all proved insufficient; Alfasi's work was intended to be comprehensive and thorough. The merits of the "Halakot" are described by Maimonides in the introduction to his commentary on the Mishnah as follows: "The 'Halakot' of our great teacher, Rabbenu Isaac, of blessed memory, have superseded all their predecessors, because there is included therein everything useful for the understanding of the decisions and laws at present in force; that is, in the time of the Exile. The author clearly demonstrates the errors of those before him when his opinion deviates from theirs, and with the exception of a few Halakot whose number at the very utmost does not amount to ten, his decisions are unassailable." Alfasi based his "Halakot" on the Babylonian Talmud, without, however, neglecting the Palestinian Talmud, which is frequently quoted, and the dicta of which are accepted, provided they are not contradicted by the former. In case of difference between the two Gemaras Alfasi follows the Babylonian, arguing thus: "The Babylonian is younger than the Palestinian, and its authors knew the contents of the Palestinian Gemara even better than we do. Had they not been convinced that the passage from the Palestinian Gemara, cited in opposition to their opinion, was untrustworthy, they would never have deviated from it" ('Er., at end). Critics, however, attacked many of Alfasi's Halakot as contrary to the decisions of the Babylonian Talmud. In all such cases it will be found that the critic and the author differ in reality as to the right interpretation of the Talmudic passage, for in truth Alfasi never deviates from what he recognizes as the final decision of the Babylonian Talmud.

Its Characteristics.

Alfasi is exceedingly self-conscious, decided, and firm in asserting the correctness of his decisions, and in rejecting the opinions of those who differ from him (Ket. x. 115, ed. Sulzbach, 1720; Ber. vii. 39*b*). He rarely wavers or doubts. Of previous authorities he mentions by name Gaon Hai, Gaon Judah, and Gaon Moses (Ket. iv. 84*b*); others he cites by the general term "Some of the rabbis." In three places (*ib.* x. 116*b*, 119; viii. 106) he refers to a lengthy explanation in Arabic, which he originally gave as an appendix to the treatise Ketubot, convinced "that he who will read these explanations will arrive at the true sense of the text of the Talmud." These explanations have been detached from their original place, and are at present known only by two Hebrew translations, the one being included in a collection of responsa by Menahem Azariah di Fano (Nos. 127–129), the other in "Temim De'im" (Nos. 218–220, the third part of "Tummat Yesharim"). The latter work contains also a few responsa of Alfasi, translated from the original Arabic by Abraham ha-Levi אבקרט (Nos. 221–223).

His Commentators.

The "Halakot" of Alfasi became famous both on account of the reputation of the author and of their intrinsic value. The work was studied like the Talmud, and soon had its commentators and its critics. The principal commentators are the following: Jonah, on Berakot; Nissim, on Seder Mo'ed, Makkot, Shebu'ot, 'Abodah Zarah, Seder Nashim (except Yebamot), and Ḥullin; Joseph Ḥabiba, on the smaller Halakot, Seder Neziḳin (except Makkot, Shebu'ot, and 'Abodah Zarah), and Yebamot; Joshua Boaz in his commentary "Shilṭe ha-Gibborim" includes notes of various scholars, both for and against Alfasi. The so-called commentary of Rashi, found in some editions, consists merely of extracts from Rashi's general commentary on the Talmud. Alfasi's chief critic is Zerahiah ha-Levi of Lunel, whose work "Ha-Maor" (The Luminary) consists of two parts, entitled respectively, "The Great Luminary" (Zerahiah, the sun) and "The Small Luminary" (Lunel, the moon), the former on Berakot and Seder Mo'ed, the other on Seder Nashim and Seder Neziḳin. Naḥmanides in "Milḥamot Adonai" (The Wars of the Lord) defended Alfasi. Rabad attacked Zerahiah's criticisms in defense of Alfasi, but at the same time wrote *Hassagot* (criticisms) of his own on the "Halakot" (see "Temim De'im"). Even a disciple of Alfasi, Ephraim, is found among his critics ("Temim De'im," No. 68). A long list of emendations is given by Joseph Shalom in "Derek Tamim." In addition to these commentaries and criticisms, there are to be mentioned the "Kelale ha-Rif," contained in "Yad Malachi" (pp. 123*a*, 124*b*). These rules show how to detect the different degrees of decisiveness which Alfasi desired to indicate in the "Halakot," when quoting the opinion of other authorities. Alfasi's "Halakot" appeared without commentaries (Cracow, 1597, 8vo; Basel, 1602, 8vo); the above-mentioned commentaries, and further notes and emendations, were added in subsequent editions (among others, Talmud and Alfasi, Warsaw, 1859, fol.). Besides the "Halakot," there is a collection of Alfasi's "Responsa," ed. Judah Aryeh Loeb Ashkenazi (Leghorn, 1821, 4to). The collection contains 320 questions, mostly referring to civil law cases; only a few have reference to religious rites. Some Arabic responsa of Alfasi are to be found in Harkavy, "Studien und Mitteilungen," vols. iv., xxv., and in S. A. Wertheimer, "Ḳohelet Shelomoh," Jerusalem, 1899; compare "Monatsschrift," xliv. 144.

M. F.

ALFASI, ISAAC BEN JOSEPH: Descendant of a Spanish family; flourished in Adrianople in the sixteenth century. He translated Ghazzali's work, "Mishkat al-Anwar," into Hebrew, under the title, "Maskit ha-Orot u Pardes ha-Niẓẓanim" (The Chamber of Light and the Garden of Flowers). This work is still extant in manuscript in the Bodleian Library.

I. BR.

ALFASI, ISAAC BEN REUBEN: Sometimes stated to be a grandson of Isaac Alfasi. He is frequently cited as the author of "Sha'are Shebu'ot," a work in twenty chapters on oaths, usually printed with Alfasi's "Halakot" (Fürst, "Bibl. Jud." i. 36; Benjacob, "Oẓar ha-Sefarim," p. 605). It is probable, however, that the actual author was Isaac ben Reuben of Barcelona or an otherwise unknown Isaac ben Reuben, especially as he quotes the Rif without claiming relationship.

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 1148; Weiss, *Dor*, iv. 281. A *Song of Love* by Isaac ben Reuben has been translated into English by Nina Davis in *Jew. Quart. Rev.* viii. 271.

D.

ALFASI, MASA'UD RAPHAEL: Rabbi in Tunis at the end of the eighteenth century; died in 1776. He is the author of "Mishḥa de-Rabuta" (Oil of Anointing), a work containing notes on Joseph Caro's "Shulḥan 'Aruk" (Leghorn, 1805). He was assisted by his two learned sons, Solomon (d. 1801) and Ḥayyim (d. 1783), the former being the author of a similar work, "Kerub Mimshaḥ" (The Anointed Cherub), Leghorn, 1859, fol. M. F.

ALFONSI, PETRUS (called before baptism **Moses Sephardi**, "the Spaniard"): A controversialist and physician in ordinary to King Alfonso VI. of Castile; born at Huesca, Aragon, in 1062, and died in 1110 at the age of forty-eight. He embraced Christianity and was baptized at Huesca on St. Peter's day, June 29, 1106, in his forty-fifth year. In honor of the saint and of his royal patron and godfather he took the name of Petrus Alfonsi (Alfonso's Peter). Like all the apostates of his time, he sought to show his zeal for the new faith by attacking Judaism and defending the truths of the Christian faith. He composed a series of twelve dialogues against the Jews, the supposed disputants being Mose and Pedro (= Moses Sephardi and Petrus Alfonsi, or, in other words, himself before and after conversion). Though the work is overpraised by Raymund Martin, in his "Pugio Fidei," and others equally biased, it is but little known to-day; and, as Steinschneider observes ("Hebr. Uebers." p. 933), fully merits the oblivion into which it has fallen. The "Dialogi in quibus impiæ Judæorum . . . opiniones . . . confutantur," the full title of which is given in Wolf, "Bibliotheca Hebræa" (i. 971) and Fürst, "Bibl. Jud." (i. 36), appeared at Cologne in 1536 and later in "Biblioteca Patrum" (xii. 358, xxi.; ed. Lugdunensis, p. 172; ed. Migne, t. 157, p. 535). Other books are ascribed to him, and he is sometimes confounded with Petrus Hispanus of the thirteenth century. See Steinschneider (*l.c.* p. 470, § 282; p. 934, § 557, note 208), who regards him as the probable translator of the "Canones Tabularum" ("Cod. Corp. Chr." 283, 13; f. 141*b*) from the Arabic. It is ascribed to one Petrus Anfulsus, who is very likely identical with Alfonsi (see Steinschneider, "Hebr. Bibl." 1882, xxi. 38; "Hebr. Uebers." pp. 985, 986, § 589).

Another controversial tract, described as a dialogue "Inter Petrum Christianum et Moysem Hæreticum" (Codex Merton, 175*b*, f. 281; in Coxe's "Cat." p. 69), is said to have been written by Petrus Alphonsi (compare "Hebr. Bibl." xxi. 38). In Cambridge University, England, there is a manuscript of the fifteenth century bearing the title: "De Conversione Petri Alfonsi Quondam Judæi et Libro Ejus in Judæos et Saracenos," which is mentioned in Steinschneider's "Polemische und Apologetische Literatur," 1877, p. 224 (compare p. 235, No. 5, *s.v.* Epistola).

Alfonsi's fame rests chiefly on a collection of thirty-three tales, composed in Latin. This collection has enjoyed a most remarkable popularity, and is, on that account, an interesting subject of study in comparative literature. It is entitled "Disciplina Clericalis," or "A Training-school for the Clergy," and was often used by clergymen in their discourses, notwithstanding the questionable moral tone of some of the stories. The work is important as throwing light on the migration of fables, and is almost indispensable to the student of medieval folk-lore. Translations of it into French, Spanish, and German are extant; and Joseph Jacobs has recently discovered some of the stories at the end of Caxton's translation of the fables of Æsop, where thirteen apologues of "Alfonce" are taken from the "Disciplina Clericalis."

An outline of the tales, by Douce, is prefixed to Ellis' "Early English Metrical Romances." Nearly all the stories are adopted in the "Gesta Romanorum." Chapters ii. and iii. were done into Hebrew and issued under the title ספר חנך, "Book of Enoch," Constantinople, 1516; Venice, 1544 and 1605. An early French translation of this Hebrew extract was made prior to 1698 by Piques, and August Pichard published another version in Paris, 1838.

BIBLIOGRAPHY: The whole literature is put together and discussed in Steinschneider's *Hebr. Uebers.* (pp. 934–935). Mention should be made of the scholarly edition of F. W. V. Schmidt, Berlin, 1827, to whose notes Steinschneider offers very valuable emendations and parallels from Oriental and Western folk-lore. Steinschneider, *Manna*, 1847, pp. 102, 114; idem, *Cat. Bodl.* cols. 549, 550, 733, 734; idem, *Jewish Literature*, p. 174; the authorities mentioned in B. P[ick]'s article, *Pedro Alfonso*, in McClintock and Strong's *Cyclopedia*, vii. 864, 865; W. A. Clouston, *Flowers from a Persian Garden*, p. 100, London, 1890; Jacobs, *Jewish Ideals*, 1896, pp. 141–143, lays stress on Alfonsi's importance as one of the intermediaries between Eastern and Western folk-lore, and quotes one of Caxton's stories from "*Alfonce.*"

G. A. K.

ALFONSINE TABLES: A series of astronomical tables giving the exact hours for the rising of the planets and fixed stars; compiled at Toledo at the request of Alfonso X. of Castile about the year 1252, the date given in the Latin editions being the year 1251. They are of considerable importance to the history of astronomy and even to that of geographical discovery, since it was by trusting to a revision of them by Abraham Zacuto that Columbus was enabled to reach the New World. According to Zacuto, the chief compiler of the tables was Isaac ibn Sid, a ḥazan or cantor of the city of Toledo; and astronomical observations of his, dating from the years 1263–66, were seen by Isaac Israeli.

In what language the original tables were compiled is doubtful. The Latin portion refers to Jews in uncomplimentary terms; and it is therefore not likely to be the work of Ibn Sid, who is, besides, known as a translator from Arabic into Spanish of other astronomical works. The tables were supposed by Humboldt in his "Cosmos" to have been compiled at a congress of Christian, Jewish, and Mohammedan astronomers, especially assembled for that purpose by Alfonso. This myth has been exploded by Steinschneider, who traced the tradition to Zacuto. Strange to say, the Alfonsine Tables proper were for the first time translated from the Latin into Hebrew by Moses ben Abraham of Nîmes, at Avignon, as late as 1460; though this translation was of little consequence to the history of science. There are, besides, several Hebrew manuscripts containing commentaries and explanations for the use of the Alfonsine Tables, giving the canons or ruling principles on which they were compiled.

The Alfonsine Tables must not be confounded with earlier astronomical tables composed at Toledo between 1061 and 1080 by Abu Isḥaḳ ibn Al-Zarkali of Cordova, which were translated into Spanish at the request of Alfonso X. by Don Abraham Faquin about 1277. This translation has been published by Rico in "Libros del Saber de Astronomia," Madrid, 1865.

Still another set of astronomical tables was compiled in Spain for Pedro IV. of Aragon, about 1367, by Jacob ben Isaac Carsono. These tables were translated into Hebrew, and still exist in manuscript at Parma and at Rome. David Gans, author of "Zemaḥ David," mistook them for the Alfonsine Tables. See also Isaac ibn Sid.

J.

ALFONSO III. OF PORTUGAL. See Portugal.

ALFONSO V. OF PORTUGAL. See Portugal.

ALFONSO IX. OF LEON. See Spain.

ALFONSO: A mathematician of uncertain date, author of a treatise on squaring the circle, extant in a manuscript in the British Museum (additional manuscripts, 26,984). Alfonso claims in the prefatory remarks to have found and demonstrated the possibility of constructing a plane figure, equal—not merely approximately, but exactly—to the area of a given circle. He professes to have put an end to all doubts on the subject, such as were entertained by Aristotle, and controverts the opinions of Ibn Roshd and Ibn Sina, who had declared the demonstration to be impossible.

ALFONSO DE ALCALA. See Alfonso de Zamora.

ALFONSO BURGENSIS. See Abner of Burgos.

ALFONSO COMPLUTENSIS. See Alfonso de Zamora.

ALFONSO DE SPINA. See Spina, Alfonso de.

ALFONSO OF VALLADOLID. See Abner of Burgos.

ALFONSO DE ZAMORA: Spanish Marano of the sixteenth century; Hebraist and polemical writer; born in Zamora about 1474, and baptized in the Catholic faith in 1506. His father's name was Juan de Zamora, and he likewise seems to have become a Christian. Alfonso was professor of Oriental languages for several years at the University of Salamanca. His pure Hebrew style leads Neubauer to suppose that he attended a Jewish school before going to the university. Owing to this proficiency, Cardinal Ximenes employed him for over fifteen years in the preparation of the Complutensian Polyglot, to which he contributed largely. He wrote a number of grammatical and lexicographical works, and composed in Hebrew and Latin, interlined, an epistle to the Jews in Rome, wherein he seeks to admonish them and convert them to the Christian faith. The letter entitled "A Letter from the Kingdom of Spain to the Jews in the Roman Community" (Alcalà de Henares, 1526) does not seem to have disturbed the Roman Jews; in fact, Rieger questions whether they ever received it ("Gesch. d. Juden in Rom," ii. 47, Berlin, 1895).

Among his writings, enumerated in the subjoined references, may be mentioned two Hebrew vocabularies, published in 1515; an introduction to Hebrew Grammar ("Introductiones Artis Grammaticæ Hebraicæ," 1526), now very rare (second ed., Alcalà de Henares); translations of and commentaries on portions of the Bible (Jeremiah, Isaiah, etc.); an introduction to the Targum, 1532; a polemic entitled "Libro de la Sabiduria de Dios" (manuscript in Escurial, see Kayserling, "Bibl. Esp.-Port. Jud." p. 118); and letters and miscellaneous correspondence preserved in manuscript at Leyden (Codex Warner, 65). In a letter, dated March 30, 1544, he states that he was seventy years old and still professor of Hebrew at the University of Salamanca (Steinschneider, "Leyden Cat." p. 281). In one place he also calls himself teacher of Hebrew at the University of Alcalà de Henares.

Rev.* 1895, vii. 398-417; Blau, *ibid.* ix. 476.

G. A. K.

ALFONSUS BONIHOMINIS: The name taken by the Latin translator or adapter of an anti-Jewish pamphlet, originally written in Arabic by Samuel abu Naṣr ibn Abbas, better known as Samuel Maroccanus (of Morocco). The first edition bears the title, "Epistola ad R. Isaacum Contra Errores Judæorum, ex Arab. Latine per Alfonsum Bonihominis." Nothing is known about the translator; and Steinschneider is probably right in suspecting that he is none other than Paul of Burgos. The translation was made during the first half of the fourteenth century. Alfonsus Bonihominis is said to have also translated from the Arabic into Latin a "Disputatio Abutalib Saraceni et Samuelis Judei" (Discussion between Abutalib, a Saracen, and Samuel, a Jew), which is still in manuscript (see Abbas, Samuel abu Naṣr ibn; Abner of Burgos).

Bibliography: Steinschneider, *Cat. Bodl.* Nos. 4407, 7055.

G.

ALFUAL (or, rather, **al-Fawwal**, "The Bean-Merchant"): The family name of a number of Spanish Jews (Steinschneider, "Jew. Quart. Rev." xi. 587), of whom the following are known:

Abraham Alfual: Of Tortosa; lived at the end of the fourteenth century. He is cited in the responsa of Isaac ben Sheshet.

Ḥayyim ben Judah Alfual: Of the eleventh century; mentioned in the responsa of Isaac ibn Megas.

Ḥayyim ben Judah Alfual: A rabbi on the island of Rhodes; lived in the sixteenth century.

He enjoyed a considerable reputation as a casuist. He is mentioned in the works of his contemporaries, Samuel di Medina (מהרשד"ם), David ben Abi Zimra (רדב"ז), and Joseph ibn Lab, who highly esteemed him.

BIBLIOGRAPHY: Michael, *Or ha-Ḥayyim*, No. 855.

Isaac b. Ḥayyim b. Judah Alfual: Cabalist; flourished in the second half of the sixteenth century; died 1579. Perhaps he is identical with the Alfual who lived in Chios in 1578 (Abr. de Boton, "Responsa," No. 24), and with the Isaac b. Samuel Ḥayyim, whom the author of the "Shalshelet ha-Ḳabbalah" mentions as a noted cabalist of Spanish origin (ed. Warsaw, 1889, p. 87). His posthumous work, "Nofet Ẓufim" (Drops from the Honeycomb), which was edited by his son, Ḥayyim ben Isaac Alfual, Constantinople, 1582, is now rare. It contains interpretations of the Torah, alphabetically arranged and based on the three cabalistic methods of exegesis; namely, *gematria*, *ẓirufim*, and *rashe tebot*—the numerical value, the combination, and the initials of words.

H. G. E.

Joseph ben Ḥayyim Alfual: Of Saragossa; lived in the thirteenth century.

Joseph ben Isaac Alfual: Lived in Huesca in the thirteenth century. He translated (1297) the Mishnah into Spanish, and the commentary of Maimonides on the section "Moed" from the Arabic into Hebrew. This translation is preceded by a poetical introduction in which each verse begins with the last word of the preceding verse (Steinschneider, "Hebr. Bibl." ix. 138; "Hebr. Uebers." p. 923).

Joseph ben Solomon Alfual: Wrote a commentary on the Canticles, a manuscript of which exists in the Vatican Library (see Salfeld in "Magazin," vi. 36, 204; *idem*, "Die Erklärer des Hohen Liedes," p. 175; and in "Hebr. Bibl." ix. 138).

Munajjim ibn al-Fawwal: Of Saragossa; lived in the eleventh century. According to Ibn Abi Oseibia, he was a physician of renown, and well versed in logic and philosophy. He wrote a work in Arabic, called "Kanz al-Maḳl," in the form of questions and answers, to which he added the rules of logic and the principles of physics (see "Ibn Abi Oseibia," ed. August Müller, ii. 50, Königsberg, 1884; Steinschneider, "Hebr. Uebers." p. 923).

Samuel ben Judah Alfual: Lived in Saragossa in the thirteenth century. G.

ALGABA, JACOB B. MOSES DI: Translator into Hebrew of the celebrated medieval romance, "Amadis de Gaul." The translation probably appeared at Constantinople between 1534 and 1546. A copy of the work, which is extremely rare, is in the British Museum (see the "Catalogue" of Van Straalen, p. 11, London, 1894).

The name Algaba, as Steinschneider suggests, may be either a patronym, or an apocope of the Hebrew word גבאי ("treasurer"). In the latter case its full form would be "Algabai."

ALGAZI, ABRAHAM BEN SOLOMON: Supposed to have lived at Smyrna in 1659, and to have been the son of the author of the book, "Shema' Shelomoh" (Solomon's Fame), Smyrna, 1659, containing homiletic explanations of a part of the Torah. Very little is known about his writings. J. CH.

ALGAZI, ḤAYYIM: Rabbi in Constantinople in the seventeenth century. He was a disciple of Joseph di Trani, and the author of a commentary on "Sefer Mesharim" (The Book of the Righteous), which is the part that treats of civil law in the ritual code "Toledot Adam wa-Ḥawwah," by R. Jeroham ben Meshullam (thirteenth and fourteenth centuries). This commentary was published, under the title "Netibot Mishpaṭ" (The Paths of Justice), in Constantinople, 1668 (see Steinschneider, "Cat. Bodl." col. 821). D.

ALGAZI, ḤAYYIM ISAAC: Author of the books: "Derek Eẓ ha-Ḥayyim" (The Way of the Tree of Life), "'En Yamin" (The Right Eye), "Sha'ar Yehudah" (The Gate of Judah); all published at Salonica, 1822. J. CH.

ALGAZI, ḤAYYIM BEN MENAHEM: Rabbi of the island of Rhodes and Smyrna; lived in the seventeenth century; author of "Bene Ḥayyai" (Sons of My Life), containing notes and novellæ in the sequence of the four Ṭurim. It was edited by the author's pupil, Meir Danon, Orthokoi (near Constantinople), 1712. Appended to it are the author's "Ḥiddushim," miscellaneous notes on Shebu'ot, Sanhedrin, Giṭṭin, etc., edited by Ḥayyim ben Isaac Raphael Alfandari.

BIBLIOGRAPHY: Benjacob, *Oẓar ha-Sefarim*, p. 80; Fürst, *Bibl. Jud.* i. p. 37.

D.

ALGAZI, ISRAEL JACOB: Great-grandson of Solomon Algazi the elder, and rabbi in Jerusalem in the eighteenth century. Besides contributing to dialectical, liturgical, and legal literature, he was the author of some valuable works on Talmudic methodology. Of these there exist: (1) "Ar'a de-Rabbanan" (The Land of the Rabbis), a treatise on Talmudic principles (Constantinople, 1745); reedited by Jacob Ayas with the commentary of Juda Ayas, his father, called "'Afra de-Ar'a" (The Dust of the Land) (Leghorn, 1783); (2) "Sheerit Ya'aḳob" (The Remnant of Jacob), consisting of homilies (Constantinople, 1751); the second part published at Leghorn, 1790; (3) "Neot Ya'aḳob" (The Habitations of Jacob), a volume of responsa and homilies (Smyrna, 1767); (4) "Shema' Ya'aḳob" (Hearken, O Jacob!), homilies on Genesis and Exodus, the first of which was delivered at the bar-miẓwah of his son and successor Yom-Ṭob (1739); (5) "Emet le-Ya'aḳob" (Jacob's Truth), on the laws concerning Scripture reading (Constantinople, 1764), of which Azulai made an epitome under the title "Le-David Emet" (David's Truth) (Leghorn, 1786), reprinted several times.

BIBLIOGRAPHY: Azulai, *Shem ha-Gedolim*, s. v. דובב; Steinschneider, *Cat. Bodl.* col. 1162.

D.

ALGAZI, MOSES BEN ABRAHAM: A rabbinical writer who flourished in Smyrna in the seventeenth century. He was the brother of Solomon Algazi the elder, and wrote annotations to "Dobeb Sifte Yeshenim" (Smyrna, 1671) and "Sefat Emet," two rabbinical works of his grandfather, Moses Benveniste the elder. The latter is a work on Hebrew etymologies published together with a poem of Isaac Tshelebi on the Hebrew words beginning with שׂ. According to Zedner, "Cat. Hebr. Books Brit. Mus." p. 766, it was published at Constantinople in 1799; but according to Benjacob, "Oẓar ha-Sefarim," p. 592, it was published there in 1722–23 and 1807.

BIBLIOGRAPHY: Azulai, *Shem ha-Gedolim*, s.v. דובב; Steinschneider, *Cat. Bodl.* col. 1769.

D.

ALGAZI, MOSES JOSEPH: Rabbi at Cairo, Egypt; born 1764; died after 1840, in which year he became prominent through the energetic support which he gave to Crémieux and Salomon Munk in their effort to establish schools for the Jews of Egypt. The movement was a direct outgrowth of the eastern journey of Montefiore, Crémieux, and Munk on the occasion of the Damascus blood-accusation, when the low plane of enlightenment prevalent among Egyptian Jews became manifest to the philanthropists. Munk issued an eloquent appeal in Hebrew and Arabic (September, 1840). At Alexandria, the local rabbi, assisted by a prominent layman, Valensino, headed the movement, while at Cairo, which contained about three hundred Jewish families, Algazi, though already seventy-six years of age, seconded by a leading layman, Adda, made such a strenuous effort on behalf of the plan that on Oct. 4, 1840, two schools—one for boys and one for girls—were opened. The institutions received the name of the Crémieux schools; and their sponsor made himself responsible for a European annual contribution of 6,000 francs toward their maintenance.

Algazi, moreover, showed an additional trait of tolerance when, despite the opposition of numerous fanatics, he supported Munk in the proposal to admit to the schools the children of the Karaites, of whom there were at Cairo about one hundred. The establishment of these institutions signified the beginning of secular culture among the Jews of modern Egypt; and soon after this event Moses Fresco, chief rabbi of Constantinople, issued a circular letter exhorting them to learn the language of the country.

Juden*, 2d ed., xi. 545 *et seq.*; Munk's appeal (in Arabic), in *Zion*, i. 76–78 (the Hebrew text in *Literaturblatt des Orients*, 1841, col. 103); Jost, *Annalen*, 1840, No. 52; 1841, Nos. 11, 16; Letter of the Ḥakam of Constantinople in *Allg. Zeit. d. Jud.* 1841, p. 16.

H. G. E.

ALGAZI (ALGHASI), SAMUEL BEN ISAAC BEN JOSEPH, of Candia (Crete): Talmudical commentator and historian, died shortly before 1588. He came of a family of scholars, both father and grandfather being known as Talmudists. Joseph Solomon Delmedigo bestowed upon Algazi the title of "Gaon," at the same time declaring that he was the most prominent pupil of Delmedigo's ancestor Judah ben Elijah. Algazi does not seem to have left Crete; but the fact that this island belonged to Venice made it easier for Algazi's name to become known in Italy. Men of prominence ranked him among the great teachers of his time. Of his works, only a small chronicle, "Toledot Adam" (The Generations of Adam), was published by his grandson Samuel ben Moses Ẓarfati (Venice, 1605). This chronicle, which is based largely upon the "Yuḥasin" of Abraham Zacuto, begins with Adam and concludes with the burning of Hebrew writings in Italy on Sept. 9 (New-year's Day), 1553. His consolation was that in the small towns of Crete, God had saved a "brand from the burning"; meaning thereby that in Crete the Talmud and other Hebrew books had been spared.

Oddly enough, Algazi fixed upon the year 1583 as the beginning of a new era from which he reckoned all dates; for example, he would cite Adam and Eve as having lived in the year 5343 before that year. He was in a measure influenced by the Midrash, from which probably he obtained the names of the wives of Seth, Noah, and Terah. He placed the exodus of the Ephraimites from Egypt and their annihilation in the year 2924, or 2,420 years after the Creation. Concerning the Christian chronology he says:

> "1672 years since the Nazarene, according to our tradition; according to their reckoning, 1613 since the birth [of Jesus]; that is, the eighteenth year of the one hundred and ninety-sixth cycle; that is, the two hundred and seventy-seventh year of the Seleucidan era, equivalent to the three hundred and seventeenth year of the Second Temple, and the fifteen hundred and eighty-second year since the foundation of their religion."

It would appear from this that he wrote his little book in the last four months of 1582; besides, he counts since September, 1553, thirty years.

Algazi chronicled the birth of Mohammed and the taking of Constantinople just as he did the most important events in the history of the persecution of the Jews or of their literary history. He knew the German Jews as well as the Spanish.

Algazi's unpublished works are: (1) "Biur 'Aruk Gadol," a commentary on the book "Yereim" by Eliezer of Metz, which was given the same importance as Joseph Caro's "Bet Yosef"; (2) "Ḳebuẓat Kesef," a concordance to both Talmuds, Mekilta, Sifra, Sifre, and the Midrash Rabbot; (3) "Tanḥumot El," which is said to have contained glosses on the Psalms and probably sermons also; (4) "Derashot" (Disquisitions), which are probably identical with the "Shiṭot" (Novellæ) to eighteen Talmudic treatises and to the ר״ן (Rabbenu Nissim), mentioned by Delmedigo.

A. Le.

ALGAZI, SOLOMON NISSIM, the Elder: Rabbi in Smyrna and in Jerusalem in the seventeenth century. He must not be confused with his grandson and namesake, a rabbi in Egypt in the eighteenth century. Solomon Algazi was a prolific writer on all topics of rabbinical literature, and has won distinction by his treatment of Talmudic hermeneutics and methodology. His attempts to rationalize Talmudic Haggadot, while not scientific in a modern sense, still prove him to have been superior to the average Talmudist of his age. His best work is his Talmudic methodology, "Yabin Shemu'ah" (He Will Elucidate the Message), which is written in the form of a commentary to Joshua Levi's "Halikot 'Olam" (Venice, 1639; Leghorn, 1792). He wrote two other works on Talmudic methodology; namely, "Halikot Eli" (The Ways of My God; Smyrna, 1663), and "Gufe Halakot" (Principle of Halakah; Smyrna, 1675). Algazi was also the author of "Ahabat 'Olam" (Everlasting Love), a series of homilies (Constantinople, 1642; Dyhernfurth, 1693); "Hamon Rabbah" (The Great Multitude), an index of the Biblical passages quoted in Midrash Rabbah (Constantinople, 1644); "Zehab Sebah" (The Gold of the Hoary Head), on Talmudic Haggadot, (Constantinople, 1683); "Leḥem Setarim" (Secret Bread), Talmudic novellæ (Venice, 1664); "Me'ullefet Sappirim" (Overlaid with Sapphires), selections from the Zohar (Smyrna, 1665; Amsterdam, 1703); "Raẓuf Ahabah" (Inlaid with Love), or "Apirion Shelomoh" (Solomon's Palanquin), notes on the Tosafot to the haggadic passages in the Talmud (Smyrna, 1659; Amsterdam, 1710); "Ta'awah la-'Enayim" (A Delight to the Eyes), notes on the Talmudic Haggadot (Salonica, 1655; Sulzbach, 1687).

Bibliography: Azulai, *Shem ha-Gedolim*, p. 82; Steinschneider, *Cat. Bodl.* col. 2277; Fürst, *Bibl. Jud.* i. 37, 38.

D.

ALGAZI, YOM-ṬOB BEN ISRAEL JACOB: Commentator; lived at Jerusalem in the eighteenth century; author of a commentary on Naḥmanides' "Hilkot Bekorot" (Laws Concerning Primogeniture), which was published at Leghorn in 1794. Some consider him to be the author of

"Shalme Ẓibbur," which is generally assigned to his more learned father, Israel Jacob Algazi.

ALGEBRA, SCIENCE OF. See Mathematics.

ALGERIA: Country on the coast of North Africa, now a French colony, but formerly belonging successively to Carthage, Rome, the Saracens, and the Ottoman Turks. The claim is put forth by several Jewish Algerian communities that they were established in North Africa at the time of the destruction of the Temple. Though this is unwarranted, the presence of Jews there since the first centuries of the common era is attested by epitaphs ("C. I. L." viii. 8423, 8499; "Bulletin Archéologique du Comité des Travaux Historiques," No. i. xiii. 64), from which two inferences may be drawn: first, that since the Jews mentioned bear Latin names, most of them came from Italy; secondly, that since the proportion of Jewish inscriptions to the great mass of Latin-Algerian inscriptions is very small, the number of Jews was not large. Under the fairly tolerant Vandals the Jews probably multiplied; for Justinian in his edict of persecution respecting North Africa, proclaimed by him after the overthrow of the Vandal empire, mentions them in the same category as Arians and heathens ("Novellæ," xxxvii.).

In the seventh century an important addition to the Jewish population was made by Spanish immigrants, who, fleeing from the persecutions of the Visigothic king Sisebut and his successors, escaped to Mauritania, and settled in the Byzantine cities. Whether they mingled with the Berber population, making converts among them, is an open question, to which, however, Arabic historians give an affirmative answer. Ibn-Kaldûn categorically maintains that several Berber tribes professed Judaism: the Nafusah in Ifriḳiyyah (Tunis and a department of Constantine), the Faudalawah, the Fazaz, the Madiunah, the Bahlulah, and the Ghayyathah in the Maghreb al-Aksa (in the west of the department of Oran and Morocco). The powerful tribes of the Jarua and of the Aurès, whose queen, the Kahina Diḥya, for a long time kept the Arabian generals in check, also practised the Jewish religion. Ibn-Kaldun adds that the existence of Judaism among the Berbers lasted until the reign of the founder of the Idriside dynasty. This prince devoted himself energetically to stamping out all traces of Judaism from his empire; but certain present usages among the tribes of the Aurès, such as house-cleaning at Passover time and Sabbath observance, must be considered as survivals of that religion. Moreover, some contend that certain portions of the tribe of the Henansha (south Constantine), leading in all particulars the pastoral life of the Arabs, still observe the religion of Moses.

Arabic Domination.

Under Arabic domination the situation of the Algerian Jews was what that of "the People of the Book" (*Ahl-al-Kitab*) has always been in Moslem empires. Though they were compelled to pay the poll-tax (*jizyah*), the régime was relatively tolerant, and they maintained the free exercise of their religion. At the same time they were always exposed to the caprice of a prince or to an outburst of popular fanaticism. On several occasions under Idriside emirs they suffered persecution, but under the Aghlabites they experienced real tranquillity, and even a fair amount of favor. Two Jewish physicians, both named Isḥaḳ ben Amram, appear to have attained a certain standing at the court of Ziyadat-Allah I. and of Ziyadat-Allah III., and to have been the confidants and counselors of those princes. The Almoravide dynasty seems to have left the Jewish communities of the Maghreb in peace; but the fanatical Almohades, who overthrew it (1146), followed a totally different policy toward the Jews. The first Almohade, 'Abd al-Mu'min, made them the object of frequent persecutions. In pursuance of a fanciful belief, of which it is impossible to find the least foundation in Moslem tradition, he pretended that Mohammed had permitted the Jews the free exercise of their religion for only five hundred years, and that if, at the expiration of that time, the Messiah had not appeared, they must be forced into Islam by fair means or foul. His successors pursued the same course, and their severe measures produced either emigration to the east or forced conversions. Becoming suspicious of the sincerity of the new converts, the Almohades, in order to distinguish them from Moslems of longer standing, obliged them to wear a special garb. Under the various dynasties, which after the fall of the Almohades divided the Maghreb among themselves, the Ḥafsides of Tunis, the Banu Ziyan of Tlemçen, and the Marinides of Fez, the situation of the Jews was somewhat improved. At any rate their situation was far better than that of Jews across the Mediterranean in Christian Spain; and the African coast cities became the natural shelter for refugees from Spanish persecutions.

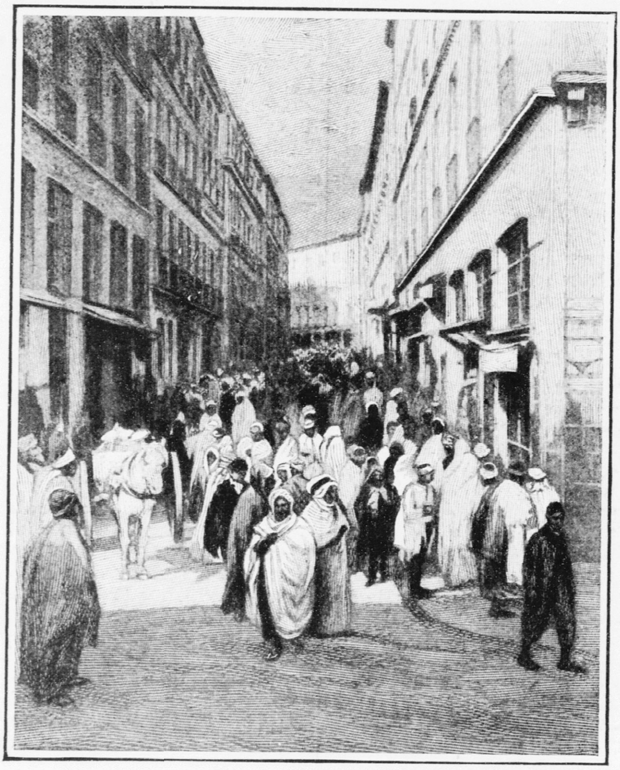
Spanish Immigration.

In 1391, in consequence of that terrible uprising against the Jews which steeped Castile, Aragon, Andalusia, and the Balearic Isles in blood, groups of immigrants landed at Algiers, Oran, Mostaganem, and Bougie, penetrated into the cities of the interior, and settled there with the permission of the Moslem authorities. They had to pay a capitation fee of a doubloon for admission into the land. On the whole, they were well received by the Jewish communities already there, but for some time they formed separate groups.

The ancient Algerian Jews were known as "wearers of turbans," the newcomers as "wearers of birettas." Greatly superior to the African Jew in culture and in intellectual and commercial activity, the Spanish Jew soon gained the upper hand, and from the first years of the fifteenth century rabbis who emigrated from Spain are found at the head of nearly all Jewish communities in Algeria: at Algiers, Isaac ben Sheshet Barfat, known by the abbreviation "Ribash," and Simon ben Ẓemaḥ Duran I., similarly called "Rashbaẓ"; at Oran, Amram ben Merovas Ephrati; at Constantine, Joseph ben Menir and Maimun ben Saadia Najar; at Medeah, Saadia Darmon; at Tlemçen, Abraham ben Hakin and Ephraim Ankawa; at Bougie, Benjamin Amer, etc.

Henceforth the number of Jews in Algeria continually augmented, the increase being most marked when a large immigration into Africa took place at the end of the fifteenth and the beginning of the sixteenth century. After the expulsion of the Jews from Spain (1492, 1502) four to five thousand of them repaired to Africa. An old chronicler says: "Those who arrived at Oran were so numerous that the Arabs, on seeing their vessels, thought that enemies were descending upon them and killed a number; but afterward the Moslem prince took pity on them, and, through the intervention of an influential Jew of the country named Dodiham, permitted them to land. He had board cabins erected outside the city for them and the cattle they brought with them." The conclusion may be drawn that these new immigrants found in the Algerian cities well-constituted Jewish communities, full of vitality, by which they were absorbed, despite their own strength and importance; for, in the first place, the division of the Jews into two groups, African and Spanish, that has existed at Tunis up to our own times, ceased in Algeria after the middle of the Turkish period; and, in the second place, Arabic has remained the current speech of the Algerian Jews, while the contrary is the case at Tetuan and Tangiers, where Spanish is the vernacular of the Jews.

At first Algeria did not offer the Jewish refugees from Spain a very secure asylum. When Cardinal Ximenes took Oran in 1509, he overwhelmed the Jews with his impositions; Peter of Navarre, in his conquest of Bougie (1510), pillaged, massacred, and reduced to slavery a considerable number of Jews.



Jewish Quarter of Algiers, After the Riots (1898).

Turkish Domination.

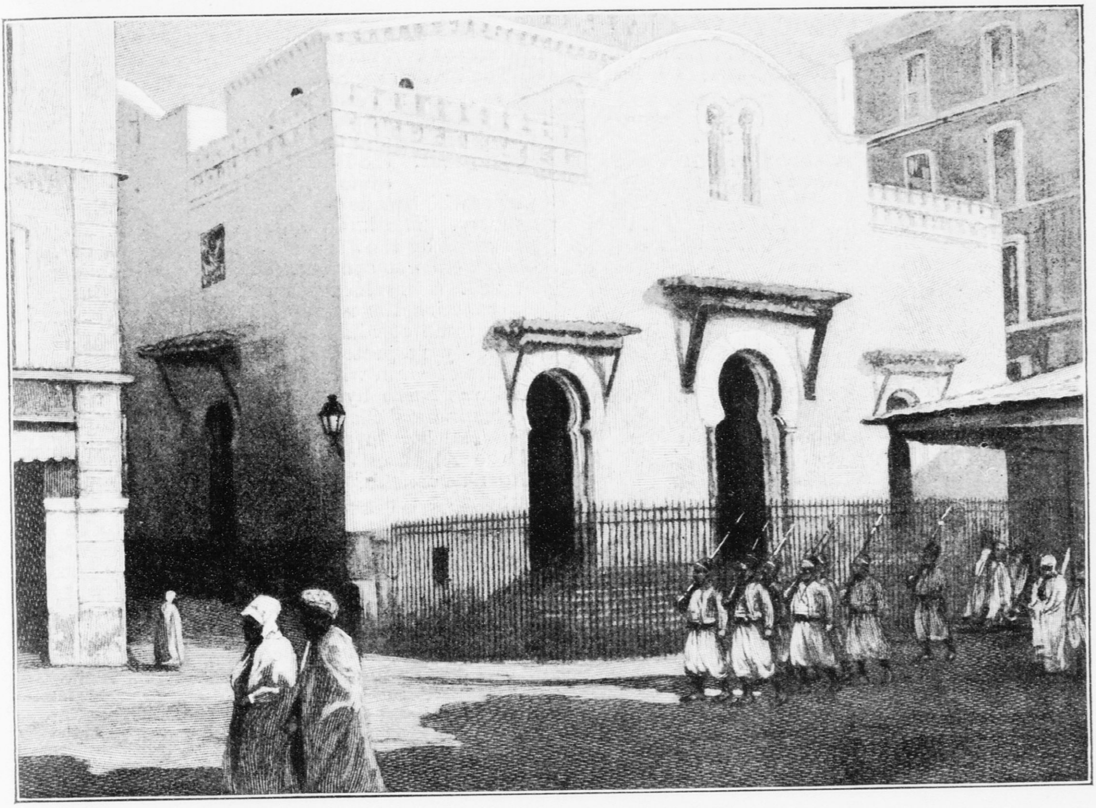
But under Turkish domination, from 1519 onward, during the sixteenth, seventeenth, and eighteenth centuries, the Jews in the towns of the regency of Algiers enjoyed a fair amount of security, being practically guaranteed the free exercise of their religion and the liberty to administer their own affairs. However, they were despised, subjected to annoying treatment, forced to pay heavy taxes, and, if they complained, punished with the utmost rigor. In addition they were exposed to arbitrary acts at the hands of petty local tyrants. The pasha of Tuggurt, Mohammed al-Akhal ben Jallab, wished to convert the Jews to Islam by force, and the deys of Algiers on several occasions handed over the houses of the Jews to the populace for pillage. But it was chiefly in the villages occupied by the Spaniards and exposed to the wars between the regency and the Catholic kings that the Jews suffered from active fanaticism—the fanatical hate inspired by the Inquisition. The Spaniards in possession of Tlemçen in 1563 killed or enslaved fifteen hundred Jews there, and in 1669 Taxardo expelled from Oran the Jewish population, proscribed the free exercise of Judaism, and replaced the synagogue by a church dedicated to San Christo de la Patienza. It is no wonder, then, that the Algerian Jews publicly demonstrated their joy on several occasions when the Turks were victorious over the Spaniards. The following curious fact is worthy of mention: Emperor Charles V. sent a Jew of Oran named Jacob Cansino (1556) to represent him at the court of the emperor of Morocco, and to protect the interests of Spanish subjects in that country; the descendants of this Jacob Cansino, Isaac, Ḥayyim, Aaron, and Jacob, in direct succession from father to son, filled the office of consuls of Spain in Morocco until 1666.

In the eighteenth century certain Jewish communities were reestablished or enlarged under the friendly rule of Turkish deys. Among the chief of these is the present community in Oran. In 1792, after the final evacuation of the city by the Spaniards, the dey Mohammed al-Kabir invited the Jews of Tlemçen, of Mostaganem, of Mascara, and of Nedroma to live there. On condition of the payment of certain taxes, and of building within fixed limits, he conceded to them a piece of land between what is now Chateau-Neuf and Saint-André. At Constantine the dey Salaḥ donated to the Jews of the region some land with indefinite boundaries between the Souḳ al-Aseur and the gate of El-Ḳantara. They established themselves there, erected buildings, and peopled that part of the city up to the desert.

In the seventeenth century a new Jewish element found its way into the chief cities of the regency, especially at Algiers. These Jews from Leghorn, Italy, called Gorneyim, soon attained great importance as social economic factors. It was their commercial activity that brought them to Algiers, and in the course of the eighteenth century they became the bankers of the deys, intermediaries between them and the European powers, and their respected and influential counselors, almost even their ministers.

The Communities.

The organization of the Jewish Algerian communities developed in the course of time. Definite information concerning the system during the Turkish period is in existence, and a short summary may be given. Placed at the head of the community was a *muḳaddam* selected by the Arabic or Turkish governor of the city or the region. The muḳaddam was the official representative of the community, and the sole legal intermediary with the Moslem authorities for all administrative and financial affairs. He was assisted by a council (*ṭobe ha-'ir*), appointed by himself, which, apart from its administration of the general affairs of the community, saw to the levying and collecting of the taxes imposed on the Jews of the country. The rabbinical tribunal possessed two judicial functions. In purely religious matters, it settled ritual questions and, if necessary, inflicted penalties, fines (*ḳenas*), excommunications (*ḥerem*), and flogging (*malḳot*); in civil matters it exclusively pronounced judgment on questions pertaining to personal relations and succession. The muḳaddam executed the sentences. In civil matters other than those involving personal relations, the rabbinical tribunal was not necessarily the sole authority; the Moslem cadi had the same power if the parties concerned were agreed in bringing their differences to him, or when only one of the litigants was a Jew. The administration of religious matters was entrusted to various officials, hierarchical in character, in the following order: *gizbar*, *gabbai*, *ḥaber*. The first had the care of the synagogue and supervised the expenses attendant on the service. In certain cities the title of gizbar was merely honorary and was purchasable through donations. The gabbai and the ḥaber attended to mortuary ceremonies, and the latter took an important part in marriage celebrations. It was his duty to conduct the bride from her parents' home to the residence of her husband.



THE SYNAGOGUE AT ALGIERS.—SENTRY RELIEF DURING THE RIOTS (1898).

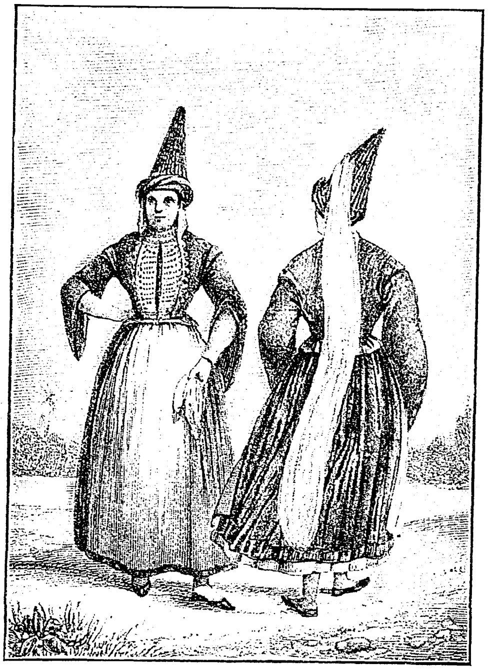
The revenues of the community were at first derived from taxation on articles of consumption levied on certain trades (the butcher's trade and the sale of Passover bread). Collections and voluntary gifts supplied the rest. There were generally four large collections a year: at the New-year, for the housing of the poor; on Yom Kippur eve, for food for the poor; at Ḥanukkah, for clothes for the poor; at Purim, for defraying the expense of the Passover.

The Algerian Jews were forced to reside in a restricted quarter, analogous to the Ghetto of medieval Europe, and called by various names: *ḥarrah* and *sharah* in the provinces of Algiers and Constantine; and in the province of Oran, *mellah*, which is still the name that it bears in Morocco. Among the tribes, the Jews lived apart under the authority of the sheik. Their situation was wretched and precarious, and more so under Turkish than Arabic domination. Distinction, of course, must be made between the Leghorn or Frankish Jews and the native. The Turks imposed on the latter the most difficult drudgery without compensation, and subjected them to endless annoyances. They were officially obliged to wear a special costume: a *shachiah*, a skullcap of dark-colored cloth, a gray burnoose, and shoes without heels (*tcharpi* or *bettim*). The women dressed in a caftan, without the veil worn by Moslem women to cover their faces. Entrance into the mosques was absolutely prohibited to Jews, and before certain particularly venerated mosques they were compelled to take off their shoes. They were forbidden to ride upon a horse, an animal set apart for Moslems only, and could use only asses or mules; nor were riding-saddles permitted, merely pack-saddles and panniers. Through their muḳaddam, they had to pay to the Moslem authorities the taxes imposed by Islam on "the People of the Book." In certain cities they were subjected also to the same taxation as the Moslems. At Medeah, the *gharama*, payable by the entire population, was apportioned equally to the Jewish and Moslem communities, the latter numbering six thousand, the former only six hundred.

Religious antagonism and the scorn of the Moslems

Relations of Jews and Moslems.

for all those who denied the mission of Mohammed did not, however, create insuperable barriers between them and their subjects. On the contrary, there are still traces of the intercourse that undeniably existed between the two peoples. Unity of language, daily life side by side, and the economic position rapidly attained by the Jew in the slothful Moslem society, greatly contributed to create common usages and observances. It was not rare that rabbis commanded great respect from Arabs, and at the present day (1901) the Jews of the country zealously claim as sainted rabbis a number of highly venerated *walis*, Sidi Ya'kub (Jacob) and Sidi Yusif (Joseph) at Tlemçen, Sidi Yousha' (Joshua) ben Nun near Honaïn, etc., all bearing Biblical names, whom the Arabs, in consideration of their high qualities, exalted after their death to the dignity of Moslem *Marabouts*. The tombs of these illustrious personages have become sanctuaries, the resorts of pilgrims of both races, before which they practise the same observances, sometimes highly fanciful. Moreover, every year an Arab of Algiers, a self-constituted guardian of one of these marabouts of disputed origin, goes to the province of Oran to make collections among the Jewish communities, and is generally very successful. In the same category with these facts is the well-known veneration paid by the Arabs to the synagogue of Bona.



Costume of an Algerian Jewess.
(From Jungmann, "Costumes, Mœurs et Usages des Algériens" (1837).

The existence among the Jews of a large number of usages and superstitions is to be attributed wholly to Moslem influence. Such are: the custom among women of mutilating their faces on the death of their kindred; belief in the sorcery of the jinn; and confidence in the efficacy of white fowls placed under the sick-bed, etc. These beliefs are widespread, and ministers of religion have difficulty in combating them.

For four centuries the family of the Duran provided heads of the community at Algiers. In other cities, owing to the emigration of 1391, Spanish rabbis in the course of the fifteenth century obtained the leadership of all the Jewries. At Tlemçen was the well-known Ephraim Ankawa (d. 1422); at Oran and Tlemçen, Abraham Abi Zimra, Isaac Abi Zimra, then Alal ben Sidun (fifteenth century), Joseph Alashkar, and Judah Ḥalaz (sixteenth century), and the family of the Gavisson, originally from Seville and Granada, who left Spain after 1492. At Constantine is the tomb of Ben Menir, surnamed "He-Ḥasid," who arrived there probably after the end of the fourteenth century. His successor was Najar, author of various casuistic and juristic treatises.

The French Conquest.

The French conquest freed the mass of Algerian Jews from the Turkish yoke. They welcomed it as a veritable deliverance—which it was—and the very day after the entrance of the French troops at Algiers, they became devoted allies of the civilizing power which made an end of Turkish barbarity in that country. The knowledge of the Arabic language possessed by the Jews made their services, of which they were not sparing, extremely valuable to the French. The roll of honor of the military interpreters contains the names of a number of Algerian Jews, some of whom died on the field. According to highly respected authorities, the brunt of the defense of Oran when besieged by Abd el-Kader in 1833 was borne by the Jews. Therefore it is easy to comprehend that from 1830 to 1870 opinion has been shifting in the direction of the assimilation of the Algerian Jews with the French citizens. Magazine articles, various publications, and the resolutions of the general councils did not cease since 1845 to pronounce such an assimilation to be most profitable for the future of French Algeria. And this desire, frequently expressed, naturally found an echo in the various legislative decisions, which, in the forty years before 1870, pretended to regulate the legal status of the Algerian population. In these decisions the statutes concerning the Israelites were always double in character. In the first place they clearly distinguish between Jew and Moslem among the natives; and in the second place, they more and more approximate the Jewish element to the French. To mention instances: after Aug. 10, 1834, the authority of the rabbinical tribunals was considerably restricted; henceforth they decided only on matters of marriage, divorce, and liturgy; and seven years later they were completely suppressed (ordinance of Feb. 28, 1841), though "prétoires" of the Moslem cadis in the meantime continued to be in operation. The decree of March 15, 1860, which in penal matters subjected the natives of the territories of the commando to martial law, was not applicable to the Jews, who, no matter in what part of Algeria they lived, were tried before the criminal courts of the civil law. The Mosaic law in secular matters had been suppressed by the statute of June 16, 1851, and the suppression was confirmed by the *Senatus-consulte* of 1865, which in addition, according to article 2, admitted native Jews to all the rights of French citizens on the demand of each individual. In 1866 they were granted a special representation in the municipal councils of Algeria. Finally, the decree of Oct. 24, 1870, better known as the decree of Crémieux, was the last stage in the long journey toward the legal assimilation of the Algerian Jews. It naturalized them as a whole, and, conforming to the principles of the Revolution of 1789, suppressed Judaism as a nationality in the new France of Africa, but permitted it to exist as a religion recognized by the state. Such in the twentieth century is the situation of the Jews of Algeria. They are French citizens, and since 1870 they have made praiseworthy efforts to show themselves worthy of their new status. Their children attend the schools and colleges of Algeria, and every year a number enter the large schools of Paris.

Recent Riots.

Within recent years a strange phenomenon has manifested itself—active anti-Semitism attended by mob violence and bloodshed. The political anti-Semitic party had but one aim, to oppress the Jew, to drive him, if possible, from the country. To that end pamphlets were written, speeches were made, special papers, like "L'Algérie Française" and "L'Anti-Juif," were started, anti-Jewish songs were composed, lengthy books were written; all means were devised for making the life of the Jew unhappy. Jewish merchants were boycotted, indigent Jews could not avail themselves of the free hospital service open to others, attempts were made to render them ineligible to public office, and if Jewish children were not actually kept out of the public schools, they did not receive the same treatment as the others.

During February, 1897, an association of students made public manifestations against a Jewish professor recently installed at Algiers: but the signal for unleashing popular hatred was a common brawl at Mostaganem, begun by a party of cyclists from Oran, and ending in violence, pillage, and the complete sacking of the synagogue (May 18, 1897). The evil spread, and the same scenes were enacted at Aïn-Tedeles, Oran, Aïn-Temouchent, and several other places. "A bas les Juifs!" "Mort aux Juifs!" rang through the whole province. Jews were unsafe on the streets; stores and homes were plundered and many of them were wounded. From this time manifestations continued to be made, disturbances very frequently occurred, and street brawls were the order of the day. Justice, to put it mildly, was tardy; the police were lenient to the anti-Semites, and offenders against Jews received ridiculously small penalties. Hopes were founded on the new governor-general, Lépine, who assumed office at the end of 1897; but his policy was not sufficiently strong, and equally violent riots occurred in Algiers in January, 1898. The leader was Max Régis, elected mayor of Algiers in November, 1898. Other outbreaks occurred in July, 1898; February, April, and September, 1899, and the anti-Semites were victorious in the elections of May and November, 1898. By December, 1899, there was a sensible improvement; Jonnart, the new governor-general, in his reply to the grand rabbi's address of welcome, declared himself against anti-Semitism, but the anti-Semites were victorious in the municipal elections in all three provinces.

It is difficult to assign causes for the peculiar and violent character of Algerian anti-Semitism. Some ascribe it to jealousy created by the Crémieux decree. But the leaders of the movement were not natives who might be affected by such jealousy. It may be due to social conditions in Algeria. There is a large element of foreign adventurers of mixed nationalities who were too rapidly naturalized and who, disappointed in their hopes of making fortunes quickly, were ready to accept the teachings of clericalism and to turn against the easiest victims of their passions. The natives simply followed the lead of these agitators.

Religion and Religious Organization.

The religious organization by consistories is similar to that in France. Since July 10, 1861, the consistories have received legal recognition, and are managed by a rabbi and six laymen elected by the Jews themselves for eight years. The constitution of the consistories is settled by the ordinance of Nov. 9, 1845, which defined all functions, fixed the amount of sums to be spent, and specified the purposes of expenditures. The decree of Dec. 31, 1895, and still more that of Aug. 23, 1898, limited the power of the consistories, whose number was augmented that each might embrace a smaller sphere. The consistory of Algiers includes, besides five congregations in Algiers, fourteen outlying communities, one of which, Medeah, has a rabbi; the consistory of Constantine includes twenty-one communities, of which Bona has a rabbi; and the consistory of Oran embraces thirty-eight, including the community of Tlemçen.

Vital Statistics.

Up to 1856 the census of the natives in Algeria was made by the military administration and gave only approximate figures. From 1830 to 1870 there was no increase in population among the Jews, but after 1881 many came from Morocco and Tunis, in order to enjoy the fuller liberty conferred on Algerian Jews by the Crémieux decree. However, after 1895 the tribunals struck from the list of voters many such Jews. Leroy-Beaulieu gives the population of native Jews in 1891: Algiers, 14,895; Oran, 19,794; Constantine, 12,875—that is, a total of 47,564 out of a population of 4,169,650. Hazell's "Annual" (London) for 1900 gives the Jewish population as 50,000. The average number of births a year for the years 1891, 1892, and 1893 was 2,698, or 56.72 to 1,000 souls; the number of deaths was 1,812, or 38 to 1,000. This is a comparatively large death-rate, due to great mortality among infants.

W. MA.

ALGIERS: A seaport of northern Africa; capital of the French colonial province of Algeria. The origin of its Jewish community, like that of all Algerian communities, is shrouded in obscurity. Doubtless a Jewish population existed at Algiers when the massacres of 1391 drove a number of refugees from Spain and the Balearic Isles to Africa: but probably it was not large; and the general opinion is that the real foundation of the Jewish community at Algiers should be attributed to the Spanish rabbis that settled there in the fourteenth and fifteenth centuries. The names of two of these of some distinction have been handed down; viz., Isaac ben Sheshet and Simon ben Ẓemaḥ Duran. The Duran family—originally from Provence, but settled for a long time in Majorca—occupied, almost without interruption, up to the eighteenth century, the foremost rank in Algiers, and provided the community with numerous rabbis of scholarly attainments and men of high character.

The Spanish persecution following upon the conquest of Granada (1492) resulted directly in an increase in the Jewish population of Algiers. The latter city—up to this time a mere provincial one, and a bone of contention between the kings of Tlemçen and Tunis—was advanced, on the advent of the Turks about this period, to the rank of capital. The new capital of the deys naturally attracted a large number of Spanish immigrants; and the conquerors—avaricious corsairs—seeing a source of profit in the Jews, regarded an increase in the number of the latter by no means unfavorably. In 1518 Khair al-Din permitted Jews to settle in Algiers, assigned them a quarter of the city, subjected them to a tax, and restricted them from opening more than a limited number of shops.

At the end of the sixteenth century there were in the Israelite population of the city three classes: Jews originally from Spain, those from the Balearic Isles, and native Jews. They were grouped in about one hundred and fifty families; they engaged in trades and manufactures; and at their head was a *caciz*. Though they suffered from maltreatment at the hands of the Moslem population, it seems certain that they considered their lot less miserable under the domination of the Turks than under that of the Catholic kings; for the defeat of Charles V. before Algiers in 1541 inspired real joy in the victims of Spanish fanaticism and their descendants. Prayers and poems of thanksgiving were composed on this occasion by the rabbis Moses 'Abd-al-Asbi and Abraham Ẓarfati; and long afterward these were recited in the synagogues on the anniversary of this memorable event. Two centuries later similar feelings of delight were manifested by the Jews of Algiers, when the expedition, led with a great flourish by O'Reilly against the corsairs' city, ended in lamentable defeat (1775).

Turkish Domination.

By the end of the seventeenth century the number of Jews in Algiers had increased considerably: a traveler in 1634 estimated them at 10,000. At that date the differences in origin had become less marked; and although a distinction might be made between the "Cheklien" (Jewish immigrants from Spain) and the "Kapossiem" (old native Jews), they all had the same customs, led the same life, and spoke the same language—Arabic blended with Spanish and Hebrew. Their position was always rather precarious. Events but little serious in themselves were often attended by after-consequences which included the pillage of the Jewish shops, and sometimes even the massacre of the proprietors.

Entirely different was the condition of a new Jewish element, that of the Leghorn, or Frankish, Jews, commonly designated "Gorneyim," who, from the beginning of the eighteenth century, added their numbers to the Hebrew population of Algiers. The first of these to attain celebrity was Sulaiman Jakete, farmer of the taxes on wax under the deys Ali Sha'ush and Mohammed ibn Ḥasan, of whom he was the trusted adviser. In the course of the century the Gorneyim acquired an ever-increasing importance in the economic and political life of the regency. Tolerably Occidentalized, they fell generally, by the régime of the capitulations, under the authority of the European consuls, and were the usual intermediaries between the consuls and the Turkish authorities. On the other hand, their activity, their knowledge of affairs, and their great wealth assured them wide influence over the deys, of whom they were often the bankers, agents, and even the political advisers. At the close of the eighteenth century two Gorneyim especially, Joseph Bakri and Naphtali Busnash, had attained a predominant position. The dey Ḥasan granted them a monopoly of the grain trade; during the dearth of 1795 they supplied France with a considerable quantity of wheat on credit; and on their advice the dey authorized a loan to the French "Directory" of five million francs, the credit for which was eventually transferred to them. Thirty years later the settlement of this loan was attended with the most serious consequences. Ḥasan's successor, Mustapha, owed his elevation to the influence of Busnash, who was his banker, and in whose hands he was but a tool. In Mustapha's reign the secret hate cherished by the janizaries and the Moors against the all-powerful Gorneyim manifested itself in a terrible riot. Busnash was killed at the gate of the dey's palace by a janizary, who, firing a pistol at him, cried out ironically, "Hail, king of Algiers!" The populace attacked the Jewish shops; a massacre ensued, which the dey, out of fear, countenanced; while the French consul sheltered in his house two hundred Jews in danger of their lives.

The Leghorn Jews.

In succeeding years the Gorneyim regained a part of their influence. Dey Ḥasan (1818–30) enforced the claim of the heirs of Bakri and Busnash in regard to the loan of 1795; and the difficulty arising on this occasion was the original cause of the definite rupture between the regency and France, of the expedition of 1830, and of the French conquest of Algeria. Despite the high position acquired by the Gorneyim under the regency in the eighteenth and nineteenth centuries, the less important Jews of Algiers were very harshly treated by the Turkish authorities. They were subjected to continual vexations: and at the time of the march on Algiers the French generals found, without shelter outside the walls, more than three hundred Jewish families, whom the dey had mercilessly driven from the city in anticipation of a siege.

Out of a total population of about 97,000, the Jewish residents of Algiers numbered in 1900 nearly 10,000, of whom 1,200 are of foreign birth. Large numbers of Jews are engaged in commerce and petty traffic; but since the charge has recently been made that they have unfairly monopolized all the trade in Algiers, it may be well to present some figures showing the proportion among them that follow handicrafts. There are 250 shoemakers; 155 tinners and blacksmiths; 200 tailors; 40 joiners and cabinet-makers; 70 house-painters; and 100 watchmakers and jewelers. Before the anti-Semitic troubles of 1897–99 the Algiers Bureau of Charity assisted about 600 families; and 1,200 have been aided since.

Handicrafts.

At the head of the community are a consistory and a grand rabbi, the latter being appointed by decree of the president of the French Republic on the recommendation of the Central Consistory of Paris. There are, in addition, a considerable number of native rabbis and of minor officials, appointed by the consistory and paid by the community, and six honorary officials called *gizbarim*. Algiers has nineteen synagogues, of which six are official and thirteen private. The oldest of the former was founded in 1866; of the latter, nine existed before the conquest, the remainder being of comparatively recent establishment. Among the rabbis at Algiers before the conquest, besides Barfat and Duran already referred to, may be mentioned Judah Ayyas, Moses ben Isaac Meshiḥ, Ibn Ḥayyim, Joseph Azubib, and Nehoraï Azubib. Its native rabbis included Isaac ben Samuel, David Zaïs, Ẓemaḥ Duran, Judah Amar; and among its grand rabbis sent from France were Michel Weil, Lazare Cohen, Abraham Cahen, Isaac Bloch, Moïse Weil, and Abraham Bloch.

W. MA.

ALGUADEZ (אלגואדיש, אלגודיש), MEIR B. SOLOMON: A Castilian court physician and chief rabbi of the fifteenth century; exact dates of birth and death unknown. He was presumably related to Don David Alguadez, a brother-in-law of the treasurer of Portugal, Don Juda, and to Salomon Alguadez, who lived in Peralta, in Navarre, in the year 1414; perhaps also to Abraham Alguadez, who resided in Vitoria in 1461. According to Zacuto, Meir Alguadez studied the Talmud at Toledo under the direction of Judah b. Asher, and also devoted himself to the study of medicine, which he followed as a profession. He "wandered from town to town, from land to land," though his residence was at the court of the king of Castile. Because of his skill, and of the successful cures he had effected, the king appointed him his body-physician. He enjoyed such favor with King Henry III. that he was made chief rabbi of all the Jewish communities in Castile. He ranked among the most influential men of his time. Salomon ha-Levi of Burgos, who, as Paul de Santa Maria, or Paul de Burgos, became bishop of Cartagena about 1393, addressed to him a Hebrew satire on the festival of Purim, and received in rejoinder the satirical letter entitled "Be not like thy fathers!" (אל תהי כאבותיך), which had been written by PROFIAT DURAN, who had been forced to undergo baptism in 1391, but soon after publicly returned to Judaism.

Meir Alguadez was always on the alert to defend Judaism and Jews, and was so highly esteemed by the Jewish communities of Castile that on his death they exhibited their gratitude by exempting from all communal taxation his widow, Bathsheba, and his daughter, Luna, who had married Don Meir ibn Alfakar of Toledo.

Though much occupied in other ways, Meir Alguadez found time for literary work. At the instance of his patron, Benveniste ibn Labi, of Saragossa, he translated "Aristotle's Ethics" from the Latin of Boëthius into Hebrew. He intended in the same manner to make Aristotle's "Œconomica" accessible to his coreligionists. About 1400 he wrote a number of prescriptions for various diseases, to which his pupil, Joseph, added others, and which the historian, Joseph ha-Kohen (Genoa, 1546) translated from Spanish into Hebrew under the title "Meḳiẓ Nirdamim," but did not publish. The translation of the "Ethics" was published by Isaac Satanow (Berlin, 1790).

Nothing definite is known concerning the last years of Don Meir Alguadez. The accusations that he poisoned the weakly and long-suffering King Henry III., or that, influenced by Paul de Burgos, he caused the desecration of the host, and being brought to torture, confessed it and was barbarously executed, were long ago characterized by the Spanish historians themselves as mere fables. Don Meir probably died before 1413, the date of the disputation at Tortosa; had he been alive, he would certainly have been present.

ALGUM or **ALMUG:** A tree, the identity of which is uncertain. Jastrow, "Dict." *s.v.*, suggests that it may be coral-wood; others, that it may be brazil-wood (so Kimḥi) or red sandal-wood. The name "Almug" (I Kings, x. 11) is said by some authorities to be a corrupted form or transposition of "Algum" (II Chron. ii.).

According to I Kings, x. 11 and II Chron. ix. 10, 11, the Almug was imported from Ophir; while, according to II Chron. ii. 8, algum-trees were obtained from the Lebanon mountains. The latter statement increases the difficulty of identification. Unless the words "out of Lebanon" be regarded as a gloss, the simplest solution seems to be that Algum and Almug were originally two different trees—as already suggested by Celsius—which have been confused with one another. Its wood was used by Solomon in his building operations, more particularly for terraces, stairs, and balustrades; it served also for making harps, psalteries, and other musical instruments (see the commentaries of Thenius, Keil, Kittel, and Benzinger on the Biblical passages in question and Talmudic and Midrashic references in Jastrow, *l.c.*). See Perles, in "Monatsschrift," xxxviii. 135.

G. B. L.

ALḤADIB (Alchadib, אחדב, חרב, חאדף. חארב, "Jew. Quart. Rev." x. 530 = hunchback): Name of a family of which representatives are known from the beginning of the fourteenth to the end of the seventeenth century. The following list includes the more important members:

Abraham ben Solomon Alḥadib: Judge in Corfu in 1530.

Eliakim Alḥadib: Lived in Lepanto, seventeenth century.

Ezra ben Solomon Alḥadib: Venice, 1607. Samuel Aboab addressed a letter to him in 1647.

Ḥayyim Alḥadib: In the seventeenth century, who, according to Sambari's "Chronicle" (Neubauer, "Mediæval Jewish Chronicles," i. 140), composed an index "Meḳor Ḥayyim" to the Scripture passages found in homiletic works.

Isaac Alḥadib: Lived in the seventeenth century, in Cairo; mentioned by Sambari (*l.c.*, p. 162, two lines from bottom of page).

Isaac ben Solomon ben Ẓaddiḳ Alḥadib: An astronomer of note, in Castile (1370), in Sicily (1396–1429 ?), a pupil of Judah ben Asher and follower of Samuel Ẓarẓa. He composed a work on chronology called "Oraḥ Selulah" (Plain Way), in which he follows Al-Raḳḳam, the authority for astronomers in Tunis. He adds four tables taken from Al-Battani and one from Al-Kammad. According to a manuscript in private hands, he wrote also אגרת כלי חמדה (Letter on Desirable Instruments), in which he speaks of the instruments which he had invented in Sicily. According to Steinschneider, this is not the same as his work כלי המכוצע (Planimetrical Instruments). He wrote also a treatise on theological terminology. According to Buxtorf, he was the author of "Leshon ha-Zahab" (Golden Tongue) on the weights and measures mentioned in the Bible. Finally, he is the author of a hymn on Esther—giving his own full name in acrostic—as well as of an addition to the poem with which Moses Handali opened his commentary on the Hebrew translation of Al-Fergani's astronomy. (See Steinschneider, "Munich Catalogue," p. 92; 2d ed., p. 256; "Hebr. Uebers." pp. 550, 556; "Hebr. Bibl." vii. 112; Zunz, "Z. G." p. 536.)

Jacob ben Moses Alḥadib: Lived in 1442; the writer of "Codex de Rossi, No. 950."

Johanan Alḥadib: Lived in the sixteenth century.

Judah Alḥadib: Lived in 1566, in Lepanto.

Menahem Alḥadib: Lived in the first half of the sixteenth century, in Arta.

Menahem ben Samuel Alḥadib: Lived in the sixteenth century, in Safed.

Moses ben Isaac Alḥadib: Lived in 1560; judge at Patros.

Samuel Alḥadib: Lived in the beginning of the fourteenth century.

Samuel Alḥadib: Lived in the second half of the sixteenth century, in Safed.

Solomon ben Menahem Alḥadib: Lived in 1543, in Venice.

Solomon ben Samuel Alḥadib: Died of the plague while still young, in 1349.

Bibliography: Zunz, *Z. G.* pp. 423, 424; Steinschneider, *Cat. Bodl.* No. 5307; *Jew. Quart. Rev.* x. 530.

"'Al ha-Rishonim" is chanted as an introduction to the piyut to some elaborate melody traditionally associated with the occasion. Three such melodies are widely known, one for Passover, the second for the other festivals, and the third for the Sabbaths of the 'Omer period. None of these melodies has any pretensions to antiquity, the material of construction, quoted partly from related sections of the service, being clearly traceable. But those for the Passover and for the 'Omer Sabbaths succeeding it may be quoted in juxtaposition to illustrate a principle underlying all the Jewish musical uses, in accordance with which the character, even the mode, of a melody varies rather according to the occasion on which it is to be chanted than according to the sentiment of the text. Here there is the grateful gaiety of the Passover melody in contrast with the plaintiveness of that for the later season of sad memories; the difference being obviously not suggested by the text, but by the historical associations of these two seasons of the Jewish year. F. L. C.

AL-ḤARIZI, JUDAH B. SOLOMON B. HOPHNI (surnamed **ALḤARIZI**): A celebrated Hebrew poet of the early part of the thirteenth century, who lived in Spain and traveled in the Orient. Neither the date of his birth nor that of his death is known. Possessing a masterly knowledge of Hebrew and Arabic, he seems to have been appreciated as a poet at home and on the various journeys he made to southern France. His disposition was a genial one; he loved what was witty and sparkling.

Translator.

His first introduction to the literary world was in the shape of a translation of the celebrated "Makamat" of the Arabic poet, Hariri of Bozra, in which, in inimitable style, he faithfully adhered to the sudden rimes and abounding quaint conceits of his original. But, while a master of witty poetry, he was a serious student as well, understanding and appreciating the value of such works as Maimonides' "Commentary on the Mishnah" and "Moreh Nebukim," both of which he likewise translated—the former only in part—from Arabic into Hebrew. In an evil hour for himself, he determined to travel to the Holy Land, as his distinguished predecessor, Judah ha-Levi, had done fifty years before. Unfortunately times had changed: Jewish poetry and the love for it had considerably declined since Ha-Levi had brought both to the highest pitch. This decline was not altogether without cause;

there were many poets in his days, though of far inferior rank; hence there was a certain indifference in the hearts of the former patrons of Hebrew literature. Alḥarizi was made to experience this painfully on his travels: he received no such welcome as Judah ha-Levi had; and he plaintively deplored the passing of the bygone times when Solomon Gabirol, Judah ha-Levi, and Moses ibn Ezra gained such valuable rewards from the lovers of literature. He found the well-springs of liberality closed to him; and thus he sang:

> "The fathers of song, Salómo, and Judah,
> And Moses besides—all shone in the west,
> And rich men were rife then who purchased the pearls of their art;
> How sad is my lot now times are so changèd!
> The rich men have gone, and their glory hath set!
> The fathers found fountains—for me ne'er a fountain will start!"

The "Taḥkemoni."

But though his journey brought him disappointment and possibly suffering, it stimulated him to the production of his masterpiece, "Taḥkemoni." He gives the following account of its origin: Speaking of his previous work of translating Hariri, he says, "Thus I gave what was demanded—by the Andalusian rich commanded—and I brought home unto each Israelite—the work of that rare Ishmaelite." Leaving his home, he traveled eastward by sea; and then there dawned upon him the folly of having given his efforts solely to the translation of an Arabic author:

> "As if the word of the Lord of life—in Israel were no longer rife; like her of old—of whom we are told—'other vineyards I protected—my own, alas, that I neglected!'" (Cant. i. 6).

The Makama.

He therefore determined to write an original work in Hebrew (1218–20). He gave it the name of "Taḥkemoni," "the wise one" (?); see II Sam. xxiii. 8. As the "narrator" (see below) he selected Heman the Ezrahite, and as the "hero" of the narratives, Heber the Kenite. Although this was designed to be a wholly original work, he followed the model of his first favorite, Hariri, by adopting from him the peculiar form of the *makama*: that curious species of riming prose, with its desultory leaps and coincident assonances, its verbal quips and countless conceits. But what gave it exceptional zest for Jewish readers was Alḥarizi's deft interweaving of whole Biblical sentences, the incongruity of which as to the circumstances described, but their witty fitness in their new application, could not fail to evoke a constant series of smiles in the scholarly reader who knew his Hebrew Bible well. The makama is quite an old and familiar form of Arabic poetry; as early as 1054, the Arabic poet, Aḥmad Abu al-Fadhl b. Husein, of Hamadan in Persia, composed several hundred makamas exactly in the style later adopted by Hariri. Concerning the makama, Kämpf says, "The Semites had no theater; but they had story-tellers, who related deeds and happenings in truly dramatic style." In this species of spoken drama, two personages were supposed to take part in constant dialogue: the hero who told of his doings, and the narrator who served as chorus to him, drawing him out, as it were, by interrogating him. Each episode described by the hero is the subject of a single makama (poem), and has no close connection with that which follows, but its rambling, riming prose is extended and diversified by the interpolation of smaller poems, in absolutely strict rhythm and rime, and generally of exalted strain. The manner of opening a makama may be understood from the following:

> "From Siddim's vale—to Chaldea's pale—went I—and when arrived—the thought revived—to try—all to see—that there might be—rising, growing—coming, going, of the worst and the best, east and west. As I strode on the road—one day I espied on—a stone—all alone—at the highway side—a stranger sitting—resting him. As befitting—I addressed him—aiming at interesting him—as travelers do—when a few—or two—chance to meet—in a country street. And I said, What cheer—neighbor dear?—Whence hast thou strayed—and what thy trade?—He said, From daring feat—to daring feat—as it chances—my roving pleasure ever glances.—A fox I chase—or run a race—with the mountain sheep; no hill too steep—or vale too deep—for me to pace. Said I, Tell me, since thou so much hast wandered—some wondrous thing that thou hast pondered. He answered," etc. ("Taḥkemoni," makama x., "The Chanticleer's Reproach").

The episodes of the "Taḥkemoni" cover a wide field of remarkable experiences, varying from a banquet given to him in an important city of Babylonia (where, as the guest, Heman [Alḥarizi] tells of all the noble poets he has known in Spain) to a battle between Arabs "in the tents of Kedar," a debate between an ant and a flea, or a reproof by a village chanticleer escaped from the butcher's knife.

If any purpose can be said to underlie Alḥarizi's work, more serious than the one he himself alleges, namely, the entertainment and refreshment of wearied minds, it may possibly be discerned, as Kämpf suggests, in his constantly implied reminders to wealthy men that they are bound to patronize and protect those that make scholarship their wealth and art their worth. His own experience gave point and pith to these admonitions. But if his own sufferings served likewise as the inspiration of his song, one feels gratified to learn from himself that the bow of constant hope shone steadily for him. As he himself says:

לו ענני שחק כעיני יזלו,
לא דרכה רגל אנוש יבשת,
אמנם דעו כי לא למי נח לבד
כי גם לדמעי נראתה הקשת.

> "If heaven's clouds should weep as my poor eyes have done,
> Then were for man on earth no path that still were dry;
> But know, that e'en for me, as erst for Lamech's son,
> With all this deluge stood a rainbow in the sky!"

His Criticisms.

Alḥarizi's journey seems to have led him first to Alexandria, then to Palestine. In 1218 he was in Jerusalem, as he states in the twenty-eighth makama of the "Taḥkemoni." He mentions at the same time that it was in 1199—on the recapture of the holy city by the Mohammedans from the Christians—that the Jews were again allowed to live there. From Palestine his path led him to Syria, and there Damascus held him for a time. He has no high opinion of the Damascenes: they are "lovers of the wine-cup." Of one of the poets of the city he says that "when he a ditty writes or eke an ode—it sounds as if some pot or kettle did explode." Again, "they are nothing but shallow rimesters whose flow of eloquence or diction soon runs dry, sirs!" As a general thing, however, Alḥarizi's opinions concerning his rivals, Jewish or non-Jewish, were always more vehement than just (see Awani). Whether he visited Greece or not is not clear: he has no respect for Grecian poets, who, he says, "mingle roses and thorns" (of style) promiscuously. From the superscription of the last makama, it appears that in 1204, the year Maimonides died, he was back again in Toledo; but there is no intimation of his fate thereafter.

A remarkable illustration of his verbal dexterity may be mentioned: it is in the eleventh makama of the book which is entitled "Maḥberet Shirah bat Shalosh Leshonot" (The Song of the Three Languages). It contains an interpolated poem, twenty-three lines long, every line of which is written one-third in Hebrew, one-third in Arabic, and one-third in Aramaic.

The Arabic portion rimes with the Hebrew throughout; the Aramaic portions have one rime, and that a two-syllabled one, maintained throughout the whole poem.

Alḥarizi seems to have been a man of brilliant qualities, but a prey possibly to his impatience due to his trials and sufferings. Many of the better poems —those interpolated in the various makamas—betray a height of noble feeling which marks the true man of sentiment. Of his merits as a master of Hebrew versification there can be no doubt. Abraham b. Isaac Bedersi (end of the thirteenth century), in his "Ḥereb Hamithapeket" (Flaming Sword), mentions him together with Gabirol, Ibn Ezra, and Judah ha-Levi (Zunz, "Z. G." p. 463). The poet Immanuel of Rome speaks in the preface to his "Maḥberot" (Makamas), with reverence of him who wrote poetry and composed parables "diverse each one from the other," such as "the ancients knew not"; and he placed his poems, "taken with his sword and with his bow," in the names of other men, although he alone composed them; in the name of Heber the Kenite . . . thus he took in his hand "the rod" of his intelligence and "therewith performed the miracles." (The words in quotation-marks are Biblical phrases, in the mosaic style of writing then prevalent among Hebrew scholars.) In his twenty-eighth makama, he places Alḥarizi in paradise, in the choice company of Maimonides and Mattathias, the high priest of the Hasmoneans.

The following is the list of his writings:

Original works: (1) Commentary on Job (Zunz, p. 213); (2) the "Taḥkemoni"; (3) "Sefer 'Anaḳ" (The Necklace), an imitation of Moses ibn Ezra's work of the same name (Zunz, in "Allg. Zeit. d. Jud." 1839, p. 388); (4) a small work, "Sefer Goralot" (Book of Lots); (5) "Refuat Gewiyah" (Healing of the Body), a poem on dietetics (Steinschneider, "Monatsschrift," 1846, p. 279; Zunz, "Z. G." p. 213); (6) an introduction to the Hebrew language (see Neubauer, "Notice sur la Lexicographie Hebraique," p. 208).

Translations: From the Arabic—(1) Maimonides' Mishnah Commentary: "Zera'im." (2) Maimonides' "Moreh Nebukim"; published by L. Schlossberg, London, 1851, with notes by Scheyer. (3) Makamat Al-Hariri (Hariri's Makamas), under the Hebrew title "Maḥberot Ithiel," ed. Chennery, London, 1872. From the Greek—(4) Aristotle's "Ethics" and "Politics"; reprinted in Leipsic, 1844. Graetz (*l.c.* note) mentions likewise (5) a translation of an essay by Galen against speedy interment, and (6) of a gynecological treatise by Sheshet Benveniste ("Segulah le-Harayon"; see also Kämpf, ii. 26); and (7) "Sefer ha-Nefesh" (Book on the Soul), also ascribed to "Galen, the prince of physicians," but translated from the Arabic (published by Jellinek, Leipsic, 1852). (8) "Musare ha-Filosofim" (Dicta of the Philosophers), done from Greek into Arabic by Ḥonain ben Isaac.

BIBLIOGRAPHY: The fullest and best appreciation of Alḥarizi is in Kämpf's *Nicht-Andalusische Poesie Andalusischer Dichter*, Prague, 1858; *Allg. Zeit. d. Jud.* 1837, Nos. 81, 86; 1838, No. 7; Krafft, *Jüd. Sagen*, Ansbach, 1839; *Literaturblatt des Orients*, 1840, Nos. 9, 11, 12, 13, 14; Lebrecht, *ibid.* 1845, p. 43; Zunz, *Z. G.* pp. 213 *et seq.*; Dukes, *Ginze Oxford*, 1851; *Monatsschrift*, 1846, p. 279; Grätz, *Gesch. d. Juden*, vii. 83; Steinschneider, *Hebr. Uebers.*, see index. The *Taḥkemoni* has been frequently edited: Constantinople, 1540, 1583, Amsterdam, 1729, Vienna, 1845, Berlin (part only), 1845, by Lagarde in 1883, Kaminka, 1899; but on this last, see adverse criticism in *Zeit. f. Hebr. Bibl.* iii. and iv. The Berlin edition (1845) was made by Kämpf, who revised, annotated, and vocalized the text, and translated it into German. A French translation was made by Carmoly (Brussels, 1843–44). Some portions of the *Taḥkemoni* were translated into Latin by Ure (London, 1772); into French by Silvestre de Sacy (Paris, 1833); and into English by F. de Sola Mendes in *Jew. Chron.* London, 1873. For Alḥarizi's contribution to the liturgy, see Zunz, *Literaturgesch.* p. 471; concerning his journey, see Kaminka, in *Monatsschrift*, 1900, pp. 217–220.

F. DE S. M.

'AL ḤEṬ (על חטא): The longer confession of sin (*Widdui*), each sentence of which begins with the formula, "Forgive us for the sin we have committed before Thee in . . ." the particular sins then being enumerated in alphabetical order. In the Sephardic usage, only one sin is mentioned for each letter, but among the Ashkenazim two sins are enumerated under each, the formula for the second being, "And for the sin," etc. This confession is inserted in each "'Amidah" of the Day of Atonement and its repetition, with the exception of the closing prayer, "Ne'ilah." Among the Sephardim an abbreviated form is used in the repetition. According to northern custom the confession is chanted at length in a minor key, and is broken into four sections by the prayer, "For all these, O God of forgiveness, forgive us, pardon us, grant us remission!" The interruption is marked by the employment of a special chant for the preceding couplet, the same strain being elsewhere used in the penitential prayers, and, singularly enough, also for the responsive formula inviting the company at table to join in the grace after meals. The music is as above.

ALI B. ABRAHAM AL-TAWIL: Karaite scholar; flourished at Ramleh, Egypt, in the twelfth century. He was the author of a commentary on the Bible, no longer extant. Indeed, his very name remained unknown until recently, when it was brought to the attention of scholars by the publication, by G. Margoliouth, of Al-Hiti's chronicle, which mentions Ali among the Karaite doctors of the twelfth century.

BIBLIOGRAPHY: Margoliouth, in *Jew. Quart. Rev.* ix. 434.

I. B.

ALI HA-LEVI BEN SOLOMON: Gaon; head of the academy at Bagdad in the first half of the twelfth century. His name occurs in an old Arabic responsum (Harkavy, "Responsen der Geonim," p.

186), also in "The Itinerary of Benjamin of Tudela" (ed. Asher, pp. 77 *et seq.*; and in Sambari, ed. Neubauer, "Med. Jew. Chron." i. 123), where he figures as the master of David al-Roi, the clever pseudo-Messiah, whom, under the name of Alroy, Disraeli has made the hero of a romance (compare Grätz, "Gesch. d. Juden," 2d ed., vi. 269 *et seq.*). Ali was probably the father of Samuel ha-Levy, who also presided over the college at Bagdad, and who, though at first a friend of Maimonides, in the year 1190 in an open letter attacked the latter's doctrine regarding resurrection.

As to the orthography of the name, some writers render it "Eli" (Asher, *ib.* English translation, p. 122; Harkavy, "Zeit. f. Hebr. Bibl." ii. 125), which is preferred by Steinschneider ("Jew. Quart. Rev." xi. 484), while others have it "Ali" (Epstein, "Monatsschrift," xxxix. 512; Poznański, "Rev. Ét. Juives," xxxiii. 310; Kaufmann, *ib.* xvii. 304).

A poem addressed to Ali, the head of an academy, probably at Bagdad, on the occasion that his son, called Safi al-Din Joshua, had finished the Torah at the synagogue, was published by Steinschneider ("He-Haluẓ," 1856, iii. 151 *et seq.*) and has been thought to refer to the subject of this article (compare Kobak's "Jeschurun," Hebrew part, iv. 92, note). The same poem, however, has now been found again by Steinschneider in an anonymous Hebrew diwan which is contained in a manuscript bought in the Orient by E. N. Adler ("Jew. Quart. Rev." xii. 115 *et seq.*, and 202). The diwan points to the early part of the thirteenth century as the date of its author, and contains two other occasional poems addressed to Ali, who, therefore, can not be identical with the gaon of the preceding century. This, moreover, is confirmed by the fact that in an earlier poem ("Diwan Adler," No. 6) the poet appears to have lamented the death of a daughter of the gaon Samuel ha-Levi, who, as mentioned above, succeeded Ali b. Solomon in the presidency of the academy. It is quite likely, therefore, that the Ali eulogized in the diwan, which speaks of him as "a descendant of the Geonim" (No. 179, vs. 7 and 9), was the son of Samuel and grandson of the first Ali, and that he succeeded his sires in the exalted office which Samuel, in particular, had invested with great dignity.

H. G. E.

ALI IBN SAHL IBN RABBAN AL-TABARI (ABU AL-ḤASAN): Physician and writer on medical subjects in Irak about the middle of the ninth century; born in Taberistan. His father, Sahl, was well known as an astronomer and mathematician. For a time Ali lived at Rai, where Mohammed al-Razi was his pupil in medicine. From Rai he went to Samarra, and for some years acted as secretary to Mazyar ibn Ḳarin. He became a Mohammedan through the efforts of the Abbassid calif Al-Mu'taṣim (833–842), who took him into the service of the court, in which he continued under Al-Mutawakkel (847–861). Ali wrote the following works: (1) "Firdaus al-Ḥikmah" (Garden of Wisdom), called also "Al-Kunnash," a system of medicine in seven parts; (2) "Tuḥfat al-Muluk" (The King's Present); (3) a work on the proper use of food, drink, and medicines; (4) "Ḥafth al-Siḥḥah" (The Proper Care of Health), following Greek and Indian authorities; (5) "Kitab al-Ruḳa" (Book of Magic or Amulets); (6) "Kitab fi al-Ḥijamah" (Treatise on Cupping); (7) "Kitab fi Tartib al-'Ardhiyah" (Treatise on the Preparation of Food).

Bibliography: The chief authority is Al-Nadim (about 913–936), in his *Fihrist*, ed. Rödiger, i. 296, from which are drawn the notices in Al-Ḳifṭi, ii. 141, and in Ibn Abi Oseibia, ed. Müller, i. 309. Compare Leclerc, *Hist. de la Médecine Arabe*, i. 292; Wüstenfeld, *Gesch. der Arabischen Aerzte*, No. 55, p. 21; Brockelmann, *Gesch. der Arabischen Lit.* 1898, i. 231; Steinschneider, *Jew. Lit.* p. 194, and especially *Z. D. M. G.* liv. 46, where other authorities are cited; Grätz, *Gesch. d. Juden*, v. 224. An extract from the "Firdaus" is given by Schreiner, in *Monatsschrift*, xlii. 462.

G.

ALI SULEIMAN. See David of Fez.

ALIBI (literally, "elsewhere"): A form of defense by which the accused undertakes to show that he was elsewhere when the crime was committed. Such a defense could of course be made in the criminal procedure of the ancient Jews: for witnesses were admitted for the defense as well as for the prosecution; and the rules concerning the competency of witnesses and the mode of examination were pretty much the same for the witnesses on either side. It is therefore needless to speak here about the Alibi of the accused. But there is another kind of Alibi which is peculiar to the Talmudic law, dealing as it does with the presence or absence of the witnesses of an alleged crime from the place where it was committed. It is drawn from the passages about the "plotting witnesses" (עדים זוממים): "If an unrighteous witness rise up against any man . . . then shall ye do unto him as he has thought [plotted] to do unto his brother" (Deut. xix. 16–19, R. V.).

The law against the "plotting witness" applied to civil as well as to criminal cases. The underlying principle is thus set forth in Mishnah Makkot, i. 4:

The Plotting Witness.

> "Witnesses are not 'plotters' unless they are confuted as to their own persons. How is this? Suppose they say, 'We testify against such and such a man that he has killed somebody.' Now, if others should say to them, 'How can you say so? for the murdered man [or the supposed murderer] was at the time of the deed in our company at such and such a place.' This would not prove them 'plotters.' But if the opposing witnesses say: 'How can you testify so, seeing that you were with us on that day at such and such a place?' This proves them 'plotters'; and upon such testimony they may be put to death."

Two witnesses, being required to prove any fact, were called a set (כת); three witnesses were no more than a set (*ibid.* 7); and a new set of witnesses was deemed sufficient to refute the former set and to convict them of "plotting," provided they could prove an Alibi as to the two or three witnesses of the prosecution. But if these were at different places, the absence of each from the place where the disputed act occurred must be testified to by at least two witnesses.

Effect of Contradictory Testimony.

As to the casuistry of a case in which more than three witnesses (that is, more than one set) had testified, or in which one of the original witnesses was found to be disqualified by kinship or bad character, the balance of opinion is that the same set of counter-witnesses could refute and brand as plotters any number of original witnesses as they came up in separate sets.

The case is also put, in which witnesses (the first set) against the accused are branded as plotters by a second set, and those of the second set are exposed in like manner by a third set; that thereupon the man originally accused and the second set of witnesses would be punishable, and the first witnesses would stand justified. This process, following the opinion adopted in the Mishnah, may be continued indefinitely, as long as no execution of judgment has taken place. To this rule, however, R. Judah objects, on account of the mischief that would result from such encouragement of informers (*ib.* 5).

The Sadducees maintained that the false witnesses could not be punished until the sentence against the original defendant was carried into effect; but the

Pharisaic sages pointed to the words of Scripture, "as he had thought [plotted] to do"; not "as he did." However, any procedure against the plotting witnesses is to take place only after the defendant has been condemned; which rule is drawn from the words of Scripture, "soul for soul," the defendant being deemed dead when he is condemned.

Punishment of Plotting Witnesses.

In case the accused has been actually put to death upon false testimony, the plotters can not be punished; but when the judgment is only for stripes, or for money, or property, the execution of the judgment does not bar a prosecution of the plotters (Maimonides, "Hilkot 'Edut," xx. 2). Still, in all such cases the convicted plotters are rendered infamous, and can never be witnesses thereafter (*ib.* 1). It does not follow, however, that witnesses proving the absence of the witnesses for the prosecution from the *locus in quo* should not be heard at the trial, in a manner similar to other witnesses for the defense.

The punishment to be inflicted upon plotting witnesses when the defendant is condemned to death is distinct enough; but when he is condemned to exile in one of the cities of refuge for involuntary manslaughter, it does not suffice to send the false witnesses to the city of refuge: they must on the contrary be punished with stripes, on the ground that every offender against "thou shalt not" (negative commands) is thus punished, unless a different punishment is pronounced and is practicable.

An analogous case occurs where witnesses denounce a man of the priestly line as being the son of a divorced woman, which would render him unfit for the priestly function. In this case there can be no retaliation in kind, and the witnesses must be flogged (Mak. i. 1).

Indemnity.

Again, if the false witnesses testify that the defendant's ox has killed a human being, or that some one is a Jewish bondman, or has by theft incurred the penalty of being sold into bondage—they are flogged: such is the tradition (Mak. 2*b*). The words of Scripture (Deut. xix. 21), "eye for eye, tooth for tooth, hand for hand, foot for foot," offer no difficulty; for as this law was in other cases carried out by the award of a money-compensation, the judgment rendered on the testimony of the plotting witnesses for the loss of an eye, a tooth, a hand, or a foot, would be a judgment for money simply. In case the false witnesses are condemned to make good in money the amount of an unjust judgment, they are not punished with stripes; the rule being that "those who pay do not suffer stripes." The plotting witnesses pay between them only once the sum which the party against whom they testified would have lost by their falsehood (Mishnah Mak. i. 3, Gem. 5*a*).

In some civil cases it is not so plain how much injury would result from an unjust judgment; and here it seems that the sages felt the necessity for a calculus of probabilities. The Mishnah (Mak. i. 1) formulates these cases (of witnesses found guilty of "plotting"):

"We testify against N. N. that he has divorced his wife and has not paid her her jointure (*ketubah*). But [it is objected], will he not some day have to pay her that jointure? [Answer:] The judges should estimate how much a man is willing to pay of the given amount in acquittance of a jointure (inasmuch as it is payable only when the wife is widowed or divorced; while if she dies before the husband, no claim exists, since he is her heir). Or: We testify against N. N., that he owes A. a thousand zuz [$160] payable in thirty days (while in fact he owes him this sum payable in ten years). The judges should estimate how much a man will give to retain the money in his hand for ten years rather than for thirty days."

Such questions are often answered in modern times by life-tables, dower-tables, and, generally speaking, by the calculation of compound interest; but the Hebrew judges of early days had neither the statistical nor the mathematical elements on which to base their calculations. They had to guess as best they could. L. N. D.

ALIENATION AND ACQUISITION: The act of causing a thing to become the property of another—Alienation—is, in Roman and English law, the general term under which the change of title by gift, sale, or barter is treated. The rabbinical law looks at the transfer of property from the standpoint of the new, rather than of the old, owner: not from the view-point of him who alienates or parts with a thing, but of him who acquires ownership in it. The distinctions of the Mishnah and the discussions of the Talmud apply to *ḳinyan* (Acquisition). Acquisition is brought about in different ways, according to the nature of the thing to be acquired—a slave, land, a commodity, or a claim. As the old owner's title ceases at the same moment that the new owner's title begins, the Talmudic law of Acquisition covers the same ground as that of Alienation in the jurisprudence of more modern times. The leading maxims on Acquisition are given by the Mishnah in the first chapter of the treatise "Ḳiddushin" (Betrothals), which, beginning with the modes in which the right to a wife may be acquired, goes on to show how other rights are acquired,—for example, to a Jewish servant, a Canaanitish servant, a slave, land, etc.—and then how title is acquired in domestic animals, and other chattels (Ḳid. iv. 1). For the law touching commodities, and more especially for different kinds of currency, Baba Meẓi'a, iv. 1–2, must be consulted. Setting aside the cases of the Hebrew bondman and bondwoman, who can not be transferred to another master, and omitting also the means by which the "Canaanite bondman" may obtain his freedom, the following general rules are given:

Modes of Acquisition.

A bondman is acquired by the payment of money, by deed in writing (*shetar*), or by taking possession (*ḥazaḳah*) (Ḳid. i. 3). Animals are acquired according to their nature, by delivery to the purchaser, or by his removing or lifting them. The term most commonly used is *meshikah* (pulling, moving); and this is elsewhere applied to other movables (*ib.* 4). Things of value "bound by debt" (*aḥarayut*)—that is, land or things attached to the soil—and slaves are acquired by payment of money, by a written deed, or by taking possession (*ib.* 5). Other things, *i.e.*, movables, are in themselves acquired only by bodily removal; but they may be made an incident or accessory to land or immovables, and will then pass with these when the land or immovable thing is acquired as above (*ib.*). As a general rule, in the case of barter, when one thing of value becomes the price of another, the Acquisition of one immediately changes title in the other (*ib.* 6). But (see Acceptance) mere words of assent, though spoken by seller and buyer, or by donor and donee, in the presence of witnesses, have in themselves no force whatever.

The Alienation of land (*ḳarḳa'*) is to be considered first. Whatever is attached to the ground is treated as land, except ripe fruits (such as grapes), which may be sold separately in the same manner in which movables are alienated. The Acquisition of

Acquisition of Land.

land by the payment of money or by taking a written deed is derived by the Talmud from the incidents related in Jer. xxxii., especially in the 44th verse: "Men shall buy fields for money, and subscribe the deeds and seal them." It may be remarked that in Talmudic language the sealing of a written document (*sheṭar* or *get*) means neither more nor less than the subscription by the witnesses. No "sealing" of the deed of conveyance, however, is required in any of the passages of the Mishnah or Baraita which treat of such deeds; though such attestation is contemplated sometimes (see PRIORITIES). While the proceedings described in Jer. xxxii. 9–14 imply a custom of leaving a copy of a deed for land at some public or secret place (a custom equivalent to the modern law of recording deeds), the Talmud shows only slight traces of this useful institution; and these point to Roman influence (Ḳid. iv. 5; Yer. M. Ḳ. ii. 81*b*; Giṭ. 44*a*; Tosef., B. B. viii. 2; see Jastrow, "Dict.," under the words ארכי and ערכי).

It seems that while a deed is always sufficient to complete a gift of land, it is not sufficient of itself to close a sale of land until the price is paid, except in a case in which the owner "sells land on account of its badness"; that is, in order to get rid of it, and is therefore willing to risk the buyer's solvency rather than give him time to reconsider. Neither the Talmud nor the later standards undertake to define what is meant by a sale of land on account of its badness. But where the seller, upon giving a deed of conveyance, takes a bond for the whole purchase-money, or for the unpaid part; or when he states in the deed that he has received such a part and remains a creditor for the balance, he shows that he does not insist on cash in hand, and the sale stands, no matter how long the payment is withheld (Ḳid. 26*a*; B. M. 77*b*, *et seq.*). But a partial payment of the purchase-money, unless it be expressly stated that the rest is held over by the buyer as a loan, with or without a written conveyance, entitles the purchaser only to a proportionate share of the land. This share is taken from the most desirable parts (*'iddit*), or from the least desirable parts (*zibburit*), according as the seller or the buyer demands the rescission; he who declines to carry out the contract has the "lower hand" (*ib.* 77*b*). When the seller, after receiving part of the price, continues to dun the buyer for the rest, it is proof that he does not consider the transaction closed, except in the case already mentioned, where he has sold the field on account of its badness (*ib.*).

The Tosafists on this passage remark that in the practise of their time these distinctions were dropped, and that dunning for the price does not defeat the sale. But the great standard works, such as that of Maimonides and the "Ḥoshen Mishpaṭ," maintain the rule about the seller who, in the words of the Talmud, "goes out and in" after his money.

Modes of Possession.

Payment of the purchase-money is sufficient by itself to bind both parties, but only in countries in which it is the custom not to write deeds for the transfer of land: where the custom requires such a deed the money payment alone is insufficient (Ḳid. 26*a*). But the taking possession by the purchaser seems to be a full substitute for the writing of a deed. When possession is taken in the grantor's presence, his consent is implied; otherwise he must have given leave by such words as, "Take possession and acquire." Closing a fence or making a gap in it—no matter how small—or widening a gap, with a purpose of improving, or locking up a house, is an act of possession; and where the grantor delivers the key of a house, or the bucket of a cistern, which he has sold, such delivery is an authorization to take possession (Mishnah B. B. iii. 3, Gem. 52*b et seq.*). Walking up and down over a field does not secure possession of it; but where a footpath is sold, walking on it is enough; for this is its only use (B. B. 100*a*). Stony, unenclosed land, unfit for tillage, may be acquired by spreading fruit or letting one's cattle run over it (*ibid.* 29*b*). Of course, to sow or to reap or to gather fruit is an act of possession (*ibid.* 36*b*).

Where several parcels of ground are granted together, though they be in several countries and of the most diverse kinds or descriptions, the act of taking possession of one parcel gives the purchaser title to all, and binds the bargain as to all. However, if the parcels are sold for money, it seems that the price of all must be paid, else only those that are paid for will pass (Tosef., Ket. ii. 1; Ḳid. 27*a et seq.*).

The most effective manner of acquiring land is the so-called "purchase by kerchief" (*ḳinyan sudar*), under the rule given above, that where one thing is made the price of another, the Acquisition of the one changes title in the other also. Now as an "implement" (*keli*) may be acquired by lifting it, it can easily be arranged that a kerchief—or any other object, such as a needle, even if worth less than a peruṭah (the smallest coin)—be made the nominal consideration, the real price being paid as the parties may agree. The custom was known also in the old German law, under the name of *Mantelgriff* (grasping the mantle). It is derived by the Talmud from the passage in Ruth, iv. 7: "to confirm all things, a man plucked off his shoe and gave it to his neighbor." The change of ownership in the land being thus established, there was a foundation for the promise of the buyer to pay a further sum, the real price of the land; and the bargain was at once closed, so that neither side could withdraw (B. M. 47*a*). Only "implements" can be used thus; not coins nor "fruits" (*perot*), the latter term comprising grain and other eatables sold by quantity (*ibid.* Ḳid. 28*b*).

Sale Limited by Time.

The owner of land may sell or give it to another for a term of years—an arrangement which differs from a lease in so far as there is no stated rent—or he may sell and give its produce for a number of years. In the former case, the grantee may "build and tear down," or, in the language of the common law, he is a tenant "without impeachment or waste"; in the latter case, he is on the footing of an ordinary tenant. And just as land or its produce can thus be given for a stated time, one or more fruit-trees, or their fruit, can be thus sold or given. But the land or trees, or their produce or fruit, after the term of years, must be reserved to the original owner or his heirs. The grantee can not alienate any unexpired time to a third person; for the use of the land or its produce from and after a time in the future, being a "thing that has not come into existence," can not be the subject of sale or gift (Maimonides, "Hilkot Mekirah," xxiii.). Hence, what the English lawyer designates as a "strict settlement," and the layman calls "tying up an estate," is impossible under the Jewish law.

A slave (Canaanite bondman) is in the main acquired like land; and what in the case of land is said as to a deed in writing or payment in money, would apply also to the purchase of a slave, except that there could be no apportionment of the thing bought to the part of the price that is paid. But the form of taking possession (ḥazaḳah)—which is the third manner of Acquisition—naturally differs from that in the case of land. Any service rendered by the bondman to the buyer, such as carrying articles for him, dressing or undressing him, rubbing or drying him after a bath, is sufficient.

The best opinion is that lifting or pulling, as in the case of domestic animals or of lifeless animals, is not applicable to a slave: instead of the buyer lifting his new slave as an act of possession, it would be more proper for the slave to lift and carry his new master as an act of service. But the slave may, like land, be acquired by the form of bartering him for a "kerchief" or other implement (Ḳid. *22b*). And a slave, like land, is deemed a thing "bound for debt"; hence, other things of value may be transferred with him as incidents.

Sale of Movables.

The rule that movables (*meṭalṭelin*) do not pass by the payment of the price in money, but only by "lifting or removal .or delivery," is by most of the later teachers (Resh Laḳish dissenting, B. M. 47*b*) spoken of as a mere rabbinical institution. They explain that the Torah gives a binding effect to the payment of the price; but that the early sages feared that when the price was paid before delivery, room would be left for fraud, as the seller after receiving his money might claim that the buyer's goods had been burned or otherwise destroyed in his (the seller's) barn or warehouse, while already at the buyer's risk. Hence, in an unusual case in which such fraudulent practise is not to be feared, delivery is not required; for example, when the seller is in debt to the buyer for the price of another commodity (not, however, for money loaned), an oral sale in satisfaction of this debt is held binding without delivery (*ib.* Maimonides, "Hilkot Mekirah," v. 4).

While lifting is sufficient in all places, delivery to the buyer gives title only when it takes place either on the public highway or in a courtyard not belonging to either; and the buyer's own act of moving (*meshikah*) gives him title only when it is done upon the sidewalk, or in a courtyard that belongs to both; for in the act of moving, the buyer brings the article into his own domain. When goods of any kind are already on the grounds of the buyer, the bargain itself, price and all terms being fixed, is sufficient to change the title and bind all parties: when the goods are on the grounds of the seller, or of a warehouseman of the seller's choice, the buyer can attain the desired end by renting the place upon which the goods are placed. He thus comes into virtual possession (B. B. 85*a*, Ḳid. 25*b*, 27*a*).

When a flock of sheep or when very bulky articles are bought, a formal renting of the place on which they are found is the easiest mode of closing the bargain, as the "purchase by kerchief" seems not to have been in vogue in dealing with chattels.

The Talmudic passage as to the requisites for changing title in a ship (B. B. 76*a et seq.*) is rather confused; and the commentators are not agreed either as to its true meaning or as to which of the disputants is right and should be followed. It seems clear that when the ship is in deep water, in the open sea, delivery is sufficient; but it is not clear what degree of removal is required when it is in a narrow, half-private inlet comparable to a sidewalk, or when it is drawn up on land.

Exchange of Coins.

Goods may be sold or given away as an incident to land. The Talmud (Ḳid. 26*b*) mentions a case that happened in Jerusalem where a wealthy person wished to give to a friend goods of great value in different parts of the country. Upon the advice of competent lawyers that there was no other way to bring about his purpose, he went with his friend to a lot which he owned beyond the walls, and, announcing his intent to give him that lot and the goods named, put him in occupation of the lot, which thus included the goods. A written deed for the lot and the goods would probably have been just as effective. As movables are not acquired by payment of the price in money, a question arose over the exchange of two kinds of money, and it was held that the more current among them is to be treated as money, the other as a commodity: the delivery of the latter therefore binds the bargain, not the delivery of the former. The less current "buys" the more current. Thus "gold buys silver; copper buys silver; bad (*i.e.*, worn or uncurrent) pieces buy good pieces; bath-checks buy coins"; but inversely, the bargain can not be clinched (Mishnah B. M. iv. 1).

The Gemara (44*a*) on this section refers to an older opinion—evidently inconsistent with the Mosaic law—that, as between gold and silver coins, the former are to be considered money, and the latter "fruits," *i.e.*, commodities. But gold or silver bars are commodities for all purposes.

With certain exceptions which necessity has engrafted on the rule, things not yet in existence, or which do not yet belong to the person attempting the sale, may not be sold (see Acceptance). Things of undefined quantity, not yet weighed or measured, may be sold, such as a field of growing wheat, a stack of wine-jars, etc., subject, however, to recourse for overreaching (see Overreaching); for the law does not allow chancing bargains. But when the nature of the objects is unknown to either of the parties, *e.g.*, "I sell to you whatever this house contains," the sale is void; though the goods may have been formally "moved" to satisfy the requirements of meshikah.

Sanctity of Contracts.

Although a trade between buyer and seller could not be enforced after the money had been paid but the goods not been delivered to, or removed by, the buyer, it was deemed binding in the forum of conscience, as the Mishnah says (B. M. iv. 2): "He who collected His demands from the age of the Flood and the age of the Dispersion, will hereafter collect His demand from the man who does not stand by his word." Upon a precedent given in the Talmud, the custom grew up that in such cases, the party taking advantage of the rule of law, by asking the return of the price, or by refusing to deliver the goods and tendering back the price, would be summoned before the judges, and be solemnly informed by them in the above words: "He who collected," etc. (to which is added, B. M. 48*a*: "and from the men of Sodom and Gomorrah and from the Egyptians who were drowned in the sea"). According to the better opinion this was an imprecation, the public warning being evidently meant as a punishment, and in the hope that the fear thereof would induce men to carry out their contracts of sale, though a rise or fall in the price of the commodity (such as salt or wine) might cause loss (B. M. 48*b*).

Transfer of Claims.

The old Mosaic law, like the early Roman and early common law, did not recognize the sale or transfer of a claim to a third person. But the Scribes, like the Roman and English jurists, devised ways and means of overcoming this defect and of treating claims as subjects of gift or sale (Giṭ. 13*b et seq.*). An old Halakah establishes the validity of the transfer in one particular case known as the "meeting of three." This occurs when the creditor, the debtor, and the proposed assignee are all together: a transfer made even by word of mouth is then binding. This rule is stated as if it were arbitrary and rested on tradition alone; but it is thoroughly logical. For if the debtor is present and assents, there is, in fact, a new agreement on his part to pay his debt to the assignee; while the old creditor releases him, and the new promise is based on this release. But when the three do not meet, a delivery of the bond or written obligation (*sheṭar*) for the debt is insufficient to change the title; for the bond is not the debt, it is only evidence thereof. The creditor, besides delivering the bond, should give to the assignee a written order on the debtor; and thus the transfer is said to be made by "delivery and writing" (B. B. 75*b*, 77*a*).

But as the Mosaic law knows nothing of the sale of claims, the old creditor and his heirs would still have the power to "forgive" [cancel] the debt; and the debtor might claim the benefit of such a release, because he was "bound" only to the original, not to the new, creditor. Hence, some of the later rabbis suggested that a clause be inserted in every bond to the effect that the debtor should be bound not only to the creditor, but to any one deriving rights from him; thus rendering it a note payable to "A. B., or order," which would be in a measure negotiable. (Note of Rabad on Maimonides, "Hilkot Mekirah," vi. 12.)

Another way of disposing of claims by sale or gift was found in the maxim above given, that things of value can be made to pass with land or slaves. Hence a debt, no matter how large, secured by a bond or an open account, might be made an incident to a plot of land, no matter how small; and if the proper steps were taken to pass title in the lot (for instance, by occupation), the title to the debt would pass also, though neither the debt nor the deed evidencing it, was in any way connected with the land (B. B. 77*b*).

Acquisition by the Sanctuary (Heḳdesh).

The "power above," which meant the representatives of the community of Jerusalem, whenever buying on behalf of the Sanctuary, could purchase both land and chattels without taking possession, either by the payment of the price or even by word of mouth. "'This ox is a burnt-offering,' 'This house is consecrated,' are effective words, though the objects be at the end of the world" (Mishnah Ḳid. i. 6, Gem. 28*b et seq.*).

Privileges of Orphans.

Orphans under guardianship are, as to their inherited goods, to some extent governed by the same rules as the Sanctuary, and even have certain privileges, not discussed by the Talmud as belonging to the Sanctuary. If, after the orphans have sold "fruits" but have not yet received the money, the value of the "fruits" rises, the orphans may set the sale aside; for their goods can be acquired by payment only. Should the goods fall in price, the buyer who acquired them in the usual way must keep them. If the orphans have received their money, and the "fruits" have risen in price before removal, the sellers may reconsider, like adults. Should the price of the "fruits" fall, then the buyers may withdraw, but remain under the imprecation mentioned above, "He who collected," etc. Again, when the orphans have bought commodities and taken possession, but have not yet paid the money, and the commodities rise in value, the orphans are no worse off than others and may insist on their contract. On the other hand, should the commodities become cheaper, the orphans may not withdraw; for under such circumstances no one would sell commodities to them on credit. Lastly, if the orphans have paid the price, but have not taken possession, they may withdraw like others, in case of a fall in price. But if the commodities have risen the seller may retire, and suffer the usual imprecation; for, should the rule be fixed that the orphans gain title by paying the price, the seller might pretend that the goods had since been lost by fire or been stolen by robbers while in his possession (Maimonides, "Hilkot Mekirah," ix. 3-6).

Question of Priority.

A question of priority may arise, when the same land has been sold, or disposed of by donation, to two or more parties. Among the early Amoraim there arose a dispute whether the parties should divide or the judge should use his discretion (*shuda de-dayyane*) to decide the priority of the claimants; the latter opinion prevailed, so that only in the absence of such evidence will the parties be called upon to divide. The decision will not be determined so much by the evidence of the witnesses whose attestation forms the seal of the deed, as by that of the witnesses to its delivery, if such there be; for deeds take effect not from the time of attestation, but from the time of delivery. Where the custom of marking the hour of delivery upon the deed obtains, a deed bearing the hour will prevail over the deed of the same day without the hour; and a deed bearing the day and month will prevail over the deed bearing the month only (Ket. 94*a et seq.*). According to the standard codes, a deed of gift will be rejected when in conflict with a subsequent sale of land, unless it has been made public, so as to warn all other persons against purchasing the subject of the gift. A deed of gift is under suspicion of fraud unless it contains words of request to the attesting witnesses to publish the gift widely; and even as between two deeds of gift the second should be preferred when it contains such words and is made public, while the first is kept secret or does not contain a request for publicity (Maimonides, "Hilkot Zekiyah u-Mattanah," chap. v.).

Conditional Sales or Gifts.

The law of conditional sales or gifts is rather obscurely stated in the Mishnah (B. M. vii. 11), and the Gemara upon it (94*a*) is too scanty to elucidate it. Rashi (*ad locum*) thinks that an impossible condition is to be disregarded, even if named as preceding the act. Maimonides ("Hilkot Mekirah," chap. xi.) derives from the Mishnah the following rules:

When one grants either land or goods, and conditions are set up by either the grantor or grantee which are possible of fulfilment, then if the conditions are fulfilled, the object passes; otherwise it does not (*ib.* xi. 1). This holds, however, only when the grant is made in the prescribed way (deed of land, moving of goods, etc.), and the grantee has to perform the condition thereafter; but if the title is not to pass at once, and it is agreed that it shall pass when the condition is performed, it will not pass even on performance; for there is an "insincere promise" (Asmakta), and the title can not pass, as it was not intended that it should (*ib.* xi. 2). For instance, A has sold or given his house to B, on condition that B shall, on a named day, go with him to Jerusalem; and B has occupied the house: then, if B goes on the date specified, the house is his. But if A tells B, "If you go to Jerusalem, I will give you the house, or sell it to you for so and so much," and B goes and thereafter occupies the house, the sale or gift does not take effect (*ib.* xi. 3). Hence where earnest-money is given to bind a bargain, with the understanding that the giver shall forfeit it if he withdraw from the bargain, but the receiver shall return it doubly if he withdraw, only the former part of the agreement can be carried out, and not the latter (*ib.* xi. 4). Though the conditional agreement for a transfer in the future be made before witnesses or by deed in writing, it can not be carried into effect (*ib.* xi. 6).

L. N. D.

ALIENS: There are several designations for Aliens in the Old Testament. Of these, זר and נכרי mean specifically "foreign," a person outside the circle of the nation (Isa. i. 7; Judges, xix. 12) or of the class or family (Deut. xxv. 5, husband's family; Ex. xxix. 33, Aaron's family; Prov. ii. 16, a man's family), and so come to signify simply another person" (Prov. v. 10). In Prov. v. 3 "a strange woman" = "adulteress," a woman, not a man's wife, with whom he has illicit relations. The most important term is גר, "resident alien," a foreigner who has come to dwell permanently among people with whom he, to a certain extent, identifies himself. Nearly equivalent to *ger* is תושב, "sojourner," a rare word in the Old Testament, apparently implying a less settled residence than ger (but compare Gen. xxiii. 4; Lev. xxv. 23). Most of the occurrences are in Lev. xxii. 25. In I Kings, xvii. 1 we should probably read with Septuagint *mit-tishbaḥ*. To these two terms may be added שכיר, "hired man," a person who, though he may be a native (Deut. xxiv. 14), is often contrasted with the native (Deut. xv. 18) and associated with the *toshab* (Ex. xii. 45). Three classes of Aliens may be recognized: (1) Canaanites dwelling in Israelitish communities; (2) persons from other lands (fugitives, etc.) seeking permanent abode in Israel; (3) foreigners dwelling there temporarily. No sharp distinction is made in the Old Testament between the first and second classes.

Canaanites and Israelites.

As to the position of Aliens in the pre-Canaanite period, we have no knowledge. After the settlement in Canaan, up to the time of Solomon the relations between the Israelites and their neighbors seem to have been free and unrestricted. The clans dwelt side by side; there was no central government; intermarriages were common (Samson, Uriah, etc.); it was generally accepted that a man going to live in a community should adopt its religion (I Sam. xxvi. 19). This state of things lasted until the establishment of Israel's political supremacy and the birth of a distinct national feeling. Gradually the rights of citizenship were in part formally restricted to natives. Some of the foreign tribes were reduced to slavery (Josh. ix. 27; I Kings, ix. 20; compare I Chron. xxii. 2); and resident foreigners occupied an inferior position.

Friendly Laws.

Though Aliens did not enjoy full civil rights, and were not citizens in their own right, their interests were not neglected. Living, as they did, in close social relations with the natives, they were protected by the broad dictates of humanity. There seems to have been a relation similar to that of clientage (Lev. xxii. 10, xxv. 40). Gradually this kindly sentiment was formulated in laws. No prophet before Jeremiah speaks of duties to Aliens. Before his time public opinion had apparently not been directed to this point: it was a new social question. The alien, as well as indigent persons (Levites, widows, orphans), was to have a share in the third year's tithes (Deut. xiv. 29, xxvi. 12, 13) and in the offering of first-fruits (Deut. xxvi. 11); he had the right to glean (Deut. xxiv. 19–21; Lev. xix. 10, xxiii. 22); he might flee from the avenger of blood to the city of refuge (Josh. xx. 9, Num. xxxv. 15); and strict justice was to be meted out to him (Ex. xxii. 20 [A.V. 21]; Deut. xxix. 10 [A.V. 11], xxvii. 19; Jer. vii. 6, xxii. 3; Ezek. xxii. 7). The ordinary commercial regulations applied to him: he might become poor and be sold as a slave (Lev. xxv. 45), or grow rich and own slaves, even Israelitish slaves (Lev. xxv. 47); but should he be sold he remained a slave in perpetuity, whereas the Israelite slave was freed at the jubilee.

Civil Rights.

It was lawful to lend money at interest to a foreigner (Deut. xxiii. 21 [A.V. 20]) and to exact of him the payment of a debt (Deut. xv. 3); but it is not clear whether or not the rule applied to a ger. As to the right of the alien to own land, we have little information. In early times, probably, the right existed; see II Sam. vi. 10 (Obed-edom), xi. 8 (Uriah), xxiv. 24 (Araunah). It is distinctly affirmed by Ezekiel (Ezek. xlvii. 22, 23); whether it had been modified before his time, or was modified after his time, it is hardly possible to say. The tendency was to an extension of the rights of Aliens; see especially the broad tone of Num. ix. 14, xv. 15, xxxv. 15. The general rule of Lev. xxv., by which land reverted to the Israelite owner at the jubilee, is not incompatible with ownership of land by resident Aliens. On the whole, it seems likely that the right had never been denied them by law.

Religious Rights.

In the religious status of the ger we find a similar movement toward freedom and equality. At first he was not subject to the stricter ritual rules: he might eat of food from animals that had died a natural death (Deut. xiv. 21), or such a carcass might be sold to a foreigner (Deut. xiv. 21); but this permission was afterward rescinded (Lev. xvii. 15). He was required to observe the national holidays, Sabbath (Ex. xxiii. 12, xx. 10), the feasts of Weeks and of Booths (Deut. xvi. 11, 14), though this was perhaps a civil and social regulation, these being probably old Canaanitish festivals. It is probable also that from the beginning he observed the other agricultural festival, Maẓẓot; though such observance is not commanded in Deuteronomy, it is enjoined in Ex. xii. 19. The case is different with the nomadic festival, Pesaḥ. This was at first not considered to be an affair of the ger; but after the Exile, when the community became religiously a unit, he was permitted to take part in it (Num. ix. 14).

Finally, as it would seem, the rite of circumcision was made a condition of such participation (Ex. xii. 48); probably at this time gerim were as a rule circumcised. But participation was forbidden to the foreigner (*nokri*), the sojourner (*toshab*), and the hireling (*sakir*) (Ex. xii. 43, 45). In other points equality came to be the rule: as to eating blood (Lev. xvii. 10), the cult of Melek (Moloch) (Lev. xx. 2), blasphemy (Lev. xxiv. 16), sins of inadvertence (Num. xv. 29), offerings (Lev. xvii. 8, xix. 10, xxii. 18; Num. xv. 14–16), the Day of Atonement (Lev. xvi. 29). The general statement of equality is made in Lev. xviii. 26.

The broadest conception of God's relation to the foreigner is given in Solomon's prayer in I Kings, viii. 41, 43: the prayer of the foreigner will be heard. The perfect ethical principle is announced in Deut. x. 19; Lev. xix. 34: the resident alien is to be loved as oneself. Israel is to remember that it was once an alien in Egypt.

The result in the Old Testament is the substantial fusion of Aliens with the nation. Yet from Ps. cxlvi. 9 it may be inferred that Aliens long continued to form a separate class; in some circles (Isa. lvi. 6) the admission of foreigners to national fellowship was advocated. For postexilic conditions see PROSELYTES.

T.

ALIMONY: "The allowance made to a woman by an order of court, from her husband's estate or income, for her maintenance after her divorce or legal separation from him, or during a suit therefor" ("Standard Dictionary"). This is its definition in modern law. Strictly speaking, under Jewish law the divorced woman had no Alimony.

The Jewish law, however, provided for the divorced woman by the marriage contract or marriage settlement, the substantial results of which were the same as those secured in modern times by an order of court. The marriage contract or settlement (Ketubah) must be in writing. By the ketubah, which a husband gives to his wife, a certain sum of money is secured to her by her husband, to be paid out of his estate upon her widowhood or divorce. The sum thus secured to the wife is a lien on his estate, prior to all other debts; and it may be collected out of property which is no longer in his possession, even though it has been transferred to a third person (Ket. 82*b*) should he have no estate in possession sufficiently large to pay it. Consequently, as soon as a woman was divorced she could make demand for the payment of the amount guaranteed her by the ketubah; and the judges that presided in the divorce proceedings would enforce its payment.

Originally, the amount thus secured to the wife was paid to her father; and late in Talmudic times this was still the law in cases where the wife was a minor or was divorced before the marriage had been consummated. Eventually, however, the money was settled on the wife; remaining undivided in the estate of the husband, and being made payable to her on her divorce or widowhood.

Ketubah, or Marriage Settlement.

As the heirs of the husband often defrauded the widow of her rights, it was ordained that the amount of the marriage settlement should be deposited with the father of the bride, thus making it secure against the adverse claim of her husband's heirs; but as it was the original purpose of the marriage settlement to act as a check upon the husband so that "it shall not be easy in his eyes to divorce her," the deposit of the money with the father of the bride destroyed the effect intended; for, the husband having no further payment to make, there were no financial considerations to hinder him from "giving" divorce whenever he pleased.

It was thereupon provided by law that the amount of the marriage settlement should be invested in articles of value, and that these should remain in possession of the husband. This regulation, however, was found to give no greater satisfaction than the former one; for it was very easy for the husband to give the articles of value to his wife and to tell her to go.

The final remedy of the ketubah was provided by Simon ben Sheṭaḥ, which prescribed that the amount of the marriage settlement should remain in the possession of the husband and not be separated from his estate; but that it should be secured to the wife by a writing whereby all of his estate was charged with its payment (Ket. 82*b*).

Women Not Entitled to Alimony.

The wife's right under the ketubah was absolutely guaranteed to her by the law; and she was not permitted, even voluntarily, to release her husband from his obligation to her (Maimonides, "Yad ha-Ḥazaḳah, Hilkot Ishut," x. 10). In case the husband refused his wife her conjugal rights, he was punished by a weekly addition to the ketubah, until he yielded. In such cases, the court, by its decree, increased the amount due to the wife under the ketubah (Mishnah Ket. v. 7), and such a decree was practically the same as the decree of a modern court of law for Alimony. The wife's right to receive payment of the amount to which she was entitled under the ketubah depended on her good conduct. The following women were not entitled to its payment: An adulteress (Mishnah Soṭah, iv. 5); a maiden (*betulah*) who had been guilty of antenuptial incontinence (Mishnah Ket. i. 2); a woman who practised fraud upon her husband leading to her marriage (Mishnah Ḳid. ii. 5, Ket. vii. 7); one who offended against some ethical or religious law or custom, involving moral turpitude (Mishnah Ket. vii. 6); the woman who, having been married during her minority, refused, upon attaining her majority, to continue to live with her husband (Mishnah Ket. xi. 6); a woman married to her husband in disregard of the prohibited degrees of consanguinity (*ib.*); a woman who deserted her husband (Ket. 110*b*), or who refused to cohabit with him (Ket. 63*b et seq.*).

Although the husband was not legally obliged to pay his wife more than the amount specified in the ketubah or in the decree of the court, it was deemed commendable in him to support her if she was in want after she had been divorced.

It is related of R. Jose, the Galilean, who lived about the beginning of the second century, that after his divorced wife had remarried and had become impoverished, he invited her and her husband into his house and supported them, notwithstanding the fact that while she was his wife she had made his life miserable. His conduct is the subject of rabbinical laudation (Yer. Ket. xi. 34*b*, Gen. R. xvii., Lev. R. xxxiv.). "Do not withdraw from thy flesh," said Isaiah (lviii. 7, *Heb.*). "This," said R. Jacob b. Aḥa, "means, do not withdraw help from thy divorced wife" (Yer. Ket. *l. c.*). R. Moses Isserles cites this case with approval (Shulḥan 'Aruk, Eben ha-'Ezer, 119, 8, gloss), and adds that the support of the divorced wife is considered a better deed than the support of any other poor person, provided that for moral reasons the husband has no direct personal dealings with her, but sends the money for her maintenance by a messenger. See also Divorce and Ketubah.

D. W. A.

The following is a document of a legal sale of the husband's property, during his absence, for the support of his wife, called Alimony (אגרת מזון), from the collection of documents by Judah Barzillai of the twelfth century:

Ancient Writ of Alimony.

"Whereas, before us, the undersigned judges [dayyanim], appeared Mrs. . . . , daughter of Mr. . . . and wife of Mr. . . . , complaining of her straitened circumstances and want, pleading: 'Know ye, Rabbis, that my husband, Mr. . . . , is across the sea in foreign lands, and has left no rations to last me even for three months. I have no means to support myself and no income from my handiwork. I am now in sore need of means to sustain life. I therefore petition you, Rabbis, to inquire regarding my want and to decide upon my alimony.' And we, the judges, considering her claim as of right, have instituted a search for her husband's property, but found none that could be disposed of except a certain field [described] which we ordered to be sold. And after advertising it in the manner prescribed by the Rabbis, we found no purchaser willing to offer as much as A. ben A., whose bid was the sum of . . . dinarim, for which amount we, the judges, saw fit to sell it to the said person, and ordered him to pay out of the said sum an alimony allowance to the wife of Mr. . . . , namely, . . . dinarim per month, to which stipulation the said A. ben A. agreed. And in accordance with the rabbinical regulation, we, the judges, have written this legal document, certifying the sale of the said field for the support of the said wife; that neither the said husband, Mr. . . . , nor any one else, from now on and forever, shall have the least right or claim thereon. And now let the said A. ben A. go and take possession of the said field for the use of himself, his heirs, and successors. And he shall have the right to possess and to sell, to leave as an inheritance and to bequeath, and to do with it as he may please, from this day on and forever. And should her said husband at any time choose to sue the said purchaser, either in a Jewish or non-Jewish court of justice, his claims shall be null and void, like a valueless broken potsherd. And we the judges hereby admonish and impose a fine of . . . dinarim on the said husband, to be paid by him to the said purchaser, who may use it as he pleases, should he ever be sued in a Gentile court by the said husband for the recovery of the said field. Above all, he must

> let the property stay in perfect possession of the purchaser. And as a consideration of the sale by us judges for the alimony of the said wife, it shall be the duty of her said husband and his heirs and successors to keep harmless, to repel, and remove from the said A. ben A. and from his successors all claims in the world arising on the said field by reason of our sale; but the same shall remain in the possession of himself and his successors, free of any cost to them, just as if he [the husband] himself had sold it. This guaranty shall remain in force like a guaranty given to any other legal deed of purchase or to any judicial writ of alimony in favor of married or widowed women by the custom in Israel, from this date on and forever.
>
> "All of which was done before us judges on day . . . month . . . year . . . in the town of . . . , and being enlightened by the power of Heaven, we have written and signed this judicial act and delivered to A. ben A., to be in his hand and in the hands of his successors as a legal right and proof."

ALISCH, ISAAC BEN MOSES. See Elles, Isaac ben Moses.

ALITYROS (ALITURUS): Actor, of Jewish birth, at the court of Nero. Through him Josephus became acquainted with the empress Poppæa—whose special favorite the actor always had been—and obtained the pardon for those priests whom Felix, the procurator of Judea, had sent to Rome. In the novel by Sienkiewicz, "Quo Vadis," Alityros instructs Nero in the art of gesticulation, and accompanies the emperor to Greece.

'ALIYAH: In synagogal services, the going up, or being called up, to the reading-desk (*almemar*), for the reading of a portion of the Law. According to an ancient institution of the synagogue seven men are called up in succession to read the *sidra* (the weekly Pentateuch-lesson) on each Sabbath morning; six men, for the reading of the appointed portion on the Day of Atonement; and five, on the three chief festivals. In addition to these, there is the *maftir*, the one called up for the reading of a concluding chapter, who in addition reads the portion from the Prophets, called "Hafṭarah." On new-moon and half-holidays, four men, and on Sabbath afternoon, on Monday and Thursday mornings, on Ḥanukkah and Purim mornings, and on fast-days, only three men are called up; the portions read on these days being shorter. The first of the men called up in orthodox synagogues should be a Cohen or Aaronite, the second a Levite, the third and further members of the rota are ordinary Israelites, the one higher in rank always preceding the one inferior, with the exception of the mafṭir, who, though last, may be a Cohen or a Levite. Men are as a rule called up who have during the week had especial occasion for joy: a bridegroom or father of a bride; and the father of a new-born child, whose mother for the first time appears in the synagogue. On mournful occasions also men are called up, as at the anniversary (*Jahrzeit*) of a parent's death.

Down to the twelfth century, the men called up were themselves expected to read a portion aloud, those unable to read the Law being considered unworthy of the honor. The first concession to ignorance was made in the case of an illiterate Cohen: when there was no other present to be called up as the first, Saadia suggested that the reader should prompt him, in order to enable him to read his portion. (For further information on the origin and development of the reading from the Law, as part of the service, see Liturgy.) In the twelfth century it had become the established custom for the reader to prompt in the accentuation and cantillation of the words; and the next step was to have the reader prompt the actual words to those unable to read at all, in order to spare them the humiliation of never being called up to the Law. In the fourteenth century the whole sidra was read aloud by the reader, exception being made only with the Bar Mizwah, the youth to be initiated into the Law, who still reads his portion himself in order to give proof of his proficiency.

In Reform synagogues the reading from the Law, which is often on the shorter scale of the three years' cycle, is done exclusively by the reader, and no one is called up to read.

Separate Jurisdiction.

ALJAMA: A Spanish term of Arabian origin used in old official documents to designate the self-governing communities of Moors and Jews living under Spanish rule. The Jewish communities of Spain, owing to their social isolation and to the religious and political regulations imposed upon them, had always formed groups apart from the rest of the population. The authority exercised by their own rabbis and the system of tax-collection by the heads of the congregations for the administration of communal affairs, placed them almost completely without the jurisdiction of the government of the country; and, as a result, they soon came to be dealt with by the officials not as subjects amenable to the general law of the land, but as collective bodies with special privileges and special duties. Thus, the Visigothic kings imposed a tax not upon each individual Jew or upon the heads of families, but upon the community as a whole, allowing the communal authorities to fix the individual rate of taxation. But both under the Visigoths and under the Moors there was neither regularity in the transactions of the rabbis and elders nor system in the attitude of the government toward the Jewish communities. With the reestablishment of Christian rule, however, the relation between the government and its Jewish subjects gradually became a well-defined one. In 1219 and 1284 in Toledo, in 1273 in Barcelona, in 1290 at Huete, and on more than one occasion during those years in Portugal, councils were held of Spanish officials and Jewish representatives for the purpose of establishing a just rate of taxation for Jewish communities, and of devising adequate means for tax-collection. This first official recognition by the government of the Jewish communities as separate bodies led to a still further change in the treatment of the Jewish congregations and in the legislation, both local and national, regarding them. The bishops of the various districts assumed immediate authority over them, and, in conjunction with Jewish representatives, formed rules which were henceforth to govern the communities. The elections of rabbis and judges were to be held at stated intervals, and the names of these dignitaries submitted to the bishop for approval; there was to be a "rabbi of the court" for the presentation of communal questions before the proper authorities; and the heads of the congregation were made answerable for the conduct of the community. In all government action, whether local or general, the unit considered was in most cases the community, not the individual Jew.

A good example of how much self-government was granted to the Jewish Aljamas is afforded by the "resolution of the meeting" or *tecana* (a Hebrew word that, like *sanedrin*, has been incorporated into the Spanish language) arrived at by the Aljama of Valladolid in 1432. This report is written partly in Hebrew, and partly in Spanish with Hebrew characters, and is preserved in the Bibliothèque Nationale at Paris ("Fonds Hébreux," No. 585). From this document it is learned that, at Valladolid, electoral meetings were held by the community every ten years, and that the particular meeting of which an account is given in the document took place in the latter part of Iyyar (end of May) and lasted for ten days. The following were some of the matters decided or discussed: (1) The necessity of the Talmud Torah, or Hebrew school, and the rate of taxation for the maintenance of the same, which was decided upon as follows: five maravedis for each of the cattle killed, and one for each sheep; five maravedis for every flask of wine. Five maravedis were also to be paid by a married couple on the day of their wedding, and by a boy on the day of his "bar Miẓwah," or confirmation. A certain tax was also laid upon inheritances, and various other means of revenue were devised. In connection with this question the employment and salary of private or itinerant teachers were discussed. (2) The election of the judges and of the *rab de la corté* (rabbi of the court), to which much space is accorded in this tecana or report. (3) The attitude of the individual Jew in his relations with the state. This was by far the most important question discussed. Since permission to decide civil and criminal cases before Jewish judges had been granted by the Spanish government, and since "the Christians, though they be well versed in law, know nothing of Jewish laws," no Jew might plead before a Christian judge, whether religious or civil, except in cases where the taxes and imposts due to the ruler were in litigation, or where special permission was obtained from the dayyan, or chief judge of the Aljama. A Jew who arrested another Jew with the aid of a Christian was to be apprehended by the dayyan; for a second offense of the same nature, he was to be branded on the forehead and expelled; while the third offense was made punishable by death.

"Tecana" of Valladolid.

The word "Aljama" is derived from the Arabic "jama" (gather) plus the definite article "al," which meant originally "congregation," "assembly," "group," but which, even before the establishment of Spanish rule, was applied by the Arabs to their own religious bodies and the larger mosques, and especially to the Jewish communities in the midst of them, and to the synagogues and schools which formed the center of all Jewish life. The term was adopted by the Christians, and its meaning extended so as to designate also the quarters that Jews and Arabs had made their own. Very often, for purposes of distinction, such phrases as "Aljama de los Judios" (Aljama of the Jews) and "Aljama de los Moros" (Aljama of the Moors) were used. But the circumstance that the Arabs of Spain had by the term designated more especially the Jewish community has left its trace in the use of the word in the Spanish language; for in Spanish literature "Aljama," without any further specification, stands for "Sanedrin" or for "Juderia" (Jewry), or even for the Jewish place of worship, in the concrete as well as in the abstract sense. This use occurs at a very early date. In the "Poem of Alexander," in the "Milagros de Nuestra Señora," and in the "Duelo de la Virgen" of Gonzalo de Berceo, all of the thirteenth century, "Aljama" or "Alfama" is employed to designate the people of ancient Jerusalem; and the historian of the sixteenth century, Mariana, uses "Aljama" for the synagogue: "they devastated their houses and their aljamas."

From "Aljama" are derived the following: (1) "Aljamado," adjective and noun, the inhabitant of an aljama; (2) "Aljamia," the Spanish vernacular used by the Jews or Moors, but more especially the Spanish language written with Hebrew characters by the Jews, and with Arabic letters by the Moors; (3) "Aljamiado" (adjective and noun), he who speaks or knows the Aljamia.

ALḲABIẒ, MOSES BEN SOLOMON.

See Alḳabiẓ, Solomon ben Moses ha-Levi.

ALḲABIẒ, SOLOMON BEN MOSES HA-LEVI:

A cabalist and liturgical poet born in Safed, who flourished in the first half of the sixteenth century and who was a contemporary of Joseph Caro, the author of the "Shulḥan 'Aruk," and teacher and brother-in-law of Moses Cordovero, one of the foremost representatives of Jewish mysticism. Like Caro and Cordovero, he belonged to the group of cabalists who had taken up their abode at Safed, in Upper Galilee, and made that city the Mecca of the mystics. Alḳabiẓ, who was a disciple of Joseph Taytatzaqk, migrated thither from Turkey, where he had lived at Salonica and Adrianople. The date of his death is unknown. According to Aripol, at the time Alsheich flourished he was sixty years old (compare Azulai, "Shem ha-Gedolim," ed. Benjacob, i. 164); in 1561, the year in which his commentary on the Book of Ruth appeared, he was still living, and even Elijah di Vidas, the pupil of Cordovero, whose "Reshit Ḥokmah" (The Beginning of Wisdom) was finished in 1575, in quoting a prayer composed by Alḳabiẓ, mentions him as yet alive (see Nepi-Ghirondi, "Toledot Gedole Yisrael," p. 320). He, therefore, must have attained to a ripe old age. The exceptional esteem in which Alḳabiẓ was held, both by his contemporaries and by his immediate posterity, is attested by the legend woven around the circumstances of his death. The same account which popular fancy invented for the poet Ibn Gabirol is also allotted to Alḳabiẓ. It is as follows: An Arab, who remarked his wisdom and striking personality, was moved by envy to murder him. He buried his victim beneath a fig-tree, which straightway began to blossom in advance of the season, and thus attracted the attention of the townsfolk and their prince. The latter summoned the assassin, and finally succeeded in wringing from him a confession of his crime; whereupon the culprit was hanged on the self-same fig-tree (compare Landshuth, "'Ammude ha-'Abodah," p. 310). This is only one of the many legends with which mystic imagination adorned the memory of Alḳabiẓ. Another, telling of an ecstatic vision which Alḳabiẓ and Caro had seen one Pentecost night while yet in Turkey, may have been the cabalistic embellishment of the direct causes for the migration of the two masters to Palestine (see Isaiah Hurwitz, "Shene Luḥot ha-Berit," ed. Amsterdam, p. 180*a*).

Alḳabiẓ's popularity rests mainly on his liturgic poem for the Sabbath-eve service, which, under the name of "Lekah Dodi" (Come, My Beloved), has become more famous than its author. Not only was this mystic love-song to the Sabbath readily admitted into both the Spanish and the German rituals, but R. Isaac Luria, the leader of the contemporary cabalists, is said to have preferred it to all the poetry of Ibn Ezra and Ibn Gabirol. It has also been appreciated in modern days by the poet Herder, who translated it into German, and by Heinrich Heine, who, though he erroneously attributed it in his "Romancero" to Judah ha-Levi, also rendered it into German ("Werke," iii. 234, Hamburg, 1884), while Mrs. Alice Lucas has included a good English version in "The Jewish Year," pp. 167 *et seq.*, London, 1898. This poem, however, is but one of a large number written by Alḳabiẓ and embodied in several rituals.

Among his larger works, his cabalistic commentaries on several Biblical books require notice. The first of the series, a "Commentary on the Book of Esther," was written in 1529, when he sent it to his father-in-law as a Purim gift for his bride. It was not published till 1585, when it appeared at Venice, accompanied by the Hebrew text and several homilies, under the title of "Manot ha-Levi" (The Gifts of the Levite). His commentary on the Song of Songs, called "Ayelet Ahabim" (The Dawn of Love), written in 1536, was published, with the text, in Venice, 1552; while "Shoresh Yishai" (The Root of Jesse), on the Book of Ruth, written in the year 1553, appeared, together with the text and an index by his son Moses, in 1561, at Constantinople. Besides this series he wrote a commentary on the Book of Hosea, which, however, has not been published, and quite a large number of cabalistic prayers and books. Among the latter his "Bet Adonai" (The House of the Lord) should be mentioned, which the authors of "Shalshelet ha-Ḳabbalah" and "Sifte Yeshenim," as well as Wolf, attribute to his son Moses, but which, no doubt, belongs to Alḳabiẓ senior, because he alludes to it as his own work both in his commentary on Ruth (iii. 14), and in a note to the Zohar (Gen. i. 16), which he sent to Joseph Caro, and which the author of "Seder ha-Dorot" claims to have seen (compare "Seder ha-Dorot," p. 243). De Rossi misreads the passage in question, and deduces from it the existence in manuscript of a commentary on the entire Zohar.

Azulai, furthermore, appears to have seen another work by this author, which possesses some biographical value, inasmuch as under the title of "Berit ha-Levi" (The Covenant of the Levite), Alḳabiẓ collected in it a cabalistic commentary on the Passover Haggadah, and a number of other esoteric disquisitions, all of which he left as a species of mystic souvenir to his disciples and associates at Adrianople, just prior to his departure for Palestine.

ALKALAI, ABRAHAM BEN SAMUEL: Casuist, who lived in Turkey in the latter part of the eighteenth century and beginning of the nineteenth. He wrote "Zekor le-Abraham" (Remember Abraham), in which the laws of the four Ṭurim are alphabetically arranged and commented upon. The work appeared in two volumes, at Salonica, in 1798, and was reedited by Judah Ḥai Alkalai at Josefow, 1840. Alkalai also published two volumes of responsa under the title of "Ḥesed le-Abraham" (Mercy to Abraham), Salonica, 1813–14.

ALKALAI, JUDAH BEN SOLOMON ḤAI: Rabbi in Semlin, Croatia; died October, 1878. He became noted through his propaganda in favor of the restoration of the Jews to Palestine. By reason of some of his projects, he may justly be regarded as one of the precursors of the modern Zionists headed by Th. Herzl (see Zionism). His work, "Goral la-Adonai" (A Lot for the Lord), published at Vienna, in 1857, is a treatise on the restoration of the Jews, and suggests methods for the betterment of conditions in Palestine. After a somewhat able homiletical discussion of the Messianic problem, in which he shows considerable knowledge of the older writers, Alkalai suggests the formation of a joint-stock company, such as a steamship or railroad trust, whose endeavor it should be to induce the sultan to cede Palestine to the Jews as a tributary country, on a plan similar to that on which the Danube principalities were governed. To this suggestion are appended the commendations of numerous Jewish scholars of various schools of thought. The problem of the restoration of Palestine was also discussed by Alkalai in "Shema' Yisrael" (Hear, O Israel), 1861 or 1862, and in "Harbinger of Good Tidings" (compare "Jewish Chronicle," 1857, p. 1198, where his name is spelled Alkali). In his "Shelom Yerushalayim" (The Peace of Jerusalem), 1840, he replies to those who attacked his book, "Darke No'am" (The Pleasant Paths), which treated of the duty of tithes. Another work of his, "Minḥat Yehudah" (The Offering of Judah), Vienna, 1843, is a panegyric on Montefiore and Crémieux, who had rescued the Jews of Damascus from the horrors of the blood-accusation.

ALKALAI, MOSES BEN DAVID: Judæo-Spanish translator, and writer of Hebrew text-books; lived in Turkey in the nineteenth century. With his father David, he translated Solomon ibn Verga's "Shebeṭ Yehudah" from Hebrew into Judæo-Spanish (Belgrade, 1859). He also wrote: (1) תקון סעודה (Belgrade, 1859), treating of laws concerning meals; (2) a Hebrew grammar (Bucharest, 1860); (3) בואו חשבון (Belgrade, 1867), a treatise on arithmetic.

ALKAN, ALPHONSE (known as **Alkan the Elder**): French printer, bibliographer, and author; born in Paris, 1809; died at Neuilly-sur-Seine, 1889. He first worked as a practical printer, then wrote for various typographical and bibliographical reviews, and subsequently was appointed secretary and proof-reader to the Count de Clarac, keeper of the Museum of Antiquities in the Louvre. Alkan was a prolific writer and the author of many books, pamphlets, and articles, which deal with the art and history of printing and illustrating as well as with bibliography. His more important books are: "Les Femmes Compositrices d'Imprimerie sous la Révolution Française de 1794, par un Ancien Typographe," 1862 (anonymous); "Les Graveurs de Portraits en France," 1879; "Documents pour Servir à l'Histoire de la Librairie Parisienne," 1879; "Les Livres et Leurs Ennemis," 1883; "Les Etiquettes et les Inscriptions des Boîtes-Volumes de Pierre Jannet, Fondateur de la Bibliothèque Elzéverienne," 1883; "Edouard René Lefèbvre de Laboulaye, un Fondeur en Caractères, Membre de l'Institut," 1886; "Berbignier et Son

Livre: les Farfadets," 1889; "Les Quatre Doyens de la Typographie Parisienne," 1889.

Bibliography: De Gubernatis, *Dict. International des Écrivains du Jour*, s.v.

M. B.

ALKAN, CHARLES HENRI VALENTIN (Morhange; called also Alkan the Elder): French pianist and composer; born in Paris, Nov. 30, 1813; died there, March 29, 1888. On attaining his sixth year he was admitted to the Paris Conservatory of Music, and when but seven years old (1820) won the first prize for solfeggio; on this occasion he gave his first public performance on the violin. Alkan was the pupil, in pianoforte, of Pierre Zimmerman, laureate of the Institute of France in 1850, studied harmony under Victor Dourlen, and, in competition, was awarded the first prize for this subject in 1826. In 1828 he was appointed honorary professor at the Conservatory, which position he resigned in 1835. Besides achieving distinction in the technique of music he obtained the first prize for composition awarded by the Institute of France in 1831. Two years later he visited London, and on his return to France settled in Paris as a teacher of the pianoforte.

Alkan devoted a part of his time to composition, and produced seventy-two works, comprising études, concertos, sonatas, caprices, transcriptions, and songs. Writing of his music, James D. Brown ("Biog. of Musicians," p. 14) says: "The works of this composer abound with technical difficulties. . . . His studies are especially extravagant in construction, and require close attention from even the best performers to obtain adequate interpretation." According to Grove ("Dict. of Music and Musicians," i. 53, London, 1890), Alkan's two series of twelve études (op. 35 and 39) and his "Trois Grandes Études" belong to the most modern development of the technique of the instrument, and represent, in fact, the extreme point which it has reached. Though they can not stand comparison in point of beauty and absolute musical value with the études of Chopin and Liszt, yet, like those of Anton Rubinstein, which are in some respects akin to them, they have a valid claim to be studied; for "they present technical specialities nowhere else to be found, difficulties of a titanic sort, effects peculiar to the instrument carried to the very verge of impossibility."

The following are Alkan's chief compositions: "Étude Caprice," for the pianoforte (op. 12, 13, 15, and 16); "Le Preux," a concert study (op. 17); "Duet" for violin and pianoforte (op. 21); "Nocturne" for the pianoforte (op. 22); "Saltarelle" (op. 23); "Gigue" (op. 24); "Alleluja!" (op. 25); "Transcription from Mozart" (op. 26); "Étude" (op. 27); "Bourrée d'Auvergne" (op. 29); "Trio" for the pianoforte, violin, and violoncello (op. 30); "Twenty-five Preludes" for piano or organ (op. 31); "Collection of Impromptus" for the pianoforte (op. 32); "Sonata" (op. 33); "Three Marches" (op. 37); two books of "Chants" (songs without words, op. 38); another series of "Three-Marches" (op. 40); "Three Fantasias" (op. 41); "Reconciliation," a caprice (op. 42); "Salut, Cendres du Pauvre," a paraphrase (op. 45); and a "Sonata" for pianoforte and violoncello (op. 47).

F. H. V.

ALKAN, NAPOLÉON ALEXANDRE (Morhange): French pianist and composer; born in Paris, 1826. He was a brother of Charles Valentin Alkan, and, like him, entered the Conservatory of Music at a very early age. He studied under Adolphe Adam and Pierre Zimmerman. In 1850 he was appointed professor of solfeggio in the Conservatory, and held the appointment for nearly fifty years. Among the more prominent of his pupils were Bizet, Sarasate, Carvalho, Jules Cohen, the brothers Weniadski, Melchisédec, Taudou, and Risler.

Alkan has not achieved great distinction as a composer; nevertheless in 1890 he obtained the second prize for composition awarded by the French Institute. His most notable work is an "Étude Fuguée sur 'Le Prophète.'"

A. A. G.

ALKIMUS JAKIM: High priest, leader of the Hellenists. See Alcimus.

ALLARIZ: A Spanish town in the province of Orense, Galicia, in which, as in Coruña, Ferrol, and Pontevedra, there were Jews as early as the eleventh century. Upon a complaint by the prior of the monastery of Allariz, Isaac Ishmael, the head of the small Jewish community, was notified, 1289, that from that time no Jews would be allowed to live outside of the Jews' quarter, or to congregate on the streets or to appear in public during processions, etc. A similar ordinance existed prohibiting Christians from living in the Jews' quarter, in order that the latter might not be disturbed or molested in their worship or during their festivals. See also Galicia, Spain.

ALLEGORICAL INTERPRETATION: That explanation of a Scripture passage which is based upon the supposition that its author, whether God or man, intended something "other" (Greek, ἄλλος) than what is literally expressed. Expositors of this system may be called allegorists; the system itself, allegorism. Two modes of Allegorical Interpretation are found dealing with the Bible: the one, symbolic or typologic interpretation, derived mainly from Palestinian Jews; the other the philosophical or mystical modes, originating with the Alexandrian Jews of Egypt. Both methods originate in the same natural cause; whenever the literature of a people has become an inseparable part of its intellectual possession, and the ancient and venerated letter of this literature is in the course of time no longer in consonance with more modern views, to enable the people to preserve their allegiance to the tradition it becomes necessary to make that tradition carry and contain the newer thought as well. Allegorism is thus in some sense an incipient phase of rationalism. As soon as philosophy arose among the Greeks, Homer and the old popular poetry were allegorized. There being scarcely a people which underwent such powerful religious development and at the same time remained so fervently attached to its venerable traditions as the Jews, allegorism became of necessity a prominent feature in the history of their literature.

Early Allegorism.

Accordingly, one of the first of the prophets whose writings are preserved, Hosea (xii. 5), is one of the earliest allegorists, when he says of Jacob's struggle with the angel that it was a struggle in prayer: this was because the idea of an actual physical contest no longer harmonized with the prophetic conception of heavenly beings. The activity of the Scribes at a later period made the Bible a book for scholars, and allegorism was fostered as a form of Midrash. The Book of Daniel supplied an illustration hereof, when it interpreted Jeremiah's prophecy of the seventy years of exile (xxix. 10) as seventy weeks of years, and thus gave hopes of redemption from the contemporary tyranny of the Greeks. The dread of reproducing Biblical anthropomorphisms—a thoroughly Jewish dread, and a characteristic feature of the oldest portions of the Septuagint—shows the original disposition of all allegorism; namely, to spiritualize mythology. See Anthropomorphism; Septuagint.

Alexandrian Allegorism.

Essential as allegorism thus was to the Palestinian Jews, it was none the less so to the Alexandrian Hebrews, who were made to feel the derision of the Hellenes at the naive presentations of the Bible. The Jews replied by adopting the Hellenes' own weapons: if the latter made Homer speak the language of Pythagoras, Plato, Anaxagoras, and Zeno, the Jews transformed the Bible into a manual of philosophy which also was made to contain the teachings of these philosophers. This polemic or apologetic feature of Alexandrian allegorism is at the same time characteristic of its relation to the Palestinian Midrash on the one hand, and the allegorized mythology of the Greeks on the other; in its purpose, Alexandrian allegory was Hellenic; in its origin and method, it was Jewish. But one would hardly be warranted in maintaining that allegorism was specifically Hellenic because the Alexandrians were the first Jews known to have cultivated it; nothing can be really proved from the absence of allegory in the few inconsiderable remains of Palestinian Scriptural lore of the two centuries before the common era.

The Wisdom of Solomon.

Closely connecting with the Palestinian Midrash is Aristobulus, rightly to be termed the father of Alexandrian allegory. His purpose, to prove the essential identity of Scripture and Aristotelianism, is of course the Alexandrian one; but his explanations of the Biblical anthropomorphisms is thoroughly Palestinian, and reminds one of Targum and Septuagint. Similarly, The Wisdom of Solomon, another Apocryphal book of the same period, is not specifically Hellenic in its allegorical symbolism. The explanation of the heavenly ladder in Jacob's vision, as a symbol of Divine Providence and the supersensual world, is just as little Hellenic as the Biblical narrative itself, the sense of which is very correctly given (Wisdom, x. 10). The influence of a Palestinian Midrash, preserved in the Mishnah (R. H. iii. 8), is evident in the explanation of the serpent (Num. xxi. 9), as a "symbol of salvation, while the salvation itself came from God" (Wisdom, xvi. 5). These and similar interpretations are so clearly of Palestinian origin that it would be wrong to assume any foreign influence for them. The literal reality of the Law and of the Biblical history is so strongly adhered to by the author of The Wisdom of Solomon, coming as it does from Pharisaic circles, that one can hardly speak of his treatment as an allegorization of the Bible.

The Allegorical Interpretation of the Law in the Aristeas Letter exhibits Hellenic influence more decidedly. It seeks to give ethical motives for all the ritual and ceremonial laws. On the one hand, the flesh of birds of prey is declared unclean, it says, in order to teach how violence and injustice defile the soul; on the other, that of animals which chew the cud and divide the hoof is permitted. For the former characteristic typifies the duty of invoking God frequently; and the latter signifies the distinction between right and wrong, and the division to be maintained between Israel and nations practising abominations.

Radical Allegorism.

A further step, but an inevitable one, was taken by those allegorists of whom Philo writes ("De Migratione Abrahami," xvi.; ed. Mangey, i. 450), that they cut loose entirely from any observance of the Law, and saw in the records of Jewish revelation nothing but a presentation of higher philosophical truths. Such an extreme step could only provoke reaction; and the result was that many would have nothing whatever to do with Allegorical Interpretation, justly seeing in it a danger to practical Judaism. These anti-allegorists were specially represented in Palestine, where the warning was heard (about 50 B.C.) against those "evil waters" to be avoided by the young scholars "abroad," *i.e.* Egypt (see Abtalion). Nor were there wanting in Alexandria itself many determined opponents of this tendency (Philo, "De Somniis," i. 16; ed. Mangey, i. 635). But the extremists on both sides, allegorists as well as anti-allegorists, were in the minority; for most teachers held steadfastly to the ancestral faith as far as actual practise was concerned, and endeavored only theoretically to harmonize Judaism with the Hellenic philosophy by means of allegory. Philo informs us ("De Vita Contemplativa," III. ii. 475) that his predecessors in this allegorical tendency (from whom he quotes eighteen times—see the list in Siegfried's "Philo," p. 26) had committed their teachings to writing; but beyond those quotations nothing has been preserved. The following is an illustration: "Men versed in natural philosophy explain the history of Abraham and Sarah in an allegorical manner with no inconsiderable ingenuity and propriety. The man here [Abraham] is a symbolical expression for the virtuous mind, and by his wife is meant virtue, for the name of his wife is Sarah ["princess"], because there is nothing more royal or more worthy of regal preeminence than virtue" ("De Abrahamo," xx. 8; ed. Mangey, ii. 15).

Josephus.

It would not be just, in the absence of striking proof, to maintain that Josephus, who in his preface to the "Antiquitates" speaks of the literal sense and the allegorical, was influenced by Alexandrianism in general or by Philo in particular (Siegfried's "Philo," p. 270). His symbolical exposition of the Tabernacle with its utensils, and of the high priest's vestments ("Ant." iii. 7, § 7), and his interpretation that the Holy of Holies means the heavens, the showbread means the twelve months, and the candlestick means the seven planets, resemble Philo, but are merely resemblances. Similar explanations are repeatedly given by the Midrash; and this kind of symbolism was always a favorite in Palestine.

All achievements of preceding allegorists, however, were far surpassed by Philo, the most important representative of Jewish Alexandrianism. His philosophy furnished one foundation-stone to Christianity; his Allegorical Interpretation, in an even greater degree, contributed to the Church's interpretation of the Old Testament; and strange to say neither his philosophy nor his allegorism had the slightest

Philo.

effect upon Judaism. Gfrörer has cleverly described Philo's allegorical bent in saying, "It is madness, but there's a method in it" (Gfrörer, "Philo," i. 113). Palestinian hermeneutics and Alexandrian allegorism are the two foundations upon which Philo builds his system of Bible interpretation. He detects allegorical secrets in parallel passages or duplicate expressions of Scripture, in apparently superfluous words, in particles, adverbs, and the like. In view of the numerous peculiarities of Hebrew in this direction—they are so prevalent that they may sometimes be detected even in the Septuagint translation —it was a very easy matter for Philo to discover many such secret hints where none existed. In addition to "rules" based upon the Palestinian Midrash, the Greek allegorists had set up an extensive system of the symbolism of things and numbers; and of this also Philo made considerable use. Thus the number one is God's number; two is division; five means the five senses; and similarly all simple numbers up to ten, and some compound ones such as 12, 50, 70, 100, 120, have their allegorical significance. Animals and winged birds, creeping things and swimming things, all have their symbolical import. Likewise, plants, stones, the heavenly bodies, certain species of animals—in short, everything that is finite was an allegory of some truth; this is one of the chief rules of Philo's allegorism.

But it must be noticed that Philo none the less protected the rights of the literal word, without, however, being quite clear as to the proper relation of the written word to its Allegorical Interpretation. By means of such hermeneutic principles Philo expounded almost the whole Pentateuch in its historical as well as its legal portions. The following is an illustration from Genesis: "God planted a garden in Eden [Gen. ii. 5 *et seq.*]: that means God implants terrestrial virtue in the human race. The tree of life is that specific virtue which some people call goodness. The river that 'went out of Eden' is also generic goodness. Its four heads are the cardinal virtues; 'Pheison' is derived from the Greek *φείδομαι* (I abstain) and means 'prudence'; and, being an illustrious virtue, it is said 'to compass the whole land of Havilah where there is gold.'" The name "Gihon" means "chest" (see Gen. R. on the passage) and stands for courage, and it compasses Ethiopia, or humiliation. Tigris is "temperance"; the name is connected with a tiger because it resolutely opposes desire. Euphrates means "fertility" (Hebrew *parah*; see Gen. R.) and stands for "justice." In this way the patriarchs, however, are allegorized away into mere abstractions ("De Allegoriis Legum," i. 19 *et seq.*; ed. Mangey, i. 56 *et seq.*).

Palestinian Allegorism.

As to Palestinian allegorism, it was too deeply rooted in historical Judaism to permit itself to go to such extremes with the history as the Alexandrians, no matter how much it may have chosen to allegorize the Law. Nothing exhibits the genuinely Jewish character of the Palestinian allegory more clearly than its application to the Halakah; a mere Greek fashion—and one specifically antagonistic to the letter of Scripture—could never have taken part in the Halakah, which is professedly founded upon the Scripture text. Devoted as the Palestinians were to the Pentateuch, it is nevertheless a fact that the Halakah, both before and after Akiba, made use of allegorism. It is expressly stated that Rabbi Ishmael (died about 132) explained three Pentateuchal passages כמין משל by a species of parable (Mek., Mishpaṭim, vi.). His younger contemporary R. Jose of Galilee interprets Deut. xxiv. 6 also allegorically, or rather euphemistically after Job, xxxi. 10 (Gen. R. xx. 7). Akiba, although he more than any one else perceived the danger of this allegorization of the Law, which just then was fashionable in the Christian and the Gnostic worlds, could not refrain from adopting something of this method of interpretation. Thus, referring to the verse, "And she [the heathen captive] shall bewail her father and her mother" (Deut. xxi. 13), Akiba understands by "father and mother," "idols," according to Jer. ii. 27 (Sifre, Deut. 213); and in Lev. xix. 26 he perceives a warning to judges to partake of no food upon a day on which they are to consider a capital sentence (Sifra Ḳedoshim, vi. 90*a*). Similarly the verse, Deut. xxv. 4 (forbidding the ox to be muzzled when treading out corn), when taken in conjunction with the following law (by סמוכים or interpretation by sequence), is allegorically used to explain that the widow may not be compelled to enter into a levirate marriage with a leper. Just as the ox in the passage is not to be prevented from helping himself to a share of the harvest he is threshing, so the woman may not be deprived of her right to happiness in her marriage (Yeb. 4*a*).

Book of Jubilees.

The essential characteristic of Palestinian allegorism which distinguishes it from Alexandrian is its acceptance of the Scripture as the inalienable heritage of Israel. The Bible was a Jewish revelation, so that any hidden import discovered by means of allegorism was an inherent part of the history or of the religious life, the Torah of the Jews. An excellent exemplar of Palestinian allegorism is afforded by the BOOK OF JUBILEES. The periods prescribed in Lev. xii. for the purification of women are deduced by it from the legend that Adam was forty days old when he entered Paradise, and Eve eighty (iii. 9); in vi. 15, the Feast of Weeks is associated with God's covenant with Noah after the flood. These interpretations are strictly Haggadot rather than allegorisms, but nevertheless they show the typological character of Palestinian allegorism in the endeavor to expound the pre-Mosaic period by the light of the later period of the Law.

The oldest form of Palestinian *derush* (exposition), already archaic in the year 70 of the common era, is that of the דורשי רשומות Symbolists, literally "interpreters of signs"; called also ד' חמורות, "interpreters of parables" (Ber. 24*a*; see Bacher, "Die Aelteste Terminologie," *s.v.*). Their method is allegorical or symbolically allegorical; thus: "they found no water" (Ex. xv. 22) means "no Torah," as in Isa. lv. 1; "and God showed Moses a tree," that means God taught him—a play upon the word ויורהו, which means "to teach," as well as "to show"—the Law, as it is said, Prov. iii. 18, "It is a tree of life" (Mek., Beshallaḥ, Wayassa', i. 1). Another instructive example is the following: The Symbolists say that all, even the wickedest, kings of Israel shall enter the future world, as it is said, Ps. lx. 9; "Gilead is mine" means Ahab who fell at Ramoth-Gilead; "and Manasseh is mine," that is, literally, King Manasseh; "Ephraim is the strength of mine head" means Jeroboam who was an Ephraimite; "Judah is my law-giver" means Ahithophel, who was of the tribe of Judah; "Moab is my wash-pot" means Gehazi; "Over Edom will I cast out my shoe" means Doeg, the Edomite (Sanh. 104*b*).

The Essenes.

Closely allied with this ancient form of Palestinian allegorism must have been that of the ESSENES. The author of a book sometimes ascribed to Philo reports that among the Essenes, after the public reading from the Scripture, "another, who belongs to the most learned, steps forward and expounds that which is not known, for in greatest part such men explain by means of symbols in the old-fashioned manner" ("Quod omnis probus liber," xii.). They certainly possessed many such allegorical interpretations of Scripture in writing (see Philo, "De Vita Contemplativa," iii.).

To base upon the above report the inference that Essene allegorism was drawn from Hellenic sources—as Zeller ("Philosophie der Griechen," vol. iii, part 2, p. 293) has done—is erroneous; for no Alexandrian would have spoken so disparagingly of Hellenic allegorism as to call it "old-fashioned," whereas the Alexandrians may well have deemed the Palestinian Allegorical Interpretation out of date—it was too Judaic for them.

The early Haggadot of the Tannaim contain only few specimens of their Allegorical Interpretation.

Early Tannaim.

R. Johanan b. Zakkai is credited with five allegorical interpretations, four of which refer to Biblical passages (Ex. xx. 16, 25; xxxii. 16; Lev. iv. 22; see Tosef., B. Ḳ. vii. 3), and it is remarked that he explained the Scriptures as a parabolic charm (*ḥomer*); that is, allegorically, in the style of the Symbolists, דורשי חמורות (Bacher, "Ag. Tan." i. 33). This applies also to R. Johanan's younger contemporary Gamaliel II. (Soṭah, 15*a*). But the allegorizer of this period is Eleazar of Modiim, an uncle, according to rabbinical tradition, of Bar Kokba. The Mekilta upon Ex. xvii. 8 contains a running allegorization. Thus: Amalek's onset was directed against those who were weak in faith, wherefore Moses sent men without sin to their protection. "The top of the hill," where Moses took his stand, signifies the pious deeds of the patriarchs and matriarchs, who are considered as the highest pinnacles of the human race. "Moses' hands became heavy" whenever Israel's sins prevented the effects of prayer. Aaron and Hur represented the merits of their progenitors Levi and Judah. Moses vanquished Amalek by his prayers, wherefore it is written in verse 13, לפי חרב, literally, "by the mouth of the sword"; by the mouth, prayer replaces the sword. Many such allegorical interpretations by R. Eleazar are contained in the Midrashim (see Bacher, *l.c.* i. 211 *et seq.*).

Akiba and His School.

Though Akiba is not quoted as the author of so many allegorisms as Eleazar, he is known as the first tanna to allegorize an entire book of the Bible, the Song of Solomon. This was undoubtedly an important factor in quelling the opposition to the canonization of this book (Mishnah Yad. iii. 5). From the scant remains of this allegory only so much is evident, that he perceived in the Song of Solomon a representation of the relations between God and Israel, portraying in its passages the most conspicuous events in the history of the nation, past and to come. Alongside of this typological interpretation of this book, the essential features of which have been crystallized in Targum and Midrash, there may have stood that mystical interpretation which, according to Origen ("Canticum Canticorum," hom. iv.), was held in such high esteem among the Palestinian Jews that its study was forbidden to those not of mature years. Akiba's assertion (Mishnah, *l.c.*) that the Song of Solomon is "of the holiest of the holy," sounds in itself somewhat mystical. Akiba's favorite pupil, R. Meir, added to his master's interpretation of the book in the same spirit; thus upon ch. i. verse 12, he explains, "while the King sitteth at his table, the spikenard sendeth forth the smell thereof," as signifying that while the King of Kings was in heaven occupied in giving the Law to Moses, Israel fell into sin (Ex. xxxii.) with the golden calf, of which it is said, "These be thy gods, O Israel" (Cant. R., *in loco*). From the controversy that arose between Meir and Judah b. Ilai concerning this exposition, it is evident that there were other pupils of Akiba who accepted his typo-allegorical method of interpretation. Meir was in so far independent of contemporaries that he saw also the sinister events of Israel's history depicted in the book, while the general understanding was that, being a love-song between God and Israel, it could therefore contain nothing in the way of reproach. Meir allegorized the earliest Bible history as well; his explanation of כתנות עור "coats of skin" (Gen. iii. 21) as כתנות אור "coats of light" (Gen. R. xx. 12) is interesting; the same idea played quite a part in the earlier Gnostic and Christian literature.

Judah the Patriarch.

Concerning R. Judah, the editor of the Mishnah, the important statement is made that he interpreted the Book of Job as an allegorical representation of the sin and punishment of the generation of the flood (Gen. R. xxvi. 7). Many allegorisms are quoted in the names of his disciples. Bar Ḳappara interprets Jacob's dream (Gen. xxviii. 12) in the following manner: "A ladder set up on the earth," that is the Temple; "the top of it reaching to heaven," that is the pillar of smoke from the sacrifices; "the angels ascending and descending on it," these are the priests who mount and descend the steps leading to the altar; "and behold the Lord stood above it," that refers to Amos, ix. 1, "I saw the Lord standing upon the altar" (Gen. R. lxviii. 12). Rab and Samuel, the founders of the academies in Babylonia, are also named as the authors of allegorisms which, however, have nothing specifically Babylonian about them, but are quite in the spirit of Palestinian interpretation.

Palestinian Amoraim.

While the Babylonian schools did very little for the Haggadah in general and for allegory in particular, in Palestine the golden age of allegorism dawned when the Amoraim interpreted everything in the Bible—legend, history, and law—in an allegorical manner. But it would be incorrect to attribute the vast allegorical material of Midrash and Talmud exclusively to the particular Amoraim named as their authors. In the tradition of the Haggadah, the subject-matter was everything, the name of the author nothing; so that the same Haggadah is continually found quoted with different sponsors who applied the traditional interpretation to their own times. It is hardly to be supposed that a new and sudden development of the tendency toward allegorization took place at any one epoch. Only later generations which had the older material before them compiled that of the various epochs. The following illustrations are taken from different parts of the Pentateuch: R. Simeon b. Laḳish explains the second verse of Gen. i. as follows: "The earth was without form," that means Babylon; "and void," that means Media; "and darkness," that means Greece (the Antiochian persecutions); "upon the face of the deep," that means the wicked empire (Rome); "And the spirit of God moved," that means the spirit of the Messiah; "upon the face of the waters," that is, when Israel shall be repentant; for water (compare Lam. ii. 19) symbolizes repentance (Gen. R. ii. 4).

Again, the four rivers of Paradise represent the four great kingdoms of the world: Pishon is Babylon, after Hab. i. 8—the land of Havilah which it compasses being Israel that watcheth for (הוחילה) the Lord (Ps. xlii. 6) and has the gold of the Law. Gihon is Media, the home of Haman, the serpent-like crawler (גחון, Gen. iii. 14); Hiddekel is the Seleucid monarchy with its sharp (חד) and rapid (קל) anti-Jewish legislation; Euphrates (Perat) is Rome the destroyer (הפיר), the wine-press (פורה, Isa. lxiii. 3) of the Lord (Gen. R. xvi. 4). Such technical matters as the precepts concerning clean animals are also covered by allegorization; but it must never for a moment be forgotten that throughout Palestinian allegorism the literal word of the Law is endowed with complete reality, and any allegorical meaning found in it is always secondary to the import of its literal sense and does not in any way displace it. Thus in Lev. xi. 4–8, "the camel" means Babylon "because he cheweth the cud," for the Babylonians praise God (Dan. iv. 34); "and the coney," that is Media, because the Medians likewise praise God; "and the hare because he cheweth the cud," that means Greece, for Alexander the Great praised God; "and the swine," that is Edom (Rome); "he cheweth not the cud," he not alone praiseth not God but curseth and blasphemeth Him (Lev. R. xiii. 5). The preceding examples of Palestinian allegory were concerned with Israel and its history; but there are also many ethical doctrines in the form of allegories, though perhaps they are not so numerous as the preceding species. Thus, for instance, R. Johanan explains the passage, Num. xxi. 27: "Wherefore they that speak in proverbs say," so as to refer to those who control their passions (המושלים); "come into Heshbon," is interpreted as "let us estimate [חשבון] the good and the bad and weigh them against each other." "Let it be built and set up," "if thou doest thus, measuring good and evil, thou shalt be built up and established in this world and in the world to come," etc. (B. B. 78*b*). The whole is interesting inasmuch as it shows that the allegorization of Biblical proper names was by no means exclusively the characteristic of Alexandrian allegorism; the Palestinians were very fond of it, as shown by their interpretation of the genealogical lists in Chronicles, fragments of which have found their way into the Talmud, Meg. 13*b*, B. B. 91*b*, Sifre Num. 78, and Ruth R. repeatedly.

Of anagogic allegory—which, according to Origen, was a favorite mode among the Jews in the interpretation of the Song of Songs especially—there are but very few specimens in rabbinical literature. Thus a passage in Pirḳe R. El. xxi., the close relationship of which with Gnostic ideas has been demonstrated by Ginzberg ("Monatsschrift," 1899, 224), in commenting on Gen. iii. 3, interprets the sin of paradise as being sensual gratification.

The Targums.

Allegory in the Targums is hardly different from that of the Midrash. Onkelos is almost entirely free from it, though he occasionally uses it, as on Gen. xlix.; the Palestinian Targums frequently make use of it. The Targum to the Prophets, especially that upon Isaiah, frequently employs allegory. The Targum to the Song of Solomon is an allegorical Midrash in itself, preserved in part in the Midrash Rabbah upon the book.

Rashi and Ibn Ezra.

Even those two prominent defenders of literal interpretation (*peshat*), Rashi and Ibn Ezra, also at times succumbed to the influence of allegorical exposition. This is especially true concerning the Song of Solomon, which is interpreted allegorically by both writers, although in varying fashion. Rashi, the head of the French school of exegesis, sees in the book, like Akiba, the history of Israel, or, more properly, the history of Israel's sufferings, while Ibn Ezra, like a philosopher, descries in it an allegory of the intimate union of the soul with the universal intelligence, and explains it accordingly.

Philosophic Allegory.

It would seem that when the Arabian-Greek philosophy took root among the Jews, a philosophico-allegorical treatment of Scripture gradually developed. The Karaite Solomon b. Jeroham mentions Benjamin Nahawendi as the first Jewish allegorist (Pinsker, "Liḳḳute Ḳadmoniot," ii. 109), but the illustration he gives is quoted literally from the Midrash Rabbah on Ecclesiastes, so that he can scarcely be said to prove his statement by it. Shaharastani (Haarbrücker, p. 256) indeed relates of Judgan of Hamadan, a contemporary of Benjamin (about 800), that he explains Scripture allegorically and in opposition to the custom of the Jews. However much the Jewish philosophers of the Middle Ages may have agreed with the Alexandrians that revelation and philosophy taught the same truth, they contrived generally to avoid the mistake of the latter in straining to prove this by means of the most artificial and far-fetched allegorization.

Saadia.

Saadia, the pioneer in Jewish religious philosophy, laid down a rule for the employment of allegory which was recognized generally until the time of Maimonides; it was that Allegorical Interpretation is only admissible in the four following cases: where the text contradicts (*a*) reality, (*b*) reason, (*c*) another text, or finally (*d*) rabbinical tradition (sec. vii. p. 212 of the Arabic text in Landauer). Saadia himself uses these rules in interpreting the anthropomorphisms of the Bible as conflicting alike with reason and tradition. He also shows how dangerous a free treatment of the literal word might become by showing how the Biblical account of Creation, and the history of the Patriarchs, and even the precepts themselves, could be so allegorized away that nothing of Holy Scripture would remain. Saadia's view of the proper use of Allegorical Interpretation was accepted by Baḥya ibn Pakuda, Abraham b. Ḥiyya, Abraham ibn Daud, and Judah ha-Levi. The last-named, by virtue of his antiphilosophical bent, even found a way to defend the literal conception of the Bible's anthropomorphic expressions; compare also SAMUEL B. HOPHNI.

Solomon ibn Gabirol.

Quite apart stands Solomon ibn Gabirol, who in his philosophy gave no consideration to Judaism, but in his exegesis frequently made use of Allegorical Interpretation. His method is quite Philonic, without being influenced, however, either directly or indirectly by Philo. Here is an example of Gabirol's Allegorical Interpretation as quoted by Ibn Ezra (compare Bacher, "Die Bibelexegese der Jüdischen Religionsphilosophen," p. 46; Kaufmann, "Studien über Solomon b. Gabirol") in his commentary upon Genesis. Paradise is the world supernal; the garden, the visible world of the pious. The river going forth out of Eden is universal matter. Its four separating streams are the four elements. Adam, Eve, and the serpent represent the three souls; Adam, who bestows names, representing the rational soul, Eve the animal soul (the living חוה), and the serpent the vegetative. Thus, when it is said that the serpent shall eat dust, it indicates that the vegetative soul cleaves to the dust of materialism. The coats of skins typify the body; the tree of life is the perception of the upper intelligible world, just as the cherubim, the angels, are the intelligible beings of the upper world. In addition to this allegory of Gabirol's, Ibn Ezra quotes another interpretation of Jacob's dream; but while it is possible that he may have applied this method to visions or similar passages of the Bible, it is altogether unlikely that he presumed to apply it either to the Law or to the historical events chronicled in Scripture.

Maimonides.

The head and front of all philosophical allegorism among the Jews in the Middle Ages was undoubtedly Maimonides, although of course he can not be held responsible for the excessive use made of it by those who followed in his footsteps. He was the first Jewish thinker to set up the principle that the superficial sense of Scripture compares with the inner or allegorical signification as silver does with gold. The benefit to be drawn by men from the literal word is quite insignificant compared with that derivable from the perception of that deeper truth which may be learned from the word's inmost sense (Introduction to the "Moreh," Arabic text, 6*b*). Maimonides distinguishes two kinds of allegorism—that of each individual word of a passage and that of the passage as a whole. Of the former his interpretation of Jacob's dream is an example. The "angels" are the prophets, who "ascend" the ladder of perception; "whose top reached to heaven"—that is, to God—who forever "stands" above it. When the angels have reached a certain height of perception "they descend on it" in order to instruct men ("Moreh," i. 15, 22). The second kind is illustrated by Prov. vii. 5, where in the admonition against the adulterous woman he perceives the warning against all carnal desires; for woman is the allegorical designation for matter, or the animal craving (Introd. 7*a*, 8*a*). Concerning the relation of the inner meaning to the superficial one, Maimonides somewhat inconsistently declares that the literal sense must give way when it contradicts the postulates of philosophy, and yet he leaves the Biblical miracles and many prophecies undisturbed in their literal acceptation, as not being irreconcilable with his particular philosophy. His statement that if the eternity of the world were philosophically proven, "the gates of Allegorical Interpretation would not be closed" (for this view, see Bacher, "Bibelexegese Mose Maimuni's," pp. 14–17, 85), is characteristic. All legal enactments, however, must be taken literally, and he energetically protests against that Christian allegorization of the Law which entirely strips away and destroys the significance of its commands and prohibitions ("Iggeret Teman," ed. Vienna, 1874, p. 18). Maimonides' allegorism is thus confined, as it were, between the barriers of his rationalism on the one hand and his fidelity to tradition on the other. But his interpretation of the Canticles ("Moreh," iii. 51, 126) and of Job (*ibid.* iii. 22, 44*b et seq.*) contains premonitions of that excessive allegorization which after his death so strongly menaced the position of rabbinical Judaism in southern France. Maimonides' modest conceptions of allegorism undoubtedly influenced such writers as David Kimḥi, as Bacher (Winter and Wünsche, "Jüdische Literatur," ii. 316) points out, so that the attempt to set up Samuel ibn Tibbon as the originator of the Provençal school of allegorists, with the assumption of Christian influence, is entirely gratuitous. Ibn Tibbon's allegorism in his work, "Yiḳḳawu ha-Mayim," is physical rather than ethical, as the Greek philosophers would say—that is, occupies itself chiefly with the Being of God and with natural phenomena—whereas Christian or Philonic allegorism, which is by some claimed to have influenced him, is mainly ethical, seeking in Scripture for the philosophical foundation of moral truths and of the idea of man's relation to God.

Pseudo-Maimonidean Writings.

In the Maimonidean "Pirḳe ha-Haẓlaḥah" (Chapters on Happiness)—largely interpolated by later writers (see Bacher, in "Jew. Quart. Rev." ix. 270–289)—and the "Ethical Will" (Ẓawwaah), falsely ascribed to Maimonides, the allegorization of Biblical personages and events is carried still further: Pharaoh is the evil inclination; Moses, the intellect; Egypt, the body; her princes, its members; the land of Goshen, the heart. Thus the Biblical narrative connected with these is simply a representation of the conflict between human reason and human passion for superiority in man. Even the minute and technical details of the construction of the desert tabernacle are allegorized into a physiological portrayal of the human body, its members and their functions. Although this "higher wisdom" at first did not dare to undermine the historical and legal passages of Scripture, accepting them in their true literalness, it was not long before it aspired to complete influence over the whole range of Scriptural interpretation. The fundamental proposition of these allegorists was then formulated, to the effect that all the narrative portions of Scripture, and especially those from the initial verse of Genesis down to Ex. xx. 2, are not to be taken literally; מבראשית עד מתן תורה הכל משל "From Creation to Revelation all is parable" (Minḥat Ḳenaot, p. 153); and that even some of the legislative enactments are to be understood symbolically. First of the conservative allegorists who respected the literal word was Jacob b. Abba Mari Anatoli, at the beginning of the thirteenth century. In his "Malmad ha-Talmidim" (Goad for Scholars), he allegorizes the story of Noah to the effect that, in order to preserve himself against the waters of sin, every man must make himself an ark out of his good deeds, and this ark must consist of three stories, the mathematical, physical, and metaphysical elements (*l.c.* 12*a*).

The Opposition to Maimonides.

Even Anatoli, however, understands the Wisdom-Books of the Bible to consist of philosophical reflections only. Although Levy b. Abraham, of Villefranche, who was so prominent in the conflict concerning Maimonides, protests most stoutly against radical allegorism, he, in his "Liwyat Ḥen," nevertheless allegorizes the campaign of the four kings against five (Gen. xiv.), making of Chedorlaomer a representation of the Imagination, the leader in the battle of the five senses against the four elements.

From the same school also came purely allegorical commentaries upon Scripture, of which the following, out of the few fragments extant to-day, is an illustration: "Out of the house of Levi" (Ex. ii. 1)—that means, from organic corporal association (לוי union)—"went a man"—that is, Form—and "took to wife a daughter of Levi"; Form unites with Matter. From this union a son is born, Reason. "The daughter of Pharaoh" is Active Reason, who is the daughter of God the Recompenser (פרעה, derived from פרע, to recompense), and who is therefore called Bithiah (literally, the daughter of God), as Moses' adoptive mother was traditionally named (Meg. 13*a*). It is of the nature of Active Reason to work among lower beings, and make their passive reason active reason too; wherefore it is said (verse 5) "the daughter of Pharaoh came down" (compare the Zunz "Jubelschrift," p. 159). That such explanations of Scripture in point of fact are tantamount to a perfect negation of its words is incontrovertible, and the conservatives of Provence were justified in opposing it by all the means at their command. The expulsion of the Jews from France in the beginning of the fourteenth century put an end to the conflict, but the subversive principles of extreme allegorism had no doubt by that time been completely checked. Gersonides, undoubtedly the most important genius among the allegorists of the fourteenth century, never thought of allegorizing historical or legislative passages, and instead contented himself with a philosophical exposition of Proverbs and Job, and that in a most conservative manner. A contemporary, the Portuguese David b. Yom-Ṭob ibn Bilia, unconscious in his remote country of the conflict between philosophy and orthodoxy, was alone at this period in giving an Allegorical Interpretation to the miracles and narratives of Scripture.

A curious fact, characteristic of the varied mental gifts of the Polish Jews, is that Moses Isserles, called Rama (רמ"א), the greatest rabbinical authority of Poland in the sixteenth century, imitated the Provençal allegorists, some two hundred years after them, by allegorizing the Book of Esther. The quarrel between Ahasuerus and Vashti is the conflict between Form and Matter in the universe, just as Plato had presented the same opposition of existence as that of man and woman. The five senses and the five powers of organic life are symbolized for Isserles in the ten sons of Haman, who is himself the Evil Inclination (Commentary on Esther, "Meḥir Yayin").

Mystical Allegorism.

Though conservatism may thus be said to have vanquished philosophical allegorism in the fourteenth century and brought it to a halt, it could not prevent its development in another direction into that mystical allegorism, which in its turn became the most predominant method of Biblical interpretation. As far back as the "Sefer ha-Bahir" (first half of the twelfth century) this tendency had held sway in certain quarters, and it has survived down to the latest cabalistic work of modern Ḥasidim. The "Bahir" is the oldest cabalistic work of this kind. It says, "The earth was without form and void" (Gen. i. 2); the word "was" indicates that something was already existent; "void" also shows that there was a something; thus the preexistence of the universe before Creation is deduced from Scripture.

Though Naḥmanides made only a scant use of allegorism in his Bible commentary, he was the chief Talmudic authority of his age who with great insistence spoke a good word for it, and a pupil of his, Baḥya b. Asher, was the first to define the advantages of mystic allegorism over other modes of interpretation. While admitting the merits of *peshaṭ* (the literal meaning), of *remez* (philosophical allegorism), and *derush* (exposition), he claims that only in the path of the *sod* (Cabala) is there light (Introd. to Pentateuch commentary, begun in 1291). In his commentary he never fails to take cognizance of this mystical interpretation; thus he sees in the three festivals, the symbols of the three Sefirot, *ḥesed* (love), *din* (justice), and *raḥamim* (mercy), the last of which establishes equilibrium between the former two, which are mutual opposites. In the deliverance of the Jews from Egypt, God's love was displayed; in the revelation upon Sinai, His mercy, the intermediary between justice and love; and on the festival of the Holy Spirit (Tabernacles), the Sefirah of din (justice) stood revealed, an emanation of *ḥokmah* (wisdom). ("Commentary, Deut." ed. Riva di Trento, p. 256*b*.)

Zohar.

The masterpiece of Jewish allegorism, and next to Philo's writings the most interesting and most influential product of its kind, is the celebrated Zohar (Splendor), the gospel of the Jewish mysticism of the Middle Ages. It was this allegorical commentary upon the Pentateuch that coined the term **PaRDeS** (פרדס Paradise) for the four species of Biblical interpretation, forming it from their initial letters: thus **Peshaṭ** (literal meaning), **Remez** (allegorical), **Derush** (haggadic or halakic interpretation), and **Sod** (mystic meaning). As secondary forms of these four, the Zohar mentions in a passage (iii. 202*a*, ed. Amsterdam) the following seven: (1) literal meaning, (2) Midrash, (3) allegory, (4) philosophical allegory, (5) numerical value of the letters, (6) mystic allegory, and (7) higher inspiration. It may be remarked with regard to the last that Philo likewise claims "higher inspiration" for some of his interpretations ("De Cherubim," i. 9, 144; "De Somniis," i. 8, 627). Resting as it does upon rabbinical Judaism, the Zohar maintains the authority of the written word; but mysticism was already aware, at the time of the Zohar's origin, of its essential antagonism to the spirit of strict rabbinism, as appears from the following classical passage concerning the various methods of Scriptural interpretation:

> "Wo unto the man who asserts that this Torah intends to relate only commonplace things and secular narratives; for if this were so, then in the present times likewise a Torah might be written with more attractive narratives. In truth, however, the matter is thus: The upper world and the lower are established upon one and the same principle; in the lower world is Israel, in the upper world are the angels. When the angels wish to descend to the lower world, they have to don earthly garments. If this be true of the angels, how much more so of the Torah, for whose sake, indeed, both the world and the angels were alike created and exist [an old Midrash; see Ginzberg, "Monatsschrift," 1898, p. 546]. The world could simply not have endured to look upon it. Now the narratives of the Torah are its garments. He who thinks that these garments are the Torah itself deserves to perish and have no share in the world to come. Wo unto the fools who look no further when they see an elegant robe! More valuable than the garment is the body which carries it, and more valuable even than that is the soul which animates the body. Fools see only the garment of the Torah, the more intelligent see the body, the wise see the soul, its proper being, and in the Messianic time the 'upper soul' of the Torah will stand revealed" (Zohar, iii. 152, בהעלתך).

General Allegorization of the Law.

This classical passage reads almost like a declaration of war against rabbinism, whose haggadic and halakic interpretation is designated "body," or substance by the rabbis themselves (Ab. iii. 28) and by the Zohar is as it were travestied, being a body without soul. Characteristic of the Zohar is the fact that it provides a general allegorization of the precepts of the Law which heretofore had been attempted only in scattered instances. The following is the characteristic elucidation of the passage in Ex. xxi. 7, concerning the Jewish woman sold as a slave:

> "When God, who in Ex. xv. 3 is called איש, the man, sells his daughter—that is, the holy soul—for a slave—that is, sends her into the material world—she shall not go out as the men-servants do. God desires that when she leaves this world and her state of servitude in it, she should go from it free and pure, and not after the manner of slaves, laden with sin and transgression; in this manner only can she be reunited with her heavenly Father. If, however, 'she please not her master,' so that she can not be united with him owing to impurity and sinfulness, 'then shall he let her be redeemed'; that is, man must do penance and liberate the soul from the punishments of hell, so that she shall not 'be sold unto a strange nation,' the evil angels."

Next to the Zohar, mention must be made of the mystic allegorical commentaries of Menahem di Recanati, about 1320, the first writer to mention the Zohar; of the books "Peliah" and "Ḳanah"—see Ḳanah—probably of the fourteenth century, antirabbinical works in the form of a commentary on the Biblical account of Creation; and of the "Ẓioni," by Menahem b. Zion of Speyer, beginning of the fifteenth century. The allegorism of these works is entirely derived from the Zohar. Extensive use of cabalistic allegorism was likewise made by Solomon Ephraim Lenczyz (end of the sixteenth century), who applied it even to rabbinical precepts. This homiletic application of allegorism was quite favored by the Polish "darshanim," or preachers, the best examples being afforded by the often highly ingenious allegorizations of Jonathan Eibeschütz in his homilies, "Ya'arat Debash" (Honeycopse). When cabalism became incorporated in Ḥasidism, Allegorical Interpretation received a new impulse, the effects of which are still felt. The following allegorization of the passage concerning the two wives (Deut. xxi. 15) is from a work entitled "Ezor Eliyahu" (Elijah's Girdle), published at Warsaw, 1885: "When man's two inclinations [נשׂים, "rulers," for נָשים, "wives"], the spiritual and the material, the one which a man readily obeys and the one to which he is not so obedient, both produce actual deeds, then only the offspring of the spiritual prompting—the one less beloved—shall be considered as the real 'first-born,' the meritorious one."

Isaac Arama.

It was owing to mystic influence that, toward the end of the fifteenth century, philosophical allegorization, which had so long lain dormant as under a ban, once more raised its head in association with *derush* (exposition of Scripture). Quite the ablest of these allegorizing preachers was Isaac Arama, who, basing his attitude upon the above-mentioned declaration of the Zohar, strenuously maintained not only the propriety, but the necessity of Allegorical Interpretation ("Ḥazut Ḳashah," x.), without, however, detracting in the least from the authority of the literal word. Exactly in the words of Philo, but probably quite independent of him (compare Paul's allegory of the same Biblical narrative), "Sarah, the mistress, is the Torah; her handmaiden, Hagar, is Philosophy. The fruitfulness of Sarah [the Torah] followed only when the Egyptian handmaiden—that is, heathen Philosophy—had for centuries usurped the position of mistress. It was then that the real mistress, the Torah, resumed her sway, and Philosophy became her handmaid. But the latter sought to flee from her rule into the wilderness, where the angels found her at the well. Thus Philosophy essayed to separate herself from Revelation, and presumed to water the desert of mankind with mere human wisdom, water from her well; but the angels taught her that it were better for her to be a servant in Sarah's house [the Torah] than a mistress in the desert." Arama's deduction that philosophy is the handmaid of theology is thus exactly the opposite of the view of Maimonides and his successors.

Next to Arama, mention may be made of Judah Moscato, the first darshan in Italy in the sixteenth century to make extensive use of allegorism. In the Biblical prescription for the Nazarite, he perceives the intimation that man must renounce the world and its enjoyments, until his hair, typifying his connection with the spiritual, has grown to such extent that he can enjoy the world without danger ("Nefuẓot Yehudah," hom. 15). In connection with this mention may be made of Don Isaac Abravanel, whose allegorism closely resembles that of the darshanim. He, too, takes his stand upon the Zohar's justification of allegorism and its distinction of garment, body, and soul in the Torah. Being an admirer of both Maimonides and the Cabala it is not seldom that he gives to a Biblical passage two interpretations, one philosophical and one cabalistic. Thus Adam is the type of Israel, the true man, into whom God breathed His spirit, the holy law. He placed him in Paradise, the Holy Land, where were the tree of life (the teachings of the Law and prophecy) and also the tree of knowledge (heathenism). And thereupon a philosophical interpretation follows, based principally upon Maimonides and Gersonides ("Commentary on Gen." iii. 22, ed. Amsterdam, 34*b*).

In the New Testament.

Epistle to the Hebrews.

Of the New Testament writings, the Pauline and Deutero-Pauline are especially full of Allegorical Interpretation, in which the two elements of Palestinian and Hellenic Judaism are both conspicuous. Paul's allegorism is typological and betrays its Pharisaic origin. Thus it can not be said to be due to Alexandrian, still less to Philonic, influence, when Paul, in I Cor. ix. 9, 10, says, "Doth God take care for oxen?" (Deut. xxv. 4), "or altogether for our sakes." This is simply a modification of the old Halakah quoted above, which applies this law to explain that a woman may not be forced into an unsuitable levirate marriage, because she herself is entitled to the ordinary promise of happiness in return for her share in the bond of wedlock. So, too, his well-known allegorization of Sarah and Hagar (Gal. iv. 21-31) is fundamentally only a typological presentation of the Palestinian teaching, "Thou wilt find no freeman but him who is occupied in learning Torah" (Ab. vi. 2). Paul is not even original in his types, for the oldest Haggadah represents the conflict between Ishmael, the son of the maid, and Isaac, the son of the mistress, as a spiritual one (Sifre, Deut. xxxi.). Alexandrian influence is first discernible in the Epistle to the Hebrews, whereas Palestinian allegorism is suggested in the interpretation of the ark of Noah as representing the rite of baptism, in I Peter, iii. 20; compare Gen. R. xxxi. 9. Alexandrian influence is shown in Hebrews by the general tendency throughout rather than by individual instances. Paul never detracts from the historical reality of the narratives he allegorizes, but the Hebrews became the model for Alexandrian ingenuity by which Israel's history and legal enactments were construed as being in reality intimations of the mysteries of faith, concealing the spirit in the letter, and reducing the essentials of the Old Testament to mere shadows. This tendency is clearest in the Gospel of John, the author of which makes most use of Old Testament illustrations; the serpent upon a pole in the wilderness (Num. xxi. 8) becomes Jesus upon the cross (John, iii. 14). Jesus is the manna in the desert, the bread of life (*ibid.* vi. 31, 49).

The Apostolic Fathers.

This pushing of the allegorization of the Old Testament to such an extreme that it would deprive it of all its independent life and character, or make of it a vague and feeble prophecy of the future, found favor among the Apostolic Fathers. Prominent among these for his allegorization was Barnabas (about the year 100), who, acquainted as he was with rabbinical and even halakic doctrine, aspired to show that the Jews did not themselves understand the Old Testament. The Biblical enactment of the scapegoat is typically applied to Jesus, who carried the sins of his crucifiers; the goat's flesh was devoured raw and with vinegar—an old Palestinian tradition—because Jesus' flesh was also moistened with gall and vinegar. The boys who sprinkle the water of purification are the apostles; they are three in number, in commemoration of Abraham, Isaac, and Jacob. These and other allusions make it sufficiently clear that Barnabas depended upon Palestinian sources rather than upon Philonic, as Siegfried would maintain ("Philo von Alexandrien," p. 331).

While Barnabas exhibits a not insignificant Hellenic bias, his methods were applied by Gnostics to the New Testament writings. Although they disclaimed any depreciation of the historical value of the Old Testament, they became the chief exponents in their time of that Alexandrian allegorism which made of the Biblical narrative nothing else than an account of the emancipation of reason from the domination of passion. The Gnostics developed this theme with the modification that they detected this conflict between mind and matter, between reason and sense, in the New Testament in place of the Old. A different tendency was conspicuous among the older apologists of Christianity, who allegorized away the Old Testament, but regarded the New as absolutely historical. Justin Martyr is one of them, who ridicules the artificialities of Jewish exegesis ("Dialogus cum Tryphone," 113, 340), but whose own allegorization of Old Testament passages is thoroughly Jewish, Palestinian as well as Alexandrian.

Gnosticism.

Thus he says Noah was saved by wood and water, showing that Christians are delivered from sin likewise by the cross and by baptism (*l.c.* 138). In effect he transforms the whole Old Testament into a typology of Jesus and Christianity, so that Tryphon very pertinently remarks that God's word was holy indeed, but that Justin's interpretations were very arbitrary. With the gradual development of the Catholic Church out of Jewish primitive Christianity and Greek Gnosticism, the attitude of the Church toward the Old Testament was modified too, as is shown by Clement of Alexandria, or more strongly yet by his disciple Origen. The former is the first Church father to revert to Philo's methods of allegorism, distinguishing between the body (literal word) and spirit (Allegorical Interpretation) of Scripture. He finds allegorical meaning in both prophetical and legislative portions; he adopts Philo's allegorical rules and many of his individual interpretations. Nor does he fail to originate some expositions himself. Thus the unclean animals which chew the cud, but are of undivided hoof, are the Jews; heretics are those of divided hoof but who chew not the cud; while those who possess neither characteristic are the heathens ("Stromata," v. 52, vii. 109). Origen's intimacy with Palestinians prevented him from falling into such exaggerations of the Alexandrian tendency as marked his teacher Clement, and even a certain degree of historical appreciation of the Old Testament becomes evident. But the conflict in Origen, so apparent in his Christology, between speculative Gnosticism and the historical conception of Scripture, prevented any rational and consistent view of Scripture. He, too, must be made responsible for the gross exaggerations of Christian allegorists lasting down to modern times; Hilary, Ambrose, Jerome, and Augustine all borrowed their allegorizing method from Origen, who likewise originated the doctrine of the threefold meaning of Scripture, the literal, moral, and mystical ("De Principiis," iv. 8, 11, 14). The following may serve as specimens of his manner: The narrative of Rebecca at the well is to teach us that we must daily resort to the well of Scripture in order to find Jesus. Pharaoh slew the boy-children and preserved the girls alive, to show that he who follows pleasure kills his rational sense (masculine) and preserves the feminine (the sensual passions). Origen's allegorism was thus a triumph for Jewish Alexandrianism in the development of the Church, but Palestinian allegorism likewise celebrated its own victory in the Church of Antioch.

Antiochian School.

The basic principle of Jewish typology, "*Ma'aseh abot siman le-banim*" (the lives of the Patriarchs prefigured the lives of their descendants), became the motto of the Antioch school. Aphraates makes diligent use of this typology, and his successors do so in even greater degree; with them the aim of this typology is not always Messianic, and not even Christological. Thus Theodore of Mopsuestia regards Jacob's anointing of the stone (Gen. xxviii. 18) as a type of the erection and consecration of the Mosaic tabernacle, just as the Midrash does ("Nicephori Catena," *ad locum*).

BIBLIOGRAPHY: A separate presentation of Allegorical Interpretation has not yet been written, and therefore reference must be made to works treating of Scripture interpretation in general: Rosenmueller, *Historia Interpretationis Librorum Sacrorum*, iv. Leipsic, 1795. On Philo: Siegfried, *Philo von Alexandrien*, Jena, 1875, and the list of references on p. 162; Diestel, *Gesch. A. L. G.

ALLEGORY IN THE OLD TESTAMENT:

Allegory is a sustained description or narration, treating directly of one subject, but intended as an exposition of another, the latter having a more spiritual nature than the former, yet bearing some perceptible resemblance to it. It is a comparison between two different groups of ideas on the basis of something possessed in common. It has for its purpose the illustration or inculcation of a higher truth.

In the Old Testament, allegory with its kindred didactic forms is comprised under the Ḥokmah (Wisdom), literature under the two terms *mashal* משל and *ḥidah* חידה (Ezek. xvii. 2; compare xxiv. 3; Dan. viii. 23). *Mashal*, now specifically maxim, or gnome, primarily denoted a comparison or simile. Under this older meaning, it was generally rendered in the Septuagint by παραβολή (parable). Originally, it was doubtless didactic in purpose, and derived a maxim for the conduct of life from the comparison of two apparently dissimilar objects. Later it was applied to any sententious or pointed saying, and even to obscure prophetic utterances, since these, too, aimed to instruct and usually employed comparison (Num. xxiii. 7, 18; xxiv. 3; compare Isa. xiv. 4; Micah, ii. 4; Hab. ii. 6). *Ḥidah*, properly a riddle, is used in a wider sense for figurative and significant speech (Judges, xiv. 14; I Kings, x. 1; compare Ps. xlix. 5; lxxviii. 2).

It is somewhat difficult to define the difference between allegory, parable, and fable. The parable and the fable may be considered species of the allegory, for, like it, they represent their subject in an image or in a complete figurative narration or description. The characteristic mark of the fable is that it employs for the vehicle of its expression the improbable, even the impossible—such as reason and speech in animals and plants—and that its lesson is confined to practical worldly expediency. It derives a truth, to be applied to one sphere of thought, by displaying that truth as manifest in a different but comparable sphere.

Fable.

An example is furnished by the more elaborate of the two fables in the Old Testament, that of the trees choosing a king. The valuable olive-tree, the fig-tree, and the vine refuse to be king over the trees, but the worthless bramble accepts (Judges, ix. 8-16). The truth derived is to be applied to Abimelech and the men of Shechem who choose him king. Like the bramble, Abimelech is worthless, and would serve only to set "fire to the other trees," that is, would bring only disaster to the men of Shechem. The second fable (II Kings, xiv. 9-10) is more like a proverb. King Amaziah of Judah challenges King Jehoash of Israel, and receives for answer a comparison of himself to the weak thistle that woos the daughter of Lebanon, and is trodden down by the wild beast. The similitude between Amaziah and the thistle lies in the fact that each is weak and is punished for presumption; here the resemblance ends.

Parable and Allegory.

In the parable and allegory an actual basis of resemblance and actual points of contact exist between the primary subject and the analogous subject with which it is compared. Thus, each subject may serve as a figure for the other. In the parable the author himself indicates the analogy by placing interpretation next to image; but in the allegory, judgment is not expressed. An index to the meaning is provided by the condition and circumstances of hearer and speaker, and by the individual figures of the image which, as it were, form a veil through and beyond which the mind sees the real object. The interpretations are given, for instance, in the most finished parable of the Old Testament (Isa. v. 1), in the parable of the vine (Ezek. xv.), and in the parable of the poor man bereft of his ewe lamb by the rich man (II Sam. xii.). On the other hand, in the eightieth Psalm, the reference of the vine to Israel (compare Isa. v.) is not definitely indicated, but only understood from the connection. In Jer. ii. 21 the same thought is expressed as in Isa. v. and Ps. lxxx., but here it is in metaphoric form. In the New Testament (John, x.), Jesus' comparison of himself to a vine is also a metaphor, though somewhat lengthy, and often quoted as an instance of mixed allegory. Still more extended are the metaphors in Ezek. xvi. and xxiii. One of the finest pieces of allegorical imagery is the representation of the king of Babylon as an eagle, and the house of David as a cedar (Ezek. xvii. 2–10); but since the interpretation follows it is not strictly an allegory, and metaphors similar to it in character are given in Ezekiel (xix. 1–9; xxx. 2–17). The comparison of Jerusalem to a caldron (Ezek. xxiv. 3–6) is a parable rather than an allegory, and the allegorical description of old age (Eccl. xii. 2–6), in its individual figures, is rather in the nature of an enigma.

I. M. C.

ALLEGRI, ABRAHAM: A contemporary of Moses Benveniste; lived at Constantinople about the middle of the seventeenth century. He wrote a commentary on the "Sefer ha-Miẓwot" of Maimonides, in which he defended him against the attacks of Naḥmanides. He published this work at Constantinople, in 1652, under the title "Leb Sameaḥ" (A Gladsome Heart)—referring thereby to his own name, Allegri. Under the same title a number of his responsa were published in Salonica, 1793.

M. K.

ALLEMANNO, JOHANAN: A cabalist who flourished in the second half of the fifteenth century; born in Constantinople. He migrated to Italy, and became distinguished there as the teacher of Pico della Mirandola, "the Italian prodigy," in Hebrew and the Cabala, thus contributing toward the spread of Jewish mysticism among the Christian humanists (see Cabalists, Christian). Allemanno's writings show great versatility and attainments. In his chief work, "Ḥesheḳ Shelomoh" (The Delight of Solomon), he evinces a certain philosophic acumen as well as a wide acquaintance with both the Arabic and the Greek philosophers. The introduction to this work is a discourse on the artistic and intellectual attainments of the human race, all of which are combined in King Solomon, whom the author places above Plato and his fellows (compare "Sha'ar ha-Ḥesheḳ," pp. 3–7). Excerpts from the introduction were published, with additions by Jacob Baruch b. Moses Ḥayyim, at Leghorn in 1790. Allemanno also wrote: "'Ene ha-'Edah" (The Eyes of the Congregation), a cabalistic commentary on the Torah (compare Gedaliah ibn Yaḥya's "Shalshelet ha-Ḳabbalah," ed. Warsaw, 1889, p. 86); "Ḥayye Olam" (Eternal Life), a treatise on immortality; "Liḳḳutim Collectanea," a volume of about two hundred pages, containing stray thoughts, aphorisms, noteworthy quotations from rare authors, and exegetical remarks.

H. G. E.

ALLEN, JOHN: English dissenting minister, educator, and author; born at Truro in 1771 and educated in the city of his birth by Dr. Cardue. He conducted a private school at Hackney, near London, for thirty years, and died at that suburb on June 17, 1839. He is best known by his "Modern Judaism; or a Brief Account of the Opinions, Traditions, Rites, and Ceremonies of the Jews in Modern Times" (London, 1816); that is, since the common era. This work has been commended by no less an authority on religious subjects than Edward Bickersteth, the English divine, for its "useful information." William Orme, a contemporary, characterized it as "the best work on modern Judaism in the English language"; and Thomas Harwell Horne, an English bibliographer, referring to it said: "In this well-executed volume the various traditions received and adopted by modern Jews, that is, by those who lived in, and subsequent to, the time of Jesus Christ, are fully and perspicuously treated." The book was reprinted in 1830. Allen also published other works, including an excellent translation of Calvin's "Institutes" (1815; 2d ed., 1838).

ALLENSTEIN: Town in the district of Königsberg, eastern Prussia. The small Jewish community there was established Feb. 25, 1862. Before that date there were only a few families in the town, and they rented a room for divine services. The community possessed a cemetery, in which the oldest tombstone is dated 1872. The synagogue was built in 1877; and a rabbi, Dr. Olitzki, was appointed in 1892. The following societies have also been organized: Society for the Care of the Sick and the Burial of the Dead (Ḥebra Ḳaddisha); Women's Society; Society for the Prevention of Vagrancy; Jewish Historical and Literary Society. In 1880 Allenstein contained forty Jewish families. In 1900 there were one hundred families, or about 450 souls.

ALLGEMEINE ZEITUNG DES JUDENTHUMS: A German journal devoted to Jewish interests; founded in 1837 by Dr. Ludwig Philippson

(1811-89); published first in Leipsic and later in Berlin. At the time of its foundation there had been several Jewish journals in existence: "Sulamith," "Jedidja," Geiger's "Wissenschaftliche Zeitschrift für Jüdische Theologie," and Dr. Höninghaus' "Universal-Kirchenzeitung," which admitted Jewish contributors. Philippson felt that these did not satisfy the needs of the times. He determined to found a journal for the intelligent laity—one that should not only advance the knowledge of the Jews' past history, but should also plead the cause of the Jews of his day. The first number of his paper appeared May 2, 1837, and was published by Baumgärtner in Leipsic with the subtitle "Unparteiisches Organ für Alles Jüdische Interesse in Betreff von Politik, Religion, Literatur, Geschichte, Sprachkunde, und Belletristik" (Impartial Organ for All Matters of Jewish Interest Pertaining to Politics, Religion, Literature, History, Philology, and Belles-lettres).

During the first two years three numbers a week appeared; and for a year and a half a supplement was published three times a month, devoted to literature and homiletics. In 1839 the journal became a weekly. The "Allgemeine Zeitung" has never received a subsidy from any Jewish body. In 1848, when the publication of nearly all other Jewish journals was interrupted, the "Allgemeine Zeitung" braved the storm and spoke out plainly in the political turmoil. After 1853 a supplement was published regularly, entitled "Jüdisches Volksblatt zur Belehrung und Unterhaltung auf Jüdischem Gebiete" (A Popular Jewish Journal for Instruction and Entertainment on Jewish Subjects). On the death of Philippson, Gustav Karpeles became editor. The journal is now published in Berlin by Rudolf Mosse. Its first issue under Karpeles' editorship appeared Feb. 9, 1890. The outward appearance has been changed so that the literary part, which forms the bulk of the paper, is now separated from the part containing the news. The latter is paged separately, and bears the title "Der Gemeindebote."

From the outset the "Allgemeine Zeitung" met with success. A few weeks after the issue of its first number a society of students in Leyden (Holland) was formed to aid its circulation. Even in Poland it obtained several hundred subscribers; and within three months after the appearance of the first number Philippson felt justly confident of its material success. The journal aroused great enthusiasm in the cultured Jewish circles of Germany, Austria, and Holland, and exercised considerable influence on Judaism in general—more especially in Germany, where it became a distinct factor in the evolution of Judaism. To its influence is due in a large measure the establishment of a rabbinical seminary (Lehranstalt für die Wissenschaft des Judenthums in Berlin) and of a Jewish Publication Society (Institut zur Förderung der Israelitischen Literatur), as well as the calling together of a Jewish synod (Leipsic, 1869).

Philippson's chief aim was the civil emancipation of the Jews. He carried on the fight for that cause begun by Gabriel Riesser and others. But the paper gained further importance in connection with the inner communal and religious life of the Jews, since it devoted attention to the organization of religious instruction, to the form of worship in the synagogue, and to the cultivation of Jewish learning in all its branches. Jost, who in his "Neuere Geschichte der Israeliten" (iii. 149-156), devoted a whole chapter to the "Allgemeine Zeitung," said "that it became epoch-making in Jewish history by attempting for the first time to give a general view of the life and conditions of the Jews."

During the first years of its existence the paper had among its collaborators a number of the most distinguished scholars, some of whom were Gabriel Riesser, E. Carmoly, J. L. Saalschütz, S. D. Luzzatto, Leopold Zunz, Leopold Dukes, Julius Fürst, Leopold Löw, Franz Delitzsch, Adolph Jellinek, Abraham Geiger, and I. M. Jost. It is interesting to note that Phoebus Philippson, brother of Ludwig, contributed in the first year a series of eleven articles under the title "Ideas for an Encyclopedia and a Methodology of Jewish Theology."

ALLGEMEINES ARCHIV DES JUDENTHUMS: A monthly publication, devoted, as its title indicates, to the general history of the Jews. It was founded and edited by Jeremiah (Jerome) Heinemann, who, prior to its publication in Berlin in 1839, had edited an annual entitled "Jedidiah." From the date of its first issue it appeared irregularly until 1844, when it had reached the middle of its third volume and its publication ceased (Winter and Wünsche, "Jüdische Literatur," iii. 861).

D.

ALLIANCE ISRAÉLITE UNIVERSELLE: A society founded in 1860 for the protection and improvement of the Jews in general, but mainly devoted to the interests of those in the east of Europe, North Africa, and Asia Minor. It was established by six Jews of Paris (France): Aristide Astruc, afterward chief rabbi of Belgium; Isidore Cahen, editor of the "Archives Israélites"; Jules Carvallo, civil engineer; Narcisse Leven, lawyer; Professor Eugène Manuel, and Charles Netter, merchant (died 1882)—all men of good standing, but at that time not particularly prominent in the Paris community. Repeated attacks upon the Jews by fanatical sects of various denominations had long made it apparent that something should be done on an organized scale. The assassination of Father Thomas at Damascus, in 1840, had given rise to an accusation of ritual murder against the Jews of that city. Sir Moses Montefiore, together with Adolphe Crémieux, a lawyer, and Solomon Munk, the eminent Orientalist, proceeded at once to Egypt to intercede with Mehemet Ali and to defend the accused. This event brought forcibly to light the necessity for a central organization that should undertake the defense of the oppressed Jews scattered throughout the world; and the Jewish journals of Germany and France made earnest appeals for the creation of such an institution. Owing, however, to lack of agreement or perseverance, their utterances remained without any practical issue for twenty years.

A crime perpetrated in the Papal States in 1858, with the connivance of the papal government, aroused world-wide indignation. A child, Edgar Mortara, was torn from his Jewish parents and forcibly baptized. This outrage against religious liberty contributed much to strengthen the general sentiment for organized protection; and, as a result, two years later the Alliance Israélite Universelle came into existence, under the auspices of the above-named public-spirited Jews of Paris.

In an "Appeal" addressed to the public in December, 1860, the task which the new society was about to assume is stated as follows:

"To defend the honor of the Jewish name whenever it is attacked; to encourage, by all means at our disposal, the pursuit of useful handicrafts; to combat, where necessary, the ignorance and vice engendered by oppression; to work, by the power of persuasion and by all the moral influences at our command, for the emancipation of our brethren who still suffer under the burden

> of exceptional legislation; to hasten and solidify complete enfranchisement by the intellectual and moral regeneration of our brethren:—such, in its chief aspects, is the work to which the Alliance Israélite Universelle hereby consecrates itself."

Program.

This program is definitely formulated in Article I. of the statutes:—

"The society of the Alliance Israélite Universelle has for its aims:

"(*a*) To work everywhere for the emancipation and moral progress of the Jews.

"(*b*) To give effectual support to those who are suffering persecution because they are Jews.

"(*c*) To encourage all publications calculated to promote these ends."

To this program the Alliance has steadfastly and faithfully adhered. It must be admitted that the founders had a very practical conception of their undertaking. Disregarding any project which might cause dissension, they limited their field of activity to such questions only as to which there could be no divergence of opinion among the Jews. It was in this spirit that they declared at the outset that all political questions should be excluded, and that the Alliance would take no account of either the political convictions of its members or of their religious opinions. It recognized neither Orthodox nor Liberal, neither Conservative nor Reformer as such: it desired to stand upon the one platform of the defense and the regeneration of the Jews, exclusive of all political or theological distinctions.

First Struggles.

From the beginning the Alliance numbered many Protestants among its friends, clergymen as well as laymen. Dr. Pétavel of Neuchâtel and his sons, who at once sent their congratulations and good wishes to the infant society, deserve particular mention. Among other Christian subscribers, Alexandre Dumas, the younger, and Jules Simon, must be mentioned; they remained faithful adherents until their death.

The Alliance encountered obstinate opposition among the timorous, among those who hated action, and among those who thought that evil could be cured by ignoring it. There were distinguished men in Jewry, too, who combated the project—writers and rabbis who sought to hinder the foundation of the society. The Jewish journals of 1860 and 1861 are full of vigorous polemics on the subject; but time, reflection, and experience have quieted the opposition. At the present day there is very little diversity of opinion in the Jewish world as to the positive service rendered by the Alliance, particularly in the domains of education and philanthropy.

Until 1880 the society had to struggle with internal dissensions, especially after the Franco-German war of 1870–71. Again and again, both at general meetings and at other gatherings convened by the Central Committee, it was proposed to split up the "Universal Alliance" into a number of "National Alliances." At Berlin in 1872 and again in 1879 this idea was supported by men of great influence among the Jews of Germany. Fortunately they failed in their endeavors: a division would have greatly weakened the Alliance; and the scattered fragments would have been unable to accomplish anything durable or important. What happened in England and in Austria should be convincing in this regard. In 1871 the English Jews created in London an institution entitled "The Anglo-Jewish Association" in connection with the Alliance Israélite Universelle. This association has for the most part the same objects as the Alliance. It has almost daily correspondence with the Central Committee of the Paris institution, and contributes to the Alliance funds for the support of certain schools; but its sphere of activity can not well extend beyond the British empire, and it would be difficult for it to undertake work throughout the world or to approach the diplomatic authorities of any country but England. The Alliance Israélite, on the other hand, because of its universal character, is active everywhere and in all directions; appeals to sovereigns and governments indiscriminately; and founds schools where the teaching is carried on in German, English, French, Turkish, Arabic, or Russian. Another society, "Die Israelitische Allianz zu Wien" (The Israelitish Alliance at Vienna), was formed upon the same model in 1873; but its sphere of action is limited to Austria, and its principal purpose is to work for the elevation of the Israelites of that country.

Central Committee.

At present the Central Committee is composed of 23 members living in Paris and 39 outside of France. Of the latter 17 are in Germany, 1 in Austria, 2 in Hungary, 3 in Holland, 1 in London, 1 in Switzerland, 1 in Belgium, 6 in the United States, 4 in Italy, 1 in Denmark, 1 in Curaçao, and 1 in Turkey. French communities outside of Paris are not represented in the Committee, nor are those of Algeria or Tunis. According to article 8 of the statutes, the Central Committee is elected by the members of the society, by a majority of the votes cast. Article 9 provides that the members of the Committee shall hold office for nine years; three members retiring every three years, all being eligible for reelection. The first elections were held in 1862; the subsequent ones on the following dates: May 21, 1865; May 3, 1868; Oct. 20, 1872; March 19, 1876; Feb. 11, 1883; March 10, 1887; Oct. 13, 1889; Oct. 8, 1893. Up to the present time elections have thus been held almost regularly. In 1879 exceptional circumstances prevented an election. In 1897 the unanimous sense of the members of the Central Committee, supported by the great majority of local committees, decided that the electoral machinery should not be employed in that year, and that it was preferable to appoint the necessary new members of the Committee by the vote of the existing members of the board.

The society is managed by the Central Committee resident in Paris. Non-resident members participate in the work, but indirectly. They receive every month notice of the questions which are to be discussed and are invited to send in their opinions. When these questions are of general importance, the major part of them communicate their views in writing, and occasionally some of them are present at the sessions in Paris and take an active part in the deliberations. The Central Committee was presided over from 1860 to 1863 by L. J. Königswarter; from 1863 to 1867 by Adolphe Crémieux; in 1867 by Solomon Munk. At his death, the post remained vacant for a year; Crémieux being reelected in 1868, and retaining the office until his death in 1880. Out of respect to him it was left vacant until 1882, when S. H. Goldschmidt was appointed to the office, which he held until his death on Feb. 18, 1898. From this date the presidency has been entrusted to Narcisse Leven, one of the original founders of the Alliance, its general secretary from 1863 to 1883, and its vice-president from 1883 to 1898.

Article 13 of the statutes provides that the Central Committee shall convene a general meeting of the members at least once a year, and shall present a report of the condition of the society. During the first years of its existence this provision was regularly observed; but from 1874 general meetings have taken place only on March 14, 1875; Aug. 12, 1878, and May 16, 1881.

The Central Committee keeps in touch with the members of the Alliance by means of local or

Organization.

territorial committees. In certain countries, notably France and the United States, the local committees are in direct correspondence with the Central Committee. In Germany, Holland, Italy, and Hungary, supervising the local committees, there are territorial committees, whose spheres of action are sometimes very extensive; but both territorial and local committees, except on rare occasions, are restricted in their actions to the carrying out of the resolutions passed by the Central Committee, to securing new subscribers, and to soliciting and collecting donations and assessments for the society. They are, as it were, the executive and propagating agents of the institution.

During its whole existence, the Alliance has had as chief source of income the assessments and donations of its members; and even to-day these contributions represent an important portion of its receipts. The annual dues being fixed at the minimum rate of 6 frs. ($1.13), and by far the greater number of subscriptions not exceeding this amount, it required nearly 22,000 subscribers to make up the 158,719 frs. derived from this source in 1898. The number of members increased continuously until 1884, when their annual contributions amounted to 220,000 frs. From that period, this income has gradually diminished from year to year; and a vigorous effort would be necessary to increase it. There are many causes for this falling off: Anti-Semitism compels great sacrifices in France, in Germany, and elsewhere; many local benevolent societies and institutions have since been established; and to these causes must be added a certain false shame which holds many aloof from their coreligionists.

Publications.

Since its organization the Alliance has published reports or "Bulletins" upon its progress and upon its work. Beginning with the appearance of the first "Appeal" in 1860, until the year 1862 these "Bulletins" were issued every two or three months. They contained extracts from the minutes of the meetings of the Central Committee, information on the condition of the Jews in various lands, a description of all the work in which the Alliance was participating or in which it might become interested, and, finally, a statement of receipts and expenses. From 1865 to 1893 the "Bulletin" was published semi-annually. When the society had grown considerably two "Bulletins" became necessary. Accordingly, from March, 1893, a monthly "Bulletin" has been issued, designed for the committees, for the principal coworkers, "and for all those willing to pay an additional yearly subscription." The semi-annual "Bulletin" gives an abstract of the monthly issues and a statement of receipts and expenditures; this is sent to all subscribers. In 1887 it was thought that, in view of the monthly "Bulletin," the semi-annual publication might be discontinued and an annual report substituted. The monthly and annual "Bulletins" appear in French and in German. Some issues have also been published in English, Hebrew, and Hungarian. In 1885, on the occasion of the twenty-fifth anniversary of its existence, the Alliance published a history of its work from its inception. This history has been translated into German, English, Arabic, Dutch, and Ladino. or Judæo-Spanish; so that subscribers of nearly every country can read it in their own tongue.

General Activity.

The Alliance had hardly been established when it demonstrated the broad spirit animating its founders by opening a subscription for the Christians of Lebanon who were being persecuted by the Druses and dying of hunger. Both Crémieux and Sir Moses Montefiore appealed to the generosity of their coreligionists in behalf of these victims of Mussulman fanaticism; and a provisional committee took up their initiative and contributed efficiently to the mitigation of this undeserved suffering. About the same time the Alliance endeavored to procure the restoration to his father of the Jewish child Edgar Mortara.

In countries where liberty of conscience and equal rights are now deeply rooted in the national institutions, it is hard to realize that the Jews have enjoyed these benefits only for the last thirty years. In 1860, certain Swiss cantons still refused foreign Jews the right of residence and the right to hold property; the canton of Aargau denied equal civic rights to its own Jewish citizens. The liberal press of both France and Switzerland energetically seconded the steps undertaken by the Alliance to remove these vestiges of medievalism. Nothing was accomplished, however, until 1867, when France, Italy, Belgium, and Holland, having been notified by the Alliance of the continuance of this unfair treatment of citizens of Jewish faith, refused to renew their treaties with Switzerland unless absolute equality were guaranteed to the Jews.

The activity of the Alliance thus far had been of a sporadic nature exerted from time to time in favor of certain bodies of Jews. There were countries, however, where this action was unremittingly exercised for a long series of years and where it still continues at the present day. A distinction must be made between countries under Christian domination and those under Mussulman influence.

Rumania.

The situation of the Jews of Rumania and Servia called for the action of the Alliance from the day of its foundation. For seventeen years, up to the treaty of Berlin in 1878, the Alliance had worked unceasingly to succor the unhappy Jews of those countries. In 1860 Rumania seemed to be ripe for civilization. The French press especially had become infatuated with this small nation of Latin race and language, which declared itself permeated with the spirit of purest liberalism. Jews had been excluded from the enjoyment of political rights; they were considered as aliens, although a great majority of them had been born in the country and had never belonged to any other nationality. The members of the Central Committee of the Alliance, several of whom had the opportunity of making the acquaintance of Rumanian statesmen in Paris, saw no reason to doubt the good disposition of Rumania. The reigning prince himself, Alexander John (Cuza), in 1864 received the suggestions of the committee most graciously, and requested his representative at Paris to place himself in communication with the Alliance. In 1866 Crémieux went to Bucharest, and was heartily welcomed by government officials. Ministers and deputies vied with one another in expressions of regard. He was formally conducted to the Chamber of Deputies, and the members thronged around him to listen to his eloquent words. A vote was just then being taken on the adoption of the constitution which contained an article according all civil and political rights to the Jews, and Crémieux took his departure from Bucharest with the conviction that the emancipation of the Rumanian Jews was an accomplished fact. Scarcely had he left the city, when a riot broke out in which the synagogue was stormed and sacked. This was the first step in a policy of violence, injustice, and persecution which has prevailed ever since. It was followed by various prohibitions against living in villages; against owning houses, lands, or vineyards in rural districts; against dealing in liquor; against the possession of municipal rights, or the exercise of any public function; against following the profession of lawyer or pharmacist; and against the employment of Jews on the railroads. On March 15, 1884, an edict prohibiting peddling was promulgated, and thereby twenty thousand Jews were deprived of their means of support.

Dissatisfied with this, the Rumanians then invented a still more efficient method of harassing their Jewish fellow citizens. Since about the year 1894, the primary and secondary schools have been closed to Jewish children, and even the trades and commercial schools likewise. It is the hardest blow dealt at Rumanian Jewry, and one which it feels most keenly. These laws have caused the Alliance and the Jewish Colonization Association to lend generous support to Rumanian Jewish communities for the creation and maintenance of special schools. Such restrictive laws on education are more deadly than all the expulsions and all the riots which have stained the streets of Rumanian towns with Jewish blood. The question will be asked, "Was the Alliance idle during these odious persecutions?" It was its duty to proclaim to public opinion the bad faith and the intolerant spirit of the successive Rumanian ministries; to intercede with European governments, especially with the great powers, under whose guaranty Rumania obtained its independence in 1856. The truth was not sufficiently known either to the European public or to the various governments, and therefore had to be proclaimed; this was the especial function of the Alliance, and it did not fail in the emergency. Rumanian agents perverted the facts, and represented that the Jewish expulsions were hygienic measures. They claimed that the prohibitive laws were directed against aliens and not against Jews. Friends of the Alliance and of truth interpellated the government in various European parliaments concerning the conduct of the Rumanian government. Irrefragable statements were published by the Alliance in support of its accusations against the Rumanian government. Certain very grave events that had taken place at Ismaila in 1872 spurred the Alliance to still greater efforts. Under its auspices, a conference was held at Brussels, Oct. 29 and 30, 1872, of delegates from France, Germany, England, and the United States, presided over by Crémieux. It was decided to persevere in the struggle and meanwhile to assist the Rumanian Jews in their endeavors to obtain justice. Another meeting took place in Paris Dec. 11, 1875, at which it was resolved to solemnly demand of the powers their intercession in behalf of the Jews in Rumania. The memorial prepared by this conference was taken to the celebrated diplomatic congress at Constantinople by M. Charles Netter, a member of the Central committee.

Berlin Congress, 1878.

The failure of the conference of Constantinople, which was followed by the war between Russia and Turkey, is a well-known historical fact. The congress convened at Berlin in 1878 to settle the affairs of the East after the close of the war, was solicited to take up the question of the Rumanian Jews. The Alliance was represented by three delegates to the congress, Kann, Netter, and Veneziani. It was a solemn moment in the life of the Alliance. Its delegates were courteously received and were enabled to lay before the assembled European diplomats a full statement of their grievances and their demands. France took the initiative and proposed to the congress that in Rumania, Servia, and Bulgaria "differences of religious belief should not be considered as reason for disability in matters pertaining to the enjoyment of civil and political rights." This declaration is embodied in articles 5, 20, 35, and 44 of the treaty of Berlin. United Europe sanctioned the equality of all religions before the law and proclaimed the emancipation of the Jews. This significant episode is unique in the history of Judaism. But this concession was made practically inoperative. The government of Rumania deceived Europe, and evaded the treaty under pretense of modifying, as a matter of form only, an article of the constitution; with the result that Rumanian Jews, excepting a certain privileged number among them, continue to be considered by the law as "aliens" in a country where they have resided for almost seven centuries.

Servia and Bulgaria.

In Servia, the Alliance met with no fewer difficulties than in Rumania, but the result has been different. Servia conforms strictly to the requirements of the treaty of Berlin. There are no restrictions there upon the rights of Jews; their emancipation is complete. In Bulgaria, which was a Turkish province until 1878, the Alliance has likewise secured full emancipation. In that country, the Alliance, in addition to the political and economic benefits conferred, has added schools, which will be described further on in this article. The Jews of Bulgaria possess the full franchise. Many of them are members of the various elective bodies. They possess full equality, and their relations with their Christian fellow citizens are satisfactory.

Russia.

It is rather surprising to find that between 1860 and 1870, Russia regarded the activity of the Alliance with outspoken approval, and came near requesting its cooperation in the elevation of her Jewish population. Upon the occasion of the incident at Saratoff, wherein Jews were unjustly condemned as having slain a Christian child, the Russian ambassador at Paris received with great favor the representatives of the Central Committee, who waited upon him in 1862 with a memorial addressed to the emperor in behalf of the condemned. Again, at the request of the Alliance, the ambassador, M. de Budberg, consented in 1868 to inquire into the case of a young Jewish girl who was baptized in Russia against the will of her parents.

The first time the Alliance was called upon to intervene in favor of the Russian Jews was in 1869. Famine was ravaging Russian Poland; the number of its victims was enormous. The Alliance issued an appeal for the relief of the sufferers. A conference of delegates of the Alliance, under President Crémieux, with members of the committees of Berlin and Königsberg, took place at the Prussian capital, October, 1869. It was decided to assist a certain number of Jews to migrate into the interior of Russia, to convey others to the United States, and to erect at Königsberg a permanent institution for the care of Russo-Polish children. This program was carried out. In less than two years eight hundred emigrants were transported to America, where they were received by the Board of Delegates and aided in the establishment of new homes. Three hundred orphans were cared for by the Jewish communities of France and Germany. In Königsberg, Posen, Memel, and Cologne, trade-schools for Russian children were established; that of Königsberg exists today, and receives a considerable subvention from the Alliance.

In the great persecutions of 1881–82 the horrors of barbarism were reproduced. From Ekaterinoslav to Wilna, bands of rioters attacked the Jews. The scenes of murder, pillage, and incendiarism which Russia then presented raised a cry of indignation throughout

Europe and America. In Paris, Berlin, London, and the cities of the United States, meetings were called and resolutions passed vigorously denouncing the assailants, and expressions of sympathy and commiseration sent to their unhappy victims. But the case called for more effective action. The Alliance helped with large donations; it organized bureaus for relief and methodically directed emigration toward the United States. This emigration, which commenced in 1881, was attended with good results. The Jews of the United States accepted the charge thus laid upon their shoulders with most commendable generosity. The Board of Delegates, the Hebrew Emigrant Aid Society, the United Hebrew Charities of New York, and the various committees of Philadelphia, Boston, and many other places, applied themselves to the formidable task with a self-sacrifice and devotion which have never been exceeded. See AGRICULTURAL COLONIES IN THE UNITED STATES.

Twenty thousand poor Russian Jews were massed together on the Austrian frontier. Two members of the Central Committee journeyed thither, worked for several months, sending back those who could not support themselves in America, forwarding young and robust men to the United States, and settling in different parts of Europe those who could not be so conveyed, and who for one reason or another could not be returned to Russia. It was a colossal enterprise requiring much effort; but the Alliance was actively seconded by the committees in London, Vienna, and Berlin. It was especially due to the extraordinary munificence of the American Jews that it was able to succeed in this overwhelming task. The work accomplished in 1882 was also the starting-point for that spontaneous emigration from Russia to the United States which has already carried thither, according to statistics of entry at New York, Philadelphia, and Baltimore a population of over 600,000 souls (see "American Jewish Year Book," under "Statistics," 1899). In the interior of Russia the Alliance has always exerted itself in behalf of those Jewish communities that are subjected to misery or persecution; helping victims of expulsion, aiding families ruined by fire, relieving famine-stricken farming colonies, and rendering assistance to schools and poor students—efforts all unfortunately insufficient.

In Mohammedan Countries.

In Christian countries the inferior status of the Jews is almost always the result of exceptional legislation, of disabilities decreed by the law or by the will of the sovereign. In Mohammedan countries it is due to economic conditions, to the customs or to the fanaticism of the inhabitants, and to the greed of officials and governmental tyranny. It must be noted that if the Jews there are generally held in small esteem, the Christians are equally contemned, so that it is necessary for these latter to appeal to the Christian powers to prevent their ill-treatment or expulsion. But it is frequently the case that in Mohammedan countries the Christians are most hostile to the Jews. The incident of Father Thomas at Damascus, in 1840, with the tortures inflicted on innocent Jews, and hundreds of less important occurrences, show that the Christians of the Orthodox Greek Church, which predominates in Mohammedan countries, are possessed of a violent antipathy to the Jews.

Turkey.

While the Turkish government accords fair treatment to its Jews as such, the country is still in such a semibarbarous condition that cases frequently occur of outrage, of individual or collective violence, of private revenge or brigandage, as well as of spoliation by greedy or cruel functionaries.

Each time that an event of this kind has been brought to the knowledge of the Alliance, that organization has appealed to the Turkish government, and in every instance its representations have been favorably received.

The Jews of Turkey have always been a considerable burden upon the resources of the Alliance. As will be shown further on, there are numerous schools founded and supported by the Alliance throughout Turkey. The Alliance, properly considered, is not strictly a benevolent society; but when any disaster threatens a whole population or at least a large community, it can not remain indifferent, entrenching itself behind the strict letter of its by-laws—even when a body of Jews are not suffering "in their quality of Jews." Appeals made by it in cases of disaster overtaking a district or an important community have been numerous, but have always met with generous responses. In Turkey, such action on the part of the Alliance has been frequently called for: famine in Asia Minor in 1880; conflagrations at Constantinople in 1874 and again in 1883; and the earthquake at Chio in 1881. In 1877, after the Russo-Turkish War, a large subscription was opened which afforded opportunities to give substantial aid to those Turkish Jews who had fled before the Russian invasion and who had become successively the victims of marauding Russian, Bulgarian, and Turkish soldiers.

Abyssinia.

In Egypt the Jews have no need of assistance from the Alliance. In Abyssinia there exists a Jewish population, called Falashas. They are scattered among tribes who follow agriculture and other forms of manual labor. Their number is reckoned at about 50,000, although some travelers set the estimate as high as 200,000. In 1867, the Alliance sent a learned Orientalist, Joseph Halévy, to visit them, and his reports were published in the Alliance "Bulletin" for the first half of 1869. The Alliance also published a Falasha prayer-book in Ethiopic, and in 1900 prepared a new expedition to Abyssinia, to reopen relations with these African brethren.

Tunis.

In Tunis, which is now a protectorate of France, the Jews, numbering about 60,000, live in absolute security. They labor under no legal disqualifications or social inequalities. But for many years the Alliance had to combat the arbitrary and cruel conduct of the bey, and sometimes even governmental anarchy, as shown in the abduction of young girls and in unpunished murders of Jews upon the highways and even in cities. By means of complaints and appeals, the Alliance has usually succeeded in obtaining the energetic intervention of the consuls of the great powers and in putting an end to these crimes. See also TUNIS.

Morocco.

In Morocco and in Persia, conditions are still very precarious. In both these Mohammedan countries the power of the government is feeble, ill-directed, and scantily obeyed. The "Bulletins" of the Alliance are filled with narratives of murder committed upon Moroccan Israelites, of cruel exactions imposed by irresponsible officials, and of acts of violence perpetrated by an ignorant and fanatical populace. The intervention of the Alliance has become an almost daily occurrence in these countries; and if it has not been able altogether to modify the existing conditions which are responsible for such barbarous crimes, it has at least secured, according to its means, greater protection for the Jews. Upon its representations the powers of Europe and the United States have repeatedly compelled the Moroccan government to inflict punishment on those guilty of crimes against Jews. Owing to the vigilance and untiring protests of the Central Committee, the powers assembled at the Congress of Madrid in 1880 guaranteed official protection to a certain number of communities containing resident Jews. The Alliance was represented by MM. Netter and Veneziani, who successfully pleaded the cause of humanity before the assembled diplomats. In energetic resolutions proposed by France and Italy, the congress did not confine itself to a mere guaranty of protection for Jews and Christians, but demanded of the sultan of Morocco that full religious liberty be granted to them. A reply from the sultan's government, dated Sept. 18, 1880, assured the powers that this request would be granted. The Jews of Morocco are very poor; the Ghettos in which they are compelled to reside are in a deplorably unhealthful condition, which often breeds epidemics. The Alliance has frequently come to their aid, not alone by establishing schools which are thriving to-day, but also by enabling them to improve the Jewish quarter. See MOROCCO.

Persia.

Persia is in a still more hopeless condition than Morocco if that be possible. The people there are fanatical in the extreme, belonging to the Shiite sect, which detests everything that is not Mohammedan. From its foundation the Alliance has striven to interest France and England in the fate of the Jews of this country; in addition, it has endeavored repeatedly to give them material aid. In 1873, when the shah of Persia, Nasr-ed-Dîn, journeyed through Europe, committees of the Alliance waited upon him with memorials in behalf of his Jewish subjects. The shah gave a very friendly welcome to these representations, but unfortunately the real power in Persia is vested in the hands of the priests. The government's influence is very limited, and the priests are ingenious in devising ways to humiliate and maltreat the Jews. They are forbidden to clothe themselves in European garb, to draw water from the public fountains, to purchase their provisions in the markets at the same time as Mohammedans. Murders and other organized acts of violence are numerous. The Alliance has sent frequent assistance to these much-tried communities, but with only temporary results. In 1898 the Central Committee decided to establish a school in Teheran. One of the Alliance's best teachers in the East was selected as its head, and he was received very cordially by the ministers of the shah, Muzaffer-ed-Dîn, and members of the diplomatic corps. The school was hailed by the Jews of Teheran with a gratitude and an enthusiasm that can be easily understood.

Ritual Murder.

The foregoing may serve as a rapid sketch of the protective action of the Alliance over its coreligionists. Before approaching the second portion of its program, a word must be said touching its efforts to combat the prejudice concerning ritual murder. This cruel and absurd accusation, which originated in Europe in the Middle Ages, was in more recent times the peculiar fancy of the Greek Orthodox nations, such as the Slavs, Greeks, and Bulgarians. From the Christian world it extended to the Mohammedan, and finally in these later years has made its appearance in more western countries: in 1882 in Hungary (the Tisza-Eszlár affair), and in 1899 in Bohemia (the Polna incident). No detailed account will be given here of all the lawsuits and investigations undertaken during the last forty years; but it must be said that no superstition has ever been combated by the Alliance with so much perseverance and warmth as this monstrous blood-accusation. Whenever the accusation has been brought forward the Alliance has intervened, either to save the accused Jews, to indemnify those who had suffered from the accusation, or to enlighten the judges and public opinion on the inanity of the charge. Such intervention could not always be open and direct for fear of exciting fanatical passion, but it has never been lacking. Declarations from churchmen, from scholars, from men of eminence and authority, have been elicited; consultations and expert opinion by physicians and physiologists have been procured and collected; and dozens of pamphlets and books with hundreds of newspaper articles published, in the untiring effort to counteract this odious slander.

Educational Activity; Schools.

Of all the enterprises of the Alliance its educational system is undoubtedly the most prosperous and beneficial. Travelers who visited Morocco, Turkey, and Tunis in the earlier part of the century were lamentably impressed by the low intellectual status of the Jews there and the absence of all modern culture. The only thing the children learned was barely to read and write Hebrew. Under the distressing influence of a life shut up in narrow Ghettos, the physical and spiritual force of the race had gradually diminished. Their mode of life and their prejudices restrained them from all serious manual labor, so that the Jews of Mohammedan countries were restricted for the means of subsistence to peddling and the more wretched trades. Schools were the only remedy for this state of affairs. The founders of the Alliance had this fact in view even before they actually turned to the task of improvement. As soon as there were funds at command, in 1862 it was decided to devote them to the erection of a school at Tetuan (Morocco). In 1864 another school was opened in Morocco, at Tangiers, and in 1865 a third at Bagdad. Since then this educational work has been developed steadily; to-day it covers Bulgaria, European Turkey, Turkey in Asia (from Jaffa to Aleppo and Bagdad), Egypt, Tunis, and Morocco. The beginning of the educational work was made in Rumania, and it now extends as far as Persia. Progress has been rapid since 1879. In 1880, the number of schools was 34; in 1890, 54; and in 1899, 94—58 of which were boys' and 36 girls' schools—with an attendance of 24,000 children. This development of the educational work of the Alliance has been rendered possible mainly through the munificence of Baron de Hirsch.

The curriculum can not be uniform in all these schools: in each, it has to be accommodated to the special needs and circumstances of the Jews of the particular country. Thus in the schools of Tunis instruction in French occupies the first place, in Bulgaria the language of that country, and in both European and Asiastic Turkey room is made in the curriculum, in some places for Turkish, in others for Arabic. Particular prominence and attention have long been given in certain schools to English and German; to the former in Bagdad, Egypt, and Morocco. The Alliance has a large school in Constantinople, where the instruction is carried on in German, and this language is also taught in other schools of Constantinople and in Smyrna, Adrianople, Salonica, and Jerusalem. Of other subjects taught, Hebrew naturally occupies a prominent place, together with the study of the Jewish religion and history. The geography and history of the country in which the school is situated are taught; while arithmetic, elementary geometry, physics, chemistry, and drawing complete the curriculum.

In Mohammedan countries more particularly than in others instruction for girls is extremely necessary.

The Jewess can not attain to the position she should occupy and which local custom denies her, unless she becomes the equal of the Jew in knowledge and education. It is conceded that the influence of the schools has been especially beneficial in this direction. In former times, in certain districts of Morocco, Tunis, and Turkey, girls were married at the age of eleven or twelve; nowadays such barbarous customs have disappeared, owing to the influence of the schools. The Alliance's schools are free only to the children of the very poorest; they are furnished not only with gratuitous instruction and books, but sometimes with clothing as well, and nearly everywhere with a hot lunch at noon. Parents of the more prosperous classes pay a school-fee, which in some schools is as high as twenty francs a month. These schools are, moreover, open to children of every faith; in 1899, about 300 non-Jewish pupils attended them—Catholics, Protestants, Greeks, Armenians, and Mohammedans. On the staff of instructors there are also Christian and Mohammedan teachers, especially for instruction in the several languages. Free courses for adults have been opened in many localities. They are attended by workingmen and small tradesmen who, not having attended any elementary school, can scarcely write their names, and who recognize the resultant drawbacks under which they labor.

Rabbinical Seminary.

After giving to Judaism a long succession of learned and illustrious rabbis, the congregations of the Orient have witnessed the gradual decay of learning among their spiritual leaders. With certain rare exceptions, the rabbis of the East and of Africa are devoid of all modern culture. Their Hebrew and Talmudic knowledge is likewise very slender, and they can not write the language of the country at all. The Alliance directed its attention to this matter long ago, but to introduce the needed reforms among the rabbis was felt to be a rather delicate task. It was necessary first to bring the congregations to see the necessity for the innovation, and in 1891 the movement took public shape. The Alliance then decided to establish in Constantinople a rabbinical seminary similar to those in Europe. The institution was organized in 1897; and it soon won the appreciation of the people. Instruction is given by scholarly teachers, one of whom was prepared for this office by the Alliance at the rabbinical seminary of Paris. This enterprise is the crowning achievement of the Alliance in its educational efforts toward the elevation of Oriental Judaism.

Normal School.

To direct these numerous schools it was necessary to supply a large staff of teachers. After various experiments the Central Committee decided to undertake this task too. In 1867 it founded in Paris a normal school for teachers, who are recruited from the countries for which teachers are required. The principals of the various schools in the Orient and in Africa select their best pupils and send them to Paris, where they remain in the Normal School for four years. They are then appointed to positions as teachers in their own countries. The Normal School of Paris has secured legal recognition from the government, enabling it to legally receive donations and legacies. Its full title is "École Normale Israélite Orientale." It is located in a handsome building upon a large estate which it owns, and which was purchased for this purpose by the Alliance. There were in the beginning from 20 to 25 young men and about 10 female students; but these numbers have been considerably increased since the work of the schools has assumed such vast proportions. Thus, on Dec. 31, 1899, there were 90 male and 37 female students. The former have their own building and grounds. They come from Oriental and African countries; among them are 16 young Rumanians, who, after sufficient preparation, will become instructors in their own land.

Apprenticeship.

Although these schools are admirable means toward progress and improvement, the education given to poor children does not always furnish them with a means of livelihood. Accordingly, instruction in trades came to be considered by the Alliance as a natural and necessary supplement to the ordinary schools. But the miserable industrial conditions of their native countries, the very limited needs of the people, the jealous exclusiveness of the tradesmasters, and the disinclination of children to follow callings of which their parents were ignorant, all made this question very difficult of solution.

Many obstacles and disappointments must, of course, be encountered before positive results can be looked for. Although not able to overcome everywhere the ill-will of non-Jewish "masters," the Alliance has at least succeeded in removing the prejudice against manual labor among Jewish children. Apprentice-schools exist in 28 localities of the East and Africa, and are attended by 700 lads who are taught remunerative crafts. Such trades as tailoring, shoemaking, tinsmithing, and those crafts which are easily learned and are already overcrowded, are not taught to pupils of the Alliance. Only those avocations which require some bodily strength, those which are not yet open to Jews, and those which are well paid, receive attention. The trade-school of the Alliance opened in Jerusalem in 1882 deserves particular mention, both by reason of the service it renders and of its especial organization. The establishment comprises a series of workshops, where the trades of carpentry, blacksmithing, locksmithing, coppersmithing, metal-founding, and wood-carving are carried on. All the teachers received their training in Europe. The equipment and arrangement are suited to the demands of each particular trade. These shops are attended by 200 apprentices, 50 of whom reside in the building and are supported by the institution. The organization of these trade-schools for boys necessitated a similar institution for poor girls graduating from the schools; this was organized in 1884. It is necessarily limited to a small number of trades by reason of certain conditions peculiar to Oriental life, and especially by the general absence of all industrial occupations among the women of the East. Classes in tailoring, sewing, and embroidery have brought good results. There are 15 shops where these trades are taught. The expense of the trade-schools is considerable.

Farm-School in Jaffa.

The present agitation for the employment of Jews in agriculture was early anticipated by the Alliance. At a time when no one thought for a moment of such a demand, the Central Committee of the Alliance established a complete school of agriculture in a most belated and fanatical Jewish quarter, that of Jaffa in Palestine. This institution received the significant name of Mikveh Israel (Hope of Israel). The Jaffa school was established in 1870, upon a grant of about 600 acres generously conceded by the sultan. Its great success is due to the indescribable devotion of a man whose name is associated with everything useful and noble that the Alliance has accomplished—Charles Netter. For a very long period it had to struggle against the prejudices of the children, the lack of sufficient resources, and the difficulty of finding a proper staff. Nothing discouraged Netter, and he succeeded in overcoming every obstacle. But at the very moment when the institution was emerging from its formative stage and commencing to give assured results, Netter suddenly died, Oct. 2, 1882, while on a visit to Jaffa, and was buried in the grounds of the school. The Alliance, in recognition of his services, has erected a tomb to his memory. On Dec. 31, 1899, there were 210 pupils at the Jaffa school, all inmates. Management and tuition are entrusted to a professional staff, composed exclusively of Jews trained by the Alliance in the agricultural schools of western Europe. The course of instruction embraces all possible branches of agriculture, such as the care of olive-groves, orange-plantations, vineyards, grain-crops, orchards, and garden products, stock-breeding, and silkworm-raising. The receipts from all these sources reached, during the farm-year 1898–99, about 70,700 frs. ($14,140). The expenses aggregated 46,000 frs. ($9,200), leaving a profit of about 24,000 frs. ($4,800).

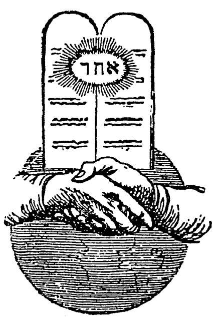
Apprentices at the Farm-School in Djedei (Tunis).

Agricultural Colonies in Palestine.

The question now presented itself whether, after leaving the farm-school, its pupils would become farmers themselves. The Alliance could not afford to establish them as such, while Jewish farm-hands had little prospect of employment with Turkish or Christian proprietors. Still a certain number of these graduates did succeed in finding positions as managers and as gardeners with various Turkish and Arab cultivators, though the demand for trained agriculturists was necessarily very limited. It was at this moment that the great persecutions of 1881–82 broke out in Russia. Even before that date, thousands of poor Russian Jews, animated by the desire of living as colonists in Palestine, had emigrated thither with the intention of becoming agriculturists. Other immigrants came from Rumania and Galicia. All these poor people went to Palestine possessed of a sublime faith. Some had means, but the majority were very poor. The Alliance assisted the immigrants, and the officers of the trade-school became their instructors and advisers. The officials of the Alliance gave them the benefit of their knowledge of land, and appointed graduates of Mikveh Israel to counsel and guide them. The farm-school at Jaffa thus became the foster-mother of the first colonies in Palestine (see Agricultural Colonies in Palestine). But with all this they could not possibly have succeeded had not more powerful aid been forthcoming. Baron Edmond de Rothschild assumed all the expenses of colonization and support, constructed houses, cleared lands, built wine-cellars, and planted vineyards and olive-groves. While this was happening in Palestine, another philanthropist, Baron de Hirsch, was settling Jewish colonies in the Argentine Republic. After various unfortunate experiments, Baron de Hirsch requested the Central Committee to furnish him with experienced men to take charge of the colonies. The Alliance placed at his disposal several excellent directors, among them M. Hirsch, who had long been at the head of the Jaffa farm-school, and who in this capacity was the first friend and counselor of the youthful Palestinian colonies. These men still continue in charge of the Argentine colonies.

Farm-School in Tunis.

The Jews of the north of Africa—Morocco, Algeria, Tunis, Tripoli, and Egypt—comprising a population of more than 300,000 souls, remained complete strangers to the movement for the cultivation of the soil, which for the last decade or so had made itself felt among the Jews. The Alliance conceived it to be its duty to lead their tastes in that direction. Tunis is essentially a farming country, and the French protectorate has established a regular government with absolute security; it therefore appeared to be a district peculiarly adapted for the experiment. A tract of about 3,000 acres, with a river running through it, affording opportunity for various crops and industries, was acquired in 1895 at Djedei, a few miles from Tunis. A farm-school for children was there established, having at first only 25, but later (in 1899) 110 pupils, about half of whom were Tunisians, the others being from Algeria, Morocco, and Tripoli. In the year 1898–99 the farm products gave a surplus of more than 25,000 frs. ($5,000). The total expenses for the year 1900 amounted to about 70,000 frs. ($14,000). In Algeria, Tunis, and Egypt pupils graduating from this institution easily find employment; in these countries many Israelites possess farms, on which they are quite willing to employ these young Jewish agriculturists. A number of graduates of 1899 were engaged by a Jew of Sousa, in Tunis, who found work for them upon his estate (or farm-lands). The agricultural work accomplished or inspired by the Alliance marks undoubtedly an important era in the economic evolution of the Jewish people and in the development of their mental and moral qualities.



Official Device of the Alliance.

Encouragement of Jewish Literature.

Regarding the last item of the society's program, "the encouragement of publications contributing to the emancipation or elevation of Jews," the first step taken was the announcement of a prize-contest. An excellent work by Elie Benamozegh, of Leghorn, "La Morale Juive," was awarded the first prize. But the Alliance soon observed that such prize-competitions were powerless to draw the attention of scholars away from their favorite studies, and that an important work could not be undertaken at the word of command, so that it would be preferable to leave to authors free scope and full liberty. It was therefore decided to restrict the society's activity to lending financial support to learned works of interest to Jews. For more than thirty years not a single important work upon such subjects has appeared without the assistance of the Alliance. This feature of the budget calls for an annual expenditure averaging 4,000 frs. The Alliance itself has brought out a number of publications devoted principally to Jewish statistics and the defense of Jewish interests.

The Alliance possesses in its central office an important library, numbering to-day 22,000 volumes, and containing all documents and publications concerning Jewish history and such kindred subjects as statistics, anthropology, demography, legislation, literature, exegesis, theology, and polemics, as well as collections of the principal Jewish newspapers of the world. The library owes its existence to the late secretary of the Alliance, Isidore Loeb, who suggested the idea of its establishment, and who devoted his rare moments of leisure to the compilation of a catalogue and to searching for new acquisitions. He collected about 200 valuable manuscripts, many of which have been of assistance in the composition of a number of scholarly works. A systematic catalogue is now in course of preparation; but, unfortunately, the small income at the disposal of the library committee will scarcely admit of its publication. The gratuitous use of the library is offered to scholars and literary workers. Donations and important legacies from L. L. Rothschild assure the maintenance and development of this useful institution.

The following tables exhibit the state of the Alliance's activity and finances in 1899:

SCHOOLS.

Towns.	Boys or Girls.	Date of Foundation.	Number of Pupils.	Subsidy of the Alliance.
Acre	Boys.	1896	50	*360.00
Adrianople	Boys.	1867	354	7,219.00

BIBLIOGRAPHY: The history of the Alliance Israélite Universelle can be traced in the publications of this organization. Since its foundation the administration has regularly published semi-annual and annual "Bulletins," containing detailed reports of its activity, statistics, tables, etc. They generally appeared in French, but now and then were published in English, German, Dutch, Italian, Judæo-German, and Hebrew. In 1885, on the occasion of its 25th anniversary, the Alliance published an extensive review of its work and of the results achieved for that period—in French, English, German, and Judæo-Spanish. Another pamphlet in French and English appeared in 1896, giving a general statement and a short review for the whole time of its existence (1860–95); this publication was especially designed for those who are not acquainted with the work and object of the organization.

J. Br.

ALLIANCE, New Jersey: An agricultural colony situated in the southeastern part of Salem county, New Jersey, five miles from Vineland, ten from Bridgeton, ten from Millville, and about thirty-five miles from Philadelphia. It was named in honor of the Alliance Israélite Universelle of Paris, and was founded May 10, 1882, by the Hebrew Emigrant Aid Society of New York and Philadelphia. The settlement of this pioneer colony followed the cruel persecutions in Russia that broke out in 1881, and it was colonized by a contingent of expatriated Russian Jews. There were about twenty-five families in this contingent, and the number was soon increased to forty-three and afterward to sixty-seven. Most of the settlers had been small traders or storekeepers at home.

The site chosen for colonization was covered with dense forest, but, working together over a tract of about thirty acres, the colonists cleared the land, and by the end of the first month (May) had planted corn. As quickly as more land was cleared, potatoes and other vegetables were planted.

Pioneering.

Soon after the settlement, the Hebrew Emigrant Aid Society of New York erected several large buildings, and in each of these a number of families were housed. They were all fed from a common kitchen, the provisions being furnished by the society. This condition of things continued for about six months, during which time the colonists cleared or tilled more land. Many of the colonists worked part of the time for neighboring Christian farmers.

In the meantime the Hebrew Emigrant Aid Society (which at a later stage developed into the Alliance Land Trust), with Henry S. Henry, Isaac Eppinger, Leonard Lewisohn, Leopold Gershel, and Dr. F. de Sola Mendes at its head, purchased about 800 acres of land, including the tract upon which the colonists worked, and divided it into small farms of fifteen acres each. On these farms the society erected small houses and dug wells. It supplied household furniture and utensils, as well as stoves, to each family, and during the following winter and spring (1882–83) paid the colonists from eight to twelve dollars per month for living expenses, according to the size of the family. In addition to this help, tools, seeds, plants, and farming implements were furnished during the spring. Most of the settlers planted fruit-trees, grapevines, small fruit, and garden-truck for the use of their families.

Manufacturing Industries Introduced.

During the summer and early fall of 1883 the colonists supported themselves by working out for the Christian farmers. In the fall the manufacture of cigars and shirts was undertaken in a part of one of the large buildings formerly occupied by the colonists, and these industries afforded employment for the settlers during the winter of 1883–84; about forty families occupied themselves with sewing, while twenty-six engaged in the manufacture of cigars. The idea of employing the colonists in the manufacture of cigars originated with Moses W. Mendel, of New York, who at a later period erected for this purpose the large brick building now used as a tailoring establishment.

In the spring of 1884 the factory building was burned down, and this mishap abruptly terminated these industries. At this juncture the more prosperous of the farmers purchased horses and such farming implements as were necessary for the more systematic working of their own holdings, finding time also to assist their fellow farmers in this direction. Further funds were forwarded to the colony ony at this time by the Emigrant Aid Society, which were expended in planting additional vines and berries.

When the winter of 1884–85 set in, some of the settlers went to Philadelphia and New York, and secured tailoring work for their own and other families, which they took out to their homes.

External Assistance.

Notwithstanding the help thus afforded, there was still great distress among a number of the settlers. On their behalf an appeal was made to the Association of Jewish Emigrants of the City of Philadelphia, which sent its president, Alfred T. Jones, and treasurer, Simon Muhr, to investigate. These officers made frequent visits to the colony and brought substantial aid to the distressed, furnishing food, clothing, household goods, tools, and agricultural implements. Through the generosity of Mrs. Joseph Reckendorfer, of New York city, who donated $1,000 for the purpose, the cigar factory was reestablished and run for some time by S. Jacobson, who, however, left Alliance. About this time Sir Samuel Montagu, Dr. Asher, and Mr. Benjamin L. Cohen, of London, visited the colony, and on behalf of the Mansion House Fund of London contributed $7,000 to pay off pressing mortgages, thus constituting the Fund mortgagee, with the Alliance Land Trust (formed for the purpose) to represent it. H. S. Henry was president of the Trust until his death in 1890, and was succeeded by Isaac Eppinger.

In the spring of 1885 the farmers, who had reaped some measure of profit from the labor of previous years, were stimulated by this incentive to apply themselves with energy to the working of their lands. The conditions that prevailed during the fall and winter were identical with those of previous years, but a fresh impetus was given to farming in the spring and summer of 1886 by the fact that some of the farmers had raised on their lands products to the value of $200 to $400. A natural pride in this achievement led them to improve their farms further. They erected new dwelling-houses (those that they occupied were not adapted for a family of average size), barns, and other outbuildings. When fall and winter set in the farmers followed their former practise of hiring their labor to the neighboring Christian farmers, or engaged in tailoring and such work as was needed on their own farms.

From 1887 the affairs of the Alliance colony flourished. The success of the old settlers attracted other Jews who had settled in the cities and immigrants who had recently arrived. These were employed as tailors during the winter, and as farm-laborers in the summer. In this way many of the immigrants, who subsequently settled as farmers at Rosenhayn and Carmel, gained their experience while working on the farms of the Alliance colony. Prosperity again rewarded the efforts of the farmers in the summer of 1888.

According to a contemporary record ("Philadelphia Mercury," Oct. 20, 27, 1889), as soon as possible the settlers applied for naturalization papers and took active interest in local politics, in which their views were as varied as on religious topics. They determined to keep a record-book in which they gave a concise history of the reasons which caused them to leave their native land, and the course of events which had led to their settlement in the colony. A list of the benefactors who had assisted them was given, and of the main streets of the village that were named after them.

They also recorded in the book their determination to build a synagogue to be called Tiphereth Israel. This was erected in 1890; and the religious instruction of the young was cared for, by private teachers hired by the colonists as well as by public classes maintained by the Land Trust.

Financial Troubles.

In 1890 and the years that followed, most of the farmers were compelled to borrow money or mortgage their farms to various loan associations. With this money they paid the debts previously contracted and also made such improvements as were necessary on their farmsteads. As long as they were able, the farmers paid the interest on the loans they had negotiated, but a period of depression set in, and the prices obtained for farm products fell so low during the nineties that the farmers were unable to meet their obligations. Threats of foreclosure and ejectment were made by the second mortgagees (the Land Trust holds the first mortgages), but through the timely intervention of the officers of the Baron de Hirsch Fund these were averted.

The Baron de Hirsch Fund raised the mortgages on the farms and made arrangements with their tenants to repay the amounts expended for this purpose on a graduated payment basis. Under the auspices of the Fund, tailoring is again being encouraged in the colony, and improved conditions now prevail. On Oct. 30, 1900, the Land Trust resolved, with the approval of the Russo-Jewish Committee, to transfer all interest in the colony and its future management to the Baron de Hirsch Fund of New York.

The following Jewish organizations existed in Alliance in 1900: Eben ha-'Ezer and Tiphereth Israel synagogues; Norma Brotherhood, Alliance Israélite Library, Young People's Benevolent Society, Alliance Lodge No. 484, I. O. B. B.; Agudat Zion.

In addition to farmers and tailors, there are a few carpenters, blacksmiths, and masons. Out of a total population of 700 there are 600 Jews.' See also Agricultural Colonies in America.

ALLITERATION AND KINDRED FIGURES:

ALLITERATION AND KINDRED FIGURES: Successive use or frequent recurrence of the same initial letter or sound at the beginning of two or more words; specifically, the regular recurrence of an initial letter or sound in the accented parts of words in poetry; initial rime. Figures kindred to Alliteration are the following:

Definitions.

I. Rime, a correspondence of sounds in two or more words, especially in poetry; specifically, the occurrence of the same vowel, and succeeding consonant sounds (if there be any), in accented syllables at the end of two lines, or more rarely at the beginning of two or more words. Under the head of rime may be mentioned assonance—correspondence of the vowels, but not of the consonants, in riming syllables, such as "nice" and "night," "feel" and "need"—used in the Romance languages. In a wider sense assonance signifies correspondence of sound in general.

II. Play upon Words (pun, paronomasia, quibble), a combination of words of similar sound producing a witticism or jest. Pun is more specifically the witty use of a word in two senses, usually antithetic and more or less incongruous, in which the play of thought turns chiefly on the sense; or less strictly, a play on words of the same sound but of different meanings. But the most frequent and comprehensive term for these figures in ancient rhetoric is paronomasia, which, however, in the modern application of the term, signifies any use for effect of words similar in sound, but differing in meaning; a play on words in which the similarity of sound is the prominent characteristic. In Hebrew there is found in Ḳimḥi's commentary on Micah, i. 10 the expression לשון נופל על לשון דרך צחות, "*vox coincidens* (*sono*) *cum alia, elegantiæ causa.*"

Alliteration in the Old Testament.

Alliteration being the simplest and probably the oldest of the figures produced by similarity of sound, is also the most frequent of these figures in the Old Testament. Here its proper sphere is in syntactically coordinated words, as a rule synonyms, or related to one another in meaning, where, in not a few cases, it forms set phrases. The force of Alliteration in these combinations is, as in other literatures, that of emphasis and impressiveness: עפר ואפר "dust and ashes," Gen. xviii. 27; Job, xxx. 19; xlii. 6; עמל ואון "misery and wretchedness," or "sin and iniquity," Num. xxiii. 21; Isa. lix. 4, etc.; סופה וסערה "storm and tempest," Isa. xxix. 6, etc.; שם ושאר נין ונכד "name and remnant, progeny and offspring," Isa. xiv. 22; דבר ודם "pestilence and bloodshed," Ezek. v. 17; חנית וחצים "spear and arrows," Ps. lvii. 5; בשמחה תצאו ובשלום תובלון "for ye shall go out with joy and be led forth with peace," Isa. lv. 12. In conjunction with onomatopœia: בוקה ומבוקה ומבלקה "empty, and void, and waste," Nahum, ii. 11; יום מהומה ומבוסה ומבוכה "a day of trouble, and of treading down, and of perplexity," Isa. xxii. 5. As seen from the few examples given above, Alliteration in Hebrew is not restricted, as in Latin, Anglo-Saxon, and Old German, to precisely the same letters; nor is it necessary that the combined words should follow in immediate succession.

Rime and Assonance.

Excluding the congruence of sound in the flexional endings, and confining it to the cases in which the similarity is in a stem-syllable, the number of instances of rime in the Old Testament is comparatively small, and it is always combined with the assonance of the whole word: אבלה נבלה הארץ "the earth mourneth and fadeth away," Isa. xxiv. 4; ותגעש ותרעש הארץ "the earth shook and trembled," Ps. xviii. 8; שריד ופליט "an escaped one and survivor," Jer. xlii. 17, etc.; תהו ובהו "waste and void," Gen. i. 2, etc.

Of assonance there is in Hebrew—in which the consonantal element predominates—hardly any instance, except perhaps בן סורר ומורה "a stubborn and rebellious son," Deut. xxi. 18, etc.

Paronomasia.

While in Alliteration and rime the stress lies on the form, in the play upon words both form and meaning come into consideration. Alliteration and rime combine, preferably, synonyms and coordinated ideas, while playing upon words or punning implies some surprising contrast.

The principal classes of play upon words in the Old Testament may be summed up as follows:

1. Where the words are the same or similar in form (homonyms) and the difference of meaning is contrasted: לא שמעתם אלי לקרא דרור איש לאחיו . . . הנני קרא לכם דרור . . . אל החרב "Ye have not hearkened unto me, in proclaiming liberty, every one to his brother, . . . behold, I proclaim a liberty for you, . . . to the sword," Jer. xxxiv. 17; התרפית ביום צרה צר כחכה "If thou faint in the day of adversity, thy strength is small," Prov. xxiv. 10; בלחי החמור חמור חמרתים . . . הכיתי "With the jawbone of an ass, heaps upon heaps, . . . have I slain," Judges, xv. 16; כקול הסירים תחת הסיר "For as the crackling of thorns under a pot, so is the laughter of fools," Eccl. vii. 6; compare Isa. xxx. 16; Jer. iv. 17, 18; xi. 17; Hosea, viii. 11; Joel, i. 10–12; Dan. xi. 22, etc.

2. Where the same verb is used in different voices: אם תאבו ושמעתם טוב הארץ תֹּאכֵלוּ: ואם תמאנו ומריתם חרב תְּאֻכְּלוּ "If ye be willing and obedient, ye shall eat the good of the land; but if ye refuse and rebel, ye shall be devoured with the sword," Isa. i. 19, 20; compare Gen. xlii. 7; Lev. xxvi. 32; I Sam. i. 27, 28; I Kings, viii. 20; Jer. xxiii. 19; Prov. xxvi. 17, etc.

3. Where the words differ in form: בחלקי נחל חלקך "Among the smooth stones of the stream is thy portion," Isa. lvii. 6; ויקו למשפט והנה משפח לצדקה והנה צעקה "And he looked for judgment, but behold oppression; for righteousness, but behold a cry," Isa. v. 7; פאר תחת אפר "beauty for ashes," Isa. lxi. 3; ישם . . . מוצאי מים לצמאון "He turneth . . . watersprings into dry ground," Ps. cvii. 33; compare Deut. xxxii. 14; Jer. l. 35–38; Ezek. xxviii. 26; Joel, i. 15; Job, v. 21; xxxvi. 15; Eccl. xii. 11, etc.

Play upon Proper Names.

A name, as representing something individual, is especially a tempting mark for a witticism or pun. In Hebrew, moreover (as also in the other Semitic languages), the proper names are still in living contact with the language; their meaning and form are still clear and transparent. Not only are thoughts and sentiments attached to proper names (compare the blessing of Noah, Gen. ix. 27, and that of Jacob, Gen. xlix.), but even most of the historical lore is grouped around them. The names of persons, tribes, and places are made to suggest the character attributed to them, or the important events connected with them. The plays upon proper names in the Old Testament may therefore be divided into two classes:

(1) Etymological explanations of names; in many of which it is apparent that merely a folk-etymology is aimed at, which is satisfied with the agreement of sound between the name and the appellative that is to explain it. This is the case, for instance, when Gen. v. 29 נח is explained by ינחמנו (compare Gen. R. and Rashi on the passage); or שמואל by שאל I Sam. i. 20 (compare Driver, "Notes on the Hebrew Text of the Books of Samuel," p. 13). Many other instances could be cited.

(2) Plays either upon the sense or upon the sound of proper names: בחשבון חשבו עליה רעה . . . גם מדמן תדמי . . . "In Heshbon [Counting Town] they have devised evil against it. . . Also thou shalt be cut down, O Madmen [Dunghill]; the sword shall pursue thee," Jer. xlviii. 2; . . . כי עזה עזובה תהיה, ועקרון תעקר . . . "For Gaza shall be forsaken . . . and Ekron shall be rooted up," Zephaniah, ii. 4; והכרתי את כרתים "And I will cut off the Cherethim," Ezek. xxv. 16; רתם המרכבה לרכש יושבת לכיש "O thou inhabitants of Lachish, bind the chariot to the swift beast," Micah, i. 13, etc.

Euphonic Figures and Diction.

Like all other embellishments of speech, the figures based on the congruence of sound are an element of higher style. They are therefore most frequent in the Prophets and in the poetical books of the Old Testament. Plays upon words are most frequently to be found in the prophetic speech, which aims at reaching the conscience of the hearer and bringing home to him some truth in a striking manner. They are also of frequent occurrence in the Proverbs, which generally depend largely for their effect upon a happy form and pointedness of expression. But everywhere these figures are merely a casual, not an organic, element of diction.

Word-Plays in the Talmud.

The Talmud sometimes plays upon words in adages and maxims: בשלשה דברים אדם ניכר בכיסו בכוסו ובכעסו "The character of a man reveals itself in three things: in his behavior concerning his purse, his cup, and in his anger," 'Er. 65*b*. Compare Derek Ereẓ Zuṭṭa v.: אוי לי מיוצרי אוי לי מיצרי "Wo is me from my Creator [who punishes sin], wo is me from my sinful inclination," Ber. 61*a*; תהא לוטא ואל תהא לאטא "Rather be [innocently] cursed than be cursing," Sanh. 49*a*; אכול בָּצָל ושב בְּצֵל "Eat onions and live in the shadow of thy house" [*i.e.*, rather live poorly than make debts and be compelled to give up thy house], Pes. 114*a*. The Talmudic literature is especially rich in efforts to supply with etymologies those proper names that the Old Testament has left unexplained. For example: ירבעם שריבע עם "because he made the people crouch" [*i.e.*, made it degenerate]; or שעשה מריבה בעם "because he caused strife [*i.e.*, division] among the people"; and שעשה מריבה בין ישראל לאביהם שבשמים "because he caused strife between Israel and their Father in heaven," Jeroboam is called בן נבט "because" שנבט ולא ראה "he looked and did not see [his true position and destiny in history]," Sanh. 101*b*; מנשה "son of Hezekiah" שהנשיא את ישראל לאביהם שבשמים "because he caused Israel to forget their Father in heaven," Sanh. 102*b*; (compare Nimrod and Amraphel, who are identified, 'Er. 53*a* and Yalḳ. Gen. 72; Shinar, Shab. 113*b*; Samson and Delilah, Soṭah 10*a* and 9*b*, etc.).

In Post-Talmudic Literature.

Since the seventh century rime has become a regular feature in Hebrew poetry. The composers of *piyutim, yoẓerot, seliḥot, and ḳinot* indulged even to excess in rimes and alliterations. A further opportunity for this jingling was given in the introductions to books. Sometimes all the words were made to begin with the same letter (compare, for instance, the אלף אלפין in the Iggeret of Moses Zacuto, ed. Leghorn, 1780; or the בקשת הַמֵּמִין appended to many editions of Jedaiah Penini's "Beḥinat 'Olam"). The Hispano-Jewish writers sometimes formed plays upon words with great skill. So, for instance, Judah Alḥariẓi in his "Maḳamat" (ed. Lagarde, 1883): החכמה תעוז לחכם באורח חיים תְּנַחֲהוּ ומעמלו תְּנִיחֵהוּ בשכבו תשמר עליו ולא תַּנִּיחֵהוּ "Wisdom gives power to the wise; she leads him in the path of life and affords him rest from his toil; when he lies down she watches over him and does not leave him alone," p. 2, § 2, v. 1, ושב היופי דופי "and beauty is turned to disgrace," 17, 14, 28; בלשונם תְּפִלָּה ובקרבם תִּפְלָה "On their tongue is prayer, and in their heart perverseness," 17, 4, 34. In the Azharot (hymns dealing with the 613 precepts), in the liturgy of the Feast of Weeks, ascribed to Solomon ibn Gabirol, we find: ולא תהיה קדישה בסוד עדה קדושה "And there shall not be a hierodule in the assembly of the holy congregation"; ונשך לא תְסַכֵּן להשים על מְסֻכָּן "And thou shalt not practise usury upon the poor."

As an example of play upon words in modern Hebrew, the ingenious epigram of M. B. G. Abudiente may find place here ("Bikkure ha-'Ittim," iii. 22), in which many words are repeated in opposite senses:

אתמול לבושך בוץ ומעיל סרוח
שוכב בתוך ערשך עלי תולעת
היום לבושך בוץ ומעיל סרוח
שוכב בתוך ארצך עלי תולעת

which may be rendered as follows: "Yestreen thy garment was fine linen and robe a-trailing, lying in thy bed upon scarlet; To-day thy garment is mud and a rotten robe [Amos, vi. 4, after Sanh. 97*a*], lying in the grave upon worms."

I. M. C.

ALLON ("Strong"?): **1.** Son of Jedaiah, in the genealogy of Simon (I Chron. iv. 37). **2.** One of those who returned with Zerubbabel (I Esd. v. 34), perhaps the same as Amon of Neh. vii. 59, Ami of Ezra, ii. 57. (While R. V. has "Allon," the Greek and A. V. have "Allom.") G. B. L.

ALLON BACHUTH ("Oak of Weeping").—**Biblical Data:** An oak near Bethel, at the foot of which Deborah, the nurse of Rebekah, was buried (Gen. xxxv. 8). In Judges, iv. 5 a tree is referred to as the "palm-tree of Deborah," which has been identified by some with the "oak of weeping." G. B. L.

——**In Rabbinical Literature:** According to the Haggadah, the word "allon" is the Greek ἄλλον (another); and it explains the designation of the burial-place of Deborah as "another weeping," by stating that before Jacob had completed his mourning for Deborah, he received the news of the death of his mother. Scripture does not mention the place of Rebekah's interment, because her burial took place privately. Isaac was blind; Jacob was away from home; and Esau would have been the only one to mourn; and his public appearance as sole mourner would not have been to Rebekah's honor (Pesik. Zakor, pp. 23*b* *et seq.*; Gen. R. lxxxi., end; Tan. Wayishlaḥ, xxvi.). L. G.

ALLORQUI, JOSHUA BEN JOSEPH IBN VIVES. See Ibn Vives Allorqui, Joshua ben Joseph.

ALLUF (or RESH KALLAH): In the Babylonian colleges, title of the chief judge, third in rank below the gaon. As a special distinction it was granted to prominent non-Babylonian scholars, particularly to those of Palestine. There were, however, others who bore this distinctive title, for there is record of a certain "Eliezer Alluf," or "Resh Kallah," of Spain in the ninth century. This title bears no direct relation to the Hebrew אלוף (duke), but is closely connected with אלופינו (our herds) (Ps. cxliv. 14), which, according to the Talmud (Ber. 17*a*), is a figurative appellation for pious and learned men in Israel. See Academies in Babylonia.

Bibliography: Zunz, *Ritus*, p. 190; Harkavy, *Studien und Mittheilungen*, iii. 48, iv. 377; Halévy, *Dorot ha-Rishonim*, pp. 217 *et seq.*

L. G.

ALLUFE HA-ḲEHILLAH: A general name for prominent members of any congregation, and typically used in regard to the leaders of the community in the old *kahals* (governing boards) of the Jews of Poland and Lithuania. The number of these leaders varied from five to ten according to the size of the community. Candidates were chosen from among them to replace absent members of the four elders (ראשים), or any of the three to five honorary members of the board (טובים). They were the so-called "reserve" of the kahal. H. R.

ALMAGEST: The Arabic title of the astronomical work of Claudius Ptolemy (flourished 150), entitled by him *μαθηματικὴ σύνταξις*, in order to distinguish it from another *σύνταξις* of Ptolemy's, devoted to astrology. The Almagest contains a full account of the Ptolemaic theory of astronomy, by which the retrograde movement of the inner planets was explained by a system of cycles and epicycles. It also gives, in the eighth and ninth books, a list of the fixed stars, with their positions, still of use to the astronomer. It continued to be the classical text-book of astronomy up to the time of Copernicus, and even of Newton, and was the foundation of the astronomical knowledge of the Jews (who became acquainted with it through Arabic translations) in the Middle Ages. One of the earliest Arabic translations is said to have been by an Oriental Jew, Sahl Al-Tabari (about 800), but no trace of it can be found. From Ptolemy, too, were derived the conceptions of the spheres and the *primum mobile*, which had so much influence upon the Cabala. The Almagest was translated into Hebrew from the Arabic, with both Averroes' and Al-Fergani's compendiums of it, by Jacob Anatoli about 1230, the latter from the Latin version of Johannes Hispalensis. Commentaries on parts of it were written by David ibn Naḥmias of Toledo, Elijah Mizraḥi, and Samuel ben Judah of Marseilles (1331); only the latter's commentary is extant. From the Almagest the Jews received their conception of the number of the fixed stars as 1,022; the comparison of the universe to an onion with its successive skins, corresponding to the spheres; and their idea of the size of the earth—24,000 miles in circumference—which indirectly led to the search for the New World, by inducing Columbus to think that the way westward to India was not so far as to be beyond his reach.

J.

ALMALIA, JOSEPH: Italian rabbi, of the beginning of the nineteenth century, whose responsa "Toḳfo shel Yosef" (The Strength of Joseph) were published in two parts at Livorno, in 1823 and 1855. His name is wrongly given as Almagia, by Mortara ("Indice Alfabetico," *s.v.*).

Bibliography: Benjacob, *Oẓar ha-Sefarim*, p. 672.

W. M.

ALMALIḤ, JOSEPH B. AARON: One of the patrons mentioned by Abraham Ankawa in the preface to his responsa, "Kerem Ḥemed" (Leghorn, 1869-71). Kaufmann regards him as the grandson of Jacob b. Joseph Almaliḥ, whose date may be fixed by an elegy composed by him on the persecution of the Jewish community at Morocco (1790). The persecution in question was, no doubt, due to the disturbed state of the country that ensued upon the death of Sultan Mulei Sidi Mohammed.

H. G. E.

ALMANAC: An annual table, book, or the like, comprising a calendar of days, weeks, and months. Among the Jews it was the holy prerogative of the patriarch or president of the Great Sanhedrin to fix the calendar and according to it proclaim the new moon. Witnesses who reported their having perceived the new moon were heard, their statements carefully examined, and perhaps compared with the result of some esoteric calculation. Hence the phrase "*sod ha 'ibbur*" (the mystery of the calculation), though it may perhaps apply altogether to the intercalation. These observations and researches gradually crystallized into a science, the oral traditions having been reduced to a literature on the Calendar (see Chronology).

Luaḥ, the Hebrew equivalent for Almanac, means literally a table or tablet. Most of the works on chronology naturally contained such a calendar. It included the proper designation of every day as part of the week as well as part of the month; the designation of the *parashah* (the weekly Sabbath portion of the Pentateuch); the dates of feasts and general and local fasts; furthermore, the exact date of the *molad* (new moon) and the *teḳufot* (the quarter-days of the year), as well as the beginning and end of the *shealah* (the time when a short prayer for rain is added to the eighteen benedictions).

Quite another appearance is borne by calendars which are calculated for more than one year, for a hundred years, or when they are meant to be perpetual. These must be classified as chronological literature. The Hebrew calendar contained originally no literary supplements, its only aim being to give a list in order of time of the days of the year. This changed, however, with the composition of the Jewish calendar in a European language. The nineteenth century introduced the literary annual which has become an almost indispensable part of the Almanac.

The Almanac first appeared as a tablet, then as a booklet, sometimes appended to the prayer-book or Pentateuch. In the synagogue the tablet was used exclusively. Written Hebrew calendars were easily lost; and, therefore, few have come down to us. But among the discoveries made in the Genizah of Cairo there are also some calendars, the margins of which are illuminated with arabesques. Only through the spread of the art of printing did this kind of literature grow up.

The first printed Almanac known came from the printing-office of di Gara at Venice, 1597. It is printed on a folio sheet. In towns where Hebrew printing-offices existed there appeared every year an Almanac on a single sheet or in a booklet. Thus almanacs have been annually published in the city of Prague since 1655, at Venice since 1670, and at Frankfort since about 1670. Owing to the great fire in the last-named city, 1711, the Almanac was published at Homburg; and from it was evolved the well-known Rödelheim Almanac, which is still being published there. Gradually these calendars were enlarged by the insertion of the memorable days in Jewish history, the civil dates, the Christian festivals, and the days of various fairs. Similar in composition and size are the bibliographically well-known calendars printed at Amsterdam since 1707, at Dyhernfurth since 1712, at Wilmersdorf since 1715, at Mantua since 1727, at Altona since 1738, at Berlin since 1739, and at Fürth since 1745. The Sulzbach Almanac contains not only all memorable days, among which it counts the fires at Prague (1689), Frankfort-on-the-Main (1715), Posen (1718), Nikolsburg (1721), but also the birthdays of the rulers and princes of Europe. Since 1758 a list of the most important highways has been added. The calendar printed at Cassel in 1790 gives a list of the Hesse-Cassel princely family and "information when all the mails at Cassel leave and arrive." The calendar of Metz gives also a list of the festivals and names of the months which were instituted by the French Revolution. The first Almanac which contained a literary supplement was published by J. Heinemann in Berlin, 1818–20, under the title "Almanach für die Israelitische Jugend," as the Oxford publication, "The Jewish Kalendar in the Year 5452" (1692), does not belong to this category.

The following bibliography, which includes only calendars published in the nineteenth century, lays no claim to completeness. Only those almanacs are noted which cover a period of not less than one year.

AMERICA.

The Jewish Calendar for Fifty Years (1854–1904), with an Essay on the Jewish Calendars, by J. J. Lyons and Abraham de Sola. Montreal, 1854.

ALMANZA, ARON DE (or **SELOMOH DE**): A Marano born at Salamanca, Spain, of Jewish parents. His first wife was Leonore de los Rios Sotte, whom he married in 1696 and with whom he obtained a dowry of "70,000 florins [$21,000, or £4,200] in money, 19,000 florins [$5,700, or £1,140] worth of jewels, and other presents." After her death he married a Christian woman. He migrated to England, and in 1703 he published, in English and Spanish, an account of his conversion, dedicated to Henry, Lord Bishop of London, entitled: "A declaration of the conversion of Mr. Aron de Almanza, a Spanish merchant, with his two children and nephew, from Judaism to the Protestant religion, according to the Doctrines of the Church of England, with his abjuration of the Jewish Rights (*sic*) and ceremonies," etc. In this work the author treats his former coreligionists very severely and, in a postscript, says that "Jewish rabbis, with the directors of the Jewish Synagogue and some other Jews in London," had spread a report to the effect that in Spain he had been a Catholic. He declares that he would be neither a

Catholic nor a Lutheran, believing in transubstantiation as little as in consubstantiation; and as for being a Calvinist, he would as lief have remained a Jew.

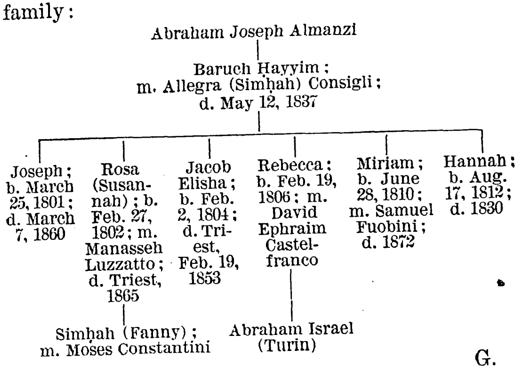
S. A. H.

ALMANZI: A family that, according to Luzzatto, derives its name from the city of Almansa in Murcia, Spain. The earliest member of the family of whom there is any knowledge is **Abraham Joseph Almanzi**, grandfather of JOSEPH ALMANZI. Abraham's son, **Baruch Ḥayyim Almanzi**, born in Scandiano, near Modena, Italy, was brought to Padua when quite young by Jacob of Triest. Baruch entered Jacob's business, living with him and his son Moses. He married Allegra (Simḥah) Consigli of Rovigo; and six children were the issue of the union. Baruch died May 12, 1837, and his wife, Feb. 2, 1857.

The following is a sketch pedigree of the Almanzi family:



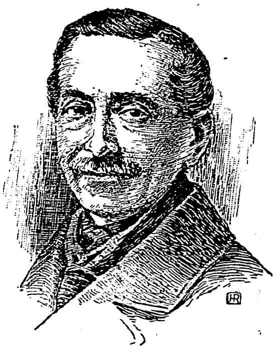
Abraham Joseph Almanzi
Baruch Ḥayyim; m. Allegra (Simḥah) Consigli; d. May 12, 1837
Joseph; b. March 25, 1801; d. March 7, 1860
Rosa (Susannah); b. Feb. 27, 1802; m. Manasseh Luzzatto; d. Triest, 1865
Jacob Elisha; b. Feb. 2, 1804; d. Triest, Feb. 19, 1853
Rebecca; b. Feb. 19, 1806; m. David Ephraim Castelfranco
Miriam; b. June 28, 1810; m. Samuel Fuobini; d. 1872
Hannah; b. Aug. 17, 1812; d. 1830
Simḥah (Fanny); m. Moses Constantini
Abraham Israel (Turin)

G.

ALMANZI, JOSEPH: Bibliophile and poet; born at Padua, March 25, 1801; died at Triest, March 7, 1860. The eldest son of Baruch Ḥayyim Almanzi, a wealthy merchant; he received a good education by private tutors, one of whom was Israel Conian. According to the Italian custom, he began at an early age to write Hebrew poems on special occasions. At the age of twenty he was a devoted student of Jewish literature and an ardent collector of Hebrew books. Rare books and manuscripts that he could not purchase he copied. He had a good command over the Hebrew, Italian, Latin, German, and French languages, and is said also to have known Syriac. His tastes as a bibliophile were fed by the large and well-selected library formerly belonging to Ḥayyim Joseph David Azulai, which his father had bought from Azulai's son, Raphael Isaiah, at Ancona. This library was largely increased by Joseph Almanzi, its rare editions and manuscripts making it one of the most important in private possession. Its treasures were freely used by Luzzatto, Steinschneider, Zunz, etc. During the last few years of his life Almanzi lived at Triest, where he took a lively interest in all communal affairs. Here he died unmarried.

Few of Almanzi's poems have been published. He was a graceful writer, and, above all, a clever translator into pure Biblical Hebrew of the poems of the great Italian authors. After his death S. D. Luzzatto published a number of his Hebrew letters and of his poems, in a collection entitled "Yad Yosef" (The Hand of Joseph), Cracow and Triest, 1889.

Almanzi was the author of: (1) "Me'il Ḳinah" (The Robe of Mourning—a play on Isa. iix. 17), an elegy on Israel Conian (Reggio, 1824); (2) a biography of Moses Ḥayyim Luzzatto in "Kerem Ḥemed," vol. iii., reprinted by M. Wolf, Lemberg, 1879, together with Luzzatto's "La-Yesharim Tehillah"; (3) "Higgayon be-Kinnor" (A Reverie upon the Harp), a collection of poems on Judah di Modena and Isaac Abravanel and of translations from Savioli, Tasso, Phædrus, Petrarch, Vitorelli, etc. (Vienna, 1839); (4) an elegy on the death of Jacob Vita Pardo, printed together with S. D. Luzzatto's "Abne Zikkaron" (Prague, 1841; the copy of the inscriptions published by Luzzatto was made by Almanzi); and (5) "Nezem Zahab" (A Golden Ring), Hebrew poetry (Padua, 1858). He left a number of Hebrew poems in manuscript, among them translations from Horace (see "Bikkure ha-'Ittim," Vienna, 1845). Almanzi's family published in his honor a catalogue of his Hebrew library, which was compiled by his lifelong friend Luzzatto, who also wrote a preface. Luzzatto had already described the manuscripts of the collection in the "Hebräische Bibliographie" of Steinschneider (iv. 52, 121, 145; v. 20, 43, 101, 128, 144; vi. 49, 85, 141). The greater part of the manuscripts were bought by the British Museum; the collection of rare books found its way to the bookseller Frederik Müller in Amsterdam, and was bought in 1868 by the trustees of Temple Emanu-El in New York, who in 1893 presented it to the library of Columbia University.



Joseph Almanzi.

ALMAZAN (ALMAÇAN), MIGUEL DE: A Marano of Saragossa, and private secretary to King Ferdinand of Aragon. He was burned at the stake on the accusation of being an adherent of Judaism. One month later, March 18, 1486, Manuel de Almaçan of Saragossa suffered the same fate.

M. K.

ALMAZAN, PEDRO DE: One of the conspirators against the inquisitor Pedro d'Arbuez. He escaped death by flight, but his wife Isabella, together with his brothers, Pedro junior and Manuel, were burned at the stake at Saragossa, January 25, 1487, while he himself was burned in effigy.

M. K.

ALMEIDA, ISAAC: Turkish rabbi and author; born in the latter half of the seventeenth century; died between 1723 and 1739. He was associate rabbi in Constantinople. His printed work, "Ḥiddushim we-Sheëlot u-Teshubot" (novellæ and responsa), appeared as an appendix to "Shene ha-Meorot ha-Gedolim," a rare work by Elijah ben Judah Covo (Constantinople, 1739). After his death it was republished, edited partly by Joshua ben Joseph Chendali, publisher of the larger work mentioned, and partly by Almeida's son, Solomon. Almeida was living in 1723, as is attested by the fact that on page 18*a* of "Shene ha-Meorot" the work "Neeman Shemuel" is mentioned as having been recently printed; and this book appeared in Salonica in 1723. On page 15*a* it is mentioned that Almeida was associate rabbi (dayyan) in Constantinople.

Schiller-Szinessy, in the catalogue of the Cambridge manuscripts, p. 23, mentions an Isaac ben Solomon Almeida, who in a Bible manuscript of the fourteenth or fifteenth century was named as its owner. While he can not be positively identified as being of the family of Isaac Almeida, it is not impossible that such is the case.

ALMEIDA, LOPEZ D': Head of the embassy sent by Alfonso V. of Portugal to Pope Sixtus IV., in the year 1472. His mission was twofold: to congratulate the pope upon his accession, and to inform him of the king's victory over the Moors of Arzilla, in Africa. Don Isaac Abravanel, who was prominent at the court, endeavored to induce the embassy at the same time to plead with the pope in favor of the Jews. He wrote to his Italian friend, Yeḥiel of Pisa, to perform all possible kindly offices toward Lopez d'Almeida and to win his good-will by impressing upon him the gratification of the Italian Jews at the generous attitude of Alfonso toward their coreligionists. The success of Abravanel's effort is doubtful (see SIXTUS IV.).

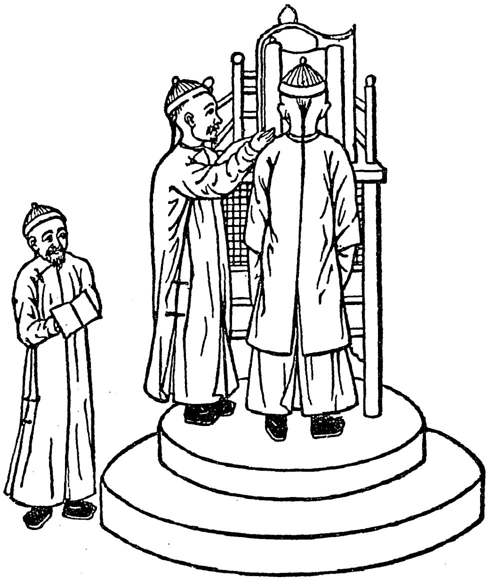
H. G. E.

ALMEMAR or **ALMEMOR:** Corrupted from the Arabic *al-minbar*, "the chair," "the pulpit," is an elevated platform in the synagogue, on which the desk stands for reading the lessons from the Pentateuch and Prophets. In the synagogues following the Spanish ritual the prayers are also read from it. In Russia it still goes by its Talmudic name בימה, which is simply the Greek *βῆμα*, a speaker's tribune. Being the counterpart of the wooden pulpit from which Ezra read the Law to the assembled people who stood all around him (see Neh. viii. 4), its proper place seems to be in the middle of the synagogue (see the literature in "Ben Chananja," viii. No. 39, pp. 681–688; "Die Almemarfrage" by Leopold Löw, reprinted in "Gesammelte Schriften," iv. 93–107), but it has in modern times often been moved forward close up to the Ark.

L. N. D.

The Septuagint reading in the passage in Neh. is *βῆμα* for מגדל. In the '*Azarah*, or Temple hall, a *bema*, or wooden pulpit, was erected for the king when, every seventh year, he read the prescribed section in Deut. xxxi. 10, 11 (Soṭah, Mish. vii. 8). The Alexandrian synagogues, also, had a wooden bema in the center (Suk. 51*b*). In both passages cited Rashi explains the word "bema" as "our almembra." In J. Weil's "Responsa," p. 147, it is called "altar" (see Berliner, "Aus dem Leben d. Deutschen Juden," 2d ed., p. 116, in which attention is called to "Or Zarua‘," ii. 21, which latter, in turn, designates it also by the name "Katheder"). This term, however, goes further back. In "Rev. Ét. Juives," xxxiv. 299, Bacher calls attention to the קתדרא דמשה ("chair of Moses") mentioned by Aḥa, the Palestinian amora of the fourth century, in Pesiḳ. ed. Buber, 7*b* (see Esther R. to i. 2 and Ex. R. xliii.). Bacher compares it with "the seat of Moses" in Matt. xxiii. 2. Under the same name, "the seat of Moses," an Almemar has been found by Father Gozani among the Jews of China, at Kai-Fung-Fu. It was described by him as "a large elevated seat in the middle of the synagogue, from which the Torah is read each Sabbath day" (see Mayer Sulzberger, "Rev. Ét. Juives," xxxv. 110).



So-called "Chair of Moses" in Synagogue at Kai-Fung-Fu, China.
(From "Jew. Quart. Rev.")

Regarding the question whether the Almemar must be in the center of the synagogue or not rabbinical authorities differ. Maimonides, "Yad ha-Ḥazaḳah" (Tefillah, xi. 3), Jacob Asheri, and Moses Isserles ("Oraḥ Ḥayyim," § 150, 5) hold the affirmative view, following Suk. 52*b*; while Joseph Karo in "Kesef Mishneh" to Maimonides, and all modern rabbis, with a few exceptions, hold the negative.

Bibliography: Leopold Löw, *Rabbinische Gutachten über Zulässigkeit und Dringlichkeit der Synagogen-Reformen*, in *Ben Chananja*, 1865, viii. 681-688; idem, *Gesammelte Schriften*, iv. 93-107. Opinions of Aub, Fassel, Frankel, Geiger, Hess, Herxheimer, Sam. Hirsch, Holdheim, Hamburger, Kahn, A. Kohn, Mannheimer, Maier, Neuda, Philippson, Schwab, L. Stein, Salomon, Shreinka, and Zipser, all in favor of placing the Almemar near the Ark.

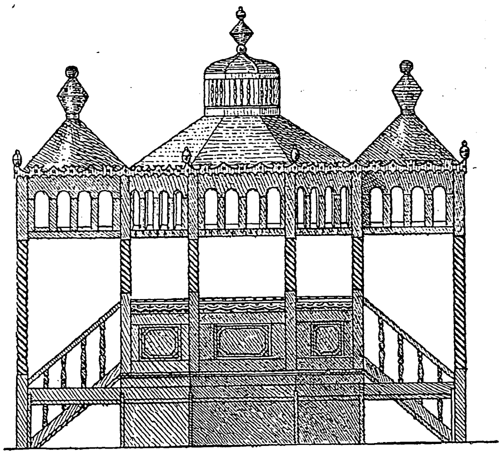
K.

——**Architecturally Considered:** The Almemar is generally rectangular in form, but sometimes the front or back is curved. The sides are open and are approached by steps, never less than three in number and sometimes more; and there are to be found various arrangements of railings or balustrades with lamps on the corner-posts. As a rule, wood is the material employed; but there are instances where marble and bronze are used. The desk is covered with rich drapery.

In the older synagogues, and in most orthodox ones, the position of the Almemar is invariably either in the center of the building or further back nearer the entrance. The space between it and the Ark is left open and entirely free of seats. Recently, however, the custom of combining the Almemar with the Ark has become general. The advantage of this is obvious: first, the service is not interrupted; secondly, a much larger area is secured for seats. So while tradition demands that the Almemar should stand by itself in the center of the floor, the practical necessity of a larger seating capacity has occasioned the adoption of the newer arrangement in the great majority of modern synagogues. At first the combination was made by simply moving the Almemar in its regulation form to a position immediately in front of the Ark. In this position, however, the reader could not face the congregation. Consequently the logical development of this scheme has resulted in enlarging the platform upon which the Ark rests, giving it capacity enough for the reading-desk and the pulpit, which latter is a separate structure often placed in front of the reading-desk on a slightly lower level.

In many of the Paris synagogues, and in the larger ones in New York, a fine decorative composition is the result of the combination of the Ark and Almemar. The synagogue in Munich is another example of this; and by the use of different levels and the arrangement of steps and balustrades great impressiveness and architectural interest are attained.

In the Florence synagogue, where the Almemar is near the Ark, no innovations are made except as to its position. It is constructed of richly inlaid wood; and the railings, which are of bronze, rest on a base of marble similar to that used for the floor and for the steps of the Ark. The pulpit is an independent structure, entirely separate, and is placed against one of the piers at the side of the building.



Almemar of Synagogue at Zabludow, Russian Poland.
(From Berson, "Kilka Slow.")

The Almemar in the Jewish synagogue at Kai-Fung-Fu in China—the oldest of which there is any knowledge—was a simple desk with the sides extended and the whole placed on a circular platform.

A. W. B.

ALMEYDA, JOSE HENRIQUES DE: A writer in Amsterdam in the early part of the eighteenth century. He published in Portuguese: "Anagrama Achrostica do Sagrado Nome de Tora, com hum Breve Discurso por Introito," Amsterdam, 1706. This was dedicated to D. Abraham Israel Suasso in Amsterdam, and consists of odes upon many words made by combining the letters of תורה (Torah). It is very rare indeed. He also published in the same language "Panegyrico Encomastico ao excell. Senhor D. Joaõ Gomez da Silva, Embaxador extr. de Rey de Portugal, por Primeiro Plenipotenciario de paz â estas provincias de Holande," Utrecht, 1712; a volume of verse dedicated to Don J. G. de Silva, who had been sent as special peace plenipotentiary from the king of Portugal to the united provinces of Holland. The work is also extremely rare, not being found even in the Montezinos collection, so rich in Spanish and Portuguese works.

Bibliography: Kayserling, *Biblioteca Española-Portug. Judaica*, p. 10.

Almemar of Ashkenazic Synagogue, Jerusalem.
(From a photograph by the American Colony, Jerusalem.)

ALMILIBY, ADAM: A Portuguese Jew who, together with Isaac Belamy, was appointed a farmer of the royal taxes in 1353 by King Alfonso IV. By virtue of this office both were exempted from wearing the Jew-badge, and were endowed with power to enforce the collection of the royal customs. During their term of office the Jews of Portugal were relieved of all imposts except the poll-tax.

M. K.

ALMODAD (Septuagint and Vulgate, read **Elmodad**): The eldest son of Joktan (Gen. x. 26, I Chron. i. 20). The meaning of the name is uncertain. The first element, "Al," may be the Arabic article, and the second perhaps a corruption of "Maudad" (see Joktan).

ALMOHADES: A Moorish dynasty in northwestern Africa and in Spain during the twelfth and thirteenth centuries. With the rise of the Almohades (Almuwaḥḥidin) dynasty, a radical change was suddenly apparent in the territories which it succeeded in bringing under its scepter. Religious laxity had penetrated the western parts of the Moslem world to such an extent that the most important tenets of the faith were utterly neglected. Being consummate theologians and imbued with the spirit of uncompromising orthodoxy as taught by Al-Ghazzali, the Almohade rulers initiated a reaction of the most thoroughgoing kind. The new state of things was felt by the Jews as soon as 'Abd al-Mu'min, the second Almohade prince, took Morocco in 1149, and not long afterward those of Mohammedan Spain were also made to feel the difference. It was only one of the consequences of the renewed rigidity of the law that non-Moslems should not be tolerated in the Almohade states. The Jews and Christians had to choose between conversion to Islam and emigration. Synagogues and churches were either destroyed or changed into mosques. Many people left their homes, others agreed to pronounce the formula of the Moslem

Forced Conversion to Islam.

creed, while secretly continuing the observance of their own religion. In accordance with the established practise the merely formal adoption of Islam was deemed sufficient by the early Almohade rulers; and, as Moslem doctrine emphasized the unity of God in its most stringent fashion, many Jews thought it only a small transgression to so acknowledge in addition Mohammed as a prophet. In order to prevent the harm which it was felt must ultimately result from such a notion, Maimun b. Joseph, the father of Maimonides, who at that time had settled at Fez with his family, wrote his "Epistle of Consolation" in which he advised his brethren not to lose heart and faith. In the same cause his son Moses wrote his "Letter concerning Conversion," to encourage those who felt the gravity of even this outward desertion from the faith of their fathers.

But such proceedings did not remain unnoticed by the later Almohade princes, who were not satisfied with the mere utterance of a religious formula. Abu Yusuf Ya'ḳub Almansur, the fourth Almohade prince, suspecting the sincerity of the converted Jews, forced them to don a distinguishing garb, consisting of a black tunic with long sleeves, and a yellow scarf as head-covering. His successor Abu Abdallah changed the color of the gaberdine also to yellow. Before the middle of the thirteenth century the power of the Almohades was broken in Spain; but in northern Africa the lot of the Jews continues a hard one, even down to the present day, as a result of the Almohade reaction.

BIBLIOGRAPHY: Grätz, *Gesch. d. Juden*, vii. 23, 98; for the Almohades in general, see Goldziher, *Materialien zur Kenntniss der Almohadenbewegung in Nord-Africa*, in *Z. D. M. G.* xli. 30-140; *Die Bekenntnissformeln der Almohaden*, ibid. 168-171, and the authorities there cited. On Maimun's letter, see Introduction to Simmonds' edition in *Jew. Quart. Rev.* ii. 62, 335 *et seq.*

H. HIR.

ALMOLI, ALMULI, or ALMALI: A Spanish-Jewish family name derived from the Arabic *al-mu'alli* ("the one who raises up"). In addition to those referred to in the following articles two other members of the family are known. A **Salomon Almuli** is mentioned in a Barcelona list for the year 1262 (Jacobs, "Sources," No. 212, p. 16). In a similar list occurs the name of **Gento Almuli of Calatyud** (Kayserling, "Jew. Quart. Rev." viii. 492).

G.

Jesse Almoli: Son-in-law of Rabbi Meir, of Boton, whose collection of responsa he arranged for publication in the year 1660. M. K.

Nathaniel b. Joseph ibn Almoli: A physician of Saragossa, Spain, at the end of the thirteenth century. He translated Maimonides' commentary on the fifth Order ("Ḳodashim" = sacred things) of the Mishnah from the original Arabic into Hebrew. In November, 1296, Rabbi SIMḤAH was sent by the Jewish community of Rome to Spain to obtain a Hebrew version of the commentary; and he was advised by Solomon ben Adret to procure a capable translator in Saragossa. A copy of the full commentary on the first five Orders was to be found only in that town; and as the first Order had already been translated by Alḥarizi, and the second and third by scholars in Huesca, there remained for the scholars of Saragossa only the fourth and fifth Orders. On Simḥah's arrival at Saragossa Almoli expressed his willingness to undertake the translation of one Order; and the fifth was assigned to him.

Unfortunately for the work, Almoli had not mastered the neo-Hebrew language; he had a defective manuscript to decipher, and, as he himself admits, he was not an experienced Talmudist. Furthermore, through want of care in copying, the translation has come down to modern times in a most deplorable condition. Almoli lacked utterly the faculty of adapting the correct Hebrew words to the Arabic originals, a faculty possessed in an eminent degree by Alḥarizi and the Tibbonides. Frequently Almoli's style is clumsy, and his expressions are often vague; therefore, his plea for indulgence is not altogether without reason. With all these defects, the translation still has the merit of first rendering this celebrated commentary accessible to those unacquainted with Arabic.

J. VR.

Solomon b. Jacob Almoli (Almuli): Physician and Hebrew author of the sixteenth century; lived in Turkey, probably in Constantinople. As a physician he seems to have enjoyed quite a reputation, but he is better known as a Hebrew grammarian. In 1517 he wrote an introductory ode to Elisha b. Abraham b. Mattathia's "Magen David," which was a defense of Ḳimḥi's grammatical system against Profiat Duran's criticism. Shortly after, he published "Halikot Shewa," a grammatical essay upon the *sheva* (Constantinople, 1519). He also wrote "Meassef Lekol ha-Maḥanot" (The Collector from All Camps) (no date or place), which was, in a way, a prospectus for a Jewish encyclopedia. (The book is extremely rare; the Bodleian possesses only a manuscript copy of a part. Neubauer, "Cat. Bodl. Hebr. MSS." No. 1936, 4.) Best known and oftenest printed of all his works is his "Pitron Ḥalomot" or "Mefasher Ḥelmin" (Solution of Dreams), a dream-book, in which he explains all passages in the Talmud referring to dreams or their interpretation. It consists of three chapters upon the interpretation of dreams and upon the averting of evil dreams, and was first published in Salonica, about 1516. It was republished in 1518 in Constantinople, then later in Cracow; was printed in Amsterdam by Manasseh ben Israel, and in 1694 appeared in a Judæo-German translation. He also wrote a philosophical treatise upon the nature of the soul and its immortality, entitled "Sha'ar ha-Shem he-Ḥadash," Constantinople, 1533. He appears to have become a man of wealth in later years, for he published at his own expense numerous grammatical works. Thus in 1529 he published Ibn Ezra's "Yesod Mora," and in 1530 the work "Sefat Yeter" by the same author. To an edition of Ibn Yaḥyah's "Leshon Limmudim" in 1542 he supplied an introductory poem beginning with the words "Reu Sefer." Outside of the frequently reprinted "Pitron Ḥalomot," his other works are extremely rare.

ALMOLIK (ALMALIK), ABRAHAM BEN JUDAH ELIMELECH. See ABRAHAM BEN JUDAH.

ALMON: A city in the territory of Benjamin given to the priests (Josh. xxi. 18); now called 'Almit. Found also in the corresponding list of I Chron. vi. 45 [A. V. 60], but there called ALEMETH.

G. B. L.

ALMOND (שקד): A term applied to a tree (Jer. i. 11, Eccl. xii. 5), to a fruit (Gen. xliii. 11, Num. xvii. 23 [A. V. 8]), and to a bud or flower (Ex. xxv. 33, xxxvii. 19). Once (Gen. xxx. 37) the same tree is called *lûz*, its name in Aramaic, Arabic, and Ethiopic. The almond is the *Amygdalus communis* (L.), of the order *Rosaceæ*. Its Hebrew name (*sheḳed*) is derived from a stem meaning to "waken" or "watch," to which Jeremiah makes reference in his use of it (Jer. i. 11). The name is said to have been given because it was the first tree to awaken from the sleep of winter; but it more probably expresses its color or some other physical quality. About January the bare tree, still devoid of leaves, is suddenly covered with blossoms an inch or an inch and a half broad. The petals, pink at the bottom, become white at the top, producing the effect of a perfectly white tree. It is a native of western Asia. The fruit was considered a delicacy (compare Gen. xliii. 11). In Eccl. xii. 5 it is used metaphorically, according to most interpreters, of an old man's gray head.

G. A. B.

ALMON DIBLATAIM: A stopping-place in Moab in the Israelites' journey from Egypt (Num. xxxiii. 46, 47). Called Beth Diblataim in Jer. xlviii. 22. G. B. L.

ALMORAVIDES (AL-MURABATIN): A Moorish dynasty in northwestern Africa and in Spain in the eleventh and twelfth centuries. The rise of this dynasty marked a new epoch; for the first time non-Arab rulers occupied a Moslem throne. Yusuf ibn Tashfin, the founder of this dynasty, did not even understand Arabic. He was, therefore, unacquainted with many traditions and customs of Moslem government, but was also free from Moslem prejudices. Religious observances were anything but rigid; the treatment of non-Moslem subjects was, therefore, dictated by liberal principles. Yusuf was of a kind disposition and a lover of justice, and the Jews under his sway had little to complain of. In Africa he indirectly provided new homes for them by founding Morocco and Tlemçen (1062), and no doubt also brought about a welcome change for many Jews living in Spain when he conquered the Ommiades. Only on one occasion is he said to have threatened the Jews of Lucena with compulsory change of faith; but they ultimately bought him off with large sums of money. Under the rule of his son Ali (1106–43), when the Almoravides were at the height of their power, Jews occupied important posts. The poet Solomon Al Mu'allim (Abu Ayyub), praised by Alḥarizi for his great talent, was his physician. Among other prominent Jews was the physician Abraham ben Meir ibn Kamnial (Abu al-Ḥasan), to whom Judah ha-Levi (who spent the years of his training in a place belonging to the rulers) dedicated seven poems, Isaac (Abraham) ibn Muhajir, and Solomon ben Farusal (Ferrisol). The Almoravide dominion soon declined, and was superseded in Spain by that of the ALMOHADES in 1149. H. H.

ALMOSNINO: A distinguished Jewish family originally dwelling in Aragon. The name, according to Jellinek (see Steinschneider, "Cat. Bodl." No. 6430), is derived from the Arabic and denotes "an orator." The following members of the family are those best known to fame:

Abraham Almosnino: Father of Joseph, a physician, and Ḥayyim. He and **Abraham Canombrial** were grandfathers of the mother of Moses Almosnino, and were burned at the stake by the Inquisition (Steinschneider, "Cat. Bodl." col. 1771).

Ḥasdai Almosnino: Rabbi in Tetuan. He is the author of "Mishmeret ha-Ḳodesh" (The Holy Charge), a supercommentary on Rashi's commentary on the Pentateuch, published at Leghorn, 1825; and "Ḥesed El" (The Mercy of God), a series of annotations upon Biblical and Talmudical passages, published at Leghorn, 1826.

Isaac Almosnino: Rabbi at Gibraltar and later ḥakam of the London Spanish and Portuguese congregation (Bevis Marks); died in 1784.

Isaac Almosnino: Named as the author of a translation of Aristotle's "Ethics" into Hebrew (see Kayserling, "Bibl. Esp.-Port. Jud." p. 11); but in all probability he has been confused with Moses Almosnino.

Joseph Almosnino: Son of Isaac and grandson of Moses b. Baruch Almosnino; born 1642; died at Nikolsburg, Moravia, in 1689. He was rabbi at Belgrade, and author of numerous responsa, collected by his son Isaac under the title "'Edut bi-Yehosef" (Testimonies in Joseph) and published at Constantinople, 1711–33.

Moses b. Baruch Almosnino: Distinguished rabbi; born at Salonica, 1510; died in Constantinople about 1580; elected rabbi of Neveh Shalom community of Spanish Jews in that city in 1553, and of the Liwyat Ḥen congregation in 1560. He was eminent alike for knowledge of rabbinical matters and for scholarship in the science of his day, particularly natural physics and astronomy, furnishing commentaries upon many treatises translated from the Arabic and Latin. In 1565 he successfully represented his brethren at an audience with the sultan Selim II., petitioning for the confirmation of their civil rights. He wrote, in 1570, a rather prolix Hebrew commentary on the Biblical "Five Rolls," under the title "Yede Mosheh" (The Hands of Moses); also an exposition of the Talmudical treatise "Abot" (Ethics of the Fathers), published at Salonica in 1563; and a collection of sermons delivered upon various occasions, particularly funeral orations, entitled "Meammeẓ Koaḥ" (Reenforcing Strength). These were published in Hebrew by his son Simon, the expense being defrayed by two other sons, Abraham and Absalom. Another Hebrew work by Almosnino was "Tefillah le-Mosheh" (The Prayer of Moses), an apologetic work on the Pentateuch, published at Salonica in 1563, and republished at Cracow in 1598 and 1805. In Spanish he wrote a homiletic work, "Regimiento de la Vida," which treats among other things of the origin of good and evil, the influence of the stars, Providence, the moral life, education of children, and freedom of the will. To this was appended a chapter on "Dreams, Their Origin and True Nature," written, as it is stated, at the request of Don Joseph Nasi, duke of Naxos. Although written in Spanish, the work was printed in Hebrew characters at the press of Joseph Jaabez, Salonica, 1564, and was republished at Venice in 1604, and at Salonica in 1729. An appendix of five pages contains a list of difficult Spanish words, occurring therein, translated into Hebrew. An edition in Spanish letters was published by Samuel Mendes de Sola and associates in Amsterdam, 1729, dedicated to Aaron David Pinto. This work is considered by Sanchez to be one of the rarest in the Spanish language. A historical work by Almosnino, "Extremos y Grandezas de Constantinopla," also in Spanish with Hebrew characters, was transliterated and republished by Jacob Cansino, Madrid, 1638.

According to Steinschneider ("Hebr. Uebers." p. 215), Moses Almosnino was also author of a commentary upon Aristotle's "Ethics." Carmoly (p. 12) mentions it under the title of "Pene Mosheh" (The Face of Moses), stating that it was written by Moses at Palestria near Salonica, and that his son Simon, after his father's death, desired to publish it (1584).

Samuel Almosnino: Rabbi at Salonica in the sixteenth century. He was the author of a commentary on some of the minor prophets, published among the rare commentaries, in Moses Frankfurter's large Bible, Amsterdam, 1724–27; also of a commentary on the Pentateuch, with particular regard to Rashi's commentary.

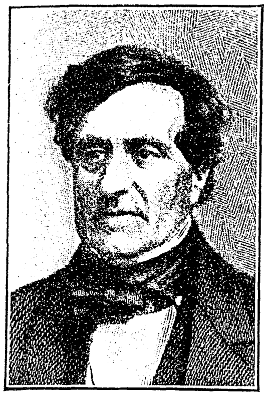
F. DE S. M.

Solomon Almosnino: Secretary to the Bevis Marks Synagogue (Sephardic), in London, England; born Sept. 5, 1792; died in London, 1878. He was descended from an ancient Spanish family, his grandfather, who was chief rabbi of Gibraltar, having migrated to England in the middle of the eighteenth century. In the year 1814 Almosnino was appointed clerk to the secretary of the Bevis Marks Synagogue, and on the death of the secretary, in 1821, was elected his successor. He practically managed the affairs of the congregation; and its entire funds passed through his hands. He was concerned in all the historical events of his community for half a century. Being entirely bound up in his work, all his hopes, fears, and aspirations were concentrated in the *mahamad*-room (vestry-room) at Bevis Marks. His modest and unassuming kindness won for him the respect and friendship of all sections of the community.



Solomon Almosnino.

G. L.

ALMS: A word derived from the Greek ἐλεημοσύνη (mercifulness), used by Greek-speaking Jews to denote almost exclusively the offering of charity to the needy, from a feeling of both compassion and righteousness (*ẓedaḳah*). (See LXX. on Prov. xxi. 21, and Dan. iv. 24.) The word "almsgiving," however, is far from expressing the full meaning of the Hebrew ẓedaḳah, which is, charity in the spirit of uprightness or justice. According to the Mosaic conception, wealth is a loan from God, and the poor have a certain claim on the possessions of the rich; while the rich are positively enjoined to share God's bounties with the poor. A systematic mode of relief of the needy was, therefore, provided by the law and by the institutions of the synagogue (see CHARITY). But all these provisions could not entirely remove want. "The poor shall never cease out of the land," says the lawgiver, and commands: "Thou shalt open thine hand wide unto thy brother, to thy poor, and to thy needy, in thy land" (Deut. xv. 11). In the course of time the giving of Alms out of mere pity and without regard to the permanent relief of the recipient, became a meritorious practise, possessing, like sacrifice, the power of atoning for man's sins, and redeeming him from calamity and death. The verse Prov. xi. 4 (compare xvi. 6, xxi. 3) was expounded in this sense: "Water will quench blazing fire; so doth almsgiving make atonement for sins." "Lay up alms in thy store-house; it shall deliver thee from all affliction" (Ecclus. iii. 30, xxix. 12).

Talmudic Conception.

Accordingly, King Nebuchadnezzar is told by Daniel: "Break off thy sins by righteousness [ẓedaḳah—almsgiving] and thine iniquities by showing mercy to the poor" (Dan. iv. 27), and both Daniel and the king become models of charity (Midr. Zuṭta, Cant., ed. Buber, p. 21). (See ALTAR.) The entire story of Tobit is a lesson on almsgiving and its redeeming powers (Tobit, i. 3, 16; ii. 14; iv. 7–11; xii. 8, 9). "Alms deliver from death and purge away all sin" (compare Prov. xi. 4); whence the custom of giving Alms at funerals (see ẒEDAḲAH BOX). "Every one who occupies himself with charity shall behold the face of God," as it is written (Ps. xvii. 15, *Heb.*): "I behold Thy face by almsgiving" (*ẓedeḳ*; see Midr. Teh. *l.c.*, B. B. 10*a*). Almsgiving, prayer, and fasting constituted the three cardinal disciplines which the synagogue transmitted to both the Christian church and the Mohammedan mosque (see Tobit, xii. 8; and compare Matt. vi. 1–18; and the Koran, where almsgiving, called *zakat* (Aramaic *zakuta*), or *sadaka* (ẓedaḳah), is always mentioned in connection with prayer (sura ii. 40, 104; ix. 54). The Mandæans, too, made almsgiving (*zidka*) and fasting the means of obtaining eternal life and bliss (see Brand, "Mandäische Schriften," pp. 28 *et seq.*). According to Rab Assi of the third century, "almsgiving is equal in value to all other commandments" (B. B. 9*a*; compare Luke, xv.): "It saves man from sudden, unnatural death and the soul from doom" (R. Johanan, B. B. 10*a*, after Prov. x. 2): "Almsgiving is more than any sacrifice, though personal charity is superior even to almsgiving" (R. Eleazar, Suk. 49*b*). R. Eleazar states also that it should precede prayer, taking Ps. xvii. 15 also to mean, "After almsgiving I shall behold Thy face," B. B. 10*a*. Likewise each fast-day was virtually an occasion for almsgiving, as the day's offerings were handed over to the poor (Ber. 6*b*). Compare Midr. Zuṭta, Cant., ed. Buber, p. 21: "The Israelites fast and give their food and that of their children to the poor"—quoted by Origen, "Homilies to Leviticus," x. (see also Aristides, xv. 9).

The Gift of King Monobazos.

"Almsgiving is a powerful paraclete (mediator) between the Israelites and their Father in heaven; it brings the time of redemption nigh" (B. B. 10*a*). In allusion to the various Biblical passages concerning ẓedeḳ and ẓedaḳah—righteousness in the sense of almsgiving—Tosef., Peah, iv. 20 (also B. B. 12*a*) narrates a story of King Monobazos, the husband of queen Helena of Adiabene, who lived about the year 18. He is in the legend probably confounded with his son Izates, who, after his father's death, became a convert to Judaism, and sent—in addition to the rich gifts of his mother—large sums to Jerusalem for the relief of the poor (Josephus, "Ant." xx. 2, § 5). "When the generous gifts he had bestowed upon the poor, in the time of great famine, provoked the protests of his brothers, who reproached him for having thus squandered what his royal ancestors had gathered together, he replied:

> "My ancestors laid up here on earth; I in heaven (Ps. lxxxv. 12);
> My ancestors laid up treasures where the human hand can reach them; I, where no human hand can reach them (Ps. lxxxix. 15);
> My ancestors laid up treasures that bear no fruit; I, such as bear fruit (Isa. iii. 10);
> My ancestors laid up treasures of Mammon; I, treasures of souls (Prov. xi. 30);

> My ancestors gathered and will not reap the benefit; I have gathered and shall reap the benefit (Deut. xxiv. 19-22);
> My ancestors laid up treasures for this world; I, for the world to come, as it is said (Isa. lviii. 8): 'Thy righteousness [almsgiving] shall go before thee and the glory of the Lord shall be thy rearward.'"

God and Mammon.

This contrast between the treasures of unrighteous Mammon (Prov. x. 2) and the treasures of righteousness laid up for the world to come (Isa. xxxiii. 6; see the translation in the Septuagint and Shab. 31*a*) is also alluded to in a similar utterance of Jesus, in Luke, xii. 33, 34; Matt. vi. 19-24: "Sell what ye have and give alms; provide yourselves bags which wax not old, a treasure in the heavens that faileth not, where no thief approacheth, neither moth corrupteth. For where your treasure is [whether of unrighteousness or righteousness] there will your heart be also [your soul—in the world to come]." Here follows in Matthew the passage of the single (sincere) eye and the evil eye, misplaced in Luke, xi. 34-36, which recalls several similar rabbinical utterances: "He that gives a free offering should give with a well-meaning [unbegrudging] eye" (Yer. B. B. iv. 11); whereas the rich man who shows an evil (begrudging) eye to the collectors of Alms, will lose his riches (according to Eccl. v. 12, Ex. R. xxxi.). Compare Paul in II Cor. ix. 7-9: "God loveth the cheerful giver," with B. B. 10*b* in connection with Ps. cxii. 9, God lavishes his bounty in the same measure as men give. Thus also R. Eleazar referring to Hosea, x. 12: "The kindness displayed in the giving of alms decides the final reward" (Suk. 49*b*). "Therefore no disciple of the wise should live in a city where there is no alms-box" (Sanh. 17*b*). Almsgiving should, therefore, be done in secret (Eleazar, B. B. 9*a*; Derek Ereẓ Zuṭṭa, ix. 4, after Prov. xxi. 14), and not before men, for "he who gives before men is a sinner," as it is said, that God shall bring also "the good deed before his judgment" (Eccl. xii. 14, Ḥag. 5*a*, Shab. 104*a*, B. B. 10*a*). In view of the current exposition (see Sifre on the passage) of Deut. xv. 10, "Let not thine eye be evil against thy poor brother . . . thou shalt surely give him," as meaning "thou shalt surely give him—him directly—and no one shall stand between him and thee," the Essaioi or Essenes ("the secluded ones") had their treasury in a chamber of their own in the Temple, so that both the giving and the taking should remain unobserved (Mishnah Sheḳ. v. 6). Such a "chamber of the Essenes" (silent or modest ones) לשכת חשאים existed in every town in order that the poor of good families should be enabled to receive their support in seclusion (Tosef., Sheḳ. ii. 16).

The Alms-Boxes.

In the same spirit Jesus, in the "Sermon on the Mount" (Matt. vi.) says: "Take heed that ye do not your alms [zedaḳah—righteousness] before men to be seen of them, otherwise ye have no reward of your Father which is in heaven." The Temple "treasury" in the story of the widow's mite (Luke, xxi. 2; Mark, xii. 41; compare Josephus, "Ant." xix. 6, 1, "B. J." v. 2) into which rich and poor cast their gifts, consisted of thirteen trumpet-like receptacles of brass, so shaped to prevent dishonest people from taking out coins while pretending to cast them in (Sheḳ. v. 1 and Yer. 49, 3; 50*b*. For later times compare 'Er. 32*a* and Giṭ. 60*b*). The words of Jesus, "This widow hath cast in all the living that she had," refer to Lev. ii. 1, as interpreted by the rabbis (Lev. R. 3), "The poor widow bringeth her very life [*nefesh*] in her little 'meat-offering,'" and are an exact parallel to the story of the widow and the priest, or the poor and King Agrippa, given in the Midrash as illustrations. But while the gifts cast into the receivers were intended for Temple use and not for charity, the fact that the term *ḳorban* (sacrifice for the treasury) was retained for "charity" in Christian communities until the third century ("B. J." ii. 4; Mark, vii. 11, "Apost. Const." ii. 36; Cyprian, "De Oper." and "Eleemos." xiv.) shows that it was actually treated like the Temple gifts. Even the trumpet-shaped alms-holders seem to have been retained in the Church until the beginning of the fourth century, judging by the term *conchæ* (conch-shells) applied to the charity treasury (see Mehlhorn, "Aus den Quellen der Kirchen-Gesch." i. 27, note 10; against Ratzinger und Kraus quoted in Uhlhorn, "Christl. Liebesthätigkeit," p. 399). At any rate it is with an allusion to the trumpet-like form of the alms-box that Jesus said (Matt. vi. 2 *et seq.*): "Therefore when thou doest thine alms do not sound a trumpet before thee, as the hypocrites do in the synagogues and [at the public fasts] in the streets, that they may have glory of men. . . . Let not thy left hand know what thy right hand doeth: that thine alms may be in secret; and thy Father, which seeth in secret, himself shall reward thee openly." The latter sentence may refer to Prov. xi. 21 (*yad le-yad* = "hand to hand") interpreted by the rabbis (Soṭah, 4*b*, 5*a*) as alluding to the giving of charity in secret. Compare also the Mandæan teaching (Brand, "Mandäische Schriften," pp. 28, 64):

> "If you give alms do not do it before witnesses. If you give with the right hand, do not tell it to your left; if you give with the left, do not tell it to your right. Any one who giveth and has witnesses, it shall not be accounted to him."

Almsgiving is regarded as an offering brought to God:

> "They that give alms to the poor, give it to Me," says God, for it is said: "My korban, My bread" (Num. xxviii. 2). Surely God needs no bread, nevertheless He says: "I count your gifts as though you were My children supporting their father" (Midr. Zuṭṭa, Cant., ed. Buber, p. 23; compare the exact parallel in Matt. xxv. 45, where Jesus speaks simply in the name of God, the Father of all).

On Giving Alms.

The abuse of almsgiving made itself felt occasionally in Talmudic times. "He who takes alms by deception, or without need of the same, will finally go to ruin," says an old Baraita (Ket. 68*a*). Compare Ecclus. xii. 1-6: "When thou wilt do good, know to whom thou doest it. Give unto the good and not unto the sinner" (compare "Didache," i. 5, 6). Still, says R. Eleazar (Ket. 68*a*): "Let us be thankful that there are deceivers among the needy, to excuse us somewhat for the guilt which the many uncared-for bring upon us."

To give Alms only to such as are worthy was therefore made an object of special solicitude. "When given to undeserving persons it is not a meritorious act, receiving reward" (B. B. 9*b*). "Happy he that considereth the poor," says the Psalmist (Ps. xli. 2); not "he that giveth." This is an admonition to us to take personal interest in him and not simply to give him Alms (Lev. R. xxxiv.).

"He hath dispersed, he hath given to the poor; his righteousness [almsgiving] endureth forever" (Ps. cxii. 9). Compare Talmud Kallah: "What shall men do in order to acquire wealth for their children? Let them do the work of heaven by dispensing alms among the poor," in accordance with Ps. cxii. 9, and Yalk. to Prov. xi. 24: "He that lavisheth bountifully shall increase his wealth, and he that giveth sparingly shall see his fortune decrease."

In the course of time, almsgiving gave way to organized charity. See CHARITY.

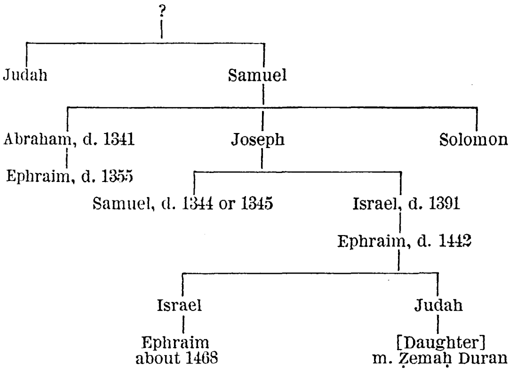
M. K.

ALNAKIF, ISAAC BEN JOSEPH: Liturgical poet of the thirteenth century (in Spain?), who composed a *zulat* (liturgical poem between the Shema' and 'Amidah) for the Passover service (see Zunz, "Literaturgesch." p. 504; "Jew. Quart. Rev." xi. 310).

W. M.

ALNAQUA: An important family of Spanish Jews, the first mention of whom occurs late in the twelfth century. In Hebrew the name is written נקוה or אלנאקוה. It is the same as אנקווה or אנקאווא, though Steinschneider seems to be of a different opinion. In modern works the name appears as Alnaqua, Alnequa (Zedner), Aluncawi (Kayserling), and Ankoa. Originally from the Iberian peninsula, members of the family spread to northern Africa and Turkey, where by marriage they became related to the Durans and Benvenistes. The first two of whom mention is made are Judah and Samuel, who fell victims to court slanders in Toledo about the year 1200. The three brothers, Abraham, Joseph, and Solomon, who lived in the fourteenth century, came each to an untimely end: the first was assassinated (1341); the other two were cut off by the plague a few years later. In the fifteenth century the Alnaquas settled in northern Africa, where they became the leaders of the communities. From Zunz's notes the following genealogical tree may be traced:



In the sixteenth and seventeenth centuries the Alnaquas are to be found in Turkey, prominent as scholars and philanthropists. In the nineteenth century Abraham ben Mordecai Ankawa was a Halakist of some renown in Morocco (Steinschneider, "Hebr. Bibl." i. 113).

M. B.—G.

Ephraim ben Israel Alnaqua (Alnucawi, Ankava, Ankoa; called **Rab** in Africa): Physician, rabbi, and theological writer; founder of the Jewish community at Tlemçen, North Africa, in which place he died in 1442. According to a legend, Alnaqua escaped from the Spanish Inquisition, which had martyred his father and mother at the stake, and came to Africa mounted on a lion, using a serpent as a halter. Azulai refers to him as a miracle-worker. Alnaqua succeeded, after all other physicians had failed, in curing the only daughter of a king of the family Beni Zion. Refusing the reward of gold and silver offered him by the king, he begged only that the Jews living near Tlemçen might be united in it. In this way the community was formed. Alnaqua's first care was to establish a large synagogue: this is still in existence, and bears his name. Above the rabbi's chair, on which the verse Jer. xvii. 12 is engraved, a lamp burns perpetually. Alnaqua's grave, surrounded by those of his family, is in the old cemetery: it is sacred to North African Jews, and is frequently visited by pilgrims from all Algeria.

Alnaqua had two sons, Israel and Judah. The latter lived at Oran, Mostaganem, and, later, at Tlemçen, and became the father-in-law of Ẓemaḥ Duran. Alnaqua wrote for his elder son Israel "Sha'ar Kebod Adonai" (Entrance to the Glory of God), containing answers to the criticisms of Naḥmanides on the "Moreh" of Maimonides. Manuscripts of this work exist in the Bodleian Library, Oxford. He wrote, also, some religious hymns.

S.

Israel ben Joseph Alnaqua: Ethical writer and martyr; lived in Toledo, Spain; died at the stake, together with Judah ben Asher, in the summer of the year 1391. He is the author of an ethical work in twenty chapters, entitled "Menorat ha-Maor" (Candlestick). The work commences with a long poem, an acrostic on the author's name. Then follows a preface in rimed prose. The introduction to each chapter is headed by a poem, giving the acrostic of his name, Israel. It was printed in 1578. A manuscript of it is in the Bodleian. An abridgment of it was published at Cracow, 1593, under the title "Menorat Zahab Kullah" (Candlestick Wholly of Gold). It is divided into five sections, which contain observations (1) on laws in general; (2) on education; (3) on commerce: (4) on the behavior of litigants and judges in court; (5) on conduct toward one's fellow men. This is supplemented by a treatise, שפת אליהו רבה, consisting of Talmudic and midrashic sayings and maxims, which has been published in German (Hebrew characters) in Wagenseil's Belehrung der Jüd.-Deutschen Red- und Schreibart," Königsberg, 1699.

ALNUCAWI, EPHRAIM. See ALNAQUA, EPHRAIM.

ALOES: Translation of אהלים, occurring four times in the Old Testament (Num. xxiv. 6, Ps. xlv. 8, Prov. vii. 17, Cant. iv. 14), and of *ἀλόη* in the New

(John, xix. 39). In all these passages, with the exception of the first, it signifies a perfume used upon garments or a bed. It was the gum of the *Aloexylon* and *Aquilaria ovata* of Malacca and of *A. agallochum* of Bengal (Toy, "Proverbs," p. 153, in "International Critical Commentary"), and not the wood itself. It was distinct from the common bitter aloe used in medicine and from the American aloe ("Encyc. Bibl."). In Num. xxiv. 6 the word indicates a tree; but that a tree of southeastern Asia should be known to an eighth-century Israelitish poet sufficiently to be used in a simile is more than doubtful. In the Septuagint, in the passage in question, the word is rendered "tents"; but the occurrence of "gardens" before it and of "cedars" after it compels us to look for a tree of some kind. Dillmann (Com. to Num. xxiv. 6, 2d ed., p. 157) conjectures that the word was originally אילם (compare Ex. xv. 27, Gen. xiv. 6). איל signifies also terebinth (compare Septuagint to Gen. xiv. 6), and this would accord with the context quite as well. G. A. B.

The Aloe.
1. Plant showing method of growth. 2. Flower-stalk. 3. Leaf.

ALONZO DE LA CALLE. See America, Discovery of.

ALONZO DE CARTAGENA, or **DE SANTA MARIA:** Marano; born in Burgos, Spain, in 1385. Alonzo, together with his father, Salomon ha-Levi, or Paul de Burgos, and his brothers and sisters, was baptized in 1391. Having devoted himself to the study of philosophy and the Law, while yet young he became deacon of Santiago and Segovia. Owing to his erudition and adroitness he exerted great influence at the Castilian court, whence he was sent to Lisbon to negotiate peace between the kings of Castile and Portugal. Alvaro de Luna sent him, with Gonzalo Garcia de S. Maria, his brother, to represent Spain at the Council of Basel. Alonzo, who upon the death of his father received the episcopal see of Burgos, inherited also his father's hatred for the Jews. To his influence may be ascribed the malevolent decrees of the Basel Council, especially the bull, so hostile to the Jews, which Pope Eugenius IV., till then a most mild ecclesiastic, issued on August 8, 1442, to the bishops of Castile and Leon, by virtue of which all Christians were prohibited from intercourse with the Jews, and the latter were stripped of all their civil rights, and debarred from holding any public office. Alvaro de Luna, a man very friendly to the Jews, did all in his power to prevent the publication of the bull, and succeeded in winning the king over to a humane treatment of the Jews. This caused Alonzo to become the most violent opponent of Alvaro de Luna. De Luna was ultimately discharged from office, and subsequently assassinated. Alonzo, called "the joy of the Spaniard and the delight of religion," published several philosophical and theological works, as well as some erotic poems.

ALONZO DE HERRERA: Cabalist, philosopher. See Herrera, Alonzo de.

ALPALAS (ALFALAS), MOSES: A Jewish preacher at Salonica about the middle of the sixteenth century. Of his many homiletic and theological writings, there have appeared in print, "Wa-yaḳhel Mosheh" (And Moses Collected), a collection of sermons (Venice, 1597), and "Hoyl Mosheh" (Moses Was Content), apologetic essays on Judaism and the excellence of the Mosaic law (Venice, 1597). The name Alpalas is probably the same as the Arabic "al-Fallas" (The Money-Dealer; "Jew. Quart. Rev." xi. 591).

Bibliography: Steinschneider, *Cat. Bodl.* col. 1768.
M. K.

ALPHA: The Greek name for Aleph was, according to the older tradition of R. Ishmael (Sheḳalim, iii. 2; compare Aleph), used as a mark for the first of the shekel boxes in the Temple. According to Men. ix. 1–6, Alpha designated the first quality of the flour used in the Temple (see Alphabet).
K.

ALPHA AND OMEGA: An expression found in several places in the Revelation of John (xxi. 6, xxii. 13, i. 8), a book which is to-day almost universally recognized by New Testament scholars of the critical school as derived from an originally Jewish work. It is found in passages like "I am the Alpha and the Omega, the beginning and the end" (xxi. 6); "I am the Alpha and the Omega, the beginning and the end, the first and the last" (xxii. 13); and also, "I am the Alpha and the Omega, the beginning and the end, saith the Lord, who is, who was, and who will come, the Almighty Ruler" (i. 8.). This is not simply a paraphrase of Isa. xliv. 6: "I am the first and the last," but the Hellenized form of a well-known rabbinical dictum: "The seal of God is Emet," which means Truth and is derived from the letters א מ ת, the first, the middle, and the last letters of the Hebrew alphabet, the beginning, the middle, and the end of all things. Thus Josephus defines God as "the beginning, middle, and end of all things." See Zipser's edition of Josephus "Contra Ap." edited by Jellinek, 1871, pp. 159, 160.

In Yoma, 69*b* and Sanh. 64*a*, the following is related: "The men of the Great Synagogue prayed to God to remove from the earth the Evil Spirit, as the cause of all the trouble. Immediately a scroll fell from heaven with the word אמת (Truth) written thereon, and thereupon a fiery lion came out of the sanctuary. It was the Spirit of Idolatry leaving the earth. "This legend shows," said R. Ḥanina, "that the seal of God is אמת—Truth." More light is thrown on the passage (Yer. Yeb. xii. 13*a*, Gen. R. lxxxi.), where the verse (Dan. x. 21), "I shall show thee what is marked upon the writing of truth" (*biketab emet*) is explained in the following manner: Whatever decree bears the signum of God, אמת, is immutable; for, says Simon ben Lakish: "א is the first, מ the middle, and ת the last letter of the alphabet—this being the name of God according to Isa. xliv. 6 explained Yer. Sanh. i. 18*a*: 'I am the first [having had none from whom to receive the kingdom]; I am the middle, there being none who shares the kingdom with me; [and I am the last], there being none to whom I shall hand the kingdom of the world.'" Evidently the original utterance in the Apocalypse referred to God (and not to Jesus). A careful investigation of the passage, however, makes it quite probable that the whole was originally written in Hebrew with reference to the verse in Daniel, and owing to its being translated into Greek, the connection between vers. 5 and 6, viz., the reference to אמת, was lost. Compare Justin's "Address to the Greeks," xxv., which says: "Plato, when mystically expressing the attributes of God's eternity, said, 'God is, as the old tradition runs, the end and the middle of all things'; plainly alluding to the law of Moses." Compare also Irenæus, "Adversus Hæreses," xiv. 3.

ALPHABET, THE HEBREW: The characters of the Hebrew Alphabet are derived from the so-called Phenician or Old Semitic letters, to which almost all systems of letters now in use, even the Roman, can be traced. But this latter is in mediate relation only to the original source, while the Hebrew Alphabet has kept closer to the primitive signs. In spite of the great progress made in Semitic paleography during the last decades, which enables the student to follow, step by step, the several styles of characters used by the various Semitic peoples from the ninth century B.C. down to the present day, no opinion can as yet be expressed with any certainty as to the origin of these characters. Attempts have repeatedly been made to derive them from the Egyptians (see Bibliography 1, at end), or from the Babylonian (Bibliography 2), but with indifferent success. The reason for this uncertainty lies perhaps in the fact that the oldest known forms of these letters come from a time that had been preceded by a long period of development, during which time the characters themselves may have undergone important modifications. It may also be said with a certain amount of probability that the alphabet did not possess from the beginning all the characters that it now contains. Thus 𐤇 (ח) is manifestly an expansion of 𐤄 (ה); ⊕ (ט) is merely X (ת), enclosed in a circle; again by the addition of a horizontal line between the top and bottom strokes 𐤎 (ס) is formed from ⌶ (ז), and a perpendicular stroke served perhaps to develop 𐤑 (צ) from W (ש). Though it may be impossible to determine with certainty of what race the inventor of these letters was, the alphabet undoubtedly received these expansions from a Semite. If it be conceded that the names of the letters of the alphabet originated with the same man, then, since their form is Aramaic, one could say that he was an Aramean; but they may also have arisen somewhat later. The names for the characters were chosen with reference to near-by things, such as parts of the body and other objects of the daily life peculiar to the Bedouins, the name of each of which began with the very sound the letter indicated. In a few cases the names seem to have been derived from the form which the sign represented. These names, as well as the order of the letters, certainly existed at least one thousand years B.C., for they were known when the Greeks adopted their alphabet from the Semites. At this period the alphabet must already have undergone local variations among the different ethnical groups of the northern Semites.

Origin of Alphabet.

The most important monument written in alphabetical characters of this epoch comes from a territory closely bordering on Palestine. Not only does the language of this section greatly resemble the Hebrew, but the writing already exhibits a coloring which approaches the epigraphic monuments of Palestine. This is the famous Moabite stone, which was discovered in 1868 by the Alsatian missionary Klein near Dibon in the land of Moab. Various governments attempted to obtain possession of this valuable stone; and when Turkey began to participate in the strife, the Bedouins, from intense hatred of the Turks, broke it into bits. The greater part of the fragments were, however, recovered and placed in the Museum of the Louvre in Paris. This monument dates from Mesha, king of Moab, mentioned in II Kings, iii. 4, who describes upon it his victorious wars against Israel and his doings in the interior of his land. The language, with slight deviations, is Hebrew, and reads almost like a chapter from the Book of Kings. The form of the letters is already essentially cursive. One peculiarity which the inscriptions on this monument have in common with Hebrew, and which the latter idiom has developed still further, is of special interest; namely, the tendency to bend the stems of the letters which slant to the left, so as to bring them nearer to the letter that follows, and also to extend the letters more in the width than in their length or perpendicular dimension. These are the eight lines of the inscription transliterated into the later Hebrew characters, according to Lidzbarski's "Handbuch," Plate I. See MOABITE STONE, and Bibliography 3.

Palestinian monuments of the earliest antiquity are very rare. From the preexilic time there exists but one inscription of any length, found in the Siloam tunnel in 1881. It relates an episode from the construction of the conduit, and dates perhaps from the time of Hezekiah. The six lines below transliterated are taken from a photograph in the "Zeitschrift der Morgenländischen Gesellschaft," vol. xxxvi. See Siloam Inscription, and Bibliography 4.

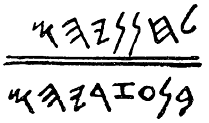
Seal No. 1.

לקניו

(From Clermont-Ganneau, in "Archéologie Orientale.")

As may easily be seen from the text the language is pure Hebrew, and differs externally only in the sparing use of the *matres lectionum.* The script, which was probably previously traced upon the polished stone by a ספר מהיר (a ready writer) with a reed, resembles the writing used in the preparation of a legal manuscript rather than that seen on monuments. It shows a conspicuous preference for curved lines, which not infrequently end in little strokes or flourishes. Besides this monument there exist from preexilic times only some very short inscriptions. They are mostly on seals, some of which may be even older than the Siloam inscription. They are characterized by the frequent occurrence of names composed with יהו; as well as by the utter absence of any representation of living things. There is, however, a series of seals that certainly bear Hebrew legends, and yet have pictures of animals or of Egyptian symbols. A peculiarity of these seals is the separation of the lines by two parallel strokes. See Seals, and Bibliography 5. For seal No. 1 compare Lidzbarski, "Handbuch," p. 487, and Clermont-Ganneau, "Recueil d'Archéologie Orientale," iii. 189; for No. 3 compare Clermont-Ganneau, *ib.* 154 *et seq.*; for No. 2 Clermont-Ganneau, "Journal Asiatique," 1883, i. 129.



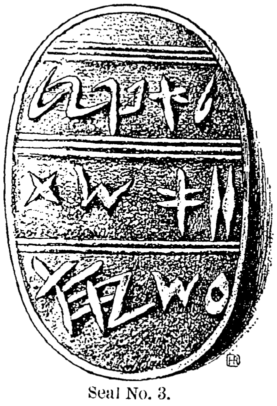
Seal No. 2.

להנניהו בן עזריהו

(From Clermont-Ganneau, in "Journal Asiatique.")

Seals.

Other smaller inscriptions with Old Hebrew characters occur as "factory-marks" upon clay vessels, which were found in Jerusalem, in Tell-es-Safi, and in Tell-Zakariya (southwest of Hebron). These are probably the product of the royal potteries which existed in the different cities, and in addition to the word למלך, "to the king," the seals mention also the name of the town in which the pottery was situated (compare Lidzbarski, "Ephemeris," i. 54; Palestine Exploration Fund, Quarterly Statement, July, 1900, pp. 207 *et seq.* The following town-names have been found: Socho, Zif, Ezer, Ḥori, Hebron. This explanation of the legends is due to Clermont-Ganneau and Canon Dalton. It is more acceptable than the other which would see here the name of the king or some other person. The illustration accompanying this text shows למלך and חברן. These smaller monuments of epigraphy

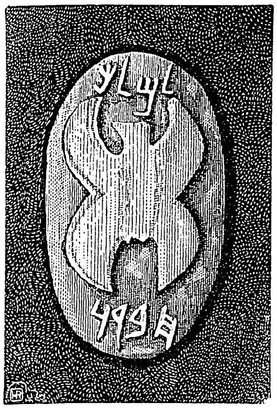


Seal No. 3.

לאכגיל אשת עשיהו

(From Clermont-Ganneau, in "Archéologie Orientale.")

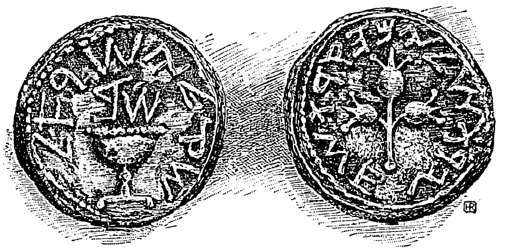
and most of the seals date from preexilic times. Like the Hebrew language, the Hebrew Alphabet at this time was almost exclusively used in Palestine. Only the upper classes, who were in relations with foreign lands, spoke and wrote Aramaic (II Kings, xviii. 26; compare G. Hoffmann, in Stade's "Zeitschrift," i. 337, note 1 to Isa. viii.1). But a marked change took place after the Babylonian exile. The Aramaic language, which had then already spread over the whole of Asia Minor, though used by the side of the local dialects, was gradually accepted by the Jews, together with its script. But inasmuch as the Hebrew was still used as the literary, the "holy," language, the writers did not altogether give up the use of the ancient Hebrew characters.



Trade-Mark on Pottery Found at Lachish.

Coins.

During the first centuries after the Exile, the Jews certainly used Hebrew in their writings. From this period up to the time of the Maccabees there are extant no monuments bearing inscriptions; for the following one there exist many remains, though in small dimensions, being mainly confined to coins. One would think that the characters used on a coin would be those most widely known; and, indeed, in Syria, Aramaic script and language are principally used upon coins. But the right to coin money was in olden times as to-day looked upon as a sign of political independence. Therefore, when the Jews, after their successful revolt against the Seleucids, felt themselves masters in their own land, they not only wanted to have their own coins, but, to give more forceful expression to their newly won independence, they inscribed legends in their own language and their own script. The letters on these coins resemble very closely those of the Siloam inscriptions and the smaller monuments. But what is there evidently the flourish of the reed as it hurried over the surface, or an imitation of it, appears here in fixed form. The curved stems of the old script have been broken at right angles, upon the lower leg of which the letter appears to rest. The appended stroke and flourishes, which before appeared accidental, became essential parts of the letter, while other original parts have been considerably reduced. Another peculiarity of this writing is the freedom observed in placing the character (see Plate I., cols. 4–6). For about a hundred years these characters were used upon the coins; they were then supplanted by the Greek.



A. B.

Shekel of Simon Maccabeus, Second Year of Independence (140-139 B.C.).

A, שקל ישראל ש[נת]ב B, ירושלים הקדושה

(After Madden, "Coins of the Jews.")

Not until the revolts against Nero and against Hadrian did the Jews return to the use of the old Hebrew script on their coins, which they did from similar motives to those which had governed them two or three centuries previously; both times, it is true, only for a brief period (see Coins, and Bibliography 6). In addition to the above, there exists only one other small monument bearing the same sort of letters. It is the capital of a column, discovered in 1881 by M. Clermont-Ganneau near Amwâs, with the inscriptions ברוך שמו לעולם and Εἷς Θεός [*] ("God is One"). This may, however, possibly be of Samaritan rather than of Hebrew origin.

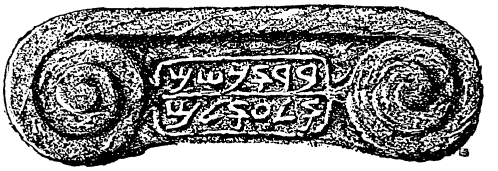
(After Madden, "Coins of the Jews.")

Samaritan Alphabet.

While the Jews adopted the Aramaic alphabet, gradually abandoning their own, the Samaritans held fast to the original forms, in order to show themselves the veritable heirs of ancient Hebraism. They then not only used the Hebrew text for sacred books, but employed it in secular writings as well, and later on even used it for both Aramaic and Arabic. The letters already adorned with angles and corners were still further overloaded under their hands and developed into a sort of Gothic (see Plate I., cols. 8–10). It is the same character used in all the Samaritan books of to-day, and remains the only offshoot of the old Hebrew script extant, while the modern Hebrew Alphabet is of Aramaic origin.

The Aramaic characters had undergone many changes in development before the Jews became acquainted with them. The oldest monuments with this alphabet are those discovered, about ten years ago, in or near the ruined mound of Zingirli, north of Nicopolis (Islahie), and dating from the eighth



Inscription on Column Discovered Near Amwâs by Clermont-Ganneau.

Aramaic Origin of Modern Hebrew Letters.

century B.C. The texts are partly in Aramaic and partly in the local dialect, which was a compromise between Aramaic and Hebrew (see Bibliography 7). Several hundred monuments of smaller dimensions represent the succeeding centuries, among which those worthy of special mention are the two tombstones found in the mound of Nerab, near Aleppo, which date from the seventh century B.C. (see note 8). A larger number of inscriptions came from the archives of Nineveh and Babylon. As a rule, these are cuneiform inscriptions relating to commerce, and giving short Aramaic legends somewhat in the fashion of a label. It is obvious from this that the official scribes of Nineveh and Babylon were not perfectly familiar with the complicated cuneiform alphabet, and therefore, in order to facilitate future reference to these archives, inscribed upon the tablets a brief explanatory synopsis of their contents in Aramaic (compare "Corpus Inscriptionum Semiticarum," ii. No. 15 *et seq.*).

These dockets, written entirely in cursive characters, are of special scientific value, because they allow us to follow up, step by step, the transition of the Aramaic alphabet from the original form to that in which it became known to the Jews in Babylonia, and even through some later developments (see plate II., col. 3). During that period the alphabet had undergone material changes, and at its close scarcely a symbol retained the form of three centuries before. The letters ב, ד, ר exemplify this evolution in a characteristic manner. Originally they were written with closed heads ()though, in writing rapidly, less and less attention was paid to the juncture of the lines. But what was at first only negligence became later a fixed custom. The heads were opened more and more, and the former convergent strokes developed into parallel lines, so that these three letters took on the following forms: . In *'Ayin* (O) the circle opened more and more until the curve ∪ became an angle open at the top: V.

Changes in Letters.

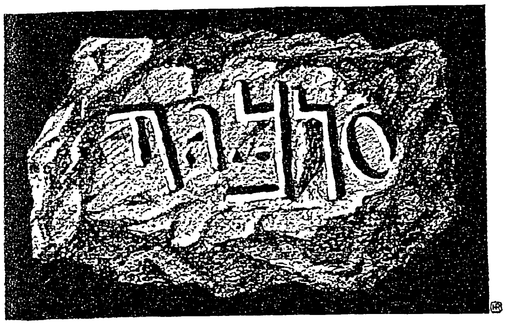
In *Aleph* ( ) the sides of the angle separated, the upper one moving more and more to the right and becoming unrecognizably small. So also in *Kaph* : the upper side of the angle is moved to the left and placed perpendicularly at the end of the other leg; thus כ became , and therewith came to resemble closely ד and ר. In *He* the lower horizontal lines were detached from the perpendicular, one of them was gradually omitted, and the other attached to the horizontal cross-bar, as . The metamorphosis of = ו took place by the reduction of the head until it became entirely flat and ד is curved to a ר. Again in *Zayin* and *Yod* the double curved line is gradually straightened, the former becoming |, while *Yod* develops into , which sign is gradually made smaller until it is reduced to scarcely more than a mere dot. In *Ḥet*, the central horizontal stroke only was retained, and was moved more and more to the top: , ח. In *Ṭet*, too, one line of the cross was omitted and the other fastened to the now open circle so that the letter could be made with one stroke: ט. In the case of *Mem* and *Shin* the broken line  first becomes and for the latter of these two letters the middle stroke is then made parallel with the right one, so that a new sign results, , while in the case of *Mem* becomes or . In this latter form the straight stroke | extends above the curved line and soon becomes greatly lengthened. Similarly the head of (ס) is transformed into a zigzag , and gradually becomes which is simplified to . The circular head in *Koph* was at first not closed; it becomes first , and then by the addition of a hook to the left is changed to ק. In *Tav*, the cross-line \ forms an angle, the right side of which is lengthened until it reaches the base , ת.

The particular form given to these Aramaic letters with ink upon papyrus, at the close of this evolutionary period—that is, about the fifth or fourth century B.C.—is shown by a series of Aramaic papyri from Egypt collected in the "Corpus Inscriptionum Semiticarum," ii., table xv. Imitations of these cursive forms were also executed upon stone. A glance at the text in the "Corpus Inscriptionum Semiticarum," ii., table xvi., reveals the astonishing fact that not only the general features of the script are much like the cursive Hebrew of the Middle Ages, but that many of the signs taken by themselves are almost identical. It is scarcely probable that any material differences in the mode of writing existed in western Asia at the time when the use of the Aramaic alphabet became general among the Jews. The Jews in exile were certainly very quick to abandon their mother tongue for the Aramaic in word and script. When release came, the exiles returned in numbers to their native land, and it was among them that the art of writing as a profession was most prevalent. Meanwhile, masses of other nationalities had settled in Palestine, either from choice or from compulsion, and these people for the most part also spoke Aramaic; but the most important factor was the circumstance that the government functionaries both spoke and wrote Aramaic.

Causes of Adoption of Aramaic.

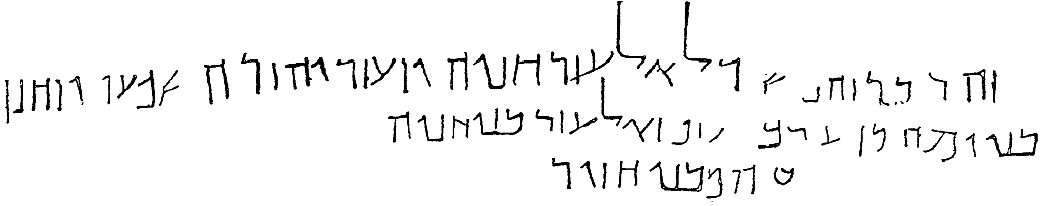
An extended private epistolary correspondence among the Jews of Palestine at that time could hardly have existed; nearly all writing was limited probably to literary productions, or to commercial and official documents. For the former, the indigenous script could very well be retained, and since literature was mostly confined to the priests, it is also tolerably certain that they at least remained faithful to the ancient mode of writing. On the contrary, all official or semi-official documents had to be written in Aramaic. It became, therefore, necessary for business people to learn two alphabets, one for their social needs and the other to enable them to read the Holy Scriptures. Naturally Jews who lived in foreign lands, and whose numbers continually grew, were especially compelled to do this, which circumstance no doubt furnished a reason for writing even the holy books in the Aramaic character; and these established themselves so firmly, that they were regarded at the time of the Mishnah as the only sacred ones (compare Mishnah Yadayim, iv. 5).

The opinion, therefore, has been expressed that the Hebrew Alphabet slowly developed into the Aramaic (compare Bleek-Wellhausen, "Einleitung in das Alte Test." 5th ed., p. 551), but this view can hardly be upheld. Among the Jews the two alphabets co-existed side by side, though this by no means precludes the possibility that a writer, either from ignorance or inadvertence, may have occasionally inserted Aramaic letters into his Hebrew text, or vice versa. Such errors would occur especially when the parallel letters differed very slightly. That this mixing of the letters occurred in the inscription below, which is regarded by authorities as the oldest one with square characters, may be due to chance. The inscription consists of only five letters, and not all even of these can be identified with certainty.



Inscription in a Cavern at 'Araḳ-el-Emir.

According to both Jewish and Christian tradition, the introduction of the Aramaic script and its use for the Holy Scriptures are directly attributed to Ezra the scribe (see Sanh. 21*b*, 22*a*; Yer. Meg. 71*a*; Origen, ed. Migne, ii., col. 1104: Jerome, "Prologus Galeatus"). The former statement is certainly not correct; nor can the latter be established satisfactorily. Supposing the introduction of the Aramaic script to have taken place in the fifth century or even later, the older manuscripts would hardly have been destroyed on that account. At all events, this much is assured, that, irrespective of the Samaritans, the knowledge of the older script still existed among the Jews for several centuries (Meg. *ib.*; Origen, "Hexapla" on Ezek. ix. 4, quotes the testimony of a converted Jew).



Inscription on Family Vault of the Bene Ḥezir.

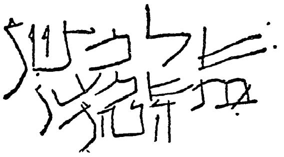
וה קבר ומשכב (ג) לאלעזר חניה יועזר יהודה שמעו[ן] יוחנן
בני ים----ב--ף ואלעזר בני חניה
מבני חזיר---

("This is the tomb and resting-place of Eleazar, Ḥoniah, Joezer, Judah, Simeon, Johanan, sons of . . . . . ., and Eleazar, sons of Ḥoniah, of the children of Ḥezir.")

The 'Araḳ-el-Emir Inscription.

Ancient monuments with square letters are very rare. That at 'Araḳ-el-Emir, referred to above, southeast of Es-Salt on the Wadi es-Sîr, may be considered the oldest (see Chwolson, "Corpus Inscriptionum Hebraicarum," 1; Lidzbarski, "Handbuch," pp. 117, 190, 484). It consists of one single word, the correct reading of which is probably ערביה. The cavern in which it is found is generally identified as the one which, according to Josephus ("Ant." xii. 4, § 11), was built by Hyrcanus, nephew of the high priest Onias II., in the land of the Ammonites when he fled thither. Since this flight took place in the year 183 B.C., the inscription could not have been cut earlier; unless it be that Hyrcanus did not, at that time, construct the grotto, but altered the work of others to suit his own purposes. In this word the letter ע has the old Semitic form and the letters ב, ה, and י are similar to the Aramaic characters of the Persian period, while the ר has taken the form of a much later date (see Plate III., col. 1). The inscription of the Bene Ḥezir to be found on a family vault in the valley of Jehoshaphat probably dates from the first century B.C., and was afterward regarded as the resting-place of St. James (see "Corpus Inscriptionum Hebraicarum," Plate I., No. 6; Driver, "Notes on the Hebrew Text of the Book of Samuel," pp. xxiii.; and Berger, "Histoire de l'Écriture," 2d ed., pp. 257 *et seq.*). From about the same period are to be dated the ossuaries, or stone sarcophagi wherein the bones of those deceased were preserved; these are found in great numbers in Palestine (see Plate III., col. 2; "Corpus Inscrip. Hebra." col. 76; and Clermont-Ganneau, in "Revue Archéologique," série iii., i. 257). Notwithstanding the lack of care in the execution of the inscriptions and in spite of their uninteresting details, these stone chests possess an appreciable value, because by their aid may be traced the development of the square letters into characters which do not greatly differ from the present ones.

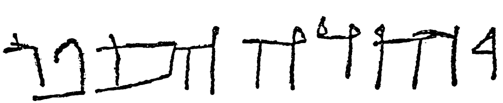
Stone-Chest Inscriptions.



Ossuary Inscription of "Shalam-Zion, Daughter of Simeon the Priest."

שלמציון
בת שמעון
הכהן

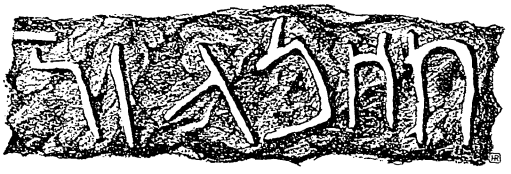
Even before the formation of the square characters, most of the letters could already be made with one stroke. But the attempt was presently made to give them such forms that a whole word might be written with as few breaks as possible, and each letter be gradually made to approach as near as possible the one following; thus in some of the letters which were originally closed by a perpendicular (ךםןףץ) line, this line was bent toward the left. But this bending of the perpendicular line took place naturally only when ligature with the next letter was desirable or permissible; when the letter stood at the end of the word, the change in the sign was unnecessary, and the final letters ץ, ף, ן, ך still retained their original downward stroke; though they are considerably lengthened in the forms of our present



Ossuary Inscription of "Judah the Scribe."
יהודה הספר

Final Letters.

letters. In the letter מ the original bent stem was curved upward still more until it reached the upper horizontal stroke, so that the final *Mem* to-day has the form ם. The Palmyrene script possesses a final *Nun* with a lengthened stem; the Nabatean contains similarly final *Kaph*, *Nun*, *Ẓade*, and *Shin*, and further a closed final *Mem* and final *He*. In the same manner as exhibited in final *Mem* the zigzag on the head of *Samek* developed into a straight line, and—as was the case in the Palmyrene and Syriac script—the stem was again bent upward, so as to reach the upper horizontal line; but it remained open for a longer period than *Mem* (compare, for the two letters, also Shab. 104*a*). As a result of the effort to approach the letter following it, the hook on *Lamed* has been lengthened and advanced more and more toward the front until it finally became ל. So also in the case of V the right side was prolonged beyond the point of intersection and finally produced ע. In such letters as ר, ד, and ו the stem could not be bent to the left without conflicting, the first two with the letters ב, כ, and the third with נ. But since the head of ו gradually disappeared or became nothing but a short stroke, the whole letter approached very closely to ז, which even in the Persian times had been reduced to a mere |. But, in order to distinguish the one from the other, it was found necessary to add a small stroke on the left side of *Vaw*, thus ו. The treatment of *Yod* varied: it often occurs with a stroke on the left side, a remnant of the lower horizontal line; but this line was very insignificant and often was not written at all. The stem, as a rule, was made very small (Matt. v. 18, *ἰῶτα ἓν ἢ μία κεραία*); though, in order to make its form harmonize more nearly with that of the other letters, it was occasionally lengthened and then resembled the ו. In the earliest editions of the Septuagint, it is said that the Tetragram was written in Hebrew characters which looked like the Greek ΠΙΠΙ (Jerome, ed. Migne, i. 429; see also Gesenius, "Gesch. d. Hebräischen Sprache und Schrift," p. 176).



Boundary Inscription of the City of Gezer.
תחם גזר (Limit of Gezer).

Changes in Letters.

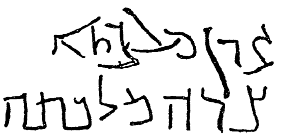
Of the upper transverse line in *Aleph* only the left side remains, and in order to reach the base-line, it was gradually lengthened. The same is the case with ג, though there as well as in *Aleph*, the whole left member of the letter is pushed to the bottom. In the letter *He* the former lower horizontal line is gradually made parallel to the vertical stem and fastened to the upper cross line, from which, by a process of shortening, it has been separated only since the Middle Ages. Some of the older forms of this letter show an extension of the right-hand stem above the cross-bar. In the case of *Ḥet* H = ח, a system of curtailment affected the upper horns of this letter, gradually reducing it to its present form. An extension of the upper part of *Tav* is also noticeable in the older forms of this letter, which causes the *Tav* to approach in appearance the corresponding Syrian sign. As early as the middle-Aramaic period the letters ט, ק, ש appear in forms almost identical with those now in use, though in the older *Koph* the stem is not longer than in the other letters, and it hangs from the horizontal line; the stems of the *Shin* are drawn together to a point, and often the left-hand stem passes beyond this point. Compare Plate III., cols. 2, 3, and Talmud Shab. 104*a*.

Inscriptions in Square Characters.

The only inscriptions in square characters dating from the time of the destruction of Jerusalem are: (1) the monuments marking the boundaries of Gezer (see "C. I. H." ii.; compare also Lidzbarski, "Handbuch," p. 484, and "Ephemeris," i. 56), and (2) the bilingual legends upon the sarcophagus of Queen Ẓadda (see illustration below). Up to now (1901), five of these boundary-stones have been discovered, thanks to Clermont-Ganneau; they served to indicate the town limits of Gezer, beyond which it was forbidden to pass on the Sabbath. The sarcophagus bears the short legend צדה מלכתה, which is repeated in Syriac. The queen or princess צדה here referred to has been identified as the princess Helena of Adiabene, who is said to have settled in Jerusalem about the year 40 of the common era. From the fact that it preserves the oldest Syriac inscription known this bilingual stone possesses additional value. Several fragmentary inscriptions found in Jerusalem and vicinity may be assigned to the first centuries of the common era (Chwolson, Plate I., Nos. 3, 4, 7, 9). To the third and fourth centuries belong the inscriptions found in the synagogues of Kefr-Bir'im in Galilee, northwest of Safed; see illustration on following page.

Older even than these are the inscriptions over the Synagogue in Palmyra, which contain the Shema'. (See Plate II., col. 7; compare S. Landauer in "Sitzungsberichte der Berliner Academie," 1884, p. 933, and Ph. Berger, "Histoire de l'Écriture," 2d ed., p. 259.) The characters on the walls of the catacombs of Venosa are also very old, and belong probably to the period between the second and the fifth centuries; most of them are painted in red lead. Till now the oldest gravestones have been found in Italy (compare Ascoli, "Iscrizioni Inedite o Mal Note Grecche, Latine, Hebraiche di Antichi Sepolcri Giudaici," in the "Transactions" of the fourth Oriental Congress in Florence, published at Turin and Rome, 1880, and also "C. I. H." No. 24 *et seq.*). See Plate III., cols. 7 and 8.

The number of inscriptions relating to this period is very small, and their contents are of little importance. Owing to the many upheavals which took place, notably in Palestine, during this interval, much epigraphic material was undoubtedly destroyed, though it is certain that if very many monuments had been produced the existing remains would have been much greater. From the mode of execution it would appear that then there was not much activity in epigraphic work, for the script seems to come from inexperienced, clumsy hands. Compared with it, the degree of perfection to which the Palmyrene script had arrived is striking, though this in essence is the same as the Hebrew square script (compare Plate II., col. 7). The Nabatean alphabet also in a comparatively short period developed into a smooth and pleasing cursive, due entirely to the repeated effort to connect the letters with each other. The connection of single characters in words occurred even in the inscriptions of the Bene Ḥezir, but the general acceptance of ligature was systematically opposed. Such



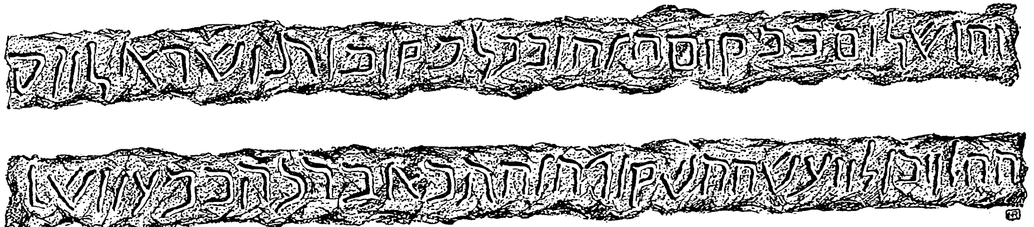
Inscription on Queen Zadda's Sarcophagus. (From "C. I. S." ii. 156.)

at least was the case with the text of the Holy Scripture, as is proven by testimony of Men. 29*a* ("Any letter not entirely surrounded by clear parchment on all four sides is unlawful"). This injunction has not been barren of effect; for, despite the various modifications through which the Hebrew Alphabet has passed, of all the Semitic systems of letters it has departed least from its fundamental form. Nothing alters the individuality of the letters so much as the use of ligature, because the little stroke which serves to unite the letters is often made too important a factor, so that the letter sometimes is merged entirely in it. This is most clearly exemplified in modern Arabic.

As has already been remarked, specimens of writing from the oldest periods are afforded only by inscriptions; there are no manuscripts. And yet it may be safely asserted that toward the end of the ancient period the holy books were written substantially as now. A passage in the Talmud even declares that those small "ornaments," as they are called, the three זיונין or זיינין placed over the seven letters שעט"נז ג"ץ, were at the time not only customary but obligatory (Men. 29*b*). Whether written with ו or י, these signs were originally nothing more than ornaments which accidentally took the form of *Zayin*, and the letters which received them were simply all those which ended in a perpendicular stroke; for the heads that they now possess are of a later origin. At

Ornamentation of Letters.

first they may have been nothing but thicker points, such as were made to terminate the strokes of the Samaritan ornamental writing (compare Plate I., col. 10), and since the great majority of the letters begin with a horizontal stroke, habit may have led the writer to add a small horizontal stroke to the others. ו and י are not included in the letters שעט"נז ג"ץ, because the stroke at the top is a part of their original form (see Plate III., col. 2); hence these two letters did not receive any of the זיונין. (For further information concerning the תגין and the קוצין of the letters compare J. Derenbourg's work cited in Bibliography, § 9, end of this article.) There is this further possibility, that these marks are diacritical. It may readily be supposed that ז received such a mark in order to distinguish it from ו and י; ג, to avoid confusion with כ; still this hypothesis is not tenable for all the letters. It would be just as difficult to determine why ק, ה, ד, ב, and in many manuscripts the letters י and ח, should receive a *zayin*. (For the form of the letters with these *zayinin* in modern German manuscripts, see Plate IV., col. 7.) It is certain that *Ḥet* received its "roof" (Men. 29*a*; compare also col. 24) solely in order to differentiate it from ה.



SYNAGOGUE INSCRIPTION AT KEFR BIRI'M. (From "C. I. H." p. 17.)

יהי שלום במקום הזה ובכל מקומות ישראל יוסה הלוי בן לוי עשה השקוף הזה תבא ברכה במעשיו—

("May peace abide within this [holy] place and in all [holy] places of Israel! Jose ha-Levi, son of Levi, erected this lintel; blessing attend his works (?)!")

As regards the names given to the Hebrew alphabets at the time of the Mishnah and the Gemara, the name *ketab 'Ibri* (Hebrew writing) needs no further explanation. Perhaps Rabbi Jose may be correct in his explanation of the term *ketab Ashuri* as the name for the modern script; according to him אשור is equivalent to Ἀσσυρία, Συρία, and אשורית therefore meant Syriac, Aramaic. Of interest also is an expression of Rabbi Judah which shows that the contrast between the straight lines and stiffness of the Aramaic, as compared with the angular irregularity of the Samaritan, was considered quite striking.

Names for Hebrew Script.

Much more difficult to understand are the other names for the Hebrew script: רעץ and ליבונאה; for רעץ the reading רעץ most often occurs, denoting the "broken" script. Again, in Stade's "Zeitschrift," i. 336, G. Hoffmann, referring to this appellation, says that in Epiphanius ("De Gemmis," xii. 63) this same script is called "deession," "deessenon," consequently רעץ would be the correct reading; and according to Hoffmann also, *ketab Da'az* meant first styliform script, and afterward script (used on coins). Both Hoffmann and Halévy ("Mélanges de Critique et d'Histoire," p. 435, Paris, 1883) recognize in לבונאה an adjective from the name of some locality. The former, with R. Hananeel in the Tosafot, adopts the reading לבונה for the place (north of Neapolis), while the latter reads ניבולאה (Neapolis). Since R. Ḥisda was a Babylonian it is quite conceivable that he was unacquainted with the Samaritan alphabet, and that he regarded the ancient forms as identical with those found upon the clay tablets—כתב לבינאה. This opinion of R. Ḥisda may have been strengthened by the existence of the name כותאי. According to R. Nathan, who was likewise a Babylonian, the theory might be held that ketab Da'az stood for styliform, incisive, or cuneiform text. Though this form of writing may not have been practised at this time, yet, both then and later, the rubbish of the old ruins supplied in numbers clay tablets covered with these characters, sufficient to perpetuate the knowledge that this was the form of the ancient script. A mention of the clay tablet inscriptions may be found even in the Fihrist of the An-Nadîm, composed in the year 987 (compare M. Jastrow, Jr., in "Zeit. f. Assyr." x. 99).

Influence of Ligature.

Owing to the inflexible rules governing the writing of the Torah rolls there could not be any material variation in the form of their letters. The great importance, however, which was attached to these manuscripts led to great care in the execution of the characters; the scribes strove to produce the most beautiful effect so far as could be done within the prescribed limitations. In the case of alphabets having a highly developed system of ligature, like the Arabic, the writer might obtain good results by artistic grouping of letters, but in a block text, such as the Hebrew, in which every letter must be strictly separated, efforts in the direction of ornamentation were confined to the individual letter. Hence the Hebrew script followed the same development undergone previously by the Palmyrene. Even at the early period when the Aramaic alphabet branched out into the Hebraic, Palmyrene, and Arabic, the symbols had an almost rectangular form (compare Lidzbarski, "Handbuch," Table XXVI., col. 4), and developed until the characters became almost perfect squares, and thus formed the *ketab merubba'* ("square writing").

From the earliest days, throughout West Asia writing was done with the calamus, imported in most cases from Egypt. Since this reed was easily

Influence of Writing Material.

broken it was not found practical to make too sharp a point, and this circumstance resulted in producing an instrument analogous to the modern stub pen, which gave the characters in all texts of West Asia the form of a "round hand." The heavy and light strokes in the letters alternate in such a manner that gradually the horizontal strokes become heavy, while the perpendicular ones naturally diminish in thickness. Such a modification took place in the Hebrew, and all the horizontal strokes were made thick. As has been remarked above, the scribes, probably from force of habit, added even to the letters beginning with upright stems a short thin stroke quite similar to the little ornaments on the letters שעט"נז ג"ץ. The reed pen ("habilis calamus") glided easily over the surface. Consequently, wherever it was used as an instrument for writing—that is, in Saracen lands—the characters, in spite of being in the square form, show a tendency to roundness, the vertical strokes at the same time becoming more or less inclined at an angle. In the Occident, however, the quill was used, which offered a similar obstacle to sharp pointing, and as a consequence it assumed in its results much the character of the calamus. On the other hand, the walls of the quill are much thinner than those of the reed; and this gave rise to an appreciable difference between the pen-stroke and one made by the calamus. The ability of the quill to retain a sharper nib adapted it especially to the finer strokes of the letters, but its comparative flexibility led more easily to the breaking of the lines. Again, since the nibs of the quill pen parted very easily, in fact spread so far asunder that the ink failed to fill out the space between them, distinct scratches would sometimes make their appearance at the beginning, or sometimes at the end, of a thick stroke. In the Saracenic, or, as they were called, Sephardic (Spanish) lands the Hebrew Alphabet is distinguished for its roundness, for the small difference between the thickness of the horizontal and upright strokes as well as for the inclined position of the letters. The script of the Christian Occident—called Ashkenazic from the Hebrew name for Germany, where the Jews were the most populous—shows sharper corners, thinner upright stems, broken and pointed lines. Several minor peculiarities arose also in the letters ג, צ, ק.

Local Variations of Script.

Within the range of these distinct features, in different countries various gradations and transitions occur; thus the characters used by the Jews of Southern France and Italy, owing to their proximity to the Jews of Spain, and those used by the Greek Jews, owing to their relations with their Oriental coreligionists, assumed a rounder form than the strictly Ashkenazic. The Ashkenazic alphabets may be divided, therefore, into a German, a northern and a southern French (כתב פרובינצאל); an Italian (כתב וועלש), and a Greek branch. Among the Sephardim there are fewer variations noticeable, yet it is possible to distinguish in the Sephardic alphabet variations due to North African, Palestinian, and Babylonian-Persian Jews. The same script used for the Torah rolls is employed for the rest of the Biblical books or other important works, only in this case the תגין, זיונין and the roof of the *Ḥet* are omitted. In other works, however, embellishments and flourishes occur which were strictly prohibited in the preparation of the Torah. These ornamentations were influenced by the miniature illuminations used by Christians, and sometimes even artists of that faith were employed. Two works, freely used among the people, were thus especially illuminated, the Megillah (Book of Esther) and the Haggadah for Passover.

The "Ketibah Tammah."

In the St. Petersburg Imperial Public Library may be found the oldest Hebrew Bible manuscript extant. It dates from 916–917, and the letters are in general the same as those made now, though several slight modifications appear. Thus in ד and ה the horizontal line projects to the right over the upright, besides in ה and in ק the left stem hangs from the cross beam. י is comparatively long, but ו not longer than the other letters (see Plate IV., col. 1). One or two centuries earlier is the manuscript of Ecclesiasticus discovered in Egypt, in which all these characteristics are wanting, but the very peculiar width of the lower part in ש may be noted (*ib.* col. 2). Columns 3, 4, and 5 in Plate IV. exhibit other Oriental alphabets; those of the Ashkenazim may be illustrated by specimens from illuminated German manuscripts. For the former, compare cols. 1–5; col. 6, in which the cusped letters predominate, is taken from a German Seliḥot manuscript of the thirteenth or fourteenth century (Steinschneider, "Verzeichniss der Hebr. Handschriften," Berlin, i. 4, 9; Tab. ii. 3). The more secular the work, the less importance was attached to it, and the less care was taken that the execution of its letters should conform to the rules set down for the writing of the Holy Scriptures, and be, as it was called, a כתיבה תמה (see Sifre on Deut. xxxvi. כתב שלם). In the Talmud (Shab. 103*b*) *ketibah tammah* means simply "correct" script, but later it was applied to the square as opposed to the cursive alphabet; thus Maimonides' statement (compare Steinschneider, "Vorlesungen über Hebräische Handschriften," p. 29), that the ketab tam designates the German square script as compared with the Oriental, seems to rest on an error.

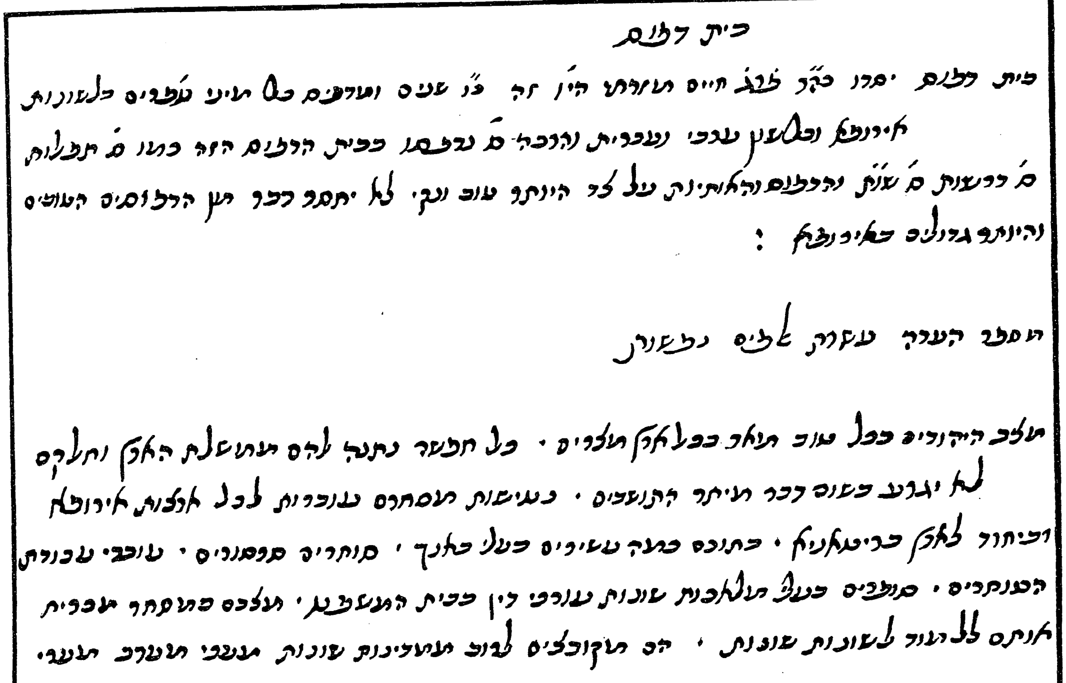
Transliteration of Foreign Languages.

Still less care was taken in the execution of the letters in cases where the text transcribed was not even Hebrew. For though it is true that within their own country the Jews, in exchanging their language for that of another nation, adopted also the alphabet of that nation, yet, throughout the Diaspora, the vernacular of the country, which was invariably adopted by the Jews, was written by them with Hebrew characters. So that, whether the vernacular be German, French, Spanish, Italian, Arabic, Persian, or even Tatar, as is the case with the Karaites of Southern Russia, the Hebrew was the alphabet used. Accordingly there grew up in coexistence with the square a cursive script, the tendency of which was to give the letters such forms as would permit their being more easily and rapidly made. But the mandate against the use of the ligature in connection with the writing of the sacred texts was powerful enough to influence the development of this system of writing also; for the ligature occurs comparatively seldom even in the cursive script. Thus a most potent factor in the transformation of the alphabet was held in restraint.

The primal difference between the two alphabets, square and cursive, was size. In unimportant works the lettering, for economy's sake, was small; such was also the case with marginal or explanatory notes. The former was called *ketibah gassah*, or "large script"; the smaller characters were known as *ketibah daḳḳah* or *ḳetannah*, "small script" (compare Steinschneider, *l.c.*, note 1, and Löw, "Graphische Requisiten," p. 73, where still other names for the various styles of script may be found). Through greater carelessness and haste in writing, the corners of the square letters became somewhat rounded, and the heads were made smaller or disappeared altogether; later on, distinct modifications took place in some of the letters.

Cursive Script.

The brief inscriptions daubed in red ink upon the walls of the catacombs of Venosa are probably the oldest examples of cursive script. Still longer texts in a cursive alphabet are furnished by the clay bowls found in Babylonia and bearing exorcisms against magical influences and evil spirits (see Bibliography 10). These no doubt date from the seventh or eighth century, and some of the letters are written in a form that is very antiquated (Plate V., col. 1). Somewhat less of a cursive nature is the manuscript, which dates from the eighth century (see Bibliography 11). Cols. 2–14 exhibit cursive scripts of various countries and centuries. The differences visible in the square alphabets are much more apparent. For instance, the Sephardic rounds off still more, and, as in Arabic, there is a tendency to run the lower lines to the left, whereas the Ashkenazic script appears cramped and disjointed. Instead of the little ornaments at the upper ends of the stems, in the letters שעטנ"ז ג"ץ a more or less weak flourish of the line appears. For the rest the cursive of the Codices remains fairly true to the square text. Documents of a private nature were certainly written in a much more running hand, as the sample from one of the oldest Arabic epistles written with Hebrew letters (tenth century?) clearly shows in the papyrus, in "Führer durch die Ausstellung," Table XIX., Vienna, 1894, (compare Plate V., col. 4). But since the preservation of such epistles was not held to be of importance, material of this nature from the earlier times is very scarce, and as a consequence the development of the script is very hard to follow. The last two columns of Plate V. exhibit the German cursive script of a later date. The next to the last is taken from a manuscript of Elias Levita. The accompanying specimen presents Sephardic script. In this flowing cursive alphabet the ligatures appear more often. They occur especially in letters which have a sharp turn to the left (ג, ז, כ, נ, צ, ת), and above all in נ, whose great open bow offers ample space for another letter.



Specimen of Modern Sephardic Script.

(Portion of the original article on "Modern Alexandria," written for "The Jewish Encyclopedia.")

The following are the successive stages in the development of each letter: *Aleph* is separated into two parts, the first being written thus <, and the perpendicular stroke placed at the left K. In the modern German cursive these two elements are separated, thus lc, and the acute angle was rounded. It received also an abbreviated form connected with the favorite old ligature ⅃, and it is to this ligature of *Aleph* and *Lamed* that the contracted Oriental *Aleph* owes its origin (Plate V., col. 7). In writing *Bet*, the lower part necessitated an interruption, and to overcome this obstacle it was made ב, and, with the total omission of the whole lower line, ?. In *Gimel*, the left-hand stroke is lengthened more and more. *Dalet* had its stroke put on obliquely to distinguish it from *Resh*; however, since in rapid writing it easily assumed a form similar in appearance to ר, ד in analogy with ב was later changed to ק. A transformation very similar to this took place in the cases of final *Kaph* and of *Ḳoph* (see cols. 2, 5, 11, 14), except that *Ḳoph* opened out a trifle more than *Kaph*. The lower part of *Zayin* was bent sharply to the right and received a little hook at the bottom. The left-hand stroke of *Ṭet* was lengthened. *Lamed* gradually lost its semicircle until (as in both the Nabatæan-Arabic and Syriac systems) it became a simple stroke, which was bent sharply toward the right in the most modern cursive script. Final *Mem* branches out at the bottom, and in its latest stage is drawn out either to the left or straight down. In *Samek* the same development also took place, but it afterward became again a simple circle. In order to write *'Ayin* without removing the pen from the surface, its two strokes were joined with a curl. The two *Pe*'s spread out in a marked flourish. As to *Ẓade* the right-hand head is made longer, at first only to a small degree, but later on to a considerable extent. In the beginning *Shin* develops similarly to the same letter in the Nabatæan, but afterward the central stroke is lengthened upward, like the right arm of *Ẓade*, and finally it is joined with the left stroke, and the first stroke is left off altogether. The letters ה, ד, ח, ן, נ, ר, ת, have undergone little modification: they have been rounded out and simplified by the omission of the heads.

"Rashi" Script.

When printing was introduced, the selection of a style of type depended upon the same conditions as in the case of the execution of manuscripts. Square or block letters were cast for biblical and other important works; in the various countries different models for letters were often followed; one form was preferred at one time, another at another; however, the style selected by the Ashkenazim prevailed and maintained its preeminence over all the others. Books of a secondary character, works which accompanied another text, such as commentaries and the like, were printed in the cursive; and here a style of type became popular which very closely resembled the Hispano-African cursive (compare Plate IV., col. 9). Since the script occurs oftenest in commentaries on the Bible and the Talmud by Rashi, it has become known as the Rashi script. For the printing of Judæo-German texts, a further development of the Ashkenazi alphabet, called "Weiber-Deutsch," has been created (compare Plate V., col. 13; see Bibliography 12).

ALPRON, JACOB: Italian translator; died Dec. 22, 1622. He adapted and translated into Italian Benjamin ben Abraham of Solnik's "Miẓwot Nashim" (Precepts for Women) for the use of Jewish women in Italy. The translation became very popular and went through several editions at Padua and Venice (1625, 1652, and 1710). The name Alpron is corrupted from Heilprin=Heilbronn.

Bibliography: *Monatsschrift*, xliii. 317; Fürst, *Bibl. Jud.* i. 49.

AL-RABI IBN ABU AL-ḤUḲAIḲ: Jewish poet of the Banu-al-Nadhir in Medina, who flourished shortly before the Hegira (622). His family was in possession of the fort Al-Kammus, situated near Khaibar. Like most of the Medina Jews, he took part in the quarrels between the two Arab tribes of that town, and was present at the battle of Bu'ath, 617, which took place in the territory of the Banu Kuraiza. Al-Rabi was a poet of note. He had a contest at capping verses with the famous Arabic poet, Al Nabighah, the latter reciting one hemistich, while Al-Rabi had to supply the next, keeping to the same meter and finding a rime. He has been credited with the authorship of other poems, but upon dubious authority. One of these poems used to be recited by Abun, the son of the Calif Othman. From its contents, however (it criticizes the folly of his own people), it seems more likely to have been written by one of Abun's sons, who bore the same name as Al-Rabi. It might, then, have been composed after the submission of the Banu Kuraiza. Al-Rabi's brother Sallam and his three sons were among Mohammed's most bitter opponents. An account of Al-Rabi can be found in vol. xxi. of the Kitab al-Aghani, ed. Brünnow, p. 91. He is cited among the Arabic Jewish poets by Moses ibn Ezra in his "Kitab al-Mudhadarah" ("Rev. Ét. Juives," xxi. 102). Steinschneider can hardly be right in saying that he was a Moslem ("Jew. Quart. Rev." xi. 609, note 1), as the Arabic authorities are quite certain about his Jewish origin.

ALROY, or **ALRUI, DAVID** (called also **El David** and **Menahem ben Suleiman ibn Al-ruḥi**): A pseudo-Messiah who lived about 1160; born at Amadia in Kurdistan. He became thoroughly proficient in Biblical and Talmudic knowledge, studying under Ḥisdai, the Prince of the Exile, and under Ali, the head of the Academy in Bagdad. He was versed in the literature of the Moslems and known as a worker of magic.

The condition of the califate in the days of Alroy afforded a ready opportunity for a venturesome character to stir up political tumult. The crusades had caused a general condition of unrest and a weakening of the authority of the sultans of Asia Minor and Persia. On all sides there arose spirited chieftains who set up small independent states in defiance of their paramount ruler. This state of affairs was in itself a source of disturbance among the Jews of the califate, and was aggravated by the existence of a vexatious poll-tax levied upon all males above the age of fifteen (see Lebrecht's essay on "The State of the Califate of Bagdad" in Asher's edition of "Benjamin of Tudela," ii. 318 *et seq.*).

The materials for a rebellion being thus at hand, David Alroy raised the banner of revolt against the Seljuk Sultan Muktafi, and called upon the oppressed people of Israel to regard him as their long-expected Messiah. He promised to lead his brethren to the recapture of Jerusalem, after which he would be their king, and they would forever be free. In the adjacent district of Adherbaijan there lived a number of warlike Jews who had their homes among the mountains of Chaftan, and these men Alroy sought to win over to his cause. To his brethren in Mosul, Bagdad, and other towns, he sent letters announcing his divine mission, and summoning them to aid him in waging war upon the Moslems and to shake off their yoke. His intimate knowledge of the magic arts is said to have convinced many Jews of the truth of his pretensions, and Alroy soon found himself with a considerable following, burning to free themselves from Moslem tyranny. He resolved to attack the citadel of his native town, Amadia, and directed his supporters to assemble in that city, with swords and other weapons concealed under their robes, and to give, as a pretext for their presence, their desire to study the Talmud with such a distinguished scholar as himself.

What followed is uncertain, for the sources of the life of Alroy tell each a different tale, and the subsequent events are closely interwoven with a mass of legends that have no historical basis. In all probability, the attack upon the fort at Amadia failed; Alroy and his deluded followers were defeated, and he himself was put to death.

The legends, however, are full of interest, and the version of Benjamin of Tudela, which is set forth as though made up of historical facts, is well worth reproducing.

Benjamin of Tudela's Version.

The news of Alroy's revolt reached the ears of the Sultan, who sent for the would-be Messiah. "Art thou the King of the Jews?" asked the Moslem sovereign, to which Alroy replied, "I am." The Sultan thereupon cast the Jewish pretender into prison in Tabaristan. Three days later, while the Sultan and his council were engaged in considering Alroy's rebellion, the pseudo-Messiah suddenly appeared in their midst, having miraculously made his escape from prison. The Sultan at once ordered Alroy's rearrest; but, by his magic, the rebel made himself invisible and left the palace. Guided by the voice of Alroy the Sultan and his nobles followed him to the banks of a river, where, having made himself visible, the marvelous wizard was seen to cross the water on a shawl, and make his escape with ease. On the same day he returned to Amadia, a journey which ordinarily took ten days, and, appearing to his followers, related to them his wondrous exploits.

The Sultan now threatened to put the Jews of his dominion to the sword if Alroy were not surrendered, and the Jewish authorities in Bagdad endeavored to induce Alroy to abandon his pretensions to the Messiahship for fear of the evil that might befall Israel. From Mosul also an appeal was made to him by Zakkai and Joseph Barihan Alfalah, the leaders of the Jewish community; but all in vain. At length, the governor of Amadia, Saif al-Din, bribed the father-in-law of the daring rebel to slay him, which was done, and the revolt was brought to an end. The Jews of Persia had considerable difficulty in appeasing the wrath of the Sultan, and were obliged to pay a large indemnity.

The death of Alroy did not entirely destroy the belief in his heaven-sent mission for the redemption of his people. Two impostors came to Bagdad and succeeded in perpetrating a huge fraud upon the credulous followers of the pseudo-Messiah. They announced that upon a certain night they were all commanded to commence a flight through the air from Bagdad to Jerusalem, and, in the meantime, the followers of Alroy were to give their property into the charge of these two messengers from their dead leader. The dénouement of this cunning scheme may be imagined; and yet, for many years afterward, a sect of Menahemites, as they were termed, continued to revere the memory of the so-called Messiah of Amadia.

Literary Sources.

The principal source of the life of Alroy is the "Itinerary" of Benjamin of Tudela (ed. A. Asher, i. 122–127). This version is followed in its main outlines by Solomon ibn Verga, in his "Shebeṭ Yehudah" (ed. Wiener, Hebrew text, p. 50). Ibn Verga states, on the authority of Maimonides (which, however, can not be substantiated), that, when asked for a proof that he was truly the Messiah, Alroy (or David El-David, as Ibn Verga and David Gans in his "Ẓemaḥ David" call him) replied, "Cut off my head and I shall yet live." This was done, and thus the pretender escaped a crueler fate. David Gans, Gedaliah ibn Yaḥya (in his "Shalshelet ha-Ḳabbalah"), who calls him David Almusar, and R. Joseph ben Isaac Sambari (see A. Neubauer, "Mediæval Jew. Chron." i. 123) closely follow Benjamin of Tudela's version. The name Menahem ibn Alruḥi ("the inspired one"), and the concluding episode of the impostors of Bagdad, are derived from the contemporaneous chronicle of the apostate, Samuel ibn Abbas (see Wiener's "'Emeḳ ha-Baka," pp. 168 *et seq.*, xxv. *et seq.*). The name Menahem (*i.e.*, the comforter) was a common Messianic appellation. The name Alroy is probably identical with Alruḥi (see Wiener, *l.c.*; Grätz, "Gesch. d. Juden," pp. 269 *et seq.*, 426; Basnage, "Hist. des Juifs," vii. 9). Lord Beaconsfield's novel, "The Wondrous Tale of Alroy," is purely imaginary, and exalts a man who was probably a vulgar impostor into a high-souled "hero of a dramatic romance," and invests him with a halo of glory.

BIBLIOGRAPHY: Loeb, in *Rev. Ét. Juives*, xvi. 215, xvii. 304.

M. A.

ALSACE: A German territory which, together with Lorraine, forms a *Reichsland*, or imperial territory. It lies between the River Rhine and the Vosges Mountains. The precise date when Jews settled in this and the neighboring regions can not be definitely fixed. According to some historians there were Jews in Cologne in the fourth century: others date their presence in Mayence from the end of the eighth century. If these statements be true, it is not impossible that Jews resided also in the chief city of Alsace during the period of the Frankish and Carlovingian kings. This was Schoepflin's view in the last century ("Alsatia Illustrata," translated by Ravenez, v. 143); but he furnished no proofs. However, Benjamin of Tudela, in his account of his travels between the years 1160 and 1173, speaks of having met many rich and learned Jews in the towns of Treves, Worms, Speyer, and Strasburg; hence, Jewish communities must have existed there in the second half of the twelfth century. According to J. Euting ("Aeltere Hebräische Inschriften im Elsass," 1887), the oldest of the gravestones unearthed in 1868 in the Rue des Juifs at Strasburg dated from this time.

Traces of Early Settlements.

Another tombstone bore the date of 1223; but most of the remainder are of the fourteenth century.

The second code of laws, promulgated by the prince-bishop of Strasburg about the year 1200, prescribed that the Jews of that city should furnish the episcopal standards ("Urkundenbuch der Stadt Strassburg," i. 481). In 1233 a Jews' quarter existed in the city ("Urkundenb." i. 185), and the term "Jew" was applied to some of the Christian inhabitants either as a sobriquet, or because they were descended from baptized Israelites. Under the emperor Frederick II., there were Jews in Hagenau (Richer de Lenones, ad annum 1236; Boehmer, "Fontes," iii. 58); and, some time later (about 1260), those of Weissenburg were accused of ritual murder, and expelled from the town ("Annales de Colmar"; Boehmer, "Fontes," ii. 4). The author of the anonymous appendix to the "Annales de Colmar" (about 1300) says: "In Alsatia . . . chyrurgici pauci, physici pauciores; Judei pauci; hæretici in locis plurimis abundabant" (In Alsatia there were few surgeons and fewer physicians; Jews also were few, but in most places heretics abounded; "Annales de Colmar," ed. Gérard et Liblin, p. 230). When the bishop of Strasburg, Walter von Geroldseck, quarreled with the citizens, one of his grievances was the maltreatment of the Jews by his rebellious subjects; and in an agreement entered into with his successor the town council engaged not to exact the payment of imposts from the Jews for five years ("Urkundenb." i. 374).

Era of Persecution.

For nearly three quarters of a century the Jews of Alsace were simply tolerated; but in the last decade of the thirteenth century their persecution began. In 1290 the people of Mülhausen rose against the Jewish usurers. One of them, a certain Solman of Neuenburg, was beaten to death by the mob; and King Rudolph I. by proclamation annulled all debts to the Jews, amounting to 200 silver marks—about $20,000 or £4,000 of the present day (Mosmann, "Cartulaire de Mulhouse," i. 88). Two years later (1292) the Jews of Colmar were accused of ritual murder, and a riot ensued (Boehmer, "Fontes," ii. 30). During the following year the people of Rufach, aided perhaps by the avaricious clergy, began to show intolerance toward the Jews of that city, who fled precipitately to Colmar (*ib.* ii. 31). In the "Annales de Colmar" (p. 168) it is recorded that in 1296 a Jew of Sulzmatt, having been accused of theft, was hanged by his feet on a gibbet and remained in this position for eight days, when, according to the account, he succeeded in freeing himself. Another Jew was murdered at Ensisheim in 1299 (*ib.* p. 182).

Persecution, once begun, diminished somewhat at certain intervals, but never ceased entirely. When King Henry VII. of Germany in 1308 delivered the Jews of Rufach and Sulzmatt to John of Dirpheim, bishop of Strasburg, several of them were imprisoned, and others perished at the stake for unknown reasons. A second massacre of the Jews occurred in Rufach in the year 1338, on the anniversary of the conversion of St. Paul; and shortly afterward nearly all the Jews were expelled, at least temporarily, from the bishopric of Upper Alsace ("Alsatia Illustrata," iv. 262).

Massacres.

The period between 1337 and 1338 was particularly unfortunate for the Jews scattered over the neighboring country; and from the meager records of contemporary writers it appears that the movement against them ultimately developed into a general uprising of the peasantry. In May, 1337, Umbehoven, a knight of Dorlisheim, and Zimberlin, a noble of Andlau (according to another authority, a simple innkeeper), collectively taking the name of "König Armleder" (King Leather-arm), placed themselves at the head of a mob of peasants and massacred the Jews of Ensisheim, Mühlhausen, Rufach, and other towns. They then marched on Colmar and summoned the magistrates of the city to surrender the Jews to them; but the citizens of Strasburg having decided to assist in the defense of the threatened city, the mob dispersed ("Chronique de Kœnigshoven," ed. Hegel, p. 759). At about the same time the Jews of Ribeauville, who in 1331 had been turned over by Louis of Bavaria to the Sieur de Ribeaupierre as surety for a loan of 400 marks in silver (corresponding to $80,000 of the present day), were accused of being poisoners and were massacred ("Alsatia Illustrata," iv. 262).

Strasburg a City of Refuge.

Isolated cases of murder also occurred at Strasburg. In 1337 a Jew accused of killing a little girl was burned; and the child was buried with great pomp, and honored by the crowd as a martyr (Grandidier, "Nouvelles Œuvres Inédites," v. 344). Still Strasburg practically remained the city of refuge for the Jews of Alsace up to about the middle of the fourteenth century; and as its commerce and industry developed, the imperial free city adjusted its relations with the Jews in a manner that, though onerous, was at least endurable. In accordance with an agreement made in 1325, the Jews occupied a quarter of their own in the city of Strasburg and had their own cemetery ("Urkundenb." ii. 394). If they could not acquire real estate, they were not compelled to submit their actions at law to any judges other than the mayor—a privilege that assured them a measure of protection, though it was doubtless costly. A certificate of protection (*Schutzbrief*) issued in 1338 to sixteen persons, and valid for five years, cost 1,072 marks, of which 1,000 were payable to the city, 60 to the king, and 12 to the bishop. As compensation for this, the Jews were permitted to engage in money-lending; the rate on loans being fixed for them at 5 or 6 per cent a week, or at 43 per cent per annum ("Chronique de Kœnigshoven," ed. Hegel, append. iv. 977).

The degree of culture among these Jews is shown, at least relatively, by the fragments of their gravestones which have recently been unearthed, and by the fact that Jews of other cities attended the lectures of the rabbis of Strasburg. There is still extant a letter of the mayor of Schlettstadt to the mayor of Strasburg praying the latter to allow some of the Jews of the former place to sojourn in Strasburg, in order that they might take advantage of the teaching of the rabbis there ("Urkundenb." v. 1029).

"Confessions" Under Torture.

Then came that horrible "year of terror," which descended upon all Alsace and swept away most of its Jewish communities. A letter of Rudolph of Oron, bailiff of Lausanne (Nov. 15, 1348), announced to the mayor of Strasburg that certain Jews of Lausanne had confessed, under torture, that by order of, and in collusion with, their coreligionists of Italy they had poisoned all the wells in the Rhine valley. It was, they said, to avenge the cruelties of King Leather-arm that the Jews spread around this poison, which would not kill them, but would kill the Christians ("Urkundenb." v. 164–210). In December, 1348, the city council of Obernai (Enheim) notified that of Strasburg that they had put to the torture five Jews, arrested at the last large fair at Speyer, and that these had admitted their participation in this crime

("Urkundenb." v. 177). On Dec. 29, the council of Colmar also announced that a certain Hegmann, one of the Jews under its protection, had, under torture, accused Jacob, the cantor of the synagogue of Strasburg, of having sent him the poison which he put in the wells of Colmar: one of his cousins, a woman named Bela, had similarly poisoned the wells of Ammerschweier. Notwithstanding these accusations, the chief magistrates, influenced no doubt as much by self-interest as by humanity, continued to protect the Jewish community of their city. But a general uprising, instigated by the civic magnates and the neighboring nobles—possibly also by the clergy itself—broke out at Strasburg in February, 1349. The councillor, Peter Swarber, and his two colleagues were deposed, mulcted in heavy fines, and expelled. Afterward the new communal authorities constituted by this revolutionary movement decreed the extermination of all the Strasburg Jews as well as of all Jewish refugees residing temporarily in the city. At this time there were barely 2,000 Jews having settled dwelling-places in the city, which contained, at most, 15,000 or 20,000 inhabitants all told. On St. Valentine's day (February 14), 1349, the Jews in the city were burnt *en masse* on the site of their own cemetery. A small number who had abjured their faith, together with some children, were saved, the latter being snatched from the flames. The number of the victims of this horrible holocaust has been greatly exaggerated by tradition ("Chronique de Kœnigshoven," pp. 761–764). Undoubtedly they owed their fate chiefly to their wealth, as is attested by the chronicler: "Ir gelte vas ouch die sache davon die Juden getoedet wurden" (Their money was the cause of the Jews' death). Other Jews were burnt at Schlettstadt together with a supposed Christian accomplice ("Urkundenb." v. 195). At Colmar and in other towns the Jews were sacrificed without being heard in their own defense; only at Landau, where they were numerous, was an attempt at defense made, and there without success. The imperial authorities did absolutely nothing to protect the *servi cameræ imperialis* (servants of the imperial chamber), as the Jews were then called in the Holy Roman Empire. In April, 1349, Charles IV. of Germany laid claim to the proceeds of all the loans made by the Jews of Strasburg to the Count of Würtemberg. On June 5, 1349, a defensive alliance was formed between the municipal authorities of Strasburg, the bishop of Strasburg, and the Abbot of Murbach, the Count of Würtemberg, and a number of other Alsatian grandees, to repel any attempt to inquire into the massacre. Some months later Charles IV. absolved the people of Speyer from all responsibility for the massacre of February (Letter of Sept. 12, 1349, "Urkundenb." v. 207). These attempts at extermination did not annihilate the Jews of Alsace nor prevent accessions to their number.

Strasburg the Scene of a Holocaust.

The proper names recorded in the authorities cited prove that the greater part of the Jews who dwelt in Alsace during the fourteenth century came from the right bank of the Rhine. In 1356 there were Jews again at Mühlhausen; for Petri ("Mühlhauser Geschichten," p. 45) gives an account of a Jew in that town who had been apprehended by the lord of Neuenstein, thrust into a sack, and carried to Franche-Comté in order that ransom might be extorted from him.

In granting new franchises to the town of Hagenau, Charles IV. accorded to it the right to receive or to reject at will protected Jews ("Alsatia Illustrata," v. 247); and in 1374 he extended the same privilege to the city of Kaisersberg (*ib.* v. 293). Jews were living at Colmar in 1385. In 1369 Jews were again admitted to Strasburg ("Urkundenb." v. 715). An ordinance (*Judenordnung*) concerning them, dated May 14, 1375, refers to the presence of a dozen families ("Urkundenb." v. 880); another, issued in 1383, directs that they be treated and protected as other citizens ("Urkundenb." vi. 89); and a short time afterward, on the recommendation of the Count of Öttinger, sixteen families were admitted from Ulm, Bretten, Breisach, Wesel, and Mosheim ("Urkundenb." vi. 95). In 1384 the mayor appointed a Jew, Maître Gutleben, as physician, with a salary of three hundred crowns (about $360 nominal) per annum. Although the community was not large, it must have been rich, as in 1385 the Count Palatine Robert alone owed the Jews of Strasburg the sum of 15,400 fl. ($7,700 nominal; see "Urkundenb." vi. 143). Undoubtedly their wealth was a constant source of menace to them; for King Wenceslaus of Germany (Feb. 6, 1386) ordered the municipality to enforce against the Jews sumptuary laws in matters of dress, and to require them to resume the yellow shoes and sugar-loaf hats formerly worn by them ("Urkundenb." vi. 162; see Badge). The same year the mayor fined them 20,000 fl. ($10,000). In 1387, delegates from the Rhenish cities assembled at Speyer (where in 1385 they had considered the Jewish question) and adopted resolutions inimical to the Jews. On the demand of the delegates from Strasburg it was resolved that neither male nor female Christians be allowed to act as domestic servants or wet-nurses in Jewish families, under penalty of being branded on the forehead ("Urkundenb." vi. 204). During this year King Wenceslaus placed under the ban all Jews of Colmar, Schlettstadt, and Hagenau who refused to pay the taxes he demanded for their protection, and even included three imperial cities that had retained for themselves such Jewish contributions ("Urkundenb." vi. 194). In the month of June a Jew of Italian or French origin (Mamelot der Morschele, der Walch) chanced to enter the cathedral of Strasburg; and though he had done nothing objectionable, he was beaten by the verger, expelled, and threatened with drowning if he should reenter the city ("Urkundenb." vi. 198).

The Jews were a source of considerable revenue to the city treasury. They numbered at that time about twenty families, who paid an annual tax of 727 fl. ($365.50 nominal); and the richest one among them, called in the records "der ryche Sigmund," paid 203 fl. ($101.59; see "Urkundenb." vi. 211).

In the autumn a new and much graver peril threatened the Alsatian Jews. A weaver of Bischheim, named Lauwelin, was accused of having offered his own child to the Jews of Strasburg for a ritual sacrifice, and—doubtless under torture—was convicted of the crime; and as a punishment his eyes were put out ("Urkundenb." vi. 207). By the beginning of the year 1388 the entire Jewish community was expelled and their real estate confiscated—a condition which was maintained until the French Revolution of 1793. In 1392 the scrolls and the tables of the Law belonging to the synagogue were still preserved in Strasburg ("Chronique de Kœnigshoven," pp. 975–986). Colmar was also the scene of acts of violence which did not end so brutally. Wenceslaus annulled all the claims of the Jews of that city against their Christian debtors in 1392 (Mossmann, "Juifs de Colmar," p. 8). In 1397 another story of poisoned wells was circulated in Upper Alsace through a certain Jew of Ribeauville, whose confessions implicated fresh victims (Schreiber, "Freiburger Urkundenb." ii. 108).

The fifteenth century was a period of comparative

The Fifteenth Century.

calm for the Jews of Alsace. During that period they were the victims of incessant chicanery rather than actual persecution, except in the later decades of the century when acts of violence were renewed (1476–77), at the commencement of the general agitation produced by the Burgundian wars between Louis XI. and Charles the Bold. In 1436 Emperor Sigismund prohibited the citizens of Hagenau from renting or selling houses to the Jews ("Alsatia Illustrata," v. 170). On Oct. 31, 1437, he prohibited the Jews of Colmar from acquiring any real estate in the town or its suburbs, without special permission from the mayor, who seems to have wearied of his protégés; for in 1478 only two families were tolerated within the city. By decree of Emperor Frederick III. the Jews of Schlettstadt were, in turn, expelled from that city Dec. 12, 1479 (J. Gény, "Die Reichsstadt Schlettstadt," p. 206); but he refused to sanction the expulsion of those at Colmar—no doubt because they found influential defenders at his court (Mossmann, *op. cit.* p. 18).

The Sixteenth Century.

The opening of the sixteenth century marked a revival of economic and religious antipathy toward the Jews of Alsace. To the city of Münster, where during the Middle Ages there had been no Jews, Maximilian I. gave permission to admit or reject members of that race; but the citizens decided to exclude from the rights of citizenship all persons who even borrowed money from the Jews ("Alsatia Illustrata," v. 281). At length (Jan. 22, 1510), this ruler granted to the city of Colmar the long-desired right to expel the Jews, so that whenever their business affairs called them to that city they were compelled to pay a toll and to wear the yellow badge on their garments. Maximilian also presented the Jewish synagogue and the cemetery to his secretary, Jean Spiegel of Schlettstadt.

Driven from the city, the Jews dwelt in the villages surrounding Colmar and continued to do business with its citizens: they were then prohibited from depositing their wares with Christians. In order to rid himself of his neighbors, the mayor obtained permission from Charles V. to forbid their entrance into the city (April 25, 1541). This did not hinder the imperial chancellery from renewing, on May 24, 1541, at the request of R. Josel of Rosheim, all the privileges enjoyed by the Colmar Jews. R. Josel exercised, though unofficially, the functions of collector of the customs and protector of the Jews of Alsace. These latter were far from being as numerous then as they were one or two centuries later. A detailed census ordered by the regency of Ensisheim showed only 52 families in the whole of Austrian Alsace; and in 1574 they were expelled from the country. Then there began between the city of Colmar and its Jewish inhabitants a struggle for the favor of the imperial chancellery—a struggle marked for its corrupt influence, and which, after continuing for several years, ended in 1549 disadvantageously for the Jews. From that time until its union with France, Colmar became the most important and the most anti-Semitic city of Upper Alsace. So strong was this sentiment in 1622 that the mayor positively refused the bishop of Strasburg, and through him the archduke Leopold of Austria, permission for one of his subjects, a Jewish horse-dealer named Kossmann of Wettolsheim, to enter the city; and it was only in 1691 that Jews were again allowed to set foot in Colmar ("Kaufhauschronik," ed. Waltz, p. 58). In the other cities similar conditions prevailed. In 1517 the mayor of Landau consented to admit ten Jewish families to the city on the payment of 400 fl. ($200) annually; but in 1525 he decided to expel them, and finally did so, although opposed by the Elector Palatine. At Obernai the chief bailiff, Jacques de Morimont, forbade Jews to enter the city except on market-days ("Alsatia Illustrata," v. 270). At Weissenburg an imperial edict declared void the agreements which the city had entered into with the Jews (*ib.* v. 247); while at Schlettstadt, after having greatly restricted the business of the Jews, under an imperial edict issued Feb. 24, 1521, the mayor availed himself of a suit for the recovery of a debt, brought by the Jews against some of the citizens, as a pretext for their total expulsion in 1529 (Gény, *op. cit.* p. 207).

The Seventeenth Century.

In the seventeenth century a noteworthy immigration of Jews into Alsace began, caused mainly by the Thirty Years' War. They came from the right bank of the Rhine, where the authorities were powerless to control or impede them. At that time military rule superseded civil authority everywhere; and both the chiefs of the various factions and those of the army availed themselves of the keen commercial instinct of the Jews to equip their cavalry and to replenish their commissariats. To the soldiers they were indispensable as agents for the disposal of pillage. From the beginning of the Thirty Years' War Jews settled on the lands of the bishopric of Strasburg, in the county of Hanau-Lichtenberg, on the estate of the lords of Ribeaupierre, and in other cities, especially at Hagenau. Desiring to augment their revenues, the nobles of the vicinity of Lower Alsace sold to the Jews the right to settle in the villages; for there they preferred to dwell. Denizens of the cities in the Middle Ages, the Jews of Alsace, driven by irresistible force to the country districts in the seventeenth century, became a rural class with no taste for agricultural pursuits, and remained such even in the eighteenth century. By the Peace of Westphalia in 1648, Austria ceded her possessions in Alsace to France, and in 1681 Louis XIV. took possession of Strasburg.

In the first general census of the "Jewish nation" of Alsace, taken in 1689 by order of Intendant Jacques de la Grange, a total for the whole province of 525 Jewish families is given. These, allowing at least five persons to each family, would represent about 2,600 souls. Of this number, 391 families belonged to Lower Alsace, 134 to Upper Alsace and to the Sundgau. The urban Jewish population was insignificant (Landau had 3 families, Hagenau 19, Weissenburg 8, Buchsweiler 18, Saverne 6, Obernai 3); but in certain small villages the number of families was larger. There were 37 families at Westhofen, 20 at Marmontier, 17 at Bollweiler, and 14 at Hegenheim ("Revue d'Alsace," 1859, p. 564).

Statistics in the Eighteenth Century.

From 1697 the increase in population was considerable; in his "Mémoire sur l'Alsace" (p. 229), revised to that date, La Grange gives 3,655 Jews in Alsace, of whom 897 were in Upper and 2,766 in Lower Alsace; and they formed about one-seventieth of the total population of that time. In 1716 there were 1,269 families, numbering over 6,000 individuals, and from that time, owing to the prolonged peace which the province enjoyed in the eighteenth century—doubtless also to the uninterrupted immigration—the growth was astonishingly rapid. The statistics for 1750 show the number of families to have been 2,585; in 1760 it had increased to 3,045, and in 1785 to 3,942 families, aggregating 19,624 individuals. The Jewish population of the cities did not show any material increase. In Colmar, Schlettstadt, and Kaisersberg there was not a Jewish inhabitant; Strasburg, with a very bad grace, tolerated the presence of the family of the chief commissary of the army, Cerf-Beer, who had been appointed by Louis XV.; Hagenau had 325 Jews, Rosheim 268, Buchsweiler 297, Ribeauville 285, Landau 145, Weissenburg 165, and Obernai 196. But certain small cities of Upper Alsace had Jewish populations that outnumbered the Christian. At Darmenach there were 340 Jews, at Hegenheim 409, Niederhagenthal 356, Wintzenheim 381, Zillisheim near Mülhausen 332, Bischheim, a suburb of the city of Strasburg, 473 ("Dénombrement Général des Juifs d'Alsace," Colmar, 1785).

Attitude of Leopold of Austria.

This rapid increase in population naturally added to the difficulties of earning a livelihood. With the liberal professions and the larger channels of trade closed to them, what could the Jews do? In the cities they were not considered eligible to membership in the gilds of trades and handicrafts; besides, the greater number of them were scattered over the country. Their own legitimate avenues of trade were cattle-dealing and the selling of second-hand goods. These were insufficient for their support; and they resorted to the lending of money on notes or mortgages, at an unfixed rate of interest often amounting to usury. The most hostile authors agree in depicting the Alsatian Jews of the end of the eighteenth century as poorly fed, clothed in rags, and possessing only a limited capital, which they loaned, and on the interest of which they realized enough to support themselves. The antipathy of the masses to them never died out, though toward the middle of the seventeenth century the humiliating badge that they had been ordered to wear disappeared. A copy of this badge—a small yellow disk, which was attached to their clothes—is found in "Le Cornelius Redivivus" of King Louis XIII., engraved in 1617. If no longer massacred (albeit in 1657 a mob at Dachstein burned several Jews), they suffered none the less from extortions and exactions. They were beset by narrow and tyrannical regulations, even in cities where they were received with more than ordinary toleration. Thus a decree of the Archduke Leopold of Austria (May 22, 1613) regulated everything pertaining to their public and private life, and prohibited them from acquiring real estate. By this decree they could not recover notes of credit against Christians until after they had been recorded by the registrar or provost of the locality. They were prohibited from publicly celebrating their religious rites, from sheltering a strange Jew for more than forty-eight hours, and from employing Christian servants on holidays or Sundays. For the privilege of passing from one town to another they were compelled to pay a special tax (*Judenzoll*). When Alsace came under the dominion of France the condition of the Jews was not ameliorated. At first Louis XIV. or his ministers inclined toward their expulsion (1651); later, by virtue of letters patent issued Sept. 25, 1657, the king took them under his special protection. But that did not prevent the lord-lieutenant, Poncet de la Rivière, from levying upon them, in 1672, an additional tax for royal protection (in addition to that which they paid to the lord of the manor direct), which amounted to 10½ fl. ($5.25) per family. The Jews soon learned how to make themselves useful to the new government as agents and as farmers of the revenues of those who held monopolies of the sale of salt, iron, and other minerals; above all, it was not long before they were considered necessary to provide remounts for the royal cavalry that garrisoned Alsace. After the Peace of Ryswick (1697) the question arose how best to relieve the province of its Jewish population. But the War of the Spanish Succession afforded new opportunities to the Jews to render special services, and on Jan. 31, 1713, Pontchartrain notified the provincial and local authorities that the king did not deem it fit to expel them.

Effect of Peace of Ryswick.

Throughout the eighteenth century the condition of the Jews became more and more precarious. Though, at the close of the preceding century, La Grange had been able to say ("Mémoires," p. 239), "There were very few of them who were in easy circumstances, and none whom one might call rich," this was now even more the case. In the Sundgau the hatred of the farmers, who had been ruined by Jewish usurers, grew apace, and a series of decrees of the Sovereign Council, the parliament of Alsace, served to remind the Jews of the fact that they lived there only through the royal toleration. Thus, in 1726, the Council ordered the destruction of the three synagogues of Wintzenheim, Bischheim, and Hagenthal, which had been built without sovereign authority; in 1733 the king forbade the Jews to bake their bread on Sundays; in 1740 they were forbidden to dwell in the same houses with Christians, even though the Christians consented. All illicit intercourse between a Jew and a Christian woman was punishable by the gallows, or at the least the galleys for life, for the man; the woman being condemned to seclusion and a flogging.

Status of the Rabbis.

From the date of the French conquest of Alsace, the organization of the Jewish communities of that province became more centralized. Formerly each lord of the manor, where the Jews were sufficiently numerous to warrant it, appointed a chief over the community—a rabbi who was entrusted with the administration of all the religious functions of the community, and who acted also as common judge in all the civil suits between Jews, the latter having the privilege of appeal from the rabbinical tribunal to the superior courts. Over these rabbis the government of Louis XIV. appointed a superior; and on May 21, 1681, nominated Aaron Wormser chief rabbi of the Jews of Upper and Lower Alsace, setting his residence at St. Louis de Brisach, and later at Colmar. At the outset this innovation met with opposition from those most concerned. In 1704, Samuel Lévy, the successor of Wormser, had much to contend with from recalcitrant rabbis and delinquent laymen, and the Sovereign Council authorized him to pronounce excommunication upon them.

Forged Receipts.

Little is known of the internal life of the Jewish communities of Alsace during the eighteenth century; and only a very vague idea can be formed of their intellectual and moral condition. One Hirtzel Lévi of Wettolsheim, condemned for armed robbery on false evidence and sentenced to be broken on the wheel at Colmar, Dec. 31, 1754, was exonerated by a decree of the Parliament of Metz, Sept. 24, 1755. The dark side of the Jewish question of that time is shown in the long and significant suit over forged receipts that engaged public attention in Upper Alsace during 1778 and 1779. It appears that the peasants strove to avoid their debts by the aid of forged receipts, made wholesale and sold to them by a number of daring swindlers, most of whom were caught and punished with imprisonment, the pillory, or at the galleys, or with death on the gallows. The disappointment of the peasants, who had been duped and who had hoped for immediate relief from their debts, only increased their hatred toward their creditors, who were almost as poor as themselves.

The royal edict of January, 1784, which relieved the Jews from certain odious taxes such as the poll-tax, and permitted them to follow agricultural pursuits, came too late to effect a change in their habits, which had been confirmed through centuries of time; nor did it allay the antagonism of their adversaries. The Christian rural population, burdened as it was with debt, found consolation in its traditional contempt for the Jewish minority. Fear of an energetic and well-organized police led the peasants to exercise some self-restraint. But all at once the question of granting equality to all the inhabitants without respect to religion suddenly presented itself. The sovereign power, paralyzed, was in no condition to control popular passion; and from that time it was feared that what had been considered merely the spirit of discord would ultimately develop into a display of physical resentment. From the outset public temperament was indicated in the *cahiers de doléance* (official instructions of the electors to the deputies at the States General as to their wishes and complaints), compiled by the various electoral districts of Alsace. Several districts called for a reduction in the number of Jews. The clergy of the districts of Colmar and Schlettstadt demanded that thenceforth in order to check their "astounding increase" only the oldest son in each Jewish family should be allowed to marry. The nobility of these districts declared that the very existence of the Jews was a public calamity. The bourgeoisie of Belfort and Hüningen wished to deprive the Jews of the right to lend money; that of Colmar and Schlettstadt desired that they at least be prohibited from lending money to Christians; while Strasburg insisted on the confirmation of its ancient anti-Jewish privileges and on the right to expel the family of Cerf-Beer.

Reforms Opposed.

When the news of the fall of the Bastile reached the province, disorder broke out everywhere; the castles and convents of Upper Alsace were pillaged; and in the Sundgau the peasants attacked the dwellings of the Jews. Under the leadership of an adventurer, who claimed to be the Duke of Artois, brother of Louis XVI., the peasantry devastated nineteen villages one after the other, demolishing the dwellings and burning the commercial papers and books of their Jewish creditors. Abandoning everything to the pillagers, the unfortunate Jews fled for safety to the republic of Basel and to the bishopric of the same name. Ultimately it became necessary to send a number of troops, under General de Vietinghoff, into the Sundgau and the valley of the Saint Amarin to restore peace, or at least its outward semblance, in those regions. Some philanthropists, who for years had interested themselves in the regeneration of the oppressed Jews, now degraded by a prolonged servitude, worked upon the public opinion of Paris and upon that of the National Assembly, in order to obtain for them civil rights, or at least official recognition of their social standing. In order to comprehend fully the struggle that now engaged the public opinion of Alsace and that of the capital, it must not be forgotten that the number of Jews that had settled elsewhere in France was relatively small, and that the Spanish or Portuguese Jews, the Jews of Bordeaux, of Avignon, and of Paris had generally attained a higher plane in development than the "barbarian Jews" of Alsace. Indeed, public opinion in the capital was more in favor of a reform of this kind because it almost ignored local conditions. But the deputies from the province were unanimous in their opposition to such a measure; and the majority of the inhabitants—Catholics, Lutherans, and Reformed—were in perfect accord with them. Rewbell, a deputy from Upper Alsace, was especially vehement in his defense of "his hard-working and unfortunate compatriots, who were oppressed in a most atrocious manner by a horde of cruel Africans that swarmed over the country"; he even declared that the decree which granted the Jews citizens' rights would be the signal for their destruction in Alsace (session of Sept. 21, 1789). Together with his colleagues he opposed the discussion of the Jewish question, and endeavored to have the matter adjourned. But one month later (Oct. 14, 1789) a deputation of Jews from Alsace and from Metz presented themselves at the bar of the National Assembly and prayed for the redress of their wrongs; and subsequently the Assembly decided that the question of the amalgamation of the Jews with the other citizens be placed on the agenda of the Assembly.

Partial Redress.

On Dec. 22, 1789, the Assembly debated the question of admitting to the public service all citizens without distinction of creed; but in spite of the unanimous opposition of the deputies from Alsace, the majority voted the admission of non-Catholics only, with the rider that it was not thereby intended to prejudge any matter concerning the Jews (session of Dec. 25, 1789). The opposition to the Hebrew race was not restricted to the floor of the Assembly; for innumerable pamphlets were published, most of which opposed the plan of amalgamation. Captain de Foissac, in command of the garrison of Pfalzburg, was the first to answer a brochure by the Abbé Grégoire. M. de Hell, deputy from the districts of Hagenau and Weissenburg, was the author of a tirade against the Jews; and his colleague Pflieger, deputy from Belfort and Hüningen, issued "an opinion" opposing the granting of civil rights to the Jews. Notwithstanding this agitation, a new petition from the French Jews, Jan. 28, 1790, reopened the discussion in the Assembly and met with some measure of success. A majority (374 yeas, 224 nays) supported the claims of the Portuguese Jews who had settled in France, and those of Avignon; but Francis Joseph Schwendt, a deputy from Strasburg, insisted on restricting the debate so as to exclude all reference to the Jews of Alsace. This, he claimed, was absolutely necessary for the reestablishment of the public peace and to guarantee the safety of the 26,000 German Jews. The Assembly, unwilling to oppose the public opinion of an entire province, postponed the settlement of this important problem, which was brought before them insistently on Feb. 26 and March 23. In the month of February, the Society of the Friends of the Constitution, founded at Strasburg, encouraged the sympathizers to raise their voices in favor of equality in Alsace itself. On the 17th of the same month, François-Xavier Levrault proposed that the society refute the charges made by Captain de Foissac; on the 20th they admitted to their society the first Jew member, Marx Beer, son of the rich banker, Cerf-Beer; and on the 27th M. Brunck of Frundeck, who had been appointed to consider the question of the civil status of the Jews, presented his report. This report was received with marked approbation; and the society ordered its publication in French and German. Thereupon there was intense excitement throughout the city. One hundred and fifty citizens petitioned that the primary assemblies be convened in order to discuss the question publicly. The petition was read to the General Council, and the permission prayed for granted. Ultimately, by an almost unanimous vote, the citizens of Strasburg declared themselves opposed to the granting of civil rights to the Jews. On April 8 an address, signed by all the municipal officers and by thousands of the better classes of the citizens in Strasburg, was presented to the National Assembly: it declared that the signers did not wish to have any Jewish citizens within the city walls. The Assembly considered this address on April 13; and a few days later another from Colmar brought tidings of similar sentiments in the Upper Rhine region. In view of the constant agitation kept up by a flood of counter-revolutionary literature distributed over the disturbed districts by the emigrants and the contumacious clergy, a considerable time elapsed before the Constitutional Committee dared to propose any definite solution of the problem.

While theories were being discussed in Paris, the ill-treatment of the Jews in Alsace had not entirely ceased. In the new department of the Upper Rhine especially the local authorities frequently refused permission to Jews to establish themselves in the community, or prohibited them from collecting the promissory notes of the Christians. At Oberhagenthal, for example, the Jews were compelled to request the executive of the department to send troops, whom they offered to pay, to protect them against the exactions of the municipality (Procès-verbaux du Directoire du Haut-Rhin, March, 1791). In Hegenheim a Christian woman was compelled to do penance in the Catholic church for having kindled a fire on the Sabbath for a Jew (March 4, 1791). The mayor of Issenheim thrust into prison such of the Jews under his administration as did not send him the tongues of the oxen which they killed (May 31, 1791). Worse things happened in the department of the Lower Rhine. In December, 1790, the mayor of Obernai cast a young Jewish girl into prison and kept her there until after her delivery, in order that her child might forcibly be baptized in the Catholic church, although the father of the child, who was a Jew, had previously declared his intention of marrying the woman (see Ezekiel Landau's "Noda‘ bi-Yehudah," on Eben ‘Ezer, 2d ed., No. 27).

More Efforts for Redress.

The prolonged discussions on the civil constitution of the clergy led to the shelving of the Jewish question during the summer of 1791; but on Sept. 27, Adrien Duport proposed that the Jews of France be accorded the rights of active citizens. Rewbell and Victor de Broglie, two deputies from the Upper Rhine, opposed the proposition. The former insisted that, although the Assembly had no desire to shield Jewish usurers—who, he said, held notes to the amount of twelve or fifteen millions of francs against debtors whose personal estate never exceeded three millions in value—it would be held responsible for all the troubles which its vote might excite in Alsace. The Assembly desired to complete its humane work, but all that the old and the new representatives of Alsace, united in the conference, could obtain, was the decree of Sept. 28, which required the Jews to make a formal renunciation of the jurisdiction of their rabbis and to submit completely to the civil laws. "Few among them," wrote Schwendt to his constituents on the same day, "will wish to take this oath"; and on Oct. 8 he wrote: "Nothing remains of the Jewish nation in France; and Judaism is now nothing more than the name of a distinct religion: those who are unwilling to yield this will not enjoy any of the rights of French citizens." Henceforward it became necessary to respect the laws; but the wrath of the reactionaries manifested itself violently in many pamphlets, as, for example, in "Les Pourquois du Peuple à ses Représentants"—an interrogatory addressed by the electors to their representatives. The Liberals themselves were somewhat disturbed by this movement, which they considered premature and altogether too radical. The Jews seem to have had the majority on their side; but, either from fear of the future or from ignorance, they were quite indifferent to the signal victory which had been gained for them. However, here and there, they expressed their satisfaction, as at Bischheim, on Oct. 20, during the festival of the Constitution, when the rabbi and the priest fraternized before the national altar; and at a banquet given by a wealthy Israelite the patriotic inhabitants of all beliefs were united. Strasburg, in particular, held aloof for a long time; and it was only on Feb. 21, 1792, that the Jews of the vicinity were admitted to the city, to take the oath of allegiance prescribed by the decree of the Legislative Assembly, Nov. 13, 1791.

Causes of Oppression.

It must be acknowledged that, as regards a very large number of the Jews of Alsace, the prolonged distrust of them was not altogether unjustifiable. Many of them engaged in questionable transactions in government bonds, such as assignats, promissory notes issued by the Revolutionary government, and in the surreptitious exportation of specie prohibited by law. Some became the agents in ordinary for the sale of the antirevolutionary pamphlets issued by the Cardinal de Rohan, and were the transmitters of the correspondence of those French citizens who had emigrated for political reasons; others instigated the emigration of young peasants harassed by the fractious priesthood. But there were also among them a number of patriots who were lavish in their gifts to the volunteers, and who to aid in similar contributions deprived themselves of their jewels, and even offered to the fatherland the candelabra of their synagogues. Soon they were treated with as much disfavor by the Radicals, who had come into power, as previously by the Liberals. When the Legislative Assembly called for 300,000 men, certain of the communes, such for instance as that of Wintzenheim, supplied the greater part of its quota from among the Jewish minority. It may be mentioned that while many of the numerous volunteers furnished by the Jews found means to evade military service, several rose to the rank of officer and took part in the battles of the Upper Rhine during the wars of the Republic.

In other places, as at Voegtlinshoffen, the Christians again sacked the dwellings and synagogues of the Jews (April, 1792). In February, 1793, a representative, named Couturier, who had been sent into the Lower Rhine district to investigate conditions there, declared in his report that he suspected most of the Jews of being "the agents of the English"; and in June, 1793, other representatives informed the Assembly that "the Jewish faith was abhorred in Alsace," because its votaries practised only usury and refused to work.

The Jacobin Club.

The Jacobin Club of Strasburg, successor of the "Society of the Friends of the Constitution" that had defended the Jews so zealously some years before, demanded on Oct. 17, 1793, the expulsion of all the Jews from the city, and on Nov. 19, Representative Baudot seriously proposed to devote himself to their regeneration by means of the guillotine. When the new revolutionary tribunal of the Lower Rhine began its circuit in the department (November, 1793), a number of Jews were guillotined; while others were sentenced to transportation to Madagascar for stock-jobbing, or for violations of the law regulating the rates of interest. On Nov. 22 the Directory Council of the district of Strasburg decreed in an arbitrary manner the abolition of the rite of circumcision and of permission to wear a beard; and it ordered the public burning of all books written in the Hebrew language. On Dec. 1 a commissioner of the court, named Martin, ordered the arrest of all rabbis, cantors, and synagogue officials of the district of Bari. When the Reign of Terror spread to Alsace there was scarcely a Jew of any means who was not mulcted in heavy fines, and imprisoned (May, 1794) with other suspects, under the pretext of being guilty of stock-jobbing, selfishness, or fanaticism (R. Reuss, "Seligmann Alexander, ou les Tribulations d'un Israélite Strasbourgeois pendant la Terreur").

Reign of Terror.

In June, 1794, the Jacobin municipality of Saverne ordered, under very heavy penalty, the destruction of all the Jewish gravestones in the city, declaring them to be "manifestations of fanaticism." Meanwhile, although the Jews were denounced by the national agents as parasites, only one Jew suffered death as a victim of the Reign of Terror in the department of the Lower Rhine, in 1794. So far as can be ascertained, none suffered execution in the province of the Upper Rhine. But persecution continued till the fall of Robespierre, and on July 22, 1794, a decree of the people's representatives, Hentz and Goujon, ordered the arrest of all the priests, rabbis, and cantors in the districts of Schlettstadt and Altkirch, and their imprisonment in the citadel of Besançon, where they were detained till August.

The lot of the Jews was not altered immediately after the downfall of Robespierre. Public opinion was still hostile to them in Alsace, and in November, 1794, the Constitutional Committee of the Convention had to order the authorities of Strasburg to protect their Jewish citizens, against whom the keen business competition that existed in the city had been charged, and who had greatly increased in number during the war. It is stated that there were at one time as many as 8,000 Jews in Strasburg, the total population being 45,000.

When the rural districts had quieted down, the Jews gradually dispersed, but did not largely apply themselves to agriculture. Those who remained in the cities, when not occupied in money-lending, were engaged in some sort of brokerage. According to the report of Laumond, prefect of the Lower Rhine for the year X., there were at that time, in this department alone, 587 pedlers. In the meantime the government strove to get the Jews to take up the more regular and the more productive occupations, but without marked success. The secretary general of the administration of the Lower Rhine, named Bottin, in his annual report for 1799, refers in detail to Hirtzel Bloch, a Jew of Diebolsheim, as an example worthy of imitation, of one who had applied himself with energy and success to agricultural work.

Under the Empire.

In the first years of the Empire, the general situation was not materially changed. Considerable fortunes had been accumulated by Jews who had speculated in assignats; others applied themselves to banking and to wholesale trading. The intellectual development of a minority among them attained to the same level as that of the general population. Adepts in the liberal arts appeared with the new generation that had been emancipated by the Revolution; and public offices were no longer denied to worthy Jews. Napoleon determined to hasten the development of this new element. To this end he sought to condemn in an official manner, and by an authority that he deemed more powerful than the civil law, all regrettable practises of the Jewish race. The first step toward this was his decree of May 30, 1806, summoning a convention of the Jewish notables, among whom were many Alsatians, such as Rabbi David Sintzheim, who took an important part in the discussions. At the instance of Napoleon this convention, presided over by M. Molé, councilor of state, discussed and approved a series of propositions in practical morals, which were to combine the law of Moses with the Code Napoleon. Action on these propositions was taken later by a second assembly of a more ecclesiastical character, designated as the Great Sanhedrin of France, which was convened in February, 1807, by order of the emperor. The Jewish religion was then officially established in Alsace. It was to be governed by two consistories, one at Strasburg and the other at Colmar; and a synagogue, built at Strasburg in 1809, took the place of the private houses of worship that had existed up to that time.

The Great Sanhedrin.

General Progress.

From this period the history of the Jews of Alsace is merged in that of the Jews of France. The antagonism of a large part of the rural population still manifested itself from time to time, and almost in an official manner, either in orders of the Councils General of the departments of the Upper and Lower Rhine or in certain decrees of the royal tribunal of Colmar; but in the Chamber of Deputies, members spoke no more against them; and for the first time, thanks to the restricted suffrage under Louis Philippe, a Jew, Colonel Cerf-Beer, was elected to represent one of the electoral districts of the Lower Rhine. The progress of public instruction, the diffusion of liberal ideas, and the efforts of the Jews themselves—who established an industrial school at Mülhausen and a school of arts and trades at Strasburg—gradually improved the conditions of the various Jewish communities of the country, especially in the higher spheres of provincial society. A speech delivered by Crémieux at Saverne in 1844 led to the abolition of the oath, *more Judaico*, required until then by the courts of Alsace. Alsatian Jews in larger numbers took part in the municipal and departmental councils of the localities in which they dwelt; they became members of the faculties of the colleges and lyceums; and were appointed to chairs in the Academy of Strasburg. They distinguished themselves at the bar, in the world of art and letters, and in medicine. At certain epochs of great political commotion more or less violent awakenings of the former antipathies toward the Jews took place. To this may be attributed the disturbances which occurred in February, 1848, at Altkirch, and in some other localities of the department of the Upper Rhine as well as at Brumath and at Marmoutier in the Lower Rhine—disturbances that had to be suppressed by troops. It was from the same cause that in January, 1852, after the *coup d'état*, trouble arose at Roestlach, in the canton of Ferrette. Again, at the time of the war in Italy in 1859, anti-Jewish manifestations occurred at Rixheim and at Ottrott. Other instances of a similar nature, and of comparatively modern date, could be named with little difficulty. Nevertheless one can not deny the great progress that has been made by the Jews throughout Alsace in the course of the nineteenth century, nor the gradual disappearance of the religious and social antipathy in which the Jews at one time were held. The prevalence of juster notions is probably due to the fact that the fear, entertained during the Revolution, that in a brief period of time the Jewish population, by reason of its rapid natural increase, would gain the upper hand over the Christian population, has long since been dispelled by fact. Just the reverse has taken place. In 1790, out of a population of about 600,000 in Alsace, there were from 20,000 to 23,000 Jews —more than one-thirtieth of the total. In 1871, more than eighty years later, the Jews numbered 30,000 in a total population of 1,200,000, or about one-fortieth of the whole. Moreover, through the removal of the Jews into the towns, the rural districts were relieved of a large part of the population, that could not live by other means than usury: such localities lost one-half of their Jewish inhabitants. Bergheim is an example of this. In 1784 this district had 327 Jews; in 1890 it had only 129. The population of Darmenach decreased from 340 to 232, and that of Hegenheim from 409 to 230.

Statistics.

The annexation of Alsace by Germany in 1871 led to the migration of a large number of Jews from the region to France (where anti-Semitism was then entirely unknown), to Switzerland, and even to America. In spite of the immigration of the German Jews in considerable numbers, the whole of Alsace-Lorraine, as late as 1890, contained but 34,615 Jews in a population of 1,560,000, or about one forty-fourth of the whole. Of this number Lower Alsace contained 17,810, Upper Alsace 9,760, and Lorraine only 7,075. The district of the city of Strasburg contained 4,023 Jews, that of Mülhausen 3,642, and that of Colmar 2,859, while the country district about Strasburg contained 2,606, and Hagenau 2,479; but there are several districts of the Upper Rhine that contain no more than 500 to 600 Jews each, and the larger number of those of Lorraine have only 600 or 700 Jews. In 1900 in Strasburg, of the total population of 136,000, the Jews numbered about 4,000.

AL-SAMERI: The man who made the golden calf in the wilderness. See SAMERI.

ALSARI, JACOB: Teacher of Hebrew and grammarian, who for eighteen years lectured in Hebrew in Zerkowo, Prussian Poland, near the Russian frontier. His son Joseph, born in Zerkowo in 1805, claims to have translated the family name into German, and acquired a reputation as Julius Fürst. Jacob Alsari wrote "Dore Ma'alah" on Angelology and on accents. He was also the author of a religious poem and notes to the Targumim. None of these works has been published. The name is said to be originally Arabic.

ALSARI, JOSEPH. See FÜRST, JULIUS.

ALSHECH (Arab. "the Elder"?), **MOSES:** Rabbi in Safed, Palestine, in the second half of the sixteenth century, and son of Ḥayyim Alshech. He was a disciple of R. Joseph Caro, author of the "Shulḥan 'Aruk"; and his own disciples included the cabalist R. Ḥayyim Vidal. Although Alshech belonged to the circle of the cabalists who lived at Safed, his works very rarely betray any traces of the Cabala. He is celebrated as a teacher, preacher, and casuist.

Little is known of his life. In his works he avoids mention of himself, telling only of his course of study; thus in the preface to his commentary on the Pentateuch he says:

> "I never aimed at things too high or beyond me. From my earliest days the study of the Talmud was my chief occupation, and I assiduously attended the yeshibah [college] where I made myself familiar with the discussions of Abaye and Raba. The night I devoted to research and the day to Halakah. In the morning I read the Talmud and in the afternoon the Poseḳim (casuists). Only on Fridays could I find time for the reading of Scripture and Midrash in preparation for my lectures on the Sidra of the week and similar topics, which I delivered every Sabbath before large audiences, eager to listen to my instruction."

These lectures were afterward published as "Commentaries" (perushim) on the books of the Holy Scriptures, and Alshech gives a remarkable reason for their publication. He says: "Many of those who had listened to my lectures repeated them partly or wholly in their own names. These offenses will be prevented by the publication of my own work." These lectures, though somewhat lengthy for our taste, were not tedious to his audience. The author repeatedly declares that in their printed form (as "Commentaries") he greatly curtailed them by omitting everything which was not absolutely necessary, or which he had already mentioned in another place.

His Lectures.

Like Abravanel and some other commentators, Alshech headed each section of his comments with a number of questions which he anticipated on the part of the reader; he then proceeded to give a summary of his view, and concluded with answering all the questions seriatim. His Commentaries abound in references to Talmud, Midrash, and Zohar, but contain scanty references to other commentaries, such as the works of Abravanel, R. Levi b. Gerson, or Maimonides. His explanations are all of a homiletical character; his sole object being to find in each sentence or in each word of the Scriptures a moral lesson, a support for trust in God, encouragement to patient endurance, and a proof of the vanity of all earthly goods as compared with the everlasting bliss to be acquired in the future life. He frequently and earnestly appeals to his brethren, exhorting them to repent, and to abandon, or at least restrict, the pursuit of all worldly pleasures, and thus accelerate the approach of the Messianic era. Alshech possessed an easy and fluent style; his expositions are mostly of an allegorical character, but very rarely approach mysticism. In his commentary on the Song of Solomon, he calls *peshaṭ* (literal explanation) and *sod* (mystical interpretation) the two opposite extremes, while he declares his own method of introducing allegorical exposition to be the safe mean between these extremes.

Alshech wrote the following commentaries, most of which have appeared in several editions:

1. "Torat Mosheh" (Commentary on the Pentateuch), first ed. Belvedere near Constantinople, about 1593. Complete, with Indexes, Venice, 1601.
2. An abstract of this commentary was prepared by Jos. b. Aryeh Loeb, and has appeared in various forms (Ḳiẓẓur Alshech ʽal ha-Torah), Amsterdam, 1748.
3. "Marot ha-Ẓobeot" (Collected Visions), on the prophets and their prophecies, Venice, 1803-7.
4. Extracts from this commentary are included in "Minḥah Ḳeṭannah," a commentary on the earlier prophets; published in the Biblia Rabbinica (Ḳohelet Mosheh), Amsterdam, 1724.
5. "Romemot El" (Praises of God), on the book of Psalms, Venice, 1605.
6. "Rab Peninim" (Multitude of Pearls), on Proverbs, Venice, 1601.
7. "Ḥelḳat Meḥoḳeḳ" (The Lawgiver's Portion), on Job, Venice, 1603.
8. "Shoshanat ha-ʽAmaḳim" (Lily of the Valleys), on the Song of Solomon. This commentary was the first to appear in print, and was edited by Alshech himself in 1591. According to this commentary, the Song is an allegory, and represents a dialogue between God and exiled Israel on the latter's mission.
9. "ʽEne Mosheh" (Eyes of Moses), on Ruth. Alshech says of the book of Ruth, "Surely from it we might take a lesson how to serve God"; and illustrates this statement throughout his commentary, Venice, 1601.
10. "Debarim Niḥumim" (Comforting Words), on the "Lamentations of Jeremiah." The title is not merely a euphemism for Lamentations; the author repeatedly attempts to show that there is no cause for despair, God being with Israel, and though the Temple is destroyed the Shekinah has not departed from the Western Wall, Venice, 1601.
11. "Debarim Ṭobim" (Good Words), on Ecclesiastes. Alshech calls Ecclesiastes, on account of its deep thoughts, "Waters without end" (oceans). He endeavors in the commentary to illustrate, as the central idea of the book, the dictum, "All is vain, except the fear of the Lord, which is the essential condition of man's real existence," Venice, 1601.
12. "Massat Mosheh" (Moses' Gift), on the book of Esther, presented by the author to his brethren as a Purim gift, Venice, 1601.
13. The commentaries of Alshech on these last-named five books ("megillot" or rolls) appeared in an abridged form, edited by Eleazer b. Hananiah Tarnigrad, Amsterdam, 1697.
14. "Ḥabaẓelet ha-Sharon" (The Rose of Sharon), on the book of Daniel, Safed, 1563, and Venice, 1592.
15. A commentary on the "Hafṭarot" called "Liḳḳute Man" (Gatherings of Manna), was compiled chiefly from "Marot ha-Ẓobeot," by E. M. Markbreit, Amsterdam, 1704.
16. "Yarim Mosheh" is the title of a commentary on Abot, gathered from the works of Alshech by Joseph B. M. Schlenker, Fürth, 1764.
17. A commentary of Alshech on the Haggadah (Home Service for the two nights of Passover) appears in the edition of the Haggadah called "Bet Ḥorim" (House of Free Men). The commentary is full of interesting remarks and earnest exhortations (Metz, 1767). Even in the introduction the laws for Passover and the order for the evening are treated allegorically, and made the vehicle for religious meditation. It is, however, not likely that Alshech wrote these notes for the Haggadah. They were probably gathered from his works long after his death, as otherwise the Haggadah would have been published with his commentary much earlier.
18. "Responsa"; as casuist he was frequently consulted by other rabbis, and his decisions were collected in a volume of responsa (Venice, 1605; Berlin, 1766). His contemporaries frequently quote his opinions. During his lifetime Azariah de Rossi produced his "Meor ʽEnayim" (Light for the Eyes), in which the author rejected some beliefs generally received as traditional; Alshech, at the request of his teacher, R. Joseph Caro, wrote a declaration against the "Meor ʽEnayim" as being contrary and dangerous to the Jewish religion (Kerem Ḥemed, v. 141).
19. Alshech wrote also a poem, "Dirge on the Exile of Israel," in a very simple style in ten rimed verses. It has been introduced into various earlier morning rituals, such as "Ayelet ha-Shaḥar" (The Morning Dawn). It is also contained in the collection of prayers and hymns called "Shaʽare Zion" (The Gates of Zion).

M. F.

AL-TABBAN, LEVI B. JACOB IBN, with the Arabic surname **Abu l'Fihm**: Grammarian and poet, flourished at Saragossa in the beginning of the twelfth century. He was the friend and elder contemporary of Judah ha-Levi, who probably was governed more by affection than by critical judgment, when he styled Al-Tabban "King of Song." Al-Ḥarizi's opinion of his poetic talent was not so high, for, in his enumeration of contemporary poets, he refers to "Levi and Jacob [which, as it has been suggested, may be a corruption of Levi *ben* Jacob] ibn Tabban" as verse-makers who "thresh poetry like straw" (compare "Taḥkemoni," chap. iii.). He is also alluded to by Abraham ibn Ezra in the preface to "Moznayim." He was the author of a grammatical work in Arabic, called "Miftaḥ" (The Key), of which only the title has been preserved. Of his liturgic poems a number are extant in the festival liturgies of Tripoli, Avignon, and Algeria, and can usually be easily identified by his customary acrostic, לוי בן יעקב or אני לוי. The spirit of melancholy which pervades his penitential poem in the Tripoli prayer-book (p. 63*a*), "To you, O men, I call," as well as the dirge-like recital of abuse and misery which it contains, shows the poem to have been produced in an age of persecution and tyranny practised against the Jews. To such circumstances point also others of his literary products, which are marked by distress and gloom. No doubt the allusions in them all are to the devastation of the province of Saragossa carried on by the Christians under Alfonso VI., whose triumphant advance Yusuf ibn Tashfin was called from Africa to check.

ALTABIB, ABRAHAM: Spanish physician who lived in Castile in the first half of the fourteenth century. He was the contemporary of Abraham ibn Zarzal, the physician of Don Pedro the Cruel, king of Castile. He wrote a supercommentary to Abraham ibn Ezra's Pentateuch-commentary, in which he often opposes Solomon Franco and his supercommentary. Altabib's work is still only in manuscript.

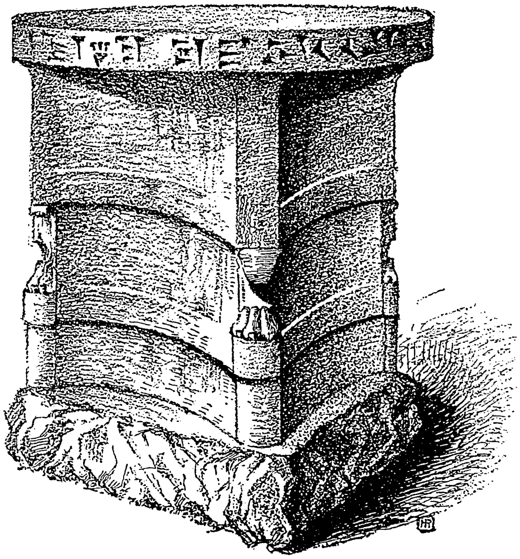
ALTAR (מזבח, *mizbeaḥ*, Aramaic מדבח, Ezra, vii. 17, "place of slaughter").—**Biblical Data**: In the book of Genesis it is often said that altars were erected (viii. 20, xii. 7, xiii. 8, xxvi. 25, xxxiii. 20, etc.). These altars were usually heaps of stones such as Laban and Jacob built to sacrifice upon (Gen. xxxi. 52 *et seq.*), for they are said to be "built" (בנה) in several instances (*e.g.*, viii. 20, xii. 7, etc.). Once (xxxiii. 20), the Altar is said to have been "erected" (נצב) and hence must have been a "pillar" (מצבה). Dillmann (*Com.* to Gen. xxxiii, 20), believes that here *mizbeaḥ* has been substituted for *maẓẓebah*. In the law of Ex. xx. 24 *et seq.*, the Altar which is preferred is an Altar of earth. Probably it is this kind of Altar which is referred to in Gen. xxxv. 1, 3, which was said to be made (עשה). The same law permits stone altars (Ex. xx. 25), but provides that they shall be made of unhewn stone and prohibits (v. 26) that they be ascended by steps. According to this law also altars may be built (or earthen altars made, עשה) wherever there is a theophany. Those referred to in Genesis mention as a rule no special theophany, though the pillar at Bethel (Gen. xxviii. 18-22), which was closely allied to an Altar, was erected in consequence of such a theophany; and hence all were thought probably to be so built.

The Altar for the tabernacle (Ex. xxvii.) was made of acacia wood overlaid with bronze. It was five cubits square and three cubits high. It had a grating or network below (v. 4) and a ledge (v. 5), intended perhaps for the priests to stand upon. It had horns at the corners and also four brazen rings in which to insert poles for carrying it. The utensils for it are also described—pans for clearing away ashes, shovels, basins or saucers for catching blood, flesh-hooks and fire-pans for removing coals. According to Lev. vi. 12, fire was to burn on it perpetually.

Altar in Tabernacle.

An Altar of incense, also for the tabernacle, is described in Ex. xxx. It, too, was to be made of acacia wood and overlaid with gold. It was to be square, a cubit each way, and two and a half cubits high. There was a molding (זר) around it, and four rings at the corners for the insertion of poles for transportation—all overlaid with gold. The tabernacle was also provided with a table for showbread, made of acacia wood, with a crown or molding of gold around it (Ex. xxv. 23 *et seq.*, xxxvii. 10 *et seq.*, Lev. xxiv. 6, Num. iv. 7). In Deut. xii. the liberty of building altars in more than one place is withdrawn, but the form of the Altar which is favored is not specified.

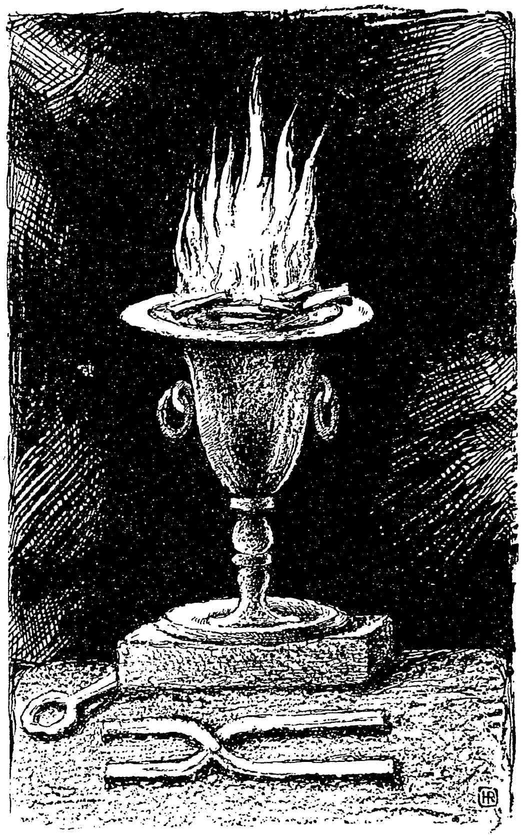
In the period covered by the books of Judges and Samuel sacrifice was offered in many places as in the book of Genesis; especially where a theophany occurred (Judges, vi. 11 *et seq.*, xiii. 3 *et seq.*; II Sam. xxiv. 16 *et seq.*). These sacrifices were in the first instance offered on the natural rock (Judges, vi. 20, xiii. 19). A rock might do also when in stress for want of a better Altar (I Sam. xiv. 33, 34). Altars were afterward built on such spots (Judges, vi. 26; I Sam. xiv. 35; II Sam. xxiv. 18 *et seq.*). The altars of the period were probably for the most part made of stone (see I Kings, xviii. 31, 32) and also had horns (I Kings, i. 50, 51).



Assyrian Altar.
(Now in the Louvre.)

The principal Altar in Solomon's Temple appears to have been of bronze (I Kings, viii. 64; II Kings, xvi. 14; II Chron. iv. 1 *et seq.*). If we may trust the chronicler it was of immense size—twenty cubits square and ten high (II Chron. iv. 1). If these dimensions are not exaggerated (Benzinger, "Archæologie," p. 388, accepts them), an ascent of steps must have been necessary for this structure. It was made, like all the furniture of Solomon's Temple, by workmen sent from Phenicia, and doubtless represented an innovation. The Temple seems also to have contained an Altar or table of showbread (I Kings, vi. 20 *et seq.*, vii. 48 *et seq.*), as did an earlier temple (I Sam. xxi. 6, 7), and the tabernacle. Ahaz modified the arrangements (II Kings xvi. 10 *et seq.*). While at Damascus he saw an Altar that pleased him, and he sent the pattern of it to Urijah, the priest, commanding that one like it be made for the Temple —a command which was carried out. It is inferred that this Altar was of stone since it was built (v. 11), and since the chief Altar of the temple was ever after of stone. Upon this Altar the daily sacrifices were offered thereafter, while the bronze Altar was reserved for the king. This stone Altar is called "the great Altar" (II Kings, xvi. 15). At the time of Josiah all the altars in the land but this were abolished, and the Temple became the sole place of sacrifice (II Kings, xxiii.), so that the history of the Altar is merged in that of the Temple.

Altar in Solomon's Temple.

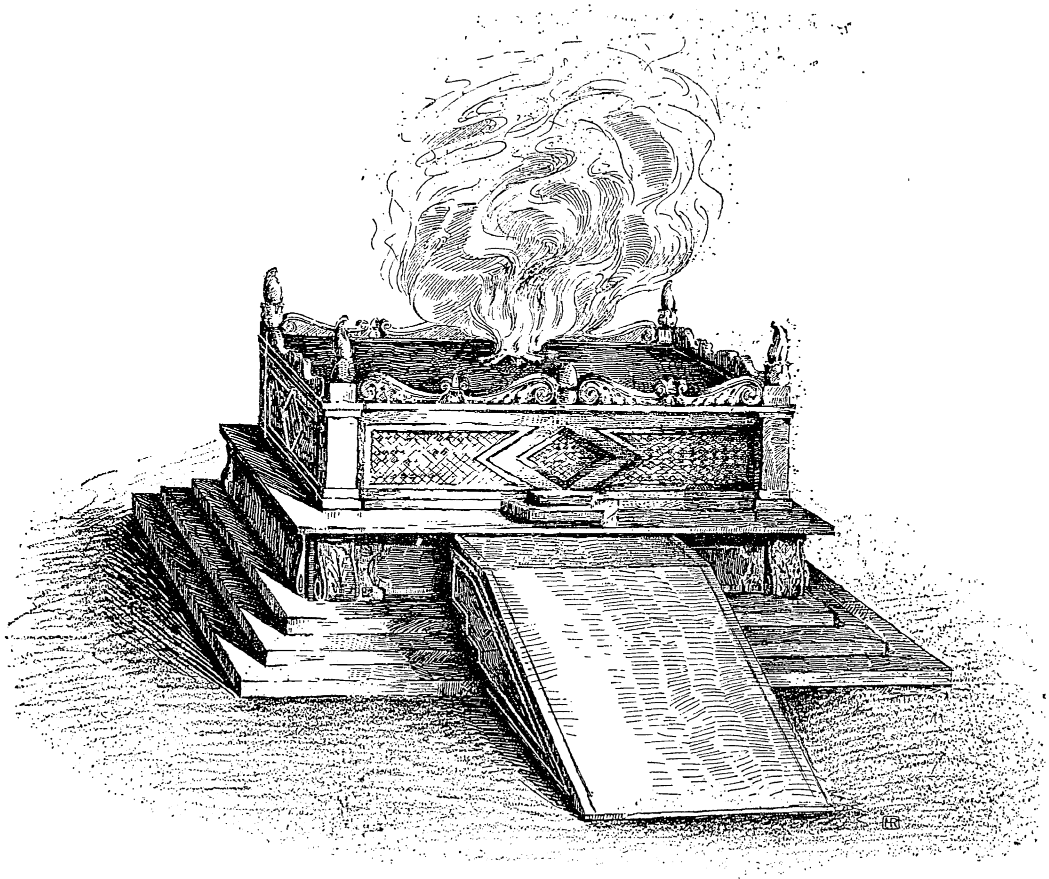


Persian Portable Fire-Altar.
(From Justi, "Gesch. der Alten Perser.")

In Ezekiel's ideal Temple the Altar of burnt offering was to be built as follows: a base eighteen cubits square and a cubit high to be surmounted by a platform sixteen cubits square and two high; on this another platform fourteen cubits square and four high

Ezekiel.

arose. Above this was the Altar hearth (אריאל), twelve cubits square and four high. This at each corner was surmounted by a horn a cubit in height (see Toy's "Ezekiel," S. B. O. T. p. 191). In the opinion of many scholars this description holds good for the Temple of Jerusalem, in which probably Ezekiel had served; perhaps therefore it was such an Altar as this which Ahaz saw at Damascus. Ezekiel is also in like manner a witness to the presence of the table-altar of showbread in the Temple (Ezek. xli. 22).



Bronze Altar of the Temple, Restored.

(After Calmet.)

Postexilic Days.

In the postexilic temple the principal Altar was of stone (Hag. ii. 15, I Macc. iv. 44 *et seq.*), while the table of showbread or "golden" Altar and Altar of incense also found places (I Macc. i. 21, iv. 49 *et seq.*; Josephus, "Ant." xii. 5, § 4; "Contra Ap." i. 22). When these implements were defiled by the heathen sacrifice of Antiochus Epiphanes they were replaced by new ones (I Macc. iv. 44 *et seq.*, 49 *et seq.*).

All these formed a part of Herod's temple. The main Altar was of stone, and according to Josephus ("B. J." v. 5, § 6), fifty cubits square and fifteen high, though the dimensions are differently given in the Mishnah (Middot, iii. 1). It was approached by a gradual ascent. G. A. B.

——**In Rabbinical Literature:** "The Altar is the means of establishing peace between the people of Israel and their Father in heaven; therefore, iron, which is used as an instrument of murder, should not be swung over it. What a guaranty for those that endeavor to establish peace between man and man, and between nations and nations, that no evil shall befall them!" said Johanan ben Zakkai (Mek., Jethro, 11; Tosef., B. K. vii. 6). And in the same spirit he said: "If the altar of the Lord must be built of whole stones (according to Deut. xxvii. 6), all the more should the men that perform the peaceful work of divine instruction be whole-souled and peaceful" (*ib.* 7). In a similar strain: "If the very stones of the altar are to be treated with respect and with decorum, how much more living man!" (Mek. *l.c.*, end).

Metaphorical Meaning of Name.

The Hebrew name for Altar (מזבח) is explained as signifying, "It wipes away sin; it nourishes the higher man; it fosters love for God; and it atones for all guilt" (Ket. 10*b*): its four letters מחילה, זכות, ברכה, חיים (initials of *meḥilah, zekut, berakah, ḥayyim*), point to Forgiveness, Justification, Blessing, and Life (Tan., Terumah, 10). It was considered a miracle and a proof of the manifestation of the Shekinah that the continual fire upon the Altar did not destroy the copper with which the stones were overlaid (Lev. R. vii.; Tan., Terumah, 11).

The Altar was made a special object of veneration on the seventh day of the festival of Tabernacles, when the people made a circuit around it seven times, and addressed it on departing: "To thee belongeth beauty, O Altar! To Him, the Lord, and to thee, O Altar!" (Suk. iv. 5). The belief was that the Altar on Mount Moriah was the same that Noah built, and that Adam had already brought his first sacrifice to this identical spot (R. Ishmael, in Pirḳe R. El. xxxi.; Targ. Yer. Gen. viii. 20; xxii. 9). For "upon sacrificial worship rests the world" (Ab. i. 2; Ab. R. N. (*A*) iv.; (*B*) v.; Yer., Ta'anit, iv. 68*a*; Bab., Ta'anit, 27*b*; Meg. 31*b*).

Still this regard for the Altar was not universal among the Jews. Aversion to it was manifested not so much by the Ḥasidim (Essenes), whose opposition was directed rather against the illegally appointed high priests than against sacrifices in general, as by the priests themselves, among whom the cry was raised by Miriam, the daughter of Bilgah (who became an apostate in the time of the Syrian invasion of the Temple): "O thou wolf who swallowest all the wealth of Israel, and yet failest to give relief in time of need!" (Suk. 56*b*; Yer., Suk. end; Tosef., Suk. iv. 28). But this very expression "wolf," applied to the Altar, came into later popular use without any allusion to its voraciousness (Gen. R. xcix.; Targ. and Jerome on Gen. xlix. 27).

Altars in the Temple.

Of the two Altars in the Temple, the golden one for the incense is said to symbolize the devotion of the soul, whose nourishment is of a finer nature; the bronze Altar for animal sacrifice, that of the body, which is fed on flesh (Midr. Tadsheh xi.).

When the destruction of the Temple with its Altar filled the people with alarm as they thought of their unatoned sins, Johanan ben Zakkai comforted them saying: "You have another means of atonement as powerful as the altar, and that is the work of charity, for it is said: 'I desired mercy and not sacrifice'" (Hosea, vi. 6); and he referred to Daniel x. 11, "the man of desirable virtues" (*ish ḥamudot*, translated also by the Septuagint, ἐπιθυμιῶν, "the merciful one"), who served God by almsgiving and prayer (Ab. R. N. (*A*) iv. after Dan. x. 11). The Altar being called, also, the "table before the Lord" (Ezek. xli. 22; Mal. i. 7, 12), the Altar of incense placed before the ark of the covenant is said to be only the symbol of the study of the Law by the wise, while the Altar of sacrifice represents the charity offered by the rich, who spread their bounties for the poor on the table in front of their houses (Targ. Yer., Ex. xl. 5, 6; compare Ab. iii. 3; Men. 110*a*; Ber. 55*a*; Ḥag. 27*a*; Yoma 71*a*). Paul applied the same idea of the Altar as the table of the Lord to the Communion meal (I Cor. x. 18-21). And while among the rabbis indigent and non-resident students of the Law were the chief ones chosen as partakers of the meal in order to render it a "table of the Lord" (see Ber. 10*b*), according to the Apostolic Constitutions (ii. 26, iv. 3), widows and orphans were called "the altars of the Lord," the widows representing the Altar of burnt-offering, and the virgins the Altar of incense. Even the law concerning the exclusion of impure gifts from the Altar of God (Deut. xxiii. 19) was applied to the Church charity. In striking contrast to the Church view of the superior merit of virginity, Tan. (Wayishlaḥ, 6) says: "The pious wife, remaining modestly within her domestic circle, is like the altar, in that she is an atoning power for her household."

But the Altar was also taken as symbolic of the sacrifice of one's life in the cause of God. The celebrated mother who saw her seven sons die a martyr's death (according to the Talmudic legend, in Hadrian's time, and not in that of Antiochus Epiphanes), cried out: "O my sons, go forth and tell Abraham your ancestor (supposed to sit at the Gate of Gan Eden): 'Thou didst build one altar whereon to offer thy son as sacrifice: I have built seven altars!'" (Giṭ. 57*b*). In IV Macc. vi. 29, xvii. 22, we also read that the blood of these saintly martyrs (the seven sons) was an atonement for Israel's sins; an idea often repeated in the Talmud (M. Ḳ. 28*a*). The death of the righteous has the same atoning power as the Red Heifer. On this idea rests Paul's doctrine of the atoning power of Jesus' death (Rom. iii. 25, and elsewhere) and the identification of Jesus with the Altar in Heb. xiii. 10.

Its Archetype in Heaven.

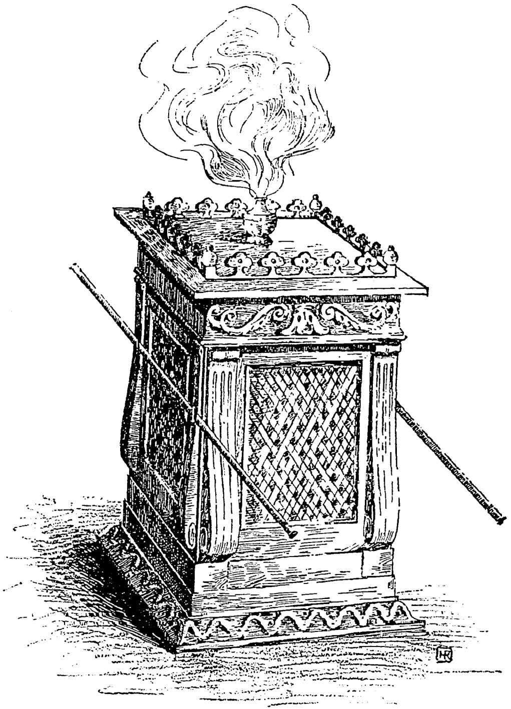
The Altar with its sacrifices on earth has, according to the ancient Gnostic view, its archetype in heaven: Michael, the archangel, as high priest offering (the souls of the saints) upon that Altar (Ḥag. 12*b*, Zeb. 62*a*, Men. 110*a*; Seder Gan Eden, and Midr. 'Aseret ha-Dibberot in Jellinek's "B. H." iii. 137). The same heavenly Altar is referred to constantly in the Church liturgy. Under this heavenly Altar the saints rest after death (Ab. R. N. (*A*) xxvi. and xii.). Similarly the souls of those slain for the word of God are said in Rev. vi. 9, viii. 9, to rest under the heavenly Altar. K.

——**Critical View on Forms and Origin:** A glance at the above material makes it clear that in form the simplest Altar was a natural rock or stone. A stone with a large flat top, in which were natural depressions for receiving the blood and natural channels to act as conduits for it, was usually selected. Several such have been identified (see "Biblical World," ix. 229 *et seq.*). The first advance toward complexity was the substitution of a heap of earth or of stones for the simple rock. This heap was sometimes surrounded by a trench (I Kings, xviii. 32), evidently for the purpose of carrying off water and blood, as was the case with the ghabghab in the sanctuary at Mecca (Wellhausen, "Reste des Arabischen Heidenthums," p. 105). A great departure from this is found in the Altar of Solomon's Temple and the Altar of the Tabernacle. The former was of bronze and of Phenician workmanship. Its form is in doubt. The Chronicler (II Chron. iv. 1) makes it an enormous square ten cubits in height, but there is no mention of it among the utensils of the Temple in I Kings, vii. It is mentioned in I Kings, viii. 64 (a late insertion, see Kittel in Nowack's "Hand-Kommentar"). Wellhausen ("Proleg," 5th ed., p. 45), and Stade ("Gesch." i. 333) hold that it was omitted by a late redactor, who thought that the bronze Altar of the Tabernacle must have been moved into the Temple by Solomon. Robertson Smith ("Religion of the Semites," 2d ed., p. 487) objects that no separate bronze Altar is mentioned as having been carried away by Nebuchadnezzar (II Kings, xxv.), and seeks to show that the pillars Jachin and Boaz had *ariels* or fire-pans in them, in which fire was kept burning by fat of the sacrifice. Thus they became huge candlesticks or cressets (compare also Toy, "Ezekiel," in Haupt's "S. B. O. T." p. 186, who accepts this view). If this be so, the two *ariels* of Moab which Benaiah smote (II Sam. xxiii. 20, *Heb.*) were similar pillars before a shrine (compare "C. I. S." i. 281, for a cippus on which pillars or posts before a shrine are figured). We learn from the inscription of Mesha (lines 11, 12, 17 *et seq.*), that an *ariel* was a structure which could be carried off. Most scholars, however, hold that the Altar of

Forms of Altar.

Solomon was a real bronze Altar (compare Benzinger, "Arch.," p. 388; Nowack, "Arch." ii. 41, and Stade, "Gesch." i. 333), and that Wellhausen's explanation of its excision from I Kings, vii. is correct. In favor of this rather than the view of Smith is the fact that according to Ezekiel (xliii. 16), an *ariel* was part of a very different structure. Probably the reason that it was not carried away by Nebuchadnezzar is that in times of stress it had been previously disposed of (compare II Kings, xvi. 17, 18). A large channel in the Temple rock at Jerusalem is thought by some to mark the site of the Temple Altar, and to have acted as a conduit for the blood from the Altar (see Nowack's "Hebräische Archäologie," ii. 41).

That the form of the Altar of the Tabernacle differed still further from the primitive type than that in the Temple is evident from what has been said already of its form. The form of Altar introduced by Ahaz is probably given in Ezekiel's description (xliii. 13 *et seq.*), already noted. The later altars in the Temple were evidently built on this general plan, though they differed in detail and in size.



Altar of Incense, Restored.

(After Calmet.)

Origin and Development.

Among the early Semites deities were identified with natural rocks or trees, and when an offering was presented to them it was placed upon the rock or suspended from the tree (see W. Robertson Smith, *l.c.*, pp. 185, 209 *et seq.*, and Doughty, "Arabia Deserta," ii. 515). This custom of sacrifice prevails in all essential features in parts of Arabia to the present time (Doughty, *op. cit.* i. 449 *et seq.*). Natural rocks, in which were channels and depressions for conducting and receiving the blood, served as Altars in Israel, at least in places, till the period of the Judges (compare Judges, vi. 21 *et seq.*; xiii. 19 *et seq.*; "Biblical World," ix. 328 *et seq.*). A great advance was made over the religious thought of this early period when it was considered possible to persuade the god to come and reside in an object selected by the worshiper. Such objects among the Semites were usually stones, and were called by the Arabs *anṣâb* (sing. *nuṣb*), and the Hebrews *maẓẓebot* (sing. *maẓẓebah*). They served not only as a residence of the deity (a *beth-El*, Gen. xxviii. 17), but also as an Altar. Oil was poured on the Altar (Gen. xxviii. 18), and the fat of sacrifices was smeared on it to bring it as closely as possible into contact with the deity (see Anointing and Maẓẓebah, also W. Robertson Smith, *l.c.* pp. 204 *et seq.*, and Wellhausen, "Reste des Arabischen Heidenthums," 2d ed., pp. 101 *et seq.*). The conception of sacrifice at this time was, as Smith has shown, commensal (see Sacrifice), and the god was able to dispose of his portion if thus brought into physical contact with it.

Fire-Altars.

The transition to fire-altars came, first, from the custom of cooking the meal, and, secondly, from a more elevated conception of the deity which made men believe that the god inhaled the smoke of the burning offering and so took his part in that way. This necessitated the addition of a fire-hearth to the maẓẓebah. This transitional form has actually been found in Abyssinia in monoliths with fire-hearths attached (see Theodor Bent's "Sacred City of the Ethiopians," pp. 180 *et seq.*). Where sacrifice was offered on a natural rock, it could easily be burned there. After a heap of stones had been substituted for a natural rock the addition of a fire-hearth as in the Altar of Ezekiel would be necessary. Naturally it was placed at the top of the structure in imitation of the natural rock, and not at the side as in case of those which grew out of the maẓẓebot. Solomon's bronze Altar was an innovation of civilization and gave way later, through the revival of an earlier form, to the stone Altar.

Bronze and Stone Altars.

The Altar of acacia wood overlaid with bronze is mentioned only by the Priestly writer and those dependent upon him. It would not have endured a sacrificial fire, and it is the opinion of modern scholars that it never had actual existence.

The Altar of incense belongs to the secondary elements or additions to the Priestly writer, and its existence before the time of Ezekiel is even more problematical.

The table or Altar of showbread is a survival in a different way of the commensal idea of sacrifice. The story of Bel and the Dragon in the Greek book of Daniel shows that the idea that the god actually consumed the food lay at the bottom of this part of the ritual. With advancing civilization the table increased in splendor till it was called the golden Altar.

Horns of Altar.

The origin of the horns of the various kinds of altars is shrouded in obscurity. Stade ("Gesch." i. 465) suggests that they arose in an attempt to carve the Altar into the form of an ox, while Robertson Smith held ("Religion of the Semites" 2d ed., p. 436), that they were substituted for the horns of real victims which had at an earlier time been hung on the Altar. At all events they were regarded as a most sacred portion of the Altar (I Kings, i. 51; ii. 28, and Lev. viii. 15; ix. 9; xvi. 18).

G. A. B.

ALTAR, JONAS (JONATHAN HA-LEVI): Bohemian rabbi; born 1755; died March 25,1855, in Goltsch-Jenikau. He represented the strictest orthodoxy as evidenced by his polemical pamphlet against Aaron Chorin, published in Prague in 1826, entitled, "Mefiboshet ben Yeonatan," in which he endeavors to prove the religious necessity of keeping the head covered during prayers. He wrote also a number of articles for the weekly "Zionswächter," edited by Enoch.

K. T.

ALTAR, MEIR HA-LEVI: Son of preceding; born in Goltsch-Jenikau, Bohemia, 1803; died there in 1868. He translated into German the Yoẓerot or liturgical pieces for Sabbath reading, published by M. I. Landau, Prague, 1836.

K. T.

ALTARAS: A family name variously spelled: טראס, טארע, טאראע and טרש. It is not certain whether this is the same name as that borne by the Spanish Karaite, Sidi ibn al-Taras (אלתראס), author of a work containing the opinions of Abu Alfaraj. Altaras is mentioned by Abraham ibn Daud ("Sefer ha-Ḳabbalah"; in Neubauer, "Mediæval Jew. Chron." i. 79) and by Joseph ben Ẓaddiḳ, in Neubauer, *ib.*, p. 93; see also Schreiner, "Jeschua' ben Jehudah," in "Program of the Berlin Lehranstalt für die Wissenschaft des Judenthums, 1900," p. 3).

D.

ALTARAS, JACQUES ISAAC: French shipbuilder and philanthropist: born in Aleppo, Syria, in 1786, and died at Aix (Department of Bouches-du-Rhône, France), Jan. 30, 1873. He was the son of a rabbi in Palestine, and left Jerusalem in 1806 to engage in business in Marseilles as a ship-builder trading with the Levant, in which he was successful.

In the middle of the century a project was started to assist Russian Jews to emigrate to Algeria, then recently conquered by France. Altaras took up the idea with zeal, and armed with letters of introduction from Guizot and with promises of support from many influential Jews, he started for St. Petersburg, in 1846, intending to petition the czar to allow 40,000 Jewish families to emigrate from Russia to Algeria, but he was promptly informed by the minister of foreign affairs, Count Nesselrode, that he had laid the matter before the czar, and that his application could only be supported on condition of an advance payment of about sixty rubles in taxes and fines for each family, in conformity with the Russian laws, which do not allow the Russian subjects to leave the country for lifetime. Altaras considered these difficulties insurmountable, and thus the project was abandoned. Altaras was president of the Marseilles Consistory for thirty years, and a knight of the Legion of Honor, and helped with Marini to found a school for Jewish children at Marseilles.

H. R.

ALTARAS, MOSES: An Italian rabbi of the sixteenth and seventeenth centuries; known as the author of a translation into Judæo-Spanish (but in Latin characters) of the Shulḥan 'Aruk under the title "Libro de Mantenimiento de la Alma," Salonica, 1568; Venice,1609 and 1713. It was written for the use of the Maranos who could not read Hebrew. According to Steinschneider, Altaras was merely the patron of the work, which was actually written by a man named Meir, otherwise unknown.

ALT-BREISACH: Ancient fortified city in the grand duchy of Baden, Germany; the scene of Jewish persecution.

In the fourteenth century, when the black death devastated the world (1348–51), this city, like that of Mayence, was the scene of a fearful massacre of the Jews, who were falsely accused of poisoning the public wells and thus causing the pestilence.

The total population in 1900 was 3,000, of whom about 450 were Jews. The community maintains fifteen benevolent foundations, and two sick-benefit associations.

ALT NEU SYNAGOGUE, PRAGUE. See PRAGUE.

ALT-OFEN (Hungarian; Ó-Buda, אובין): Old Hungarian city, now incorporated in Budapest as the third district. The earlier history of the Jews in Alt-Ofen begins with the twelfth century and ends with 1541, when the Turks obtained possession of the city. Jews probably settled at Ofen at the time of the Crusades, when so many fled from Germany into Hungary. The first certain information about the Jews in Alt-Ofen is of the year 1217, when Isaac ben Moses of Vienna, the author of "Or Zaru'a," mentions that the Jews of Ofen (meaning Alt-Ofen) submitted the question to him, whether the warm springs there might be employed for ritual baths. In the last half of the fifteenth century, according to the testimony of Israel Isserlein (died 1470), of Wiener-Neustadt, there was a Jewish congregation at that place ("Pesuḳim u-Ketabim," 184).

Under Feudal Lords.

The modern period began with the final expulsion of the Turks from Buda in 1686, when a few Jews returned. From this time on the congregation rapidly increased, fostered by the broad administration of the baronial family of Zichy de Vásonykeö, who as lords of the domain of Alt-Ofen exercised their feudal rights over the Jewish community in a most liberal and kindly manner. Owing to this attitude, the number of Jews constantly increased. In 1727 only 22 families lived there; in 1735 these had increased to 43 families, numbering 138 individuals, who collectively paid annually 160 florins "protection money" to the Zichy family. Two years later, the community was able to purchase the site of their synagogue from their feudal lord and a large district for a cemetery; the seller, Countess Susannah Zichy, contracting "to defend the Jewish congregation in the possession of this land against every one, native or foreign." On their part the congregation was bound to bury no stranger in this cemetery without permission of the feudal lord, under penalty of 24 Rhenish florins for each stranger. The burial tax was 6 florins for every corpse brought from outside the community; and one pound of pepper for the interment of every one dying by accident. This cemetery was located in the middle of the town (in the present Kasernengasse), upon the ruins of an old Roman bath, and was used by the Alt-Ofen community—which, in course of time, reached nearly 4,000 souls—until 1888. It was likewise used by the community of Pest until the year 1795. From the year 1765 until the end of the century it was the only Jewish cemetery in the territory of the cities of Pest, Ofen, and Alt-Ofen. The Ofen community, which in 1735 had numbered 32 families or 156 persons, was entirely disbanded in 1765, and the remains of those interred in their cemetery were exhumed and reinterred in the Alt-Ofen burial-place.

Here reposes, among others, J. B. Oppenheim—the first rabbi of the community—who was buried in 1754; and the inscription upon his tombstone designates him as "a luminary of Judaism." He was followed in office by Nathan Günsburger of Belgrade, who was also buried in this cemetery, in 1781.

Under the Jurisdiction of the Crown.

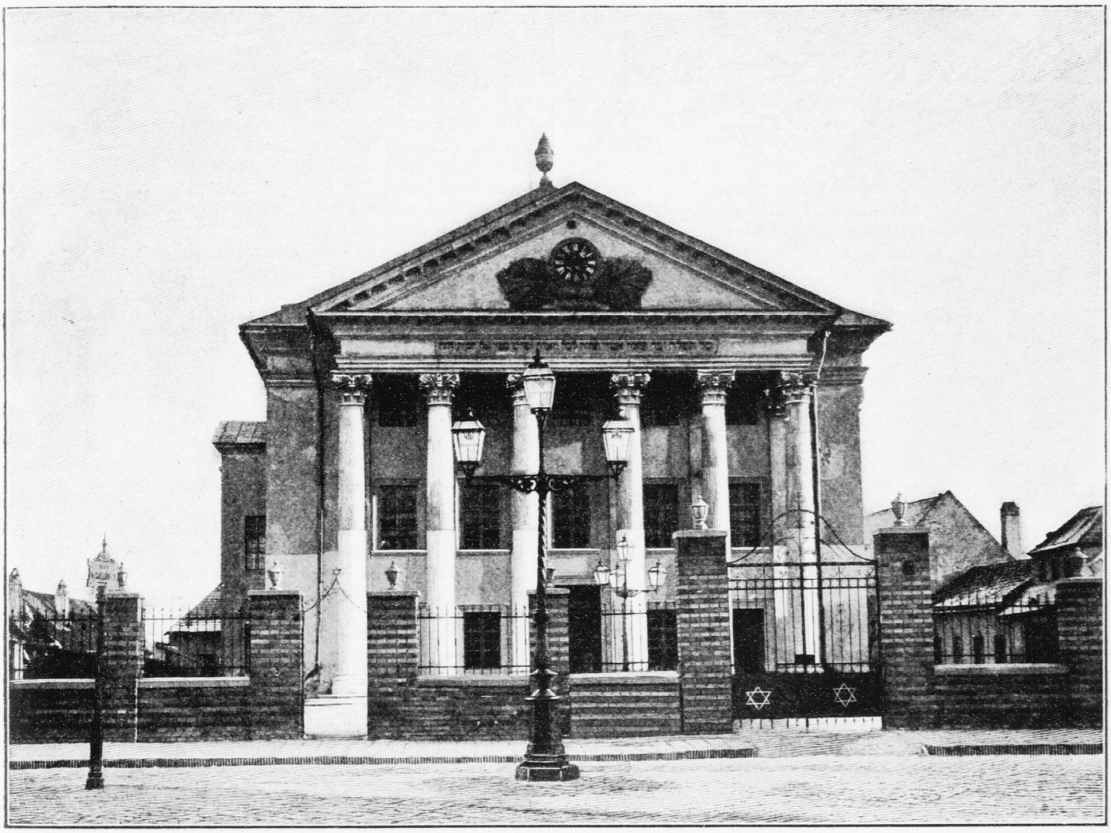
During the official life of these first two rabbis, the progress of the community of Alt-Ofen was continuous, owing to the constant acquisition of new rights and privileges conferred by their feudal governors. All these rights were secured by formal agreements, which were made—sometimes for a period of six years, sometimes for ten—with the baronial house of Zichy. Upon the transfer of Alt-Ofen back to the Crown, these privileges were confirmed by the successive kings of Hungary. These agreements secured to the Jewish community of Alt-Ofen at that time an aggregate of privileges of a character that scarcely another congregation in Hungary enjoyed. They were guaranteed the undisturbed practise of their religion under the protection of the baronial house; the right to decide, as a court of first instance, in disputes between Jews and Jews, and even between Christians and Jews; the liberty to buy and to sell the large mansions and grounds of the nobility upon securing specific permission in each case. In 1774 there were twelve such estates; and in 1806 twenty-four. These residences were exempt from the billeting of troops and the compulsory furnishing of post-horse relays. But new settlers, as well as those who desired to leave the city, had first to satisfy all congregational dues before they were entitled to the baronial protection. By this means the feudal lord secured to the community a source of revenue that at times was very considerable. In some cases as much as 1,500 florins was paid for the privilege of permanent residence.

Marriage was permitted without hindrance until 1787, after which every young couple had to pay a "Kremnitz-ducat" to the count, in return for which they were enrolled in the list of Schutz-Juden (Jews under protection). On their own premises the Jews might dispense beer, brandy, and kosher wine; they could pasture their cattle on the town common; might dress every kind of meat in the slaughter-house that they owned; "Sabbathposts" ('Erubin) might be set up, under the protection of the government; they might follow any trade with the exception of shoemaking, in regard to which the royal government in 1818 enforced certain limitations. The amount of the protective tax the community paid varied from 1,350 to 1,800 florins annually; in addition they were required to present the count with 200 florins on his birthday and at the Christian festivals of the New-year, Easter, and Martinmas (Nov. 11). It was not difficult for the community to raise these relatively large sums, because their own indirect revenues were very considerable. For instance, the returns from the sale of kosher liquor in 1807 amounted, for wine alone, to 6,500 florins ($3,250), for beer and brandy 210 florins ($105), irrespective of 150 firkins (1,500 gallons) of untaxed wine for private use.

In addition to the rights guaranteed to the community, they enjoyed certain prerogatives not less important. The right of jurisdiction naturally brought with it the right to carry their verdicts into execution; and when the matter was of a police or religious nature, they could incarcerate the condemned in the prison which was in the synagogue yard, or inflict blows with a stick—a maximum of twelve blows being fixed by the government. The community had the care of funds belonging to orphans, the administration of estates, and the settlement of disputed inheritances. The community thus gradually attained almost to the power of a political body. It became interested in the disposition of public works, as for instance the laying out of streets; and, indeed, the baronial authorities consulted in such matters with the Jewish community as well as with the Christians.

The Inner Organization.

The inner organization of the congregation was on a scale commensurate with this outward aspect. At its head was a judge, called "Judge of the Jews," who was elected by the twenty-four Councilors of the Community upon the issuance of the baronial permission, and in the presence of a baronial representative, of the rabbi and of two men learned in the Law. Of the Councilors, twelve belonged to the Inner, and twelve to the Outer Council. The tax-receiver, president of the community, and two "orphan-fathers" were also elected by the whole community. After their election they proceeded to the synagogue, where they took the oath of office at the hands of the rabbi. The Inner Council held sessions every Tuesday and Thursday, taking cognizance only of the more petty matters. Deliberation upon questions concerning the community as a whole required the presence of the Outer Council as well. The members of the Inner Council drew a small salary from the communal treasury, which was withheld, however, for unpunctuality. According to a decree of the baronial prefecture in 1801, absence from three sessions, without sufficient reason, was followed by arrest. Civil matters were decided by the judge and the Inner Council without consultation with the bet din—whose jurisdiction extended over religious affairs only—and they were paid after every session, the rabbi receiving 30 kreutzers,* the members or "dayyanim" 17 kreutzers each. The written transactions of the community were in charge of a notary, who was required to know both German and Hebrew, but the minutes had to be kept in German. The great power with which the Jewish judge was thus invested gave him considerable standing in the outer world as well as in the community; and this, after the fashion of the times, was expressed by various insignia of office. He carried a heavy staff embellished with an enormous silver knob as a sign of his rank, and in the street was always accompanied by a liveried footman.



Synagogue in Alt-Ofen.
(From a photograph.)

Institutions Founded.

The inner development of the community kept pace with its ever-growing influence and standing, and a number of religious, congregational, and benevolent institutions were organized in the second half of the eighteenth century. One of the first was certainly the Ḥebrah Ḳaddisha, which was founded in 1770 at the latest, as may be inferred from the fact that in 1780, at the instance of Dr. M. Oesterreicher—who was the first Jew to be graduated from the University of Pest—the Jewish hospital was established and placed under the management of the Ḥebrah. The still-existing "Biḳḳur Ḥolim Association," which took care also of the young with a view to the inculcation of religion among children, was established in that period. Several private synagogues, in addition to the large congregational one, afforded ample religious facilities. The synagogue possessed more than thirteen scrolls of the Law in 1760, as is apparent from the appendix to the "Masoret" of Meir Todros; the "Buda" (the Hungarian name for Ofen) mentioned there is most undoubtedly Alt-Ofen, because at this time there were no Jews in Ofen proper.

The greatest acquisition was, however, the Jewish public school, which, in pursuance of a special edict of Emperor Joseph II., was opened on May 17, 1784. This school was the first Jewish public school in Hungary. Considerable opposition attended its foundation, as it was generally feared that it would become a nursery of irreligion; indeed, so great was the fear of disturbance that public proclamation was made in all the synagogues by order of the prefect, that, under penalty of flogging, nobody should stand at the doors or windows of the school during sessions. The attendance was at first very sparse, so that endeavors were diligently made to close up the opposing private schools, and compel their pupils to attend the congregational one regularly. Slowly, however, the new institution won its way, and when in due time its accommodations became too small, Emperor Joseph II. presented the community with the adjoining house. Doubtless the loyalty and piety of the first teachers contributed a great deal to the increased esteem which the institution enjoyed; its fame extended through the length and breadth of the land. One of its first teachers was called to the public school of the Brody community, and the first preacher of the Pest community, Joseph Bach, was a teacher here.

---

* The value of a kreutzer to-day is about half a cent (U. S.) or a farthing (Eng.).

Moses Münz, Rabbi.

From 1781–90, the community was without a rabbi. Nathan Günsburger died in 1781, and although the prefect urged it repeatedly, the community could arrive at no agreement as to a successor. Wolf Boskovitz, a wealthy man, well versed in Jewish literature and a member of the community, had a high opinion of his own fitness for the post, but his own family worked against him. Some Galician linen-dealers directed the attention of their Alt-Ofen friends to Moses Münz, born in Podolia, and living as a private citizen in Brody (Galicia). An inquiry of Ezekiel Landau, the chief rabbi of Prague, elicited an answer which not only strengthened the recommendation, but styled Münz "a miracle of our times"; accordingly in 1790, Moses Münz, then forty years old, became chief rabbi of Alt-Ofen, which post he held until his death in 1831. The choice of the congregation was a most fortunate one; Münz's learning carried the reputation of the congregation far beyond the confines of Hungary. Numerous religious questions were submitted to him by congregations in all parts of the monarchy.

Inner Life of the Community.

In 1799 a number of remarkable regulations were enacted by the Council and bet din of Alt-Ofen, which were no doubt dictated by the circumstances of the times. These regulations afford an insight into the social and religious life of those days. The following prohibition (Issur) was proclaimed in all synagogues: "It is forbidden to give or receive presents: (*a*) to or from newly elected officers of the congregation and ḥebrah; (*b*) upon a wedding engagement; (*c*) before or after a wedding; (*d*) upon a bar-miẓwah (a boy's religious majority), or upon receipt of the degree of 'ḥaber' [associate] or 'morenu' [rabbi]; (*e*) upon taking up residence in a new dwelling." The following were also forbidden: the extravagant "third" Sabbath-meal before and after a wedding (of which usually almost the whole community took part); the banquet after a bride took her ritual bath, and dancing by the young people on that night; the extravagant wedding-dinners, in which uninvited guests participated; and finally the procession by the newly married pair—a custom imported by Suabian Jews—free passage for which had to be purchased with money. The reason for these prohibitions was the tendency toward display which led many to the verge of financial ruin. Many refused to accept office in the congregation, or to perform certain religious functions, because of the very considerable monetary outlays attendant thereon, outlays which had been allowed to grow into a species of almost religious duty. Possibly also the continuous influx of newcomers, who were for the most part poor, had some influence in bringing about this curious legislation.

Public Spirit.

Parallel with these regulations of the community run many of humane and patriotic nature, dating from the first half of the nineteenth century. Whenever the country at large was in dire need, the community rose to the occasion. In the national troubles of 1800 they took up a collection among their members, heading it with a communal contribution of 400 florins ($200); in 1810 they gave 2,625 florins ($1,312.50)—in those days a considerable sum—toward the foundation of the National Museum; which evidence of generosity induced the Palatine Archduke Joseph to send a very cordial letter of thanks to the community. In 1830 they gave 150 florins ($75) to the vicar Alt-Ofen von Pécsy, toward the building of the Metropolitan Church at Gran.

Jewish Scholarship.

In 1831, Rabbi Moses Münz died, after a short illness, and before the close of the year of mourning intriguing for the vacant post began. A large majority of the congregation elected Hirsch Heller, called "Ḥarif" (sagacious or quick-witted), who had been formerly rabbi in Bonyhad, and just before his call to Alt-Ofen had accepted a like position in Ungvár. Heller declined at first, because, according to the testimony of a friend, he knew nothing of the outer world, and had been overwhelmed with threatening letters from a vigorous reform party which existed in the Alt-Ofen congregation. In addition, the Ungvar congregation declined to release him from his engagement with them until he had served them long enough to defray the expense they had been put to. Only when the Alt-Ofen congregation paid 2,500 florins in compensation to that of Ungvar, and Heller had been convinced that by far the larger majority of the members were enthusiastically in his favor, would he enter upon the position in Alt-Ofen (April, 1834), where he, however, died, six months later, on October 27th. After Heller's death the rabbinate remained vacant for twenty-seven years; all religious matters were, during that period, attended to by the dayyanim, among whom, as among their predecessors, there were many who enjoyed a wide reputation for Jewish scholarship; for instance, Elhanan Dayyan, P. L. Freudinger, Jacob Neuschloss of Wetsch, I. H. Oesterreicher, M. I. Oesterreicher, his son and successor, and his son again, P. L. Oesterreicher, who died in 1899. There were numerous scholars among the lay members of the community, who maintained their own schools, some of which attracted many Talmud students. Prominent among these scholars were L. L. Löwenthal, L. H. Schlesinger, and M. L. Boscovitz. There were other scholars, as F. Goldberger, I. Totis, and J. Reuss, who had synagogues in their own homes, in which stipendiary Talmud scholars studied, and for their maintenance rich legacies were provided.

Closely following the death of Heller, several causes contributed to the decadence of the Jewish community at Alt-Ofen. Pest came rapidly into prominence, and since the feudal system of "protective agreements" fell into disuse, the wealthy merchants and residents of Alt-Ofen moved to Pest, leaving the poorer and straitened contingent behind to manage communal affairs. As a result, some 33,000 florins ($16,500) of the legacy-funds were applied to current communal expenses, thereby endangering the maintenance of many testamentary obligations. Another disintegrating influence was exercised by the growth of the many private synagogues, splitting up the community into many small congregations, and leading in 1851 to a bitter struggle between them and the official congregation, which continued till 1889, when the last of these small synagogues was definitively closed up. The political affairs of the country contributed much in those days to the decline of the community. Its patriotic stand in the fight for freedom in 1848 brought it almost to the verge of financial ruin. It donated of its own accord a large portion of the synagogal silver paraphernalia to the Hungarian government for coinage into money. Inasmuch as its young men had been found bravely fighting in the ranks of the defenders of the country, General Haynau, "the hangman of the Hungarian nation," laid a war-contribution upon it of 14,270 florins ($7,135) and of 50 horses with complete equipment for the same: a burden imposed upon no other congregation in Hungary. Under this load the community labored until at last, in 1889, the king (Francis Joseph) was pleased, on the proposition of the minister of public worship, Count Csaky, and on the application of the chief rabbi, Dr. Julius Klein, to remit the payment of the balance, amounting to 1,328 florins ($664).

(From a photograph.)

The reawakening of the Hungarian nation after 1860 injected new vigor into the community, which began to recover from the saddened circumstances of the previous decades. The first promising sign was the reappointment to the vacant rabbinate, of the young Marcus Hirsch, of Tisza-Bö, who in addition to profound Talmudic scholarship possessed wide secular knowledge, acquired at the university of Prague. Soon thereafter the management of the business affairs of the community was entrusted to the hands of Michael Stern and Samuel Ehrlich: two men of noble character and enthusiastic love for Judaism. They restored matters to something like order, and to their experienced administration it was owing that the sums which had been diverted from the legacy-fund were soon replaced. At this time (1863–65), too, the first Hungarian Jews were raised to the ranks of the nobility (S. W. Schossberger as "De Tornya" and Samuel F. Goldberger as "De Buda"); these were descended from Alt-Ofen families. In 1880, Dr. Hirsch was elected chief rabbi of Prague, and left Alt-Ofen, which remained without a rabbi another seven years till Dr. Julius Klein, of Szigetvár, became his successor. After his death in 1896, Dr. Elias Adler became rabbi.

The Present Community.

The following are statistics of the present condition of the community. It possesses a synagogue of classic architecture, built in 1820; owns thirty-eight Torah-rolls, silver synagogal paraphernalia weighing 23,000 grams; curtains for the Ark—some of which are masterpieces of the gold-embroiderer's art—all of which represent a value of 20,000 florins ($8,000). In its legacy-fund are nearly 100,000 florins ($40,000), the income from which is devoted to benevolent purposes. It has eighteen charitable societies, which are a veritable blessing for the numerous poor of the congregation. There are 810 families on its register, of whom nearly half are artisans, the majority of them being employed in the calico-print works of Samuel F. Goldberger & Sons, founded in 1780. Another important calico-factory is that of Gerson Spitzer, whose products find extensive sale in all parts of the world; it was founded in 1826. Other contributors to Hungarian industries are Wilhelm von Leipziger, knight of the order of the Iron Crown, who took a prominent part in securing the distillery law of 1889, which contributed so much to the rehabilitation of Hungarian finances.

ALTONA: City and port, situated on the Elbe, adjoining Hamburg, in Holstein, which was formerly a Danish duchy, but is now a part of the province of Sleswick-Holstein, Prussia. The Jewish community of this city was founded, under the jurisdiction of the counts of Schaumburg, at the beginning of the seventeenth century. The earliest tombstone in the old cemetery bears the date 1621. On August 1, 1641, the community received its charter from King Christian IV. of Denmark (see page preceding); and in 1671 it united with the congregation of Hamburg—then unimportant—and afterward with that of Wandsbeck, making one congregation known as the Three Communities אה״ו (א Altona, ה Hamburg, ו Wandsbeck). Their joint chief rabbi had his seat at Altona; and he exercised jurisdiction over the whole German-Jewish population of those communities as well as over that of the duchy of Holstein. These conditions continued until 1811, when, under the French occupation, Hamburg was ordered to form a Jewish community by itself. The union was dissolved; and the Altona community has since then been officially known as Hochdeutsche Israeliten-Gemeinde zu Altona (High-German Jewish Community of Altona). From the beginning of the eighteenth century until 1885, there existed also a Portuguese-Jewish community, known as Bet Jacob ha-Ḳaṭan, and later as Neweh Shalom, which was, however, but a branch of the Portuguese congregation of Hamburg.

The economic conditions of Altona were much improved by the settlement of Jews, on whom King Christian IV. bestowed the privilege of engaging in shipbuilding. The Hamburg Jews, who had no such privilege, turned their activities to Altona; and the growth of the Altona whale-fishery in the eighteenth century was due largely to their efforts.

The Three Communities had the following chief rabbis: Solomon Mirels of Neumark, 1678–1706; Ẓebi Ashkenazi (Ḥakam Ẓebi), and Moses ben Süsskind of Rothenburg (died 1712); Ezekiel Katzenellenbogen, known by his responsa "Keneset Yisrael," 1712–49; Jonathan Eibenschütz, born 1690, formerly rabbi at Prague and Metz, well known for his keen intellect and vast knowledge, author of "Kreti u-Pleti," "Urim we-Tummim," and other works (died 1764); Jacob Emden (1745), who had for a short time been rabbi of Emden, but who afterward lived privately in Altona: it was he who accused R. Jonathan of being a secret follower of Shabbethai Ẓebi, and attacked him in various pamphlets; Isaac Horowitz, 1767; David ben Loeb, Berlin (died 1771); and Raphael ha-Kohen (grandfather of Gabriel Riesser), 1776–99, who was particularly learned in Jewish civil law, and resigned his office on account of a conflict with the Danish government, which disputed his right of excommunication. Raphael intended to go to Palestine, but was prevented by the Napoleonic wars. He died in 1803. His successors were Ḥayyim Zebi, Berlin (1799–1802), and Ẓebi Hirsch Zamosz (1803–7), author of "Tiferet Ẓebi."

Among the chief rabbis who held office after the dissolution of the union were: Akiba Wertheimer, (1815–35); Jacob Ettlinger (1835–71), who, by his halakic writings and his activity as a teacher, greatly promoted the study of the Talmud, and upheld the rabbinical reputation of Altona; Dr. Loeb (1873–92), a scholar and eloquent preacher; and, finally, Dr. M. Lerner, who was elected in 1894. Besides the chief rabbi there were two rabbinical assistants (dayyanim, whose special function it was to render ritual decisions), Jacob Cohen and Elijah Munk (died 1899). Subject to the jurisdiction of the chief rabbi are several communities of Holstein: Kiel, Rendsburg, and Friedrichstadt; also the neighboring community, Wandsbeck, which, however, has its own rabbi.

The community of Altona possesses a synagogue, erected after the fire of 1713; a lecture-hall, founded by Ḥakam Ẓebi; an orphan asylum; a home for the aged; a school for boys and girls; and a society for the promotion of Jewish knowledge. The present cemetery is situated in the suburb of Bahrenfeld. In Altona itself there are, side by side, the old German-Jewish cemetery, in which Chief Rabbi Ettlinger was the last person interred, and the very interesting cemetery of the Portuguese Jews of Hamburg, which was purchased in 1611 and closed in 1871 (see illustration).

The Jewish population in 1900 numbered about 2,000, in a total of 150,000; whereas soon after the end of the Danish rule, in 1867, it numbered 2,350, in a total population of 50,000.

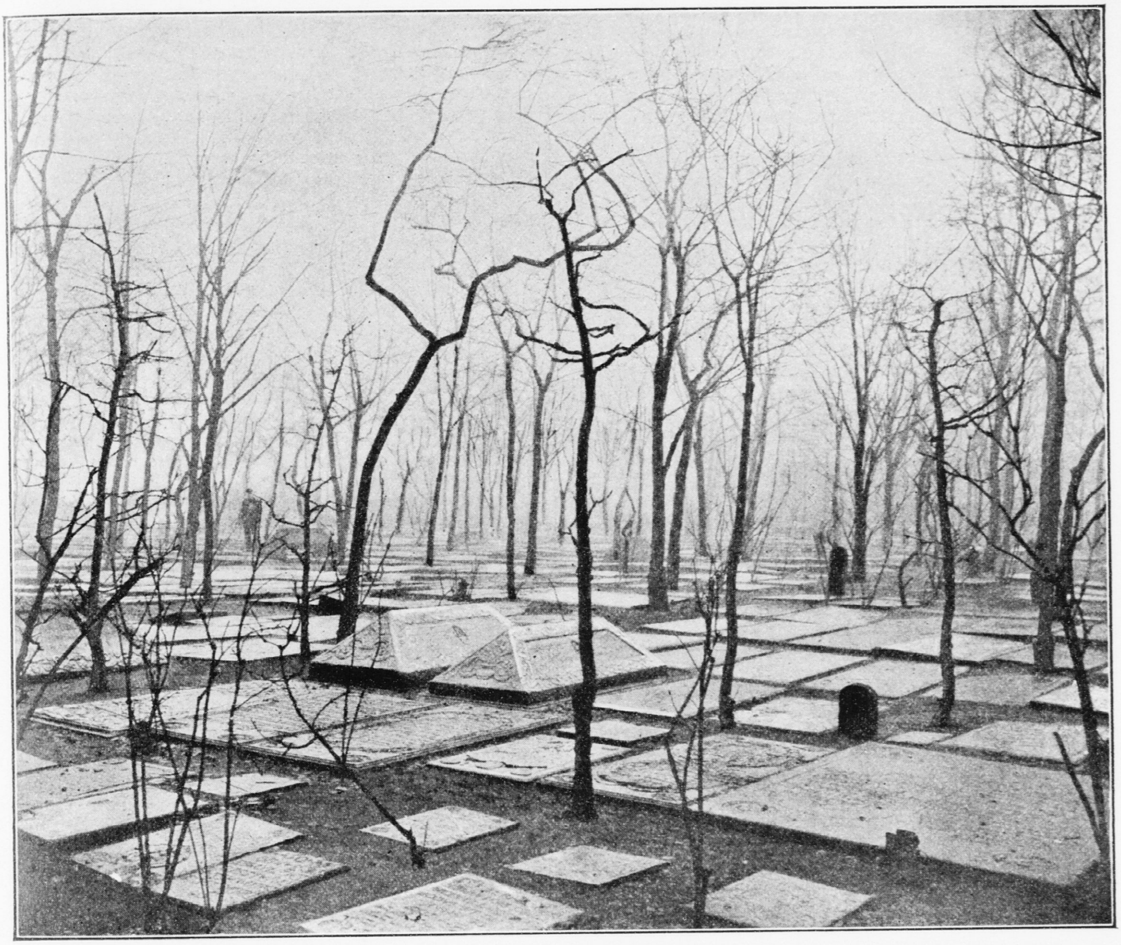
A. F.

ALTRUISM: A term derived from the late Latin *alter hic* ("this other"); dative, *alteri huic*, contracted to *alteruic*. It seems to have been first used by Comte (1798–1857), to designate conduct impelled by motives utterly unselfish and inspired by the sole desire to bring about the happiness of another without regard to, or even at the expense of, one's own. As such it is opposed to egoism. It stands to reason that there is no equivalent of it in ancient or modern Hebrew. The very idea which it connotes, exaggerated self-obliteration, is not indigenous to Judaism. An analysis of the basic idea of Jewish ethics will reveal the reason why. Both Altruism and its contrary, egoism, belong to ethical systems founded on the concept of happiness as the ultimate motive of conduct and the *summum bonum*. According as the happiness of the individual self or that of the individual other or others is projected into dominant importance, hedonistic (*i.e.*, happiness) ethics becomes either egoistic or altruistic. And even those systems, largely theological, that seemingly have harmonized Altruism with egoism have done this by accentuating that self-happiness will only be attained through conduct leading to the increase or the establishment of the happiness of another.



Portuguese Cemetery of Altona.

(From a photograph.)

In this sense both the ethics of Christianity and Buddhism were at one and the same time egoistic and altruistic. Self-obliteration in this life assures self-realization in the other. Self-realization being, according to Buddhism, the mother of all evil, self-obliteration is the road to permanent happiness.

Ethics of Christianity and Buddhism.

Buddhistic as well as Christian Altruism are thus founded on other-worldliness, which in the Christian scheme flowers in the assurance of personal felicity in a higher state, whereas in that of Buddhism it promises release from all evil of self-existence in the blissful and happy Nirvana.

The non-theological systems of ethics, almost without exception, have failed to establish a higher harmony between egoism and Altruism. In the more recent writings on evolutionary ethics—the school of Herbert Spencer—the endeavor is made. Upon psychological grounds it is maintained that every altruistic act is, if not in its motives, always in its effects egoistic. Maternal love, for example, leads to the happiness of the mother through her own self-sacrifice. The pre-Spencerian (hedonistic) schools have posited either self or the other as the fountain-head of moral conduct. Comte virtually reverted to the fundamental thought of the English moralists of the seventeenth and eighteenth centuries, according to whom the sympathies rooted in human nature are the mainsprings of morality (Cumberland, Shaftesbury, Hutcheson, Butler, Paley, Adam Smith). Modern Altruism is a reaction against the exaggerated egoism of the philosophy of the French Revolution, leading to the exaltation of such figments and abstractions as the economic man—a being supposed to act upon one sole motive to the exclusion of any other; viz., unmitigated or even enlightened selfishness. Modern liberalism in politics, religion, and economics having taken its cue from the writings of Rousseau, Voltaire, and the encyclopedists, it was but natural that the pendulum of thought should swing back to the opposite pole and posit as the secret of all true life an equally excessive love for the fellow, in which the self of man failed to receive its legitimate due. This one-sided emphasis upon altruistic conduct in turn evoked the counter-revolution culminating in the apotheosis of the selfish, desocialized man, the "overman" of Nietzsche's doctrine, as before him Max Stirner had developed the theory of the selfish man's supremacy and autocracy.

Morality Summed up in Service.

This fatal antithesis beween self and others is avoided in the ethics of Judaism. The fundamental motive of the moral life is, according to Judaism, not the quest for happiness. Morality is summed up in service. The purpose of human life is service now and here. In the creation narrative man is destined to be ruler over every being and thing created. In this purpose all that live and breathe in the wide sweep of human fellowship have a part. None can be spared. He who should efface himself would commit as grievous a breach of the covenant as he who should crush another. The measure of the service which is upon us is contingent upon the strength, talent, possession, and power which have come to us. The ethical ambition on this basis runs to the desire for increase of strength, knowledge, possession, and power. Weakness is not a virtue. The stronger the man the better able he is to render service. Therefore, the appeal of Judaism is that each shall become a self and strive for the realization of the fullest possible measure of self. Self-realization is the realization of a part of the service placed upon all. But, on the other hand, and flowing from the same concept of service, what is ours is ours only as a means to enlarge the common life. We are stewards of our talents and property, trustees thereof in the service of all. As the weakness of one diminishes the sum of service rendered, it becomes the duty of the strong to look after the weak; to help them to strength, in order thus to increase the sum total of strength at the disposal of all.

In this way Judaism overcomes the opposition of egoism to Altruism and finds the higher synthesis on the basis of the community of service. Self-assertion flowers into the sympathy and help extended to others struggling for fuller self-realization. In the Jewish view of life as a service both *ego* and *alter* find their higher harmony. Hillel's maxim, "If I am not for myself, who will be? If I am only for myself, what am I? If not now, when then?" epitomizes this concordance of self and the others. Egoism is limited to its legitimate field, that developing every man into as strong a self as is possible with a view to more perfect service; and even so is Altruism saved from exaggeration. Self-effacement is contrary to the moral law of life. The highest aim in the economy of society and of creation is self-assertion in the service of all. Not egoism which feeds self at the expense of others, nor Altruism which effaces self while thinking of others, but mutualism as implied in the words, "Love thy neighbor as thyself," is the guiding principle of Jewish ethics.

E. G. H.

ALTSCHUL, ALTSCHULER, ALTSCHUELER, or **ALSCHULER**: Various forms of a family name borne by Ashkenazic Jews in many countries. Though each of these forms now represents groups that are distinct from one another, and that, apparently, are not interconnected by ties of relationship, they all seem to have had a common origin and to have been used and given without discrimination. It is, nevertheless, possible that the name at the outset was applied to more than one family. All records prove that the original seat of this family was Prague, the capital of Bohemia; and the transcription of the name in two separate words, אלט שול, or אלט שולר, or the abbreviation of the same, א"ש—which latter has often been misunderstood (see Nos. 19, 27, below)—clearly indicates its etymology. It is derived from the Alt'-Schul' or Old Synagogue, which still exists at Prague, and is not to be confused with the Altneuschul; and the first Altschuls, or Altschulers, were either prominent attendants at or patrons of this place of worship (see Names).

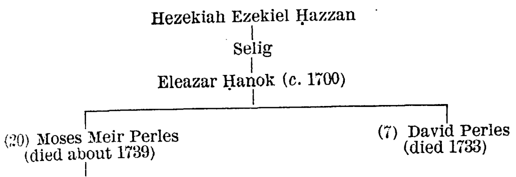
The name Altschul is supposed to have been first borne by a descendant of Provençal refugees who had settled in Prague about 1302. Prague, besides being the place of origin, was also the chief seat for several centuries of the Altschul or Altschuler family. But after the expulsion of the Jews from that city, in 1542, many of the Altschuls who found an asylum in other countries did not return; and so, from the sixteenth century on, we find them prominent in what is now Russian Poland, Lithuania, and Russia proper (see Nos. 9, 23, 30), and in Italy (see No. 28).

Later, members of the family dispersed still further (see Nos. 3, 4, 12, 25, 29); and to-day the name is borne by numerous families throughout Austria-Hungary, Germany, Russia (where it is claimed that the writer Moses Rivkes and even the Gaon of Wilna are Altschuls), England, and America. In the United States several Altschulers have achieved distinction, notably the Hon. Samuel Altschuler, candidate for the governorship of Illinois, and Alschueler, the violoncellist.

Reliable records from which to prepare a complete genealogical tree are lacking. The three charts given below are perhaps all that can be established with any degree of certainty. For the reason just stated, some members' names appear in the following biographical notices that are not in the charts, and vice versa. Because it occurs most frequently the form of "Altschul" has been adopted throughout the three tables, as well as in the list of individual members; though, as has been said, the other forms of the names also occur.

(Provençal refugee, 1302?)
(2) Abraham Eberle (c. 1490)
(17) Moses (c. 1542)
(15) Jacob (died 1596)

Eleazar Perles
Abraham Enoch Perles
(16) Judah Aaron Moses (c. 1610)
(8) Eleazar Perles (c. 1635)
(13) Isaac (died 1676)
(3) Abraham (c. 1680)



H. B.

1. Aaron ben Moses Meir Perles Altschul: Died in 1739. He was the author of "Ṭeharat Aharon" (The Purity of Aaron), a commentary on Isaac ben Abba's "Seder ha-Niḳḳur"; making numerous additions to the text, and glossing many difficult passages in Judæo-German. The work was published at Offenbach in 1725 (some allege that it had been published in 1721 also); and a manuscript copy is in the Bodleian Library, Oxford (Neubauer, "Cat. Bodl. Hebr. MSS." No. 792).

2. Abraham Eberle Altschul: So far as known, the earliest bearer of the name of Altschul. He lived in Prague toward the close of the fifteenth century.

3. Abraham ben Isaac Perles Altschul: Printer and publisher at Amsterdam during the second half of the seventeenth century. His father also was a publisher and printer. In 1678 Abraham produced a prayer-book for the Sabbath, and in 1685 reedited the "Grammatical Table" of Joseph Shalit. He is also the author of a cabalistic commentary on the Pentateuch, as yet unpublished (Steinschneider, "Cat. Bodl." cols. 704, 1526, 2827).

4. Abraham ben Jacob Altschul, of Leipa, Bohemia: Printer at Frankfort-on-the-Oder, in 1697 (Steinschneider, "Cat. Bodl." col. 2817).

5. Ascher Anschel ben Naphtali Herzel Altschul: Printer in Moravia and Bohemia during the first quarter of the seventeenth century. In 1603 he was at Prossnitz; in 1604, at Prague with the sons of Moses Schedel; and from that year down to 1623 with various other Jewish publishers, notably the Prague firms of Ḥayyim Cohen, Moses Cohen, Katz, and Lemberger (Steinschneider, "Cat. Bodl." col. 2840).

6. David ben Aryeh Loeb Altschul: A learned member of the community of Prague; lived toward the close of the seventeenth century. He collected notes for a commentary on the Bible, which his son Jehiel Hillel (No. 28) completed and edited.

7. David ben Eleazer Ḥanok Perles Altschul: Cantor at the Pinkas synagogue in Prague; died in 1733. On the death of Emperor Leopold I. (May 5, 1705), he composed an elegy in Judæo-German, which he called "Ebel Kabed"—Grievous Mourning (Steinschneider, "Cat. Bodl." cols. 550, 884; "Serapeum," ix. 315, 344; Wolf, "Bibl. Hebr." ii. 1320).

8. Eleazar b. Abraham Ḥanok Perles Altschul: Editor and author; died in Prague between 1632 and 1638. He was the editor of several works, to most of which he added remarks, glosses, or comments of his own. In the epitaph written for him by his son Isaac (No. 13) he is quoted as the author of several works; but these are no longer extant. The only one that may perhaps be attributed to him in its entirety is the "Diḳduḳe Yiẓḥaḳ," a grammatical work; but it has been claimed that even for this book the notes had been previously collected by his father-in-law, Isaac b. Jekuthiel (Kohen) Kuskes, and that the name was not given to the work merely in honor of the latter. The "Diḳduḳe Yiẓḥaḳ" is still unpublished (Neubauer, "Cat. Bodl. Hebr. MSS." No. 1497).

The following works were edited by Eleazar: (1) "Ḳeneh Ḥokmah" (Acquire Wisdom), or "Ḳeneh Binah" (Acquire Understanding). This book, which is really part of the "Sefer ha-Ḳanah," and which the editor, in the preface, claims to have copied from a parchment manuscript "several hundred years old," found by his father in a loft, is mainly a cabalistic exposition of the "Ḳeriat Shema'," as well as of the divine name of seventy-two "letters of abbreviation," etc. (Prague, 1609–11). The Zohar and other cabalistic sources have manifestly had an influence on this work (Steinschneider, "Cat. Bodl." col. 637; "Literaturblatt," xi. 761). (2) "Zebaḥ Todah" (Sacrifice of Thanksgiving), containing the "Prayer" of Solomon Luria, the "Thirteen Prostrations" of Abigdor Kara, and the "Supplication" of Ishmael ben Elisha, published at Prague in 1615 (Wolf, "Bibl. Hebr." vol. iii.). (3) "Yam shel Shelomoh," Solomon Luria's commentary on the treatise "Baba Ḳama" (Prague, 1616). (4) "Tiḳḳun Moẓaë Shabbat," a prayer-book for Sabbath night. A cabalistic exposition of the Sabbath-night service is added to the text; and toward the end of the volume there is a German adaptation of some of the prayers. The work was first published by Eleazar's son Isaac (No. 13) at Amsterdam in 1655; and with it is included the epitaph composed by Isaac for his father, of which mention has already been made (Steinschneider, "Cat. Bodl." col. 474).

9. Eliakim (Gottschalk, Goetzel) ben (Zeeb) Wolf Altschul Brodsky: Preacher and dayyan in Russia at the beginning of the nineteenth century. He wrote "Sheḥif 'Eẓ" (The Thin Board; see Ezek. xli. 16, where *sheḥif 'eẓ* is translated "wood"), a supercommentary on Rashi; and "Ereẓ Ḥemdah" (The Coveted Land), on the division of Canaan by Joshua. These two works, together with an edition of the "Zebed Ṭob" by his father (Zeeb) Wolf Altschul, were published in one volume in Warsaw, 1814 (Fürst, "Bibl. Jud." i. 43; Benjacob, "Oẓar ha-Sefarim," p. 151). H. B.—W. M.

10. Emil Altschul: Austrian physician; born at Prague, Bohemia, April 8, 1812; died there 1865. The son of a rabbi, he was intended for a rabbinical career, and therefore studied Hebrew and the cognate languages. But a strong inclination for the study of medicine induced him to attend the University of Vienna, where he obtained the degree of M.D. in 1832. In Boskowitz, Moravia, where he practised, he made the acquaintance of a physician who called his attention to the high value of homeopathy, and from that time he devoted himself to this new school of medicine. In 1848 he became professor in the medical department of the University of Prague. He wrote: "Vollständiges Rezepten-Buch der Praktischen Augenheilkunde"; "Taschenwörterbuch der Praktischen Arzneimittellehre für Ausübende Augenärzte" (1836); "Miscellen aus dem Gesammten Gebiete der Medicin" (1838); "Der Homöopathische Zahnarzt" (1841); "Kritisches Sendschreiben über das Bisherige Verfahren mit den Sterbenden" (1846; this pamphlet, on the prevailing treatment of the dying, made a great stir among Jews); and "Lehrbuch der Physiologischen Pharmakodynamik" (1850).

Altschul founded and published, in 1853, the first homeopathic magazine in Austria, under the title "Monatsschrift für Theoretische und Praktische Homöopathie."

S.

11. Ḥanok ben Moses Altschul: Learned member of the Jewish community of Prague; born in 1564; died in 1633. For thirty years he served as synagogue messenger and communal notary of his native town, and was one of the signers of the much-debated will of Mordecai Meisel. On one occasion, in 1623, Ḥanok narrowly escaped an ignominious death. Some tapestry had been stolen from the palace of Count Charles of Lichtenstein; and the investigation ordered by the "Stadthaupt" (city mayor), Albrecht von Waldstein, seemed to incriminate Ḥanok, as well as two Jews who had bought the stolen goods. The three were sentenced to be hanged; but, fortunately, facts exonerating Ḥanok were discovered and he was liberated.

12. Ḥayyim ben Mordecai (Gumpel) Altschul: Employed with his brother Raphael (No. 25) as a printer, probably at Amsterdam, from 1691 to 1732 (Steinschneider, "Cat. Bodl." cols. 2849, 3023).

13. Isaac ben Eleazar Perles Altschul: Author; died in 1676. He seems to have settled in Amsterdam about 1650; for he published in that city the "Tiḳḳun Moẓaë Shabbat" of his father, Eleazar Perles Altschul (No. 8), and another Sabbath prayer-book, that contained a Judæo-German version of many of the prayers. To Isaac is also ascribed the editing of two cabalistic works: "Siaḥ Yiẓḥaḳ" (The Meditation of Isaac), a collection of prayers, and "Wayizra' Yiẓḥaḳ" (And Isaac Sowed), a key to the Zohar (Steinschneider, "Cat. Bodl." cols. 474, 503, 1147, and in "Serapeum," x. 32).

14. Israel ben Solomon Altschul: Printer at Prague from 1613 to 1620 (Steinschneider, "Cat. Bodl." cols. 377, 2913).

15. Jacob Altschul: Son of Moses ben Abraham (Eberle). No. 16; died in 1596.

16. Judah Aaron Moses ben Abraham Ḥanok Altschul: Rabbi at Kromau, Moravia, about the beginning of the seventeenth century. He was the author of an ethical work known by the title of "Wayeḥal Mosheh" (And Moses Prayed; compare Ex. xxxii. 11). This, however, is really the name of only the first part of the work; that of the second being "Torat ha-Asham" (Precepts Concerning the Sin-offering). The "Wayeḥal Mosheh" is a cabalistic ascetic treatise on devotion; while the "Torat ha-Asham" enumerates the various modes of penance for each transgression of the Jewish laws (Prague, 1613; Frankfort-on-the-Oder, 1691; incorporated also in an edition of the daily prayer-book, printed at Amsterdam in 1881–82). Three other works—notably his "Baḥure Ḥemed" (Desirable Young Men, Ezek. xxiii. 6), a commentary on Ḳimḥi's "Miklol," and an independent work on ritual and dogma—are still unpublished (Steinschneider, "Cat. Bodl." cols. 331, 1291; Benjacob, "Oẓar ha-Sefarim," p. 148).

17. Moses ben Abraham (Eberle) Altschul: Son of No. 2; lived at Prague up to 1542. In that year, when Jews were expelled from the town, he sought refuge in Cracow, and there became *parnas* (president) of the Bohemian congregation, which had but recently been organized. Moses married a daughter of Eliezer Trebitsch, rabbi of Schlettstadt, Alsace; and his nephew, the young Eliezer Trebitsch, who had followed Moses to Cracow, became rabbi of the same Bohemian community.

18. Moses Altschul: Son of Ḥanok (No. 11); succeeded his father in his communal functions; died in 1643. He was the author of "Zikron Bayit" (In Memory of the House), still unpublished (Kisch, in "Grätz Jubelschrift," ii. 38, and in "Monatsschrift," xxxvii. 131 *et seq.*; compare also Moses ben Ḥanok Altschul, No. 19).

19. Moses ben Ḥanok Altschul: Commonly known as **Moses Ḥanoks,** and often—as early even as 1676, on the very title-page of the Frankfort edition of his work—mistaken for an *ish Yerushalayim* (a native of Jerusalem). This error is due, as stated above, to a corruption of the initial letters of his patronymic, א"ש into איש. The dates of his birth and death are not known; but as his son Ḥanok (No. 11) was sixty-nine years old when he died (1633), Moses must have been born about 1545 or earlier. It is probable that Moses b. Ḥanok died shortly after the publication of his work, the "Brantspiegel" (1602). The Moses b. Ḥanok (No. 18) who wrote "Zikron Bayit" is the grandson of the subject of this article.

Moses b. Ḥanok was a considerable figure in the history of Jewish literature or, more properly speaking, of Judæo-German literature; for he was one of the first to use the vernacular in a polished diction, though he dealt with a subject that was not new nor peculiar to the secular life—that of ethics. The "Brantspiegel" (Mirror), called in Hebrew "Sefer ha-Mareh," first published at Basel, was intended as a direct appeal to the Jews of the period to live in social and moral purity. The book is divided into chapters, the number of which varies from sixty-eight to seventy-six, according to the different editions. They all indicate the many roads to morality, and the penance that the Jew should undergo for deviating from these roads. The author alleges two reasons for the title of his book: (1) It was called "Spiegel" (Mirror) because the author wished that it should be constantly before the people, to show them their own presentments. (2) "Brant" or "Brand" (Burning; that is, Magnifying) was prefixed because, as the author states, ordinary mirrors make things appear very small; while this glass was intended to show objects (especially bad qualities) in enlarged forms, so that people would then try to remove them. The author remarks, in the preface, that his book may be read on Sabbath. The work became very popular; it called forth many imitations and analogous works, such as the "Sitten Spiegel," "Zier Spiegel," "Zucht Spiegel," and at a much later date the "Kleine Brantspiegel" (Small Mirror); and in the epitaph of Moses Altschul's son Ḥanok the work is expressly mentioned (Steinschneider, "Cat. Bodl." cols. 1312, 1823, 1824, and in "Serapeum," x. 325; Wolf, "Hebr. Bibl." i. No. 1544, ii. 1272, 107, iii. 750; see also, "Monatsschrift," xxxvii. 131).

20. Moses Meir ben Eleazar Ḥanok Altschul: A highly esteemed member of the Jewish community of Prague, who maintained friendly relations with Samson Wertheimer; died in 1739. Moses was the author of several works, of which only two have been published; namely, (1) the "Megillat Sefer" (The Roll of the Book), a commentary on Esther, which appeared, together with Solomon Isaki's analogous work (Prague, 1709–10), and (2) his edition of the "Yashir Mosheh" (Moses Sang), of Moses Cohen of Corfu (Prague, about 1710; Steinschneider, "Cat. Bodl." col. 1846).

21. Moses (Nathaniel) ben Aaron Freund Altschul: Printer at Prague toward the end of the seventeenth century. He was in the employ of the grandsons of Moses Katz in 1694–95, and in that of the grandsons of Judah Bak in 1696 (Steinschneider, "Cat. Bodl." col. 2996).

22. Naphtali Herzel ben Asher Anschel Altschul: Printer in the employ of Jacob Bok at Prague during the first half of the seventeenth century. His most notable production was a prayer-book for holy days—in editing which he was aided by his brother Simon—and the printing of "Ẓeënah u-Reënah" (Go Out and See), the well-known translation of prayers into Judæo-German (Prague, 1629; Steinschneider, "Cat. Bodl." cols. 389, 3012, 3049).

23. Naphtali (Hirsch) b. Asher Altschul: Talmudic scholar; lived in Russia and Poland—principally at Lublin, Miczdyrzei, and Jitomir—toward the end of the sixteenth and at the beginning of the seventeenth century. He seems to have traveled extensively, and in 1607 was at Constantinople. In the preface to his commentary, he mentions Bendit ben Joseph Achselrad, the author of "'Abodat ha-Lewi," and Naḥman, a learned relative of his.

Naphtali was the author of two works, one of which was a commentary on the Prophets and the Hagiographa. This he called, in reference to his own name, "Ayyalah Sheluḥah" (A Swift Deer; see Gen. xlix. 21), and supplemented it by a Judæo-German glossary: it was published, with the text of the Bible, at Cracow, 1593–95. The other, "Imre Shefer" (Beautiful Words), was an alphabetically arranged catalogue of all matters that preachers and rabbis were at all likely to discuss in their sermons, with indications as to the various ways in which each topic might be treated (Lublin, 1602). A rabbinical decision of Naphtali's is found in the responsa of Meir Lublin (No. 59?; Steinschneider, "Cat. Bodl." cols. 53, 2021; *idem*, "Jüd. Lit." p. 454).

24. Naphtali (Hirsch) ben Tobiah Altschul: Editor and printer at Cracow toward the end of the sixteenth century, where he seems to have settled, after having resided at Lublin. He was popularly known as "Hirsch the editor"; and to him are due an edition of Joseph Caro's "Shulḥan 'Aruk" (Cracow, 1593–94) and the publication of the Psalms in liturgical order (Cracow, 1598; Steinschneider, "Cat. Bodl." cols. 55, 1482, 3011).

25. Raphael ben Mordecai (Gumpel) Altschul: Printer; employed, with his brother Ḥayyim (No. 12), probably at Amsterdam from 1691–1732 (Steinschneider, "Cat. Bodl." cols. 377, 2913).

26. Samuel Altschuler: Lawyer and politician; born of German-Jewish parentage in Chicago, Nov. 20, 1859; removed to Aurora, Ill., two years after and was educated in the public schools and high school of that city. Altschuler was admitted to the bar in 1880. He is affiliated with the Democratic party, and in 1892 was a candidate for Congress in the Eighth District, but was defeated, although he ran ahead of his ticket.

In 1893 Governor Altgeld appointed him a member of the Court of Claims. He was elected to the legislature in 1896 and again in 1898. As leader of the minority he rose to prominence by defeating two obnoxiously corrupt bills. In 1900 he was an unsuccessful candidate for the post of governor of the state of Illinois, although he received 3,400 more votes than the Democratic presidential candidate.

27. Simon b. Ascher (Anschel) Herzel Altschul: Printer and typesetter in the employ of the sons of Jacob Bok at Prague in 1629 (see No. 22).

28. Simon ben Judah Loeb Altschul: Communal notary (*sofer bet din*) at Prague in the opening years of the eighteenth century (Steinschneider, "Cat. Bodl." col. 3049).

29. Solomon ben Joshua Altschul: Writer; undoubtedly of German origin, perhaps from Prague; lived in Italy about the middle of the sixteenth century. He edited the "Megillat Sefer," a work on rhetoric by an unknown author, which is based on parts of the "Poetic Art" attributed to David ben Solomon ibn-Yaḥya (Venice: D. Adelkind, 1552). Owing to the fact that Solomon had established himself in Italy, his name has sometimes been transcribed from its Hebrew letters as "Altosol."

Bibliography: Steinschneider, *Cat. Bodl.* cols. 570, 2284; Mortara, *Indice Alfabetico*, p. 3.

30. Yehiel (Jehiel) Hillel ben David Altschul: Rabbi at Jaworow (Galicia) toward the middle of the seventeenth century. He completed the commentary on the Prophets and the Hagiographa which his father (No. 6) had begun, dividing it into two parts: (1) "Meẓudat Zion" (The Fortress of Zion), a lexicological glossary; and (2) "Meẓudat David" (The Fortress of David), a commentary on the Biblical text (in part: Leghorn, 1753, 1770; Berlin, 1770; numerous editions also appeared throughout the first half of the nineteenth century—at Slavuta, Wilna, Lemberg, Josefov, etc.). Jehiel was the author of "Binyan ha-Bayit" (The Building of the House), a work on the Temple of Ezekiel and the visions pertaining to it (Zolkiev, 1774; Leghorn, 1781).

Bibliography: Steinschneider, *Cat. Bodl.* cols. 144, 154, 1272, and Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 163, where the author's name is erroneously given as Alt-Schuld; Fürst, *Bibl. Jud.* i. 44, where the author is called Jehiel Michael, and is regarded as distinct from that of Jehiel Hillel; Azulai, *Shem ha-Gedolim*, ii. 18; Benjacob, *Oẓar ha-Sefarim*, p. 81.

31. (Zeeb) Wolf ben (Dob) Baer Altschul: Russian rabbi of the second half of the eighteenth century. He was the author of "Zebed Ṭob" (The Good Dowry; see Gen. xxx. 20), a work on the third Temple of Ezekiel. The title is intended as a pun on the author's name Zeeb (Shklov, 1794); another edition was published by his son Eliakim (No. 9); see Fürst, "Bibl. Jud." i. 44; Benjacob, "Oẓar ha-Sefarim," p. 15.

ALUPKA: Village on the southern shores of the Crimea, Russia; mentioned in the letter of Joseph, king of the Chazars, to Ḥasdai ibn-Shaprut about 960) as one of the cities tributary to the Chazars.

Bibliography: A. Harkavy, *Soobshcheniya o Chazarakh*, in *Yevreiskaya Bibl.* vii. 160.

H. R.

ALUSHTA: Village on the southeastern shore of the Crimea, in the district of Yalta, Russia. Some ruins exist of the fort Aluston built there by Emperor Justinian in the sixth century. Under the name of Aluss the place is mentioned in the letter of Joseph, king of the Chazars, to Ḥasdai ibn-Shaprut (about 960) as one of the cities tributary to the Chazars. In the Middle Ages it was in the possession of the Genoese, and was known by the names of Lusta, Austa, and Alusta.

There are now only a few Jews in the village; and these are employed in the neighboring vineyards.

Bibliography: A. Harkavy, *Soobshcheniya o Chazarakh*, in *Yevreiskaya Bibl.* vii. 160, and private sources.

ALVA or ALBA, DUKE OF: Fernando Alvarez de Toledo: born, 1508; died at Thomar, Portugal, 1582. A famous Spanish general who fought in the various campaigns of the Emperor Charles V. and of Philip II. After winning several decisive battles, he was sent as governor to the Netherlands in 1567 to suppress a revolt against Spanish tyranny, and became the most cruel and rigorous supporter of the Inquisition. He established, and presided over, the Council of Blood, the victims of which doubtless included Jews as well as Christians. It seems to have been Alva's intention to rid the country of Jews. To the city council of Arnheim and Zütphen, for example, he wrote that in case any Jews were found in those places, they were to be arrested and held until further orders from him. The council evidently anticipated Alva's desire in the matter; for its report read that "there were no Jews among them." Furthermore, the few Jews remaining in the town of Waggeningen, Gelderland, were expelled in celebration of the birth of a Spanish infante. Alva's hostility, moreover, grew manifest in his attitude toward the books of the Jews. Both at Liège, and at Antwerp, there appeared under his auspices, in the years 1570 and 1571, copies of the Trent "Index of Prohibited Books," which had been published in 1564, and to which, in Alva's edition, were appended the most rigorous Spanish amendments. The latter interdicted "all books written in Hebrew, and those in any other language which contain Jewish ceremonies or which treat of Jewish life." Thus, the Romance translation of Josephus' "Antiquities of the Jews," was anathematized as heretical. (See CENSORSHIP OF BOOKS.)

H. G. E.

ALVALENSI, SAMUEL: Spanish author; born, 1435; died, 1487. He was the son of the learned Abraham Alvalensi, of Toledo, and pupil of Isaac Campanton, the last Gaon of Castile. He was the author of a small treatise, entitled "Kelale Ḳal we-Ḥomer" (Rules of the Deduction *a fortiori*), which treats of Talmudic methodology. It was published in a compilation, "Meharere Nemerim," by Abraham Akra, Venice, 1599. M. K.

ALVALENSI, SAMUEL: Perhaps the grandson of the above; was born in Spain at the end of the fifteenth century, was taken after the expulsion of 1492 to Fez, where he became the favorite of King Abu Said, of the Merines dynasty. About 1536 the Xarifes rose against the Merines, and Samuel Alvalensi, together with some of the loyal alcaldes, fitted out a fleet and sailed with four hundred men to Ceuta, which was then besieged by the rebels. Despite the numerical superiority of the enemy, who mustered 30,000 men, he inflicted upon them heavy losses and compelled them to raise the siege and to return to Fez. He showed similar courage in 1539 at the relief of Safi. Samuel afterward settled in Azamor.

M. K.

ALVAREZ or **ALVARES:** Name of a Hispano-Portuguese family which has included among its members many scholars, distinguished men, and martyrs. Branches of the family have settled in Holland, France, England, and America.

Duarte Henriques Alvares: A Portuguese Marano; lived several years at Madrid, and afterward in the Canary Islands, where he occupied the position of royal treasurer. In 1653 he went thence to London, and was one of the first members of the small and secret Jewish community of that city. (See "Transactions of the Jew. Hist. Soc. Eng.," i. 83 *et seq.*)

Garcia Alvarez, of Astorga, whose Jewish name was Samuel Dios-Ayuda (= Joshua), was a wealthy and benevolent man. He is mentioned about 1400 in a satire written by the priest, Diego de Valencia, a converted Jew, and is therein called "the delight and the ornament of the whole Jewry."

Isabel Nuñez Alvarez, of Viseu in Portugal, wife of Miguel Rodriguez of Madrid; was the owner of a synagogue, situated on the street "de las Infantes" in Madrid. She died a martyr's death in the flames, July 4, 1632. The Inquisition ordered the synagogue to be torn down, and upon its site a Capuchin monastery was subsequently erected. (See Kayserling, "Sephardim," pp. 203, 346.)

Jacob Alvarez, a member of the academy "Arbol de las Vidas" (Tree of Life) in Amsterdam in 1684. He is spoken of as "its light," and "the shield of the Talmud."

Joseph Israel Alvarez was, in 1682, a member of the academy of poets ("de los Floridos") in Amsterdam; he was distinguished for the elegance of his diction.

Juan Alvarez, a physician of Zafra, the first victim of the Inquisition in Lima. He, his father Alonzo, his wife, and his children were all publicly burnt as adherents of Judaism about 1580. (See "Publ. Am. Jew. Hist. Soc." ii. 75; iii.; iv.; vi. 75.)

Leonora Alvarez was convicted of having several times lapsed to Judaism, and was burnt in Seville, June 6, 1723, at the age of forty. Alonzo Alvarez, her brother, was condemned to life-imprisonment at the same time for being a Jew.

Meir b. Solomon Alvarez. See ALGUADES, MEIR B. SOLOMON.

Moses Alvarez was a member of the academy "Arbol de las Vidas" in Amsterdam, from 1741 to 1761. Another Moses Alvarez was one of the first settlers in Newport, R. I. He was naturalized in 1741, and died in 1766. (See "Publ. Am. Jew. Hist. Soc." vi. 76.)

Simon Alvarez, of Oporto, was the first victim of the Inquisition in Coimbra, his place of residence. He was arrested on the charge of practising Judaism, found guilty upon evidence extorted from his little daughter, and, together with his wife, burnt at the stake.

Antonio Alvarez-Soares, a Spanish poet. He composed a poem upon the dedication of the first synagogue established in Amsterdam in 1607. The poet, Daniel Levi de Barrios, who possessed the manuscript of his poems, describes him as an able versifier.

Antonio Alvarez-Soares, of Lisbon, a namesake of the preceding, was also a poet. He was much esteemed in Lisbon for his lyrics. He published in 1628 a collection of poems called "Varias Rimas." He emigrated to Flanders in 1632.

ALVARO DE LUNA: A gifted Spanish statesman of the fifteenth century who attained the highest military rank, that of Grand Constable. With Chancellor Don Juan Furtado de Mendoza and Don Abraham Benveniste, he exercised for many years unlimited influence over the young and weak king, D. Juan II. of Castile. Throughout his life Alvaro was a friend of the Jews and protector of the Maranos, both of whom were promoted by him to the highest offices.

Abraham Benveniste, with whom he was intimately associated for thirty years, and Joseph ha-Nassi were appointed by him as farmers-in-chief of taxes. Of the Maranos, Diego Gonsalez was made general receiver (contador mayor); Diego Arias Davila, manager of the royal revenues; Juan Alfonso de Baena, royal private secretary; and Juan Pacheco became through him the trusted companion of the king. Owing to this well-known friendship for Jews and Maranos, Alvaro was for a long time a thorn in the flesh to both the Infante Don Henry and the aged Paul de Burgos, the primate of Spain, the Jew-hater. Paul's sons, Alvar Garcia de S. Maria and Alfonso of Cartagena—less from political than from religious reasons —became his bitterest enemies. They conducted a furious struggle against him for many years, which ended in his downfall. Alvaro, who, in his hours of leisure, devoted himself to literary matters and wrote a book about celebrated women ("Libro de las Mujeres Ilustres"), was taken prisoner, dragged to Valladolid, and beheaded there, July 2, 1453. Friar Alfonso de Espina, the fiercest enemy of the Jewish race—to which he himself belonged—accompanied him triumphantly on his walk to the scaffold.

ALYASHAR, JACOB: Talmudist; born at Wilna, Russia, about 1735; died in Safed about 1785. The congregation at Hebron in 1765 sent him as their emissary (*meshullah*) to Persia. On the outbreak of a war in 1775, Bozrah, the city in which he resided, was besieged; but he, his wife, and newborn son, Eliezer Jeruham, escaped and settled in Safed. He celebrated his deliverance in Hebrew verses called "Megillat Paras" (The Roll of Persia), published by his grandson, R. Jacob Saul Alyashar, in "Ish Emunim" (Jerusalem, 1885). J. D. E.

ALYASHAR (more correctly **ELAYSCHAR**), **JACOB SAUL:** Hakam Bashi (chief rabbi) of Jerusalem; born at Safed, June 1, 1817. He was taken to Jerusalem in 1823. His teacher was R. Benjamin Mordecai Nabon, who, in 1828, married his widowed mother. In 1855 Alyashar was appointed associate judge to the Hakam Bashi, Abraham Ashkenazi; in 1869, chief dayan, holding the position until his promotion in 1893 to the post of Hakam Bashi by all parties in Jerusalem, as successor to the late R. Paniel. The sultan Abdul-hamid confirmed his appointment in a firman, sending him an official robe and a medal of the Medjidie order; and Emperor William II. of Germany, on his visit to Jerusalem in 1898, also presented him with a medal. He speaks Hebrew, Arabic, Turkish, Italian, and Greek.

The following is a list of his published works; the titles all contain the word "Ish" (איש), the component letters of which are the initials of his name: (1) "Kereb Ish" (Inward Thought of Man) (Ps. lxiv. 6); (2) "Ish Emunim" (Man of Faith), a collection of festival sermons, 1885; (3) "Ma'aseh Ish" (The Work of Man), responsa, together with (4) "Derek Ish" (Man's Way), sermons, 1892; (5) "Simha le-Ish" (Joy to Man), responsa, published with (6) "Girsa de-Yankuta" (Early Teachings), explanations of Talmudic problems; (7) "Ya'aseh Ish" (Man Shall Do), and (8) "Dibre Ish" (Words of Man), in one volume, responsa and sermons, 1896; (9) "'Olat Ish" (Man's Offering), decisions, 1899; (10) "Sha'al Ish" (Man Asked), responsa, in course of publication in 1900.

J. D. E.

ALYPIUS OF ANTIOCH: Eminent geographer of the fourth century; intimate friend of the Roman emperor, Julian the Apostate. Alypius, of noble and generous character, was governor of Britain 355-360, whence he was recalled by the emperor to superintend the reconstruction of the Temple at Jerusalem. At first he showed much zeal in the accomplishment of his task, but, by degrees, seeing the little effort made by the Jews to aid him, he lost interest and left the field clear for the intrigues of the enemies of the Jews, who sought by every means to cause his failure in carrying out the generous purposes of the emperor.

I. Br.

ALZEY: A town in Rhein-Hessen (Germany), on the Setez. While the first traces of the residence of Jews in the Palatinate, to which Alzey belonged from the time of the Emperor Frederick Barbarossa, date from the beginning of the thirteenth century, no date is given for the first settlement of Jews in Alzey itself. The name of the congregation appears for the first time in the "Martyrology" of Nuremberg, where it is mentioned as one of the places which suffered in the dreadful persecutions of the year of terror, 1349. The first reference to members of the congregation dates probably from the year 1383, where a certain Bonifant and his wife Jütte, and a Jew of the name of Lassarus, are mentioned. The congregation never played any very conspicuous part in history, and the number of its members until the beginning of this century was very small. The Jews of Alzey shared the unhappy fate of their persecuted brethren in the Middle Ages; at one time they were expelled from the town, at another residence therein was permitted them, all according to the inclination of the Count Palatine of the day. From the year 1391, when the Jews were driven from the Palatinate by Count Ruprecht II., they do not seem to have returned to Alzey for several centuries, or at best only temporarily; for in the census of the year 1550, which registered the names of all Jews living in the Palatinate, none are mentioned from Alzey, although this town was the official center where limited passports were issued at a fixed tariff to all Jews who traded in the region.

It is only toward the close of the seventeenth century that Jews again appear in Alzey as a regular congregation. Until the year 1791, religious services were held in private houses. The first synagogue was built in that year through the liberality of Elias Simon Belmont. A census in 1722 enumerated nine families in the congregation, and sixty-three families in the whole district. Twenty years later there were only eleven in the congregation. In 1748 the elector Karl Theodor set the legal limit of families in the town of Alzey at three. He added, that "since there were already more than that number, no additional families would be allowed to settle there until the number had been diminished by death to less than three." From the end of the eighteenth century the congregation grew steadily; in the fourth decade of the nineteenth century about fifty families are found, and there are now (1901) seventy-five. Of the 6,500 inhabitants of Alzey, about 320 are Jews, who devote themselves mainly to mercantile pursuits. The present synagogue was consecrated in the year 1854. The first rabbi (in this new building) was Dr. Samuel Adler, son of Isaac Adler, rabbi of Worms. By ministerial decree of August 17, 1842, he was appointed district-rabbi of Alzey, which post he held until the year 1856. He was called to the Temple Emanu-El in New York in 1857. His successor was Dr. David Rothschild, who officiated for nearly thirty years (from 1862 till June, 1891); he died January, 1892, in Aix-la-Chapelle. Since October, 1891, Dr. Joseph Levy has been the rabbi of this congregation.

Mention must be made of several members of the Belmont family, one of the oldest and most respected of the congregation. According to the Alzey

"Memorial-Book," Simḥah, son of Ephraim Belmont, was the first of that name to settle in Alzey; he had been head of the Jewish community in Beckelheim, near Kreuznach, which then belonged to the Palatinate. His son Joseph Jessel, called Rabbi Jessel of Alzey, held the same position in the Alzey district; he died in 1738. These men as well as their descendants were conspicuous for their piety and for their uncommon public spirit. The Elias Simon Belmont already mentioned and his nephew Simon founded the so-called "Belmont fund," which provides a marriage-portion for poor girls.

AMADEO OF RIMINI. See Jedidiah ben Moses of Recanati.

AMADIA, AMADIAH, AMADIEH, AMADEEYAH: A town in Asiatic Turkey, vilayet of Bagdad, north of Mosul, the birthplace of the pseudo-Messiah, David Alrui (Alroy). In 1163, according to the author of "'Emeḳ ha-Baka," it had a Jewish population of about a thousand families. In 1895 it had a Jewish population of 1,900 persons, who owned about 150 houses. They trade chiefly in gall-nuts.

Bibliography: Joseph ha-Kohen, *'Emeḳ ha-Baka* (German translation by M. Wiener), p. 27, Leipsic, 1858; Layard, *Nineveh and its Remains*, ii. 141; *Entziklopedicheski Slovar*, vol. i., St. Petersburg, 1891; *Longman's Gazetteer*, London, 1895.

José Amador de los Rios.
(From the frontispiece to his "Historia.")

AMADOR DE LOS RIOS, JOSÉ: Spanish historian of the Jews in Spain and Portugal, and archeologist; born 1818; died at Seville, 1878. De los Rios was for some time inspector-general of public instruction in Spain. He wrote many works archeological in character, two of which are of interest to Jews. In 1848 he published in Madrid "Estudios Históricos, Políticos, y Literarios sobre los Judíos de España." This was translated into French (Paris, 1861), and later on was expanded into the larger work on the same subject, "Historia Social, Política, y Religiosa de los Judíos de España y Portugal" (3 vols., Madrid, 1875–76). Amador de los Rios was interested chiefly in the constitutional position of the Jews; and his work, from this side, is very thoroughly done. He was, however, unacquainted with Hebrew, or Jewish sources; and his treatment of literary history in the earlier book is derived merely from the uncritical notes of De Castro.

Bibliography: List of his sources given in Jacobs' *Sources of Spanish-Jewish History*, pp. 213–244, and summary of the contents of the book, pp. 214–221.

AMALEK, AMALEKITES.—Biblical Data: Name of a nomadic nation south of Palestine. That the Amalekites were not Arabs, but of a stock related to the Edomites (consequently also to the Hebrews), can be concluded from the genealogy in Gen. xxxvi. 12 and in I Chron. i. 36. Amalek is a son of Esau's first-born son Eliphaz and of the concubine Timna, the daughter of Seir, the Horite, and sister of Lotan (Gen. xxxvi. 12; compare Timnah as name of an Edomite chief or clan, verse 40). On the other hand, Gen. xiv. 7 speaks of Amalekites, in southern Palestine, in the time of Abraham. That they were of obscure origin is also indicated in Num. xxiv. 20, where the Amalekites are called "the first of the nations." The Amalekites were the first to come in contact with the Israelites (Ex. xvii. 8), vainly opposing their march at Rephidim, not far from Sinai (compare Deut. xxv. 17, "smiting the hindmost, all that were feeble behind," and I Sam. xv. 2). Consequently, they must be considered as possessors of the Sinaitic peninsula, of the modern desert et-Tih, or at least of the northern part of it. According to Num. xiii. 29, xiv. 25, which speaks of Amalekites defeating the Israelites in the lowland (verses 43, 45), they occupied also southern Palestine, partly together with the Canaanites; see also Gen. xiv. 7 (Amalekites in "En-mishpat, which is Kadesh"). The extreme south seems to be meant, the pasture lands of the Negeb, not the arable parts.

Position and Connections.

The relation of the Kenites to the Amalekites is not quite plain. According to I Sam. xv. 6, they live with them (or at their side; compare Judges, i. 16; Num. xxiv. 21), while elsewhere they are associated with Israel (I Sam. xxvii. 10) or even specially with the tribe of Judah (I Sam. xxx. 29; I Chron. ii. 55). This would indicate that the Kenites formed a connecting-link between the Israelites, or their southern tribes, and the Amalekites. Gen. xv. 19, which foretells dispossession of the Kenites by Israel, would agree with this (see Cain; Kenites). A similar relationship might be assumed for the Kenezites.

Enmity to Israel.

The Amalekites themselves always appear as hostile to Israel. Thus (Judges, iii. 13), together with the Ammonites, they assist Eglon of Moab, and (Judges, vi. 3, 33, vii. 12) they aid the Midianites and the children of the East against Israel. Ps. lxxxiii. 7 refers to both occasions. It is on this account that Saul leads an expedition against them (I Sam. xv.). The defeat and capture of the Amalekite king, Agag (the only Amalekite name preserved), by Saul seem to be referred to also by Balaam (Num. xxiv. 7). It is not known what locality is meant by "the city of Amalek," which evidently was situated "in the valley"—that is, the plain (I Sam. xv. 5). One would not expect that the settlements of such a wandering nation would deserve the name of a city.

Fate of Amalek.

David waged a sacred war of extermination against the Amalekites, who retaliated (I Sam. xxx. 1) by a successful surprise of Ziklag. David, however, followed and caught the Amalekites on the retreat, regaining their captives and spoils. On this occasion the Amalekites, like all desert warriors, made their raids upon camels. After this defeat Amalek disappears, so that it seems as though the nation had actually been exterminated by the wars with Saul and David. I Chron. iv. 42–43 states that in the time of Hezekiah five hundred Simeonites annihilated the last remnant "of the Amalekites that had escaped" on Mount Seir and settled there in the place of Amalek. Thus the related tribes Amalek and Edom were united again at the end. W. M. M.

——**In Rabbinical Literature:** Amalek—the first foe to attack the people of Israel after they had come out of Egypt as a free nation; twice designated in the Pentateuch (Ex. xvii. 14–16, Deut. xxv. 19) as the one against whom war should be waged until his memory be blotted out forever—became in rabbinical literature the type of Israel's arch-enemy. In the tannaitic Haggadah of the first century Amalek stands for Rome (Bacher, "Ag. Tan." i. 146 *et seq.*, 211 *et seq.*); and so does Edom (Esau), from whom Amalek descended (Gen. xxxvi.). A kinsman of the Israelites, Amalek nevertheless displayed the most intense hatred toward them: he inherited Esau's hostility to his brother Jacob. When other nations hesitated to harm God's chosen ones, his evil example induced them to join him in the fray. "Like a robber he waylaid Israel"; "like a swarm of locusts"; "like a leech eager for blood"; "like a fly looking for sores to feed on"; Amalek (*'am laḳ* = the people which licketh) hurried over hundreds of miles to intercept Israel's march:

> "Having taken the list of the tribes from the archives of Egypt, he arrayed his hosts in front of the Israelitish camp—over which God's glory rested in the sheltering pillar of cloud—and called the names of the tribes aloud, one after the other, and pretending to have business negotiations with them, he treacherously slew the last, or, rather, the guilty ones among them, those chosen by lot" (Tan. Ki Teẓe, ix., and Pesiḳ. iii. 26*b*).

According to some he also used witchcraft to secure victory for his men (Yalḳ. Reubeni, and Chronicle of Jerahmeel, xlviii. 13). "Moreover, he mutilated their bodies, making sport of the Abrahamic covenant" (see Pesiḳ. *l.c.* and Pesiḳ. R. xii., Mek. Beshallah).

Evidently the colors for this picture are drawn from the palette of later experience. Accordingly, in rabbinical literature stress is rather laid on the moral lesson of the episode. Amalek was but the scourge in the hand of God to punish the people of Israel, who had become "faint and weary" in the observance of God's commands and "feared not God." They lacked the power of faith (play on the name "Rephidim" = *rafu yadayim*, "the hands became weak"), and therefore said: "Is the Lord among us or not?" (Ex. xvii. 7, 8). Like a wayward child that runs back to its father when a dog comes snarling along, the Israelites were unmindful of God's doings until like a dog Amalek came to bite them. Then Moses fasted and prayed, saying: "O Lord, who will in the future spread Thy Law, if Amalek succeeds in destroying this nation?" And with uplifted arms, holding the staff and pointing heavenward, he inspired Joshua and the people with his faith until the victory was won (Mek. *ib.*).

Harsh as seems the command to blot out Amalek's memory, its justification was seen in the leniency shown by King Saul, the son of Kish, to Agag, the king of the Amalekites (I Sam. xv. 9), which made it possible for Haman the Agagite to appear (Esth. iii. 1); his cruel plot against the Jews could only be counteracted by another descendant of Kish, Mordecai (Pesiḳ. R. xiii.). Every year, therefore, the chapter, "Remember what Amalek did unto thee" (Deut. xxv. 17–19), is read in the synagogue on the Sabbath preceding Purim.

With regard to the remarkable oath, "Truly the hand upon the throne of Yah! the Lord will have war with Amalek from generation to generation" (Ex. xvii. 16: A. V. is not literal here); the rabbis say: "Never will the throne of God—the Lord of Truth, Justice, and Love—be fully established until the seed of Amalek—the principle of hatred and wrongdoing—be destroyed forever (Pesiḳ., *l.c.*, and Targ. Yer. I. and II. to Ex. *l.c.*). Henceforth "Amalek" became the popular term for Jew-hater. K.

——**Critical View:** Modern critics have seen in the genealogy of Amalek a mere indication that Amalek was closely allied to the Edomites, but very inferior in power to them (compare the lowly station of Timna, merely a concubine). In Judges, vi. 3, 33, vii. 12, the mention of Amalek is considered as a later gloss by Budde. Nöldeke ("Ency. Bibl." i. 128) considers the account of Saul's expedition to be exaggerated in the figures, and in the geographical definition. Winckler's view ("Gesch. Israels," p. 211) stands rather isolated. He considers, for example, Judges, iii. 13 as impossible (because the Amalekites did not touch upon Moabitish territory), and regards most passages quoting Amalek as parts of mythological or mythical stories (including even the larger part of the lives of Saul and David). Thus he comes to the conclusion that "probably the nation of Amalek rests on a mythological idea." On Egyptian and Assyrian monuments, various points of contact with the nomadic tribes of the Sinaitic peninsula in war or commerce are reported or even represented; hitherto, however, the name Amalek has not been discovered on them.

The territory ascribed to Amalek in I Sam. xv. 7, "from Havilah until thou comest to Shur," is perplexing. If Havilah is the same land mentioned in Gen. ii. 11, x. 29 (compare I Chron. i. 23), and xxv. 18 (hardly that of x. 7)—that is, the extreme eastern country of the wandering desert tribes, on the borders of Babylonia—then one would have to identify the Amalekite territory with northern Arabia, from Egypt to the Euphrates. It would embrace the land of the Midianites and other "sons of the East," but would hardly leave room for Edom. Therefore, the modern commentators either understand here another Havilah, or they change the text. So, *e.g.*, Wellhausen ("Text der Bücher Samuelis," p. 97), who changes "from Havilah" to "mi-Telem," that is, "from (the city of) Telem" in Judah (Josh. xv. 24) which (in I Sam. xv. 4) is mentioned as the starting-place of Saul's expedition. Certainly, Amalek appears elsewhere always as an insignificant robber nation, and the same correction seems necessary also in I Sam. xxvii. 8, where the Amalekites (with the Geshurites and Gezrites) are "the inhabitants of the land which [reaches] from Telem [read "mi-Telem" with the better manuscripts of the Septuagint, instead of the traditional "me-'Olam" (of old)] as thou goest to Shur." If this be so, Amalek had no territory east of the Edomites.

As to the presence of alleged Amalekites in Palestine proper, such colonies have been assumed on the basis of Judges, v. 14 and xii. 15. The first passage speaks of "Ephraim whose root is in [A. V. "was against"] Amalek"; in the second, the judge Abdon is stated to have been "buried in Pirathon [southwest of Shechem], in the land of Ephraim, in the hill-country of the Amalekite." The Septuagint, however, in both places, seems to have read (at least in the Codex Alexandrinus and in the recension of Lucian) "the valley, the lowland (*'emeḳ*)" instead of Amalek, so that these two passages are, to say the least, unsafe authority. The existence of single Amalekites in the midst of Israel, such as the Amalekite, the "son of a stranger" (II Sam. i. 8, 13), is not surprising, and may possibly explain the expression "the mount of the Amalekites" in Judges, xii. 15. Thus, it is unnecessary to assume a northern branch or remnant of the Amalekites.

Arabic writers have attached great importance to the name of the Amalekites, and have invented many stories about this primeval nation, which they fancied to have ruled over Arabia and the surrounding countries, especially over Egypt. Nöldeke ("Über die Amalekiter," Göttingen, 1864) has fully shown the fictitious character of all these tales.

W. M. M.

AMAN: **1.** This name is found only in the Apocrypha, Tobit, xiv. 10. He is there mentioned as the persecutor of Achiacharus, but even in that passage the reading is not certain, the versions giving Nadab, Accab, and Adam as possible readings. See Aḥikar. **2.** For Aman in Apocr. Esther, xii. 6. xvi. 10, 17, read Haman. G. B. L.

AMANA: **1.** River rising in Anti-Lebanon and flowing through Damascus, the modern Nahr Barada (II Kings, v. 12, where there is a variant, Abana; see Abana). **2.** Mountainous district of the Lebanon from which the Amana river rises (Cant. iv. 8). It occurs in cuneiform literature as Am-ma-na (Delitzsch, "Wo Lag das Paradies?" p. 103).

G. B. L.

AMARAGI, ISAAC BEKOR: Translator and historical writer of the nineteenth century, who lived in Salonica. He translated, from the Hebrew into Judæo-Spanish, Samson Bloch's geographical work, "Shebile 'Olam" (Salonica, 1853–57, 1860), with additions of his own, and wrote a short history of Napoleon.

Bibliography: Kayserling, *Bibl. Esp.-Port. Jud.* p. 12.

M. K.

AMARAGI, MOSES: Physician in ordinary to the court of Sultan Murad IV. (1623–40) in Constantinople. He was rich and learned and a patron of Jewish scholars. In his old age he returned to his native city, Salonica, where he died.

M. K.

'AM HA-AREẒ: A term used in common parlance in the sense of "ignoramus," applied particularly to one ignorant of Jewish matters. Compare Gamaliel's maxim (Abot, ii. 5): "No 'Am ha-Areẓ can be pious [ḥasid]; also Lev. R. xxxvii.: "Jephthah, the judge, who failed to obtain release from his rash vow, was an 'Am ha-Areẓ"—that is, "one of the multitude which knows not the Law" (see John, vii. 49). According to the Tannaim of the second century an 'Am ha-Areẓ is "he who does not eat his ordinary food in a state of priestly purity" (R. Meir); or, according to the majority of rabbis, "he who does not give his tithes in due manner"; according to R. Eliezer, it is "he who does not read the Shema' evening and morning"; according to R. Joshua, "he who does not put on the phylacteries [tefillin]"; according to Ben 'Azzai, "he who does not wear fringes [ẓiẓit] on his garments"; according to R. Nathan, "he who has no mezuzah on his doorpost" (Deut. vi. 9); according to R. Nathan ben Joseph, "he who has children and does not educate them in the Law"; and according to others, "he who has not associated with the wise in order to learn the practise of the oral law" (Ber. 47*b*; Soṭah, 22*a*; Giṭ. 61*a*). Ishmael b. Eleazar says: "The 'amme ha-areẓ [the vulgar crowds] incur the penalty of death by the disregard with which they treat the sacred Ark and the synagogue, calling the one simply 'chest' and the other 'the people's house'" (Shab. 32*a*).

'Am ha-Areẓ meaning literally "the people of the land" or "the rural population," this appellation, like pagan from "pagus" or heathen from "heath" in the early Christian centuries, came to denote the country people inaccessible to, or untouched by, the influence of the teachings offered by the religious community—in a word, by the Synagogue.

Historical Origin.

The history of the term 'Am ha-Areẓ leads us back to the beginning of the second commonwealth. or rather to the time of the exile, when "none remained, save the poorest sort of the people of the land" (II Kings, xxiv. 14): these had mingled with the rest of the surrounding people and lost their specific character as Jews. Then Ezra and Nehemiah made "separations from the peoples of the lands ['amme-ha-araẓot] the condition of admission to the congregation (Ezra, ix. 1; Neh. x. 31). Henceforth separation from the lawless multitude became the watchword, and the result was the formation of the party of the Separatists ("Ḥasidim" = the pious; like the Aramæan "Perushim" = those that separate themselves from all impurity). United in associations (ḥaberim) in every town for common worship and common meals, as well as for communal works of charity, the faithful observers of the law (Pharisees) shunned any contact with an 'Am ha-Areẓ, any one of "the vulgar crowd," as defiling, because such a one failed to observe conscientiously the Levitical laws of purity, or to give the portions of his produce due to the priest and the Levite. Moreover, he was regarded as a transgressor of the law, since he neglected to fulfil all those duties which the religious practise of the synagogue had in the course of time introduced as means of the sanctification of life. The very touch of his garment was defiling to the members of the Pharisaic brotherhood (Ḥag. ii. 7), nor was he trusted in matters of Levitical purity or of tithes even as a witness in court (Dem. ii. 2 *et seq.*, Pes. 49*b*). As a matter of course, no marriage relations with him were entered into by the Pharisees.

Antipathy of the Pharisees.

Such exclusiveness naturally tended to intensify the hatred between the masses and the Pharisees, and bitter expressions were used on both sides which can scarcely be taken literally. "When I was one of the uneducated, I used to say, 'Give me one of the learned scribes that I may bite him like an ass,'" said R. Akiba. R. Eliezer says, if they were subject to the 'Am ha-Areẓ, they could not be sure of their lives. Accordingly it is declared that an 'Am ha-Areẓ is so dangerous a man that he may be killed on the "Sabbath of Sabbaths"; or says another, "torn like a fish" (Pes. 49*b*). Such expressions have been taken perhaps too seriously by Montefiore ("Hibbert Lectures," 1892, p. 499); on the other hand, Lazarus ("Ethics of Judaism," i. appendix, note 48*a*, p. 258, English translation) goes too far in the other direction, taking them as mere jests. That a hostile feeling prevailed, is shown by the expression in John, vii. 49: "this people who knoweth not the law are cursed." Even more animosity is shown in the halakic dictum of Joshua ben Levi in the name of Antigonus: "The claim of the ḥaber upon the charity-treasury to provide his wife with raiment is greater than that of the 'Am ha-Areẓ for the support of his life" (Yer. Hor. iii. 48*a*; compare also B. B. 8*a*).

There can be no doubt that it was this contemptuous and hostile attitude of the Pharisaic schools toward the masses that was the chief cause of the triumphant power of the Christian church. In preaching the good tidings to the poor and the outcast, Jesus of Nazareth won the great masses of Judea. The Pharisaic schools, laying all stress on the Law and on learning, held the 'Am ha-Areẓ in utter contempt. The new Christian sect recruited itself chiefly from the ranks of the untaught, laying special stress on the merits of the simple and the humble. As Montefiore well says: "The 'Am ha-Areẓ was probably the creation of the burdensome agrarian and purity laws." Still it is hardly correct to say that "after the destruction of the Temple the 'Am ha-Areẓ slowly disappeared." Nor is it more than mere conjecture of Hamburger that during the war of Bar-Kokba the 'Am ha-Areẓ furnished the informers and traitors. R. Judah at the close of the second century still points to the gulf separating the 'Am ha-Areẓ from the learned, and Judah ha-Nasi refuses him a share of the communal charity, probably because his disciples required it all for their own support (B. B. 8*a*). Now and then hatred gives way to love, as in the following: "A man should not say, 'Love the pupils of the wise but hate the 'Am ha-Areẓ'; but one should love all and hate only the heretics, the apostates, and informers, following David, who says: 'Those that hate Thee, O Lord, I hate'" (Ps. cxxxix. 21; Ab. R. N. ed. Schechter, xvi. 64). Again, "he who teaches the son of an 'Am ha-Areẓ the Law, for him the Lord will annul every misfortune decreed upon him" (B. M. 85*a*).

K.

AMARIAH: **1.** The great-grandfather of the prophet Zephaniah (Zeph. i.) **2.** The son of Azariah, who was high priest-in Solomon's temple (I Chron. v. 37). According to Ezra, vii. 3, he was an ancestor of his. In I Esd. viii. 2, and II Esd. 1, 2, he is called Amarias. **3.** The great-great-grandfather of Azariah (I Chron. vi. 7, 52). **4.** One of the signatories to the covenant under Nehemiah (Neh. x. 3). **5.** A Judahite ancestor of Athaiah living in Jerusalem in the time of Nehemiah (Neh. xi. 4). **6.** A priest who returned from the captivity with Zerubbabel (Neh. xii. 2, 13). **7.** A son of Hebron and grandson of Kohath the Levite (I Chron. xxiii. 19, xxiv. 23). **8.** A priest who was put in charge of religious affairs in Judah by Jehoshaphat (II Chron. xix. 11). **9.** A Levite appointed by Hezekiah as assistant to Kore, who was stationed at the east gate of the Temple, and had charge of the free-will offerings to God (II Chron. xxxi. 15). **10.** A man of the sons of Bani who had taken a foreign wife (Ezra, x. 42).

G. B. L.

AMARILLO, AARON BEN SOLOMON: Talmudic author of the eighteenth century. He was a descendant of the Amarillos, a family of scholars that gave several great rabbis to Turkey. Like his father, Solomon, and brother, Moses, both authors of several rabbinical works, he was active as a writer, and published in 1796 his collection of responsa under the title "Pene Aharon." It is arranged after the order of the "Ṭur," and throws light on many subjects in the field of Jewish lore. (See Zedner, "Cat. Hebr. Books Brit. Mus." *s.v.*) L. G.

AMARILLO, ABRAHAM: Rabbi at Salonica about the beginning of the nineteenth century. His sermons on the Pentateuch were published under the title, "Sefer Berit Abraham" (The Covenant of Abraham), Salonica, 1802 (see Zedner, "Cat. Hebr. Books Brit. Mus." *s.v.*). W. M.

AMARILLO (ḤAYYIM), MOSES BEN SOLOMON: Rabbi at Salonica during the first half of the eighteenth century. He edited, and often annotated, the works of his father, Solomon Amarillo, and is the author of a collection of novellæ on legal questions treated of by Maimonides. To this are added two separate collections of opinions and comments on criminal law, the first dealing with the payment of indemnities, the second with the laws concerning the sale, loss, and robbery of property. The three parts appeared together, under the title "Halakah le-Mosheh" (The Decision of Moses), Salonica, 1756. To a collection of his responsa which he had previously published he gave the title, "Debar Mosheh" (The Word of Moses), Salonica, 1742-50.

Bibliography: Benjacob, *Ozar ha-Sefarim*, pp. 102, 138; Fürst, *Bibl. Jud.* i. 44; Wiener, *Bibliotheca Friedlandiana*, No. 2059, p. 253.

W. M.

AMARILLO, SAMUEL: Collector of royal taxes at Tudela, Navarre, from 1380 to 1391, particularly of the duties paid by the Jews and the Moors of the town on real estate sold to Christians. At the court of Navarre he superintended the purchasing of clothing, spices, horses, etc.

Bibliography: Jacobs, *Sources*, No. 1459.

M. K.

AMARILLO, SOLOMON BEN JOSEPH: Rabbi at Salonica, who died in 1722. Amarillo was the father-in-law of Solomon Abdallah and an intimate friend of the learned rabbi Joseph Cobo. Amarillo wrote a number of works, all of which were published during his lifetime by his son Moses. The latter first collected his father's sermons, ethical and theological in character, under the title, "Pene Shelomoh" (The Face of Solomon), Salonica, 1717. Next he edited, with numerous annotations and a preface, Amarillo's responsa, nearly all of them critical discussions on parts of the "Shulḥan 'Aruk." The work was called "Kerem Shelomoh" (The Vineyard of Solomon), and was published at Salonica in 1719. The "Shulḥan 'Aruk" seems to have been Amarillo's favorite theme of discussion; for in 1722 there appeared another volume, similar to the "Kerem Shelomoh" and intended as a sequel to it, "'Olelot ha-Kerem" (Gleanings in the Vineyard). This also was edited and published at Salonica by Moses, together with the analogous work by Ḥayyim Shabbethai, "Torat Ḥayyim" (Law of Life).

W. M.

AMARKOL (אמרכל; from the Persian, *amarkir*; Armenian, *hamarakar* = master of finance): A title applied to "a Temple trustee superintending the cashiers" (Jastrow, "Dict."; see Sheḳ. v. 2). While the three—or, according to Baraita, Tamid, 27*a*, thirteen—cashiers (*gizbarim*) handled all the money that flowed into the Temple treasury, "the *amarkolim*, seven in number, held the seven keys to the seven gates of the Temple hall [*'azarah*], none opening his gate before all the others had assembled" (Tosef., Sheḳ. ii. 15, and Yer. *ib.* v. 49*a*). Above the seven amarkolim were two catholici, and these again were under the supervision of the high priest (Yer. Sheḳ. v. *l.c.*).

Abba Saul ben Batnit, in his bitter attack against the priestly house of Ishmael ben Phabi, says: "They themselves are high priests, and their sons gizbarim, and their sons-in-law amarkolim" (Tos. Men. xiii. 21, Pes. 57*a*). In Targ. Yer. to Num. iii. 32, and Num. R. iii., Eleazar, the son of Aaron, "the chief over the chiefs of the Levites," is given the title of Amarkol. Eliakim, the son of Hilkiah, as keeper of the keys of the Temple is also called Amarkol, in Targ. Isa. xxii. 23, and Jeremiah ben Hilkiah is represented as a descendant of the amarkolim, who had their inheritance in Anathoth (Targ. Yer. i. 1). In addition יוצר in Zach. xi. 13 (A. V., the potter) is translated in Targ., Amarkol = treasurer. Büchler has shown (against Schürer, "Gesch.," 1st ed., ii. 216) by referring to Josephus, "Contra Ap." ii. 8, that certain Temple officers handed the keys of the Temple to their successors each day, as a symbol of their charge—and these were none others than the amarkolim; who were, however, laymen and not priests. And it was in view of this that the title of Amarkol was applied to them.

In Targ. Yer. to Num. i. 6 *et seq.*, iii. 32; II Kings, xxii. 4; II Chron. xxxi. 13; Isa. xxii. 23, the title of Amarkol is, however, applied to *nesiim* (princes), to *peḳidim* (overseers), and to *shomere ha-saf* (the door-keepers), in accordance with Yer. Sheḳ. v., Num. R. iii., Lev. R. v.

The etymology given in Tosef., Sheḳ. ii. 15, *mar kol* ("master over all"), has no more value than the one given in Hor. 13*a*, *amar kulla* ("he who has everything to say"); wherefore the derivation from *catholicus* (Levy, "Neuhebr. Wörterb." under אמרכל; see Geiger, "Urschrift," p. 116) must be rejected.

Bibliography: Schürer, *Gesch.* 3d ed., ii. 270 *et seq.* The first who called attention to the Persian (or Armenian) etymology of the word was Levy, in Geiger's *Zeitsch.* 1867, pp. 215–218, who referred to Prud'homme in *Journal Asiatique*, 1866, p. 115. Then followed Perles' *Etymologische Studien*, 1871; Noeldeke, in *Goettinger Gelehrte Anzeigen*, 1871; and Lagarde, *Armenische Studien*, 1877, No. 1216; *Semitica*, i. 45; see also Kohut, *Aruch*, i. 129; *Rev. Ét. Juives*, xvi. 156; Büchler, *Die Priester und der Cultus*, p. 94; *Jew. Quart. Rev.* viii. 673.

K.

AMASA.—Biblical Data: **1.** According to II Sam. xvii. 25, the son of Ithra, an Israelite; I Chron. ii. 17 calls his father Jether, the Ishmaelite. He was a nephew of David and cousin of Absalom, who made him chief of the army that rose against David (II Sam. xvii. 25). After the death of Absalom and the defeat of his army, David purposed making Amasa general-in-chief of his forces (II Sam. xix. 14). To him was entrusted the suppression of the uprising under Sheba, the son of Bichri (II Sam. xx.), but Joab murdered Amasa and took his place as leader of the host. For this treachery Joab was subsequently put to death (I Kings, ii. 5, 32). **2.** Son of Hadlai, of the Bene Ephraim, who, obeying the words of the prophet Obed, refused to receive as captives the Judeans who had been taken from Ahaz, king of Judah, by the victorious Israelites under Pekah (II Chron. xxviii. 12). G. B. L.

——**In Rabbinical Literature:** The Jerusalem Talmud relates (Sanh. x. 29*a*) that when Amasa and Abner, Saul's guards, refused to be participants in the murder of the priests (I Sam. xxii. 17), Amasa boldly said to the king: "Can you lay claim to anything more than our belts and mantles (our marks of distinction)? Here they lie at your feet!" This did not offend Saul; and Amasa remained near him during his entire reign, accompanying him when he went to the witch of En-dor (Tan., ed. Buber, Emor, 4, and the parallel passages quoted there). It was quite natural, therefore, that David should appoint as commander-in-chief, in place of Joab, one already tested by Saul. Amasa did not, however, possess the martial spirit of Joab; and when he was sent to gather an army, he devoted himself to the study of the Torah. God's law seemed more important to him than the will of the king. It was, therefore, wrong on the part of Joab to execute Amasa for transgressing the king's orders (Sanh. 49*a*).

L. G.

AMASAI: **1.** Son of Elkanah, a Levite of the Kohathite family (I Chron. vi. 10, 20; II Chron. xxix. 12). **2.** Chief of the captains who met David at Ziklag and offered their services to him. It is possible that he is identical with Amasa (I Chron. xii. 19). **3.** One of the priests who blew trumpets when David brought back the Ark of the Covenant (I Chron. xv. 24). G. B. L.

AMASHAI (R. V., **Amashsai**)**:** A priest who dwelt at Jerusalem (Neh. xi. 13). G. B. L.

AMASIA, AMASIEH, or **AMASIYAH:** City in Asia Minor, on the Yeshil-Irmak (the ancient Iris). The population in 1900 was 23,000. The city is now of little importance; but, to judge from the number of Spanish fugitives that sought shelter there, it must have been prosperous during the sixteenth century.

A tragedy of interest to Judaism occurred in the sixteenth century within its precincts. A Christian had entered the house of a Jew and had not come out again. A number of Jews were suspected, and, under torture, confessed to his murder and were hanged. Among them was the learned R. Jacob ben Joseph Abiub. A few days later the Christian returned to the city: whereupon Sultan Solyman the Magnificent ordered that the perpetrators of the conspiracy receive summary punishment. R. Moses Hamon appeared before the court and obtained an order that in future any accusations of ritual murder should be tried before the "royal tribunal" and not before an ordinary judge. This is the account given by Joseph ben Solomon ibn Verga; and it is substantially the same as that given by Joseph ha-Kohen in his "'Emeḳ ha-Baka," though the name of the place is not mentioned, and Joseph Abiub is the one who is said to have met his death. Gedaliah ibn Yaḥya gives the date of this false accusation as 1530. Joseph ha-Kohen, however, gives 1545; and he is followed by Zunz and Graetz.

Bibliography: Solomon ben Verga, *Shebeṭ Yehudah*, ed. Wiener, p. 111, German transl. p. 227; Joseph ha-Kohen, *'Emeḳ ha-Baka*, ed. Letteris, p. 122, Cracow, 1865, M. Wiener's transl. p. 85, and note p. 207; Zunz, *S. P.* p. 58.

I. Br.

AMATHUS (the modern **'Amateh**)**:** A fortress near the Jordan, north of the river Jabbok and 21 miles south of Pella. At the beginning of the first century B.C., Amathus was an important fortress held by the despot Theodorus. About the year 98, Alexander Jannæus captured but could not retain it, and therefore, a few years later, razed it. Amathus became the capital of one of the five districts into which the proconsul Gabinius divided Palestine in the year 57 B.C. According to the Talmud (Yer. Sheb. ix. 38*d*) Amathus, עמתו (probably only a phonetic modification of חמתו, whence the modern 'Amateh) is identical with the Biblical Zaphon (Josh. xiii. 27; Judges, xii. 1, *Heb.*), but the correctness of this identification, in view of the Asaphon mentioned by Josephus, is not beyond doubt. Amathus is called by the latter a son of Canaan (Josephus, "Ant." i. 6, § 2). Another form (found in Yer. M. Ḳ. iii. 82*a*) is עמתן, which suggests an original form, עמתון, unless the ן is simply an error for ו. It is nowadays called Tell-'Amateh.

AMATO (HABIB) LUSITANO: Physician. See Juan Rodrigo de Castel-Branco.

AMATUNI: Members of one of the most powerful of the old Armenian clans, whose habitation was along the slopes of Mount Ararat. Their villages and castles—of which ruins are still visible—faced Mount Ararat across the plain. They controlled the district between Erivan and Gumri—the modern Alexandropol. Moses of Chorene (fifth century) relates (see Bibliography) that the clan was of Jewish origin and came from the eastern borders of the country of the Aryans, *i.e.*, Persia; and that they descended from an eponymous hero named Manuc, after whom the Persians in his day still called them Manueans. He adds that Arsaces, the first of the Parthian kings, brought them into Armenia, and that they were in his day a powerful clan in the region of Ahmatan. The Armenian king Artashes—the mythical contemporary of Domitian, Trajan, and Hadrian—gave them villages. According to the same source, *Amatuni* meant *advenæ*, "new settlers," or, equally, "proselytes"; and it is perhaps the Persian word *amat.*

The Amatuni were probably a Judaized clan. They are mentioned in the fifth century by Agathangelos and Lazar of Pharp, and they furnished leading captains, counselors, and ecclesiastics to Armenia until the beginning of the crusading epoch. There is nothing improbable in the tradition preserved by Moses of Chorene, since all the towns in Armenia and Caucasian Iberia were, according to chroniclers of the fifth century, full of Jews. See also BAGRATUNI.

F. C. C.

AMAZIAH.—Biblical Data: 1. Priest at Beth-el in the reign of Jeroboam II. When the prophet Amos came to Beth-el, and there prophesied the death of Jeroboam and the captivity of Israel, Amaziah tried to expel him from the kingdom of Israel (Amos, vii. 10, 12, 14). **2.** A Simeonite (I Chron. iv. 34). **3.** A Levite of the family of Merari and ancestor of Ethan (I Chron. vi. 30). G. B. L.

——**In Rabbinical Literature:** According to R. Meir, the priest Amaziah is identical with the false prophet mentioned in I Kings, xiii. 11 *et seq.* (Yer. Sanh. xi. 30*b* and Cant. R. ii. 5). See JONATHAN, SON OF GERSHOM. L. G.

AMAZIAH, KING OF JUDAH.—Biblical Data: Son of Joash and father of Azariah (II Kings, xv. 1); came to the throne about 795 B.C. As soon as his kingdom was established he slew the murderers of his father (II Kings, xiv. 5), but contrary to custom permitted their children to live. Very early in his reign he fitted out an army to reconquer Edom, which had rebelled during the reign of Jehoram (II Kings, viii. 20–22), his great-grandfather. Amaziah achieved a great victory over the Edomites, and slew 10,000 (the chronicler, II Chron. xxv. 11, 12, says 20,000) of them. He carried home and set up the gods of Seir (II Chron. xxv. 14) as objects of worship. His brilliant victory over Edom inflated his pride, and he challenged to a combat Jehoash, grandson of Jehu, king of Israel (II Kings, xiv. 8–14). The latter's disdain and scorn for Amaziah are embodied in the stinging parable of the thistle and the cedar (II Kings, xiv. 9). In his resentment, Amaziah rushed into a disastrous battle at Beth-shemesh, and a humiliating defeat overtook his army and the land. The king was captured, 400 cubits of the wall of Jerusalem broken down, the city, Temple, and palace were looted, and hostages carried to Samaria. It is not known how long Amaziah survived these disasters, but the reconstructed chronology of the kings of Judah would reduce his twenty-nine years' reign to fourteen or fifteen years. He, like his father (II Kings, xiv. 19, 20, xii. 20, 21), was the victim of assassins, apparently bent upon putting out of the way one who had brought upon the land such dire disasters. I. M. P.

——**In Rabbinical Literature:** Moses ibn Ḥabib, in his work, "Darke No'am" (ed. Rödelheim, 1806, p. 6*b*), gives an alleged epitaph of Amaziah's general, found in Morviedro, Valencia. It is as follows: שאו קינה בקול מרה לשר גדול לקחו יה ("Raise your voice in bitter lament, for the great chief whom God hath taken"); then follows something illegible; and at the end, לאמציה ("to Amaziah"). The epitaph, probably authentic, and belonging to some one of the name of Amaziah, gave rise to the belief that it referred to the "great chief" Amaziah. L. G.

AMBER: The Hebrew word *ḥashmal*, rendered "amber" by the A. V., occurs only in Ezekiel (three times). Its meaning has puzzled commentators from Talmudic times to the present day. Ḥag. 13*b* gives the meaning as if it were a composite word, "beasts that utter fire." The Septuagint does not throw any light upon the subject, as its rendering, "elektron," is an ambiguous word, and may mean Amber or an alloy of silver and gold. Friedrich Delitzsch (in his notes to Baer and Delitzsch, text of Ezek. xii.) identifies "ḥashmal" with the Assyrian "eshmaru," which was a shining metallic alloy. The Assyrian home of this compound would explain why the word is peculiar to Ezekiel. If "Amber" is the correct rendering of Ezek. i. 4, 27, viii. 2, it refers to a bituminous substance found in various parts of the world in two different varieties; in the Baltic district it is of a yellow color, while in the south of Europe it is red. Neither variety, however, fits the requirements of the passages in Ezekiel, where something metallic and shining is intended.

Specimens of Amber in the Mineralogical Museum of the Jardin des Plantes, Paris; exhibiting Flies, Spiders, and Beetles embedded.

AMBERG: A town in the district of the Upper Palatinate and Regensburg (Ratisbon), Bavaria; inhabited by Jews from the thirteenth century. In 1298 the town authorities ordered that the rights of the Jews be respected; but in the same year the Jewish community suffered from persecutions instigated by the leader of the peasants, Rindfleisch. The Nuremberg "Martyrologium" gives the names of the following who died there for the faith: Kalonymus ben Shabbethai and his wife Gutlin; Judlin, his wife, step-daughter, and two children; Baruch ben Jehiel ha-Kohen, his wife Minna, and two children; Lemlin ben Baruch, a young teacher; Gershon ben Solomon ha-Levi; Moses ben Israel. In 1364 permission was given to Sussmann, "Hochmeister" of the Jews in Regensburg, to keep a school in Amberg; and in 1366 the Jews of that town obtained the same rights as their brethren in Heidelberg. In 1369 one Bendit and his son Noel were received into the community for three years without the payment of any tax. The same privilege was extended to the "Hochmeister" Mosse of Wene (Wien?), who also received permission to establish a school. All who attended his school were to be amenable only to Jewish law as interpreted by the "Hochmeister." Count Palatine Rupert promised full protection to all Jews settling in Amberg. In 1389 a Jew of Amberg, named Eberl, sold his house, which was situated near the synagogue. In 1390 another Jew, Noah, negotiated with the town council of Amberg. Toward the end of the fourteenth century, Jews were expelled from Amberg, and their synagogue was annexed to the church of the town, the Frauenkirche. They removed to the neighboring towns, Sulzbach, Schnaittach, and Sulzbürg, which, from that time, contained larger Jewish communities; but eventually the Jews returned to Amberg in small numbers. In 1900 there were 94 members in the congregation which now belongs to the rabbinate of Sulzbürg. The building in which the synagogue is situated was purchased in 1896.

A. F.

AMBRON, AMBRAN, or EMBRON (עמרון): An Italian family, prominent since 1492, at which period they emigrated from Spain ("Rev. Ét. Juives," ix. 70, 74). Of this family the following are known to have lived in Rome: Shem-Ṭob (1539); Zerahiah (1536); Judah ben Shem-Ṭob (1550); Jacob, who in 1618 was president of a charitable institution; Gabriel and Baruch, at the beginning of the seventeenth century; Gabriel (1720); Alexander (1737); Hezekiah ben Gabriel. The last-named paid the printing expenses of the prayer-book "Sha'are ha-Teshubah" (Venice, 1775).

M. B.

AMBRON, SHABBETHAI: A philosophical writer; lived in Rome in the first half of the eighteenth century. His life-work was a book on the universe, with the somewhat ambitious title "Pancosmosophia." It was first mentioned in the Venice "Giornale de' Letterati" (1710), and soon after in the Leipsic "Neuer Bücher-Saal der Gelehrten Welt." According to these sources, the author made a systematic attempt to refute the astronomical views of Ptolemy, Copernicus, and Tycho Brahe, and to set up a cosmogony, the underlying principle of which was that the earth was flat. He attempted to support his views by an appeal to Jewish tradition. The author had already prepared some hundred copperplates to illustrate his theories, when the Roman Inquisition prohibited the printing of the work. Ambron sent his manuscripts to Venice, but here also his efforts were frustrated by the papal nuncio, Mottei. On learning that German scholars were interested in his work, he sent it with the plates to the publisher of the "Neuer Bücher-Saalder Gelehrten-Welt," who promised to print it. The work, however, has not been published, and all trace is lost of the manuscript.

Ambron also devoted considerable work to a projected Bibliotheca Rabbinica, with the intention of correcting Bartolocci's errors and misconceptions. This manuscript shared the fate of the foregoing.

In 1721 he is known to have been a member of the Roman *Congrega*. In a pasquil written against Lorenzo Ganganelli (later Pope Clemens XIV.) it is said: "Denam e Ambrun amò como fratelli—Uno inglese, uno ebreo, che fè il signore" (He loved Denam and Ambrun like brothers—one was an Englishman, the other a Jew who played the rôle of a lord). Considering the great difference in age between Shabbethai Ambron and Lorenzo Ganganelli (became pope in 1769), it is doubtful if the Ambrun of the pasquil is identical with the subject of this notice.

M. B.

AMBROSE: Church father and author; born about 340 at Treves; died 397 in Milan. This audacious prelate—who as bishop of Milan dared to say of his emperor, "The Emperor is in the Church, but not over the Church"—is more renowned perhaps for his energy and zeal than for his learning. His attitude toward Jews and Judaism was uncompromisingly hostile. An address of his to Christian young people warns them against intermarriage with Jews ("De Abrahamo," ix. 84, xiv. 451). But his opposition assumed a more positive and active character in the matter of the bishop of Callinicum in Mesopotamia. It appears that in 388 a mob, led by the local bishop and many monks, destroyed the synagogue at Callinicum. The emperor Theodosius the Great, who can scarcely be accused of lack of religious zeal, was nevertheless just enough to order the reerection of the synagogue at the expense of the rioters, including the bishop. Ambrose immediately issued a fiery protest to the emperor. He writes to Theodosius ("Epistolæ," xl. xvi. 1101 *et seq.*) that "the glory of God" is concerned in this matter, and that therefore he can not be silent. Shall the bishop be compelled to reerect a synagogue? Can he religiously do this thing? If he obey the emperor, he will become a traitor to his faith; if he disobey him, a martyr. What real wrong is there, after all, in destroying a synagogue, a "home of perfidy, a home of impiety," in which Christ is daily blasphemed? Indeed, he (Ambrose) must consider himself no less guilty than this poor bishop; at least to the extent that he made no concealment of his wish that all synagogues should be destroyed, that no such places of blasphemy be further allowed to exist. He also states, in extenuation, that in the time of Julian, the Jews destroyed the Christian basilicas in Gaza, Ascalon, Alexandria, and elsewhere. It is hard to say just what foundation there is for this charge against

The Callinicum Riot.

the Jews, seeing that all the misfortunes which befell the Christians in Julian the Apostate's reign were laid upon their shoulders. Continuing in this strain Ambrose implored the emperor to recall his edict. The emperor made no reply to this appeal; but his silence, instead of disconcerting the energetic churchman, simply induced him to take advantage of the opportunity which a visit by Theodosius to Milan in the winter of 388-89 offered, to speak upon the matter from the pulpit in the emperor's presence ("Epist." xl., xvi. 1113). He was, however, shrewd enough to appeal to imperial magnanimity, and with the most favorable result; for after the service Theodosius greeted the bishop with the words, "Thou hast preached against me!" "Not against thee, but in thy behalf!" was the prelate's ready reply; and, taking advantage of the emperor's passing humor, he succeeded in obtaining his promise that the sentence should be completely revoked. In this manner, this altogether discreditable affair ended in the victory of the Church, with the very natural consequence that thereafter the prospect of immunity thus afforded occasioned spoliations of synagogues all over the empire. That Ambrose could nevertheless occasionally say a good word for the Jews is shown by a passage in his "Enarratio in Psalmos" (i. 41, xiv. 943), in which he remarks, "Some Jews exhibit purity of life and much diligence and love of study."

Ambrose, the "Christian Philo."

That in his literary activity Ambrose drew extensively upon Philo is well known; the fact even gained for him the name of "Philo Christianus," the Christian Philo (Aucher, introduction to Philo, "Quæstiones et Solutiones"). He was the channel through which many types and personifications originating with the Alexandrian Jewish philosophy were embodied in both the art and the literature of the Middle Ages down to Dante. So closely does he follow Philo that many corrupt passages of the latter's text may be emended through Ambrose's quotation of them, and many misreadings may in this way be corrected (compare Förster, "Ambrosius, Bischof von Mailand," p. 180, and the Vienna edition of Ambrose, xxii. pt. i. 360). Examples of Ambrose's indebtedness to Philo are to be found in his interpretation of the four rivers of Paradise (compare Ambrose, "De Paradiso," iii. 14, xiv. 280, with Philo, "Leg. Allegr." xix.) as the four cardinal virtues, wisdom, temperance, courage, and justice. The law concerning the children of the two wives (Deut. xxi. 15) is explained by Ambrose ("De Abel et Cain," i. 4, xiv. 322) almost exactly in the words of Philo ("De Abel et Cain," v.). Philo interprets Adam as signifying "reason"; Eve, "emotion." Ambrose has it: "Adam mentem diximus; Evam sensum esse significavimus" ("De Abrahamo," ii. 1, xiv. 455).

Palestinian Influence upon Ambrose.

For a complete collection of allegorical interpretations drawn by Ambrose from Philo, see Siegfried "Philo von Alexandria," pp. 371-87. This collection will serve to show his indebtedness to Philo, not only in the matter of actual allegorical imagery borrowed from him and the adoption of his rules of interpretation, but also in the numerous echoes of the Philonic doctrines concerning God and man which therein abound. Besides Philo, the IV. Maccabees exerted great influence upon Ambrose, particularly in regard of his homiletic style, which in later days was regarded as unapproachably fine. Freudenthal shows how he quoted long extracts from this book in his sermons, frequently, indeed, word for word. But in addition to these Alexandrian sources it is not so generally known that there are numerous traces of Palestinian-Jewish influence upon Ambrose. Such Palestinian interpretations as that of the explanation of Jacob's blessing (Gen. xlix.) as referring to circumstances in the careers of the sons ("De Benedictione Patrum," ii. 8, iii. 2, xiv. 676-677) may have been derived from hearsay. That he adopts the Jewish conception of the Antichrist as springing from the tribe of Dan ("De Bened. Patr." vii. 32, xiv. 684) does not necessarily prove his acquaintance with rabbinical doctrine at first hand; for at this period the Church as a whole had adopted the Jewish conception of Antichrist. Ambrose's remark ("De Fide," iii. 11, 88, xvi. 607) that Melchizedek was not "an angel, as the Church hath received it from Jewish nonsense," but a holy man, shows that he was not above palming off as Jewish what is distinctly not so, for his statement is controverted by the old Haggadah which identifies Melchizedek with Shem, as Epiphanius ("Adv. Haer." ii. 1, etc. (see Ginzberg, "Monatsschrift," 1899, p. 495). But Ambrose's familiarity with Jewish traditions is evidenced by such statements as ("De Abrahamo," ii. 1, xiv. 455) that Abraham means "one who crossed over." This does not indicate, as has been charged, that he confuses Abraham with Eber; but that he follows the well-known Haggadah (Gen. R. xlii. 8) that Abraham is called "Ibri" (Gen. xiv. 13) because he "came over" the river Euphrates. That he confuses Korah's "children" with Korah's "followers" (see Förster, "Ambrosius," p. 316), also originates in Palestinian tradition; an old baraita (Sanh. 110*b*), commenting on Num. xxvi. 11, "notwithstanding the children of Korah died not," makes the statement that in Gehenna, into which Korah's conspirators descended, "a stronghold was formed for the children of Korah where they seated themselves and sang hymns." Ambrose's explanation that God brought all the animals before Adam, in order that he might note that each male had its female ("De Paradiso," i. 11, xiv. 299), is the old Haggadah in Gen. R. xvii. 11. He states that Adam exceeded the truth when he told Eve not to touch the Tree of Life (*l.c.* i. 12, xiv. 303), just as is narrated in "Ab. R. N." i., ed. Schechter, iv. When he says that angels visiting Abraham asked where Sarah was, in order to point out to him her modesty in avoiding strangers ("De Abrahamo," i. 5, end), he is drawing upon Jewish tradition (B. M. 87*a*). That Ambrose misquotes and misunderstands many Haggadot should not be surprising when Jerome—who for many years sedulously studied at the feet of Jewish rabbis—did the same. Thus Ambrose makes Barak the "son" of Deborah ("De Vidius," i. 8, 45; xvi. 248), whereas the Midrash declares him to have been her "husband" (Tanna debe Eliyahu R. vii.; Yalḳ. on Jud. v. 1; see also L. Ginzberg, "Haggada bei den Kirchenvätern," p. 5).

Ambrose as a strenuous opponent of the Jews on the one hand, and as a faithful pupil of Jewish tradition and Jewish teachers on the other, affords a curious illustration of the peculiar treatment which Judaism has encountered at the hands of individuals as well as nations. See also HEGESIPPUS.

L. G.

AMBROSIUS, MOSES: One of the earliest Jewish settlers in New York, then called New Amsterdam. He was one of a party of twenty-three Jews who arrived in the New Netherlands in Sept., 1654, apparently having left Bahia, Brazil, upon its reconquest by the Portuguese from the Dutch West India Company. As each member of the party had made himself individually liable for the passage-money of all the party, and as the immigrants were unable to pay this money in full, Ambrosius was one of two who were placed under civil arrest by the municipal authorities; but he appears to have been released in a short time, and, with his associates, to have prospered on American soil under the Dutch flag.

M. J. K.

AMBROSOLI: An ecclesiastic dignitary of Rome, the events of whose life touched the history of the Jews of that city in 1848. He distinguished himself through his eloquent sermons on tolerance toward the Jews, and preached in Santa Maria di Trastevere during the agitation for the abolition of the Roman Ghetto. His eloquence was so effective that his audiences were said to have been anxious to tear down the walls of the Ghetto whenever he spoke on the subject. His influence, therefore, was quite marked in the movement which culminated in the edict signed by Pius IX. on April 17, 1848, to remove the walls and gates of the Roman Ghetto. Berliner relates that he heard from a prominent Roman Jew, Samuele Alatri, that on the eventful night when the Ghetto walls were torn down and the enthusiastic crowd cheered the torch-lit laborers, the pious and learned Ambrosoli was present. Under his coat he had concealed a crucifix, ready to draw it forth at any moment, and in the name of the Christian religion resist any possible interference.

AMELANDER (AMLANDER), MENAHEM MANN BEN SOLOMON HA-LEVI: A Dutch writer of the eighteenth century. He must have died before 1767, since in the edition of the Pentateuch published in that year many of his annotations are quoted with the addition to his name of the Hebrew letters ז"ל ("of blessed memory!"). The same edition shows that he was a recognized authority on Hebrew grammar, for he is therein frequently styled המדקדק ("the grammarian"). He was probably a teacher and preacher. The family name Amelander was discovered (by G. Polak) in the epitaph upon the tombstone of Amelander's daughter at the cemetery of Muiderberg. He was a pupil of the Amsterdam dayyan and publisher, Moses Frankfort, for whose celebrated "Biblia Rabbinica"—(Ḳehillat Mosheh) Amsterdam, 1724–28, he undertook the proof-reading of the Bible text. In 1725 he published, together with his brother-in-law Eliezer Rudelsheim, a Judæo-German Bible Commentary with text, under the title "Maggishe Minḥah" (they who bring an offering), in folio, a work which enjoyed considerable reputation, and, in view of its period, is not altogether without merit.

His edition of "Midrash Tanḥuma," published in 1733, contained marginal notes giving short verbal and technical explanations. The Pentateuch edition mentioned above (with the commentaries "Ḥinnuk" and "Debeḳ Ṭob") contains also a few extended annotations by him. In De Vidas' "Reshit Ḥokmah" (The Beginning of Wisdom), published in Amsterdam in 1776, the commentary entitled "La-Da'at Ḥokmah" (To Understand Wisdom), is by Amelander. His best-known work, however, is the Judæo-German continuation of "Josippon," which first appeared in Amsterdam in 1744. It contains, in addition to many legends, a compendium of Jewish history down to his time, but is especially valuable for information concerning the settlement and history of the Jews in Holland, particularly in Amsterdam. Indeed, for the history of the German and Polish Jews there, it is almost the only source of information. Proof of the great interest aroused by the book is to be found in the fact that as early as 1767 it was reprinted in Fürth. The edition that appeared in Amsterdam in 1771, entitled "Keter Malkut" or "Sheerit Yisrael," contained an additional chapter continuing the history of the Jews up to the year 1770. This chapter, however, does not appear to have been written by Amelander, but by the publisher of the work. A Dutch translation of "Sheerit Yisrael," which appeared in 1855, was made by the journalist, L. Goudsmit, then living in Amsterdam, and contained numerous annotations by Gabriel Polak.

AMEMAR (= Ami Mar): A compound word, of which the first element is the prenomen, the second a title often found among the Jewish sages in Babylonia, and meaning "master" (compare the dictionary 'Aruk under the word "Abaye"). There are two Babylonian teachers always quoted by that name alone.

Amemar I.: An amora of the third generation (fourth century), junior contemporary of R. Judah b. Ezekiel ('Ab. Zarah, 48*a*) and of Rab Sheshet (Ḥul. 107*a*). With the study of the Halakah he combined the study of the Scriptures, passages from which he often adduced to support either a legal enactment or a saying of the rabbis. Thus to the aphorism, by Abdimi of Haifa, that with the destruction of the first Temple the gift of prophecy was taken from the prophets and bestowed upon the sages. Amemar appends, "And the wise man is superior to the prophet, for thus the Bible says (Ps. xc. 12), ונביא לבב חכמה 'and the prophet is a wise heart'; and as in all definitions the lesser is defined by the greater, this proves that the wise man ranks higher than the prophet" (B. B. 12*a*).

This singular translation of the word "nabi" as a noun, in opposition to the ordinary conception of it as a verb, is also found in the Targum in Ibn Ezra on the passage, in the name of Moses ibn Gikatella, and also in Maimonides' "Moreh," ii. chap. 38, end, and has recently been adopted by Grätz in his "Kritischer Commentar zu den Psalmen," *ad loc.*

Amemar II.: A senior contemporary and friend of Rab Ashi, the projector of the Babylonian Talmud, with whom he frequently discussed important halakot (B. M. 68*a*; Ber. 12*a*; Bez. 22*a*; Ket. 21*b*; Ḳid. 72*b*; B. K. 79*a*; Ḥul. 53*b*, 58*a*). Amemar reestablished the college at Nehardea, and restored it to its original reputable position—it having been destroyed over a century before by Odenathus (Bar Naẓar, Ket. 51*b*, Yer. Ter. viii. 46*b*; Grätz, 2d ed., iv., note 28)—and was its rector for more than thirty years (390–422). In addition to that office he was the president of the court at Nehardea and introduced several changes in the ritual (R. H. 31*b*, Suk. 55*a*, B. B. 31*a*); and on royal festivals he, together with Rab Ashi and Mar Zutra, officially represented the Jews at the court of Yezdigerd II. (Ket. 61*a*). On one of these occasions, Huna bar Nathan was among the assembled dignitaries, and the king, happening to notice that Huna's girdle was deranged, adjusted it, remarking, "It is written of you (Ex. xix. 6), 'Ye shall be a kingdom of priests and a holy nation,' and you must therefore wear the girdle as priests do." When Amemar heard of this, he said to Huna, "On thee has been realized the prophetic promise (Isa. xlix. 23), 'Kings shall be thy attendants'" (Zeb. 19*a*). Amemar's erudition was continued in his son Mar, who often quoted him to Rab Ashi (Pes. 74*b*; Suk. 32*b*, 41*b*; B. M. 68*a*; B. B. 174*a*); and some of his homiletic observations have found their way into the Babylonian Talmud (Soṭah, 9*a*; B. B. 45*a*).

S. M.

AMEMAR B. MAR YANUḲA (YANḲA): A Babylonian teacher of the fifth and sixth amoraic generations, who, together with the exilarch (Resh Galuta) Huna Mar II. and Mesharsheya b. Pakod, first suffered martyrdom in the cause of Judaism on Babylonian soil—victims of the persecutions inaugurated by King Firuz (Pheroces, 458–85). Amemar was executed in the month of Adar 470, two months after the execution of his fellow martyrs.

AMEN ("So is it," or "So shall it be"): A word used at the conclusion of a prayer, or in other connections, to express affirmation, approval, or desire. It is derived from the Old Testament Hebrew, and is perhaps the most widely known word in human speech; being familiar to Jews, Christians, and Mohammedans. It occurs thirteen times in the Masoretic text of the Old Testament, and in the Septuagint in three additional passages (Jer. iii. 19, xv. 11, Isa. xxv. 1). From these passages it is possible to trace in part the gradual development of Amen from an adjective (or, according to Barth, "Die Nominalbildung in den Semitischen Sprachen," 5*c*, 7*b*, a noun, meaning "firmness," "certainty") into an indeclinable interjection.

The primitive use of Amen is in I Kings, i. 36, where also it serves to introduce an affirmative answer. This introductory Amen occurs also in Jer. xxviii. 6; but in another passage (xi. 5) Jeremiah shows familiarity with the detached Amen. The detached Amen is that use of the Amen in which the expected answer is omitted and left to be inferred from the context. Num. v. 22 (in which Amen is repeated twice), Deut. xxvii. 15 *et seq.*, and Neh. v. 13, show that the detached Amen was employed in solemn oaths for which the brief Amen was more effective than a whole sentence.

Similar to the detached Amen is the use of the Amen in Neh. viii. 6, I Chron. xvi. 36, and Ps. cvi. 48, from which it is learned that during the Persian epoch Amen was the responsory of the people to the doxology of the priests and the Levites. Too little is known, however, of the Temple worship of that period to make it possible to determine whether, as Graetz holds, Amen and Amen Halleluiah were the only responsories used. The passages in Psalms parallel to that cited above (xli. 14, lxxii. 18–19, lxxxix. 53) make it apparent that the responsory was longer; and there exists a reliable tradition (Tosef., Ber. vii. 22; Ta'anit, i. 11, 16*b*; Yer. Ber. 14*c*, end; Soṭah, 40*b*) that at a period not far removed from the oldest Pharisaic traditions Amen was not generally employed in the Temple liturgy. The opposite view of Graetz in his attempt to distort the evident meaning of the text in this Tosefta is disproved by Sifre, Deut. xxxii. 3, 306, which clearly shows that in ancient times the usual responsive formula in the synagogue and the Temple was: "Blessed be the name of the glory of his kingdom for ever and ever" (ב"ש"כ"מ"ל"ו) ברוך שם כבוד מלכותו לעולם ועד. Thus the statement in the Tosefta becomes intelligible: while synagogues adopted the Amen, the Temple preserved the longer form. Even in later times—at least during the existence of the Temple—the Amen could not entirely supplant the longer responsory ב"ש"כ"מ"ל"ו; and the אמן יהא שמיה רבא מברך לעלם ולעלמי עלמיא (א"יה"ש"ר) ("Praised be the great Name [that is, the Tetragrammaton] for ever and ever") is a combination of the synagogue Amen with the Temple formula ב"ש"כ"מ"ל"ו, the Aramaic equivalent of which is א"יה"ש"ר. This explains the great significance which the Talmud (Shab. 119*b*) and the Midrash (Eccl. R. on ix. 14, 15) attaches to the blessing, a remnant of the Temple liturgy.

Liturgical Amen.

Since the rabbis paid strict regard to precise arrangement of prayer-formulas, naturally the use of Amen in the liturgy was rigorously determined by them. The Amen as a responsory of the people is already spoken of by the rabbis, but it is to be noted that Amen was only the responsory to the reader's doxology ברוך אתה יה" ("Blessed art thou, O Lord!" Mishnah Ta'anit, ii. 5; Suk. 51*b*. It is here recorded that in the great synagogue of Alexandria the attendant, at the conclusion of the reader's doxology, signaled the congregation with a flag to respond Amen). Of equal importance with this doxology was the priestly blessing, to each verse of which the congregation responded Amen (Mishnah Soṭah, vii. 3). As expressly stated in a Baraita (Ber. 45*a*), the use of Amen at the conclusion of a prayer, mentioned in Tobit, viii. 8, must have been very common among Jews in ancient times. Still, the Christian custom of concluding every prayer with Amen seems to have brought this use of Amen into bad repute among the Jews (Ber. *l.c.*); and it was decided in Babylonia, about 400, that only at grace after meals the third benediction (originally the last) should conclude with Amen (Ber. *l.c.*), while in Palestine (Yer. Ber. v. 4) Amen was used at the end of the last doxology. In the Middle Ages the Spanish ritual followed the Palestinian custom; the German and Polish Jews conforming to the Babylonian usage (compare "Shulḥan 'Aruk," § 1, 136, end, and the commentaries thereon).

Desiderative and Responsive Amen.

The use of Amen in response to the expression of a good wish can be traced back to the first century of the Christian era (Ket. 66*b*); whence is derived the medieval custom of suffixing an Amen to every possible expression of a desire. Especially favorite phrases are אמן כן יהי רצון = אכי"ר ("Amen! may this be the will" [of God]) generally used after prayers which do not conclude with a doxology; שיחיה לימים = שליט"א טובים אמן ("May he live to see good days, Amen!"), a formula usually appended to the name in letters; and ונאמר א" ("And let us say Amen!"), with which the reader concludes a special prayer or a prayer for a private person. The later responsive Amen is employed at the beginning and the conclusion of grace after meals (Ber. 47*a*); for, according to the rabbis, every doxology must be responded to with an Amen.

The meaning of Amen is discussed by Rabbis Eliezer ben Hyrcanus and Simon ben Yoḥai. The former, a younger contemporary of the Apostles, says: "When the dwellers of Gehenna chant their Amen at the very time that the holy name of God is praised by the congregations . . . the doors of hell yield and angels carry them in white robes into paradise on the last day" (Eliyahu Zutta xx.). That this utterance is not a later invention, is proved by the kindred sayings of Simon ben Yoḥai (Shab. 119*b*, Midr. Tehil., xxxi. 22). A poetical account of the power of Amen is given in Yalḳ. ii. 296 to Isa. xxvi. 2, in which the final release from hell is described as follows:

> "After God shall have publicly revealed the new Messianic Torah, Zerubbabel will recite the Ḳaddish. His voice will be heard throughout the world, so that all dwellers upon earth, as well as Jewish sinners and righteous heathens in hell, will exclaim, 'Amen!' Moved to pity by this Amen from the dwellers of hell, God will bid the angels Michael and Gabriel release them from hell and place them in paradise; which command the angels will forthwith proceed to carry out."

A similar Haggadah occurs in Siddur R. Amram (13*b*, foot), which is referred to by Hogg ("Jew. Quart. Rev." ix. 17): The legend regarding a pious Jew who once neglected to answer Amen to the doxology, recounted by Jaffe in his introduction to "Lebush," i., belongs to the Middle Ages.

Amen in the New Testament.

As the Amen was widely employed in the Jewish liturgy in the time of Jesus and the New Testament authors, Amen occurs extensively in the New Testament. But the use of almost one half the number of Amens found therein (fifty-two out of one hundred and nineteen) is peculiar to the New Testament writings, having no parallel in Hebrew (see however, Dalman, "Worte Jesu," p. 186); for, as is never the case in Hebrew, the Amen is sometimes found at the beginning of a sentence without reference to what precedes. The explanation of Delitzsch that this Amen is an erroneous form of the Aramaic אמינא ("I say"), is disproved not only by the fact that אמינא is exclusively Babylonian-Aramaic, but by the further fact that אמינא is used exclusively in a hypothetic sense (against 'Er. 32*a*), while in the New Testament, Amen expresses certainty. Another peculiarity is the use of *ὁ* Ἀ*μην* in Rev. iii. 14 as a designation of Jesus. The attempted explanation of this use from II Cor. i. 20 is altogether unsatisfactory.

The primitive Christian Church borrowed the Amen, as it did most of its liturgy, from the Jewish synagogue. Of especial interest is the following passage of Paul (I Cor. xiv. 16), "When thou shalt bless with the spirit (במחשבה), how shall he that occupieth the room of the unlearned (*ἰδιώτου* הדיוט) say Amen?" Paul here speaks of the reader's duty to recite his prayers aloud in order that the ignorant people might have compensation in answering the Amen to the doxology. The very same teachings are given by the rabbis (Tosef., R. H. iv. [ii.] 12; Gemara, ib. *ἰδιώτου* שאינו בקי; compare also "Shulḥan 'Aruk Oraḥ Ḥayyim," § 124, 4–6; § 139, 6). It is known that in the time of Justin Martyr (about second century) Amen was pronounced after prayer and the Eucharist ("Apologia," i. § 65, 67). Jerome shows by his "*ad similitudinem cœlestis tonitrui Amen reboat*" ("Commentarius ad Galatias," preface to book ii.) that the Church had adopted from the Synagogue even the practise of enunciating the "Amen with the full power"—of the voice (Shab. 119*b*).

In accordance with the less public character of Mohammedan worship, Amen is very little used among the followers of Islam. Still it is universally employed by them after every recital of the first sura, the so-called *Surat al-fatiḥa*.

AMERICA:* The name "America" is used in this article in its broadest signification, as applied to the entire western world; that is, North and South America and all the adjacent islands.

The discovery of America by Columbus, and the earliest expeditions and attempts at settlement in various parts of the continent and in many of the contiguous islands, are intimately connected with the Jews and their history.

Columbus received great assistance from astronomical works prepared by Jews, and from scientific instruments of which Jews were the inventors. Luis de Santangel and Gabriel Sanchez—both Maranos—and Juan Cabrero, of Jewish descent, urged upon Queen Isabella the importance of the plans of Columbus, and were instrumental in securing the funds for the first and second voyages. The expenses of the latter were defrayed almost exclusively out of moneys derived from the confiscated properties of Jews.

Jews Accompany Columbus.

At least five persons of Jewish blood accompanied Columbus upon his first voyage, among whom special mention must be made of Luis de Torres, who was to have acted in the capacity of interpreter. Torres is said to have been the first European to tread the soil of America, and the first to discover the use of tobacco. He settled and died in Cuba.

On March 31, 1492, the Catholic monarchs issued a decree to the effect that within four months all Jews and Jewesses were to leave the kingdoms and lands of Spain. On April 30 the decree was publicly announced by the heralds; and on the same day Columbus was ordered to equip a fleet for his voyage to the Indies. On Aug. 2, 1492, about 300,000 Jews left Spain to settle wherever they might find a shelter; and on the following day the fleet of Columbus set sail. His journal opens with a reference to the coincidence in time of these two events. Columbus' first account of his discovery took the form of a letter to his Jewish patron, Santangel.

The facts mentioned suffice to explain the very early presence of Jews in America (see Kayserling, "Christopher Columbus and the Participation of Jews in the Spanish and Portuguese Discoveries," New York, 1894, and the article AMERICA, DISCOVERY OF).

Brazil: Brazil was discovered in 1499 by a Spaniard, Pinzon, and independently in 1500 by a Portuguese, Pedro Alvarez de Cabral. With him was a

---

*This article is intended as an outline; numerous details have therefore been omitted. Each state, all of the large cities, and many of the important towns are treated in separate articles. America is also treated under numerous subject-headings wherever appropriate. Text references have been intentionally omitted: they will be supplied in the individual articles.

Jewish mariner, Gaspar, who was of much assistance in the discovery of Brazil and who is favorably mentioned by Amerigo Vespucci (Kayserling, *l.c.* p. 117). Brazil was the part of America earliest inhabited by large numbers of Jews. Portugal sent annually two shiploads of Jews, and criminals, and also deported persons who had been condemned by the Inquisition. The Maranos are said to have quickly thrown off their mask and to have professed Judaism. As early as 1548 (according to some, 1531) Portuguese Jews, it is asserted, transplanted the sugar-cane from Madeira to Brazil; but whether this be true or false, it is indisputable that nearly all the large sugar-plantations of Brazil during the first half of the seventeenth century belonged to Jews.

Early Portuguese Colonies.

So extensive had the emigration to Portuguese colonies become in 1557 that on June 30 of that year an edict was issued forbidding Maranos to leave Portugal. A stringent law was passed prohibiting the settlement of Jews in the Spanish colonies as well, yet some of position and wealth were among the early settlers. This is indicated by the fact that the prohibition was removed in 1577 upon the payment by the Jews in the colonies of the enormous sum of 1,700,000 cruzados, equivalent to about $714,000. In 1611 mention is made of wealthy Maranos making the return trip from Bahia to Portugal.

Under Dutch Rule.

That Jews had settled in Brazil, prior to the Dutch occupation, in sufficient numbers to make them a military factor, is shown by the argument advanced in favor of an attack by the Dutch West India Company on the Portuguese in Brazil, "that the Jews there would be ready to aid the Dutch in any attempt." This attack was successfully made in 1624, at which time all the Jews in the country united in the formation of a congregation. Jews had invested largely in the Dutch West India Company; and to this fact the favorable attitude of the Holland authorities is traceable. Those who had come over under Portuguese and Dutch rule were reenforced in 1642 by a party of 600 from Amsterdam, bringing with them Ḥakam Isaac Aboab, who settled at Recife (Pernambuco), and was probably the first rabbi in Brazil. Among these settlers was also Ephraim Sueiro, a step-brother of Manasseh ben Israel. Manasseh himself intended to emigrate to Brazil, as is learned from a letter of Vossius to Grotius; but he was dissuaded by the leading men of his community. There were also settlements at Parahiba, Bahia, and Rio de Janeiro. It is estimated that at Recife alone there were more than 5,000 Jews in 1654.

The Brazilian Jews enjoyed the same rights as other Dutch subjects; and they rendered valuable services both as soldiers and in civil life.

The first Spanish and Portuguese settlers in America, other than banished criminals, were adventurers seeking land for the crown or gold for themselves. This was not true of the Jews. Expelled first from Spain, next from Portugal, they desired only a place in which they might have the opportunity to live and to throw off the mask of Christianity which they had been forced to wear. Though they engaged largely in commerce—in which they had especial advantages, having correspondents in Venice, in Turkey, and in other countries to which their coreligionists had emigrated—they counted among their number several scholars, and during the Dutch occupation maintained friendly relations with learned men in Amsterdam.

The first trace of Jewish literature in America is found in 1636, when some Brazilian Jews, in dispute about liturgical questions, sought counsel of Rabbi Ḥayyim Shabbethai of Salonica. In the middle of the seventeenth century there were living in Brazil, in addition to Rabbi Isaac Aboab mentioned above, a well-known Talmudist, Jacob Lagarto, and the poet Eliyahu Machorro. Apparently the first Jewish scholar born on American soil was Jacob de Velosino, born in Pernambuco in 1657, a philosopher, physician, and polemical writer of ability.

First American Jewish Scholar.

In 1646 war broke out between the Dutch and the Portuguese; and in this struggle, which lasted nine years, the Jews aided the Dutch until the end. The Dutch capitulation (1654) contained a rather ominous clause wherein the Portuguese promised to the Jews "an amnesty in all wherein they could promise it." The sufferings of the Jews in this war are related in a poem by Isaac Aboab, which is probably the earliest product extant of Jewish authorship on American soil.

Although it does not appear that the Inquisition was formally established in Brazil, there is evidence to the effect that the Holy Office seized suspected persons and sent them to Portugal for trial. At all events, the Portuguese conquest was followed by the dispersion of the Jewish colony. Many returned to Amsterdam, some went to the French settlements —Guadeloupe, Martinique, and Cayenne—some to Curaçao, and others to New Amsterdam. We have travelers' statements to the effect that as late as 1850 a few remained in Brazil as Maranos; and in very recent times small congregations have been formed.

Mexico: Mexico, which contained the most highly civilized aborigines on the American continent, was invaded by Cortez in 1519; the capital was captured in 1521, and the country made a Spanish colony under the name of Nueva España (New Spain).

The most authentic information concerning the Jews of Mexico is unhappily contained in the records of the Inquisition, from which accurate, if not detailed, accounts are derived.

The first auto da fé celebrated in New Spain was held in the year 1536; and the first Jew, or rather "Judaizer" (*Judaisant*), as he was called, mentioned in these records is a certain Francisco Millan, who was "reconciled" in the year 1539. His case seems, however, to have been a solitary one; since for many years after all of those tried by the Inquisition were Lutherans or persons otherwise suspected of heresy.

Jews and the Inquisition.

In 1571 the Inquisition was formally established in Mexico, for the purpose "of freeing the land, which had been contaminated by Jews and heretics, especially of the Portuguese nation." It is not until 1578 that the names of Jews—three in that year—are again met with; and from that time on, until the close of the Inquisition records of Mexico in 1803 (the Holy Office was not formally disestablished in Mexico until 1820), a large proportion, possibly as many as one-half, of those tried were Jews. Since all of these were Maranos, and a great number of the secret Jews must have escaped the eye of the Inquisition, a fair conception may thus be obtained of the very considerable number who settled and lived in Mexico during this period. Paramus, the historian, writing in 1599, states that in spite of all obstacles the Jews publicly celebrated their Passover; but the statement is open to question.

Some idea of the number of Jews in Mexico in the middle of the seventeenth century may be gained from the fact that, in a single trial by the Inquisition—that of a boy in 1642—the names of no less than eighty-six Judaizers are mentioned. It is generally assumed that one of the principal motives of the Inquisition was the confiscation of estates; and it is unquestionably true that a considerable proportion of the Jews tried in Mexico were mine-owners or merchants. Nevertheless, there must have been many Mexican Jews in the humbler walks of life. Between 1600 and 1650 the following occupations of Jews and Jewesses are recorded: butcher, gilder, baker, sugar-hawker, peanut-vender, silversmith, juggler, nurserymaid, and seamstress.

In recent times Jews have again immigrated to Mexico; and for a short time a Jewish journal was published in the capital city.

From 1590 until the revolt of Mexico from Spanish rule the Philippine Islands were governed through the viceroy and audiencia of Mexico; and prior to 1601 at least four Jews had gone from Mexico to the city of Manila.

Other South American States: Peru was captured by the Spanish in 1533-34; and many Spanish Jews took refuge in Lima. Philip II. took rigorous measures against them, and early introduced the Inquisition. From imperfect records it appears that a Jew was burnt there in 1581. In 1639 twelve Portuguese merchants, supposed to be Jews, were burnt, one of them being described as "the Judaizing millionaire Manuel Bautista Perez." Six thousand Portuguese, of whom it may be assumed many were Jews, purchased the right of residence upon the payment of 200,000 ducats. It appears to be the opinion of writers upon the Inquisition that in Lima the Holy Office was particularly rapacious, and that all rich Portuguese were charged with being Judaizers. Yet it is extremely likely that this cynical view is incorrect, and that the larger number of Portuguese in Peru in early days were actually Maranos. A few details of the history of the Jews in Peru are known, through a memoir composed from original manuscript sources by B. Vicuna MacKenna, of a certain Francisco Moyen, who suffered most grievously from the Inquisition in the eighteenth century. In very recent times Jews to the number of about 500 have resettled in Peru.

Peru.

Jews are also to be found in very small numbers in Venezuela, Costa Rica, and other South American states. To the Argentine Republic, however, there has been a systematic immigration, due directly to the efforts of Baron de Hirsch. It is estimated that there are now settled in that country about 6,755 Jews (see AGRICULTURAL COLONIES IN THE ARGENTINE REPUBLIC).

Surinam: As early as 1644 the Jews commenced to go in small numbers to Paramaribo. In 1662 Lord Willoughby secured from Charles II. permission to colonize Surinam; and two years later the Jewish colony of Cayenne, which had been disbanded, removed to Surinam.

In February, 1667, Surinam, then an English colony, surrendered to a Dutch fleet. The articles of surrender provided that English subjects disposed to leave the colony should be at liberty to do so. Six months later Surinam was retaken by the English fleet and became again an English colony; but by the treaty of Breda (July 16, 1667) it was restored to the Dutch. The circumstance became important because the British government made strong representations to Holland on behalf of Jewish residents of Surinam who, under this clause of the treaty, desired to leave for Jamaica, but to whom the Dutch authorities at Surinam refused permission to depart, on account of their wealth and standing. In spite of the "alien" status of Jews domiciled in English possessions from the point of view of British law, the Council of Great Britain found it expedient to recognize Jews as British subjects at this early date.

Jews Regarded as British Subjects.

The Dutch continued to the Jews the privileges which had been accorded them by the English. A synagogue was built at Savanna, which was called "Jews' Town," and is said to have been inhabited exclusively by Jews. Another and a larger synagogue was erected at Paramaribo.

Many of the colonists—probably the major part of them—left with the English fleet under Captain Willoughby, and settled in Jamaica and Barbados. In 1669 the Dutch government gave the Jews of Surinam a formal promise that they would be allowed the free exercise of their religion. They were largely engaged in agriculture, and were the first cultivators of the sugar-cane in Surinam. When, in 1689, a French fleet made a sudden attack upon Surinam it was met with brave resistance by the Jews, under Samuel Nassy; and on a second attack in 1712, the Jews, under Captain Isaac Pinto, made a stubborn fight. They were also foremost in the suppression of the negro revolts from 1690 to 1772. The first rabbi in Surinam was Isaac Neto: the date of his immigration to the colony must have been about 1674.

In 1685 the Congregation Berakah we-Shalom of Savanna built a splendid synagogue. This was probably rendered possible by the considerable additions to the colony from Brazil after the reconquest of the country by the Portuguese. In 1890 the Jews in Surinam numbered about 1,560, having two synagogues, one following the Spanish and the other the German rite.

Cayenne: A colony was established here probably as early as 1650; and this was augmented by a party of 152 which set sail for Cayenne in August, 1660. Among them was the Spanish-Jewish poet, historian, and litterateur Miguel (or Daniel) de Barrios. In 1664 the colony at Cayenne was dissolved; the inhabitants moving to Surinam (as stated above), to Jamaica, and to Barbados.

Curaçao: In 1650 twelve Jewish families were brought to Curaçao.

In 1652 two leagues of land along the coast for fifty families, and four leagues for one hundred families, were granted by the Dutch West India Company to Joseph Nuñez de Fonseca (alias David Nassi) and others, to found a colony of Jews in that island. As early as 1654, direct relations between these settlers and the inhabitants of New Netherlands were established. In that year immigrants of wealth and standing arrived in considerable numbers from Brazil. The first burial-ground was established in 1656; and by 1692 the Congregation Mikveh Israel had completed its synagogue. A second congregation, Neveh Shalom, was established in 1740, and in 1865 a Reform congregation, under the name "Emanuel." In 1690 a party of about ninety set sail for North America, and established themselves in Rhode Island (Newport).

West Indies: In 1502 King Ferdinand prohibited the settlement in the West Indies of any more Jews; and in 1506 he ordered the bishops to proceed against such as might be already settled there. As noted above, Luis de Torres, who accompanied Columbus on his first voyage, settled and died in Cuba. It is asserted that as early as 1493 young Jewish children were, after baptism, sent to the island of St. Thomas. In 1642 mention is made of a certain Miguel Nuñez, a Marano in Cuba; and some authorities incline to the opinion that the first considerable settlement of Jews in New Amsterdam came from that island.

Privileges as to Taking Oath.

Barbados: Jews settled in Barbados as early as 1628; but the first definite information relates to the year 1661, when certain traders petitioned the king to permit them to live and trade in Barbados and Surinam. As early as 1664 reference is made to a Jew, named Señor Abraham Israel de Pisa, who found gold in the island. Another person of nearly the same name, Isaac Israel de Piso, fell under the king's displeasure in March, 1665, owing to his failure to find the expected gold-mines. In 1668 Jews are mentioned as owners of sugar-works. In 1671 Moses Pereyra was made a free denizen; and in 1673 the Jews began an agitation for recognition of their rights as citizens. On Feb. 18, 1674, a law was passed granting them the privilege of taking the oath upon the five books of Moses; and in January, 1675, a favorable response was made by the Assembly to their petition for the extension of their trade privileges. In 1676 Governor Sir Jonathan Atkins reported that there were about 30 Jewish families of Dutch extraction from Brazil. On Oct. 29, 1679, Jacob Senior arrived at Barbados. In the year 1680, according to a contemporary document, there were 54 adult Jews and 182 children, residing in and about the town of St. Michaels. These Jews owned a large number of slaves. In 1679 a few of the Barbados Jews emigrated—3 to London, 2 to Jamaica, and 1 to Surinam. According to the census of 1891 there were 21 Jewish families on the island.

Jamaica: Jews probably settled here in considerable numbers in the second half of the sixteenth century.

The first Jews—six in number—who were introduced into Jamaica under British government in 1663, came on the ship "Great Guest," Captain Bernard. In December, 1671, Governor Lynch reported to Lord Arlington that the king could have no more profitable subjects than the Jews. Meanwhile petitions of merchants against them were considered by the king's council; the request being that the Jews be restricted to wholesale trade, which proposition the council rejected. In 1700 the Jews presented to Sir William Beeston, governor-in-chief of Jamaica, a petition asking for exemption from special taxes, and reciting other grievances.

The trade between London and Jamaica was principally in Jewish hands; and by 1750 about 200 Jews resided and had been naturalized in that island. One of the best-known literary men of Jamaica was Daniel Israel Lopez, who translated the Psalms into Spanish. At the present day there is a flourishing Jewish community in Jamaica.

Leeward Islands: On Aug. 31, 1694, an act was passed to prevent Jews from engrossing commodities imported into the Leeward Islands, which act was repealed in 1701—an indication that there must have been an early settlement of considerable proportions there.

Porto Rico: Of Porto Rico nothing is known concerning any early Jewish settlement. In recent years, since the Spanish-American war, Jews have immigrated thither; and there is now a flourishing congregation.

Aborigines and Lost Ten Tribes.

The Resettlement in England and Its Relation to America: Not without great interest is the intimate connection between American history and the resettlement of Jews in England. According to Lucien Wolf, "American history really played a very considerable part in bringing about the return of the Jews to England." It was in America that religious liberty won its first victory. A Jewish traveler, Antonio de Montezinos, was fully persuaded that in the American Indians he had found the Lost Ten Tribes—a belief which has had an extraordinary vitality. He related this story to Manasseh ben Israel; and his narrative made a profound impression. This fact accorded with the view of the times, that the dispersion was complete except for one particular land, England; and Manasseh argued that if the Jews would return to England, the Messiah would come. This view he promulgated in his work, "The Hope of Israel." The notion that the American aborigines were the Lost Ten Tribes has played an important part among Americanists. Besides those named above, it was held by Roldan, Garcia, Thorowgood, Adair, and Lord Kingsborough; and, though without important adherents among students of the American aborigines, it is still discussed as a theory to be considered.

It seems not unlikely that some of the members of the Crypto-Jewish community in London, prior to the Restoration, came from the American continent.

United States: The greatest prosperity and the largest population reached by any nation on the American continent have been attained by the United States; it is not surprising, therefore, that it now contains a larger number of Jews than any country in the world save Russia and Austria.

About forty years after the settlement of New Amsterdam Jews commenced to arrive there. They gradually made their way to all of the original thirteen colonies; and by the time of the outbreak of the Revolutionary War, they had in several communities reached honorable positions in commerce and in society.

Early Colonists Mainly Sephardic.

Most of the early colonists in North America were of Sephardic stock, and came from Brazil, West Indies, Portugal, and Holland. At a later date some came from England. Yet German and Polish Jews came to America much earlier than is usually supposed. Some of these settled in Pennsylvania, New York, Maryland, Virginia, and South Carolina in the earliest Colonial period. The Sephardim, however—at this time constituting the larger number—usually organized the congregations; and the fact of the early immigration of Ashkenazic Jews has thus been lost sight of by most writers. German Jews seem even to have been among the martyrs of the Inquisition in Mexico.

New York: By a letter written April 4, 1652, from Amsterdam by the director of the West India Company to the governor and council of New Netherlands, it appears that Jews were on the muster-rolls of soldiers and sailors sent out to the colony, and that they engaged to serve for a term of one year. As early as 1655 there were both Portuguese and German Jews in the colony.

First Jewish Settlers.

The first Jewish settler in New Amsterdam whose name has been handed down was Jacob Barsimson, who arrived on Nov. 9, 1654, in the ship "Pear Tree." He was followed in the same year by a party of 23, who arrived in the bark "St. Catarina." It is generally assumed that they came from Brazil, although it is also held that they started from some part of the West Indies, most likely Cuba; and some had, unquestionably, spent a longer or a shorter time in Jamaica. They were received in an unfriendly fashion by Stuyvesant, the Dutch governor of New Amsterdam, who wrote to the directors of the Dutch West India Company asking authority for their exclusion. This the directors refused to grant (April 26, 1655) on the ground of "the considerable loss sustained by the Jews in the taking of Brazil, and also because of the large amount of capital which they have invested in the shares of the company." They directed that "they [the Jews] shall have permission to sail to and trade in New Netherland, and to live and remain there."

Early Privileges and Restrictions.

This permission was modified on March 13, 1656, by the statement that the Jews were not privileged to erect a synagogue; and a little later they were precluded from employment in any public service, and from opening retail shops.

One of the sturdiest pioneers of the New Amsterdam colony was Asser Levy. In 1655 he, among others, applied to be enlisted in the militia; but permission was refused, and, in common with all other Jews, he was, instead, ordered to pay a tax. This he refused to do: and on Nov. 5, 1655, he petitioned for leave to stand guard like other burghers of New Amsterdam. The petition was rejected; but Levy seems to have appealed to Holland, for it subsequently appears that he was permitted to do guard-duty like other citizens. Step by step, through the courts and by appeals, he secured many other privileges (see NEW YORK and ASSER LEVY). He seems to have been the first Jew in the state of New York to hold real estate: a lot on what is now the site of Albany was owned by him in 1661.

Another of the most prominent of the early Jews in New Amsterdam was Abraham de Lucena, who in 1655 applied, with several others, for permission to purchase a site for a burial-ground. The request was refused with the statement that there was then no need for it. On July 14, 1656, however, the request was granted.

New Amsterdam was captured by the British in 1664 and its name changed to New York. For a half-century afterward but little is known respecting the Jewish residents. Their increase in numbers was very moderate. It seems likely that they had some sort of private worship very soon after 1655, and that they began to meet in a more or less public way in 1673. In 1682 the congregation rented a house on Mill street; and it was not until 1729 that this was exchanged for a regular synagogue building.

Under British Rule.

On Nov. 15, 1727, an act was passed by the General Assembly of New York providing that when the oath of abjuration was to be taken by any one of his British Majesty's subjects professing the Jewish religion, the words "upon the true faith of a Christian" might be omitted. Three days later an act was passed naturalizing one Daniel Nunez da Costa.

There was a very considerable antipathy in the colony both to Catholics and to Jews; but in the case of the latter this gradually relaxed, so that they soon came to receive most of the privileges accorded to other inhabitants of the town and province. In 1737, however, the Assembly of New York decided that no Jew might vote for a member of that body.

Before and during the Revolutionary War the Jews, like the other inhabitants of New York, were divided in their allegiance. Many were devoted to the patriot cause; and among these was the minister of the congregation, Gershom Mendes Seixas, who, upon the occupation of New York by the British, took all the belongings of the synagogue and, with quite a number of the members, removed to Philadelphia, where he founded the first regularly established congregation, the Mickve Israel. After the close of the war most of these Jews returned to New York, which, on the decline of Newport as a commercial city, took its place and rapidly attracted a large population. The tide of immigration now commenced to flow toward the United States, most largely in the first instance to New York city. Hither came Jews from the West Indies, from Germany, Poland, Russia, Rumania, in short, from every quarter of the globe. It is estimated that the city of New York alone now (1901) contains 300,000 Jews; and there are 110 congregations enumerated exclusive of numerous small ones. Jews are now represented in New York city in every walk of life, professional, commercial, and industrial.

Modern Jewry of New York.

From the city, Jews gradually penetrated to the state. A congregation was founded at Buffalo in 1835, one at Albany in 1837, and another at Rochester in 1848; and all of the larger and many of the smaller towns in New York state now have Jewish communities.

Newport, R. I.: The hostile attitude of Stuyvesant probably caused Jewish emigrants to leave New Amsterdam as early as 1655 and to settle in Newport. There is definite information to the effect that 15 Jewish families arrived in 1658, who brought with them the first degrees of Masonry. They were reinforced by a contingent from Curaçao in 1690.

Jews Cordially Received.

Quite in contrast with the oppressive treatment in New Amsterdam was the generous reception accorded the Jews in Rhode Island, in consonance with the liberal principles propounded by Roger Williams. Already in the seventeenth century the Jews of Newport had commercial relations with their coreligionists in New Amsterdam.

It is likely that religious services were first held in Newport in 1658, although no synagogue was erected until the following century. A burial-place, however, was purchased on Feb. 28, 1677.

In 1750 a very important accession was received in the families of Lopez, Rivera, Pollock, Hart, and Hays, all persons of wealth and enterprise engaged in manufacture and commerce. These families came from Spain, Portugal, and the West Indies. The extent of the property of Aaron Lopez is shown by the fact that at one time he owned as many as 30 vessels. Jacob Rodrigues-Rivera, a native of Portugal, came to Newport about 1745. He was the first person to introduce the manufacture of spermaceti in America.

Synagogue Built.

In 1762 the erection of a synagogue was begun, which was completed and dedicated in the following year. Two years previously there had come from Jamaica the Rev. Isaac Touro, who was chosen rabbi; and under his auspices the synagogue was well attended until the outbreak of the American Revolution. In 1763 there were between 60 and 70 Jewish families in Newport. The first Jewish sermon preached in America which has been published was delivered in the Newport synagogue on May 28, 1773, by Rabbi Ḥayyim Isaac Karigel, in the Spanish language, and was afterward translated into English. Karigel appears to have come from Hebron in Palestine, and was a close friend of Ezra Stiles, the president of Yale University. As early as 1761 a Jewish club was formed, with a membership limited to 9 persons. Just before the outbreak of the Revolutionary War the Jewish population of Newport appears to have comprised about 200 families. The community was dispersed by the war; and it never regained its importance. In 1790 it presented an address to Washington. The Touro family bequeathed sufficient money to maintain the synagogue as well as the cemetery; and these are still in existence, although the number of Jews now resident in Newport is but small.

The Jewish community of Newport held an especially interesting and even a unique position in America, and impressed itself for all time on the town, once the leading port of the colonies and now the most fashionable summer resort in the United States.

Other Parts of New England: An occasional Jew may have strayed into other portions of New England in the early days; but the Puritan atmosphere was apparently not congenial. The best known of the early settlers was Judah Monis, who became a convert to Christianity, and filled the chair of Hebrew in Harvard College from 1722 until his death in 1764.

As early as 1670 there is mention of a Jew, Jacob Lucene, in the Colonial Records of Connecticut.

When the British took Newport many of the Jews there left and effected a temporary settlement at Leicester, Mass.; but this did not survive the close of the war. A number of Jews, including the Hays family, settled at Boston before 1800. About 1840 Jews began to emigrate from New York to New Haven and Boston; and congregations were formed in those cities in 1840 and 1842 respectively.

New Haven and Boston.

The communal life of the New England Jews was without especial incident; and their numbers increased but slowly until after the beginning of the great Russian emigration in 1882. Immediately the overflow from New York, as well as the emigration through Canada, commenced to pour into New England. It is estimated that 60,000 Jews now (1901) reside in Massachusetts alone, and nearly 20,000 more in the other New England states.

Russian Jews as Farmers.

An interesting phenomenon has been noticed in connection with the shifting of agricultural industry in the United States. With the opening up of the Western country and the greater advantages offered by the virgin soil, many New England farmers absolutely abandoned their comparatively unfruitful farms and moved West. These abandoned farms, especially in Connecticut, have been taken up by Russian Jews, who, principally as dairy farmers, have added a new and useful element to the agricultural community.

Maryland: It seems not unlikely that Maryland was the first colony in which Jews settled, though they were probably stragglers; and it was long before any communal life was established.

Scattered Jews seem to have arrived shortly after the establishment of the provincial government in 1634. At least as early as 1657 Dr. Jacob Lumbrozo was settled there, and in 1658 he was tried and remanded for blasphemy, his release being due to the general amnesty in honor of the accession of Richard Cromwell (declared March 3, 1658). Letters of denization were issued to him Sept. 10, 1663. He had a plantation and also practised medicine. He is described as from Lisbon; but he had a sister in Holland.

The history of the Jews in Maryland is of especial interest; since it was in this colony and state that the civil and political rights of Jews were most restricted, and it was here, of all America, that the most systematic efforts were put forth for obtaining the fullest recognition under the law. Maryland was one of the first colonies to adopt religious toleration as the basis of the state; but it was toleration and not liberty, since there was a proviso that any person who denied the Trinity was to be punished with death. Even after the Revolution, no one might hold any office of profit or trust under the state without signing a declaration that he believed in the Christian religion.

Jews Hold Public Positions.

Efforts were made in 1801 and 1804 to obtain a revocation of this proviso; but on both occasions more than two-thirds of the legislature voted against its repeal. These efforts were renewed in 1819, and finally succeeded, so that in 1824 two Jewish citizens were elected members of the Council of Baltimore, being the first Jews to hold office in the state of Maryland. The success of these efforts was largely due to the persistent labors of a single family—the Cohens—who still maintain an honored position in the community.

At the outbreak of the Civil War, Maryland, although remaining in the Union, numbered among her citizens a large body of sympathizers with the Confederate cause. The conflict of opinion was especially severe among the Jews, due to the pronounced antislavery attitude assumed by Rabbi David Einhorn, who was actually threatened with violence and was obliged to leave the city.

Schaefersville, Lancaster, and Easton.

Pennsylvania: Jews from New Amsterdam traded along South river, subsequently named the Delaware, as early as 1655, and began to arrive as settlers in the colony of Pennsylvania not much more than ten years after its establishment. Unlike New York and Newport, a very considerable proportion of the early Pennsylvania colonists were not Portuguese, but German Jews; and they settled not in Philadelphia, but in towns in the interior of the state. The earliest settlements seem to have been in Schaefersville and Lancaster. Joseph Simon, who in the latter place was the pioneer, about 1740 embarked in the Indian trade and in real-estate transactions on a large scale. In 1747 the deed for a Jewish cemetery in Lancaster was made out in his name and in that of Isaac Nunes Ricus as trustees. Myer Hart was one of the founders of Easton in 1750. He was engaged in trade, and was there naturalized on Oct. 3, 1764. Aaron Levy settled in Northumberland county, Pa., about 1760, and was a large landowner. In 1786 he projected the town of Aaronsburg in that county.

Philadelphia.

The Jewish community of Philadelphia was for a time the leading one in the United States, and was inferior in numbers only to that of New York. The first Jewish settler in Philadelphia of whom there is record was Jonas Aaron (1703), and the second was Arnold Bamberger (1726). As early as 1747 a number of persons who had joined together for the purpose of worship met for services in a small house in Sterling alley—afterward in Cherry alley—between Third and Fourth streets. They were mostly German and Polish Jews; and their differences as to the liturgy to be followed prevented at the time the formation of any regular congregation. When the British troops occupied New York during the Revolutionary War, the minister, Gershom Mendes Seixas, with a considerable portion of the New York congregation, came to Philadelphia, and, finding no regular services, they, with the help of the resident Jews, established one in accordance with the Portuguese rite. Seixas was the first minister. After him no man of importance held the position until Isaac Leeser, 1829. He was the leading

Jewish minister of his time; and not more than two or three others have left such an impress upon American-Jewish affairs as he. Minister, teacher, organizer, translator of the Bible, editor, and publisher, he was in every way indefatigable. Other prominent persons were the Phillips family, chief among them being Zalegman Phillips, Henry M. Phillips, the latter one of the leading lawyers of Philadelphia and a member of the Thirty-fifth Congress. There followed Leeser, as minister of the Mickve Israel Congregation, Sabato Morais, a native of Leghorn, Italy, who from 1851 until his death in 1897 was a leading figure in American-Jewish affairs. He first suggested the Jewish Theological Seminary in New York.

Notable Philadelphia Jews.

The first German congregation was the Rodeph Shalom, which received a charter on Aug. 12, 1802, but which no doubt had meetings at an earlier date. The most prominent of its rabbis was Marcus Jastrow; the best-known cantor, Jacob Frankel. The latter acted during the Civil War as chaplain of hospitals under the United States government. The first leading Reform minister installed in Philadelphia was rabbi Samuel Hirsch. Many other congregations have since been formed, more especially since 1882, when the Russian immigration brought large numbers to the city.

Philadelphia has always been prominent in educational matters. The first Jewish Sunday-school was organized there in 1838; the Hebrew Education Society, in 1848; and the Maimonides College, in 1867. The largest fund in the United States for higher Jewish education is that provided by a deed of gift from Hyman Gratz to the Mickve Israel Congregation in trust, from which Gratz College is supported. One of the most comprehensive of works relating to Jews of any single community in the United States is "The Jews of Philadelphia," by Henry Samuel Morais, published in Philadelphia in 1894. Philadelphia Jews have been prominent in many professions, in the fine arts, and in all the avenues of manufacture and commerce. Up to 1894 as many as 116 had been admitted to the bar; and the number has since been greatly increased. Three Jews served in Congress as representatives of the state.

Maimonides and Gratz Colleges.

Jews gradually made their way to the western part of the state, settling in large numbers in Pittsburg, which, after Philadelphia, is the next largest community in Pennsylvania. That of Wilkesbarre is notable for its numbers and for the high character of its members. Since the Russian immigration Jews have made their way to every part of the state; and there is scarcely a town of any size which is now without its community or congregation.

Georgia: In none of the colonies which afterward formed the United States did the Jews arrive in numbers so early after the establishment of the colony as in Georgia. On July 7, 1733, Oglethorpe, its founder and governor, had assembled the colonists, who had arrived one month previously, on the site of the present city of Savannah for the purpose of allotting to each settler his proportion of land. While the colonists were partaking of a public dinner, given at the close of the day's proceedings, there came up the Savannah river, from London, a vessel containing 40 Jewish emigrants. Their arrival was not expected; but on the whole they were kindly received. One of their number, Dr. Nunis, was especially valuable for his attention to the sick. The trustees in London were opposed to the settlement of the Jews; but Oglethorpe included the names of a half-dozen of them as grantors in a conveyance, executed Dec. 21, 1733, of town lots, gardens, and farms. These original settlers, all of whose names have been recorded, were the progenitors of families still in existence in various parts of the United States. The first male white child born in the state of Georgia was a Jew, Isaac Minis. Abraham de Lyon had prior to 1737 introduced the culture of grapes, he having been a winegrower in Portugal. By 1742 the number of Jews in Savannah was so diminished that the services in the synagogue had to be discontinued, three only of the original families remaining. A quarter of a century later several returned from Charleston.

Savannah.

In 1774 another congregation was started, which was gradually augmented until the outbreak of the American Revolution. Immediately after the close of the war many Jews returned to Savannah; and on July 7, 1786, they hired a dwelling-house for a place of worship. On Nov. 30, 1790, a charter for a congregation, under the name of "Mickve Israel of Savannah," was granted. The religious exercises of the congregation were conducted gratuitously by Dr. de la Motta; and in 1820, on the occasion of the consecration of the synagogue, he delivered an address which is still a document of the very greatest value to American-Jewish history. The synagogue was destroyed by fire in 1829, and was replaced by a substantial structure of brick.

Augusta was the next town in the state settled by Jews. The first arrival—about 1825—was one Florence accompanied by his wife. Other families followed in 1826 from Charleston. The first congregation, B'ne Israel, was organized in 1846. Atlanta, Columbus, and Macon have considerable communities; and a number of congregations are scattered throughout the state; but the community in Savannah is still the most important. At Atlanta there is a Home for Orphans, founded and managed by the Independent Order B'ne B'rith.

Augusta, Macon, etc.

South Carolina: As early as 1742 Jews left Savannah and settled in Charleston. A congregation was formed in 1750, and its members worshiped for seven years in a small wooden house in Union street, near Queen street. They purchased a burial-ground in 1757, and in 1781 a large building in Union street which was altered and prepared for a synagogue. In 1791, when the congregation was incorporated, it consisted of 51 families, numbering in all about 400 persons. Two years later these had increased so much that a new synagogue was erected at a cost of $20,000, which was completed in 1794. The community was augmented after the Revolution by a large number of Jews from New York, who settled in Charleston, and remained there till the commencement of the Civil War. Jews are now settled in small numbers throughout the state. The first Reform movement in any congregation in America was instituted in Charleston in 1825.

Charleston.

North Carolina: In 1808 an attempt was made to expel a member of the General Assembly of North Carolina because of his Jewish faith. In 1826 the number of Jewish settlers in the state was estimated at 400, which was considerably augmented after the emigration of 1848. The largest community at the present time (1901) is that of Wilmington.

Virginia and West Virginia: Stray Jewish settlers came to Virginia about 1658, some of whose names and transactions have been handed down. At least one Jewish soldier—possibly two—served in Virginia regiments under Washington in his expedition across the Alleghany mountains in 1754. It is likely that quite a number of Jews removed from Baltimore and other points in Maryland to Richmond at an early date. The Congregation Beth Shalom was formed in the latter place about the year 1791. The Richmond community has since grown to considerable proportions, as has also that of Norfolk. Congregations now exist in about 20 towns in the state, and in at least 4 towns in West Virginia.

Louisiana: Judah Touro came to New Orleans as early as 1801. The first interment in the Jewish cemetery of that city took place on June 28, 1828. The community there grew rapidly from 1848 on; and numbers of congregations and important charitable organizations were established. Similar progress is noticeable throughout the entire state, 19 towns now having Jewish communities.

Kentucky: The first person of undoubted Jewish blood to settle in Kentucky was a Mr. Salamon, of Philadelphia, who established himself at Harrodsburg about 1808. In 1816 he was appointed cashier of the bank of the United States at Lexington. A service was established in 1838; and by 1843 there was a synagogue which, under the name of "Adas Israel," obtained a charter from the legislature.

Louisville.

Louisville now (1901) has six congregations as well as a considerable number of philanthropic and educational institutions. The major portion of the Jews of Kentucky reside in Louisville; but there are communities in at least a half-dozen other towns in the state.

The remaining Southern states, with a single exception, can be but barely mentioned here. Jews settled in the territory which is now Alabama as early as 1724; and the first congregation was formed in Mobile in 1841. Birmingham, Mobile, Montgomery, and many smaller towns have flourishing communities.

Texas: Jews played a very considerable part in the settlement and development of Texas. The first Jewish settler was Samuel Israel, who came from the United States in 1821, when Texas was still a portion of Mexico. He received a grant of land in Fort Bend county, and later a bounty-warrant in Polk county for services in the army of Texas in 1836 and 1837. He was followed by Abraham C. Labat, of Charleston, S. C., who arrived in 1831. One of the first to take advantage of the new channel of trade opened to the United States by the results of the battle of San Jacinto in 1836, which made Texas an independent republic, was Jacob de Cordova, of Spanish Town, Jamaica. In 1837 he settled in Galveston and became a citizen of the republic; and he had a large share in settling persons on tracts of land in Texas.

Early Settlers.

The most important of the early settlers, however, was Henry Castro, pioneer of that portion of Texas to the west of the city of San Antonio. He served in the French army, and emigrated to the United States after the fall of Napoleon in May, 1827, and, having become an American citizen, was appointed consul for Naples at Providence, R. I. On June 15, 1842, Castro entered into a contract with President Houston for settling a colony west of the Medina. This colony he inaugurated Sept. 3, 1844; and it is estimated that between 1843 and 1846 he introduced more than 5,000 emigrants into the state. On the admission of Texas into the Union, a Jew, David S. Kauffman, was elected one of her congressmen; and he served until his death in 1851. Texas, in proportion to her Jewish population, has had an unusually large number of Jewish citizens prominent in public life and in the learned professions. Thirty-two towns now have Jewish communities; the largest being those of Dallas, Galveston, Houston, San Antonio, and Waco.

Western States.—Indiana: As regards Hebrews in the Western states, the first definite information is of the arrival in Indianapolis in 1794 of Jews from England; but no congregation appears to have been organized there until 1856. This congregation was, however, preceded by those of Fort Wayne (1848), Lafayette (1849), and Evansville (1853). Twenty-three towns in the state now have Jewish communities.

Michigan: A congregation was organized in Detroit, Mich., in 1851. That city now has a considerable Jewish community. In no other place in the state have Jews settled in large numbers. They are, however, distributed in small numbers throughout the whole of Michigan, there being no less than 26 towns with Jewish communities, among which should be especially mentioned Alpena, Bay City, Grand Rapids, and Kalamazoo.

Ohio: The earliest Jewish community of importance in the West, and that which still plays a leading part in Jewish affairs in the United States, is the community of the state of Ohio, more especially that of Cincinnati.

Cincinnati.

The Jewish pioneer of the Ohio valley was Joseph Jonas, who was born in Exeter, England, and arrived in Cincinnati on March 8, 1817. In 1819 he was joined by three others. Many more, all of English birth, followed, until the year 1830, when a wave of German emigration flowed into Cincinnati. As early as 1819, services were held on New-year's Day and on the Day of Atonement. In 1825 a congregation was formed, under the name "Kahal Kadosh B'ne Yisrael." Two others were established in 1841, and a fourth in 1848. Largely through the influence of Isaac M. Wise, but powerfully aided by capable and public-spirited members of the community, Cincinnati has indelibly impressed itself upon Judaism in America. It is the seat of the Union of American-Hebrew Congregations, of the Board of Delegates, and of the Hebrew Union College, which now supplies the pulpits of a large majority of the Reformed congregations of the United States.

Second in importance is the community of Cleveland, in which town Jews settled as early as 1839. A congregation was founded in 1846, and a second in 1850. Jews are now settled in 20 towns in the state.

Illinois: The state of New York contains more than one-third of the Jewish population of the United States; and the states of Pennsylvania and Illinois together comprise one fifth, these two latter being about equal. This is all the more surprising in view of the comparatively recent opening-up of the western territory; though it is quite certain that there were Jewish settlers in the Illinois territory during French rule about 1700.

Chicago received its charter not earlier than the year 1837. The first authentic information of the settlement of Jews there dates back to 1841; and in 1843 a large number arrived. The first Jew to buy land in Cook county was Henry Meyer, who came to Illinois in the spring of 1847. In 1845 the first Jewish organization was established under the name of "The Jewish Burial-Ground Society." The Kehillat Anshe Ma'arab was organized in 1847, being the oldest congregation in the Northwest; a second, B'nai Sholom, was established in 1852. In 1858 the first steps were taken toward the formation of a Jewish Reform association, which resulted in the establishment of the Sinai Congregation in 1861. Since that time the growth of the Jewish community there has been in every way proportionate to the growth of the city itself, which, though not yet 70 years old, is in point of population the second city in the United States. Fifty congregations are known to exist; and there are no doubt many smaller ones whose names have not yet been ascertained. The Jewish community of Chicago has many notable educational establishments and hospitals, and has furnished distinguished members of the legal profession, architects, and musicians. Among its prominent rabbis Liebmann Adler, B. Felsenthal, and Emil G. Hirsch may be named. Jewish communities are known to exist in 16 cities and towns of the state.

Chicago.

Central and Southwestern States: Of these but a bare mention can be made here.

Missouri: For a year previous to the admission of Missouri into the Union as a state, the territory was inhabited by Jews, a family by the name of Bloch having settled there in 1816.

The first religious services were held in St. Louis in 1836, and in 1837 a congregation was established. St. Louis and Kansas City now have very considerable Jewish communities, and smaller ones exist in 8 other towns in the state.

Tennessee: There are Jewish communities in Memphis, Nashville, Knoxville, and other towns.

Minnesota: The first congregation in Minnesota was established at St. Paul in 1856, which now has a considerable community, as has also Minneapolis; Duluth ranking third. Milwaukee has also a large Jewish community, the first congregation having been established in 1852. It has now no less than 5 congregations; and there are congregations in 13 other towns of the state of Wisconsin.

Iowa: The oldest congregation in Iowa is that of Keokuk, founded in 1856. The largest congregation is in Des Moines; and Jews now live in 11 towns in the state, though in small numbers and greatly scattered.

Kansas: The earliest congregation seems to have been that of Leavensworth, founded in 1860. Eight towns now have Jewish communities.

Nebraska: The first Jewish congregation was founded about 1870 in Omaha, which now has a considerable community. There are also congregations at Lincoln and several smaller towns throughout the state.

California: Jews went to the Pacific coast in large numbers on the announcement of the discovery of gold in 1849; and as early as 1850 two congregations had been established in San Francisco. The community grew with great rapidity; and it differed somewhat from the other Jewish communities in the United States at that time, in that while the sole additions of population to the eastern part of the United States were from Germany, California received quotas from England, France, and Holland as well. Sacramento, Los Angeles, and many other towns have congregations; but the bulk of the Jews in the state are in San Francisco. There are at least 11 congregations in this city, a hospital, an orphan asylum, and many other organizations. As a result of this movement toward the Far West, settlements have been made in other states.

Other States and Territories: Jews were in **Oregon** as early as 1850, and in the city of Portland a congregation was founded in 1858.

At Salt Lake City a congregation was established in 1881; but it is asserted that Jews went there much earlier and furnished a few converts to Mormonism.

Colorado has its principal community in Denver, the earliest congregation there having been established in 1874. A National Home for Consumptives was opened in that city in 1899. There are communities in 7 other towns of the state.

The great wave of Russian immigration has also pushed westward. **Montana, Washington,** and **North** and **South Dakota** now have congregations. It may be confidently asserted that, in spite of the apparent congestion on the eastern seaboard, there is no state or territory in the Union which at the present writing (1901) is without a Jewish community. Indeed, this statement may be extended to include the distant territories recently brought under the jurisdiction of the United States; since there are already congregations in Porto Rico, in the Hawaiian Islands, and in the Philippines.

Canada: Aaron Hart, born in London, England, 1724, who was in the British army about 1760, seems to have been the first Jewish settler in Canada. In that decade a dozen or more men of means settled in Montreal; and in 1768 they formed a congregation which took the name of "Shearith Israel." In 1807 the question of the political status of the Jew was raised by the election of Ezekiel Hart as a member of the legislature. Refusing to take the oath on the faith of a Christian, he was allowed by the clerk to take it in the Jewish form and with head covered; but, after an exciting debate, his seat was declared vacant and the election null. He was reelected by a heavy majority, but was again prevented from taking his seat; and a bill was brought in to disqualify Jews for seats in the House of Assembly. The governor-general on May 15, 1809, highly displeased with the legislature, dissolved the House; and it was not until 1831 that all the disqualifications of Jews were removed. It is a noteworthy fact that Canada extended full political rights to Jews more than a quarter of a century before the mother-country.

Political Status of Jews.

The first regular minister of the Montreal synagogue was J. R. Cohen, who settled in Montreal about 1778. The most distinguished minister of the congregation was Abraham de Sola, who held office from 1846 to 1882, and was a well-known author and professor of Hebrew in McGill University. A German congregation was established there in 1846, and a Reform congregation in 1882. Since 1890 a large number of Russian Jews have immigrated to Canada, many of whom have engaged in agricultural pursuits. Jews are also settled in Toronto, in Halifax (Nova Scotia), in Victoria, Winnipeg, and in various portions of Manitoba.

Waves of Immigration: All the great nations of historic times have been composed of immigrants. Pressure of population, the nomadic or seafaring spirit, the desire for adventure, for conquest, or for commerce, the tyranny of governments or of churches, have all contributed to turn the human race into a vast migratory species, more capable of adaptability as it is to new environment, than any other form of life. In the birth of intense national feeling following upon the establishment of the German empire, the fact has frequently been lost sight of that none of the peoples now inhabiting any great state is indigenous.

The expulsion of the Jews from Spain, and later from Portugal, and the activity of the Inquisition against the secret Jews, called Maranos, in those countries, coupled with the circumstance that these two peoples were the principal explorers and colon-

Spanish and Portuguese Exiles.

izers of Central and South America, were the factors in determining the early immigration of Jews to America, which was composed exclusively of Spanish and Portuguese exiles, who settled in all the islands to which ships from these countries went. This immigration began with the first settlement of the American continent, and was almost exclusively confined to Central and South America; although the settlers who arrived at Savannah, Ga., in 1733 went direct from Lisbon, making but the briefest stay in England. As the immigration gradually spread in South America small numbers of settlers made their way from Brazil, Curaçao, or the West India Islands to North America, and thence the first Jewish settlements in what is now the United States were derived.

Dutch-Sephardic Jews.

To Spain and Portugal Holland succeeded as an exploring nation in the early part of the seventeenth century. With the outbreak of the revolt of the Netherlands against Spain in 1567 there developed, by way of protest against the bigotry of the Spaniards, the broadest toleration then known in Europe. By the middle of the century, when Holland had extorted recognition of her independence even from Spain, when she was in league with England and Sweden and was at the height of her power, many Jews of wealth, learning, and influence—largely though not exclusively Spanish exiles—had settled in her dominions; and these were deeply interested in the Dutch West India Company, which determined the attitude of the government toward the settlement of Jews in their new dominions. The Jews in Brazil, moreover, recognizing the favorable attitude of the Holland government toward their coreligionists, powerfully aided the Dutch in their successful attack upon Brazil in 1624. The Dutch dominion lasted until 1654; and during the intervening period many Dutch Jews came to Brazil and other settlements, thus reinforcing the original migration from Spain and Portugal. Owing to the reconquest of Brazil and the subsequent flight of the Jews, these Spanish, Portuguese, and Dutch Jews found their way to the West India Islands and to North America. Jews began to go to New Amsterdam from Holland probably as early as 1652. These, then, constitute the main source whence the Sephardic-Jewish settlers were derived, although stragglers came from France, from England, and even from the Orient, at an early period. It should be stated, however, that not all of the Dutch Jews were of Sephardic stock. Proportionate to the extent of English colonization in the West India Islands surprisingly few Jews went from England to the American colonies or the West India Islands. Some undoubtedly did go to Jamaica and other islands, as well as to the continent, even up to the beginning of the present century; and they were pioneers in several states, but rather as individuals than in any considerable bodies. This is no doubt due to the fact that at the period of the earliest settlement of America there were few if any Jews in England; and later on they were too well satisfied with the conditions there to seek a home elsewhere, although a small number did go to Canada.

Ashkenazic Jews.

Jews of the Ashkenazic rite went early to America, but only as stragglers; an occasional one, to Mexico; and a few, from Holland, to New Amsterdam. From 1730 forward Germany was a theater of war and petty persecutions and of the drafting of able-bodied men into the armies, either for local purposes or to be sold as mercenaries to foreign powers. As the result of a desire to escape these hardships there ensued a steady immigration of Germans to New York, to Georgia, and, above all, to Pennsylvania, where Germans were most hospitably received. In 1750 the German settlers in Pennsylvania alone were estimated at 90,000 out of a total population of 270,000; and among this enormous number there was quite a considerable body of Jews. A lesser number had settled in New York within the same period.

German-Jewish Immigration.

The first partition of Poland in 1772, and the unsettlement of affairs consequent thereupon, brought the first contingent of Polish Jews (through Germany) to America; and this number gradually grew with the successive disasters to Poland and the incorporation of the territory and people with Russia, Germany, and Austria. The Napoleonic wars, the general misery which followed in Germany, the desire to avoid military conscription, the eager wish to partake of the advantages offered in the new country, all impelled a steady stream of German-Jewish immigration to the United States beginning about 1830, reaching its height between 1848 and 1850, and continuing until 1870, when it ceased to be a considerable factor. This immigration was principally from South Germany, from the Rhine provinces, and more especially from Bavaria. The immigrants were mostly from small towns; rarely from the larger cities or from North Germany, which contained well-organized Jewish communities.

Russian Jews.

The most momentous, and at the same time the most easily recognized wave of immigration was that from Russia, which practically began in 1882. Restrictive measures against the Jews had been for a long time enforced in the empire. The Jews were regarded as a legacy from Poland, and were practically confined to that region; but many had gradually settled in other parts of the empire. In May, 1882, a series of the most proscriptive laws ever passed against Jews in any country was promulgated. These laws practically forbade residence outside of a narrow pale of settlement, restricted higher and secondary education of Jews, mercantile and professional pursuits, and left open no course but emigration en bloc. A small portion of this emigration was directed by Baron de Hirsch to the Argentine Republic, and some to Canada; but the great bulk, by a natural impulse, came to the United States. In the past year (1900) it would appear from available figures that no less than 600,000 Russian-Galician Jews migrated to the United States; and within the year the proscriptive laws of Rumania have started a tide whose force none can foresee. These various movements have given America the third largest Jewish population in the world, and will probably in the future remove the center of Jewish activity to the United States.

Education: In the very earliest years of the establishment of the first Jewish congregation in New York city there was attached to the synagogue a school in which ordinary, as well as Hebrew, branches were taught. It was one of the earliest general schools in America. Religious education and instruction in Hebrew were established in connection with most of the early synagogues or were given privately; while for ordinary secular education the Jews resorted to the schools and colleges in existence, although these were largely under the patronage of one or another sect of the Christian church. There was a Jewish matriculate at the University of Pennsylvania, for instance, as early as 1772. As has already been noted, there was established in Philadelphia as early as 1838 a general Sunday-school quite irrespective of congregational organization; and this was the beginning of a movement, which has spread throughout the country, for the organization of educational work along lines quite independent of congregational activities.

Early Jewish Matriculates.

A similar school was organized in Charleston, S. C., in the same year; in the following year, one in Richmond, Va.; in 1845 this movement spread to New York, being taken up first by the Emanuel Society, although the Shearith Israel congregation had started a Hebrew school system as early as 1808. In 1840 Mordecai M. Noah, a well-known traveler, politician, and journalist, urged the formation of a Jewish college in the United States; and in 1848 the Hebrew Education Society was founded at Philadelphia—originally a school for general instruction in the ordinary branches up to and through the grade of grammar school, coupled with instruction in Hebrew and in the Jewish religion. In 1864 the Hebrew Free School Association was incorporated in New York; and throughout various states of the Union a movement gradually spread for the organization of free religious schools which would bring into a common school system children from the various congregations in each city. These were largely intended to supersede the private instruction that had theretofore been given. They were, in the main, carried on by volunteer teachers; and their distinguishing feature was that the instruction was usually conducted by native-born persons and in the English language as against the German teaching in the congregational schools.

Organization of Free Schools.

The whole tendency of this educational work was toward the unification of the community and the bringing-out of its individual members from the rather narrow congregational life that had prevailed. Within the last decade or so there has been a decided reaction; and religious schools and Sabbath-schools have been highly organized in connection with individual congregations. Particular stress is laid upon them by the congregations; and much of the communal strength is derived from them. While the Hebrew education societies and schools continue in existence, they do not develop or flourish as might be expected; in fact, since 1882 they have largely taken upon themselves an entirely new function. With the sudden arrival in this country of the large number of Russian Jews having no knowledge of the English language, and in many cases without any particular handicraft, there devolved upon the American Jewish community the necessity of providing, first, day and night schools for teaching the new arrivals English; and, second, manual training and technical schools. These have been established in New York, Philadelphia, Chicago, and in other cities, more or less with the aid of the Baron de Hirsch Fund.

Technical Schools.

Of higher education there has been nothing general, but only special and theological. In 1855 I. M. Wise projected a theological college in Cincinnati under the name of "Zion College"; but the plan came to naught. In 1867 there was established, largely through the instrumentality of Isaac Leeser, Maimonides College at Philadelphia, which, however, was of scarcely longer duration than its predecessor. It was not until the year 1875 that there was founded, by the Union of American Hebrew Congregations, the Hebrew Union College of Cincinnati, which is devoted to the training of rabbis and teachers. While theoretically without partizan bias, it is practically the representative of the Reform wing in America. In 1886 there was established in New York the Jewish Theological Seminary, also for the training of rabbis and teachers, and representing the Orthodox wing of the community. In 1893 there was founded in Philadelphia, through a trust vested in the Mickve Israel congregation by Hyman Gratz, Gratz College, which is devoted to the preparation of teachers for Jewish schools, practically occupying the place of a normal school.

Theological Institutions.

Throughout the United States there have been established in connection with the various congregations, and also independently, societies and Young Men's Hebrew associations which are to a certain extent educational in their character. They usually sustain small libraries and provide lecture-courses on secular and religious topics. In 1893 there was founded the Jewish Chautauqua Society, which has branches all over the country and bears the same relation to the regular schools and colleges as does the University Extension movement, as interpreted in America, to regular colleges for university work. The Council of Jewish Women has engaged to a considerable extent in educational work among its own members. In 1886 there was organized a Sabbath-school Union for the purpose of promoting uniformity and approved methods in Sabbath-school instruction. There are at present (1900) in the United States 415 Jewish educational organizations, 291 of which are religious schools attached to congregations, with 1,127 teachers and an attendance of about 25,000 pupils. There are also 27 Jewish free schools, chiefly in large cities, with about 11,000 pupils and 142 teachers.

Three societies have been organized in the United States to issue Jewish publications—the first, in Philadelphia in 1845; the second, in New York in 1873, and the third, in Philadelphia in 1888. This last is a flourishing organization, and has issued many instructive and important works. Among the educational activities should also be mentioned the American Jewish Historical Society organized in 1892. Associated with many of the schools there are now circulating and reference libraries, as well as several independent ones, the largest of which is the Aguilar Library in New York, founded in 1886. The Maimonides Library of the Independent Order B'ne B'rith in New York was organized in 1851.

Publication Societies and Libraries.

It should be said in this connection that this Order and many of the other Orders and lodges had educational features—lectures and otherwise—and did pioneer work in the education of their members.

Of Jewish periodicals and newspapers published at one time or another in the United States, not less than 83 have been in English or German, 16 in Hebrew, and 82 in Yiddish.

Philanthropy: Of the philanthropic work of Jews in America practically nothing is known outside of the United States and Canada; and under these heads the subject will be treated in detail. In a general way it may be said that, until a very recent time, philanthropic work took the form of ordinary charity. The poor were clothed, fed, and kept warm, the sick were visited, and the dead were buried. The higher philanthropic work, that of preventing poverty by improvement of conditions and surroundings, is but a recent development. From the earliest arrival of Jews in this country, it was

Early Individual Charity.

Charitable Organizations.

their ideal that none of their poor should become a charge upon the general community; and in the earlier days charity was dispensed by by individuals, or by funds collected through the congregations; the former, however, being the prevalent means. A well-to-do family, or even one in but comfortable circumstances, would care for one or more poorer families, supplying them regularly with the necessaries of life. Gradually, as the Hebrew population increased, this method proved to be inadequate, and societies—generally small, and having specific objects—were formed. Some were for the visitation of the sick and the burial of the dead; some, in connection with congregations, for general charitable purposes; and some for the distribution of unleavened bread for the Passover. Still later, as the need grew, associations for the care of orphans, hospitals for the care of the sick, and, later still, homes for the aged were erected. Most of these societies and institutions were small; their work was done with insufficient funds and by voluntary officers, and without a definite plan. It was seen that this scattering of forces produced waste, and it was feared that it tended to pauperism; so that in all the large cities a gradual amalgamation took place of the various charitable organizations into one society with a trained officer. These societies usually included all the organizations, with the exception of the hospitals and the orphan asylums, in a given city, and had for their purpose the rendering of immediate relief. Later still, in each of a few cities, a central organization was formed, which included the hospitals and orphan asylums, and whose object it was to have a central body to collect funds for all the charitable organizations in the city and to distribute them pro rata. Of recent years it has been realized that this highly organized method of distributing charity has resulted in placing the whole matter on a somewhat mechanical basis, and has not always been productive of such good results as the old and unscientific giving from man to man, which bore with it the evidence of a certain human sympathy. Consequently in all the large cities an endeavor is being made to return to a more personal relation between the rich and the poor; and Sisterhoods or Personal Service societies have been organized to aid in the intelligent and sympathetic distribution of relief.

Philanthropic Homes.

The most recent development has been the National Conference of Jewish Charities in the United States, founded Dec. 1, 1899, in Cincinnati, and composed of 40 relief organizations. Its object is to promote reforms in administration and uniformity of action without interfering with the work of any local society.

There are at present 15 homes for orphans, or societies for their care, in the United States; 12 homes for the aged; and 9 hospitals. It is estimated that there are 593 Jewish philanthropic organizations in the United States.

Religious Development: Until a very recent date, religious development was not marked by any special feature. The Jews who came to the Spanish and Portuguese settlements were all Maranos who, while attached to the Catholic Church at home, had secretly observed the tenets of their own religion, and had, to a certain extent, mingled the rites of Catholicism with those of their own faith. From the testimony given in Inquisition trials it appears that quite a series of new customs arose from this mixture.

In the Dutch settlements, the Dutch tradition was usually maintained, the rabbis being imported from Amsterdam. From the very beginning the Jews in the United States consisted of both Sephardim and Ashkenazim; but the former were at first in the majority, and organized the four earliest congregations in the country; namely, those of New York, Newport, Savannah, and Philadelphia. As early as 1766 a translation into English of the Prayers—probably the first English-Jewish Prayer-Book ever issued—was published in New York.

In Jamaica and in Canada there has always been more or less direct relation with England; but in the United States the entire religious life of Jews has been especially characterized by the absence of dependence upon any European authority, as well as by the absence of any central authority in America. Congregational autonomy has been the watchword.

Reform Movement Begun in Charleston.

The movement for ceremonial reform began in Charleston in 1825. It was strongly supported in Albany, and later in Cincinnati, by I. M. Wise, from 1850, but did not make much headway until the arrival in the United States of David Einhorn and Samuel Hirsch. Under the influence of these men and of other rabbis,—principally from Germany—the trend toward alterations in the liturgy and ritual set in very strongly; but about 1880 a reaction against the radical tendencies took place, even on the part of some congregations professedly attached to the Reform movement, resulting in the formation of an intermediate or a Conservative group. With the influx of large numbers of Russian Jews, many congregations of the Orthodox type were established. The general attitude of Jews in America is one of very considerable attachment to the principles of their religion coupled with a gradual abandonment of many of the forms and ceremonies, although apostasy and actual defections from the synagogue are rare (see AMERICA, JUDAISM IN).

Services to the State in Military and in Civil Life: As has already been pointed out under "Brazil," the Jews rendered great service to the Dutch in their conquest of Brazil in 1624 and afterward in 1646–54 against the Portuguese. They also made a brave resistance against the French fleets which attacked Surinam in 1689 and 1712 respectively, and played a considerable part in the suppression of negro revolts in the same country between 1690 and 1772. They had a separate company of which David Nassy was captain, and, later, Isaac Carvalho (1743).

Earliest Jewish Settlers Were Soldiers.

The first Jewish settlers in Canada were soldiers who came over in Braddock's army, and there is record of their being engaged later on in encounters with the Indians. There were one or two Jews in Washington's expedition across the Alleghanies in 1754. When the first agitation began which ended in the Revolutionary War, the Jews, like their fellow citizens, were divided. Some remained loyal to the British crown; but the great majority adhered to the Patriot cause. There were 9 Jewish signers to the "non-importation" resolutions of 1763; and when the war actually broke out, they not only risked their lives, but some, like Haym Solomon, helped with their money to equip and maintain the armies of the Revolution.

So far, the names of 45 Jews who served as officers and privates in the continental armies have been put on record; and this can hardly be the total number, as a considerable proportion were officers. Possibly the best known of the latter was David S. Franks, who was major, and afterward lieutenant-colonel, on the staff of General Arnold. In the war of 1812 there were, as far as known, 43 Jews, of whom the most prominent was Brigadier-General Joseph Bloomfield, in charge of Military District No. 4, comprising Pennsylvania, Delaware, and western New Jersey. In the Mexican War there were 57 Jews, the most prominent being David de Leon, who twice received the thanks of Congress for gallantry. In the Civil War there were on both sides 7,038 Jewish soldiers, and in the Spanish-American War over 2,000. Besides, a fair number has been found in the regular army, as well as in the navy (see Army, Jews in, and United States).

Services in Civil Life.

In civil service to the state nearly all of the information at hand relates to the United States. There have been 4 Jewish members of the United States Senate and about 20 of the House of Representatives. Many have been in the diplomatic and consular services, among whom may be specially mentioned Mordecai M. Noah, consul at Tunis; B. F. Peixotto, consul at Bucharest; Simon Wolf, consul-general in Egypt; Oscar S. Straus, twice minister to Turkey, and Solomon Hirsch, who held the same post.

Jews have served as mayors of cities, members of the legislature, judges of the courts; and they have held many minor offices of trust and confidence. Simon W. Rosendale was attorney-general of New York; Isador Raynor, attorney-general of Maryland.

The first statue to belong to the United States, and which originated Statuary Hall in the Capitol at Washington, was one in bronze of Thomas Jefferson by David d'Angers, a French sculptor. It was presented to the United States in 1838 by a Jew, Lieutenant, afterward Commodore, Uriah P. Levy, of the United States navy, and was formally accepted by Congress in 1874 on the motion of Senator Sumner.

Varying Experiences of Early Settlers.

Civil and Political Rights: In the colonies established on American soil more liberty or toleration was usually shown to the Jews than in the mother countries, yet they labored under serious disabilities. In Lima, in Peru, and in Mexico they were pursued by the Inquisition. In the Dutch West India Islands and provinces they were accorded the greatest freedom. In New Amsterdam, while there was some objection to them, and they were at first denied burghers' rights, the latter seem to have been granted them at a very early date—a result due largely, as already stated, to the persistence, both by petitions and before the courts, of Asser Levy. In Surinam, in 1669, Jews were formally granted the right of free exercise of their religion. The British Parliament in 1753 passed an act permitting "persons professing the Jewish religion to be naturalized by Parliament," which was repealed in the following year. Not until 1858 might Jews sit in Parliament; and it was only in 1860 that the words "on the true faith of a Christian" were removed from the ordinary oath.

The English provincial governors and assemblies exhibited a tolerant spirit much earlier. Dr. Lumbrozo was granted letters of denization in Maryland as early as Sept. 10, 1663. In 1670 Sir Thomas Lynch, governor of Jamaica, was instructed to give all possible encouragement to persons of differing religions. In 1672 Rabba Couty of New York appealed to the king in council, and promptly obtained redress for a grievance. In 1674 in Barbados Jews were allowed to take the oath upon the five books of Moses. A law passed in Jamaica in 1683 required applicants for naturalization simply to take the oath of allegiance. In 1727 the General Assembly of New York voted that Jews taking the oath of abjuration might omit the words "upon the true faith of a Christian."

In the British Colonies.

This liberality was not confined, however, to provincial assemblies. In 1740 Parliament passed an act for naturalizing, among others, such Jews "as are settled or shall settle in any of His Majesty's colonies in America." Of the 189 Jews who took advantage of this act, 151 were in Jamaica, 24 in New York, 9 in Pennsylvania, 4 in Maryland, and 1 in South Carolina. Following the Declaration of Independence in 1776 most of the states placed all citizens upon an absolute equality; the only notable exception being Maryland, in which state a prolonged struggle took place before full political rights were finally secured (see above, under "Maryland").

The stringent Sunday laws now in force in nearly all the states, forbidding Jews to work on the Christian Sunday, entail considerable hardship among Jews observing the Sabbath; but these laws are in the nature of police regulations, and are not discriminative against Jews as such.

Jews Eminent in All Departments.

Science and Art, Literature, and the Learned Professions: Jews have been members of all the learned professions—principally the legal and medical—and they have contributed to nearly all the sciences and to the fine arts. The fact has already been mentioned that some Jews have been elevated to the bench, and others elected to the post of attorney-general. Many eminent physicians, medical writers, and professors in medical schools are Jews. There has been at least one distinguished Hebrew sculptor, Moses Ezekiel, and there are several others of rank. Among artists and etchers should especially be mentioned the Rosenthals of Philadelphia, father and son; and of illustrators the best known is Louis Loeb. Jews are also found as inventors, *e.g.*, Emil Berliner, inventor of the telephone transmitter; as architects, Dankmar Adler of Chicago, and Arnold W. Brunner of New York, for instance; and as engineers, the most distinguished of whom is Mendes Cohen of Baltimore, one of the pioneer railroad builders of the country, and at one time president of the American Society of Civil Engineers.

Many Jews hold professorships in colleges: M. Bloomfield and J. H. Hollander at Johns Hopkins; Richard Gottheil and E. R. A. Seligman at Columbia; Morris Loeb at the University of New York; Morris Jastrow at the University of Pennsylvania, Joseph Jastrow at the University of Wisconsin; Charles Gross at Harvard; while a much larger number are assistant professors or instructors.

The most distinguished Jewish writer of poetry in the United States was Emma Lazarus; Michael Heilprin gained eminence as an editor and writer; A. Cahan and Emma Wolf are successful novelists; and Morris Rosenfeld is a gifted Yiddish poet.

Music and the Stage.

In music a number of Hebrews have acquired a reputable position. Jews are also prominent as actors and as dramatic authors. Among the latter may be mentioned Aaron J. Phillips, who first appeared in New York at the Park Theater in 1815 and was a very successful comedian; Emanuel Judah, who first appeared in 1823; and Moses S. Phillips, who acted at the Park Theater in 1827. Mordecai M. Noah, best known as journalist, politician, and diplomat, was also a dramatic author of considerable note. Other dramatists and authors were Samuel B. H. Judah (born in New York in 1790) and Jonas B. Phillips; and at the present time David Belasco is a most successful playwright. It would be impossible to enumerate the Jews now on the stage. The introduction of opera into the United States was due largely to the instrumentality of Jews.

In Commerce and Manufacture: In commerce Jews were notably important in the eighteenth century. The fact that the earliest settlers were men of means, and were Spanish and Portuguese Jews who had relatives and friends settled throughout the Levant, gave them specially favorable opportunities for trading. Some were ship-owners; one man, Aaron Lopez of Newport, had before the Revolutionary War a fleet of thirty vessels. Jews very early traded between the West India Islands and the North American colonies, as well as with Amsterdam, Venice, etc.

The Jewish immigrants who arrived in America during the nineteenth century were in the main poor people who commenced trading in a small way, usually by peddling, which, before the existence of railroads, was a favorite method of carrying merchandise into the country districts. By industry and frugality they laid the foundations of a considerable number of moderate fortunes. The Jews in New York became an integral part of that great trading community.

In the early colonial period, more especially in Pennsylvania and in New York, many of the Jews traded with the Indians.

Jews Active in Financial Circles.

The organization under which the Stock Exchange of New York was formed, originated in an agreement in 1792 to buy or sell only on a definite commission; and to this document were attached the signatures of four Jews. Since then Jews have been very active in the Stock Exchange and in banking circles, both in New York and elsewhere. They have also taken a leading part in controlling the cotton trade. Jews are likewise very prominent in the manufacture of cloaks and shirts in the clothing trade, and more recently in cigars and jewelry.

In 1888 Markens estimated that the wholesale trade in the hands of Jews in the city of New York amounted to $248,000,000, and the holdings of real estate to $150,000,000.

Agriculture: Jews were the first to introduce the culture of the sugar-cane on the western continent and of the vine in Georgia. Otherwise their agricultural activity was extremely limited until the arrival of Russian Jews, from 1881 forward, and the powerful impulse given through them to agriculture by emigration societies, by the Baron de Hirsch Fund, and by their own great desire to revert to the cultivation of the soil (see Agricultural Colonies in the United States).

Social: The social organization of the Jews resident in America has differed little from that in other countries. In the early colonial period the wealthier Hebrews seem to have taken part with their Christian fellow citizens in the organization of dances and other social functions, and clubs; and it is a matter of record that the wealthier Jewish families lived with comparative good taste and possessed fine houses, objects of art, etc. Nevertheless, in the main, and without any compulsion, Jews preferred to live in close proximity to each other.

At the time when little toleration was shown in other countries, there were in America many interchanges of mutual good-will between Christians and Jews. Rabbi Haym Isaac Karigel was apparently a close friend of Ezra Stiles, president of Yale College.

Jews and Christians Cooperate.

Gershom Mendes Seixas, minister of the Shearith Israel congregation, New York, was a trustee of Columbia College (1784–1815) although this organization was under the Episcopal Church; and the Episcopal bishop of New York occasionally attended service in the synagogue. After 1848 there arrived a large number of Jews who could not speak the English language, and to them a certain odium attached on this account; but this seems to have gradually worn off. The general American public exhibited great sympathy with the Jews in 1840 at the time of the Damascus murders, and again in 1882 on the occasion of the persecutions in Russia; and Hermann Ahlwardt, on his visit to America in 1895, found the soil an unfavorable one for his anti-Semitic propaganda.

The only indication of any prejudice against the Jews—shown mainly in the Eastern states—has been the exclusion of Jewish children from certain private schools and of Jews generally from some hotels.

Hebrew Clubs.

Very early the Jews in America began to form social organizations. A club was started in Newport as early as 1769; and social clubs—some comprising many members and possessed of magnificent properties—have been established in many sections of the country. This development of Hebrew social clubs has been larger in the United States than anywhere else. American Jews have also been especially given to the forming of secret "Orders," which, while they had primarily an educational and charitable purpose, had much social influence, and tended powerfully toward the continued association of Jews with each other when the hold of the synagogue upon them relaxed. These were supplemented later by the formation of Young Men's Hebrew Associations, which, like the Orders, partook to some extent of the nature of social organizations.

Statistics: In 1818 Mordecai M. Noah estimated the Jewish population of the United States at 3,000, and in 1826 Isaac C. Harby set it at 6,000. In 1840 the "American Almanac" gave the number as 15,000; and in 1848 M. A. Berk estimated it at 50,000. The first systematic attempt to obtain statistical information was undertaken by the Board of Delegates of American Israelites, through a committee, of which William B. Hackenburg, Simon Wolf, and others were members. They estimated the Jewish population in 1880 at 230,257. In 1888 Isaac Markens estimated it at 400,000.

In the reports on the statistics of churches in the United States at the eleventh census (1890), the Jewish statistics were collected by Philip Cowen. His investigations showed that there were 533 congregations with 130,496 communicants. Of these congregations, 301 worshiped in edifices with an approximate seating capacity of 139,284. Others occupied 232 halls and rooms, having an aggregate seating capacity of 28,477. The total value of the synagogue property was estimated at $9,754,257.

In 1897 David Sulzberger estimated the total population at 937,800; and in 1900 it was estimated at 1,058,135.

In the latter year it was estimated that there were upward of 791 congregations in the United States, 415 educational organizations, and 593 philanthropic organizations.

The total Jewish immigration to the United States through the ports of New York, Philadelphia, and

Baltimore, from 1881 to July 1, 1900, was 593,896. This does not take into account the emigration from Canada or to ports other than those mentioned.

Following are tables giving the estimated distribution of (1) Jews of the United States (including the Hawaiian Islands and Porto Rico), and (2) Jews of Canada, British Columbia, and South America:

DISTRIBUTION OF JEWS OF THE UNITED STATES.

Alabama	8,000	Montana	2,500
Arizona	2,000	Nebraska	3,000
Arkansas	4,000	Nevada	2,500
California	25,000	New Hampshire	1,000
Colorado	8,000	New Jersey	25,000
Connecticut	8,000	New Mexico	1,500
North and South Dakota	3,500	New York	400,000
Delaware	1,080	North Carolina	12,000
District of Columbia	3,500	Ohio	50,000
Florida	3,000	Oregon	5,500
Georgia	6,135	Pennsylvania	95,000
Hawaiian Islands	20	Porto Rico	100
Idaho	2,000	Rhode Island	3,500
Illinois	95,000	South Carolina	8,000
Indiana	25,000	Tennessee	10,000
Iowa	6,000	Texas	15,000
Kansas	3,000	Utah	5,000
Kentucky	12,000	Vermont	1,000
Louisiana	12,000	Virginia	15,000
Maine	5,000	Washington	2,800
Maryland	35,000	West Virginia	1,500
Massachusetts	60,000	Wisconsin	15,000
Michigan	9,000	Wyoming	1,000
Minnesota	6,000		
Mississippi	5,000	Total	1,058,135
Missouri	35,000

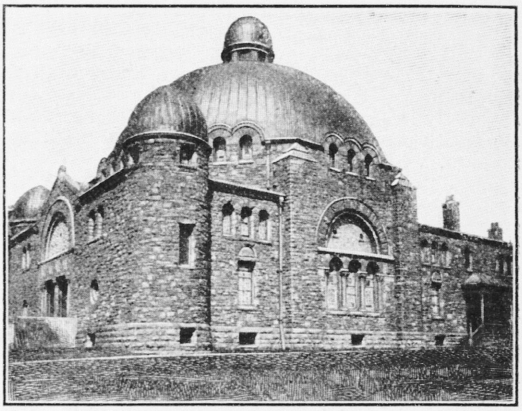
Duffy, London, 1869; and numerous other sources referred to under the separate articles.

A.

——**Jewish Architecture:** The first Jewish settlers arrived in New York—which was originally called New Amsterdam—in 1654, and some appeared in Newport, R. I., in 1677; consequently, it was in those places that the first synagogues in America were built. The oldest Jewish landmark in New York city is the cemetery at the junction of the Bowery and Oliver street, which was purchased in 1681 for a burial-place. Though of antiquarian interest, it contains no tombstones of importance from the point of view of design. The cemetery in Newport, of about the same date, was more pretentious; and at this day (1901), with its carved Egyptian entrance and high iron railings, erected by Judah Touro, it is one of the sights of Newport. Although the Jews had a place of public worship in New York as early as 1681, the first regular synagogue—that in Mill street—was not built till 1729. Like all early synagogues in America, it had no claims to architectural beauty, but was a simple, modest structure. It was subsequently taken down and more substantially rebuilt.



Temple Beth Zion, Buffalo, N. Y.—*Byzantine.*

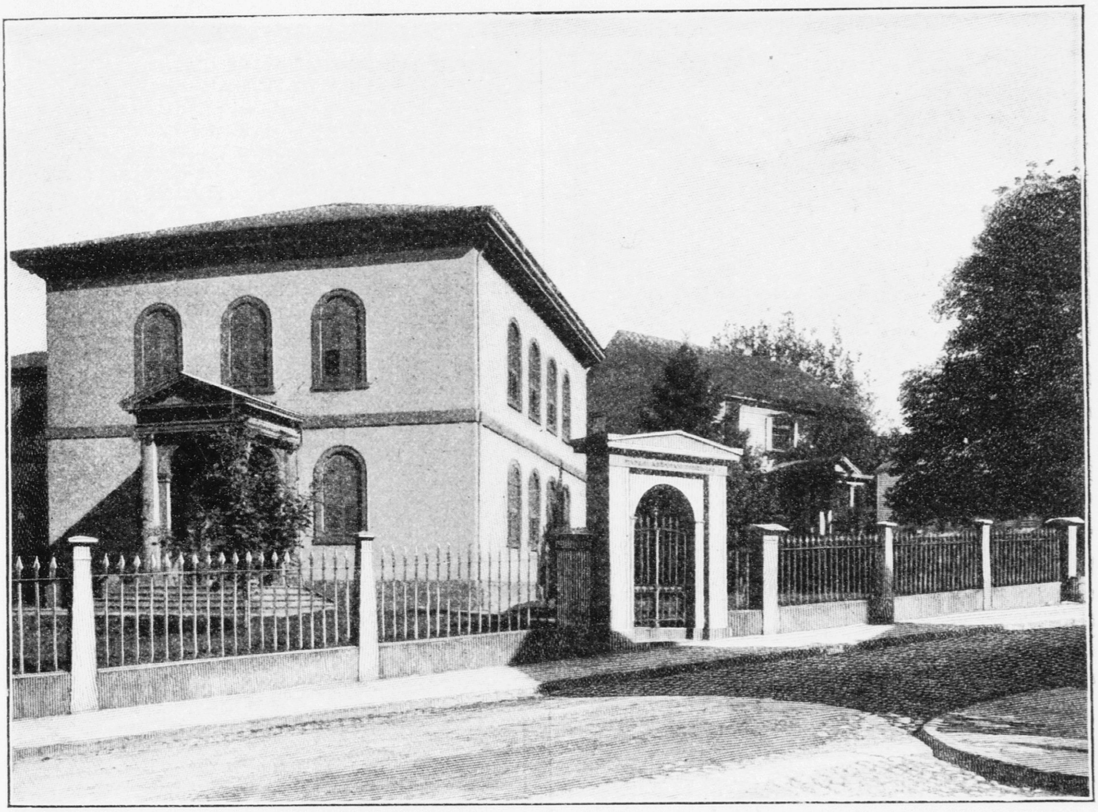
(From a photograph.)

The first synagogue of note in America was erected at Newport in 1762. It is still intact; and no alterations have been made except for the introduction of gas-lighting. The building, which is an excellent example of the colonial style of the period, is constructed of brick, and has a carved-stone cornice and porch. The plan is rectangular, with windows on all four sides and a projecting north wing, containing a vestibule and the only entrance to the women's gallery. The porch is on the west side and the Ark on the eastern wall. The latter is neatly paneled, and its cornice is surmounted by the two tables of the Law. It is raised above the main floor; it has high railings all along it, with a space at the left for the pulpit. The reading-desk is in the center of the building; and there are no stationary seats. Twelve Ionic columns support the gallery, which extends on three sides of the building and is faced by a balustrade high enough to shield the occupants from view. The ceiling is flat, with a deep cove

The Newport Synagogue.

above a modillion cornice. This little building was designed by Peter Harrison, an architect whose work in Boston and Newport is well known; it is treated in his customary style, and is a typical American synagogue of the earlier times. The columns, cornices, pilasters, balustrades, all of which are painted white with some of the carving sparingly gilded, are good examples of the best work of the day; while the plan of the interior is exactly adapted to the requirements of an Orthodox Jewish synagogue. There was even an oven connected with the building for the baking of unleavened bread.

In 1805 there were but five synagogues worthy of the name in the United States, but a little later they began to multiply in New York, Philadelphia, Charleston, Savannah, and other large cities. The rabbinic traditions regulating the position and number of windows and doors, the level of the main floor, the site, and other similar points appear to have been entirely neglected. It was generally understood that the Ark was to be at the eastern end of the building, the reading-desk in the middle, and the seats in rows under the women's galleries extending east and west. This was the usual arrangement, varied only in details or when existing conditions compelled some deviation from established custom. As the various congregations grew wealthier and could afford handsomer buildings, more attention was paid to their design; and attempts were made to secure individuality and expression which should be typically Jewish. Various styles of architecture were experimented with, but general preference seems to have been for the Moorish. This was due, no doubt, partly to the fact that some of the newer synagogues in Europe had been designed in this style, and partly to a vague impression that the style itself was Oriental and consequently appropriate.



Jeshuat Israel Synagogue at Newport, R. I.—*Colonial*.

(From a photograph.)

There were many exceptions to the prevailing taste, and some of them most successful. A synagogue was built in Charleston, S. C., in the Greek style. It possessed some dignity, and was a fair copy of a Doric temple. The interior was treated in the Ionic order; the Ark, placed in the east, was of mahogany handsomely carved; and the details generally were well executed.

Later Synagogues.

The congregation Shearith Israel, New York, the owners of the original building in Mill street referred to above, built in 1860 a synagogue on strictly classic lines on West Nineteenth street. The façade was ornamented by two orders, Ionic below and Corinthian above; and the edifice was crowned by an octagonal dome. The building, now demolished, was of unusual interest. The main entrance was on its south side. The entire ground floor was therefore devoted to vestibules and staircases, in order that the entrance to the synagogue proper should be at its western end, and the Ark placed at the east. The general effect of the interior was very imposing, the domed ceiling being of great height, and the Ark well proportioned. Corinthian columns supported the galleries; and pilasters, cornices, and balustrades were used. The windows were arched, with keystones; and classic forms were consistently employed.

Synagogues in New York City.

Several synagogues were built in New York by the late Henry Fernbach, the first Jewish architect who practised in America. Like most of his work, they were all dignified, handsome buildings, well adapted to the requirements of the several congregations. They evidenced a marked tendency toward the Moorish style, which, even when departed from in the main design, was insisted upon in details. The most ambitious and noted example is the Temple Emanu-El, which Fernbach built in collaboration with Leopold Eidlitz. While exhibiting strong Gothic tendencies in its main lines and in its interior disposition, it is strictly Moorish in its details, which are well studied and of great beauty. It is undeniably one of the most splendid modern synagogues. Its exterior has graceful minarets and well-executed carving and tracery, in the manner of the Alhambra; and in the interior there are massive stone piers, with intermediate granite columns dividing the nave from the aisles. From the piers spring large horseshoe arches which interrupt the clerestory above the smaller arches, thus producing to some extent the effect of a transept, in the ends of which are circular stained glass windows. The Ark, in the east, is elaborately arcaded and paneled, and is set in an arched recess crowned by a smaller arcade. The colors are rich; blue, red, yellow, and gold are lavishly used; but they are so well blended that the general effect is harmonious. The galleries, which are of wood, extend behind the piers and columns, and seem to be of secondary importance. The platform in front of the Ark contains the reading-desk and pulpit; and the seats, which face the Ark, fill the nave. This disposition has become very general in modern American synagogues; and the advantages of combining reading-desk and pulpit—thus concentrating the attention of the congregation as well as securing additional seating capacity—have made the arrangement a favorite one. A further development of this idea was adopted in the Temple Beth-El, corner of Fifth avenue and Seventy-sixth street, New York, designed by Arnold

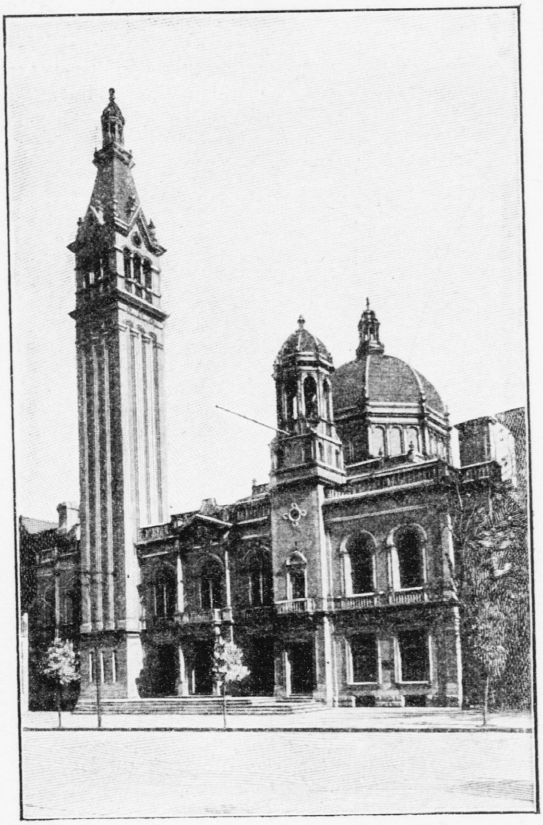
Sinai Temple, Chicago.—*Romanesque.*
(From a photograph.)

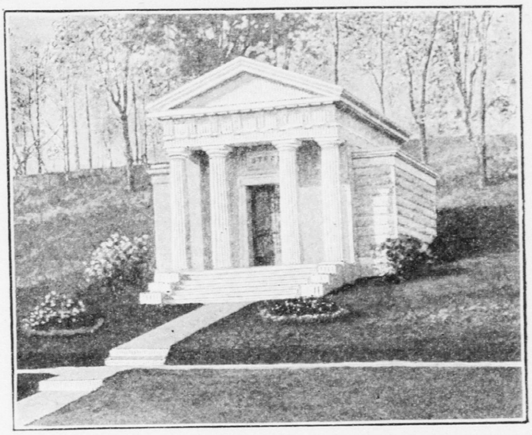
W. Brunner and Thomas Tryon, who built several of the newer synagogues. The benches are curved and so arranged that every seat directly faces the Ark, which is on a platform in a semicircular apse or recess. The reading-desk is in front of the Ark; and the pulpit is directly in front of the reading-desk. The surface behind the Ark is covered with mosaic; and above the Ark are eight marble columns supporting a half-dome and screening the organ and the choir. The ceiling of the building is vaulted, and is supported by arches springing from four columns. There are galleries on three sides, and double galleries at the west end. The building is designed in the Romanesque style, with round arches and elaborate detail work, executed in marble and mosaic. The exterior is of limestone; and its main feature is a dome covered with gilded tracery.



Temple Keneseth Israel, Philadelphia.—*Renaissance.*

(From a photograph.)

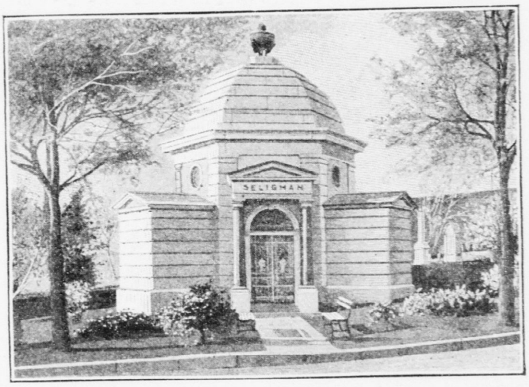
The desire for an unobstructed view of the pulpit and the Ark, that suggested the use of only four columns in the Temple Beth-El, has resulted in the planning of buildings wholly without columns, the roof being supported entirely by the walls. Other practical reasons in synagogue architecture have suggested the use and arrangement of chairs as in theaters; and light, perfect acoustics, ventilation, and comfort have been so assiduously sought after, that in the desire to secure a perfect auditorium in these respects the artistic element has frequently been forgotten, and the devotional ensemble, so important in a place of worship, has been entirely sacrificed. In some cases, as in the Keneseth Israel synagogue at Philadelphia, not only does the body of the building lack the expression of the old synagogue, but even the Ark itself has been modernized. The Temple at Cleveland, Ohio, is open to the same criticism; and there is danger that this fault in synagogue-building may become more pronounced as new examples multiply. This serious and unnecessary architectural defect is greatly to be deplored, especially in the two synagogues referred to, which are in other respects beautiful structures.



Stern Mausoleum, Cypress Hills, N. Y.

(From a photograph.)

The present building of the congregation Shearith Israel in New York city, erected in 1897, is an instance of an important modern synagogue in which the orthodox arrangement of seats, pulpit, etc., has been retained. The plan is practically that of the original building in Mill street, so far as the position of the Ark, reading-desk, galleries, and seats are concerned; but the materials employed are costly. The exterior is entirely of stone; and in the interior marble and bronze are lavishly used. Classic traditions have been respected throughout in the design, and in the interior as well as on the façades the Corinthian order has been adopted.



Seligman Mausoleum, Cypress Hills, N. Y.

(From a photograph.)

The synagogue in the thriving colony at Woodbine, N. J., is of interest, as having been built by members of the colony, who did their own work, even to the extent of making their own bricks. It is the simplest possible structure both in design and construction, with no sins of bad taste; and it is an indication of earnest, well-directed endeavor to provide a fitting place of worship while the struggle for existence is still severe.

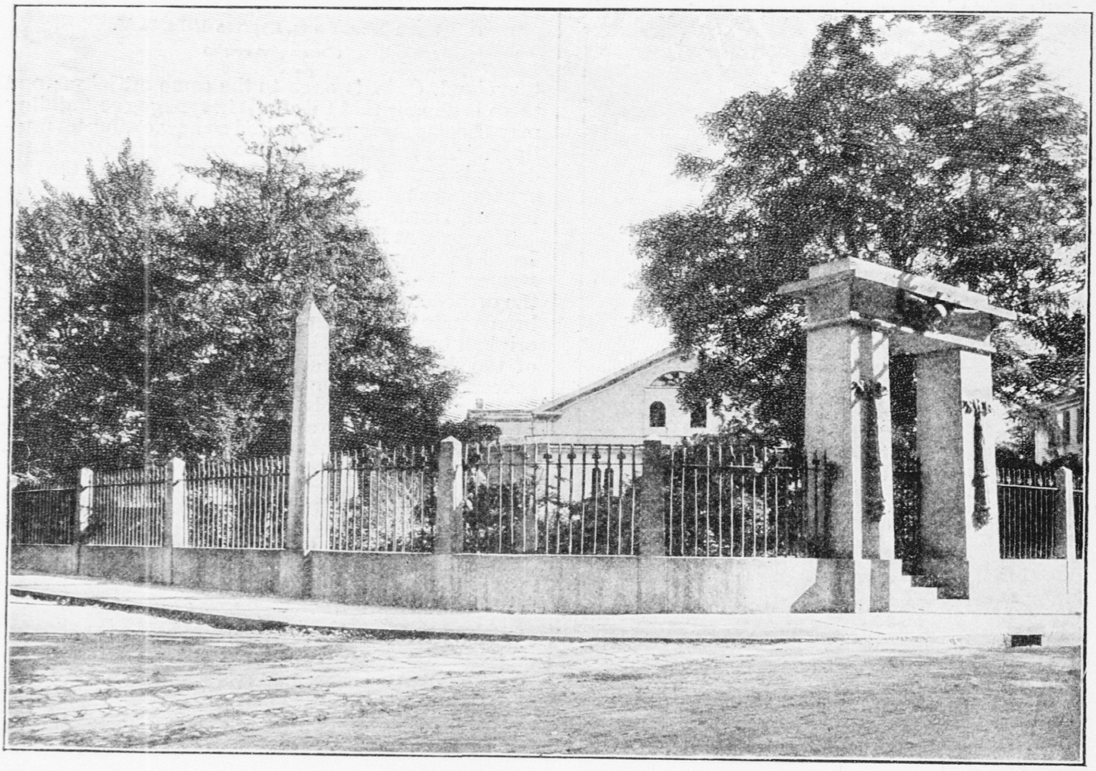
There has been much divergence of taste in the building of synagogues; but a vague Oriental tendency can generally be noticed in all of them. The preference for the Moorish style, at one time so much in favor, seems to have passed away, experience having shown it to be eminently unsuitable and un-Jewish. In America, as in other countries, if places for Jewish worship are built not entirely in the prevailing style of church architecture, they are at least strongly influenced by it. Churches in America have been built in Colonial, Gothic, Romanesque, classic, and the various forms of the Renaissance; and there are now many synagogues in all of these styles, except the Gothic. Like the synagogue at Cleveland and the Temple Beth-El at New York, the Sinai Temple at Chicago is Romanesque. It was built by the late Dankmar Adler, a Jewish architect of much ability, who, with Louis H. Sullivan, designed many noteworthy buildings. The synagogue Keneseth Israel at Philadelphia is a good example of Renaissance architecture, with a dome and a tower suggesting an Italian campanile. The synagogue at New Haven is Spanish; and many synagogues throughout the United States have been designed in other variations of Renaissance.

Domes are often used; and probably the most interesting example is the Temple Beth-Zion at Buffalo, which is an excellent Byzantine building entirely covered with a low copper dome. In Philadelphia, New York, Brooklyn, and Cleveland other examples of this treatment are to be seen. The general disposition of mass in the Temple Emanu-El, New York, which has two towers covered with minarets, is paralleled in the Temple Sinai, New Orleans, the Temple Emanu-El, San Francisco, the Temple, Cincinnati, and many others. This is a favorite arrangement, and is the natural outcome of the convenient plan of a tower on either side of the main entrance, containing staircases leading to the galleries.

In nearly every case provision is made in the synagogue or in an adjoining building for a religious school. Generally the school is in the lower story, and often occupies as much floor-space as the synagogue proper and contains a large assembly-room and numerous class-rooms. The school-rooms are generally well appointed; and much care is taken in their maintenance and equipment.

On the whole, synagogue architecture is rapidly reaching a high plane of excellence; and buildings of much beauty devoted to Jewish worship now abound, taking place among the monumental structures of America. Many of the interiors are impressive, and, while general simplicity of arrangement usually exists, the Ark and its surrounding walls afford opportunities for design that are not often neglected. In many cases the Ark is constructed of carved wood or rich marbles; and Mexican onyx, gold, and mosaics have been used with good effect.

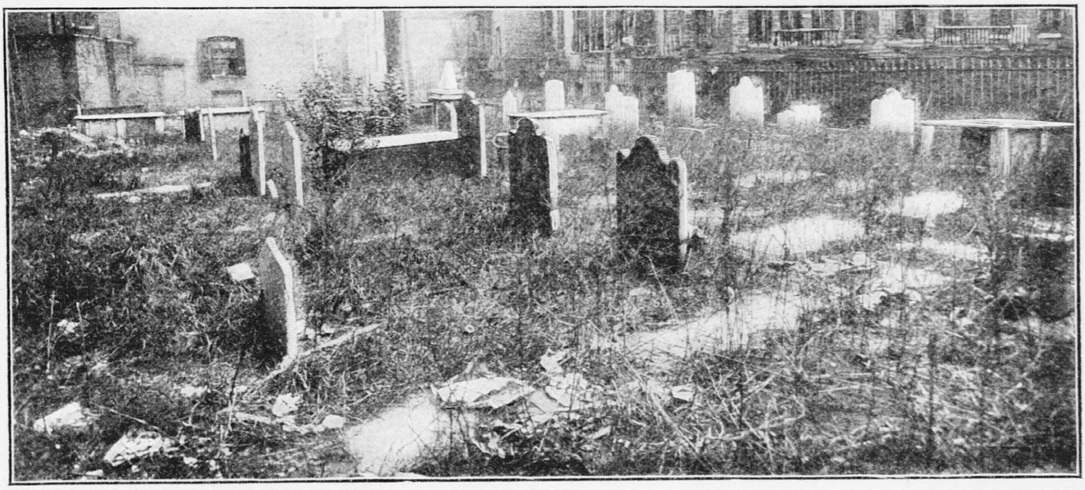
Tombs and mausoleums are assuming architectural importance; and the latter, many of which are noteworthy for good design and great dignity, help to distinguish the cemeteries, in which much pride is taken. Buildings for various Jewish charities are



TOURO CEMETERY, NEWPORT, R. I.

(From a photograph.)

numerous and often of much interest. Orphan asylums, hospitals, homes for the aged and the infirm, libraries, schools, etc., have sprung up in all the large cities of the United States. While these are frequently models as to plans and arrangements, and are handsome in design, they can not be considered as specimens of distinctly Jewish architecture; for, though erected for Jewish purposes, they are equally adapted for the uses of other denominations, while, unlike synagogues, they give no indication of sectarian purpose. A. W. B.



OLD JEWISH CEMETERY, CHATHAM SQUARE, NEW YORK.

(From a photograph.)

AMERICA, THE DISCOVERY OF: Among the various discoveries of the fifteenth century, none is more intimately connected with the Jews and their history than the discovery of the New World. Indirectly and directly, the Jews contributed to the success of Columbus' voyage of exploration: indirectly, by means of several astronomical works prepared by them, such as "De Luminaribus et Diebus Criticis," by Abraham ibn Ezra; and directly by the invention of instruments for astronomical observation. The instrument for observing the stars called JACOB'S STAFF, a sea-quadrant, was the invention, not of Regiomontanus, as has long been considered, but of Levi ben Gerson, who was the first to describe it, as is proved by Steinschneider and Günther. Abraham Zacuto then applied this instrument in navigation to the determination of latitude without depending upon the sun's meridional height—sometimes unobtainable—using the altitude of the polar star at night to ascertain the ship's position. His Latin perpetual almanac (afterward translated into Spanish), with its astronomical tables, rendered Columbus incalculable service; indeed, on one occasion it saved the lives of his whole company.

A Jew Invents the Sea-Quadrant.

A conspicuous part, too, in the discovery of America was taken by the Marano Luis de Santangel, against whose relatives the Inquisition waged a war of extermination, he himself being subjected to much inconvenience because of his Jewish origin. He was the farmer of the royal taxes and head of an important commercial house in Valencia; and, owing to his being a confidant of King Ferdinand, he became chancellor of Aragon. Together with a relative, the royal treasurer, Gabriel Sanchez (whose father was burned in effigy as a Jewish heretic at Saragossa in 1493), and his friend, the royal chamberlain, Juan Cabrero, who was likewise of Jewish stock, Santangel entered very energetically into the far-reaching plans of Columbus. He represented to Queen Isabella the advantages that would accrue to the crown and to Spain from the discovery of a sea-route to the Indies—immeasurable riches, accession of lands, and immortal fame. Under the influence of such glowing representations, she consented to Columbus' undertaking, and, since the state treasury was exhausted, was ready to pawn her jewels to procure the necessary funds to fit out his expedition. At this stage, Santangel sought permission to advance the necessary sum out of his private treasure, and accordingly loaned without interest, to the royal treasury, for the venture, 17,000 ducats (about $20,000, or £4,100; perhaps equal to $160,000 at the present day).

On April 30, 1492, Columbus received both the contract (concluded only thirteen days before, between him and Juan de Coloma on the part of the royal pair) and the royal commission to fit out the fleet for its voyage to India. A month earlier the edict expelling the Jews from Spain had been published in all public places in the dominions of the united kingdoms of Aragon and Castile. On August 2, about 300,000 Jews (some writers consider the number much greater) left the country; and on the next day, Friday, August 3, Columbus sailed with his three ships in quest of the unknown. Among the members of the expedition several were of Hebrew blood. Of these there may be mentioned Luis de Torres, who understood Hebrew, Chaldaic, and some Arabic, and who was to serve the admiral as interpreter; Alfonso de la Calle, who took his name from the Jewish quarter (*calle*), and died in Spain in 1503; Rodrigo Sanchez, of Segovia, who was a relative of the chancellor of the exchequer, Gabriel Sanchez, and joined the expedition in compliance with the special request of the queen; the surgeon, Marco; and the ship's doctor, BERNAL, who had lived formerly in Tortosa, and had been punished

Jews with Columbus.

in 1490 by the Inquisition, in Valencia, as an adherent of Judaism.

Luis de Torres was the first European to tread American soil, and the first to discover the use of tobacco. He settled in Cuba, and, having won the confidence and good-will of one of the chiefs, received from him large grants of land and many slaves as presents. From the king and queen he also received an annual pension of 8,645 maravedis (about $36, or £7). He died in Cuba. Luis de Santangel was the first to receive a detailed statement of the voyage and discoveries of Columbus, contained in a letter written by the admiral, February 15, 1493, in the Azores, where he stopped on his way home. From Lisbon, Columbus wrote a similar letter to Gabriel Sanchez, who published it in Barcelona. These letters have often been published in later times, both in Italian and in English.

Jewish Treasure Equips Second Expedition.

The expenses of the second expedition, which sailed from Cadiz, Sept. 25, 1493, were covered by the funds procured from the sale of the gold and silver vessels taken from the expelled Jews, or from those who had wandered into Portugal, or from the converted Jews who remained behind, from whom the property was seized under pretext that it formerly belonged to the emigrants. Even Christians suspected of possessing any of the Jewish treasure were not allowed to retain it. All valuables of whatever sort, clothes, and other goods belonging to the exiles, notes of hand which they could not cash, the damask, velvet, and silk draperies of the Torah, were collected and sold to further the voyage. Of the treasure thus collected, Columbus received 10,000 maravedis, promised to the one who should first see land, and 1,000 golden doubloons (about $5,000, or £1,000) as a special present.

By his haughtiness and harsh treatment, Columbus had made many enemies, and had also incurred the ill-will of Bernal, the ship's doctor. The conspiracy fostered by Bernal and Camacho was disastrous to the admiral, who in his desperate condition was compelled to call upon his old patrons, Gabriel Sanchez and Luis de Santangel, to intercede for him with the king and queen. For the services he had rendered to the state, Luis de Santangel obtained many privileges; perhaps the most important of them being a royal decree, issued May 30, 1497, by which he, his children, and his grandchildren were to be protected from any further molestation by the Inquisition.

Emigration to the newly discovered lands, upon which Columbus had set the seal of the Church, was strictly forbidden to those Maranos whom the Inquisition from time to time still persecuted. Nevertheless, Gabriel Sanchez was the first person to obtain a royal grant to export grain and horses to America. Spanish and Portuguese Maranos, well-to-do merchants and learned physicians, emigrated to New Spain in such numbers that the authorities of Castile felt themselves impelled, so soon after the discovery as 1511, to take steps against the Maranos and the children and grandchildren of those Jews who had fallen victims to the Inquisition, and to this end caused similar inquisitorial courts to be erected in the New World. One of the first victims in New Spain was Diego Caballero, a Marano from Barrameda. The edicts of June 30, 1567, and March 15, 1568, were intended to prevent any further emigration of the Jews.

Mention in Jewish Writings.

Jewish writers soon began to devote their attention to Columbus and his discoveries. The first to mention them was Abraham Farissol of Avignon, who, according to the "Stories of the Discoveries of Columbus," which appeared in a collection, "The Journeys in the New World," Vicenza, 1567, refers to them in his geographical work, "Iggeret Orḥot 'Olam," written in 1524 (Venice, 1587); translated into Latin by Thomas Hyde in 1691. More particular attention was devoted to these discoveries by Joseph Cohen, also of Avignon, who translated into Hebrew, in 1557, the "Historia General de las Indias," by Francisco Lopez de Gomara (2 vols., 1535), and included them in his Hebrew work, "Book of the Chronicles of the Kings of France," etc., Venice, 1552–53, Amsterdam, 1733; translated into English by Bialoblotsky, London, 1834–35.

AMERICA, JUDAISM IN: Judaism in America—by its logical and historical development of Judaism in its most recent sphere of activity—promises to react upon and in certain directions modify all existing phases of the faith. It varies essentially from Oriental Judaism, and has surpassed even that of western Europe in its adaptation—more or less happy—of ancient ideas to modern forms. It is in much the inevitable creation of its novel environment in a new world; but it is not lacking in independent initiative along lines of thought that sometimes emanate far back in the common history. In its development three distinct threads of derivation may be discerned which, when woven together by the hands of time and circumstance, constitute the firm texture of its fabric to-day. These are: (1) Oriental Judaism (sometimes called "Orthodox," but more correctly "Ancient," Judaism), transplanted to this country by the earliest settlers, who were of Sephardic, Polish-German, and British origin; (2) Sephardic-Conservative, tracing back to the rationalistic thought of Spain (Sephard) in the early Middle Ages; (3) German-Reformed, derived from the influx of recent German thought brought hither by the living representatives of that school, to whom the rigid domination of Oriental Judaism in Europe had grown repugnant.

The first Jewish settlers in America naturally belonged to the Orthodox or Ancient section of the faith. They were observant Jews, mainly of the Orthodox Sephardic type, who had emigrated from Europe directly to South America and later on to the northern continent. Southey ("History of Brazil," quoted by Daly, "The Settlement of the Jews in North America," ed. Kohler, p. 6) states that the open joy with which the Jews of Bahia celebrated their religious ceremonies attracted unfavorable attention there, offending their Catholic neighbors; in Portugal they had been forced to be Maranos (pseudo-Christians). In 1656 a special burial-lot on the outskirts of the town was presented to the New York Jews, who had arrived in that city in 1654. In 1677 the community at Newport, R. I., where Jews had settled in 1657, consecrated a Jewish cemetery. By 1695 the New York colony had dedicated the first synagogue on the continent of North America, in Beaver street, New York. The chaplain to the English garrison (Rev. John Miller) describes a visit he paid to it in that year (see Daly, p. 27). In 1710 Abraham de Lucena, minister of the New York congregation, petitioned Governor Hunter for

Orthodoxy.

exemption from certain civil and military duties by reason of his sacred office as rabbi and ḥazan (synagogue-reader), stating that the ministerial functions of his predecessors had secured for them the like immunity. Even as late as 1782, violations of the rabbinical laws were matters for inquisition at the hands of the congregational authorities, as, for instance, shaving on Sabbath ("Publ. Am. Jew. Hist. Soc." i. 18). Kalm, the Swedish traveler (quoted at length by Daly, p. 50, note), speaks of the strict observance by New York Jews of the Sabbath and dietary laws, and notes the covered heads at worship, the use of the *ṭallit*, and the seclusion of women-worshipers at the synagogue in New York in 1748.

Nor were contemporary settlers of German origin any different then in the matter of Orthodox observance. Such cities as New York, Newport, Savannah (1733), Charleston (1750), and Philadelphia (some time before 1781), were sought by Orthodox Sephardic Jews, as the following names of settlers testify: Abrasias, Andrade, Da Costa, De Lucena, Gomez, Hendricks (Amsterdam), Henriques, Medina, Nunez or Nones, Pacheco, Rodriguez, Seixas, in New York; and Abendana, Cardozo, Da Costa, De Lucena, Gomez, Madeira, Marache, Sasportas, and Seixas, in Philadelphia. But the cities of Pennsylvania—Philadelphia, Lancaster, etc.—as well as Richmond, Va., were the favored dwelling-places for those of German extraction, to judge from such names of early residents as Arnold Bamberger (1726), Gratz, Barnitza, Etting, Frank, possibly also Marks, Josephson, Lyon, Philipps, Simon, all in Philadelphia; and Marx, Rehine, Elkan, Darmstadt, Woolf, Kursheedt, and Bloch, all in Richmond (from 1791). Of Michael Hart (Lancaster, 1776) his daughter writes (Markens, p. 83): "He was strictly observant of Sabbaths and festivals; the dietary laws were adhered to in his home, although he was compelled to be his own *shoḥeṭ* (slaughterer)." The German Jews were probably still in great minority; for divine services were everywhere conducted according to the Orthodox Sephardic ritual in its ancient forms, amplified and elaborated by certain abuses that had encrusted themselves upon it. Anticipating events, it may be here mentioned that the first synagogue founded by Orthodox Germans in Philadelphia, was extant in 1801; in New York, that of B'nai Jeshurun was founded in 1825; followed by Anshe Chesed in 1830 (consolidated in 1874 with Temple Beth-el). In 1840 a Polish congregation, Sha'are Zedek, was established there; in 1841 the Sha'are Hashomayim, which consolidated in 1899 with the Ahawath Chesed. (Concerning the foundation of synagogues in other states, see Markens, *l.c.*, pp. 78–125.) The first English translation of the Sephardic service was published in New York in 1766. See Lady Magnus, "Outlines of Jewish History," p. 347. For Isaac Leeser's edition, see list of publications at the end of this article.

First Reform of Sephardic Origin.

The first notes of dissatisfaction with the existing routine of a lengthy and cumbersome liturgy—and thus the first utterances of Reform—were sounded in the Orthodox Sephardic congregation of Charleston, S. C., and by a Sephardi of the Sephardim. Isaac Harby (of the Morocco family Arbib), born at Charleston in 1788, was a noted publicist and dramatist and the first president of the Reformed Society of Israelites in that city. In his first annual address (Nov. 21, 1825) he expatiates on the principles and aims of the society—which were "to promote true principles of Judaism according to its purity and spirit"—and formulates the demands then recently made in a petition to the congregational authorities for the improvement of the liturgy. These consisted of the addition to the regular service of English versions of the principal parts thereof; "the abolition of rabbinical interpolations [extracts from rabbinical writings] and of useless repetitions; and to read or chant with solemnity." Further, the delivery by the ḥazan of a weekly lecture or discourse upon the section read from the Law was asked for; the same to be "explanatory of its meaning, edifying to the young, gratifying to the old, and instructive to every age and class of society." Other demands were made for the abolition of profane offerings, "and not to insult us with bad Spanish or Portuguese"; these demands having reference to the practise of making money donations in public at certain stages of the worship, which "offerings" were announced aloud in a mongrel Spanish-Portuguese dialect, replete with linguistic and grammatical errors. The society numbered nearly fifty members: but its efforts did not meet with the approval of the congregational authorities; and in 1828 Harby removed to New York, where he died the same year.

First Reform Congregation in America.

Those remaining, however, rented a hall and conducted their worship according to their own modernized ideas; and thus the first conservatively Reform congregation in America, with David Nunez Carvalho as honorary reader, was formed by those of Sephardic stock, the lineal descendants of the rationalizing and cultured Sephardim of ancient days.

It may always be a moot question how far these innovations—which were then held to strike at the fundamental principles of Judaism—were influenced or suggested by the antecedent Reform movement in Germany, where, ten years earlier, Jacobson had originated a similar introduction of the vernacular into the Hebrew liturgy, and of the vernacular sermon and hymns (at Seesen, Berlin, and Hamburg). The probabilities seem greatly in favor of the supposition that the Charleston movement was independent, if for no other reason than that the aristocratic Sephardim of that community would have felt it derogatory merely to adopt what Ashkenazim (Germans and Poles) had inaugurated: such was the feeling existent in religious as well as social matters between these two great bodies of Jews. Thus inaugurated, this conservative reform, aiming at the esthetic and intelligent development of divine service, although perhaps not immediately successful, showed in the sequence of events that it had struck lasting root; for when, in 1840, a new synagogue was built by the congregation, then under the guidance of Rev. Gustavus Posnanski (of German extraction), who had been minister since 1835, an organ and choir were introduced, together with a prayer-ritual modified after the Hamburg prayer-book. This led to the secession of the Orthodox minority, and to the formation by them of a separate congregation; which schism continued until reconsolidation took place in 1866. The Charleston movement toward a conservative reform, thus inaugurated, gradually lost force, owing probably to the complete lack of theologically equipped leaders. It did not appear again with any prominence for three or four decades, when, under the name of Conservatives, various important congregations—hitherto Orthodox—adopted some of the features of Reform (introduction of the organ, family pews, and an abbreviated liturgy). Among these congregations were Bnai Jeshurun (Henry S. Jacobs, minister) and Shaaray Tefilla (F. de Sola Mendes, minister), both in New York, the former in 1876, the latter in 1878.

Foreign-Born Rabbis.

But although the Charleston movement thus subsided for an interval, the opportunity had offered meanwhile for the interweaving on a larger scale of the third strand in the fabric of American Judaism, that of the more radical, more rationalistic, scholarly German Reform. In 1843 fifteen gentlemen in New York, of German extraction, having constituted a "Cultus Verein," organized the Emanu-El Society, "to introduce an improved form of divine service." They were in the main the same who were influential in founding the Order of B'ne B'rith. By 1845 their numbers had increased to 33; holding service in a private dwelling at the corner of Grand and Clinton streets, with Leo Merzbacher (born at Fürth, 1809; died, New York, 1856) as their rabbi and G. M. Cohen as ḥazan. About the same time, or possibly a little before, the Har Sinai Reform congregation was formed in Baltimore, with the adoption of the Hamburg Temple ritual ("Sinai," i. 199); and was incorporated Nov. 1, 1843. But for a considerable period Reform made little headway. The representative leaders of the Orthodox wing, who strenuously opposed all innovations, were, in the order of their arrival in America, Isaac Leeser, conspicuous for his literary activity (born in Westphalia, 1806; merchant and teacher in Richmond, Va., 1824; minister in Philadelphia, 1830; died there 1868); Samuel M. Isaacs (born in Holland, 1804; installed at New York, 1839; died there, 1878); Morris J. Raphall (born at Stockholm, 1797; installed at Birmingham, England, 1841, New York 1849; died, 1868), the latter two both active in New York; Abraham de Sola (born at London, 1825; installed at Montreal, 1847; died there, 1882); and Sabato Morais (born at Leghorn, 1823; installed at Philadelphia, 1851; died there, 1897).

On the other side, in addition to Dr. Merzbacher, the representatives of the more strenuous and, speaking generally, more scholarly German Reform movement were: Max Lilienthal (born in Bavaria, 1815; installed at New York 1844, at Cincinnati 1855, died there, 1882); Isaac M. Wise (born in Bohemia, 1819; installed at Albany 1846, Cincinnati 1854; died there, 1900); Isidore Kalish (born in Prussia, 1816; installed at Cleveland 1850, at Newark 1870; died there, 1886); James K. Gutheim (born in Prussia, 1817; installed at Cincinnati 1845, at New York 1866, at New Orleans 1868; died there, 1886); David Einhorn (born in Bavaria, 1819; installed at Pesth 1848, at Baltimore 1855, at New York 1866; died there, 1879); Samuel Adler (born at Worms, 1810; installed at Alzey 1844, at New York 1856; died there, 1891); B. Felsenthal (born in Bavaria, 1822; installed at Chicago 1854); and Liebman Adler, of a more conservative cast (born at Weimar, 1812; installed at Detroit 1855, at Chicago 1861; died there, 1892). These leaders avowedly belonged to the radical German Reform school, which, not content with such minor innovations in public worship as the Charleston congregation had inaugurated, demanded an adjustment to modern times and circumstances of the professed principles of Judaism, not of its forms merely.

The movement was of slow growth; for opposition to it was active, and feeling ran high. Before tracing the history of its final development, the successive arrivals in America of many destined to take part in the formative process must be noted. In the sixties came Samuel Hirsch (born in Rhenish-Prussia, 1815, officiated in Birkenfeld 1842, in Budapest 1852, in Philadelphia 1866; died, 1889); Benjamin Szold (born in Hungary, 1830; officiated at Baltimore 1860); and Marcus M. Jastrow (born at Rogasen, 1829; officiated at Warsaw 1857, at Worms 1863, Philadelphia 1866), both belonging to the more conservative wing of the Reform party, as did also Adolf Hübsch (born in Hungary, 1830; officiated at Prague 1861, at New York 1866; died there in 1884). Next in order of arrival in America were K. Kohler (born in Bavaria, 1843; officiated at Detroit 1869, at Chicago 1871, at New York 1879); Gustav Gottheil (born in Pinne, 1827; officiated at Manchester, England, 1860, and at New York 1873); and Alexander Kohut (born in Hungary, 1837; officiated at Stuhlweissenberg 1867, at Grosswardein 1875, and at New York 1884; died 1894), editor of the "Aruch Completum." To these must be added, as an exponent of the most radical features of Reform, such as the worship on Sunday in lieu of Saturday, Emil G. Hirsch (born in Luxemburg, 1851; officiated at Baltimore, Louisville and Chicago); and possibly as initiating a movement akin to certain sides of the Reform Judaism may be mentioned Felix Adler (born 1850), professor of Hebrew at Cornell University, and founder of the Society for Ethical Culture, New York.

Native Preachers.

A drawback to the usefulness of the older school of Reform, profound scholars though many of its members were, was felt to exist in the impossibility for those of German birth to acquire such complete mastery over the spoken English tongue as the pulpit demands. Many of them, indeed, continued to preach in German; but the use of English in the pulpit was much advanced by the foundation, through the indefatigable organizing power of I. M. Wise, first of the Union of American Hebrew Congregations in 1873, and next of the Hebrew Union College in Cincinnati (October, 1875) as the chief aim and purpose of that organization. The union began to make itself felt at once in American Judaism by the graduation annually since 1883 of native English-speaking rabbis, all of whom—so great was the dearth of native preachers—at once found positions. Up to the present (1901) over seventy have been graduated, the most prominent of whom are too conspicuous in the public eye to need individual mention here. Previous attempts at a theological seminary had been made, unsuccessfully, with "Zion College" at Cincinnati in 1855, and with "Maimonides College" at Philadelphia in 1867.

Rabbinical Conferences.

Such coherent shape as this German Reform Judaism of America possesses was given to it only slowly, and mainly through the agency of certain conferences of rabbis, which, in emulation of those held in Germany in the forties (Brunswick, 1844; Frankfort-on-the-Main, 1845), were directed to this task. At a conference held at Cleveland, O., in October, 1855, Wise, Lilienthal, Leeser, Cohn, and others were the dominant spirits; and a platform was promulgated so sweeping in its conservatism as to arouse the vigorous protest of the reformers. After stating that all Israelites agreed upon the divine origin of the Bible, it proceeded to declare the Talmud to be the sole legal and obligatory commentary on the Bible. Against this corollary (see "Sinai," 1855, i. 29) Einhorn protested most vigorously, as did also the New York Emanu-El congregation ("Sinai," *l.c.*); and their dissent was applauded by Leopold Stein and Ludwig Philipson in Germany. Nothing tangible was done, however, until 1869, when, in an appeal to their "theologically equipped colleagues" (published in the New York "Jewish Times," June 1, 1869), Einhorn and

Adler issued a call for another conference to meet in Philadelphia in November of that year, at which, mainly through Einhorn, the following principles of Reform Judaism were enunciated:

A.

I. Israel's Messianic goal is not the restoration of a Jewish state and its seclusion from other nations, but the union of all peoples in the knowledge of the One Supreme God, the unification of all mankind, and their elevation to purity and holiness.

II. The destruction of Israel's independence is not to be considered as the punishment for Israel's sinfulness, but as the fulfilment of the divine purpose in sending Israel forth into the world upon its priestly mission, to lead men to a correct knowledge of God and to the performance of His will.

III. The Aaronic priesthood and the sacrificial services in the Temple were but preparatory and temporary steps to the better fitting of Israel for this world-wide task. They have therefore disappeared now forever; and all references to them in our prayers should be in the way of historical mention only.

IV. The belief in a resurrection of the body has no religious foundation in Judaism: the belief in the immortality of the soul is the proper formulation for our belief in this connection.

V. The employment in worship of the Hebrew language, in which the priceless treasures of divine revelation have been preserved and the immortal monuments of a literature dominating all civilization have been handed down, must be regulated by the knowledge or ignorance of that language by the people for whom the ritual is arranged.

B.

The male child of a Jewish mother is by the fact of its birth, just as much as the female child, a member of the Jewish community, even without circumcision.

In addition, the subjects of marriage and divorce were discussed; the law of the land was recognized in such matters as the paramount authority, and various modifications in keeping with the age were promulgated.

Questions not fully discussed at the conference were postponed to another convention to be held the following year at Cincinnati. This projected conference did not take place, however; but in June, 1871, a convention was held there at which certain ill-considered utterances about revelation and a personal God were made, which provoked an indignant protest by Einhorn and eighteen other Reform rabbis (see Conferences). No other Reform conferences of note took place until November, 1885, when at Pittsburg, in obedience to a call issued by Kohler, another attempt was made to formulate principles and to reconcile differences. The following is an abstract of the Pittsburg resolutions:

Art. 1 declares that Judaism conveys the highest conception of God and of His relation to man; that God is the Creator and Ruler of the World, Father and Educator of the human race.

Art. 2 treasures the Holy Scriptures as the record of Divine Revelation, and of the consecration of the Jewish people as the missionaries of the One God. In composition and literary arrangement, the Scriptures are only the work of men, with the unavoidable limitations of their age.

Art. 3 welcomes the results of natural science as the best helps to the understanding of the working of Divine Love in the world, the Bible serving as guide to illustrate the Divine Power working within us.

Art. 4 regards the Mosaic laws as intended for the training of the Jews of Palestine in their former surroundings; that only the moral laws are divine; and that all social, political, and priestly statutes, inconsistent with our modern habits and views, are to be rejected.

Art. 5 declares that the Mosaic-rabbinical laws on diet, purity, and dress fail to imbue modern Jews with the spirit of priestly holiness; and that their observance to-day would obstruct rather than enhance moral and spiritual elevation.

Art. 6 proclaims Israel's Messianic hope to be the hope for the establishment of the authority of peace, truth, justice, and love among all men. No return to Palestine is expected, nor the reinstitution there of a Jewish state, or of a worship conducted by descendants of Aaron.

Art. 7 declares Judaism to be an ever-growing, progressive, and rational religion of modern civilization, and asserts the necessity of preserving identity with the great past of the Jewish nation.

Art. 8 hails the efforts made by various religious denominations toward removing the barriers separating sect from sect.

Art. 9 declares it to be the duty of Jews to spread the knowledge of their religious truths and mission among Jews and Gentiles.

Art. 10 declares the present agitated state of Judaism to be a period of transition from a blind belief in authority and exclusion to a rational and humanitarian conception of religion; and that the masses, therefore, should be enlightened as to the history and mission of the Jewish people, and their social and spiritual condition elevated through press, pulpit, and school.

The declarations of the Pittsburg conference, while to a great extent acceptable to all shades of Judaism, contained, nevertheless, certain planks that gave dire offense to the more Orthodox—notably to those declaring against the hope for the restoration of Palestine as a Jewish home, and against the dietary laws, etc. Various pronouncements at the conference in favor of Sunday services and discussions arising from motions favoring the admission of proselytes without circumcision evoked a heated agitation, which eventually led to the foundation (May 9, 1886) of the Orthodox Jewish Theological Seminary in New York, the main moving spirit in which was Morais, who was its director until his death.

One of the first cares of the Reform movement was naturally for an improvement in the traditional prayer-ritual. Moderate changes, as already shown, had been advocated by the Charleston movement, and also in the various prayer-books successively put forth by Szold and Jastrow, by Wise in his "Minhag America," by Hübsch, and by others; but the most radical—embodying principles afterward formulated by the Philadelphia conference—was that of Einhorn, "'Olat ha-Tamid" (The Perpetual Offering), published 1856, with German translation; edited in English by E. G. Hirsch in 1896.

The Union Prayer-Book.

Good work in the line of harmonizing the various independent rituals that had sprung up in all the decades of attempted ritual reform was done by the Central Conference of American rabbis (organized in Detroit, 1889; Isaac M. Wise, first president) in producing the "Union Prayer-book," which, to a very large extent, was founded on the Einhorn book (1894–95). Laboring under certain imperfections of literary style and a rather vague expression of Reform ideas, it is nevertheless, in point of practical utility, a considerable improvement over its predecessors, and has accordingly been adopted in the majority of Reform and even Conservative congregations in America—contributing thus to the great desideratum of a uniformity of service all over the United States. A "Union Hymnal," published by the same conference in 1897, exhibits the weak features of the prayer-book to an even greater degree—a proposed new edition will probably remove the latter. Unification of Sunday-school instruction has also been a department in which the Central Conference has worked most acceptably (the Hebrew Sabbath-School Union being founded in 1886 with Rabbi David Philipson, of Cincinnati, as president). For the educational development in American Judaism, see Sabbath-school and Confirmation.

The distinctive tendency of progressive American Judaism has thus been toward a scholarly and earnest development from the Ancient or Orthodox phase, in the light of the circumstances and demands created by the new sphere and the modern age. As concerns its future course in the United States, it seems destined by its numbers and its vigor to be a prominent factor in the development of the Judaism of the world. Any future addition of qualifying elements can come only from the Orthodox side of European Jewry; that is, from the oppressed districts of eastern Europe. Since 1882, these have been arriving in large numbers throughout the United States. But possessed of learning as well as intelligence, such elements will in all probability, after a generation or two in their new surroundings, conform themselves to the mean between extreme

Future Elements and Problems.

Orientalism and extreme Reform. It is to this mean that American Judaism as a whole is tending. Experience teaches that Oriental orthodoxy in a free country does not long successfully withstand the rationalizing influence of modern culture. It is true, however, that the principles of Reform Judaism have been frequently misunderstood by the masses and misapplied by incompetent leaders, with detrimental results. The error of disproportionate demolition, as well as the evil of restlessness, resulting in irreverence for things once held sacred, are beginning to be perceived and deplored. Nevertheless, fanatical hostilities between leaders of religious thought are no longer known, each side having arrived at the conclusion that in an interchange of ideas lies true wisdom. The restoration of Sabbath sanctity, the systematic education of the young, public worship well ordered and in the vernacular—these are the problems in which both sides are to-day joining hands for common effort. In connection with the last-named field, the efforts of the National Council of Jewish Women—formed in Chicago in 1893—are noteworthy. Remarkable also have been the attempts to lend a religious tinge to the common leisure-day (Sunday) by holding worship thereon in various Reform temples and the endeavors of the more conservative to similarly provide religious edification for those engrossed in commerce on the seventh day by holding special services late on Friday evenings. See Sunday Services.

A Sabbath Observance League was founded in New York in 1868, but it accomplished little. Resuscitated under various auspices from time to time, results are not even yet tangible; but the growing disposition in large cities to observe Saturday as a holiday in the commercial world, together with the dawning perception that the reputable Christian respects the Jew in direct proportion as, other things considered, he respects his ancestral religion, may yet achieve what formal attempts have failed to accomplish. While the rite of circumcision was violently denounced as barbarous by the early Reform rabbis of radical stripe (see L. Zunz on "Circumcision," Frankfort, 1844; also S. Holdheim, Schwerin and Berlin, 1844; Abraham Geiger, "Gesammelte Werke," v. 181, 202, and Einhorn, "Sinai," ii. 699, iii. 796), the tendency is now to listen to what medical science teaches of the prophylactic value of the rite from moral, mental, and sanitary standpoints (Bryant, "Phimosis" in "The Practice of Surgery," pp. 632, 708; Sayre, "Orthopedic Surgery," 1876; and T. Gaillard Thomas, "The Higher Functions of Medicine," pp. 7-10); and while to some extent not conforming to the rite, Reform is no longer violently antagonistic. Regarding the belief in the restoration of Israel to Palestine—so stoutly disavowed by earlier reform—see the article Zionism.

Orders and Associations.

On the practical side any account of American Judaism would be incomplete without reference to the orders peculiar to it (see Orders). Perhaps the most potent agencies, in point of the greatest good to the greatest number in the educational field, are institutions such as the Jewish Trade Schools (New York Technical Institute, 1883); the Baron de Hirsch Trade School (founded in New York, 1890; enlarged, 1899); the Woodbine (N. J.) Agricultural School (founded 1894 by the Baron de Hirsch Fund); and the National Farm School at Doylestown, Pa. (founded 1896 by Rabbi Joseph Krauskopf of Philadelphia). The practical work of all of these is leavened by Jewish religious instruction. Young Men's Hebrew Associations exist in many cities. The parent association—and by much the most conspicuous of them—is that in New York (founded 1874), which of late (1901) has exhibited renewed vitality and vigor. Similar work on a very large scale has been for years accomplished in the lower portion of the city by the New York Educational Alliance (founded 1889), in a building erected by communal effort, but placed upon a permanent endowment footing by the wise munificence of Baron de Hirsch. All these institutions, to which may be added the benevolent "Sisterhoods" organized in the congregations for personal effort in philanthropic work (first suggested by Dr. Gustav Gottheil, Feb. 3, 1889), are destined to have an important influence in Americanizing a large number of the youth (of both sexes) born in the United States of European parentage, whose religious inclinations, on attaining adult age, are toward the mean of American Judaism, rather than toward the extremes of either the Oriental or the ultra-Reform phases.

In point of literary activity, the productiveness of American Judaism has not been hitherto energetic. In addition to a very large number of periodicals, weekly and monthly (see Periodicals), the purposes of enlightenment have been served by the various successive publication societies (see American Jewish Publication Society and Jewish Publication Society of America). The following is a list of works in various departments of Judaism (theoretical and practical), published in the United States:

Bible.—I. Leeser, "Jewish Family Bible," 1853; A. de Sola, "Behemoth Hatemeoth" (Unclean Animals), 1848; *idem*, "Sanitary Institutions of the Hebrews," 1860; I. M. Wise, "Pronaos to Holy Writ"; M. Flügel, "Spirit of Biblical Legislation"; I. Kalish, "Guide for Rational Inquiries into Biblical Writings"; B. Szold, "The Book of Job, with a New Commentary" (Hebrew), 1886; M. Heilprin, "Historical Poetry of the Ancient Hebrews, Translated and Critically Examined," 1879; H. Berkowitz, "The Open Bible," 1896; A. B. Ehrlich, "Miḳra ki-Pheschuto" (critical notes in Hebrew on the Bible), 1899-1900.

Talmud.—I. Kalish, "A Sketch of the Talmud"; A. Hahn, "Rabbinical Dialectics," 1879; M. Cordial Relations with Christians.

Judaism in the United States has been most fortunate in securing testimony of esteem from political authorities and from representatives of the Christian faith, to a degree unheard of—and perhaps impossible—in Europe. The highest legislative body in the land, the national Congress in Washington, has repeatedly invited Jewish ministers to open its public sessions with prayer; the earliest instance in the Senate was afforded by M. J. Raphall, Feb. 1, 1860, followed, among others, by Abraham de Sola, Jan. 9, 1872; L. Stern, Aug. 12, 1876; H. Pereira Mendes, 1884; J. Silverman, 1892. Similarly the House of Representatives there was opened by M. Jastrow in 1869; E. G. Hirsch, March, 1892; E. N. Calisch, April 7, 1892, and I. M. Wise, 1892. Of the numerous state legislatures, New York has invited Max Schlesinger of Albany (repeatedly since 1867); Virginia, E. N. Calisch (frequently since 1891); Alabama, Oscar J. Cohen of Mobile; and New Jersey, N. Rosenau, 1901. Isaac L. Leucht was honored in the same way by the Constitutional Convention of the state of Louisiana; and the Republican National Convention at St. Louis, in 1896, made Samuel Sale one of its chaplains.

Nor has this cordial recognition of Judaism as a church been confined to non-religious bodies: Jewish ministers in America have been so frequently invited to address Christian audiences in the churches of the latter that the incident no longer attracts special attention. The earliest steps in this direction were taken by M. Lilienthal and I. M. Wise of Cincinnati, who repeatedly preached in Christian churches; while among those who have accepted similar invitations in Unitarian, Universalist, Lutheran, and Presbyterian churches have been J. Krauskopf, in Philadelphia, Kansas City, Des Moines, Cheyenne, also in Huntsville, Ala.; I. Aaron, in Buffalo, N. Y., and Hamilton, Ont.; H. J. Messing, in Hannibal, Mo., 1897; L. Stern, in Washington, D. C., 1899; I. L. Leucht and Max Heller in New Orleans, La.; S. Hecht, in Milwaukee, Wis.; S. Sale, in Baltimore, Md.; A. Guttman, in Syracuse, N. Y., 1899; R. Lasker, repeatedly at summer services in Winthrop, Mass.; W. S. Friedman, for ten successive Sundays in Denver, Col.; Emil G. Hirsch, very frequently in Chicago; G. Gottheil, in New York and Brooklyn; F. de Sola Mendes, at the Talmage "Jubilee" in Brooklyn; M. J. Gries, in Cleveland, O., and Chattanooga, Tenn.; L. Mayer, in Pittsburg; Joseph Leucht, Newark, N. J.; H. Berkowitz, First Unity Church of Philadelphia, also repeatedly in Methodist and Unitarian churches at Kansas City; E. N. Calisch, Baptist Church, Peoria; M. Schlesinger and Alexander Lyons, Congregational Church, Albany, N. Y.; O. J. Cohen, Methodist Church, Dallas, Tex.; and Meldola de Sola, at St. George's Church, Montreal, 1886 (lecture on the Jewish dietary laws). At the Parliament of Religions at Chicago in 1893 Emil G. Hirsch was one of the leaders in speech and action; while as recently as 1900, Jewish ministers were welcomed to prominent participation in the New York State Conference of Religions, both in preparing papers for the same (H. Berkowitz, M. H. Harris, R. Grossman) and in compiling a union ritual for the use of the conference (G. Gottheil).

Christian congregations have frequently worshiped in Jewish temples, as, for instance, St. George's Episcopal in the United Hebrew Congregations' Temple at St. Louis, 1888; several Presbyterian congregations and a Unitarian congregation in Pittsburg at the Jewish temple there, 1885, etc.; the First Baptist Church of Newark, N. J., at the local temple in 1889. In October, 1895, Miss Florence Buck, of the Unity Church, Cleveland, O., preached in the temple of that city, and vice versa Jewish congregations were offered the use of churches for their regular divine service on Sabbath and holy days. So, for instance, the Sinai congregation in Chicago, after the great fire had destroyed its temple in 1871, assembled for a long time in a Congregational church for regular worship.

F. DE S. M.

AMERICAN HEBREW, THE: A weekly journal, the first number of which was published in New York city, Nov. 21, 1879. It was founded chiefly through the efforts of F. de Sola Mendes, who, together with Philip Cowen, the publisher of the paper from its first number, interested several other persons in the formation of a corporation to issue the paper, which corporation was named "The American Hebrew Publishing Company." In the third number of this periodical, its policy was declared as follows: "It is not controlled by one person, nor is it inspired by one. Its editorial staff comprises men of diverse shades of opinion on ritualistic matters in Judaism, but men who are determined to combine their energies for the common cause of Judaism." At the outset of its career, "The American Hebrew" was conducted—and is to this day—by a board of editors, in which only one change has been made—that change being rendered necessary by the death of one of its members. To insure absolute impersonality in all matters pertaining to the paper, the names of the persons forming this board have never been published.

Origin and Management.

During the persecutions of the Rumanian Jews that followed the signing of the Treaty of Berlin (1878)—which treaty, it was hoped, would alleviate, rather than aggravate, the condition of the Jews of Rumania—"The American Hebrew" published a number of important letters on the subject from European writers, which led the American Jews to exercise their influence on behalf of their suffering coreligionists abroad.

The persecution of the Russian Jews that began with the enforcement throughout Russia of the May Laws in 1881 caused a large immigration of these Jews to the United States. In England and America, immigration aid associations were formed; and "The American Hebrew" assisted in the formation in New York of the "Hebrew Emigrant Aid Society," which cared for the immigrants on their arrival in the United States; though this journal was not connected in any other way with the society.

Among the leading figures in Jewish life that "The American Hebrew" has introduced to American Judaism may be named Emma Lazarus, who attained distinction as a poet. Under the management of this journal, Miss Lazarus published her "Dance of Death," a fourteenth-century tragedy, based on authentic documents placed at her disposal by Prof. Franz Delitzsch. Subsequently Miss Lazarus contributed the first poem she translated from the original Hebrew, which appeared in the issue for May 11, 1883. In "The American Hebrew" Miss Lazarus advocated industrial education for the younger generation of Russian refugees; her efforts in this direction, together with those of other earnest writers, leading ultimately to the founding of the "Hebrew Technical Institute" in New York city, which was the first institution of its kind in the United States.

Special numbers of "The American Hebrew" have been published from time to time. A noteworthy issue was that of the memorial number commemorative of the death of Emma Lazarus. This was published in December, 1887, and contained tributes in prose and verse from the pens of Browning, Whittier, Warner, Stedman, Hay, Burroughs, Dana, Eggleston, Boyesen, Maurice Thompson, and Savage.

Three years later (1890), "The American Hebrew" published a unique religio-literary symposium, entitled "A Consensus on Prejudice." Among the contributors to this number were such prominent educators as President James McCosh of Princeton University, President Charles W. Eliot of Harvard University, and Prof. Crawford H. Toy. The Christian Church was represented by Bishops Potter, Littlejohn, and Coxe, and Doctors Vincent, Dix, Crosby, Chadwick, Newton, Buckley, Hale, and Gladden. Literary men also contributed to this number; and among the leading ones were Holmes, Curtis, Burroughs, Howells, Hay, and Higginson. Zebulon B. Vance, Robert G. Ingersoll, and many others represented the public men. These persons all gave their views on the causes of the existing prejudice against the Jews, and suggested means for its dissipation. Among the more important literary contributions published in the columns of "The American Hebrew" must be instanced Max J. Kohler's edition of Judge Daly's work on the "Settlement of the Jews in America." There, too, many important discussions bearing on the development of Judaism in America have been carried on.

Religio-Literary Symposium.

Since its publication "The American Hebrew" has absorbed several Jewish periodicals, among which have been "The Jewish Chronicle" of Baltimore, Md., in 1880; "Jewish Tidings" of Rochester, N. Y., in 1895; "The Jewish Reformer," a weekly journal conducted for a time by Kaufmann Kohler, I. S. Moses, and Emil G. Hirsch, in 1886.

Active in Matters of Public Interest.

Among other matters of public interest in which "The American Hebrew" has taken an important part are the establishment in New York city of the Jewish Theological Seminary, and the dispatch, in 1900, of a special commissioner (David Blaustein) to visit Rumania for the purpose of ascertaining the condition of the Rumanian Jews. Mr. Blaustein contributed a series of comprehensive reports on the subject of his investigations; and in them he also discussed the question of emigration, which had then already begun. These reports appeared in the October and November issues of "The American Hebrew" for 1900.

Editorially, "The American Hebrew" stands for conservatism in Judaism. Nevertheless, the columns of this journal are ever open to the discussion of views with which it can in no way accord, but which may be of interest to its readers. Nearly all the prominent Jewish writers and communal workers in the United States have been contributors to its pages. "The American Hebrew" has always avoided the publication of purely private or social news, thus resisting an almost universal tendency among modern American newspapers. F. H. V.

AMERICAN ISRAELITE, THE: A weekly journal established in Cincinnati, O., in July, 1854, by Isaac Mayer Wise under the title of "The Israelite." It had two objects: (1) to propagate the principles of Reform Judaism; and (2) to keep the Israelites that lived—often singly or in communities of two or three families, in the numerous small towns of the United States—in touch with Jewish affairs, thus contributing to save them to Judaism. "The American Israelite" has always advocated progressive—that is, Reform—Judaism, while planting itself on the platform of Americanism. It has constantly maintained that American Jews are differentiated from American Christians in religion only, not in nationality, and that there is no such thing to-day as a Jewish nation.

For some time Edward Bloch and Herman M. Moos were associated with Dr. Wise as publishers. On Jan. 1, 1875, Leo Wise, the eldest son of the editor, became business manager, and the editorial management gradually passed into his hands; though Dr. Wise wrote the leaders and most of the editorial paragraphs uninterruptedly up to the time of his death (March 26, 1900). Since the latter date the management has been assisted by Rabbi David Philipson of Cincinnati, as editorial writer, and by Dr. Louis Grossmann of Cincinnati, and Dr. Julius Wise of Chicago, as editorial contributors. On July 1, 1874, the title of the paper was changed to "The

American Israelite," as being more in consonance with the ideas it represented. In the West and the South this periodical has always had a wide circulation.

One of the first things that Dr. Wise learned when he undertook to extend the circulation of "The Israelite" was that there were very many Jews in the country who were not familiar with English. To reach and influence these, and to keep them from straying from Judaism altogether, he, in 1855, began the publication of "Die Deborah," printed in German. It was conducted on the same lines as "The Israelite," and had similar aims. In this work Dr. Wise had associated with him, at different times, S. Rothenberg, Max Lilienthal, Solomon H. Sonneschein, Heinrich Zirndorf, and Gotthard Deutsch. The "Deborah" was discontinued for a time at Dr. Wise's death, but has since been revived. Owing to the intimate relations of Dr. Wise with "The American Israelite," much special information about the Union of American Hebrew Congregations, the Hebrew Union College, and the various Rabbinical Conferences is contained in its pages.

As a record of the history of the Jews of America during the latter half of the nineteenth century, the files of "The American Israelite" and of the "Deborah" are of considerable value. They indicate the growth and development of Reform Judaism in America, and of its various institutions. Most of the prominent rabbis and Jewish thinkers of the United States have been among the literary contributors to both periodicals. L. Wi.

AMERICAN JEWESS, THE: A monthly (afterward quarterly) magazine printed in Chicago and New York. There were nine volumes, the first appearing in April, 1895, the last in March, 1899. The object of the magazine was to offer to the American Jewess a field for her talents, to bring the Jewish women of the United States into closer touch with each other, and to act as the official organ of Jewish women's organizations. The editor was Rosa Sonnenschein. R. K.

AMERICAN JEWISH HISTORICAL SOCIETY: A society organized at New York city, June 7, 1892, at a meeting convened by Cyrus Adler, of Washington, D. C. About forty persons were in attendance; Oscar S. Straus was chosen president, and Cyrus Adler secretary.

The objects of the society are the collection and preservation of material bearing upon the history of Jews in America. It is not sectarian but American, and welcomes all students interested in the work as part of American history. The society meets annually for the transaction of business and the reading of papers. Meetings have been held in New York, Philadelphia, Baltimore, and Washington. Nine volumes of publications had been issued. The articles of 1893–1900 cover a wide range and contain much information and many original documents never before published. Oscar S. Straus, in his presidential addresses, 1892–97, has each year dwelt upon some phase of the history of the Jews in America, and outlined work to be pursued by the members of the society. In 1899 Cyrus Adler was elected president and Oscar S. Straus honorary president. The researches of the members have established the fact that from an early date Jews participated in the social and political life of the American colonies. It is impossible to refer in detail to the subjects treated in the society's publications, but the following may serve to show the general lines on which its society's work has hitherto progressed.

J. H. Hollander and Leon Hühner have shown that in the English and Dutch colonies Jews claimed and were accorded political rights which were denied them by the home governments. Cyrus Adler, in his articles on the Inquisition in Mexico, has described the persecutions of the Holy Office in that country. Incidentally he has shown that Jews were among the early settlers there, and that a number, driven out by persecution, sought refuge in the seventeenth century, in the Philippine Islands and in England. G. A. Kohut has done a similar service for the Inquisition in South America. Max J. Kohler and A. M. Dyer have made important contributions to the history of the Jewish community of New York, as have Rev. Henry Cohen and Rev. David Philipson to that of the settlement of the Jews in Texas and Ohio respectively. Kayserling has described the colonization of the South American countries by the Jews and the early literary activity of the Jews in Brazil and Surinam. Herbert Friedenwald has portrayed the part played by the Jews in the American Revolution, and added considerably to the knowledge of the settlements in the British West Indies. H. F.

AMERICAN JEWISH PUBLICATION SOCIETY: A society formed for the dissemination of Jewish literature, and the first of its kind in the United States; founded at Philadelphia in 1845 by Isaac Leeser. The same year an auxiliary society was established at Richmond, Va. The society published, under the general title of "Jewish Miscellany," the following works: (1) "Caleb Asher," 1845; (2) "Hebrew Tales," by Hyman Hurwitz, 1845; (3) "The Prophet's Daughter," by Marion Hartog, 1846; (4) "Moses Mendelssohn," by M. Samuels, 1846; (5) "Path of Israel," part i., by J. Ennery, 1847; (6) "Days of Old," by Charlotte Elizabeth (Mrs. Tonner); "Rachel Levi," a tale; "The Jews and Their Religion," by Isaac Leeser, 1847; (7) "The Perez Family," by Grace Aguilar, 1847; (8, 9, 10) "Patriarchal Times," by Adelaide O'Keeffe, 1847; (11) "Path of Israel," part ii., by J. Ennery, 1848; (12, 13) "Spirit of Judaism," by Grace Aguilar, 1849; (14) "Path of Israel," part iii., by J. Ennery, 1849.

In 1851 the Hart Building, at the corner of Sixth and Chestnut streets, Philadelphia—in which were stored the plates and books belonging to the society—was destroyed by fire, and the society ceased to exist.

A.

AMERICAN JEWISH PUBLICATION SOCIETY: An association founded in 1873 by a number of New York Jews: Leopold Bamberger, Benjamin I. Hart, Myer Stern, Edward Morrison, Arnold Tanzer, and Louis Lewengood, with William B. Hackenberg of Philadelphia and Simon Wolf of Washington. It was at first called "The Jewish Publication Society"; but in 1874 it added the word "American" to its title. The publication committee consisted of Gustav Gottheil, Moses Mielziner, and F. de Sola Mendes, New York rabbis; Marcus Jastrow of Philadelphia, and Moritz Ellinger of New York, editor of "The Jewish Times." In 1873, as its first publication, the society issued the fourth volume of Grätz's "Geschichte der Juden," which had been translated by Rabbi James K. Gutheim of New Orleans. In 1875 two volumes were issued: (1) "Jewish Family Papers: Letters of a Missionary," by "Gustav Meinhardt" (Dr. William Herzberg), translated by F. de Sola Mendes; and (2) "Hebrew Characteristics," miscellaneous papers from the German, comprising "extracts from Jewish moralists from the eleventh to the fifteenth century," from Zunz's "Zur Geschichte und Literatur"; "Jewish Marriage in Post-Biblical Times, a Study in Archeology," by Dr. J. Perles; and "On Interment of the Dead in Post-Biblical Judaism," also by Perles; all translated by Albert H. Louis.

Device of the American Jewish Publication Society of 1873. "To the Law and to the Testimony."

The financial panic of 1873 and the ensuing commercial depression compelled the suspension of the society in 1875. See Jewish Publication Society of America. F. de S. M.

AMERICAN, SADIE: Corresponding secretary of the Council of Jewish Women; born at Chicago, March 3, 1862.

Miss American has been connected with many philanthropic movements both in the general as well as in the Jewish community. She has been a member of the executive committee of the Chicago Civic Federation since 1896; member of the executive committee of the South Central District of Charities; vice-president of the Consumers' League since 1899; director of the Cook County League of Women's Clubs since 1899; chairman of the Vacation School and Playground Committee of Women's Clubs since 1896; president of the League for Religious Fellowship, 1897 and 1898.

Miss American has been prominently identified with the Council of Jewish Women since its organization, having always been its corresponding secretary, and she was secretary to the Jewish Women's Congress in the Parliament of Religions at Chicago in 1893, out of which the Council grew. In the capacity of corresponding secretary to the Council she has spoken before various national women's organizations, and she was delegate to the National Congress of Women at London in June, 1899. She has frequently been invited to occupy pulpits, and has delivered addresses in many places on social, religious, and educational topics. Besides editing the publications of the Council of Jewish Women, she has contributed to Jewish and secular journals numerous articles on the Council and on various subjects relating to educational and charitable topics. A.

AMETHYST: A variety of quartz of a clear purple or bluish violet color, much used as a precious stone. It is generally accepted that the Amethyst held the ninth place and was in the third row among the precious gems on the breastplate of the high priest (Ex. xxviii. 19, xxxix. 12); but the derivation of the Hebrew name *aḥlamah* is unknown (see Precious Stones). G. B. L.

AMI. See Ammi.

AMI DES ISRAÉLITES, L'. See Periodicals.

AMICO (originally Amigo), JOSEPH: Learned and influential rabbi born in Tunis (?), who went to Italy after the year 1550, when Moses Provençal was chief rabbi of Mantua. In the question of the legality of the divorce granted to Samuel Venturoso in Venice, on which the opinions of the contemporaneous rabbis were divided, Joseph Amico took sides with Moses Provençal and Felice Melli. In this case, as in a similar one at Ravenna, he couched his decision in moderate terms, and continually exhorted the contending sides to prudence. In a much-debated case dealing with the levirate law that came up for decision in 1573, Joseph Amico was also asked for an opinion, and he defended the thesis that "the law of levirate takes precedence over that of release (*ḥaliẓah*)." Since neither of these Responsa bears any indication of date or place, it is difficult to say where Joseph Amico lived, but it would appear, from the earlier form of his name, (Amigo), that he was of Levantine or quasi-Spanish origin. His name occurs also in the second part of the Responsa of Moses ben Joseph di Trani and in the collection of rabbinical consultations in the possession of M. Zadoc-Kahn. In the "Shalshelet ha-Kabbalah" (64*a*) mere mention is made of a Jacob Amigo, but the exact relationship between these two men can not be determined with any degree of certainty, nor for that matter can it be decided whether there is not a misprint in the name Jacob for Joseph.

'AMIDAH. See Shemoneh 'Esreh.

AMIGO, ABRAHAM: A noted rabbi of Palestine; flourished about the middle of the seventeenth century. He was a contemporary of Moses ben Nissim Benveniste, the younger, author of the responsa, "Sefer Pene Mosheh." For his piety and learning, Amigo was highly respected by his contemporaries. He wrote "Peri Ḥadash" (New Fruit), a commentary on the subdivision Oraḥ Ḥayyim of the Shulḥan 'Aruk, from the laws of the Passover to the end. The work has been lost. Amigo was also the author of a large work, containing responsa as well as novellæ to the Talmud and the halakic literature, which came under the notice of Azulai.

Bibliography: Azulai, *Shem ha-Gedolim*, ed. Benjacob, ii. 122-138; Fünn, *Keneset Yisrael*, p. 11; Michael, *Or ha-Ḥayyim*, No. 53.

H. G. E.

AMIGO, MEIR: A Spanish Jew, who lived in the second half of the eighteenth century at Temesvar (Hungary). He was nicknamed "Re chico" (the little king) on account of his wealth, and was highly respected at the court of Maria Theresa. At Constantinople he had many connections, and was an intimate friend of Diego de Aguilar. When, through private sources, Aguilar learned of the imminent expulsion of the Jews from Bohemia, he wrote to Amigo asking the latter to go to Constantinople and bring his influence to bear in favor of his threatened coreligionists. Amigo went, and succeeded in persuading the sultan to send an envoy extraordinary—the Jew, Coronel—with an autograph letter to the empress. By this means she was induced to repeal the decree of expulsion. Judah, Isaac, Menahem, and Joseph ben Meir Amigo, other members of this family, also lived at Temesvar.

M. K.

AMILTAI (probably identical with **Amalthea**): In Greek mythology, the goat, whose horn overflowing with nature's riches has become the symbol of plenty (the cornucopia), and that nursed the infant god Zeus with her milk. This name occurs twice in ancient Jewish legend: (1) Job's daughter, Keren-happuch (Job, xlii. 14), is translated in the Septuagint "Amalthea's Horn," wherein the Hebrew words קרן הפוך are reproduced. This daughter of Job, Amalthea's Horn, plays a prominent rôle as a type of saintly beauty in the "Testament of Job"—a Jewish apocrypha (see Kohler, "Testament of Job" in "Semitic Studies in Memory of Al. Kohut," p. 288); her "unicorn-like beauty" and her "smaragd-like radiance" are dwelt on also in B. B. 16*b*. (2) The name of Abraham's mother, called Edna (the Graceful One) in the Book of Jubilees (xi. 13), is said by Rab (B. B. 91*a*) to have been Amiltai, the daughter of Karnebo, which seems to be a corrupt reproduction of Amalthea-Keren-happuch, the daughter of Job—Job's and Abraham's histories being constantly interwoven in ancient legend. Possibly the Zeus legend prompted the name, as it is narrated that the infant Abraham was miraculously nourished by milk and honey in the cave where he was hidden.

K.

AMITTAI: Father of the prophet Jonah (II Kings, xiv. 25; Jonah, i. 1). According to rabbinical sources (Yer. Suk. v. 55*a*; Gen. R. xcviii.; Yalḳ., Jonah, § 550) Amittai came from the tribe of Zebulon and lived at Zarephath. There is a tradition that the widow who sustained the prophet Elijah there (I Kings, xvii. 9–24) was Amittai's wife, and that the child whom Elijah revived was Jonah (Pirḳe R. El. xxxiii.). M. B.

AMITTAI BEN ABIDA AHIZADEK. See CARO, DAVID.

AMITTAI BEN SHEPHATIAH: A well-known liturgical poet, who flourished at Oria, Italy, in the beginning of the tenth century. The time of his activity was until recently a matter of doubt. Rabbenu Tam (died 1171) cites one of his piyutim (אשנבי שחקים; Yeb. 16*b*; Tos. *s.v.* פסוק); and Joseph ha-Kohen mentions him as one of the early poets, but without giving any further details ("'Emeḳ ha-Baka," ed. Letteris, p. 19, Cracow, 1895). According to Zunz and Landshuth, he lived after the persecutions of the first Crusade (1096). The only reliable information in regard to the personality of Amittai, however, is to be found in the "Chronicle of Ahimaaz," which states that he was the son of Shephatiah, who died toward the end of the ninth century, and the grandson of that Amittai with whom the "Chronicle" commences. Few details of his family life are given. He had a sister Kassia, who married her cousin Hasadyah; and it is said that Amittai composed a liturgical piece in honor of the wedding. He sometimes gave a public recitation of his elegies; and once, while thus officiating at a funeral, he took offense at the action of a brother of the deceased, a certain Moses, whom Kaufmann supposes to be Moses of Pavia. He was subsequently placed under the ban because of testimony which he had offered touching the morals of a woman.

Amittai was a most prolific poet. Zunz enumerates as many as twenty-four liturgical pieces written by him, among which is the *yoẓer* for a nuptial Sabbath commencing אדון מגיד מראשית אחרית. He makes use of the Midrash, and in one piyut versifies a piece of the Mekilta. At other times he has references to historical events; *e.g.*, in אהבתיך אהבת כלולה, where he mentions the forced conversion of Jewish children. In the *seliḥah* למה יי תעמוד מרחוק the date 1096 occurs; but for other than chronological reasons Zunz suspects that the verse is a later insertion. One of his seliḥot (יי יי אל רחום) still forms part of the Ne'ilah service of the Day of Atonement.

G.

'AMM, 'AMMI (עמי): A name applied to Semitic gods and found in Biblical names like Amminadab, Ammiel, Ammishaddai. The word '*amm*, '*am*, properly "kinsman" (in Arabic, "paternal uncle"), was used among the Semites as an appellation of various gods in the sense of patron, personal protector, in the same way as *ab*, "father," *aḥ*, "brother," *ḥal*, "maternal uncle," *ḥam*, "father-in-law," *dad*, "near kinsman," and the like. Traces of this use of '*am* are found in ancient proper names in many parts of the Semitic world; thus, in Babylonia (Hammu-rabi dynasty; see "Z.D.M.G." xlix. 524), Ammi-zaduga (צדק ?), Ammi-ditana. There is no sufficient reason for doubting the Babylonian origin of these names. The signification of the ending *ī* in the Ammi of these and the following compounds is uncertain: Ammi-ba'al, a Canaanite ruler (time of Ashurnasirpal; Hommel, "Geschichte Babyloniens und Assyriens," 574 *et seq.*); Hebrew 'Ammi-el (compare Abi-el, etc.), Ammi-nadab (compare Abi-nadab, etc.), Eli-am (compare Eli-ab), etc., probably also Amram, Rehoboam (Rahab-'am), Jeroboam (Yarob'am); Ammonite Ammi-nadab (time of Ashurbanipal; Delitzsch, "Paradies," 294); South-Arabian Ammi-yada', Ammi-anisa, Am-karib, and others.

There have thus far been found no certain indications that 'Am was at any time or place used as the proper name of a god (see, however, "Z.D.M.G," xlix. 525). That it should have been often and widely used in ways closely resembling the use of proper names is quite natural. It is intrinsically improbable that any of the words *ab*, *aḥ*, '*am*, *dad*, etc., should have become true proper names, and only the most direct and unmistakable evidence could establish the fact. It is obviously not permissible to conclude, as some have done, from such a passage as Gen. xix. 38, that the Hebrews believed the ancestor of the Ammonites to have borne the name Ben-Ammi, and that therefore the existence of an Ammonite god Ammi is to be assumed, whose name also appears in the name of the people (Bene Ammon). On the contrary, the Ammonite use of 'Am, 'Ammi, in proper names can not well be distinguished from the Hebrew or Arabic use, or from the exactly parallel use of the other words denoting kinship. See also AMMIEL, AMMINADAB, AMMISHADDAI.

AMMAR, DAVID B. SAMUEL: An author of Leghorn, who wrote "Tefilah le-David" (A Prayer of David) on the hundred daily benedictions (Salonica, 1777; see Steinschneider, "Cat. Bodl." col. 857; "Jew. Quart. Rev." xi. 486).

H. G. E.

AMMI, AIMI, or IMMI: The name of several amoraim. In the Babylonian Talmud the first form only is used; in the Palestinian Talmud all three forms appear promiscuously, Immi predominating, and sometimes R. Ammi is contracted into "Rabmi" or "Rabbammi" (Yer. 'Ab. Zarah, v. 45*a*, *b*). The most distinguished of these is a Palestinian amora of the third generation (third century). His native country is not named, but it is generally assumed to be Babylonia. It seems probable that the lifelong friendship existing between R. Ammi and R. Assi had its origin in ties of blood. R. Assi is identical with R. Assi (Jose) b. Nathan, and R. Ammi's full name, as given by himself, is Ammi b. Nathan (Giṭ. 44*a*); both of them, moreover, were of priestly descent (Meg. 22*a*, Ḥul. 107*b*), so that they seem to have been the sons of the same father; and as R. Assi is a native Babylonian, there is reason for assuming R. Ammi's Babylonian nativity. In his early age Ammi attended the college at Cæsarea, presided over by R. Hoshaiah I. (Yer. Shab. iii. 5*d*), and later he went to Tiberias and became the disciple of R. Johanan, at whose death he voluntarily observed the ritual period of mourning prescribed on the death of nearest relatives only (M. Ḳ. 25*b*). When he once heard that his Babylonian contemporary, R. Naḥman, had expressed himself disrespectfully of a misapplied opinion of R. Johanan, he indignantly exclaimed, "Does Naḥman think that because he is the son-in-law of the exilarch, he may speak disparagingly of R. Johanan's opinions?" (Ḥul. 124*a*). In Tiberias he became the center of a large circle of learned friends, among whom were R. Abbahu, R. Ḥanina (Ḥinena) b. Pappi, R. Isaac, and R. Samuel b. Naḥmani (M. Ḳ. 17*a*, 20*a*; Yeb. 48*b*); but the closest and most enduring friendship existed between him and R. Ḥiyya b. Abba and R. Assi (Ber. 16*a*, Yer. Pes. iii. 30*b*), both of whom were Babylonian immigrants.

Descent.

Tamar's Lawsuit.

Rector at Tiberias.

Although R. Ammi had been in Palestine long before R. Assi, they were both ordained at the same time, and received a warm greeting from the students, who sang, "Such men, such men ordain for us! Ordain for us not those who use words like 'sermis' and 'sermit,' or 'hemis' and 'tremis'" (Ket. 17*a*, Sanh. 14*a*; see the explanation of these expressions in Bacher, "Ag. Pal. Amor." ii. 145, note 1; Krauss, "Lehnwörter," ii. 276; Jastrow, "Dict." p. 477; *idem*, "Future of Talmudic Texts," p. 15), which was an allusion to the simple language used by these rabbis as contrasted with the admixtures of foreign terms employed by other teachers. These two, together with R. Ḥiyya, constituted a court of justice, the administration of which at one time endangered their liberty, if not their lives. For a certain offense they had passed a severe sentence on a woman named Tamar, whereupon she preferred charges against them before the proconsular government for interfering with the Roman courts. Fearing the consequences of this denunciation they requested R. Abbahu to exert his influence with the government in their behalf; but he had anticipated the request, and nothing more was heard of the case (Yer. Meg. iii. 74*a*). Among their Babylonian contemporaries, Ammi and Assi were known as "the Palestinian judges," or as "the distinguished priests of Palestine" (Giṭ. 59*b*, Sanh. 17*b*). On the other hand, when R. Ammi quoted a doctrine of Rab or of Samuel, he introduced it with the expression, "Our masters in Babylonia say" (Shebu. 47*a*; compare Sanh. *l.c.*). Eventually R. Ammi succeeded to the rectorate of the college at Tiberias (Ḥul. 134*b*); but that did not prevent him from attending to his judicial functions, in conjunction with Assi. Indeed, it is reported that they interrupted their studies hourly, and, rapping at the college door, announced their readiness to hear causes if required (Shab. 10*a*). They would offer their prayers in the college building, preferring for that purpose the spaces between the pillars to all the thirteen synagogues in the city (Ber. 8*a*, 30*b*). Besides filling these offices, they, together with R. Ḥiyya, acted as inspectors and, where necessary, as organizers of schools for children and for adults. One of the instructions given by Ammi to the schoolmasters was to accommodate itinerant scholars in the schoolrooms (Yer. Meg. iii. 74*a*). In connection with one of the tours of inspection, the following characteristic anecdote is related:

> They came to a place where there were neither primary schools for children nor advanced schools for adults, and requested that the guardians of the city be summoned. When the councilmen appeared before them, the rabbis exclaimed, "Are these the guardians of the city? They are the destroyers of the city!" When asked who were the guardians, they replied, "The instructors of the young and the masters of the old; for thus the Scripture says (Ps. cxxvii. 1), 'Except the Lord keep the city, the watchman waketh but in vain'" (Yer. Ḥag. i. 76*c*, Midr. Teh. on *l.c.*).

Besides their familiarity with Halakah and Haggadah, Ammi and Assi also possessed some knowledge of the sciences of their time. They prescribed remedies in cases of sickness ('Ab. Zarah, 28*a*), and studied the habits of animals (Lev. R. xix. 1, Midr. Sam. v.). Much as they valued the study of the Law, they prized pious deeds still higher. Therefore they and R. Ḥiyya did not scruple to absent themselves from college and to miss a lecture by R. Eleazar, when the interment of a stranger required their attention (Yer. Pes. iii. 30*b*); and when once a considerable sum of money was presented to the college, Ammi took possession of it in the name of the poor, among whom it was subsequently distributed (Ḥul. 134*b*). Once R. Ammi, accompanied by R. Samuel b. Naḥmani, undertook a journey to the court of Zenobia, queen of Palmyra (267–273), to intercede for Zeir b. Ḥinena, who had been seized by her orders. Zenobia refused to liberate him, remarking, "Your God is accustomed to work miracles for you," when a Saracen, bearing a sword, entered and reported, "With this sword has Bar Nazar killed his brother"; this incident saved Zeir b. Ḥinena (Yer. Ter. viii. 46*b*). On another occasion he was ready to ransom a man who had repeatedly sold himself to the Ludi (lanistæ, procurers of subjects for gladiatorial contests—Jastrow, "Dict." p. 695). He argued that although the Mishnah (Giṭ. iv. 9) exempted a Jew from the duty of ransoming a man who repeatedly sells himself to non-Israelites, still it was his duty to ransom the children (to save them from sinking into idolatry); so much the greater was this obligation in a case where violent death was imminent. Ammi's colleagues, however, convinced him that the applicant for his protection was totally unworthy of his compassion, and he finally refused to interfere (Giṭ. 46*b* *et seq.*).

R. Ammi as Exegete.

R. Ammi and R. Assi are very frequently cited in both Talmuds and in the Midrashim, and often together, either as being of the same opinion or as opposed to each other. Owing to this circumstance, the same doctrines are quoted sometimes in the name of one and sometimes in that of the other (compare Ber. 9*b*; Pes. 119*a*; Suk. 34*a*; Ta'anit, 3*a*; Suk. 44*a*; M. Ḳ. 3*b*). The same uncertainty manifests itself even where the reporter had probably received the tradition directly from one of them (Ḥul. 84*b*; Ber. 20*b*; Soṭah, 4*b*; Giṭ. 7*a*).

Following are some specimens of R. Ammi's exegetics: Commenting on Lam. iii. 41, "Let us lift up our heart with our hands unto God in the heavens," he observes, "No man's prayer is heard of heaven, unless he carry his soul in the hands which he raises in prayer." "The prayer for rain is granted only for the sake of the men of faith." In support of this remark, Ammi, by means of an exegetical substitution of synonymous Hebrew words, quotes the verse (Ps. lxxxv. 11), "When Faith springeth forth from the earth, Beneficence looketh down from heaven" (Ta'anit, 8*a*). In Moses' designation of Israel as "a stiff-necked people" (Ex. xxxiv. 9), Ammi sees not so much a reproach as a praise of its firmness in religion, even in the face of persecution: "The Jew would either live as a Jew or die on the cross" (Ex. R. xlii.). According to R. Ammi, death is the consequence of sin, and suffering the penalty of wrongdoing; the first observation he derives from the Scriptural saying (Ezek. xviii. 4), "The soul that sinneth, it shall die"; the second from Ps. lxxxix. 33, "I will visit their transgressions with the rod (of chastisement), and their iniquity with stripes" (Shab. 55*a*, Eccl. R. on v. 4).

S. M.

AMMIANUS MARCELLINUS: Roman historian; born at Antioch, Syria, about 320; died about 395. He wrote a history of Rome, from Nerva to Valens, in which the Jews are mentioned in Books XIV. ch. viii.; XXII. ch. v.; XXIII. ch. i.; XXIV. ch. iv. It is interesting to note that from the passage xxii. 5, §§ 4, 5, the legend of the "fœtor judaicus" or evil smell of the Jews which was so widely believed in during the Middle Ages, took its origin. Reinach does not share the view of Joel ("Blicke in die Religionsgeschichte," ii. 131) and Loeb ("Rev. Ét. Juives," xx. 52) that the word "fœtentium" is a mistake of a copyist for "petentium." In xxiii. 1, §§ 2, 3, we have the only pagan account of the unsuccessful attempt of the Jews under the emperor Julian to rebuild the Temple; all the other authorities being church fathers (M. Adler, in "Jew. Quart. Rev." v. 617).

Bibliography: Th. Reinach, *Textes d'Auteurs Grecs et Romains Relatifs au Judaïsme*, pp. 351-355, Paris, 1895.

H. R.—G.

AMMIEL ("El is My Kinsman," or "My Kinsman is God"; compare Eliam): A name of the following persons in the Old Testament: **1.** A Danite (Num. xiii. 12). **2.** Father of Machir, of Lodebar (II Sam. ix. 4 *et seq.*, xvii. 27). **3.** Father of David's wife, Bathsheba ("Bathshua") (I Chron. iii. 5; compare II Sam. xi. 3). **4.** A doorkeeper (I Chron. xxvi. 5). For the meaning of the element Ammi, compare names Abi-el, [A]hi-el, Eli-am, 'Ammi-baal; and see 'Amm, Ammi.

C. C. T.

AMMIHUD: 1. Father of Elishama, the chief of Ephraim in the second year after the exodus (Num. i. 10, ii. 18); appears also in the genealogical list of Ephraim (I Chron. vii. 26). **2.** Father of Shemuel, who was to represent the tribe of Simeon in the division of the land and assist Eleazar and Joshua in the work (Num. xxxiv. 20). **3.** Father of Pedahel, the representative of Naphtali under the same circumstances as the father of Shemuel (Num. xxxiv. 28). **4.** Father of Talmai, the king of Geshur, father-in-law of King David, with whom Absalom took refuge after he had killed Amnon (II Sam. xiii. 37). The variant reading here is Ammihur. **5.** Son of Omri, a Judean living in Jerusalem (I Chron. ix. 4).

G. B. L.

AMMIHUR. See Ammihud (4).

AMMINADAB ("My Kinsman Has Given Freely"; compare the names Abi-nadab, Ahi-nadab, Jeho-nadab, and Kammush-nadab. See also Schrader, "Cuneiform Inscriptions and the Old Testament," p. 281; and see 'Amm, 'Ammi): **1.** The father of Aaron's wife Elisheba (Ex. vi. 23) and of Nahshon, the "head of the tribe of Judah" (Num. i. 7, ii. 3). Also the name of certain Levites (I Chron. vi. 7, xv. 10). **2.** The name of a king of the Ammonites in the time of Ashurbanipal (Delitzsch, "Wo Lag das Paradies?" p. 294).

C. C. T.

AMMISHADDAI ("Shaddai is My Kinsman"; compare Shaddai, and the names Zurishaddai, Shedeur, and perhaps Absadai [Lidzbarski, "Handbuch der Nordsem. Epigraphik," p. 206]; also Ammi-el, Ammi-baal, etc. See 'Amm, 'Ammi): Name of the father of the Danite Ahiezer, in Num. i. 12, ii. 25, etc. Gray, "Hebrew Proper Names," pp. 194 *et seq.*, 245, pronounces the name a late and artificial formation.

C. C. T.

Derivation and Relationship.

AMMON, AMMONITES.—Biblical Data: A nation in eastern Palestine. As to their origin from Lot, compare Gen. xix. 38, in which "Ben-ammi" (son of my paternal uncle; that is, of my nearest relative) is paronomasia, not etymology. It is possible that Ammon is derived from the name of a tribal divinity.

According to the pedigree given in Gen. xix. 37–38, the Ammonites were nearly related to the Israelites and still more closely to their neighbors in the south, the Moabites. This is fully confirmed by the fact that all names of Ammonitish persons show a pure Canaanitish character. But the above passage indicates also the contempt and hatred for the Ammonites felt by the Hebrews (Deut. xxiii. 4), even to the exclusion of their progeny from the assembly of the Lord (contrast Deut. ii. 19, 37, in which the consciousness of relationship seems to be at the root of the regard shown to Ammon).

The borders of the Ammonite territory are not clearly defined in the Bible. In Judges, xi. 13, the claim of the king of Ammon, who demands of the Israelites the restoration of the land "from Arnon even unto Jabbok and unto Jordan," is mentioned only as an unjust claim (xi. 15), inasmuch as the Israelitish part of this tract had been conquered from the Amorites whom the Moabites had, in part, preceded; while in Judges, xi. 22 it is stated that the Israelites had possession "from the wilderness even unto Jordan," and that they laid a claim to territory beyond this, so as to leave no room for Ammon. Num. xxi. 24 describes the Hebrew conquest (compare Judges, xi. 19) as having reached "even unto the children of Ammon, for the border of the children of Ammon was Jazer" (read the last word, with Septuagint, as "Jazer," instead of "'az," strong, A. V.; compare Judges, xi. 32). Josh. xiii. 25, defines the frontier of the tribe of Gad as being "Jazer . . . and half the land of the children of Ammon." The latter statement can be reconciled with Num. xxi. 24 (Deut. ii. 19, 37) only by assuming that the northern part of Sihon's Amorite kingdom had formerly been Ammonite. This explains, in part, the claim mentioned above (Judges, xi. 13). According to Deut. ii. 37, the region along the river Jabbok and the cities of the hill-country formed the border-line of Israel.

In Judges, xi. 33, a portion of the land of Ammon is mentioned. It extended from Aroer to Minnith, including twenty cities, and must have been an extremely narrow strip of land, comprising only the northeastern quarter of the region called, at present, El-Belka. According to the Moabite stone, the southeastern quarter, attributed by many scholars to Ammon, could not have belonged to it; and nothing is known concerning an extension north of the Jabbok river. The village of the Ammonites (or according to the *Keri*, Ammonitess), Josh. xviii. 24, in Benjamin, does not point to former possessions west of Jordan. On the authority of Deut. ii. 20, their territory had formerly been in the possession of a mysterious nation, the Zamzummim (also called Zuzim), and the war of Chedorlaomer (Gen. xiv. 5) with these may be connected with the history of Ammon. When the Israelites invaded Canaan, they passed by the frontier of the Ammonites (Num. xxi. 24; Deut. ii. 19, 37; Josh. xiii. 25).

Ammonites and Moabites.

Ammonite Warriors in David's Army.

Sometimes a slight distinction only seems to be made between the Ammonites and their southern brothers, the Moabites. Deut. xxiii. 4, 5, for instance, states that the Ammonites and Moabites hired Balaam to curse the Israelites, while in Num. xxii. 3 *et seq.* Moab alone is mentioned. Some authorities overcome this discrepancy by the help of the emended text of Num. xxii. 5, according to which Balaam came "from the land of the children of Ammon." This is the reading of most ancient versions; the Septuagint, however, has it like the present Hebrew text: "the children of his people" ("*ammo*") (see Balaam). In Judges, iii. 13, the Ammonites appear as furnishing assistance to Eglon of Moab against Israel; but in Judges, x. 7, 8, 9, in which not only Gilead is oppressed but a victorious war is waged also west of the Jordan, Ammon alone is mentioned. The speech of Jephthah which follows, however, is clearly addressed to the Moabites as well, for he speaks of their god Chemosh (Judges, xi. 18–24). Some scholars find that these varying statements conflict (compare Deut. xxiii. 3); others conclude that the brother-nations still formed a unit. The small nation of Ammon could face Israel only in alliance with other non-Israelites (compare II Chron. xx. and Ps. lxxxiii. 7). The attack of King Nahash upon the frontier city Jabesh in Gilead was easily repulsed by Saul (I Sam. xi., xiv. 47). From II Sam. x. 2, it may be concluded that Nahash assisted David out of hatred for Saul; but his son Hanun provoked David by ill-treating his ambassadors, and brought about the defeat of the Ammonites, despite assistance from their northern neighbor (*ibid.* x. 13). Their capital Rabbah was captured (*ibid.* xii. 29), and numerous captives were taken from "all the cities of the children of Ammon." David's treatment of the captives (*ibid.* xii. 31) was not necessarily barbarous; the description may be interpreted to mean that he employed them as laborers in various public works. The Chronicler, however, takes it in the most cruel sense (I Chron. xx. 3). Yet David could not have exceeded the savagery customary in ancient Oriental warfare; the Ammonites, themselves, for instance, were exceedingly cruel (I Sam. xi. 2; Amos, i. 13). The new king, Shobi, a brother of Hanun, evidently appointed by David, kept peace, his attitude being even friendly (II Sam. xvii. 27). There were Ammonite warriors in David's army (*ibid.* 23, 27) and Solomon's chief wife, the mother of his heir, was Naamah, the Ammonitess (I Kings, xiv. 21; compare xi. 1), probably a daughter of Shobi. After this, hostilities again broke out, under Jehoshaphat (II Chron. xx.), under Jeroboam II. (Amos, i. 13) and under Jotham, who subjected the Ammonites (II Chron. xxvii. 5).

According to the Assyrian inscriptions under Baasha (Hebrew, Baʻsha), the son of Rukhubi (Rehob), they had to send auxiliaries to the powerful king Birhidri (Benhadad) of Damascus to aid him in his war against Shalmaneser II. The following kings paid tribute to the Assyrians: Sanipu (or "Sanibu" of Bit-Ammanu; "bit," house, has either the sense of "reign" or "kingdom," or is added after the analogy of "Bît-kḥumri"—house of Omri—for Israel, etc.) to Tiglath-pileser III.; Puduilu to Sennacherib and Assarhaddon; Ammi-nadbi to Assurbanipal. An Assyrian tribute-list, showing that Ammon paid one-fifth of Judah's tribute, gives evidence of the scanty extent and resources of the country (see Schrader, "K.A.T." pp. 141 *et seq.*; Delitzsch, "Paradies," p. 294; Winckler, "Geschichte Israels," p. 215).

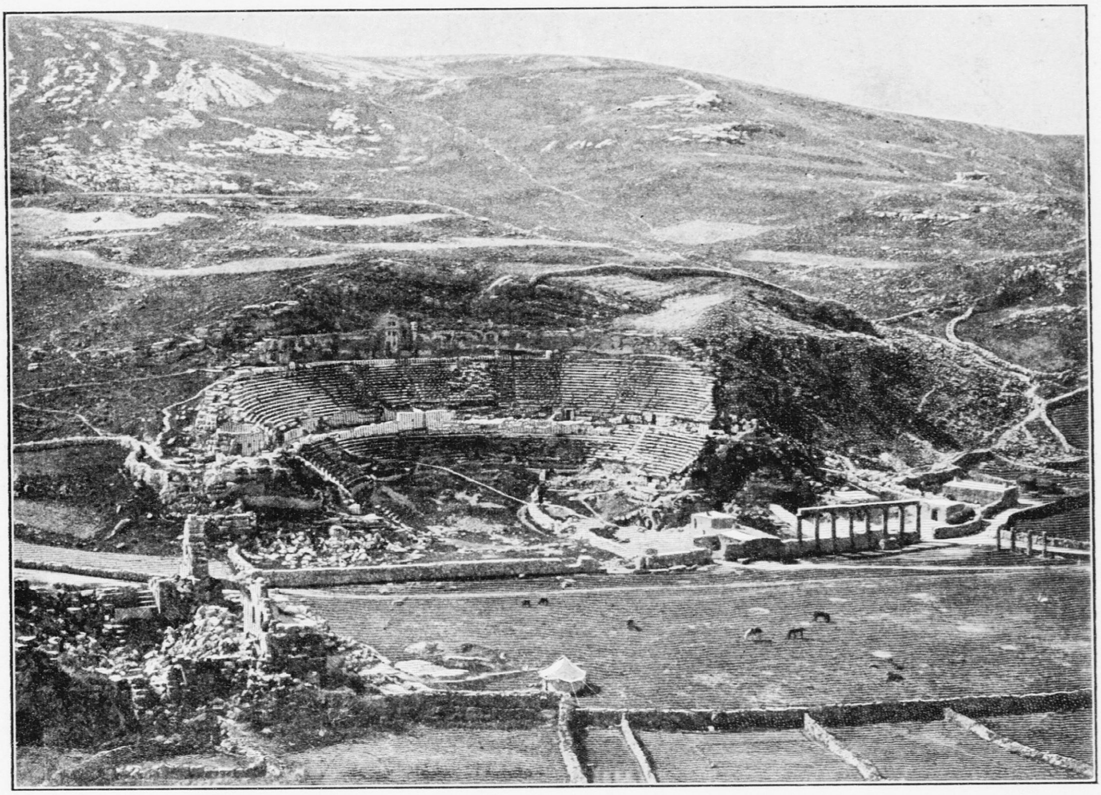
In the time of Nebuchadnezzar, the Ammonites seem to have been fickle in their political attitude. They assisted the Babylonian army against the Jews (II Kings, xxiv. 2); encroached upon the territory of Gad; and occupied Heshbon and Jazer (Jer. xlix. 1; I Macc. v. 6–8; compare Zeph. ii. 8); but the prophetic threatenings in Jer. ix. 26, xxv. 21, xxvii. 3, and Ezra, xxi. 20, point to rebellion by them against Babylonian supremacy. They received Jews fleeing before the Babylonians (Jer. xl. 11), and their king, Baalis, instigated the murder of Gedaliah, the first Babylonian governor (*ibid.* xl. 14, xli. 15). At the time of the rebuilding of Jerusalem, they were hostile to the Jews, and Tobiah, an Ammonite, incited them to hinder the work (Neh. iii. 35). But intermarriages between Jews and Ammonites were frequent (Ezra, ix. 1; I Esd. viii. 69, and elsewhere). It is stated (I Macc. v. 6) that the Ammonites under Timotheus were defeated by Judas; but it is probable that, after the exile, the term Ammonite denoted all Arabs living in the former country of Ammon and Gad. Ezek. xxv. 4–5 seems to mark the beginning of an Arab immigration, which is testified to by Neh. ii. 19, iv. 7, and is described by Josephus as completed ("Ant." xiii. 9, § 1).

Milcom Their Chief Deity.

Of the customs, religion, and constitution of the Ammonites, little is known. The frequent assumption that, living on the borders of the desert, they remained more pastoral than the Moabites and Israelites, is unfounded (Ezek. xxv. 4, II Chron. xxvii. 5); the environs of Rabba (later Philadelphia), at least, were fertile and were tilled. In regard to other cities than Rabba, see Judges, xi. 33; II Sam. xii. 31. Of their gods the name of only the chief deity, Milcom—evidently a form of Moloch—is known (I Kings, xi. 5 [LXX. 7], 33; I Kings, xi. 7; II Kings, xxiii. 13). In Jer. xlix. 1, 3, "Malcam" is to be translated by "Milcom" (the god) and not as in A. V., "their king." W. M. M.

Ammonites and Jews Intermarry.

——**In Rabbinical Literature:** The Ammonites, still numerous in the south of Palestine in the second Christian century according to Justin Martyr ("Dialogus cum Tryphone," ch. cxix.), presented a serious problem to the Pharisaic scribes because of the fact that many marriages with Ammonite and Moabite wives had taken place in the days of Nehemiah (Neh. xiii. 23). Still later, it is not improbable that when Judas Maccabeus had inflicted a crushing defeat upon the Ammonites, Jewish warriors took Ammonite women as wives, and their sons, sword in hand, claimed recognition as Jews notwithstanding the law (Deut. xxiii. 4) that "an Ammonite or a Moabite shall not enter into the congregation of the Lord." Such a condition or a similar incident is reflected in the story told in the Talmud (Yeb. 76*b*, 77*a*; Ruth R. to ii. 5) that in the days of King Saul the legitimacy of David's claim to royalty was disputed on account of his descent from Ruth, the Moabite; whereupon Ithra, the Israelite (II Sam. xvii. 25; compare I Chron. ii. 17), girt with his sword, strode like an Ishmaelite into the schoolhouse of Jesse, declaring upon the authority of Samuel, the prophet, and his bet din (court of justice), that the law excluding the Ammonite and Moabite from the Jewish congregation referred only to the men—who alone had sinned in not meeting Israel with bread and water—and not to the women. The story reflects actual conditions in pre-Talmudic times, conditions that led to the fixed rule stated in the Mishnah (Yeb. viii. 3): "Ammonite and Moabite men are excluded from the Jewish community for all time; their women are admissible."



General View of the Ruins of the Roman Theater at Ammon.
(From a photograph by Bonfils.)

The fact that Rehoboam, the son of King Solomon, was born of an Ammonite woman (I Kings, xiv. 21–31) also made it difficult to maintain the Messianic claims of the house of David; but it was adduced as an illustration of divine Providence which selected the "two doves," Ruth, the Moabite, and Naamah, the Ammonitess, for honorable distinction (B. Ḳ. 38*b*). K.

AMNON ("Steadfast"): **1.** The eldest son of David and Ahinoam, the Jezreelitess (II Sam. iii. 2). As heir presumptive to the throne he was an object of envy and dislike to Absalom. The dishonor done by Amnon to his half-sister Tamar—the full sister of Absalom (II Sam. xiii. 1 *et seq.*)—intensified these feelings and gave the younger brother a plausible justification for the murder of the offender, which was accomplished in the course of a sheepshearing feast, given by Absalom to all the king's sons (*ib.* 23–29 *et seq.*) two years after the commission of Amnon's offense. J. F. McC.

——**In Rabbinical Literature:** The sages of the Mishnah point out that Amnon's love for Tamar, his half-sister, did not arise from true affection, but from passion and lust, on which account, after having attained his desire, he immediately "hated her exceedingly." "All love which depends upon some particular thing ceases when that thing ceases; thus was the love of Amnon for Tamar" (Ab. v. 16). Amnon's love for Tamar was not, however, such a transgression as is usually supposed: for, although she was a daughter of David, her mother was a prisoner of war, who had not yet become a Jewess; consequently, Tamar also had not entered the Jewish community (Sanh. 21*a*). The incident of Amnon and Tamar was utilized by the sages as affording justification for their rule that a man must on no account remain alone in the company of a woman, not even of an unmarried one (Sanh. *l.c. et seq.*). L. G.

2. A son of Shimon, mentioned in I Chron. iv. 20. J. F. McC.

AMNON OF MAYENCE (MENTZ): Subject of a medieval legend that became very popular. It treats of R. Amnon, a wealthy and respected Jew of Mayence, whom the archbishop of Mayence, at various times, tried to convert to Christianity. On one occasion Amnon evasively asked to be given three days' time for consideration. When he failed to appear on the appointed day, the archbishop had him brought guarded into his presence. Amnon, rebuked for his failure to keep his promise, pleaded guilty, and said that his tongue should be cut out, because it had expressed a doubt as to the truth of Judaism. The archbishop, however, pronounced the sentence that Amnon's feet, which had refused to come, and his hands should be cut off. This was accordingly done.

Amnon gave orders that he be carried into the synagogue, where New-year's day was being celebrated. The reader was about to begin the Ḳedushah, when he was asked by Amnon to wait. The latter then recited the prayer called, from its initial words, "U-netanneh Toḳef," which is a description of the Day of Judgment. No sooner had he finished the prayer than he expired; and his body immediately disappeared. Three days later he appeared to R. Kalonymus in a dream, taught him the prayer, and asked him to spread it broadcast in Israel.

The oldest mention of this story seems to be found in the notes on Asheri, written by Israel of Krems or Kremsier, about 1400 (R. H. i. § 4, in the Wilna edition of the Talmud, folio 36*a*). Israel of Krems merely says: The "U-netanneh Toḳef" was written by Amnon of Mayence with reference to his own history. He gives Isaac of Vienna's work, "Or Zaru'a," as his source. The story, as given above, is found in the Maḥzor of the Roman rite for the New-year's day, published 1541. From it Gedaliah ibn Yaḥya took it; and the other historians followed him. The Maḥzor editions reprinted it; and so the story became very popular. The Russian poet S. Frug took it as the subject of an epic; and Schakschansky wove it into a drama in Judæo-German.

The story is a legend without any historical value, based on the reminiscences of the persecutions during the Crusades, and inspired by the veneration for the "U-netanneh Toḳef," which, in vivid colors, pictures the divine judgment on New-year's day.

The material of the story is taken partly from the legend of St. Emmeram of Regensburg (see Amram of Mayence), who, having been accused by Uta, daughter of Thedo, Duke of Bavaria, of being her seducer, was tied to a ladder, where his limbs were cut off, one by one. He was then brought to the castle of Aschheim, where he expired praying and blessing his murderers ("Acta Sanctorum," September series, vi. 474).

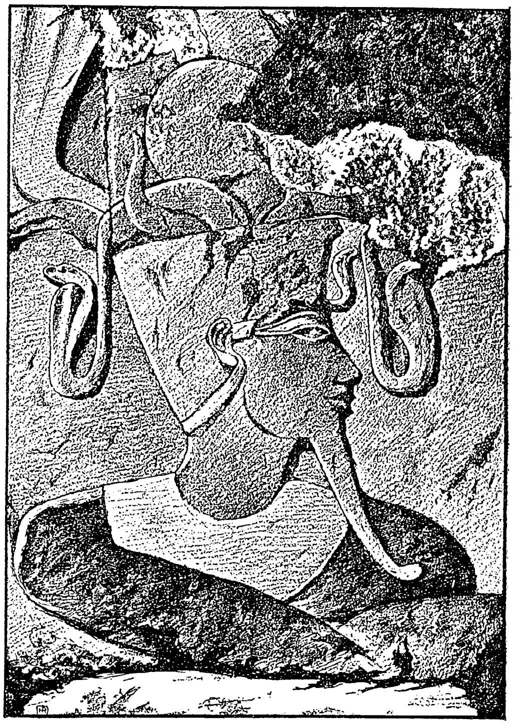
D.

AMOLO, BISHOP OF LYONS. See Amulo.

AMON (according to Brugsch, "the Hidden One"): An Egyptian god, whose name occurs in Jer. xlvi. 25 ("Amon of No," R. V.) and in Nahum, iii. 8 (No-Amon). He was originally only the local divinity of Thebes; but on the accession of the eighteenth dynasty, became the supreme ruler of the Egyptian pantheon, and official god of the empire. In this rôle the name continues to appear even in the titles of some of the Ptolemies. The Libyans and Ethiopians accepted Amon as their highest divinity; and the Greeks identified him with Zeus. When represented in human form, he was commonly given a blue skin and a head-dress of feathers, similar to that of Min of Coptos. Frequently, however, he was portrayed with the head of his sacred animal, the ram.

The earliest vocalization of his name—it does not admit of any certain etymology—is found in the El-Amarna tablets, viz., "Amanu" (compare the Ethiopian pronunciation, "Amen"). Later the name was pronounced "Amon," and still later "Amun," or, without the accent (in the *status constructus*), "Amen." The Greeks, following a popular pronunciation, doubled the "m" = "Ammon." Identified with the sun (Rē'), like most Egyptian gods, he is also frequently called Amen-rē'.



Bas-relief showing Amon, Egyptian God.
(From Steindorff, "Blütezeit des Pharaonenreiches.")

W. M. M.

[Brugsch's etymology of Amon ("Ægyptische Religion," p. 87) compares with אמון, אמון מכוסה מוצנע ("the Hidden Amon") in Gen. R. i. and pseudo-Justin, "Cohortatio ad Græcos," p. 37:—"Ammonem qui deum occultissimum vocat." K.]

AMON: 1. Governor of Samaria during the reign of Ahab (I Kings, xxii. 26; II Chron. xviii. 25). To him Ahab handed over Micaiah, the prophet, on his prophesying unfavorably to the king. **2.** The "children of Amon" are mentioned in the long list of those who returned from Babylon under Zerubbabel (Neh. vii. 59).

G. B. L.

AMON, KING OF JUDAH.—Biblical Data: The Biblical accounts of Amon are found in II Kings, xxi. 18–26 and in II Chron. xxxiii. 20–25; and he is mentioned in I Chron. iii. 14 among the descendants of King David. Elsewhere he is spoken of merely as the father of Josiah. He was the son of King Manasseh and of Meshullemeth, daughter of Haruz of Jotbah, and at the age of twenty-two succeeded to the throne on the death of Manasseh. His short reign of two years (about 640–638 B.C.) seems to have been chiefly remarkable for his repetition of the idolatrous practises of his father. In fact, according to the account in Chronicles, Amon was worse than his father; for Manasseh repented of his idolatry (II Chron. xxxiii. 12), but Amon "humbled not himself before the Lord, as Manasseh, his father, had humbled himself" (II Chron. xxxiii. 23), but sacrificed to all the graven images that his father had made. He was assassinated in his palace by a band of conspirators composed of his own servants; but the people avenged his death by slaying the conspirators and putting the king's son, Josiah, on the throne. Amon was buried in the garden of Uzza, where his father had been buried before him (II Kings, xxi. 18).

C. J. M.

——**In Rabbinical Literature:** The fact that Amon was the most sinful of all the wicked kings of Judah (II Chron. xxxiii. 23) is brought out in the Talmud (Sanh. 103*b*) as follows:

> Ahaz suspended the sacrificial worship, Manasseh tore down the altar, Amon made it a place of desolation [covered it with cobwebs]; Ahaz sealed up the scrolls of the Law (Isa. viii. 16), Manasseh cut out the sacred name, Amon burnt the scrolls altogether [compare Seder Olam, R. xxiv. This is derived from the story of the finding of the Book of the Law, II Kings, xxii. 8]; Ahab permitted incest, Manasseh committed it himself, Amon acted as Nero was said to have done toward his mother Agrippina. And yet, out of respect for his son Josiah, Amon's name was not placed on the list of the kings excluded from the world to come (Sanh. 104*a*).

A midrashic fragment preserved in the Apostolical Constitutions, ii. 23, which appears to follow an account of the repentance of Manasseh according to a lost Jewish apocryphal writing, reads:

> "No sin is more grievous than idolatry, for it is treason against God. Yet even this has been forgiven upon sincere repentance; but he that sins from a mere spirit of opposition, to see whether God will punish the wicked, shall find no pardon, although he say in his heart, 'I shall have peace in the end (by repenting), though I walk in the stubbornness of my evil heart'" (Deut. xxix. 19). Such a one was Amon, the son of Manasseh, for the (Apocryphal) Scripture says: "And Amon reasoned an evil reasoning of transgression and said: 'My father from his childhood was a great transgressor, and he repented in his old age. So will I now walk after the lust of my soul and afterward return to the Lord.' And he committed more evil in the sight of the Lord than all that were before him; but the Lord God speedily cut him off from this good land. And his servants conspired against him and slew him in his own house, and he reigned two years only."

It is noteworthy that this very midrashic fragment casts light upon the emphatic teaching of the Mishnah (Yoma, viii. 9): "Whosoever says, 'I will sin and repent thereafter,' will not be granted the time for repentance."

K.

——**Critical View:** It is rather unfortunate that so little is known of the reign of Amon, king of Judah; for he lived evidently in a critical period. The endeavors of the prophets to establish a pure form of YHWH worship had for a short time been triumphant in Hezekiah's reign; but a reaction against them set in after the latter's death, and both Manasseh and his son Amon appear to have followed the popular trend in reestablishing the old Canaanitish form of cult, including the Ashera and Moloch worship. Whether Manasseh "repented," as the chronicle tells us, is more than doubtful. There is no record of this in the book of Kings, and absolutely no indication of such a change in the subsequent course of events. The people clearly were not yet prepared for the higher religious ideas; and the constant dread that Jerusalem would encounter the same fate as Samaria—so boldly proclaimed by the prophets—instead of leading the people closer to YHWH made them feel that the national deity had deserted them. It was in times of popular unrest that refuge was taken in the old rites, which appeared better able to stand the test of distressful events and impending disaster. In any case it is significant that Amon's death was caused by a palace intrigue, and that the "people of the land," as the account directly states (II Kings, xxi. 23), gathered to avenge his death. It is but fair to conclude from this that the king stood high in popular favor, and that his death was not only regretted by his subjects at large, but made so deep an impression as to lead to a popular movement which succeeded in securing the succession for Amon's son, Josiah, under whom the party of religious reform, guided by prophetical teachings, was destined to gain a permanent victory. For a more detailed view of the religious and political conditions prevailing before and subsequent to Amon's reign, see MANASSEH and JOSIAH.

J. JR.

AMORA (plural, **Amoraim**, אמוראים): A word signifying "the speaker," or "the interpreter," derived from the Hebrew and Aramaic verb *amar* ("to say," or "to speak"). It is used in the Talmud in a twofold sense:

The Amora as Meturgeman.

(1) In a limited sense, it signifies the officer who stood at the side of the lecturer or presiding teacher in the academy and in meetings for public instruction, and announced loudly, and explained to the large assembly in an oratorical manner, what the teacher had just expressed briefly and in a low voice. While the lecturer generally pronounced his sentences in the academic language, which was chiefly Hebrew, the Amora gave his explanations in Aramaic, the popular idiom (see Rashi on Yoma, 20*b*). The original term for such an office was *meturgeman* ("the translator," or "the interpreter"), which term, even later on, was often interchanged with that of Amora (M. Ḳ. 21*a*, Sanh. 7*b*, Ḳid. 31*b*). Some of these officers are mentioned by name, as R. Ḥuẓpit, the interpreter at the academy of Rabban Gamaliel II. (Ber. 27*b*); Abdon, the interpreter appointed by the patriarch R. Judah (Yer. Ber. iv. 7*c*); R. Pedat, the interpreter of R. Jose; Bar Yeshita, the interpreter of R. Abbahu (Yer. Meg. iv. 75*c*); Judah bar Naḥmani, the interpreter of R. Simeon b. Laḳish (Ket. 8*b*). On his return from Palestine the celebrated teacher Rab (Abba Areka), while still unknown in Babylonia, in the absence of the regular Amora acted on one occasion as Amora in the academy of R. Shila (Yoma, 20*b*). It having been discovered that younger incumbents of this responsible office, in their endeavors to shine as orators (Soṭah, 40*a*), often failed to interpret the ideas of the presiding teacher correctly, R. Abbahu established the rule that no one under the age of fifty should be appointed to the position (Ḥag. 14*a*).

Amoraim as Expounders of the Mishnah.

(2) In a wider sense the term Amora was applied, in Palestine as well as in Babylonia, to all the teachers that flourished during a period of about three hundred years, from the time of the death of the patriarch R. Judah I. (219) to the completion of the Babylonian Talmud (about 500). The activity of the teachers during this period was devoted principally to expounding the Mishnah—the compilation of the patriarch R. Judah—which became the authoritative code of the oral law. This activity was developed as well in the academies of Tiberias, Sepphoris, Cæsarea, and others in Palestine, as in those of Nehardea, Sura, and later of Pumbedita, and in some other seats of learning in Babylonia. In these academies the main object of the lectures and discussions was to interpret the often very brief and concise expression of the Mishnah, to investigate its reasons and sources, to reconcile seeming contradictions, to compare its canons with those of the Baraitot, and to apply its decisions to, and establish principles for, new cases, both real and fictitious, not already provided for in the Mishnah. The teachers that were engaged in this work—which finally became embodied in the

Gemara—were properly called Amoraim; *i. e.*, interpreters or expounders (of the Mishnah). They were not as independent in their legal opinions and decisions as their predecessors, the Tannaim and semi-Tannaim, as they had not the authority to contradict decisions and principles unanimously accepted in the Mishnah itself or in the Baraitot. The Palestinian Amoraim, having been ordained, as a general rule, by the *nasi*, had the title of "rabbi"; while the Babylonian teachers of that period had only the title of "rab" or of "mar."

The Palestinian Amoraim are distinguished by their simple method of teaching and expounding the Mishnah. The Babylonians indulged more in dialectical discussions. This was especially the case in the Academy of Pumbedita, where the dialectical method reached its highest development. The hair-splitting dialectic prevailing in that academy is satirized in the proverb: "In Pumbedita they know how to pass an elephant through a needle's eye"; that is, by their dialectical argumentation they can prove even that which is absolutely impossible (B. M. 38*b*).

The period of the Babylonian Amoraim is generally divided into six minor periods or generations, which are determined by the beginning and the end of the activity of their most prominent teachers. The period of the Palestinian Amoraim, being much shorter than that of the Babylonian, ends with the third generation of the latter. Frankel, in his "Mebo Yerushalmi," treating especially of the Palestinian Amoraim, divides them also into six generations.

The Chief Amoraim: The Amoraim mentioned in the Talmud number many hundreds. The names of the most distinguished among them, especially those that presided over the great academies, are given here in chronological order.

I P. First generation of Palestinian Amoraim (from the year 219–279):

Jannai, the Elder; Jonathan, the Elder.
Oshay'a, the Elder; Levi bar Sisi.
Ḥanina bar Ḥama; Hezekiah.
Johanan bar Nappaḥa; Simon b. Laḳish.
Joshua ben Levi; Simlai.

I B. First generation of Babylonian Amoraim (219–257):

Shila, in Nehardea.
Rab (Abba Areka), in Sura.
Mar Samuel, in Nehardea.
Mar 'Ukba, chief-justice in Kafri.

II P. Second generation of Palestinian Amoraim (279–320):

Eleazar ben Pedat, in Tiberias.
Ammi and Assi, in Tiberias.
Ḥiyya bar Abba; Simeon bar Abba.
Abbahu, in Cæsarea.
Zera (or Zeira).

II B. Second generation of Babylonian Amoraim (257–320):

Huna, in Sura.
Judah ben Ezekiel, in Pumbedita.
Ḥisda, in Sura.
Sheshet, in Shilhi.
Naḥman ben Jacob, in Nehardea.

Other distinguished teachers belonging to this generation were Rabba bar Bar-Ḥana and 'Ulla ben Ishmael.

III P. Third generation of Palestinian Amoraim (320–359):

Jeremiah, }
Jonah, } in Tiberias.
Jose bar Zabda, }

These three Amoraim were the last authorities in Palestine. The compilation of the Palestinian Talmud was probably accomplished in their time.

III B. Third generation of Babylonian Amoraim (320–375):

Rabbah bar Huna, in Sura.
Rabbah bar Naḥman, }
Joseph bar Ḥiyya, } in Pumbedita.
Abaye (Naḥmani), }
Raba, son of Joseph bar Ḥama, in Maḥuza.
Naḥman ben Isaac, in Pumbedita.
Papa bar Ḥanan, in Narash.

IV B. Fourth generation of Babylonian Amoraim (375–427):

Ashi, in Sura, compiler of the Babylonian Talmud.
Amemar, in Nehardea.
Zebid bar Oshay'a, }
Dimi bar Ḥinena, }
Rafram I., } in Pumbedita.
Kahana bar Taḥlifa, }
Mar Zuṭra, }
Judah Mani b. Shalom.
Eliezer b. Jose.
Jose b. Abin.
Tanḥuma.

V B. Fifth generation of Babylonian Amoraim (427–468):

Mar Yemar (contracted to Maremar), in Sura.
Idi bar Abin, }
Mar bar Ashi, } in Sura.
Aḥa of Difta, }
Rafram II., in Pumbedita.

VI B. Sixth generation of Babylonian Amoraim (468–500):

Rabbina bar Huna, the last Amora of Sura.
Jose, the last Amora of Pumbedita and the first of the Saboraim.

The Amoraim were followed by the Saboraim, who gave to the Talmud its finishing touch.

For particulars of the life and work of each of the above-mentioned Amoraim see articles under their respective names.

M. M.

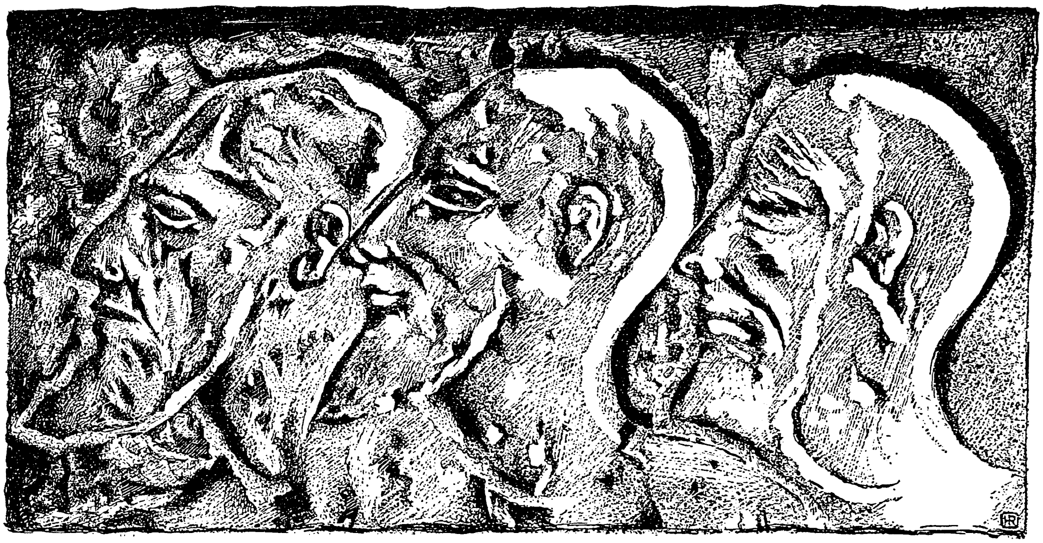
AMORITES.—Biblical Data: The descendants of the fourth son of Canaan (Gen. x. 16, I Chron. i. 14). They form part of the ancient inhabitants of Palestine (Gen. xv. 21; Ex. iii. 8, 17, xxiii. 23; Joshua, iii. 10, xxiv. 11; I Kings, ix. 20; Ezek. xvi. 3, 45; also Isa. xvii. 9, where we ought probably to follow the Septuagint reading, "the forsaken places of the Amorites and the Hivites"). As representatives of the whole pre-Israelitish population, they are mentioned in Gen. xv. 16, xlviii. 22; Joshua, v. 1, xxiv. 15, 18; Judges, x. 11; I Sam. vii. 14; I Kings, xxi. 26; II Kings, xxi. 11; Amos, ii. 9, etc.

Geographical Distribution.

Some scholars claim that (I Sam. vii. 14) Philistines and Amorites are synonymous, so that the latter expression would include all non-Israelitish inhabitants of Palestine. Usually, however, the passage in question is interpreted to mean the isolated remnants of the Amorites, who in pre-Philistine and pre-Israelitish times had occupied a large part of the country west of the Jordan. Their territory is more exactly defined as follows:

(*a*) In the south they inhabit the hill-country of the Amorites (Deut. i. 7, 19) on one side of the Canaanites (*ibid.* verses 27, 44), north of Kadeshbarnea. The Amorites in Hazezon-tamar (Gen. xiv. 7) and Mamre (ver. 13) belong to the same region.

(*b*) More to the north Joshua, x. 5, mentions five kings of the Amorites; namely, in Jerusalem, Hebron, Jarmuth, Lachish, and Eglon, as "all the kings of the Amorites that dwell in the hill-country"; compare ver. 12. According to II Sam. xxi. 2, Gibeon also was Amoritish (Joshua, xi. 19: Hivitish), although it is more probable that the name Amorite has there the vague meaning discussed above, without precise ethnological signification. We find the "Amorites which were beyond Jordan, westward" (Joshua, v. 1, xxiv. 8), distinguished from the "Canaanites which were by the sea" (*ibid.* v. 1); Joshua, xi. 3, apportions the hill-country to the Amorites, together with three other nations, distinguishing them from "the Canaanites on the east and on the west." According to Judges, i. 34 [A. V. 35], however, at a somewhat later period, the Amorites dwelling "in Mount Heres, in Aijalon, and in Shaalbim," whose border began "from the ascent of Akrabbim," did not allow the Danites "to come down to the valley" and "forced them into the hill-country," although the Amorites afterward became subject to Israel. It is questionable if a remnant of the Amoritish territory properly speaking is meant; more probably the name Amorite has again the general meaning. One is even tempted to understand it as used of the Philistines (as I Sam. vii. 14; see above).



AMORITES.
(From the pylon of the Ramesseum.)

(*c*) Amorites dwell east of the Jordan (Num. xxi. 13): the Arnon is the frontier between Moab and the Amorites. This land of the Amorites reaching "from Arnon to Jabbok, even unto the children of Ammon" (*ibid.* 24), had been taken away from Moab by Sihon (*ibid.* 24, 26, 29), who built Heshbon to be his residence (*ibid.* 26, 27) directly before the immigration of Israel. Amorites dwelling in Jazer are specially mentioned (*ibid.* 32). These Amorites "which dwelt beyond Jordan" are also referred to (Deut. i. 1, 4, iii. 2; I Kings, iv. 19; Ps. cxxxv. 11, cxxxvi. 19; Josh. ii. 10, ix. 10). Og, king of Bashan in Ashtaroth, is also called an Amorite in Deut. iii. 8, iv. 47, where we learn that Og's territory extended "from the river of Arnon unto Mount Hermon." So the land of the Amorites, which is in Gilead (Judges, x. 8), seems to have embraced all the territory afterward owned by Israel, east of the Jordan. Deut. iii. 9 informs us that the name of Mount Hermon in the language of the Amorites was Shenir.

W. M. M.

——**In Rabbinical and Apocryphal Literature:** In Tosef., Shab. (vii. [viii.] 23), and generally in post-Biblical literature, the Canaanites are usually spoken of as the Amorites (compare Assumptio Mosis, xi. 16; B. M. 25*b*); and they were characterized by R. Jose, the chronicler, as the most intractable of all nations. To the apocryphal writers of the first and second pre-Christian century they are the main representatives of heathen superstition, loathed as idolaters, in whose ordinances Israelites may not walk (Lev. xviii. 3). A special section of the Talmud (Tosef., Shab. vi.-vii. [vii.-viii.]; Bab. Shab. 67*a et seq.*) is devoted to the various superstitions called "The Ways of the Amorites." According to the Book of Jubilees (xxix. [9] 11), "the former terrible giants, the Rephaim, gave way to the Amorites, an evil and sinful people whose wickedness surpasses that of any other, and whose life will be cut short on earth." In the Syriac Apocalypse of Baruch (lx.) they are symbolized by "black water" on account of "their black art, their witchcraft and impure mysteries, by which they contaminated Israel in the time of the Judges." This refers to the strange story of Kenaz, preserved in the "Chronicle of Jerahmeel" (Cohn in "Jew. Quart. Rev." 1898, pp. 294 *et seq.*, and translation of Gaster, p. 166), which relates how the tribes of Israel learned all their wickedness from the Amorites, the masters of witchcraft, whose books they kept hidden under Mount Abarim, and whose wonder-working idols—seven holy nymphs—they had concealed beneath Mount Shechem. Each of these idols was adorned with precious stones, which shone at night like the light of day, and by their power sight was restored to the blind. Kenaz, the son of Caleb and father of Othniel, when hearing of this, forthwith destroyed the idolatrous Israelites by fire, but tried in vain to destroy either the magic-books or the

Masters of Witchcraft.

stones. So he buried the books, but in the morning found them transformed into twelve precious stones, with the names of the twelve tribes of Israel engraved thereon, and later they were used in Solomon's Temple. Then, with the help of the angel Gabriel, he smote the Amorites with blindness and destroyed them with his sword.

These legends may be regarded as reflecting the prevalent belief of the Jewish people in Amorite witchcraft. But the ancient midrashic and apocryphal narratives of battles fought by the sons of Jacob with the Amorites seem likewise to rest upon the actual warfare which took place between the Jews and the surrounding nations during the second Temple. According to the Book of Jubilees, § xxxiv.; Testament of Patriarch Judah, 3–7; Midrash Wayis'u, in Jellinek, "B. H." iii. 1–5; "Chron. of Jerahmeel," ed. Gaster, §§ xxxvi., xxxvii., and Sefer ha-Yashar, xxxvii.–xl., the sons of Jacob fought with the sons of Esau, while the Amorites sided with the latter and were defeated. The battlefield described in the various sources being almost identical with the battle-place of the Maccabean heroes, it is much more likely that the story originated in the time of John Hyrcanus, when war was successfully waged against the Idumeans and other nations, than that it arose in the time of King Herod, as Gaster thinks ("Chronicle of Jerahmeel," preface and lxxxii.; compare Book of Jubilees and Edom). K.

In Monumental Inscription.

——**Critical View:** The monumental evidence is as follows: Egyptian inscriptions (see W. M. Müller, "Asien und Europa," p. 218) call the land east of Phenicia and north of Palestine "the land of the A-ma-ra." The Amar, or Amor, of the texts is chiefly the valley between the Lebanon and Antilebanon mountains, the modern Beka'a. In the El-Amarna tablets (Winckler, Nos. 42, 44, 50), Aziru, the prince of the same region, is called "Prince of Amurru." The latter name does not seem to be much more comprehensive than in the Egyptian texts, and certainly does not apply to Palestine. Only in the later cuneiform texts the old expression Amurru (not to be read "Aḥarru") is used so vaguely that Phenicia and even neighboring countries are included (Delitzsch, "Paradies," p. 271). The Babylonian letter-group Im-martu, or Mar-tu for "West," hardly belongs here, but because of the similar sound in its earlier form it was written for Amurru in the Amarna tablets and still more frequently afterward in the extended signification of Amurru. At present it is not very easy to show the connection between the monumental Amorites and the Palestinian Amorites of the Bible. Winckler ("Gesch. Israels," i. 52) assumes that the Amorites, somewhere about the time of the El-Amarna tablets (after 1400 B.C.), descended into Palestine from their original northern habitations. He supports this by the fact that only those of the earlier Biblical traditions, which belong to the northern kingdom, contain the name Amorites; namely, the prophet Amos and those parts of the Pentateuch which the critics assign to E., the Elohistic or Ephraimitic writer (followed by Deuteronomy). For this critical distinction in the use of the name see E. Meyer, in Stade's "Zeitschrift," i. 122. Budde, in "Richter and Samuel," xvii. ascribes Judges, i. 34, to the Judaic or Yahwistic writer, but see above on the probably indistinct and not very archaic use of the name in that passage. Wellhausen ("Die Composition des Hexateuchs," ii. 341) assumes that Amorites and Canaanites are synonymous expressions, only that the former is used of the Canaanites exterminated by Israel, the latter to distinguish them from those living among the Israelites at the time of the kings. These conclusions are suggested by the circumstance that the territory of the Amorites as described above leaves very little room for the Canaanites in the territory occupied by Israel, and that both terms sometimes seem to be used interchangeably (compare Gen. xiv. 13 with Judges, i. 10; Num. xiv. 45 with Deut. i. 44 *et seq.*).

Thus Amorite would be the more ancient name, obscure even to the earliest writers. It is not certain that these writers were influenced by the etymology of the word. If Amorites were equivalent to "highlanders," we should have to compare the application of the name to the highland of Judah (Num. xiii. 29; Deut. i. 7, 19, 20; Josh. v. 1, x. 6, xi. 32) as a secondary use or as a mere inference from the etymology. At present, however, that etymology has been discarded, as *amir* means "summit," not "mountains" or "highland." The Egyptian inscriptions, indeed, seem to treat the name of the original country Amor as a geographical term, always connecting it with the article, while Amorite is in the Bible an ethnic name. How the Amorites, or at least their name, came to Palestine, still awaits plausible explanation.

Race and Language.

Gen. x. 16 calls the Amorites a branch of the Canaanites. Amoritish names like Adoni-zedek (Josh. x. 3; compare verse 5) seem, indeed, to point to full identity in language with those tribes. The question, why the Amorites, with the rest of the pre-Israelitic population of Palestine, are (Gen. x.) classed among the Hamites, can not be discussed here. Sayce ("Races of the Old Testament," pp. 100 *et seq.*) has tried to explain this by assuming a connection between the Amorites (and the Canaanites in general!) with the ancient Libyans, entirely on the basis of a certain similarity of the facial type in one Egyptian sculpture of Rameses III. The numerous other Egyptian pictures of these nations, however, do not confirm this, and a linguistic comparison of Canaanitish (see above on its identity with Amoritish) and Libyan is impossible. The remote relationship between all Hamites and the Proto-Semites in race and language does not belong here.

W. M. M.

AMOS.—Biblical Data: Jewish prophet of the eighth century B.C.; date of birth and death unknown. Among the minor prophets there is none whose personality is so familiar as that of Amos. His name occurs not only in the superscription of the book, but several times (vii. 8, 10 *et seq.*, 14; viii. 2) in the body of it. His home was in Tekoa in Judah, five miles to the south of Bethlehem. The original title of his book was merely "The Words of Amos of Tekoa"; the rest, "who was among the herdsmen," is a later addition emphasizing the fact gleaned from vii. 14, that Amos had been a herdsman before he became a prophet. From the margin this notice appears to have intruded itself into the text. The attempt has been made to discover a northern Tekoa for his home, but there is no need for that. That Amos was from Judah is the simplest interpretation of vii. 13. Amos himself tells us what his profession was: he was a herdsman and one who tended sycamore-figs (vii. 14). At Tekoa sycamores are not grown, but Amos could very well have been the proprietor of a sycamore-grove at some distance from Tekoa, in the Shefelah, the hill country leading down to Philistia, where there were sycamore-

Home and Occupation.

trees in "abundance" (I Kings, x. 27). He makes this statement of his occupation to Amaziah, the chief priest of Bethel, who, startled by the ominous utterances of Amos, advises him to make his escape to Judah and there to earn his livelihood by his profession of prophet. Amos denies both premises involved in this rebuke. He does not need to take fees for his prophecies, because he is well-to-do, and he is no prophet either by profession or extraction, but was called by God from behind his flock by special summons. Amos' attitude marks a turning-point in the development of Old Testament prophecy. It is not mere chance that Hosea, Isaiah (ch. vi.), Jeremiah, Ezekiel, and almost all of the prophets who are more than unknown personages to whom a few prophetical speeches are ascribed, give first of all the story of their special calling. All of them thereby seek to protest against the suspicion that they are professional prophets, because the latter discredited themselves by flattering national vanities and ignoring the misdeeds of prominent men. But Amos marks an epoch in Old Testament prophecy also in another respect. He is the first of the prophets to write down the messages he has received. It is easy to understand the reason for this innovation. He feels himself called to preach in Beth-el, where there was a royal sanctuary (vii. 13), and there to announce the fall of the reigning dynasty and of the northern kingdom. But he is denounced by the head priest Amaziah to King Jeroboam II. (vii. 10 *et seq.*), and is advised to leave the kingdom (verses 12 *et seq.*). Though nothing more is learned than the answer he gave Amaziah (verses 14 *et seq.*), there is no reason to doubt that he was actually forced to leave the northern kingdom and to return to his native country. Being thus prevented from bringing his message to an end, and from reaching the ear of those to whom he was sent, he had recourse to writing. If they could not hear his messages, they could read them, and if his contemporaries refused to do so, following generations might still profit by them. No earlier instance of a literary prophet is known, nor is it likely that there was any; but the example he gave was followed by others in an almost unbroken succession. It is true, it can not be proved that Hosea knew the book of Amos, though there is no reason to doubt that he was acquainted with the latter's work and experiences. It is quite certain, on the other hand, that Isaiah knew his book, for he follows and even imitates him in his early speeches (compare Amos, v. 21–24, iv. 6 *et seq.*, v. 18 with Isa. i. 11–15; Amos, iv. 7 *et seq.* with Isa., etc., ix. 7 *et seq.*, ii. 12). Cheyne concludes with great probability that Amos wrote the record of his prophetical work at Jerusalem, after his expulsion from the northern kingdom, and that he committed it to a circle of faithful followers of YHWH residing there.

First to Write down Prophecy.

Personality of Amos.

Amos is undoubtedly one of the grandest personalities among the Old Testament prophets; indeed, the most imposing of all, if the fact be considered that he is the first of the writing-prophets. His lofty conception of Deity, his uncompromisingly moral conception of the order of the universe, and his superiority to all religious narrowness, are admirable indeed. Leaving the above-mentioned "doxologies" aside, YHWH is in vii. 4, ix. 2 the Ruler of the universe, and in i., ii., and ix. 7 He is the Lord of all other nations as well as of Israel. The standard by which He measures peoples is morality, and morality only. It is by His inscrutable will that Israel was chosen among the peoples, but as a result it follows that God is doubly strict in His demands upon this nation, and doubly severe in His punishment of its transgressions (iii. 2). Ritualistic zeal and the richest burnt-offerings avail nothing in extenuation; such acts are contemptuous in the sight of YHWH, who may be served without any religious ceremonies, but not without morality (iii. 21–25, iv. 4, 5, 13). Therefore let the nation not comfort itself with the hope of the "Day of YHWH," which will be a day of terror for Israel, and not of salvation (v. 18–20). It is all over with Israel; the complete destruction is at hand (see especially ii. 5, v. 1 *et seq.*, ix. 1–4). Distinct as are these fundamental principles of his discourses, Amos must by no means be considered as an uncompromising prophet of evil; it should not be forgotten that Israel's destruction is brought about by its sinfulness, and it is only because experience appears to show an unwillingness to repent, that the hope of forgiveness is cut off. Should this experience prove false and Israel actually repent, forgiveness and national life would be by no means hopeless; and therefore utterances like v. 4 and 14, however inconspicuous they may be in comparison with the denunciatory passages, are by no means to be overlooked, and certainly not to be held as spurious. It is certain, however, that Amos did not shrink from facing the possibility of the utter destruction of Israel.

Repentance and Forgiveness.

Amos has always been admired for the purity of his language, his beauty of diction, and his poetic art. In all these respects he is Isaiah's spiritual progenitor. There is no need for astonishment that a rustic should have been capable of such diction.

The period of the prophet's activity is the reign of Jeroboam II., king of Israel, whose dynasty he mentions in one of his prophecies (vii. 9), while the narrator of vii. 10, etc. (probably not identical with Amos), clearly states that Jeroboam was reigning at the time when Amos preached at Beth-el. The superscription of the book (i. 1) mentions Uzziah, king of Judah, before Jeroboam, which is doubtless correct, inasmuch as Uzziah was a contemporary of Jeroboam; but the statement is at the same time puzzling, since it is not known that Amos was ever active in Judah.

Superscription of the Book.

The superscription adds that he "saw" his words two years before the earthquake. Now Amos doubtless experienced an earthquake (iv. 11), and an earthquake under King Uzziah is testified to in Zech. xiv. 5; but unfortunately this passage does not help us much, seeing that it is of late origin, and may itself be taken from Amos, iv. 11, or even from the heading of the book. On the other hand, the superscription may be based on the hints contained in the book itself, and indeed G. Hoffmann in Stade's "Zeitschrift," iii. 123, has tried to offer an explanation for the phrase "two years before the earthquake" which would deprive the words of every real significance. His explanation seems to be somewhat artificial, but has been accepted by such scholars as Cheyne and Marti. Still, since the heading undoubtedly contains reliable and authentic statements, the possibility that the reference to the earthquake is also authentic must be admitted. The question, however, remains whether all the prophecies united in the Book of Amos are to be understood as uttered in this same year. Their extent would not make this impossible, nor is it likely that Amos, rebuking the sins of Ephraim so openly, would have been tolerated many years before being denounced and expelled, as we read in vii. 10. In this case the earthquake in iv. 11 must be another than that mentioned in i. 1, because it could not be referred to two years before it actually happened. Moreover, it is unlikely that Amos should not have added new prophecies to those spoken during his stay in the northern kingdom, when he once proceeded to write down his utterances (compare Jer. xxxvi. 32). If i. 1 be admitted as authentic, the most probable conclusion is that "two years before the earthquake" was originally the date for only a part of the book, perhaps for only the introductory speech in i. 2.

The reign of Jeroboam II. lasted forty-one years, according to II Kings, xiv. 23. Though it can not be fixed with certainty, this much may be said, that its termination must be placed between 750 and 740 B.C. Marti ("Ency. Bibl." article "Chronology," p. 797) fixes his reign between 782 and 743 B.C. The activity of Amos could hardly have coincided with the close of his reign. The fact alone that Isaiah's call can not have happened later than 740, while he so evidently draws on Amos' prophecies, is sufficient ground for placing Amos not later than 750.

The Present Form of the Book.

The first indication that a distinction must be made between the prophecies of Amos and the book that bears his name is to be found in the narrative, vii. 10-17. This is inserted after the third of five visions which form a connected series. The insertion in question is simply a comment on vii. 9, and contains the threat of the overthrow of Jeroboam and his house. It is mentioned in vii. 10 that Amos' boldness resulted in his expulsion from the northern kingdom. It is not likely that Amos himself would have interrupted his series of addresses in this way. Moreover, he is not the narrator; another writer speaks of him in the third person. Hence it is clear that his book has not come to us exactly as he wrote it. But, on the other hand, vii. 10 *et seq.* must have been written soon after the event by a writer who had thoroughly trustworthy accounts of Amos. This is a fact of great importance.

Editorial and Later Additions.

The book is well arranged in its general features. There is in chaps. i. and ii. a coherent series of judgments on sinful and unrepentant peoples, aimed particularly at Israel. In chaps. vii.-ix. are the above-mentioned five visions; in chaps. iii.-vi. a series of discourses, loosely connected, whose beginning and end can not be fixed with certainty. The same problem is presented in other prophetical books; the prophet himself would scarcely lay great stress on the separation of the single discourses when he wrote or dictated them. There is no reason to doubt that this arrangement goes back to the first editors, working soon after the prophet's death or even delegated by him for this task. This does not preclude the possibility of later changes and additions. Since the investigations of Stade and Wellhausen, such changes have been assumed in increasing proportions. The most complete and discriminating survey of those passages whose originality hitherto has been doubted is given by Cheyne ("Ency. Bibl." article "Amos"). They can be grouped under the following titles: (1) Passages widening the horizon of the book, so as to include the southern kingdom of Judah. (2) Additional predictions affirming a better future than the gloomy auguries of the old prophet. (3) Additions giving expression to the loftier and more spiritual theology of a later time. (4) Glosses and explanations based on an erroneous conception of the texts.

(1) The chief passage of the first group is ii. 4, etc., the denunciation of Judah in the series of judgments against the nations. The same judgment against Edom in i. 11 and 12 is perhaps also an addition, and the same has been surmised of the passage about Tyre in i. 9. The isolated verse i. 2, in which Zion is spoken of as the fixed seat of YHWH, is also doubtful, and the same is true of the address to Zion in vi. 1, and the expression "like David" in vi. 5.

(2) The second group is represented by ix. 8-15, canceled by Stade, Wellhausen, Cornill, Nowack, Cheyne, and many others, as spurious. These verses do not form a single whole, but are composed of different passages. Verses 10, 11, 12, 13, and 14 seem to be mere fragments or insertions in the context. The last verse, which, by virtue of its inimitable originality, is unanimously ascribed to Amos, can not have formed the concluding verse of the book, but appears to have been the beginning of a new address. If the verses 8-15 are to be taken in their entirety as a later addition, the original continuation must either have been lost through the mutilation of the manuscript, or have intentionally been stricken out on account of the too mournful survey of the future. The latter suggestion is improbable, because verse 7 would have been rejected for the same reason, and because in other passages (see verses 1-4) the most terrible predictions have been retained. If, on the other hand, the conclusion had been lost in consequence of the mutilation and then supplied at hazard, a more uniform continuation would have been expected in place of such a rugged one, with its disjointed and disconnected sentences. The possibility remains that verses 8-15 are a repeated elaboration of the original conclusion. It is erroneous to consider verse 11, concerning the restoration of the fallen tabernacle of David, as a specifically Judaic prediction; it can only assume this character through the addition of verse 12, which regards the subjection of the vassals of Judah as an essential feature of such reestablishment. The verse refers to the reestablishment of the united kingdom of Israel, founded by David and sundered after the death of Solomon. Verses 8, 9, 11, 14, and 15 may possibly contain an original prediction directed, like vii. 9, against the house of Jeroboam, and promising for the future the restoration of a united Israel, as pleasing to Jehovah. Of course, conclusive proof of this theory can no longer be secured, nor can the original text of such prediction be restored with reasonable certainty.

(3) The third group of additions are the doxologies iv. 13, v. 8, ix. 56, which invoke YHWH as the Creator and Ruler of the world. While it is not impossible that they may have been written by Amos, the style of these additions indicates a much later period, possibly later than Deutero-Isaiah. Since all three passages interrupt the context, and iv. 12 and v. 7 have inherent difficulties of their own, it may be suggested that the interpolator designed these doxologies to fill up gaps or illegible sentences in the manuscripts.

(4) To the fourth group, iii. 14 and viii. 11, and 12 may be assigned. Other passages are open to discussion, particularly the enigmatical verse v. 26 (Wellhausen, Nowack, Cheyne), the difficulty of which is hardly solved by the suggestion of its being simply a marginal gloss. Finally, there are many individual words of the text of this book which present numerous difficulties.

Concerning the problem which the severe logical attitude of Amos presents in the history of religion, compare especially F. Giesebrecht, "Die Geschichtlichkeit des Sinaibundes," p. 14; also K. Budde, "American Lectures on the History of Religions," vol. iv. lecture iv. To ascribe the whole book to another age, the pre-Deuteronomic period of Josiah (638-621), on account of this and similar difficulties, as H. J. Elhorst, "De Profetie van Amos" (Leyden, 1900), proposes, is entirely unwarranted and impossible. See the criticism of P. Volz in Schürer's "Theol. Literatur-zeitung," May 12, 1900.

K. B.

——**In Rabbinical Literature:** According to the rabbis (Lev. R. x., Eccl. R. i. 1) Amos was nicknamed "the stutterer" by a popular etymology. The people, on hearing his bitter rebukes, retorted: "Has the Lord cast aside all His creatures to let His spirit dwell only on this stutterer?"

Regarding the teachings of Amos, the following utterance of Simlai, an amora of the beginning of the third century, is noteworthy:

Six hundred and thirteen commandments were given to Moses; King David reduced them to eleven (Ps. xv.); Isaiah to six (Isa. xxxiii. 15); Micah to three (Micah vi. 8); Isaiah, a second time, to two (Isa. lvi. 1); but Amos to one: "Seek Me and Live!" (Mak. 24*a*).

According to rabbinical tradition (Suk. 52*b*, Pirḳe R. ha-Ḳadosh, viii., based on Micah v. 5 [4]), Amos is one of the "eight princes among men" alluded to in Micah, v. 5. K.

According to rabbinical tradition, Amos was killed by King Uzziah, who struck him on the forehead with a glowing iron (Gedaliah ibn Yaḥyah in his "Shalshelet ha-Ḳabbalah," quoted by Heilprin in "Seder ha-Dorot," i. 3110, Venetian ed. of 1587, does not mention anything of this).

The story of the martyrdom of Amos, found in the pseudo-Epiphanean writings ("Vita Prophetarum"), is somewhat different; according to this version, Amos was killed by a blow on the temple struck by Amaziah, priest of Beth-el. L. G.

AMOS, BOOK OF: This Biblical book, one of the twelve so-called "Minor Prophets," opens with the announcement of God's intention to punish evildoers (i. 2). Damascus (i. 3–5), Gaza (i. 6–9), Tyre (i. 9, 10), Edom (i. 11, 12), Ammon (i. 13–15), Moab (ii. 1–3), and Judah are taken up in turn until Israel (ii. 6) is reached. The prophet is vehement because the crimes of the people have been committed in the face of the fact that God redeemed His people from Egypt (ii. 10), destroyed the Amorites (ii. 9), and sent prophets (ii. 11) whom, however, Israel would not allow to prophesy (ii. 12). In the third and fourth chapters the prophet addresses himself directly to the kingdom of Israel. The nations are summoned to the mountains of Samaria to witness the wrongs there practised (iii. 9). The punishment that is impending will be so severe that only few will escape (iii. 12). Because of the women of Samaria, who were cruel to the poor and the needy (iv. 1), prosperity will cease (iv. 2), and not even sacrifice will avail (iv. 4, 5). God had tried to teach Israel by affliction; but neither famine, drought, blasting of the crops, attacks of insects, pestilence, defeat in war (iv. 6–10), nor even treatment like that of Sodom could induce Israel to repent. Complete destruction, therefore, is foretold (v. 1–3).

In vain does the prophet admonish Israel to seek the Lord, not Beth-el (v. 4–6). Samaria persists in being wicked and unjust (v. 7, 8). Once more the prophet calls upon Israel to repent (v. 14); and, as before, Israel fails to do so. Besides injustice and irreligion, Israel indulges in luxurious and riotous living (vi. 1–6). This, too, is a factor which inevitably leads to captivity (vi. 7).

With chap. vii. begins a series of visions, which continues to chap. ix. 6. A plague of grasshoppers (vii. 1–3) and a fire (vii. 4–6) are followed by a third plague; and the plumb-line is set up against the city and against the family of Jeroboam (vii. 7–9). The prophet's audacity brings upon him the hostility of the reigning house; and he is ordered to confine his prophetical activity to the land of his birth, Judah. Amos disclaims being a prophet, or the son of a prophet, and reiterates the certainty of coming misfortune (vii. 10–17). The last vision, representing God Himself standing at the altar and announcing the terrible catastrophe (ix. 1–6), emphasizes the hopelessness of escape from divine vengeance. The book ends (ix. 7–15) in words of comfort. The remnant shall return and in the future the land will yield abundantly (13–15). For critical view of the Book of Amos, see Amos. G. B. L.

AMOZ: Father of the prophet Isaiah. See Isaiah.

AMRAM: One of the sons of Bani mentioned in Ezra x. 34, in the list of those having foreign wives (I Esd. ix. 34; Omærus; R. V., Ismærus). In the Authorized Version, "Amram" is given also in I Chron. i. 41 as the name of one of the sons of Dishon. The Revised Version, however, renders this "Hamran," which is more in accordance with the original. In this connection see Hemdan. J. D. P.

AMRAM, FATHER OF MOSES.—Biblical Data: A son of Kohath, and grandson of Levi. He married his own aunt, Jochebed, Kohath's sister, by whom he became the father of Moses, Aaron, and Miriam (Ex. vi. 18–20; Num. iii. 19, xxvi. 58; I Chron. vi. 2, 3, 18). From him were descended the Amramites, a Kohathite branch of the tribe of Levi. This family is mentioned in the record of the Mosaic census (Num. iii. 27) and in I Chron. xxvi. 23, where is given the account of the organization of the Levites in David's time (see Moses). J. D. P.

——**In Rabbinical Literature:** When Jochebed, daughter of Levi—born on the day when Jacob entered Egypt with his family (B. B. 120*a*, 123*b*; Gen. R. cxiv.)—was over one hundred and twenty years old, Amram, her nephew—born on the same day as she, according to the Testament of the Patriarchs (Levi, xii.)—married her (Ex. R. i.); and she bore him a daughter called Miriam (*mar*=bitterness) because of the embitterment of life which had then begun for the Jews, and a son named Aaron (derived from *harah*, to conceive) because every expectant mother feared for her child. But when Pharaoh issued the edict that every male child was to be cast into the river, Amram separated himself from his wife, saying, "Why should we beget sons that are to be killed?" His example as head of the Jewish high-court was followed by the others. Then his daughter Miriam reproached him, saying to him: "Thy cruelty exceeds even that of Pharaoh!" Whereupon Amram celebrated for a second time his wedding with his wife, who, though one hundred and thirty years old, had under the nuptial canopy become like a young maiden. Aaron and Miriam danced before her, while angels sang, "A joyous mother of children"—Psalm cxiii. 9 (Soṭah, 12*a*). Amram's example had a good effect upon all, but upon Miriam came the spirit of prophecy, and she said: "My mother will give birth to one who will redeem Israel from bondage!" And when, at the birth of Moses, the house was filled with light as on the first day of Creation when God spoke, "Behold, it is good!" (Gen. i. 4, Ex. ii. 2), Amram exclaimed: "My daughter, thy prophecy is being fulfilled!" But when Moses was placed by his mother in an ark in the river, Amram again cried out: "O my daughter, what has become of thy prophecy?" Wherefore Miriam remained standing on the shore watching what "would be done unto him in the far-off time" (Soṭah, 12*a*).

The Haggadah has besides much to relate of Amram, the father of Moses, that is not even referred to in the Biblical story. Amram, like Jesse the father of David (and Benjamin the son of Jacob, and Kilab the son of David), died without sin; or, as the expression is, "owing only to the effect of the poison of the serpent." Consequently he was one of those whose body did not fall a prey to worms or decay (B. B. 17*a*, Derek Ereẓ Zuṭṭa, i.). He was, like Ahijah of Shiloh, one of the long-lived saints whose life extended over many generations of Jews, to whom he became a transmitter of ancient lore. He instructed even Ahijah, the prophet, in the doctrines taught by the patriarch Jacob. Being the son of Kohath, who, though the second son of Levi, was the one chosen to "lead the assemblies of people in worship" (=ḳehat 'ammim) and therefore, the real heir to Levi, the tenth one (beginning the count from the youngest) of the twelve tribes and for this reason the consecrated bearer of Abraham's blessings and Jacob's traditions (Testaments of the Twelve Patriarchs, Levi, xi.; Book of Jubilees, xxxii.; Gen. R. lxx.), Amram was the "chief of his generation" (Soṭah. 12*a*). When war broke out between Egypt and Canaan, and the Israelites saw this to be the opportunity for taking the bones of all the sons of Jacob (except Joseph's) to the Holy Land and burying them in the cave of Machpelah, Amram was one of those who took part in the sacred task, and, while most of the people returned to Egypt, he with a few others remained for a long time in the city of Hebron (Book of Jubilees, xlvi. 11).

K.

AMRAM, DAVID WERNER: American lawyer; son of Werner David Amram; born at Philadelphia, Pa., in 1866; educated at the public schools and at the Rugby Academy in Philadelphia, and in the Collegiate and Law departments of the University of Pennsylvania, from which he received the degrees of A.M. and LL.B. He practises as an attorney at law in Philadelphia.

Mr. Amram has held numerous positions in the Jewish community, such as president of the Philadelphia Young Men's Hebrew Association; director of the Hebrew Education Society of Philadelphia; member of the publication committee of the Jewish Publication Society of America; director of the Jewish Chautauqua Society; director of the American Federation of Zionists; trustee of the Gratz College. Mr. Amram is a prolific writer on Jewish topics. His principal work is "The Jewish Law of Divorce according to Bible and Talmud" (Philadelphia, 1896). He has also published a volume of poems and sketches and has contributed to many of the publications of the day, most of his themes having some bearing on or connection with Jewish law. A.

AMRAM ḤASIDA (The Pious): A Babylonian amora of the third generation (fourth century), a contemporary of R. Naḥman (B. B. 151*a*). In addition to his scrupulousness in ritualistic observances (Suk. 11*a*), he owes his surname to his action at a moment of great temptation, when, to save himself from sin, he called for help by giving an alarm of fire. When his colleagues complained that he had exposed them to shame, he replied, "It is better that you be put to shame on my account in this world than that you be ashamed of me in the world to come." Legend adds that Amram conjured the tempter within him to depart; whereupon something like a pillar of fire came forth, and Amram, glorying in his victory, exclaimed, "Behold, thou art of fire, and I am of flesh, yet I am stronger than thou art" (Ḳid. 81*a*). His extreme piety made him the target of sport for members of the household of the exilarch; and their brutal treatment made him seriously ill; but Yalta, Naḥman's wife, herself a member of the exilarch's family, cured him (Giṭ. 67*b*). S. M.

AMRAM, ḤAYYIM: Commentator who lived in Palestine in the first half of the nineteenth century. He published "Ḳorban Pesaḥ" (Passover Offering), a commentary on the Passover Haggadah (Leghorn, 1836).

AMRAM, IBN. See Joseph ibn Amram.

AMRAM BEN ISAAC IBN SHALBIB (or SHALIB): Ambassador of Alfonso VI., of Leon and Castile, in the eleventh century. The position occupied by the Jews in Christian Spain toward the end of the eleventh century may be gathered from a statement made by Alfonso VI. in the presence of his Moslem adversaries. "The Jews," he said, "furnish our viziers, chancellors, and most of the officers of the army, and we can not do without them" ("Abd al-Waḥid al-Marrakoshi," ed. Dozy, p. 93). This statement is substantiated by the fact that Alfonso actually employed a Jewish diplomatist, to whom Arab authors give the name of Ibn Shalbib (or Shalib). The records relating to his history are defective and divergent, and agree on one point only, that in 1085 he acted as Alfonso's ambassador to Almu'tamid, the last Abbasid calif who resided in Seville. Ibn Shalbib is probably identical with Amram ben Isaac, whom Leo Africanus (Fabricius, "Bibliotheca Græca," 2d ed., 1790–1811, xiii. 295) connects with the same affair. One author (Ibn al-Labbana) relates that Ibn Shalbib came to Seville, accompanied by a number of knights, to demand the tribute due to Alfonso. Another makes him the bearer of a message to the prince asking him for a residence for Alfonso's wife, Al-Zahra, who was the daughter of the Arab prince Amram. Ibn Shalbib had to pay with his life for the arrogant manner in which he delivered his message. The circumstances of his death are, however, very uncertain. While, according to the first report, he was nailed to a stake, the second states that Almu'tamid brained him with a heavy inkstand. Ibn al-Athir ("Chronicon," x. 92 *et seq.*) also mentions the embassy, but without disclosing the name of the messenger. Concerning Ibn Shalbib's death he gives a third version; viz., that the prince struck his face till his eyes protruded. His companions also, with the exception of three who escaped, were put to death. However uncertain the details of the embassy, it undoubtedly had far-reaching consequences; for Almu'tamid sent to Yusuf ibn Tashfin, the founder of the Almoravid dynasty in Africa, asking his assistance against Alfonso, whose revenge he feared. This marks the beginning of the Almoravid conquest of Spain. Ibn Shalbib's repute as a skilful physician can not be substantiated from Arabic sources, as his name is not to be found in Ibn Abi Oseibia's or similar works.

Amram's Church.

AMRAM OF MAYENCE (MENTZ): A saint and rabbi of whom the following legend is told. After having been the head of a school at Mayence, his native place, he went to Cologne to found a school. As his end drew near, he expressed to his pupils the desire to be buried with his fathers in Mayence, but fearing obstacles, they hesitated to promise to fulfil his wishes. Thereupon he ordered them to place his coffin upon a boat on the Rhine, and let it go forth alone. This they did, but no sooner was the body of the saint put into the boat than, to the great astonishment of all the people, it took its course up the Rhine, and without boatmen or rudder made for the city of Mayence and turned toward the shore. All the inhabitants came to see the wondrous sight, and marveled who the saint might be that performed such miracles even when dead. At last the Jews learned of the death of the master of Cologne, and they took the body ashore, desiring to honor him by solemn obsequies in the synagogue. But the Christian bishop objected, claiming him as a saint of the Church and giving orders to bury him as a Christian. Another miracle followed. The body became so heavy that none could move it from the spot. Straightway the bishop ordered that a church should be built directly over the body of the saint, and set watchmen to guard it, lest the Jews should take it away by stealth. Then the saint appeared in a vision to his pupils in Cologne, and told them to have his body taken at midnight while the watchmen were asleep, and to put another corpse in its place; which they did.

This legend was still narrated at the beginning of the nineteenth century as an actual occurrence; and a pictorial representation on an old house near one of the gates of Mayence, close to the shore of the river, was shown to illustrate the fact. The name of the church was St. Emmeran's Church. Tendlau ("Buch d. Sagen u. Legenden Jüdischer Vorzeit"; "Die Amram's Kirche," pp. 9–15) refers in a note (p. 354) to the "Shalshelet ha-Ḳabbalah" and other sources, wondering how the same story could have been told of R. Amram of Regensburg (instead of Cologne) in one of the "Ma'asebücher" (books of legends). He certainly had no knowledge of the strange fact that, in connection with St. Emmeran's Church near Regensburg, the same story was told by Christians; viz.: that Saint Emmeran had died in Munich, and that his body had been carried with wondrous rapidity in a boat without boatmen from the river Isar up the Danube to Regensburg, where in honor of the saint the chapel was erected (see Panzer, "Bairische Sagen," i. 221). Strangely enough, the Jews were especially held up to reproach for not believing this miracle regarding St. Emmeran's Church (see Pertz, "Monumenta Germaniæ," vi. 549, quoted by Cassel, article "Juden," in Ersch und Gruber, p. 67, note 56). In all probability the Jewish legend was borrowed from the Christian, and Emmeran transformed into Amram; nothing else being known of R. Amram, either in Mayence, Cologne, or Regensburg. Moses Sofer takes him for Amram Gaon, and says that he saw his grave in Mayence ("Ḥatam Sofer, Oraḥ Ḥayyim," p. 16). Concerning the origin of the old Teutonic legend, see Liebrecht's edition of Gervasius of Tilbury "Otia Imperialia," p. 149; Mannhardt, "Germanische Mythen," p. 360; compare also Usener's "Sintflutsagen." See Amnon of Mayence. K.

AMRAM, NATHAN BEN ḤAYYIM: Palestinian scholar and author who flourished at Hebron in the second quarter of the nineteenth century. Amram was selected by the Sephardic communities of Palestine as European agent to collect moneys for them. He wrote: קנין גוף ("The Acquisition of Property"), containing notes on Caro's "Shulḥan 'Aruk, Ḥoshen Mishpaṭ" (Leghorn, 1830); קנין פירות ("The Attainment of Fruits"), a ritual work alphabetically arranged (Leghorn, 1840?); עז וחדוה ("Might and Joy"), a collection of essays on the killing of Abel by Cain, the transmigration of souls, and on various liturgical questions (Amsterdam, 1842); משבצות זהב ("Ouches of Gold"), responsa on certain aspects of the law of inheritance (Leghorn, 1851); נעם המדות ("The Beauty of a Moral Life"), a compilation of ethical views, aphorisms, and sayings, alphabetically arranged (Salonica, 1854). He also edited and prefaced several works of earlier writers.

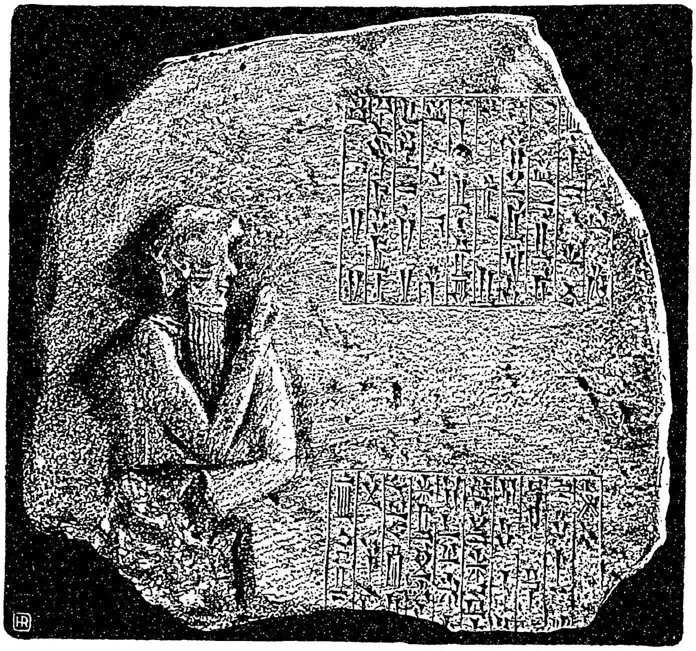
AMRAM, RAB: A Babylonian amora of the third generation (fourth century); contemporary of Ḥisda, Naḥman, and Abba bar Memel (B. B. 70*a*, Ket. 91*a*, Yer. B. M. i. 7*d*). Amram is better known in the domain of the Halakah than in the field of the Haggadah, though even in the former he is but rarely original ('Er. 102*a*; Pes. 105*a*; Yoma, 78*a*; Giṭ. 26*b*; Shebu. 11*b*; Ḥul. 52*b*; Bek. 27*a*; Yer. Mak. i. 31*a*; Yer. Sheb. x. 39*c*). It is related that in the course of a controversy between Rab Amram and Rabbah, the latter had advanced a legal opinion, when the former deftly interposed a number of objections. Rabbah, in his impatience, called his adversary a fool; whereupon a cedar pillar in the college building cracked, and each party to the controversy construed the occurrence as a heavenly sign of his having been wronged by the other (B. M. 20*b*). S. M.

AMRAM IBN SALAMEH IBN GHAZAL HA-KOHEN HA-LEVI: Samaritan liturgical poet. A number of prayers by him are incorporated in a liturgy, a fragment of which is in the Bodleian Library at Oxford, England. They consist of hymns for the ten penitential days, for both the morning and the evening services, as well as liturgic poems for the seven days of the Feast of Tabernacles, morning and evening. Compare Neubauer, "Cat. Bodl. Hebr. MSS." No. 2537, p. 2.

H. G. E.

AMRAM BEN SHESHNA or **SHUSHNA** (known as **Amram Gaon** or **Mar-Amram**): Head of the Sura Academy; died about 875. He was a pupil of Naṭronai II., Gaon of Sura, and was exceptionally honored with the title of Gaon within the lifetime of his teacher. Upon Naṭronai's death, about 857, the full title and dignities of the gaonate were conferred upon Amram, and he held them until his death. He is the author of about 120 responsa (the greater part published in Salonica, 1792, in the collection entitled "Sha'are Ẓedeḳ") touching almost every department of Jewish jurisprudence. They are of great value in affording an insight into Amram's personality as well as into the religious conditions among the Jews of that period. The following decisions will serve in illustration: Interest may not be exacted even from non-Jews, nor even such minor profits as the Talmud designates as אבק ריבית ("the dust of interest"), these being allowed only when customary in non-Jewish business circles ("Sha'are Ẓedeḳ," iv. 2, 20, 40). It is characteristic of Amram's method to avoid extreme rigor; thus he decides that a slave who has embraced Judaism, but desires to postpone the necessary circumcision until he feels strong enough for it, is not to be hurried (*ib.* iv. 6, 11). He combats superstition, and places himself almost in opposition to the Talmud, when he protests that there is no sense in fasting on account of bad dreams, since the true nature of dreams is not known (Ṭur, Oraḥ Ḥayyim, § 568). Amram's rules concerning the methodology of the Talmud are of considerable value (Mueller, "Mafteaḥ," p. 123).



Sculptured Slab Showing Effigy of Hammurabi or Amraphel.

(From Ball, "Light from the East.")

But the most important work of Amram, which marks him as one of the most prominent of the geonim before Saadia, is his "Prayer-book," the so-called "Siddur Rab Amram." Amram was the first to arrange a complete liturgy for use in synagogue and home. His book forms the foundation both of the Spanish-Portuguese and of the German-Polish liturgies, and has exerted great influence upon Jewish religious practise and ceremonial for more than a thousand years, an influence which to some extent is still felt at the present day. For Amram did not content himself with giving the mere text of the prayers, but in a species of running commentary added very many Talmudical and gaonic regulations relating to them and their allied ceremonies. His "Prayer-book," which was made familiar by the many extracts quoted from it by the liturgical writers of the Middle Ages, and which served as the model for Saadia's and Maimonides' own prayer rituals, was published complete for the first time in Warsaw, in the year 6185, by N. N. Coronel, under the title, "Seder Rab Amram Gaon." The work as published is composed of two parts. The second part containing the *seliḥot* (propitiatory prayers) and *pizmonim* (liturgical poems) for the month of Elul, for New Year and the Day of Atonement, is certainly not the work of Amram, but appears to belong to a much later period. Even the first portion, which contains the prayers proper, is full of interpolations, some of which, as the "Ḳedushah" (Sanctification) for private prayer, are evidently later additions in the manuscripts. But not much weight can be attached even to portions of the book which are specifically given under the name of Amram; many of the explanations are certainly not by him, but by the academical copyists who appended his name to them, speaking of him in the third person. These explanations of the prayers make no reference to any authorities later than the following: Naṭronai II., Amram's teacher (17 times), Shalom, Naṭronai's predecessor in the gaonate (7 times), Judah, Paltoi, Zadok, and Moses, geonim before Amram (once each) Cohen Ẓedeḳ (twice), Nahshon and Ẓemaḥ, contemporaries of Amram (twice each), and Nathan of unknown date. The only authority mentioned of later date than Amram is Saadia (p. 4*b*). This indicates that the additions to the text of the prayers must have originated in Amram's time. Certainty on this head, however, can only be obtained by a comparison of the printed text with the manuscripts; that of Almanzi, according to the specimens given by Luzzatto, varies considerably from the printed text. Israel ben Todros (1305) mentions some *azharot* as having been composed by Amram; but no trace of these can now be found (see Neubauer, in "Jew. Quart. Rev." vi. 703).

L. G.

AMRAM B. SIMON B. ABBA: The son of a scholar, and the nephew of R. Ḥiyya ben Abba; he seems to have remained without distinction in the scholarly world. His name is only connected with two homiletic observations which he quotes in the name of R. Ḥanina (Sanh. 70*a*, Shab. 119*b*).

S. M.

AMRAPHEL.—Biblical Data: A king of Shinar (Gen. xiv. 1, 9), who invaded the West in conjunction with Chedorlaomer, king of Elam, and others, and destroyed Sodom. The identity of the name has long been a subject of controversy among Assyriologists, and is not even yet established to the satisfaction of all scholars. Schrader was the first to suggest ("Cuneiform Inscriptions and the Old Testament," ii. 299 *et seq.*) that Amraphel was Hammurabi, king of Babylon, the sixth king in the first dynasty of Babylon. This is now the prevailing view among both Assyriologists and Old Testament scholars. The transformation of the name Hammurabi into the Hebrew form Amraphel is difficult of explanation, though a partial clue is perhaps furnished by the explanation of the name in a cuneiform letter as equivalent to Kimta-rapashtu (great people or family). On this basis "'am" = "Kimta" and "raphel" = "rapaltu" = "rapashtu."

Hammurabi was the founder of the centralized kingdom of Babylonia, with the capital at the city of Babylon. The length of his reign is given in the native list of kings as fifty-five years, but this long period is not perfectly certain, as a recently discovered chronicle throws doubt upon some figures in the king-list from which the number fifty-five is obtained, and puts the length of his reign at forty-three years. The period at which Hammurabi reigned is also the subject of much dispute. Sayce locates his reign at 2376–33 B.C. ("Early Israel," p. 281), on the basis of the native sources, and counting the second dynasty with its long reigns (for example, sixty, fifty-six, fifty-five, fifty years) as of equal historical character with the first. Lehmann ("Zwei Hauptprobleme der Altorientalischen Chronologie") prefers the figures 2248–2194, while Hommel would still further reduce them. The higher the figures the more difficult is the identification with Amraphel, or with the period to which the narrative of Gen. xiv. is usually supposed to refer.

Hammurabi began to reign in Babylon when the Elamites were in possession of the kingdom of Sumer and Akkad. They were driven out and the whole country was united under his rule. The dominion thus set up was strengthened by great works of peace, the chief of which were the digging of a canal at Babylon and the erection of a great granary there; the building of temples in Larsa and Sippara, and the construction of the walls of the latter city, "like a great mountain." The union of Babylonia accomplished by this monarch endured until the scepter passed from the Semites to the Persians in 538 B.C. Hammurabi himself was honored and imitated, even to the copying of his inscriptions, by kings of the latest period, such as Nabopolassar and Nebuchadnezzar (Rogers, "Outlines of History of Early Babylon," pp. 27–30). A conqueror so great as he may well have penetrated and conquered as far west as Syria and Palestine.

R. W. R.

——**In Rabbinical Literature:** According to Rab and Samuel, Amraphel is identical with Nimrod. Some say Amraphel was his real name, and he was called Nimrod, "the chief rebel," as leader of the tower-builders, "who led the world unto rebellion" (שהמריד את העולם) against heaven's Ruler; others again say Nimrod was his real name, and he was called Amraphel as the one who "commanded them to cast Abraham into the fire" (אמר והפיל) ('Er. 53*a* and Targ. Yer. to Gen. xiv. 1). Among other fanciful etymologies the name is explained as that of one whose "commands brought darkness [destruction] on the world" (אמרה אפלה), or of one who "provoked and made sport of the world" (אמרי ואפלי) (see Gen. R. xlii.; Midr. Leḳaḥ Ṭob to Gen. xiv. 1, ed. Buber, i. 63, note 4; also Beer, "Leben Abrahams," pp. 130, 131). See also ABRAHAM, NIMROD. K.—J. SR.

AMSCHEL. See ANS-CHEL.

AMSTERDAM (formerly **Amstelredam,** and so written in Jewish documents): One of the capital cities of the Netherlands founded as a fishing village in the thirteenth century. No Jews lived there in the early period when it was under Spanish domination. The history of its Jews may be best considered under three divisions: (1) the Sephardim, until 1795; (2) the Ashkenazim, until 1795; (3) both congregations, from 1795 to the present time (1901).

I. The Sephardim Until 1795: There is no actual proof of the existence of Jews in Amsterdam before the latter half of the sixteenth century, though the probability is strong that some lived there earlier. When Holland joined the Union of Utrecht (1579), which, among other provisions, forbade persecution on religious grounds, the Maranos in Portugal fixed their hopes on Amsterdam, and, according to Franco Mendes and Graetz, the first Maranos settled there in 1593. They were Manuel Lopez Pereira, his sister Maria Nuñez, and her uncle Miguel Lopez. Their voyage had not been prosperous; they were first captured by English pirates and taken to London. They again set sail for Amsterdam, only to be flung by a storm upon the coast of East Friesland at Emden. Thence the Rabbi Moses Uri Levi (born 1544) helped them on to Amsterdam, and followed them shortly in order to receive them back into Judaism. Soon thereafter other Jews came from Portugal, mainly relatives of these first comers.

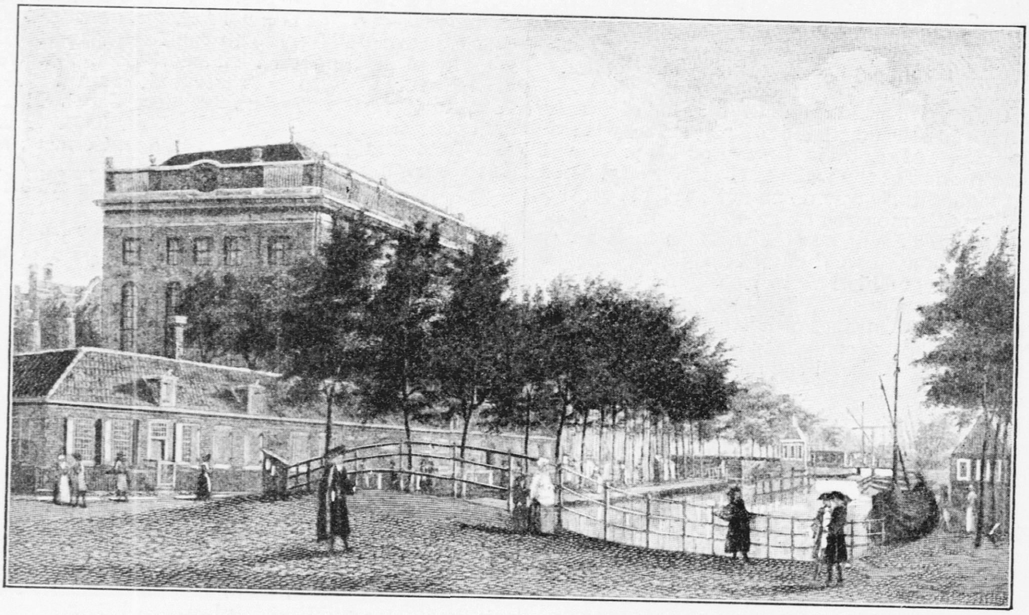
The First Two Synagogues.

On Atonement Day, 5357 (October 2, 1596), they met together for worship—probably for the first time—in the house of Don Samuel Palache, ambassador of the emperor of Morocco to the Netherlands. The congregation numbered sixteen. Soon afterward a hall for worship was secured, named "Beth Ya'aḳob," after one of its founders, Jacob Tirado, and consecrated on New-year's Day, 5358. Moses Uri Levi was preacher: he spoke in German; and his son Aaron ha-Levi (born 1578) translated his sermon into Spanish. The rabbis of this synagogue, called "ḥakamim," were Joseph Pardo (in office from 1597 to 1619), and Moses ben Aroyo (from 1597 until his departure for Constantinople). In 1616 Saul Levi Morteira became rabbi. Most of these facts, as well as many incidents of the times, are mentioned by De Barrios. In the archives of the city of Amsterdam, probably the oldest date dealing with Portuguese Jews is November 28, 1598, when there was entered in the "Puyboek," v. 22*b*, the announcement of the intended marriage of Manuel Lopez Homé and the above-mentioned Maria Nuñez. The community grew apace through the constant arrival of refugees from Portugal and southern France; and a second hall for worship was opened by Isaac Franco Medeiros in 1608, under the name of "Neweh Shalom." Its first three rabbis were: Judah Vega (in office from 1608 until his departure for Constantinople); Isaac Uzziel of Fez (1610–1622); and Manasseh ben Israel (1622).

Increased Immigration.

Amsterdam could well be satisfied with this accession of Jews. Holland was, in those times, a rather poor country; and the Portuguese Jews brought great wealth into the land. They took part in transmarine enterprises and fostered trade. And not alone did the city's material riches increase through them: its intellectual wealth increased also. Mention is made of Jewish physicians and poets of about this time. From among the latter, it is necessary to mention only REHUEL JESURUN (called also Paulo de Pina), whose "Dialogo dos Montes" was recited in 1624, in the synagogue "Beth Ya'aḳob." The various congregational institutions were carefully fostered. The Portuguese community secured a burial-place first in Groede (North Holland) in 1602. In April, 1614, another cemetery was obtained in Ouderkerk, on the Amstel, which is still in use. But after a peaceful existence of ten years, the Neweh Shalom Congregation was disturbed by discord among its members. Sharp reproofs administered by the ḥakam Uzziel in his sermons, and differences of opinion concerning divers ritual matters, alienated a number of them, who accordingly, under the leadership of David de Bento Osorio, formed a third congregation, entitled "Bet Yisrael" (1618). Their rabbis were David Pardo (installed 1618), Samuel Tardiola (in office from 1619 to his departure for Jerusalem), and Isaac Aboab da Fonseca (installed 1626).

Thus far the Jewish services had been tacitly rather than openly permitted by the city authorities. During the contests between the Remonstrants and the contra-Remonstrants frequent allusion was made to the liberty of worship enjoyed by the Jews. Accordingly the States General appointed a commission to make statutes concerning the Jews (1615), and a city ordinance, dated November 8, 1616, prohibited them from speaking publicly against the Christian religion or publishing anything against it, and forbade them to intermarry with Christians. At the same time special forms of oath for Jews were drawn up in Spanish (see "Handvesten," 1748, ii. 472). The result of the commission was a resolution (1619), granting each city authority to make its own regulations concerning Jews.



Sephardic Synagogue at Amsterdam, Showing Its Position on Canal.

(From De Castro, "De Synagoge der Portugues Israel. Gemeente.")

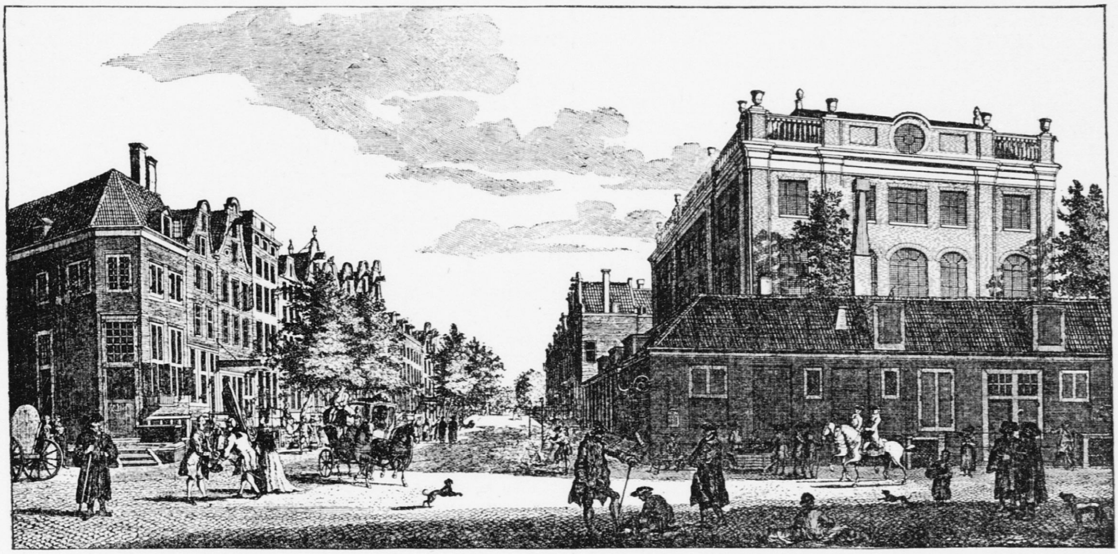
Amalgamation.

The Portuguese Jews, as above described, had founded three congregations. When, in the beginning of the fourth decade of the seventeenth century, numerous Jews from other countries came to Amsterdam, those from Spain and Portugal wished to provide for a closer union with each other; after long negotiations, the three congregations were consolidated (1638). The synagogue "Beth Ya'aḳob" was sold; that of "Bet Yisrael" was remodeled and used as a school (Talmud Torah), and "Neweh Shalom" was retained as the common place of worship. A constitution of forty-two articles, which had received the sanction of the city authorities, was proclaimed in this synagogue (1638). With its supplement (Huishoudelyk Reglement) it plainly reveals the traditional autocracy of the "parnasim" (presidents and wardens); in all disputes they alone could decide. The following rabbis of the different synagogues were reinstated in the order of priority of appointment: Saul Levi Morteira (died 1660), David Pardo (died 1657), Manasseh ben Israel (in office until 1655, and died in Middelburg 1657, on his journey back from London), and Isaac Aboab da Fonseca (died 1693). The importance of the Amsterdam Jewish congregation in the middle of the seventeenth century may be seen from the following incident. While Manasseh ben Israel was in London, endeavoring to secure from Cromwell the readmission of Jews to England, Charles II. notified the Jewish congregation in Amsterdam (1656), that if they would support him with money and arms in his projected invasion of England, he would willingly grant them permission to settle there when he should have conquered the country. Though outwardly flourishing, the united congregation was not without its internal troubles. In 1640 Uriel Acosta, and in 1656 Baruch Spinoza, were placed under the ban of excommunication.

The Shabbethai Ẓebi Movement.

Now came a time wherein all Judaism was set in a state of ferment. Shabbethai Ẓebi, the false Messiah, appeared. The great majority of the Portuguese Jews in Amsterdam in 1666 were infected with the prevailing mania, and conditions might have become serious had not Jacob Sasportas (a member of the rabbinical board) stepped forward to combat with all his energy the insanity which had seized upon everybody. It had already gone far indeed; prayers had been offered in the synagogue for the "King Messiah Shabbethai Ẓebi"; prayer-books had been printed in which the date was given as "the year one of the Messiah," and adorned with frontispieces portraying Shabbethai Ẓebi. Many of the congregation had even journeyed to Adrianople to see the "Messiah." Reaction, however, soon set in; Shabbethai Ẓebi's career came to an ignominious end. The results would have been far more serious for the Portuguese congregation in Amsterdam had not the "mahamad" (board of wardens) persuaded the magistrates to sanction a resolution in 1670 that no one might sever his connection with the congregation under penalty of the severest excommunication.

Meanwhile, the financial resources of the congregation being in excellent condition, the members conceived the idea of building a synagogue worthy of the continually increasing membership. In 1670 the plans took definite form, and in 1671 the cornerstone of the new synagogue was laid, and four years later (1675) the consecration, with imposing ceremonies, took place.



SEPHARDIC SYNAGOGUE AT AMSTERDAM AS SEEN FROM THE "BREESTRAAT."

(From an engraving by P. Fouguet, Jr.)

The Amsterdam Portuguese Synagogue.

Jews and Christians alike glorified this, certainly the most famous synagogue of Europe, and numerous copperplate engravings, still extant, made by the most celebrated Dutch engravers, depict its imposing proportions. At its consecration the congregation numbered 898 male members, of whom 586 were married and 312 single.

Hebrew Printing and Publishing.

Peace now reigned and a period of quiet progress ensued. The congregation became the focus toward which all literary endeavor in Judaism converged. Menasseh ben Israel completed the printing of the first Hebrew book in Amsterdam, January 1, 1627 (compare Steinschneider, "Cat. Bodl." No. 2129), thereby laying the foundation for that development of Hebrew typography and publishing in which, until the beginning of the nineteenth century, Amsterdam had never been equaled by any other city. So highly esteemed was the Amsterdam imprint that even foreign reprints claimed the credit of being printed "with Amsterdam type." How far-reaching the Amsterdam book-trade was may be seen from a document, dated February 7, 1685, found in the city archives of Breslau (Brann, in "Monatsschrift," 1896, p. 476), which advised against the establishment of a Hebrew press in Silesia, "because there are three very large Jewish printing establishments at Amsterdam in Holland, whence books are sent by sea to Danzig and Memel, thus abundantly providing for the Jews of Poland and Lithuania." Besides the printing-house of Manasseh ben Israel, there were those of David Tartas, Imanuel Benveniste, and Joseph and Imanuel Athias. In the German (Ashkenaz) community the best-known presses were those of Uri Phœbus ha-Levi and Solomon ben Joseph Proops, the latter the founder of a family of printer-publishers who have supplied all Europe with their products (see Steinschneider and Cassel, "Jüdische Typographie und Jüdischer Buchhandel," in Ersch and Gruber's "Encyklopädie," ii. 28, 64–74). It was therefore not strange that Jews, from all parts of the world, were induced to visit Amsterdam, either to get their books printed or to seek the patronage of the influential men there. Jacob Sasportas (born 1610 in Oran, Algeria; died 1698), who became chief rabbi of the Portuguese community after Aboab's death, in his responsa, "Ohel Ya'aḳob" (Amsterdam, 1737), relates many things about the literary life of Amsterdam. The Jewish school of the Sephardic community (see below) also became distinguished for scholarship (see Shabbethai Bass, "Sifte Yeshenim," preface; Güdemann, "Quellenschriften," p. 112, Berlin, 1891).

The successor of Jacob Sasportas was Solomon de Oliveyra (died 1708), a scholar and prolific writer, who in turn was followed by Solomon Judah Ayllon (born at Safed, 1664). Ayllon, who had formerly been a zealous partizan of Shabbethai Ẓebi, came to Amsterdam from London, and was associated in the rabbinate with Solomon de Oliveyra (1701). While chief rabbi in Amsterdam he became the central personage in the contests that were instigated by Nehemiah Ḥiyyah Ḥayyun (1713), shortly after the latter's arrival in Amsterdam. Besides him, Ḥakam Ẓebi, then chief rabbi of the Ashkenaz community, and Moses Ḥages, an emissary from Jerusalem (born about 1660, died about 1741), took part in this matter (for particulars see Grätz, "Gesch. d. Juden," x. note 6). Ayllon died in 1728. He was followed by David Israel Athias (died 1753) and Isaac Ḥayyim Abendana de Britto (died 1760), who were chief rabbis together.

The “‘Eẓ Ḥayyim” School.

These two, like their predecessors, held honorable positions as scholars. In 1637, under Saul Levi Morteira, the Jewish school “‘Eẓ Ḥayyim” was founded; Solomon de Oliveyra, in 1699, introduced a rule that the pupils of the highest class should work out legal decisions every month. When Abendana became president of this institution, he had these exercises printed and published every month. Through them his reputation spread far and wide. The collection of his responsa was entitled “Peri ‘Eẓ Ḥayyim” (Amsterdam, 1728–1811, 15 volumes). After Abendana's death the rabbinate remained vacant for a short time. In 1762 Solomon Salem (born at Adrianople 1717, died 1781) was called from Sofia to Amsterdam. He presided in the rabbinate nearly twenty years, and became well known as an author. His successor was David Acohen de Azevedo (installed 1782, died 1792), who was followed by his son Daniel (installed 1792), during whose period of office the emancipation of the Jews in Holland took place.

II. The Ashkenazim Until 1795: Even less is known about the first settlements of German Jews in Holland than about those of their Portuguese brethren. In the beginning of the seventeenth century a few German Jews seem to have dwelt in Amsterdam, for in the burial-lists of the Portuguese congregation several “Tedescos” (Teutons, Germans) are mentioned. A congregation was not formed until 1635. Amelander, in his “Scheerit Israel,” relates that in a book about which there exists no other information (perhaps a manuscript) by Maharam Maarsen, he read that the Germans held divine worship for the first time on New Year, 5396 (September, 1635). The Portuguese congregation helped its German sister-community in every way, and it grew rapidly also. Its first rabbi was Moses Wahl. It soon (1642) purchased in Muiderberg, about twelve miles from Amsterdam, the burial-ground still in use. The second rabbi was Isaac ben Joshua of Emmerich, who was followed shortly by his brother Abraham ben Joshua of Worms (died 1678). Soon after the persecution of the Jews in Poland under Chmielnicki, and especially during the massacres of 1654 and 1655, many Jews came by sea to Amsterdam, and founded a separate Polish congregation. Their rabbi was Judah Loeb ben Solomon of Wilna. They purchased (1660) a cemetery also in Muiderberg. In 1673, owing to disputes between the Polish and German communities, the magistrates stringently forbade the former to have separate communal institutions; they accordingly joined the Ashkenazim, and Judah Loeb went to Rotterdam, where he became chief rabbi. The German congregation had been presided over since 1667 by Isaac b. Simeon Deckingen of Worms. During his term of office the great Synagogue was built and consecrated on the first day of Passover, 5431 (1671); its construction cost 33,000 gulden ($13,200). In spite of this sum of money, considerable for those days, the German congregation was by no means so wealthy as the Portuguese, and in the ensuing period appeals for assistance had frequently to be made to the city authorities.

Influx of Polish Jews.

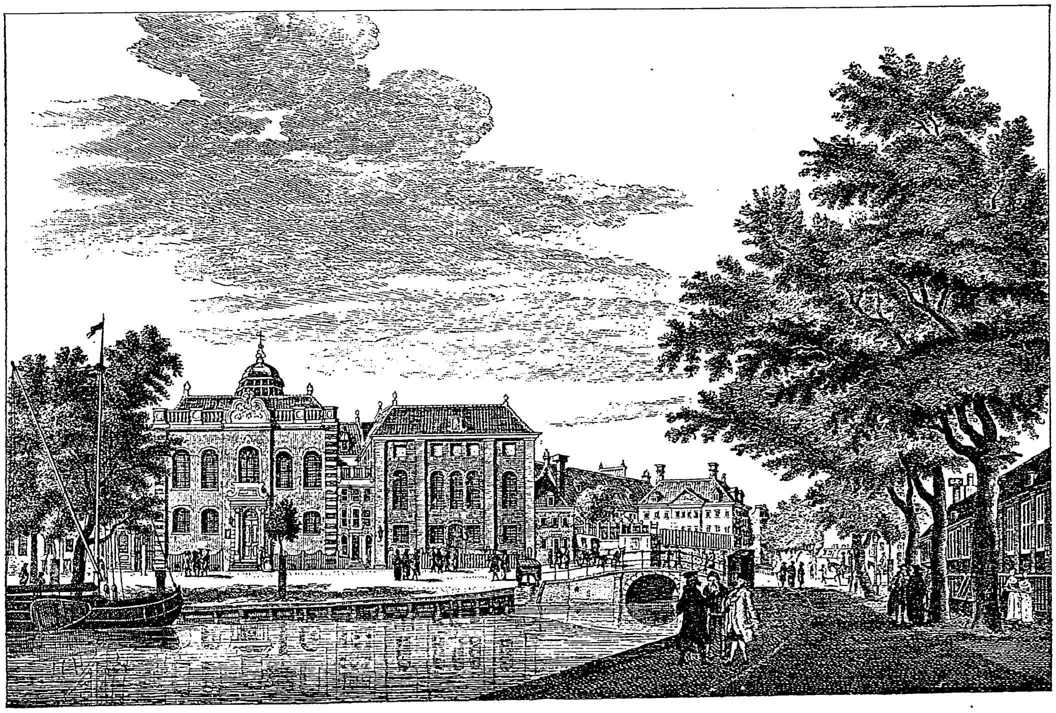
In 1672, the forces of Louis XIV. advanced to the neighborhood of Amsterdam, which was rendered unsettled by the encampment of French soldiers nearby. The road to the cemetery in Muiderberg being blocked, the magistrates granted to the Jews another burial-place within the city limits, where, from 1672 to 1674, more than ninety persons were interred, among them Chief Rabbi Isaac Deckingen (died 1672). In 1677 Meir Stern of Fulda was appointed to succeed him. His participation in the preparation of Judæo-German Bible translations is described by Grätz, “Gesch. d. Juden,” x. 298. He was a cabalist, and gave instruction in the Cabala to Knorr von Rosenroth. In 1679 he was called to Cracow, but died en route at Niederwesel; his successor in Amsterdam was David Lida (formerly chief rabbi of Mayence), who came to Amsterdam in 1680. In the very first years of his rabbinate Lida engaged in a dispute with Nisan b. Judah Loeb, the brother-in-law of R. Wolf, then chief rabbi in Berlin, whose work he himself had published in Amsterdam. Lida left Amsterdam, but the Portuguese rabbinate interested itself in his behalf. Later he seems to have become suspected of Shabbethaism, and thus arrayed against himself not only the Ashkenazic authorities, but also the Portuguese. Then the “Four-Lands' Synod” (see Wa‘ad Arba‘ Araẓot) took up his cause, with the result that he made his peace with the Amsterdam congregation and returned there. He was appointed, with the approbation of the magistracy, as chief rabbi, for three years; but at the expiration of the term his contract was not renewed. He left Amsterdam, and went to Lemberg, where he died, 1696 (David Lida, “Beer ‘Esek,” 1684; responsa, “Ohel Ya‘aḳob,” Nos. 74–76; Jacob Emden's edition of the “Kiẓẓur Ẓiẓat Nobel Ẓebi,” p. 59*a*, Altona, 1757; Buber, “Anshe Shem,” p. 56). While he was in Amsterdam the notorious Eisenmenger visited him (“Entdecktes Judenthum,” i. 843, Königsberg, 1711). Lida's successor was Moses Judah ben Kalonymus Cohen (died 1705), or, as he is generally styled, “Rabbi Leib Ḥarif.” During his rabbinate city riots occurred (1696); the mob turned its attention to the Jews, and several houses were plundered. The authorities took energetic and prompt steps to protect the Jews, and the disturbances soon subsided. These outbreaks have been described in “Historie van den Oproer te Amsterdam, 31 Januari, 1696,” Amsterdam, 1725, and in a similar work in Judæo-German by Joseph Maarsen; see Steinschneider, “Cat. Bodl.” No. 5954, No. 1.

After Leib Ḥarif's death, Saul of Cracow was called to Amsterdam; while on the way he died in Glogau (1707). In the interim the duties of the office were discharged by Judah Loeb b. Anschel, formerly rabbi in London, then chief rabbi in Rotterdam. In addition, the Amsterdam congregation employed at this time three rabbinical associates—Josef ben Reuben Judah Cohen, Isaac ben Solomon of Zamosc, and Pinchas Selig ben Moses of Posen. But soon thereafter, about the end of 1708, there was again a chief rabbi, Aryeh Judah Kalisch. He was destined, however, to preside over the congregation for only a short time; Jacob Emden tells in his autobiography (“Megillat Sefer,” p. 28) that quarrels in the congregation threw him upon a sick-bed, where he died (1709). His successor was Ẓebi Hirsch Ashkenazi, or, as he was universally known, Ḥakam Ẓebi; he was called from Altona. In the beginning he was regarded not alone by the Ashkenazim, but also by the Sephardim, as a superior being; owing, however, to his incorruptible honesty and unselfishness he soon had many enemies. Nehemiah Ḥiyya Ḥayyun, already mentioned, managed to render his position in the congregation untenable. Ḥakam Ẓebi, by his outspoken opposition to this unprincipled man, had drawn upon himself the ill-will of the Portuguese congregation, and of the authorities of his own community. The latter brought the matter before the magistrates, who, in order to obtain full information upon the subject, consulted not only the theological professors of Amsterdam, Utrecht, Leyden, and Harderwyk, but also the

Portuguese parnasim (wardens) as well. It was no wonder then that, with this array of counselors, Ḥakam Ẓebi was declared to have forfeited his office (1714). He went by way of London and Emden to Lemberg, where, after officiating as rabbi for a short time, he died in 1718.

Internal Schisms.

His departure, however, did not silence the disputes in the congregation; the magistrates therefore would not grant permission for the election of a successor. The duties of the office were meanwhile discharged by the assistants (dayyanim), Moses Frankfurt, Joseph Dayyan (both well known as owners of printing-offices), and Isaac of Zamosc. Ultimately the city authorities issued the desired permission, and Abraham Judah Berlin, formerly rabbi in Halberstadt, became rabbi (1717). Peace seems to have been restored during the thirteen years of his incumbency, but on his death (1730) disputes broke out again, and another five years elapsed before a successor was appointed. Since agreement in the congregation was impossible the following curious program was arranged: the magistrates allowed each one of the seven parnasim to nominate a candidate, and of these the magistrates themselves, by a resolution dated Jan. 31, 1735, selected three, to whom the rabbinate was to be offered successively in a certain fixed order. The first one on the list was Eleazar of Brody, who accepted the appointment, and was received with great honor (1735). A medal was struck in celebration of his arrival, but he did not stay long; for he left Amsterdam in 1740 to settle in Jerusalem, and died in Safed (1741). This time the position was not left vacant; the congregation had become more harmonious, and it appointed Ḥakam Ẓebi's son-in-law Aryeh Loeb, who was the son of that Saul who died in 1707 on his way to Amsterdam, to enter upon the duties of the rabbinate. Aryeh Loeb, or, to give his full name, Levi Saul Löwenstam, became known principally through the heated discussion between his brother-in-law Jacob Emden and Jonathan Eibenschütz. When Emden fled from Altona he found refuge with Aryeh Loeb in Amsterdam. It was owing to Loeb's influence that it was decided (1740) to establish a *bet ha-midrash* (college for Jewish theology), provided with a full library. It was in many ways a prosperous period for the Amsterdam congregation. In 1730 the increase in Jewish population necessitated the opening of another synagogue, which was further enlarged in 1750.



ASHKENAZIC SYNAGOGUE AT AMSTERDAM.

(From an engraving by J. de Bayer.)

Owing to its printing establishments, libraries, and scholars' associations, the Ashkenazim community of Amsterdam soon acquired a reputation throughout Europe superior to that of the Portuguese. Aryeh Loeb died in 1755; his son Saul Löwenstam (born in Rzeszow 1717, died 1790) became his successor. Löwenstam's name is distinguished in the annals of Jewish scholarship; the large number of literary "approbations" which were sought of him prove this.

Autocratic Power of the Parnasim.

During the whole of this period the power of the parnasim was almost absolute. Consulting only those who had already served in the office, they modified at will the statutes of the congregation and procured the approval of the magistrates. For the lay members of the congregation there remained nothing but implicit obedience. A petition presented by a large majority of the members to the magistracy in 1780, in which they protested against the arbitrary action of these officials, may be regarded as a harbinger of peace.

At first it met with no success, but in course of time these abuses were remedied. During the rabbinate of R. Saul's son, Jacob Moses Löwenstam, who was elected in 1790, the emancipation of the Jews in Holland may be said to have commenced. The new times demanded new rights.

Civil Disabilities.

III. The United Congregations from 1795 to 1900: Although the Jews in Amsterdam enjoyed full religious freedom, their civil liberties were materially restricted during the whole of the period described. By a decree of 1632 every ordinary pursuit was closed to them. Only those actually pertaining to their religion were permitted; such as dealing in meat and other provisions, Hebrew printing and publishing. They were also allowed to dispense drugs. The universities would perhaps have accorded degrees to Jews, but the Hof van Holland decreed (1658) that no Jewish advocate might plead before the courts. The oppressive effect of such statutes was felt more and more. When, therefore, the French took possession of Amsterdam (1795) many of the Jews there became imbued with revolutionary ideas, and founded an association called "Felix Libertate" (1795). This "People's Society," as the expression then ran, became the soul of a movement to acquire civil rights for Jews. The first attempt was directed toward securing the right to vote and to serve in the Citizens' Guard. The chief movers in this matter were Moses Solomon Asser, Jacob Sasportas, and H. de H. Lemon, who labored zealously in the cause, both in speech and in writing. The pamphlets and newspaper articles, for and against it, were numerous. But, strange to say, they met with opposition within the Jewish camp, as well as outside of it; in both congregations the rabbis and parnasim arrayed themselves in opposition more persistently than the members. Probably the full extent of the movement was not quite clear to them, and the parnasim, no doubt, feared a diminution of their autocratic power. But the "Felix Libertate," undismayed, petitioned the "Nationale Vergadering" (National Assembly), asking that Jews be given equal rights with other citizens, and a commission was appointed to consider the matter. For eight days it was publicly discussed in the Assembly. Finally, a resolution was adopted declaring that Jews should possess equal rights with their fellow citizens (1795). These discussions, however, produced divisions in the Jewish congregations themselves. Jacob Moses Löwenstam, chief rabbi of the Ashkenazim (called Jacob Saul in official documents), and Daniel Acohen de Azevedo of the Portuguese community, proposed to expel members of the "Felix Libertate" from their congregations. These, however, separated of their own accord, and formed a new congregation, "'Adat Yeshurun," with Isaac Graanboom as rabbi (installed 1797, died 1807). They erected a new synagogue, consecrated Sept. 27, 1799, and also purchased a cemetery in Overveen, near Haarlem. The strife attained large proportions, and every week during the years 1797 and 1798 both sides published so-called "Discourses" in Judæo-German, which afford interesting contributions to the history of the time (see Roest, "Cat. Rosenth." pp. 70 and 71). Attempts at reconciliation were made from many quarters, but for the time remained unsuccessful.

The Kingdom of Holland.

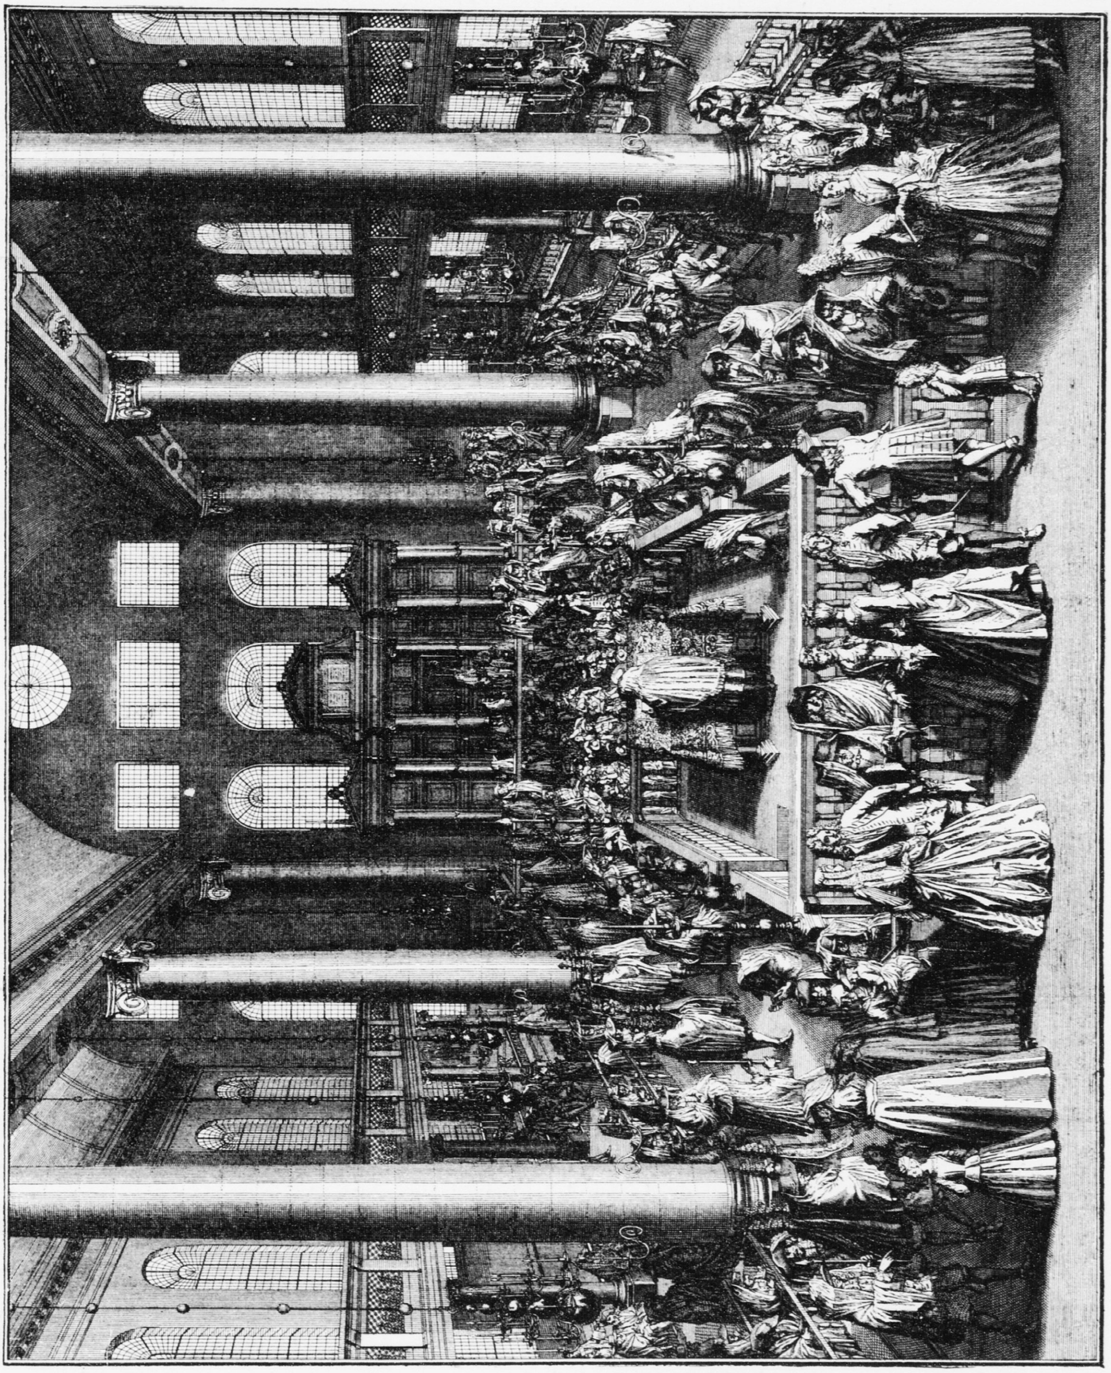
Holland became a kingdom. Louis Bonaparte not only sanctioned the emancipation of the Jews, but showed himself in all things their friend. Soon after his coronation in 1806, in order to bring about a reconciliation, he appointed a commission consisting of the Dutch jurist Jonas Daniel Meyer, Jonah Rintel, and Judah Litwack, the last two of the new congregation. After many meetings and resolutions a compromise was devised and approved by the king; at the same time a new royal statute for the senior congregations was announced. King Louis interested himself not only in the Amsterdam community, but also in the affairs of the Jews of all Holland, to regulate which he appointed an Ober-Consistorium. He endeavored likewise to raise the grade of instruction for Jewish children; he also formed two regiments, of 813 men each, made up exclusively of Jews; but they were disbanded on the incorporation of Holland with the French empire (1810), and the Jewish soldiers, like other Hollanders, were distributed among the French regiments.

William I., of the House of Orange, who was crowned king of the Netherlands in 1815, like other members of his house, was friendly to the Jews. Soon after his coronation he appointed a committee to regulate the relations of the Jews to the state. A law was passed (1814) concerning the "Israelietisch Kerkgenootschap," and as a court of the last resort in Jewish matters a "Hoofdcommissie tot de Zaken der Israelieten" was instituted. A further decree (1817) required the congregations to maintain Jewish free schools for the poor.

Educational Work.

In literary matters likewise the congregation of Amsterdam developed great activity. Similar to the "Meassefim" of Germany, several persons associated themselves for the study of Jewish literature under the name of "Toelet." Many volumes of poems and essays in Hebrew were published by the society. The school "Sa'adat Baḥurim," established in 1708 by the chief rabbi, Aryeh Judah Kalisch, was in 1834 made a state school, under the name "Nederlandsch Israelietisch Seminarium," for the training of rabbis and teachers. Steps were also taken for the spread of culture among the Jewish population. The principal workers were Moses Lemans (born at Naarden 1785, died at Amsterdam 1832), Samuel Mulder (1792–1862), and the best known of them Gabriel Polak (1803–1869). They exercised great influence upon the development of the Jews of Amsterdam, and furnished them with Jewish school-books and translations of the Bible and the various prayer-books into the Dutch language. After the death of Jacob Moses Löwenstam (1815), his son-in-law, Samuel Berenstein, became chief rabbi of the German congregation. He, too, exerted himself in behalf of progress. When he died (1838) the chief rabbinate was not filled immediately, but a rabbinical college (bet din) was entrusted with the guidance of all religious affairs. The members were A. J. Susan (died 1861), J. M. Content (died 1898), B. S. Berenstein (later chief rabbi at The Hague), J. S. Hirsch (died 1870), J. D. Wynkoop (since January, 1871). The Portuguese congregation, upon the death of De Azevedo in 1822, likewise appointed no chief rabbi, but a bet din, consisting of Jacob de Elieser Ferares (died 1852), Solomon de Abraham Acoen Pereira (died 1828), Raphael Montezinos (died 1866), Isaac Mendes de Sola (died 1849), Aaron Mendes Chumaceiro (in 1860 chief rabbi of Curaçao), and David Lopez Cardozo (died 1890), Aaron Vas Diaz (died 1885), Jacob Lopez Cardozo (until 1873), Jacob Mendes Chumaceiro (died 1900), I. Van J. Palache (from 1885), and A. R. Pereira (from 1885). In the Portuguese community the reorganization of public affairs was by no means as thorough as in the German; moreover, with a few exceptions, they took less interest in Jewish literary matters.

In 1848 Holland received a partially new constitution; State and Church were almost completely separated. The minister of the time was instrumental in calling a convention at The Hague in 1850, which consisted of twenty-six delegates from the various Jewish congregations throughout Holland. Many sessions were held in the endeavor to arrive at a general state law for the Jewish congregations, but without any appreciable success. Ten years later a new convention was called; it framed a draft for such a law, which, however, was received with only faint approval by the two congregations in Amsterdam, which together composed more than half of the total Jewish population of the country. Finally, after twenty years' work, the "Nederlandsch Israelietisch



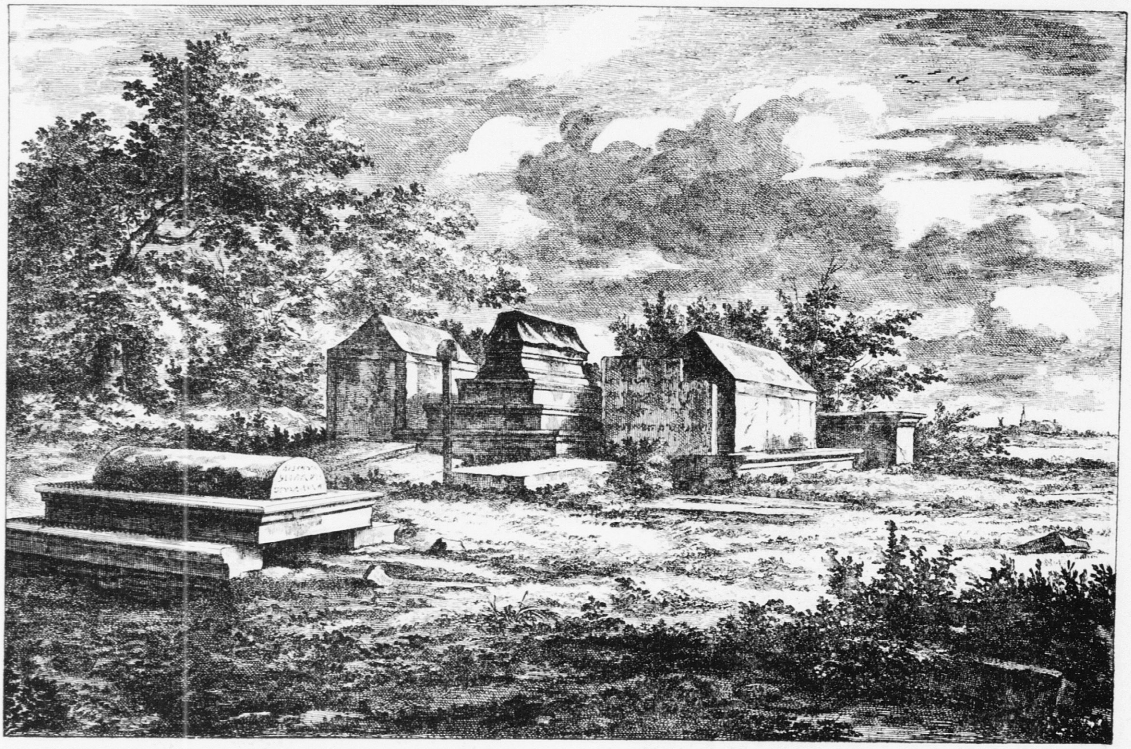
INTERIOR OF SEPHARDIC SYNAGOGUE AT AMSTERDAM. (After Picart.)

Kerkgenootschap" was organized (1870). The Portuguese separated and formed an independent "Kerkgenootschap." The former "Hoofdcommissie" was replaced by the "Centrale Commissie tot de Algemeene Zaken van het Nederlandsch-Israelietisch Kerkgenootschap," which held its first session in 1870. During this period there were several men in Amsterdam distinguished for their learning, their philanthropy, and their championship of Jewish interests; of these may be mentioned the three brothers Hirschel (1784–1853), Meir (1793–1861), Akiba Lehren (1795–1876), and Solomon Rubens (died 1857).

The internal development of the congregation progressed quietly, and a threatened division in 1860 was fortunately averted. New life came to the Judaism of Amsterdam as well as to that of the whole land, when, in 1862, Dr. Joseph Hirsch Dünner (born in Cracow, 1832) was elected rector of the rabbinical seminary. Under his guidance the institution was reorganized in such fashion that both secular and Jewish subjects were included in the curriculum from the lowest classes up. The result was the graduation of a number of rabbis and chief rabbis, who were not only learned in the Law, but whose general academic culture earned for them universal esteem. The continued absence of a strong hand in congregational matters was, however, frequently felt; accordingly endeavors were made for the appointment of a chief rabbi again. In October, 1874, Dr. Dünner was elected to that office, and associated with him was a bet din of three, consisting of T. Tal (until 1881), J. D. Wynkoop (since January, 1871), J. Content (died 1898), A. S. Onderwyzer (since 1888), E. Hamburg (since 1899), and J. D. Wynkoop. During his term of office Dr. Dünner has reorganized the system of instruction in the schools, banished the Judæo-German, and made the vernacular compulsory. The social elevation of the poorer Amsterdam Jews has also received his close attention. On his initiative in 1875 a loan-bank (*Weldadigheidsfonds*) was established, which annually grants 1,200 loans of sums varying from 10 to 300 florins, without interest. A Jewish workingman's association, "Bezalel," was founded, to which, however, until now, unfortunately, only diamond-workers belong. Since there are very few Jewish mechanics besides those employed in the diamond industry and in the manufacture of cigars, another association was founded ("Shemirat Shabbat") to foster the study of handicrafts without sacrificing the religious feeling of apprentices, and, at the same time, to abolish street-peddling, which was carried on extensively by the poorer Jews.

Internal Development.

The field of literature also was not neglected. After the appearance, from May, 1867, of the "Joodsch-Letterkundige Bydragen," edited by the Jewish bibliographer Meyer Roest (died 1889), the same editor published (from 1875 to his death) thirteen volumes of the journal "Israelietische Letterbode," contributors to which were, besides Jewish scholars abroad, the following in Amsterdam: M. Roest, Dr. J. H. Dünner, Jacob Hoofien, L. Wagenaar, D. R. Montezinos, and others. Of Jewish weeklies, there appeared the "Centraal Blad" and the "Nieuw Israelietisch Week Blad," both still in existence. The monthly magazine of the Society of Jewish Teachers, entitled "Ahawah," is also published in Amsterdam. Though this city no longer holds that position of eminence in Hebrew typographic art that it formerly



CEMETERY OF SEPHARDIC COMMUNITY AT AMSTERDAM.

(From an engraving by Ruysdael.)

enjoyed, it is still represented in the Hebrew book-world by three large printing-offices. Notable collections of books are the "Bibliotheca Rosenthaliana" (a portion of the University Library); the library of the Portuguese Rabbinical Seminary, with the division "Livraria de Montezinos," which is rich in rare works; the library of the Neder. Isr. Seminary, and of the "Bet ha-Midrash 'Eẓ Hayyim," and several private libraries. In public life, Jews are to be met with in all positions; at the university and in the courts of justice; with the army, and in the state and city governments.

IV. Statistics: The number of the Jews of Amsterdam in 1795 was 20,052, out of a total population of 217,024; on November 19, 1849, 25,173, of whom 2,747 were Portuguese and 22,426 were Ashkenazim, out of a total population of 224,949. In the census of December 31, 1889, the total population was 408,061; of them 49,946 were Ashkenazim and 4,533 Portuguese Jews; in all 54,479. Detailed statistics of the Portuguese congregation have not been printed. The report of the Ashkenazic congregation for 1899 furnishes the following: In that year there were 349 weddings, and in the two cemeteries (Muiderberg and Zeeburg) 688 interments. The congregational budget for 1898 was 221,021.12 florins ($88,000). Of this 45,354.13 florins were expended for Jewish education, and 29,077.50 for charities, which are financially and administratively extra-congregational. The German congregation had eight synagogues, seating 2,668 men and 537 women. There are in addition about 25 smaller synagogues. In the schools of the congregation were registered, in 1899, 837 children. The Jewish free schools had 1,958 pupils, and the Jewish congregational kindergarten 650 children. The Jewish Seminary, with a complete high-school curriculum, numbered 70 students. Of benevolent institutions there were in 1899: (*a*) Hospital (built in 1885); 1,095 patients, with 41,644 days of treatment; discharged, 870; died, 120. (*b*) Surgical polyclinic; 6,075 patients, with 15,115 consultations. (*c*) Eye clinic; 1,303 patients, with 15,825 consultations. (*d*) Dispensary; 56,638 prescriptions. (*e*) Insane asylum; 151 patients, with 45,262 days of treatment; discharged, 10 cured; 2 incurable; 11 died. (*f*) Home for aged men and women.

Seal of Portuguese Congregation at Amsterdam.

(From the Congregational Archives.)

[An idea of the former communal activity of the Spanish and Portuguese Jews of Amsterdam may be gained from the list of their various societies, both for the cultivation of letters and the exercise of charity mentioned by Daniel Levi de Barrios in his "Triumpho del Govierno Popular." To the first or academic class belonged the following *yeshibot*: Keter Tora (כתר תורה); Tora Hor (תורה אור); Yesiba de los Pintos; Meirat Henaim (מאירת עינים), also called Yesiba Amstelodama; Tipheret Bajurim (תפארת בחורים) or Yesiba Quinta. Of charitable organizations, the following are mentioned: Abi Yetomim (אבי יתומים); Gemilut Jassadim (גמלות, חסדים); Temime Darex (תמימי דרך); Jonen Dalim (חונן דלים); Masquil el Dal (משכיל אל דל); Sahare Zedek (שערי צדק); Keter Sem Tob (כתר שם טוב); Resit Joxma (ראשית חכמה); Bahale Tesuba (בעלי תשובה). A number of similar societies have from time to time been formed among the so-called German Jews. There may be mentioned the Nederlandsch Israelietisch Seminarium for the training of rabbis, with the Saädat Bagurim (society for the assistance of the scholars); a "Gebroederschap" (ח"ק מצדיקי הרבים הגדולה יע"א) for the study of Hebrew literature; the "Dr. Samuel Israël Mulder-Stichting," founded in 1883 for the purpose of assisting worthy Jewish students of theology. There also exists a Reform synagogue which was founded about the middle of the nineteenth century. G.]

Of benevolent societies still existing, the following may be mentioned: In the Portuguese congregation: a boys' orphan asylum, founded 1648, having 23 inmates in 1899; girls' orphan asylum, established 1734, remodeled 1839, 14 inmates; home for aged men, founded 1749, 6 inmates; home for aged women, founded 1834, consolidated with the Portuguese Jewish Hospital. In the Ashkenazic congregation: boys' orphan asylum, founded 1738, having 82 inmates in 1899; girls' orphan asylum, founded 1761, 66 inmates; Lying-in Society, established 1822.

S. Se.

AMSTERDAM, N. Y.: City of Montgomery county, New York, on the Mohawk river, 33 miles northwest of Albany; population in 1900, 20,929.

The earliest Jewish residents were Harris Davis, Isaac Mark, and a Mr. Rothenburg, in the order named. In 1865 Julius Wasserman came to Amsterdam, and in 1886 was appointed postmaster: a little later he erected a broom factory, that of the Amsterdam Broom Company, with which Mr. Wasserman and his son are now associated. Since then the Jewish community has grown rapidly, and in 1900 numbered about 250, of whom about 125 were attendants at the Reform Temple of Israel, the remainder attending the orthodox synagogue.

The congregation of the Temple of Israel was organized and incorporated in January, 1874, with Isaac Wasserman as its president, and Joseph Gregar (now deceased) as its first rabbi. Rev. I. Kline succeeded Gregar, and was in turn followed by Rev. Samuel Friedman. The latter was succeeded by Emil Friedman. The present minister (1901) is S. Philo, formerly of Atlantic City, N. J. A site, located in the most desirable residential portion of the city, was purchased in 1900, and plans for a temple are in the hands of the contractor. Beautiful cemetery grounds, about three miles from the city, are among the possessions of the congregation. The president of the congregation is Julius Wasserman, who has acted in that capacity for the last fifteen years; vice-president, Moses Behr; secretary, David Wasserman; treasurer, Samuel Levi.

Among the Jewish societies are: The Temple Aid Society; the Deborah Society—a benevolent association composed of married ladies—and a literary society, composed of young people.

The Jews of Amsterdam are engaged in the leading trades; and the largest dry-goods stores of the city are conducted by them. A. L. L.

AMU or **AAMU:** The ancient Egyptian designation for the Semites, frequently quoted in popular literature. The correct form in Hebrew letters would be עאמי for the singular, according to the Coptic *ame*, nearly equivalent to *'ami* (plural, *'a'mêu?*). The etymology seems to be Egyptian; the original word meaning "bearers of the throwing-stick," from the common weapon of the Bedouin, rather than from the Semitic *'am(m)*= "nation." The word, met with in the inscription of "Una" (sixth dynasty), while usually employed to designate the Semites, is also applied to other Asiatic and European nations of the Caucasian type. (For the history of the word, see W. M. Müller, "Asien und Europa," pp. 121, 351.) W. M. M.

Origin of the Word.

AMULET: The word "Amulet" used to be considered as derived from an imaginary Arabic word "hamalet" (something hung on); but it is in reality an ancient Latin word of unknown etymology. It is found several times in Pliny, "Naturalis Historia," xxviii. 38, xxx. 2, and elsewhere (Pauly-Wissowa, "Realencyklopädie der Classischen Altertumswissenschaft," i. 1984). Amulets are referred to in the Bible, but without any technical designation. In Talmudic literature the specific term *ḳemi'a* is found, from a root meaning "to bind." A ḳemi'a is therefore something bound on or around, so that the supposititious etymology for the word Amulet as "something hung on" would be correct as concerns the Jewish form. But this designation refers simply to the Amulet's external application, and indicates nothing of its purpose or contents. Biblical, Talmudical, and post-Talmudical passages supply information on both of these points.

Amulets were employed to protect man, or his possessions, such as houses, cattle, etc., from the evil influences of witches, demons, and other mischievous powers likely to be encountered, or to counteract misfortune, illness, and damage of various kinds already being endured. The Amulet is found both in the Orient and in the West, among wild tribes and among civilized nations down to the present day. Assyrians and Egyptians, Greeks and Romans, Jews and Christians, fostered this ancient superstition, and, in varying degrees, foster it to-day. Among the Israelites, therefore, the Amulet has a history extending over several thousand years, and it may conveniently be considered under the heads of the Biblical, Talmudical, and post-Talmudical periods.

Biblical Age.

All ornaments worn on the person seem to have been originally amulets. The majority of them derived their supposed power from the fact that they either bore the images of idols or were consecrated to idols. The patriarch Jacob buried "all the strange gods which were in their [his household's] hand, and all their earrings which were in their ears" (Gen. xxxv. 4). Seeing that the weak were more likely to suffer from the evil influence of witchcraft and demons than the strong, it was usually only the women and children who wore such means of protection. Aaron said to the men (Ex. xxxii. 2), "Break off the golden earrings, which are in the ears of your wives, of your sons, and of your daughters," whereupon "all the people brake off the golden earrings which were in their ears." The Midianite kings wore crescents and earrings; even their camels had chains about their necks, evidently as amulets (Judges, viii. 26). Jewelry was worn by the women and maidens not only for ornament, but also for protection and as charms. Among the twenty-four ornaments of the daughters of Zion, referred to in Isa. iii. 18, mention is made of *lehashim*. This word usually denotes magic, but here evidently signifies an ornament intended to counteract magic and at the same time perhaps to exert magical influence itself. The lover says (Song of Solomon, iv. 9), "Thou hast ravished my heart, my sister, my spouse; thou hast ravished my heart with one of thine eyes, with one chain of thy neck." The adulterous wife puts on her earrings and jewels before she goes after her lovers (Hosea, ii. 13). In Prov. xvii. 8 a bribe is compared to a favor-giving precious stone, whose owner prospereth whithersoever he turneth. That אבן חן here denotes a magical stone is evident; and so, too, in Nahum, iii. 4, something of the same kind is alluded to with regard to "the well-favored harlot, the mistress of witchcrafts." The Book of Proverbs, which was written for the people, and mirrors popular views of life, also makes reference to prevailing conceptions about amulets when it says of wisdom, it "shall be an ornament of grace unto thy head, and chains about thy neck" (Prov. i. 9). Similarly, when it says (*ib.* vi. 21), concerning the admonitions of father and mother: "Bind them continually upon thine heart, and tie them about thy neck. When thou goest, it shall lead thee; when thou sleepest, it shall keep thee." Parental precepts protect, like an Amulet worn upon the heart and neck. In many passages of Scripture which speak figuratively of a necklace, an ornamental crown, or of the protection afforded by the Law, the popular conception of the power of amulets is constantly referred to (Ps. lxxiii. 6, ciii. 4, Prov. iii. 22, iv. 9, xiii. 5). Especially significant is Prov. iv. 22, where it is said "they [my words] are life unto those that find them, and health to all their flesh." But amulets were sometimes hidden, carried upon the body, that they might not be exposed to the counter-influence of other amulets, and were thus supposed to be even more potent. Amulets were found upon the bodies of Jewish warriors; they had come from the heathen temple in Jamnia (II Macc. xii. 40). The signet-ring, carried over the heart or upon the arm (Song of Solomon, viii. 6, Jer. xxii. 24, Hag. ii. 23), served as an Amulet, either owing to the material of which it was composed or frequently from the inscription upon it.

Talmudical Age.

The use of amulets was very extensive in the rabbinical period; that is, from about the first century B.C. until about 600 of the common era; consequently there are copious details concerning them in literary sources. The Mishnah repeatedly considers ḳemi‘ot from its particular juridical standpoint. They were worn sometimes with covering and sometimes without. The Amulet itself, it appears, might consist either of an article inscribed with the name of God, with a Scripture passage or the like, or of the root of some herb. Grains of wheat wrapped in leather sometimes served as amulets. Particularly potent were chips or splinters of the wood of an Asherah, or of anything offered to an idol; and therefore such things were regularly made into ḳemi‘ot. The most frequent form of amulets, however, was a small metal plate suitably inscribed. Around the neck of oxen was tied a pearl wrapped in leather. To protect a horse from evil influence, a fox's tail or a crimson plume was fastened between its eyes. Children, owing to their feeble powers of resistance, were held to be much exposed to the danger of magic fascination; they were, therefore, protected by means of knots, written parchments, etc., tied round their necks. Furniture and household belongings were protected by inscribing the name of God upon foot-rests and handles. Usually, at least among men, amulets were worn on the arm; but exceptionally they were carried in the hand. Women and children wore them especially on neck-chains, rings, or other articles of jewelry. An Amulet would sometimes be placed in a hollow stick, and would be all the more efficacious because no one would suspect its presence; it was a species of concealed weapon. Figuratively the Torah is said to be such an Amulet for Israel. The priestly benediction (Num. vi. 24–26) protected Israel against the evil eye. Distinctions were drawn between amulets which had cured once and those that had cured twice or thrice; between those which had healed three different people once each and those which had healed one person three times. In short, there were approved amulets and amulets not approved; a distinction made likewise as to Amulet-makers. Besides the common people in daily life, physicians in their professional practise also used amulets: the Amulet was thought to banish the demon causing the ailment if his name were written upon the ḳemi‘a.

Foreign and Domestic Amulets.

Every nation in turn seems to have held that the magical arts of other nations were superior to its own; and therefore it is easy to understand why the greater portion of the amulets described in Talmud and Midrash are of foreign extraction, as evidenced by their foreign appellations or by other indications. Genuinely Jewish, however, were those talismans which consisted of strips of parchment bearing the name of God, or various permutations of its letters, Scripture passages, or the like. An important quotation concerning these is found in a Baraita (Shab. 115*b*): "Talismans and amulets, although containing in their letters the name of God or sundry passages out of the Torah, may not be saved on Sabbath from a conflagration; let them burn where they are." By letters of God's name are meant anagrams and transpositions of the same; see Abraxas. Upon an Amulet, said to be potent in curing the bite of a mad dog, was written יה יה יהוה צבאות "Yah, Yah, Lord of Hosts" (Yoma, 84*a*). As stated above, medicine did not disdain the use of amulets. Abraham wore a jewel on his neck which healed every sick person he looked upon. A "stone of preservation" (אבן תקומה) was said to protect women from miscarriage. The egg of a grasshopper was said to protect against earache; the tooth of a living fox against sleepiness, and of a dead one against sleeplessness. A nail from a gallows protected against wounds. The sages of the Talmud, however, forbade the use of all such remedies, as being "heathen practise." *Tefillin* (phylacteries) and *mezuzot* (inscriptions on door-posts) are designated by the Targum on Song of Solomon (viii. 6), as permissible amulets, preserving Israel from the power of demons. Sources and citations concerning the use of amulets in Talmudical times may be found in Blau, "Das Altjüdische Zauberwesen," pp. 86, 146; Strasburg, 1898.

Post-Talmudical Age.

Jewish thought and action in the Middle Ages were dominated completely by the Talmud. Since this authority did not forbid the use of written amulets, the Jews were entirely exposed both to the growth of this superstition among themselves and to the overwhelming inroads of the superstitious practises of the nations among whom they dwelt. It is therefore not surprising that the Amulet superstition grew apace among them. It flourished most in the Orient, the ancient home of all magic and superstition. Hai Gaon, the enlightened head of the Pumbedita Academy, wrote (about 1000), "Sorcery and amulets sprang from the Sura Academy, because that lies near to Babylonia and to the house of Nebuchadnezzar." He denies the powers of amulets, as, for instance, that a papyrus or an olive-leaf inscribed with the mystic name of God would put robbers to flight; or if the same were written upon a new tile, that it would calm the sea; or, if thrown upon a man, would kill him. He admits, however, that amulets may be effective as means of cure and protection. All depends upon the writer and upon the moment of application; for at certain times the best are ineffectual (Ashkenazi, "Ta‘am Zeḳenim," 56*b*).

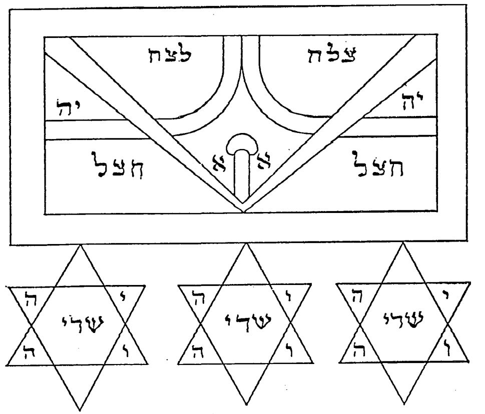
That in the Middle Ages the Jews were influenced by the Babylonian magic especially, and not by the Egyptian—the latter distinguished twenty different sorts of amulets (see Budge, "Egyptian Magic," p. 25, London, 1899)—is shown by the Jewish-Aramaic charm-inscriptions upon Babylonian clay bowls which possibly served as a protection for the utensils; that is, as amulets (Wohlstein, "Dämonenbeschwörungen aus Nachtalmudischer Zeit," Berlin, 1894; Stübe, "Jüdisch-Babylonische Zaubertexte," Halle, 1895; Schwab, "Les Coupes Magiques," etc., in "Proceedings of the Society of Biblical Archeology," April, 1890; *idem*, "Coupes à Inscriptions Magiques," *ib.* June, 1891). In Gaster's edition of "The Sword of Moses" (London, 1896)—a work evidently written under Egyptian influence, but Oriental in its origin and said to belong, according to its editor, to the fourth century—a whole series of ḳemi‘ot is given as protective against various ailments and evils. These consist of transpositions of the names of God, quite unintelligible to the modern mind, written upon paper or engraved upon metal plates, and thus resembling the magic papyri of the Greeks. Exactly as with Egyptian amulets, the requisite color and material of these are sometimes indicated; thus one charm was to be written on a red plate, another on a silver plate, and so on. By the employment of these amulets, paralysis, sciatica, eye and ear ailments, leprosy, and other evils were to be cured. With a certain plate fastened around the thigh, a man might enter a fiery furnace and come out unscathed. Material and inscription of the Amulet varied according to its purpose. By its means fish could be caught; the love of a woman secured and retained; the sea crossed dry-shod; wild animals slain; terror diffused through the world; communion had with the dead; a sword obtained which would fight automatically for its owner; one's enemies set to tearing each other to pieces; oneself rendered invisible; springs of water found; cleverness attained; and many similarly wonderful things accomplished. In one passage a device that is frequently met with in Babylonian and Egyptian magic is mentioned; namely, the preparation of an image and working the charm desired by its medium. The prescription runs:

> "If thou desirest to cause any one to perish, take clay from two river banks and make an image therewith; write upon it the man's name; then take seven stalks from seven date-trees and make a bow [here follows the word דרהסקניאהא] with horse-hair (?); set up the image in a convenient place, stretch thy bow, shoot the stalks at it, and with every one say the prescribed words, which begin with אקתרם and end with פרסוסי, adding, 'Destroyed be N., son of N.!'"

Gaster (*l.c.* pp. 12–19) explains why these means were thought to be effective. It appears that every angel and demon is bound to appear and obey when he hears a certain name uttered (p. 25, lines 2–10). Even Hai Gaon ("Responsen der Geonim," ed. Harkavy, 373, p. 189) says, "Amulets are written, and the divine name is spoken, in order that angels may help." But a great deal was made to depend upon using the right name at the right time, a condition likewise frequently insisted on in the Egyptian and Babylonian magical works.

"Practical Cabala," or the art of employing the knowledge of the hidden world in order to attain one's purpose, is founded upon the mysticism developed in the "Sefer Yeẓirah" (Book of Creation). According to this work, God created the world by means of the letters of the alphabet and particularly those of His name, ו, ה, י, which He combined in the most varied ways. If one learns these combinations and permutations, and applies them at the right time and in the right place, one may thus easily make himself master of creation, since God Himself not only permits but desires this; for these formulæ all proclaim monotheism. The Egyptians held a similar view (Budge, *l.c.* xiii.). The mystic book "Raziel" (eleventh century), in so far as it is to be considered here, is also of Oriental origin, and reflects similar views. Instructions are given for the preparation of amulets; and particular days and hours are indicated as suitable for the manufacture (ed. Amsterdam, 42*b*). As samples, the two ḳemi'ot in the next column may serve.

Cabala.



This Amulet, on which צלח from Psalm xlv. 5 is permuted, contains space for a short prayer to be written in, expressive of the particular object to be obtained, and is recommended for use in furthering all business enterprises. It contains the usual shield of David with שדי. It must be written upon parchment, and worn on the left side.

In Europe, Spain comes most prominently into view in the consideration of amulets, that country being a hotbed of superstition and Cabala. Naḥmanides and Adret permit the employment of a metal plate with the image of a lion as a remedy against a painful cough (Adret, "Responsa," 1st ed., 167, 413). This superstition was a universal one, and is mentioned also by Manasseh ben Israel of Amsterdam (seventeenth century), who remarks that Leone Soavio recommended it to Paracelsus as a cure for stomach-pain ("Nishmat Ḥayyim," third treatise, chap. xxv.). Other amulets were written upon parchment, on the skin of a fetus or of a deer (Adret, *ib.*), but were of avail only when the writer and the chosen time were propitious. Adret also forbids such charms as are clearly useless ("Novellæ" on Shab. 67). In Germany, red cords with corals were worn as protection against the evil eye. Christians employed Jews to make amulets for them; for these had the reputation of being "wise folk." Strangely enough, in the later Middle Ages, Jews attached to their arms, where the phylacteries were applied, amulets containing the names of Christ and the three holy kings (Berliner, "Aus dem Leben der Deutschen Juden im Mittelalter," pp. 97, 101). Insanity or epilepsy was cured by hanging beets around the patient's neck. People were warned, however, that the preparation of these amulets would irritate demons. Against miscarriage women carried a stone around the neck, called אינקונתא, a word evidently derived from the French *enceinte*; a hole was pierced through it; it was as large and as heavy as a hen's egg. These stones, which had a glazed appearance, were found in the fields, and were esteemed of priceless value. A similar purpose was served in antiquity as well as in the Middle Ages by *aetites.* For lightening labor, both Jewish and Christian women wore a piece of a man's vest, girdle, or other clothing. Luther relates that a Jew presented Duke Albert of Saxony with a button, curiously inscribed, which would protect against cold steel, stabbing, or shooting. The duke made the experiment on the Jew, hanging the button around his neck and then slashing him with a sword (Güdemann, "Gesch. des Erziehungswesens und der Cultur der Juden in Frankreich und Deutschland," pp. 205, 207, 214, 226, Vienna, 1880). The Italian coin, with its abracadabra-like inscription, described by Güdemann ("Gesch. d. Erz. und der Cultur der Jud. in Italien," p. 335), was probably of Jewish, and not of Christian, origin. The medallion bears on the one side the words below, the

AMULETS HUNG UP AT CHILDBIRTH FOR PROTECTION AGAINST LILITH.

(From the collection of Prof. Richard Gottheil.)

Hebrew transliteration of "Majestas YHWH regis domini mei animum benignum mihi foveat" (May the majesty of YHWH foster a kindly disposition in my lord the king toward me). Upon the other side is

מאיהסתאם יהוה
אני מום מהי
רהגים אד

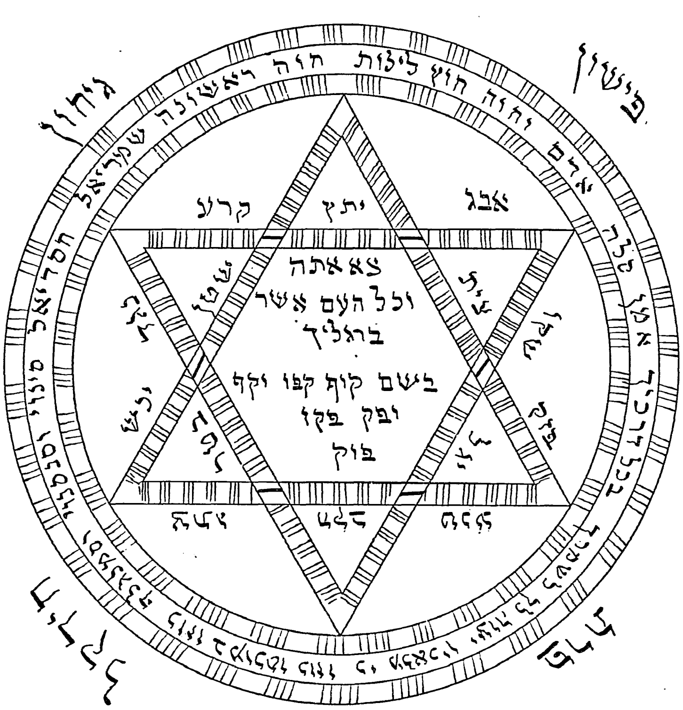
נהת

"Majestas YHWH animum mei regis ad me inclinet" (May the majesty of YHWH incline the king's soul to me).



This Amulet is claimed to be well approved, and protects the lying-in mother and her child against witchcraft, the evil eye, and demons, and is given in "Raziel," with explicit directions for use. Its authorship is ascribed to Adam. The four words outside of the circle are the names of the four rivers issuing out of paradise, Gen. ii. 10. In the circle are Psalm, xci. 11; the names of Adam and Eve; also חוץ, which is equivalent to חוה, Eve (in the א"ת ב"ש system, see AT-BASH, ץ=ה); then לילות, probably a misprint for לילית, the female demon mentioned in Isaiah xxxiv. 14; then come "the first Eve," and names of angels and of God (כוזו = יהוה: in this permutation each letter is represented by the next succeeding letter of the alphabet, thus י = כ, ה = ו etc.). Outside of the shield of David stand the initial letters of the well-known prayer by Neḥunia b. ha-Ḳana, אנא בכח, also the words, קרע שטן, "May Satan be torn asunder!" The innermost space finally contains words from Ex. xi. 8, and permutations of קוף, a mystical name of God.

The Eibenschütz Controversy.

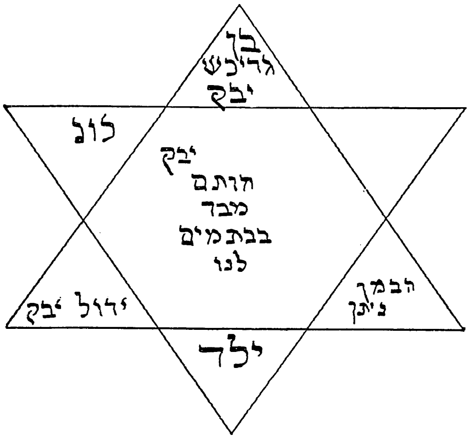
The expulsion of the Jews from Spain in 1492 caused the dissemination of the Cabala far and wide through the East and the West. Their unexampled sufferings served to foster their mystic bent more than ever. The Holy Land, as far as repeopled by Spanish exiles (notably Safed), became the hotbed of the most abstruse secret lore, which favored, among other things, the employment of amulets. From Turkey on the one side, and from Italy on the other, the Cabala spread to Poland and lands adjacent; Ḥasidism arose there and flourishes there to-day. This mysticism also prepared the ground for amulets, so that there are whole books devoted exclusively to ḳemi'ot still extant in manuscript (compare Benjacob, "Oẓar ha-Sefarim," p. 530). This so-called "practical Cabala" recommended a number of talismans, a description of which must be omitted here in order to describe a celebrated ḳemi'a contest of the middle of the eighteenth century. Jonathan Eibenschütz, remembered by Jews to-day as an eminent Talmudist, prepared a number of amulets. He issued them in Metz, where he was rabbi, and later in Hamburg, Altona, and Wandsbeck, over the united communities of which he presided as chief rabbi. He made them for sick children, for expectant mothers, also as remedies against nose-bleed, epilepsy, and the evil eye. He furnished one that would banish "croaking demons" from a house; upon digging into the foundations, the demons would then be found in the shape of veritable croaking frogs. To find the body of one drowned, he provided a charm in the shape of a written parchment to be laid on the bank of the river or pond. He claimed to have been particularly successful with his amulets in helping women in various emergencies; and statistics were said to support his statements that since he had officiated as rabbi in Hamburg scarcely one Jewish woman had died in childbirth, while in the year preceding his arrival "God's wrath had raged widely" in such cases. The congregational *Ḥebrah Ḳaddisha* (burial society) confirmed this claim officially. All of this became matter of public discussion when Jacob Emden, then residing in Altona, and Jacob Joshua Falk, chief rabbi of Frankfort-on-the-Main, both learned and respected men, openly charged Eibenschütz with invoking as Savior in his amulets the false Messiah, Shabbethai Ẓebi. The contest waged furiously; the scholars and communities of Germany, Holland, Italy, Turkey, the Holy Land, Poland, Lithuania, Hungary, and elsewhere took active part in a most vehement discussion. Even the temporal authorities were appealed to by Eibenschütz's opponents, application being made to the City Council of Hamburg, and to the king of Denmark. The charge was based particularly upon five amulets issued by Eibenschütz while officiating in Metz, and which were certified to by the congregational officials, as having been written by him.

It is a curious fact that in all the voluminous discussion, the only point at issue was the employment of the false Messiah's name in these amulets; not a voice was raised against the folly of amulets in general. The common impression probably was that they could do no harm and might serve as spiritual stimulants in the way of the wearer's reassurance and mental comfort. This widespread discussion, however, marks the turning-point in the history of the medieval faith in amulets; since then it has gradually diminished and may now be said to be

In Modern Times.

practically extinct except in the Orient. The "Shulḥan 'Aruk" does not forbid amulets (see "Oraḥ Ḥayyim," § 301, 24–27; § 305, 17; § 334, 14; "Yoreh De'ah," § 179, 12). It is important to note the fact that the Jews, the "people of the Scripture," employed mainly *written* parchments for such purposes, not bits of wood, bone, stone, or other natural objects.

Modern Judaism of course approves the sentiments of Maimonides, who pronounced against them; he denies them all potency or virtue whatever ("Moreh," iii. 37), and speaks of the "craziness of the amulet-writers, who hope to accomplish miracles by permutations of the Divine Name" (*ib.* i. 61, end).



This Amulet is "for protection in childbirth."

In five corners of the six-cornered "Shield of David," the Hebrew letters of the verse (Isa. ix. 5), כי ילד ילד לנו, "For unto us a child is born," etc., are scattered promiscuously, interspersed with the letters of Neḥunyah ben ha-Ḳana's prayer (אנא בכח). The word בבהמים in the interior space was claimed to be equivalent by permutation to Shabbethai's name (שבתי) together with the initials מ"מ; that is, מלך משיח, "King Messiah."

L. B.

AMULO (AMOLON), THEODBOLDUS: Bishop of Lyons (841) during the reign of Charles the Bald; died 852. From his master and predecessor, Agobard, he learned to hate the Jews, and with the assistance of the Bishop of Rheims and Archbishop of Sens, who nourished the same sentiments, he tried, at the Council of Meaux (849), to revive the old canonical laws and anti-Jewish restrictions. But Charles would not yield to the prelate's injunctions, and dissolved the meeting. Amulo, however—unremitting in his efforts against the Jews, like his master—wrote a virulent letter to the spiritual authorities, in which he expounded his grievances against the Jews, forgetting no fact to their discredit, not even the conversion of the court-chaplain Bodo to Judaism. Although the letter did not immediately produce the effect expected by its author, it attracted the attention of the clergy, who were at that epoch generally favorable to the Jews, and the calm enjoyed by Jews in France gradually came to an end.

ANAB ("Grape"): A city in the hills of southern Judea, lying in the domain of Judah (Josh. xv. 50), from which Joshua exterminated the Anakim (Josh. xi. 21). It is still called Anab (Buhl, "Geographie des Alten Palestina," p. 164). G. B. L.

ANACLETUS II. (PIETRO PIERLEONI): Antipope to Innocent II. from 1130 to 1138. By reason of his Jewish descent, which prompted Voltaire to call him ironically "the Jewish Pope," Anacletus had to face a great deal of opposition and calumny.

An ancestor of Anacletus, whose name was probably Baruch, had grown rich in the middle of the eleventh century by lending money to both sides in the struggle between the popes and the Roman nobility. Ambition prompted him to embrace Christianity, on which occasion he assumed the name of Benedict. He married a lady belonging to an aristocratic family of Rome, and his son, Leo de Benedicto Christiano, subsequently took rank among the champions of the papal court in its conflict with the imperial party. Leo's son, Petrus Leonis, whose name became the family eponym, resolved to devote his own son, who also bore his name, to the priesthood, and he lived to see this son wear the cardinal's hat. Pierleoni did not become pontiff, however, until after the death of his ambitious father.

One of the group who left Rome with the pope Gelasius II. when the latter fled to France, Leo subsequently was a prominent factor in the election of Calixtus II. The latter manifested his gratitude to Pierleoni, as well as recognition of his talent, by appointing him, toward the end of the year 1123, head of the papal legation to France. While in that country, Pierleoni had the opportunity of fulfilling several important ecclesiastical missions, as well as of presiding at the councils of Chartres and Beauvais.

Innocent II. His Opponent.

Pierleoni was elected pope as Anacletus II. in 1130 by one faction at Rome, while another faction elected Innocent II. Pierleoni received but little support when elevated to the pontificate, while Innocent II. was upheld not only by the councils of Rheims and Pisa, and by the greater portion of the Roman Catholic clergy—who, it would seem, could not forgive Anacletus his reputed Jewish physiognomy—but also by the entire European royalty, with the exception of Roger of Sicily, who was Anacletus' brother-in-law, and by the duke of Aquitania. It redounds to the honor, liberality, and magnanimity of the population of Rome that Anacletus was able to maintain to the last his authority in the capital, notwithstanding the repeated attacks of the emperor Lothaire II., who supported Innocent II.

The opposition to Anacletus expressed itself in the invention and dissemination of the most slanderous reports concerning him. Bernard of Clairvaux, who was the most zealous supporter of Innocent in France, quite naturally poured forth his indignation in a vehement epistle to Lothaire, to the effect that "to the shame of Christ a man of Jewish origin was come to occupy the chair of St. Peter."

Accused of Malfeasance.

But aside from styling him "Judæo-pontifex," the antagonists of Anacletus circulated the most ignominious rumors about him, charging him with the systematic robbery of chapels and churches—in the disposal of which spoils the Jews were designated as his accessories—and not flinching even from accusing him of being guilty of incest. In brief, the consensus of opinion regarding him was summed up in the decision that he was not only as bad as, but even worse than, a Jew.

Though the charge of assisting the pope in robbing the churches and chapels was undoubtedly a calumniation of the Jews, it is quite probable that the Jews sided with Anacletus in this papal schism, which lasted until his death, in the year 1138. The interests of their own safety in Rome, where his sovereignty was unquestioned, must have urged them to adopt the policy of obedience to Anacletus. In fact, the cold, formal response with which Innocent II. greeted the Jewish delegation upon his entry into Rome would warrant this assumption. There is no ground, however, for supposing that the opponents of Anacletus had used their influence to arouse the fanaticism of the masses against the Jews. Both Bernard of Clairvaux, through whose indefatigable zeal and eloquence the rulers of France and of Germany were won for the cause of Innocent, and the inhabitants of Rome, though, as a rule, inimical to the Jews, repeatedly condemned their persecution and oppression. As for Anacletus, however, his ancestral connection with the Jews undoubtedly served to enhance his schismatic troubles, inasmuch as it afforded his antagonists an additional ground for calumniation. Yet it is quite probable that the vague historic recollection of Anacletus—his Jewish origin, his ecclesiastical struggle, and, perchance, his friendly attitude toward the Jews—in later days fashioned itself into a semi-mythical background for the wide-spread medieval legend relating to the Jewish pope (see Andreas).

ANAGRAM (Greek, *ἀνὰ* = "over again," and *γράμμα* = "letter"): The letters of a word so transposed as to make a different word or phrase. The use of anagrams by the Jews dates back to the remotest antiquity. Several occur in the Bible; for example: ונח מצא חן ("And Noah found grace," Gen. vi. 8), where חן is probably employed because of its being the Anagram of נח; את בכרתי לקח והנה עתה לקח ברכתי ("He took away my birthright, and, behold, now he hath taken away my blessing," *ibid.* xxvii. 36); פאר תחת אפר ("A garland instead of ashes," Is. lxi. 3); כל אויבי ישבו יבשו רגע ("Let all my enemies return and be ashamed suddenly," Ps. vi. 11); ואמו קראה שמו יעבץ לאמר כי ילדתי בעצב ("And his mother called his name Jabez, saying, Because I bare him with sorrow," I Chron. iv. 9).

In the Talmudic and Midrashic literature, anagrams became a system of Biblical interpretation, called הפוך (inversions). Eleazar of Modi'in introduced it in explaining the word פחז (Gen. xlix. 4) by the transposition of its letters. But this system, applicable originally only to the transposition of the letters, was gradually extended to simple transpositions of the words. Jewish literature, and especially the Jewish poetry of the Arabic epoch, imitating the Arabic poets, who had a predilection for anagrams, offers many examples: אם תעלז על חליי אשטח לך לחיי ("If you mock my sickness, I will tender you my cheeks"), Judah ha-Levi, "Diwan," ed. Brody, ii. 149; ותצבר בר ורוב מזון לעת רזון ובצרת ("And she amasses corn and plenty of food for a time of scarcity and famine"), Alḥarizi, "Taḥkemoni," ed. Kaminka, p. 49).

The golden age for anagrams began with the Cabala. The Platonists had strange notions as to the influence of anagrammatic virtues, particularly of anagrams evolved from names of persons. It is not surprising, therefore, that the cabalists, like all the Neoplatonists, pretended to discover occult qualities in proper names and in their anagrams. Thus, most amulets are based upon the transposition of letters (compare "Raziel ha-Malak," p. 62). Cabalists explain, for instance, the custom of reciting some Mishnah paragraphs on the anniversary of the death of relatives (*Jahrzeit*), by pointing out that משנה (Mishnah) contains the letters of נשמה (soul). Nearly all the cabalistic writings give rules for composing anagrams, which are called *temurah* (change).

I. Br.

ANAH: 1. Mother of Aholibamah, one of the wives of Esau and daughter of Zibeon (Gen. xxxvi. 2, 14, 18, 25). The Septuagint, the Samaritan Pentateuch, and the Peshito read "son," identifying this Anah with No. 3 (see below). **2.** Son of Seir, the Horite, and brother of Zibeon; one of the chiefs of the land of Edom (Gen. xxxvi. 20, 21; I Chron. i. 38). **3.** Son of Zibeon, who is specified in the Bible as "that Anah that found the hot springs [הימם; A. V. "mules," so in Targ., Yer., and Gen. R. on the passage; Pes. 54*a*] in the wilderness" (Gen. xxxvi. 24; I Chron. i. 40, 41).

G. B. L.

——**In Rabbinical Literature:** As early as the middle of the fourth century, the rabbis discussed Anah's combination of Ha-Yemim in the wilderness. In his commentary on Gen. xxxvi. 24, Jerome cites the following definitions of the word, derived from Jewish sources: (1) "seas" as though ימים (yammim); (2) "hot springs" as though חמים (ḥammim); (3) a swift-running variety of the ass, called "yemin," obtained by Anah through a cross of the domestic with the wild ass; and (4) "mules." The last interpretation was, according to Jerome, the most current among the Jews; and it was believed that Anah was the first to have bred the mule, thus bringing into existence "a new animal bred contrary to natural laws." The rabbinical sources are familiar with this fourth explanation, and make the additional observation that "Anah was himself a bastard," his mother being also the mother of his father. As a punishment for this unnatural combination of Anah, God brought into the world the deadly water-snake, through the union of the common viper (חכינה) with the Libyan lizard (חרדון). See Gen. R. lxxxii. 15; Yer. Ber. i. 12*b*; Bab. Pes. 54*a*; Ginzberg, "Monatsschrift," xlii. 538, 539.

L. G.

ANAIAH ("The Lord Hath Answered"): **1.** A supporter of Ezra (Neh. viii. 4), who is called Ananias in I Esd. ix. 43. **2.** A prominent man who sealed the covenant with Nehemiah (Neh. x. 22). These two may be identical.

G. B. L.

ANAKIM.—Biblical Data: A pre-Canaanite tribe, dwelling (according to Josh. xi. 21, 22, and Judges, i. 10, 20) in the hill country of Judah and in the Philistine plain (Hebron, Debir, Anab, Gaza, Gath, Ashdod). Three clans are mentioned: Sheshai, Ahiman, and Talmai (Judges, i. 10; Num. xiii. 22). These names seem, from their form, to be Aramaic; but what this fact signifies is not clear. The Anakim are said to have been conquered by Caleb (Josh. xv. 14; Judges, i. 20), who received their territory. In Deut. ii. 11, the Anakim are called a branch of the Rephaim, which is perhaps a generic term. The Hebrew of Num. xiii. 33

classes them also with the Nefilim; but the clause is not in the Greek, and is probably a late gloss. In Judges, i. 10, the conquest is ascribed to Judah. How far the Anakim had been absorbed by Canaanites and Philistines is uncertain. On the genealogy in Josh. xiv. 12–15 and xv. 13, see Hebron and Kirjath Arba. T.

——**In Rabbinical and Hellenistic Literature:** According to rabbinical tradition (Gen. R. xxvi.), the Anakim are of the same Titanic race as the Rephaim, Nefilim, Gibborim, Zamzummim, and Emim. The name (as though containing the element *'anak* = neck) is explained in the Midrash (Gen. R. xxvi.) as indicating that they wore "neck-chains heaped upon neck-chains," or, as if from the verb "to press," "force," that they seized the solar disk and cried, "Send us rain," or that "they squeezed their heads into the sun" (Soṭah, 34*b*; see Rashi on Yoma, 10*a*). Of the three sons of Anak who filled the spies with awe and fear by their gigantic stature, Ahiman, Sheshai, and Talmai (Num. xii. 22–33), the first is represented in Num. R. xvi. and Tan., Shelaḥ, 7, ed. Buber, 11, as challenging passers-by, saying: "Whose brother will fight with me?" (a play upon "Ahiman" = brother of whom); the second stood there stolid as a block of marble (a play upon *shesh* = marble), and the third made deep furrows (a play upon *telamim* = furrows) in the soil with every step. (Compare Soṭah, 34*b*; Yoma, 10*a*, which has a somewhat different and possibly corrupt version; see Buber, notes to Tan. *l. c.*) And when the spies saw these men towering up to the sky and looking as if piercing the sun, they were afraid and said: "We are not able to go up against these people, for they are stronger than *He* [ממנו]; that is, stronger than even the Lord Himself!" (Num. xiii. 31).

Of the size of the Anakim, a Midrash fragment—found by Schechter in a Pentateuch commentary of the thirteenth century, and published by him in "Semitic Studies in Memory of Alexander Kohut," p. 492—gives the following description:

"The daughter of Anak had gone into her father's garden and taken a pomegranate, which she ate, after having peeled off the skin and cast it aside. Then the twelve spies came and, seeing her father, were struck with fear and hid themselves under the pomegranate-skin, believing it to be a cave. The daughter of Anak in the meantime came back and, seeing the pomegranate-skin still lying there, was afraid lest her father might scold her for lack of neatness. She therefore took the pomegranate-skin, with the twelve spies hidden therein, and cast it out of the garden, noticing the weight added by the men no more than if the skin had been the shell of an egg." The legend bears a striking resemblance to the story of the giant's daughter reprinted in Grimm's "Kinder und Hausmärchen" (compare Chamisso's "Riesenfräulein"). K.

——**Critical View:** The origin of the Anakim is unknown, and they have left no trace in history. On possible (but uncertain) remains of them, compare Nowack, "Hebr. Arch." § 16. The name "Anak" (so the Greek), or "the Anak" (Hebrew), is an etymological puzzle. The meaning of "bene ha-Anak" is uncertain. It is interpreted by some as "the long-necked"; by others, as "the necklace-wearers." It is perhaps non-Semitic.

Josephus ("Ant." iii. 14) relates that the spies found at Hebron the posterity of the giants; and this tallies with Josh. xiv. 15, according to which Hebron was the city of Arba, "the greatest man among the Anakim" ("the father of Anak," Josh. xxi. 11; the Septuagint has the "brother" of Anak). See Moore, "Judges," pp. 24 *et seq.* and Driver, "Commentary on Deuteronomy," pp. 23, 40 (note); the letter refers also to Goliath as one of the sons of Rafa, the giant of Gath.

ANALOGY: Talmudic Rule of Interpretation. See Talmud, Hermeneutics of.

ANAMIM: A Mizraimite people, unidentified, mentioned in Gen. x. 13 and in I Chron. i. 11, who dwelt probably in Egypt or some neighboring region in Africa. G. B. L.

ANAMMELECH (more properly **ANUMELECH**; "Anu is Melek" or "Prince"): A god worshiped by the Sepharvites in Samaria under the Assyrian régime, along with the god Adrammelech (II Kings, xvii. 31). Anu was the chief of the old Babylonian trinity, Anu, Bel, and Ea; and if Sepharvaim (compare *ib.* 24) is Sippara in North Babylonia (not Sepharvaim in Syria, II Kings, xix. 13), as is very probable, there is no difficulty in supposing that Anu was there worshiped under this appellation. It is stated, however, in the text, that children were burned in sacrifice to Anammelech in Samaria; and this is perhaps inconsistent with the fact that there is no evidence that such offerings were ever made in Babylonia.

ANAN: Babylonian amora of the third century, disciple of Mar Samuel (Yeb. 83*b*, Ḳid. 39*a*), and contemporary of Rab Huna and Mar 'Uḳba II. (Ket. 69*a*). Anecdote and legend combine to illustrate Anan's renown for extreme conscientiousness in his capacity as judge in civil cases, as well as for his theosophic speculations. The books "Seder Eliyahu Rabbah" and "Seder Eliyahu Zuṭṭa," mysterious in more than one sense, are said to have been composed during visitations Anan received from the prophet Elijah (Ket. 106*a*). (See Tanna debe Eliyahu R.) Anan was prominent as a teacher of civil law and of ritual; and though R. Naḥman once criticized one of his arguments—remarking, "While attending Mar Samuel, you must have spent your time in playing at checkers" (or "chess," *Iskundré*, Ḳid. 21*b*)—he highly respected him, and addressed him with the title of *Mar* ("Master," Ḥul. 56*a*). R. Huna, on his part, did not consider Anan his equal; and when the latter once addressed to him a message, headed, "To Huna, our colleague, greetings," he felt himself depreciated and replied in a manner that greatly embarrassed Anan (Ket. 69*a*). In the field of the Haggadah, Anan rarely appears, and then only as the transmitter of observations of his predecessors. But many of his teachings were probably incorporated with those of the students of the school that bore his name, Debe Rab Anan (Suk. 49*b*; Ber. 30*b*; Shab. 119*a*; Yer. Shab. iii. 5*c* (compare Bab. Shab. 37*a*); 'Er. 74*b*; Yeb. 97*a*; Yer. Yeb. ix. 10*b*; Ket. 79*a*; Giṭ. 44*b*; Shebu'ot, 40*b*; Ḥul. 4*b*, 38*a*, 56*a*). S. M.

ANAN, SON OF ANAN: Born about the beginning of the common era (compare Josephus, "B. J." iv. 3, §§ 7 and 10); was appointed high priest by Agrippa II., in the year 62, but officiated only three months. As president of the Sanhedrin he availed himself of a vacancy occurring in the procuratorship in Judea, to convene that body and to have certain persons obnoxious to him condemned and stoned to death as lawbreakers. (That among these victims was James, brother of Jesus, is a Christian interpolation in Josephus; compare Schürer, i. 486.) Albinus, the new procurator, rebuked him for this high-handed proceeding, and Agrippa deprived him of his position ("Ant." xx. 9, § 1).

Opposes Zealots.

At the outbreak of the war of the Jews, however, in the year 66, he was still a leading personage. Together with Joseph, son of Gorion, he prepared the defenses of Jerusalem against the Romans ("B. J." ii. 20, § 3; 22, § 1, 2), but he immediately took stand against the Zealots and their leader, Simon bar-Giora. When, after the conquest of Galilee, the fugitive Zealots under John of Giscala entered Jerusalem, and the Judean Zealots, having imprisoned all prominent men of moderate views as being friendly to Rome, obtained possession of the Temple and control of the high-priestly office, Anan put himself at the head of the people to oppose the Zealots, and confined them in the Temple. But John, who hitherto had supported him, now suspected him of friendship for Rome, and went over to the Zealots. He summoned the Idumeans to the city, and they murdered Anan, who with other leaders had refused them entrance ("B. J." iv. 5, § 2).

Anan's Sadducean Tendencies.

Anan is described as upright and unselfish, ready of speech, influential, democratic, and liberty-loving, one who justly discerned that the only hope for Jerusalem lay in reconciliation with Rome. On the other hand, when it was suggested that Josephus should be recalled from his post as general in Galilee, Anan, who with Simon ben Gamaliel recommended his recall ("Vita," 38, 39, 44, 60), is characterized by Josephus as venal. His behavior in the Sanhedrin is pronounced Sadducean. This reference to his Sadducean tendencies finds remarkable confirmation in the Talmudic account (Grätz, "Gesch. d. Juden," iv. 747) of the Sadducean form of Temple-worship in the decade before 70, and of the opposition to it, fostered by the Pharisaic teachers of the time. These reports gave rise to the general opinion that this was a forcible effort to reestablish Sadduceeism, which had long been supplanted by Pharisaism, though the revival was short-lived (compare Schürer, 3d ed., ii. 405). It has recently, however, been suggested that the Sadducean view of the sacrificial cult had up to that time predominated, and was only then giving way to Pharisaism (Chwolson, "Das Letzte Passahmahl," p. 87; Büchler, "Priester und Cultus," pp. 54, 109). A. Bü.

ANAN, SON OF ANANIAS, THE HIGH PRIEST: He was strategus, or governor of the Temple at Jerusalem (Josephus, "B. J." ii. 12, § 6; "Ant." xx. 6, § 2), and while in office was sent (in 52) to Rome by Ummidius Quadratus, governor of Syria, to answer to Emperor Claudius for participation in disturbances which had arisen out of the struggle between the Judeans and the Samaritans. With him were his father and Jonathan, a former high priest. Through the influence of Agrippa II. he and all the Judeans under accusation were acquitted, and allowed to return to Jerusalem ("Ant." xx. 8, § 5, and 9, § 2; "B. J." ii. 13). Anan probably owed his important office to his father's position, as did later on his brother Eleazar, who held the same office from 63 to 66 ("Ant." xx. 9, § 3; "B. J." ii. 17, § 2; compare Pes. 57*a*, Bet Ḥanin; Tosef., Men. xiii. 21, Bet Elḥanan). As strategus, Anan probably had charge of the Temple and its sacrifices.

A. Bü.

ANAN BEN DAVID, Founder of the Karaite Sect: In the second half of the seventh century and in the whole of the eighth, as a result of the tremendous intellectual commotion produced throughout the Orient by the swift conquests of the Arabs and the collision of victorious Islam with the older religions and cultures of the world, there arose a large number of religious sects, especially in Persia, Babylonia (Irak), and Syria. Judaism did not escape this general fermentation; the weak remnants of the early schisms—the Sadducees and Essenes—picked up new life and flickered once more before their final extinction. But new sects also arose in Judaism; the most important of which were the Isawites (called after their founder Abu Isa), the Yudganites, and the Shadganites (followers of Yudgan and Shadgan). All these various heresies would nevertheless have quickly disappeared or been assimilated by rabbinical Judaism, if the political conditions of the Jews in the eastern califate had not pushed to the front a certain energetic and determined man, and placed him at the head of the new movement. So great was his influence, that he succeeded in uniting all heterogeneous antirabbinical elements under his standard, and in forming a powerful sect out of them. This man, Anan ben David, had been a candidate for the highest dignity existing among the Jews at the time—the exilarchate. When, about the year 760, the exilarch (probably Isaac Iskawi) died, it appears that two brothers among his nearest kin, probably nephews of his, Anan and Josiah (Hassan), were next in order of succession to the exalted office. The former was older and richer in theological knowledge than the latter, and was thus the better fitted for the position of prince of the Exile. He should have received the preference over the younger and less learned Josiah; nevertheless the nomination was given to the latter: Josiah was elected exilarch by the rectors of the Babylonian colleges (the Geonim) and by the notables of the chief Jewish congregations; and the choice was confirmed by the calif of Bagdad.

Proclaims Himself Anti-Exilarch.

The following were the reasons for this extraordinary result, if the accounts of the earliest authorities may be credited: In the first place, Anan was of a presumptuous and imperious disposition, while his brother was unassuming and modest. Then, it is said, Anan had shown evidences of lukewarmness toward traditional Judaism, amounting even to disdain; while Josiah was pious and reverenced conformity to the Law. Any disregard for rabbinical Judaism on Anan's part may be accounted for by his long sojourn east of Bagdad in the Persian-Mesopotamian borderlands, which were then the chief hotbed of antirabbinical schisms. However that may be, it is certain that Anan's proud disposition would by no means permit him to submit tamely to his defeat, and place himself in subordination to his younger brother. His political partizans, who seemed to follow him in religious matters also, did not desert him, and so it came to pass that Anan permitted himself to be proclaimed antiexilarch. This step was naturally construed by the Mohammedan authorities as rebellion against the august authority of the calif, who had formally invested Josiah with the position; and such an act on the part of a *Dhimmi* (follower of a religion tolerated by Islam; that is, a Jew or Christian) must in a Mohammedan state appear serious in the extreme.

Therefore when Anan's proclamation of himself as exilarch became known, he was arrested by the authorities one Sunday in the year 767, and thrown into prison, to be executed on the ensuing Friday, as guilty of high treason. But luckily for Anan, he met in jail a very prominent and shrewd fellow-prisoner, no other than the founder of the great Mohammedan casuistic school of the Hanifites (whose ritual is dominant in Turkey at the present day), of the name of al-Nu'man ibn Thabit, surnamed Abu Ḥanifah. He gave the unhappy pretender to the exilarchate the following very shrewd advice, which saved his life: The pretender should set himself to expound all ambiguous and doubtful precepts of the Torah in a fashion exactly opposed to the traditional interpretation, and make this principle the foundation of a new religious sect. He must next get his partizans to secure, by means of presents and bribes to the highest officers of the court, the presence of the calif himself at the trial—his presence not being an unusual thing at the more important prosecutions.

Line of Defense.

At the right moment, Anan was to throw himself at the feet of the calif and exclaim, "O Ruler of the Faithful! didst thou appoint my brother Josiah to a position of dignity in one religion, or in two?" Undoubtedly the calif would answer, "Only in one." Thereupon Anan was to declare that his religion was quite a different one from that of his brother and of the rabbinical Jews, and that his followers entirely coincided with him in matters of religious doctrine; which was an easy matter for Anan to say, because the majority of them were opposed to the rabbis. The pretender and his friends complied with the shrewd counsel given by Abu Ḥanifah, and in the presence of the calif Almansur (754–775) Anan defended himself most skilfully. Moreover, Anan won for himself the special favor of the calif by his protestations of deep veneration for Mohammed as the prophet of the Arab nation and of the world of Islam, and by the declaration that his new religion, in many points, entirely coincided with the Mohammedan; instancing the fact that the setting of the festivals was not decided by the astronomical calculations of a calendar—as with the rabbinical Jews—but by the actual observation of the new moon—as with the followers of Islam. In this way the prisoner, though he had already been condemned to death, succeeded in gaining not only his freedom, but also in winning the favor and the protection of the ruler and of all the Arab authorities—a circumstance which proved of the greatest assistance to this new sect, so strangely founded.

Anan was now able to devote himself to the development of his new religion and its new code. But one thing was essential: it must deviate from traditional Judaism, for that was the very raison d'être of his new sect and the justification for his release. The fact that the majority of his followers were antirabbinical also made this course advisable. His "Sefer ha-Miẓwot" (The Book of the Precepts), which occupied him for several years, and which was published about 770, must be considered the basis of the newly found Ananite sect.

His Book of Laws.

It betrays very clearly that its author was anything but an original genius. He simply appropriated interpretational deviations, already existing, and ancient doctrinal differences. An analysis of Anan's code exhibits the following aspects:

(1) Anan's relationship to the rabbinical or traditional legislation may be compared to that of a traveler in an unknown region, who, though he desires to separate from his guide, realizes that he is not able to find the way by himself, and is thus compelled to follow his leader, to keep his eyes riveted on his footprints, and at the same time to select parallel paths and side-lanes in order to maintain the appearance of independence. Thus we find that although this schismatic made the total rejection of tradition his watchword, he availed himself of the identical rules of interpretation framed in the Talmud—the so-called "Middot" of R. Ishmael—for the establishment of his religious laws. He makes many modifications in them, it is true, and forces many exaggerations upon them; and with his imperfect philological attainments elicits some very curious ideas. He draws freely upon those divergent opinions that are set down in the Talmud, but that did not attain recognition as authoritative decisions for religious practise (Halakah). From rabbinical jurisprudence he adopted some material with arbitrary modifications; other details again he accepted bodily from the Talmud as true and binding traditions; these latter the Karaites designate as the "inherited burden" (*sebel ha-yerushah*).

Its Essential Features.

And since Anan designedly imitates the language, style, and fashion of the Talmud most accurately, it is not to be wondered at that a gaon of the ninth century could say that the schismatic promised his followers to give them a Talmud all for themselves, and, in point of fact, did furnish them with a most impious one.

(2) It has already been indicated that the founder of the Karaite sect, in order to attach to himself all who had espoused antirabbinical schisms, adopted many of their principles and opinions in his new religious code. As far as is now known he took much from the old Sadducees and Essenes, whose remnants still survived, and whose writings—or at least writings ascribed to them—were still in circulation. Thus, for example, these older sects prohibited the burning of any lights and the leaving of one's dwelling on the Sabbath; they also enjoined the actual observation of the new moon for the appointment of festivals, and the holding of the Pentecost festival always on a Sunday. From the heresies of the Isawites and the Yudganites immediately preceding this epoch, he borrowed the recognition and justification of Jesus as the prophet for the followers of Christianity, and of Mohammed for those of Islam; in this way ingratiating himself with professors of those creeds. From them, too, came his prohibition of all meat—with the exception of the flesh of the deer and the dove—in token of mourning for the destruction of the Temple at Jerusalem.

(3) The Mohammedan theologian, Abu Ḥanifah, who gave Anan such successful counsel, seems also to have exerted considerable influence upon the latter's religious system. The following utterance may serve as characteristic of Abu Ḥanifah:

> "Concerning those things that we have received from God and His prophet [Mohammed], we accept them with unconditional and total submission. Concerning those teachings and opinions that belong to the associates and companions of the prophets [the *Ashab*], we select from them the best. But as to all things else, which other teachers who followed them have left to us, we regard them as matters which came from persons that were human beings like ourselves."

Although Anan, in common with older schismatics, was opposed in certain points to traditional Judaism, he evidently could not, as long as he laid claim to an office dependent upon the Babylonian rabbinical academies, have possibly devised so radical a project as that of completely overturning the thousand-year-old edifice of rabbinical Judaism. It could only have been such circumstances as those which made the creation of a new sect a matter of life or death for him, and that fateful meeting with Abu Ḥanifah, which could have induced him to apply to Judaism

Built upon Analogy.

the maxim of the celebrated Mohammedan theologian just quoted. Anan imitated this Arab teacher still further. Abu Ḥanifah was accustomed in certain cases to take the words of the Koran, not in their literal, but in a symbolical sense (Ta'awil); and Anan adopted the same method with the Hebrew text of the Bible. Illustrations of this method are not infrequently, indeed, afforded by the Talmud itself. Thus he interpreted the prohibition of plowing on Sabbath (Ex. xxxiv. 21) as applying to marital intercourse; the word "brothers" (*aḥim*, Deut. xxv. 5) in connection with the levirate marriage he interpreted as "relatives," etc. But Anan's indebtedness to Abu Ḥanifah's system was most suggestively demonstrated in the following. Abu Ḥanifah's chief importance in the range of Mohammedan theology consists mainly in that to the three accepted sources of law in Islam—the Koran, the Sunnah (tradition), and the Ijma' (agreement among Moslems)—he added a fourth; namely, Rai (the speculative, individual view), claiming that in cases not provided for in the first three sources of law, it is permitted to the teacher of religion and to the judge to make his own decision with his own speculative reason in accordance with analogy (*Ki'as*; Hebrew *heḳesh* or *mah maẓinu*) with the cases actually provided. Now with Anan, too, it is found that the greater number of his innovations are based upon analogy. But he distinguished himself from his Mohammedan model in that he built mainly, not upon analogy of subject as Abu Ḥanifah did, but upon analogy of expressions, of words (the rabbinical *gezerah shawah*), indeed even upon analogy of single letters; a system which can hardly be considered a step in advance. The earliest sources tell also of another doctrine borrowed by Anan from the Mohammedans; namely, the belief in the transmigration of the soul (metempsychosis). This doctrine, represented in Greek antiquity especially by Empedocles and the Pythagoreans, had always been wide-spread in India, and was encountered there by a Mohammedan sect called the Rawendites, adopted by them, and in the middle of the eighth century was carried to Babylonia (Irak). This, too, was annexed by the Karaite schismatic, and he is said to have written a special work in its defense.

Minute Prescriptions.

Rules for Slaughtering.

In regard to general characteristics, this founder of Karaism, it must be confessed, was anything but a reformer in the modern sense of the word; for instead of lightening the load of traditional law, he increased the severity of religious praxis, as will appear from the following. Anan rejected all the admeasurements instituted by the rabbis (*shi'urim*); and instead of any permissible minimum for prohibited things—which the Talmud admits, as for instance *shishim*, one part in sixty, or *ke-zait*, "the size of an olive," etc.—he insisted that even the smallest atom of anything prohibited, mingling with an infinitely large quantity of a thing permitted, was sufficient to render the whole of the latter prohibited. In his law-book he maintains that as long as Israel is in exile the flesh of domestic animals, with the exception of the deer, is prohibited. The Talmud relates that after the destruction of the Second Temple, certain ascetics (*perushim*) sought to prohibit meat and wine because they had been employed in the Temple ritual, and that Rabbi Joshua ben Hananiah repressed the movement. The schismatic Abu Isa, just before Anan's time, had succeeded in imposing this piece of asceticism upon his followers as a law. His example was now followed by Anan, who in addition prohibited the flesh of poultry and of all birds with the exception of the pigeon and turtle-dove. The additional abolition by him of the injunction against eating meat and milk together (*basar be-ḥalab*) was thus rendered almost gratuitous. To this limitation of the eating of meat must also be added his regulation concerning the personality of the individual who slays creatures for food; Anan rejected the broad precept of the Talmud that "slaughtering is permissible to anybody," demanded a certain dignity for the act, and required from the slaughterer a complete profession of faith. From this dates the Karaite custom of reciting the articles of the creed preparatory to slaughtering. Finally, not satisfied with the Talmudic dictum that in the act of slaughtering it is sufficient to cut through two ducts —gullet and windpipe—Anan required that in addition two more—arteries or veins—should be severed. In addition to the legal fast-days appointed by the Bible, Anan, by means of word-analogies and peculiar misinterpretation, instituted the following: The seventh day of every month; the 14th and 15th of Adar instead of the rabbinical fast of the 13th, including thus the Purim festival; also a seventy-days' fast from the 13th of Nisan to the 23d of Siwan; including Passover and Pentecost as times of fasting when neither food nor drink could be partaken of by day.

Circumcision of children, according to Anan, must be performed with the scissors only; any other instrument was strictly forbidden under penalty of death. Other regulations concerning the same ceremony were of a like stringent character, and only he upon whom the operation had been performed accurately and with full observance of all these requirements was allowed to act in the capacity of *mohel* (circumciser). The omission of any single detail rendered the operation insufficient and vain, necessitating its reperformance. An adult (that is, a proselyte) might be circumcised only on the eleventh day of the month.

Rules for Sabbath.

It was forbidden to go outside of one's dwelling on the Sabbath except for purposes of prayer or necessity. Anything that is ordinarily carried on the shoulders, owing to its size or weight, might not be carried around even in a room. Anan's law-book insists that the Sabbath evening (Friday) must be passed in darkness: lights kindled in the daytime on Friday must be extinguished at nightfall, for it is forbidden to pass the Sabbath in a place artificially illuminated. Cooking and baking must be done on Friday, not only for Friday and Saturday, but also for Saturday night, to forestall any impatient longing for the close of the Sabbath. Viands already prepared must not be kept warm, but eaten cold. Unleavened bread (Maẓẓah) must be made exclusively of barley-meal, and he that prepares it out of wheaten meal incurs the punishment appointed for those that eat actual leaven (*ḥameẓ*). Nor may this unleavened bread be baked in an oven, but, like the paschal lamb, it must be roasted on the coals. In spite of his pretendedly tolerant utterances concerning the founders of Christianity and Islam, Anan amplified very considerably the traditional injunctions designed to keep the Jews distinct from other nations, particularly in the matter of the dietary laws.

That the founder of Karaism had small respect for science is often shown in his law-book. He forbids the use of medicines and of medical aid in general, for it is written, he says, "I, God, am thy physician" (Ex. xv. 26); this is held to prohibit drugs and doctors.

His opposition to the astronomical determination of the festivals, of which he boasted to the calif, led him to declare astronomy as a branch of the astrology and divination forbidden in the Bible, thus undermining the very foundation of the rabbinical calendar.

Reasons for His Views and Methods.

The impelling reasons for this rigorous tendency evinced by Anan in his legislation can not now be accurately stated. Possibly experience with the sects of the Isawites, Yudganites, and Shadganites, which immediately preceded him and were all more or less liberal in their views—some of them maintaining that after the destruction of the Temple the whole Jewish ceremonial law was no longer obligatory—showed him that such liberality soon lost its attraction for the main body of the people, and completely failed to impress them. This seems to have induced Anan to strike out in the opposite direction. He may also have been influenced in this attitude by the preponderance in both numbers and influence of the remnants of the strict Sadducees among his followers. At all events, his rigorous restraints caused many Karaite writers to reckon him among the ascetics (*perushim*) and among those "who mourned for Zion" (Abele Zion).

Karaism Succeeds Ananism.

Be this as it may, it is certain that the whole Ananite legislation was better fitted for the world-renouncing recluse than for the free citizen of the world. Although the story that Anan removed to Jerusalem is a later invention, it is true that, some time after his death, his devoted followers, who were called Ananites (the name Karaites appears later), could find no better course than to settle in the holy city and live there a secluded life of asceticism. They gradually disappeared; the greater portion of the antirabbinical schismatics separated themselves by degrees from the Ananites and created the much milder form, Karaism, which is better fitted for secular life.

During his life, however, Anan's political influence was sufficient to group all antirabbinical seceders around him and keep them together. The general and unlimited freedom in the investigation and exposition of the religious law which he openly proclaimed possessed a special attraction for all opponents of traditional Judaism. His well-known declaration expresses this principle, "Search thoroughly in the Law and depend not upon my opinion." It is therefore not to be wondered at that he closed his life as undisputed head of the new sect (about 790–800), and transmitted his position to his son Saul, whose descendants were designated *nesiim* (princes) by the Karaites.

Bibliography: All ancient sources and many new ones from manuscripts were collected by S. Pinsker in his epoch-making work (not free from errors), *Likkuṭe Kadmoniyot*, Vienna, 1860, which, before publication, was utilized by Jost (additions to the second volume of his *Gesch. des Judenthums und Seiner Sekten*, Leipsic, 1859, and by Grätz, *Gesch. d. Juden*, vol. v., new ed., Leipsic, 1895), and contains the best matter available upon the subject. Anan has been treated by Fürst, *Gesch. d. Karäert.* Leipsic, 1862, at great length (but, besides Pinsker's data, much is contained that is unfounded and fantastic). These were followed by Hamburger in Winter and Wünsche's *Jüdische Literatur*. The writer was fortunate enough to discover several new manuscript sources, including fragments of Anan's Codex, published in the Russian *Voskhod* (1897–98); also outlined in German in the new edition of Grätz, *Gesch. d. Juden*, 1895, vol. v., and in the *Jahrb. f. Jüd. Gesch. u. Lit.* (Karpeles, Berlin, 1899).

A. H.

ANAN BEN MARINUS HA-KOHEN: Rabbinical authority in Siponte; born probably about 1040. Conjointly with his somewhat older colleague, Kalonymus ben Shabbethai, he signed a rabbinical responsum before the latter removed to Worms, 1070. His colleagues in Siponte were Melchizedek ha-Kohen and Elhanan. Anan is known only from a mention of him made by the Roman rabbis Menahem b. Solomon (in שכל טוב, and from this in איסור והיתר § 157) and Zedekiah b. Abraham 'Anaw (in "Shibbale ha-Leḳeṭ," ed. Buber, i. 34, 292). Two halakic decisions and a poem on Elijah are mentioned as being by him (see Zunz, "Literaturgesch." p. 163).

H. V.

ANAN, SALVATORE: Italian writer, pamphleteer, and revolutionary leader; born at Ferrara, 1807; died at Genoa, 1874. In recognition of his patriotic zeal and literary ability, the National Society, founded in 1848, elected him secretary and, a few days later, representative for Turin. In 1849 he was elected, by an overwhelming majority, to the Constituent Assembly of Rome. The Republic of Rome sent him on an important diplomatic mission to Venice. Toward the end of 1849 he was expelled from the Pontifical States and from Lombardy and settled at Genoa, where he died. His collection of books, which was rich in works on literature and politics, he bequeathed to the library of the city of Genoa.

ANAN, SON OF SETH. See Annas.

ANANEL. See Hananel.

ANANEL (HANANEEL) DI FOLIGNO: Apostate; lived about the middle of the sixteenth century. Joseph ha-Kohen reports in his "'Emeḳ ha-Baka" that Ananel was the leader of a triumvirate of apostates, who, in 1553, appeared before Pope Julius III. with a sharp arraignment of the Talmud. Joseph Moro and John Baptista Romano Eliano, the grandson of Elias Levita, were his companions. The tradition is that the apostates were employed by two rival publishers of Jewish books at Venice, and that in the course of competition they were sent to Rome. They denounced the Talmud as containing defamatory statements regarding Jesus, the Church, and Christianity in general, and as constituting the sole impediment to the wholesale conversion of the Jews. Julius III. was neither a fanatic nor inimical to the Jews: his two physicians were Vital Alatino of Spoleto and the Marano Amatus Lusitanus. But the case in question lay beyond the bounds of his jurisdiction: it belonged to the court of the Inquisition, at the head of which stood the extremely fanatical advocate of the universalization of the Spanish Inquisition, the Dominican Caraffa. On Aug. 12, 1553, the pope signed the edict ordering the destruction of the Talmud, submitted by Caraffa. Though it is said that the Jews were given an opportunity of defense, all copies of the Talmud at Rome were seized by the Inquisition immediately, and were burnt on the Jewish New Year (Sept. 9) in the Campo dei Fiore.

Another conspiracy in which Ananel di Foligno figured threatened to culminate not merely in the destruction of the Jewish books, but in that of the whole Jewish community of Rome. A Mohammedan convert to Christianity had murdered his wealthy ward in order to appropriate his possessions, and had thrown the corpse into the Campo Santo, the exclusively Roman cemetery. When the body was found a number of unscrupulous persons, led by Ananel, straightway raised the charge of child-murder against the Jews. Marcellus II. credited the accusation, and was on the point of condemning the Jews of Rome to a severe punishment, when the calamity was averted by Cardinal Alexander Farnese, who succeeded in discovering the real culprit and appeased the pope (April, 1555).

H. G. E.

'ANANI, 'INANI, 'INYANI, 'ANANIEL B. SASON (עינייני, עינני, ענני): A Palestinian amora of the third century, contemporary of R. Ammi. He rarely discussed Halakot, and his discussions of them were not original (Shab. 64*b*). Once he recited a Halakah in the patriarch's mansion, without naming its author, which provoked R. Ammi to ask: "Is it his own? It is what R. Eleazar had reported in the name of R. Oshaiah" (M. Ḳ. 24*b*). In the Haggadah he sometimes reported the sayings of others, but more often he was original. Thus, as a reason for the juxtaposition of the regulations regarding the sacrificial rites and the priestly vestments (Ex. xxviii.–xxix.), he points out that the priestly vestments were to have atoning effects as well as the sacrifices. He represents the miter as atoning for haughtiness, and cites R. Ḥanina as saying, "That which rests highest on the priest atones for one's considering himself high"; and similarly with the rest of the priestly garments (Zeb. 88*b*; 'Ar. 16*a*; compare Yer. Yoma, vii. 44*b*; Lev. R. x.). Referring to God's appearance in the thorn-bush (Ex. iii. 2–4) he remarks, "The Holy One—blessed be He!—said to Moses, 'When I will it, one of my angels stretcheth forth his hand from heaven and reacheth to the ground,' as the Scripture says [Ezek. viii. 3], 'He put forth the form of a hand, and took me by a lock of mine head'; and when it so pleaseth me, I make three angels sit under one tree [Gen. xviii. 4]; when I choose, my glory fills the universe, as it is written [Jer. xxiii. 24], 'Do I not fill heaven and earth? saith the Lord'; 'and when I so willed, I spoke to Job in a whirlwind, as it is said [Job, xxxviii. 1, xl. 6], "The Lord answered Job out of the whirlwind" ' " (Ex. R. iii., where the interpretation is somewhat forced).

The same idea, though in different form, is found elsewhere (Gen. R. iv., Pesiḳ. R. i. 47) in the name of R. Ḥanina b. Issi (Sissi); and as the name of the subject of this article is sometimes written 'Inani and also 'Inyani (compare "Diḳduḳe Soferim" to Shab. 64*b*, M. Ḳ. 24*b*, Zeb. 88*b*)—which forms are dialectic variations of Ḥanina, though with the initial Aleph instead of Ayin—the circumstance probably suggested the identity of the two names (compare Bacher, "Ag. Pal. Amor." iii. 547, 4–5). But this identification meets with insuperable chronological difficulties, Ḥanina b. Sissi being a contemporary of Johanan (Yer. Sanh. ii. 20*c*), while 'Anani was younger even than Johanan's pupils.

Isaac Reichlin ("Ha-Kerem," 1887, p. 214*b*) aptly suggests that 'Anani's real name was 'Ananiel, as it is still preserved in Ex. R. iii. 7, and that its apocopated form was adopted to avoid the mention of the name "El" (God) in common speech. S. M.

ANANIAS: This name stands in the Septuagint and New Testament as the equivalent for different Hebrew names, one (I.) with initial ח and the other (II.) with initial ע.

I. 1. Son of Emmer who put aside his foreign wife (I Esd. ix. 21)=Hanani (Ezra, x. 20). **2.** In the same list as above (I Esd. ix. 29) = Hananiah (Ezra, x. 28). **3.** A Levite who taught the Law (I Esd. ix. 48) = Hanan (Neh. viii. 7).

II. 1. Mentioned in I Esd. ix. 43 = 'Anaiah (Neh. viii. 4). **2.** Father of Azarias, whose son Gabriel declared himself when he appeared to Tobit (Tobit, v. 12). **3.** An ancestor of Judith (Judith, viii. 1).

III. The Ananias mentioned in Acts v. as having defrauded the apostles and as having been punished by sudden death, as was also the case with his wife, Sapphira. It is uncertain with what initial his name was pronounced. G. B. L.

ANANIAS OF ADIABENE: A Jewish merchant, probably of Hellenic origin, who, in the opening years of the common era, was prominent at the court of Abennerig (בן נרגל), king of Charax-Spasini (Charakene, Mesene). He was a zealous propagandist of Judaism among the pagans, and was instrumental in the conversion of numerous native and foreign inhabitants of Charax, which, situated at the confluence of the two arms of the Tigris, was at the time a great mercantile center. Among his most prominent converts were several women of high position at the court, particularly the princess Symacho, the king's daughter. This princess had been married to Izates, a young prince who had been sent to Abennerig's court by his parents, Monobaz and Helena, the rulers of Adiabene. Through his wife, Izates' attention was directed to Ananias, with whom he formed an acquaintance that eventually ripened into a strong attachment. Ere long (about the year 18), Ananias had won the prince over to the Jewish faith. Moreover, Izates was named as successor to the throne by Monobaz, who, in so doing, passed over his elder sons. Upon his accession (about 22), Izates, in order to show his genuine attachment to the new religion, declared his determination to undergo the rite of circumcision. Helena opposed this, fearing that the adoption of foreign ceremonies might arouse against the young king the indignation of his pagan subjects. Ananias, who had come to Adiabene with Izates, supported Helena's contention, arguing that such a step on the part of the king would endanger the life of his Jewish instructor, and, further, that circumcision was not vital to the fulfilment of the Jewish religion and the worship of God.

Izates seemed convinced by the latter argument, until there came to his court another Jew, Eleazar, who, in contradistinction to Ananias' Hellenic leniency, was a rigorous legalist from Galilee. He persuaded Izates to undergo the rite (Gen. R. xlvi. 8). Ananias and Helena were strongly agitated when Izates disclosed his action, but the trouble they predicted did not immediately ensue. Whether Ananias made further converts in Izates' country is not stated (see Adiabene; Helena; Izates; Monobaz II.).

H. G. E.

ANANIAS, SON OF NEBEDEUS: High priest, appointed by Herod of Chalcis. He officiated from about 47 to 59, and was deprived of his office by Agrippa II. (Josephus, "Ant." xx. 5, § 2; 9, § 2). When the governor of Syria, Ummidius Quadratus, was investigating the matter of the tumults occasioned by the struggle between the Judeans and the Samaritans (50–52), he sent (52) Ananias, his son Anan, and other prominent persons to Rome to answer to Emperor Claudius for participating in the troubles, or for having instigated them. Through the influence of Agrippa II. Ananias was acquitted and sent home; and he continued to officiate as high priest ("B. J." ii. 12. § 6; "Ant." xx. 6, § 2). In Acts, xxiii. 2, xxiv. 1, he is mentioned as president of the Sanhedrin, and as representative of the Jews before the procurator, about 58. His removal from office did not rob him of influence; for his wealth was daily increased by gifts and by unscrupulous and violent appropriation on the tithes, or provisions destined for the ordinary priests (compare Bab. Pes. 57*a*; "Ant." xx. 9, §§ 2, 3, 4). His relations to the procurator Albinus drew upon him the hatred of the Sicarii; and at the outbreak of the great revolt, when he sided with the party of the king, the revolutionists not only burnt his palace but killed him and his brother ("B. J." ii. 17, §§ 6, 9). A. Bü.

ANANIAS, SON OF ONIAS IV.: On account of the persecutions under Antiochus IV., Onias IV. fled from Jerusalem to Egypt, won the favor of Ptolemy VI., and built there a temple (Josephus, "Ant." xiii. 10, § 4). Ananias and his brother Helkias were held in high esteem by CLEOPATRA III. Owing to her regard for them, the Judeans of the province Onion, between Pelusium and Memphis (compare "Ant." xiv. 8, § 1; "B. J." i. 9, § 4), remained true to her when she was abandoned on the island of Cyprus by all her soldiers (Strabo quoted by Josephus, "Ant." xiii. 10, § 4). When she went to Palestine to help the king of Judea, ALEXANDER JANNÆUS, against her son, Ptolemy Lathirus, and succeeded in dislodging him (about 100), Ananias and Helkias were her generals; and Ananias dissuaded her from incorporating Judea as an Egyptian province, at the same time inducing her to form an alliance with Alexander Jannæus (Josephus, "Ant." xiii. 13, § 2; Schürer, "Gesch. d. Jüd. Volkes," i. 220). A. Bü.

ANANIAS, SON OF ZADOK: According to Josephus ("B. J." ii. 17, § 10; "Vita," 66-67), one of the deputies of high rank from among the Pharisees, sent in the year 66 by Simon ben Gamaliel and the leading personages in Jerusalem to reprimand JOSEPHUS, the future historian. Entrusted with the defense of Galilee in the great war against the Romans, Josephus, soon after his appointment as general, had been suspected of corrupt purposes by John of Giscala. Josephus, being apprised of their arrival, captured them and sent them back to Jerusalem ("B. J." ii. 21, § 7; "Vita," 38-64). A. Bü.

ANANYEV: District, town, and village in the province of Kherson, Russia. In 1897 the Jewish population was: in the town 7,650 (50 per cent.); in the village 4,408 (34.9 per cent.); and in the district 4,555 (3.7 per cent.). There are three synagogues and three Hebrew schools. H. R.

ANAPA: Town in the province of Kuban, Russia, on the eastern coast of the Black Sea. Jews are said to have lived here in the first century, and to have had a synagogue.

BIBLIOGRAPHY: Harkavy, in *Voskhod*, March, 1894, p. 54.

H. R.

ANARCHISM: This term is used so loosely in the United States by writers and public speakers that a scientific definition appears to be a prerequisite to the proper understanding of its different phases. As it is often stated that Jews have been intimately connected with this movement it seems desirable to ascertain the extent of the connection.

Anarchism is defined in "The Encyclopedia of Social Reform" (New York, 1897) as "the social doctrine of the abolition of government of man by man, and the constitution of society without government." There are two schools of Anarchism: the individualistic and the communistic. Communist Anarchism is of distinctively Russian growth. From the first, Jews in Russia allied themselves with this school and participated actively in its propaganda. It originated with the early Slavophiles of the "forties" in their mystical cult of the village community; was given a socialistic guise by Herzen and Tchernyshevski at the epoch of the peasant reform; was remolded and finally merged into Proudhonism by Bakúnin in the days of the International Workingmen's Association (1868-71).

Its Origin.

The individualistic Anarchism of Proudhon found a wide and responsive audience among the Russian educated middle class, and in the "sixties" was acclimatized in the guise of nihilism. Nihilism soon gave place to the Bakúnin-communist Anarchism, which held sway over the minds of the young generation of the "seventies." The anarchist movement had exhausted itself in Russia by 1881, and had given to the western world the most noted apostle of modern communistic Anarchism, Prince Peter Krapotkin.

Clubs and Societies Formed.

The exodus of the Jews from Russia, following the anti-Jewish riots of 1881 and subsequent years, coupled with political persecutions, brought to England and the United States a number of young men and women who imported with them, along with their Russian education, the popular political and social ideas of their old country. Fired with the proselytizing spirit of the Russian social reformer, they naturally became the teachers of the ignorant Jewish immigrants, who, craving for knowledge, were now given for the first time in their lives an opportunity to study. Clubs and societies were soon formed—the Berner Club at Whitechapel, London; the Russian Progressive Labor Association; and, later, the Pioniere der Freiheit, in New York. The movement gave birth to a weekly paper, "Der Arbeiterfreund," published in London. Supported in the beginning solely by the enthusiasm of its promoters, this periodical succeeded, after a while, in gaining a small paid circulation. In New York, owing to the greater prosperity of the Jewish immigrants, as compared with the Whitechapel standard of living, a similar venture met with better success. "Die Freie Arbeiterstimme," a weekly paper founded in 1890, managed to maintain itself, by the aid of voluntary contributions, for a few years; its main energies being directed toward fighting its socialist contemporary, the "Arbeiterzeitung."

Of course, the leading spirits among the Jewish anarchists kept in touch with their non-Jewish coworkers in the anarchist movement, represented by "Freedom" in London, and Johann Most's "Freiheit" in New York. But the masses of Jewish sympathizers—secluded in their Ghetto with the rest of their countrymen—formed a distinct Yiddish-speaking branch of the movement. In New York they soon became the financiers of anarchist propaganda, contributing largely toward the support of anarchist literature in the English language.

The anarchist movement among Jews in the United States is now, however, decidedly on the wane. The organic growth of the Jewish settlement, the development of labor organizations, and the embarking by social reformers in labor politics have dealt a fatal blow to Anarchism. It is no longer a movement of the masses, as in former years—the first enthusiasm of youth having expended itself in vain efforts to convert an indifferent world—and the few remnants of the pioneers of 1890 confine their activities to the publication of a monthly magazine, "Die

Freie Gesellschaft," devoted to a popular discussion of their sociological theories.

Neither of these schools of Anarchism is necessarily other than pacific. But militant Anarchism has also been represented among the Jews, in the person of Alexander Berkmann. It will be recalled that he attempted the life of H. C. Frick, manager of the Carnegie Steel Company, during the Homestead strike in the summer of 1892, and was sentenced at Pittsburg, Pa., to twenty-two years' imprisonment in the penitentiary. Berkmann's case can not be classed, however, with the deeds of the European militant anarchists, whose blows are aimed indiscriminately at any person belonging to the ruling classes or to the bourgeoisie. The victim chosen by Berkmann was a man who represented capital in an acute conflict with labor, which brings this case into close relationship with Russian terrorism.

Individualist, or so-called "philosophical" Anarchism, which can as readily be traced to its Russian source, has had few Jewish adherents. Victor Yarros, one of the leading philosophical anarchists of the United States, is a Jewish disciple of Pissarev, the brilliant apostle of Russian nihilism (in the Turgeniev sense of the word). It must be noted, however, that though individualist Anarchism or nihilism, as a philosophical creed, has no distinct body of followers among the Jews, still its influence has made itself felt in shaping the relations of everyday life among the more cultured portion of the Russian-Jewish colony in America.

The nihilism of the "sixties" has gradually permeated all strata of the Russian "intelligentzia": even the conservative have not entirely escaped. Numbers of Jews have brought with them from Russia the ways of thinking current among cultured Russians.
J. A. H.

ANATH (from the root ענה): The name of an ancient war-goddess of the western group of Semites. The Egyptian way of writing the name of the Phenician-Israelitish city "Beth-Anath" indicates that ענת is here a goddess, and probably also in the name of the place "Beth-Anoth" in Judah and probably also in Anathoth (a plural like בעלים from בעל), the birthplace of Jeremiah. These names, however, which may possibly date from Canaanite times, point to the early worship of Anath in Palestine (Judges, iii. 31). Wellhausen has even suggested that the verse (Hosea, xiv. 9) אני עניתי ואשורנו is to be translated "I am his Anath and his Ashera" ("Skizzen," v. 131), but this is very improbable. The proper name Anati occurs upon one of the El-Amarna tablets: Winckler, in "Keilinschriftliche Bibliothek," v. 236; Flinders-Petrie, "Syria and Egypt," p. 61.

Representations of Anath (W. Max Müller, "Asien und Europa," p. 313) show her provided with helmet, shield, and spear, and with a swinging battle-ax in her left hand. A later picture of Anath (de Vogüé, "Mélanges," p. 47) shows her sitting upon a lion, which also typifies her warlike disposition.

ANATH. See Shamgar.

ANATHEMA (Greek 'Ανάθημα; Hebrew חרם; Aramaic חרמא): A term used both in the sense of consecration and of condemnation. The old Greek 'Ανάθημα signifies a votive offering, something devoted to, or set aside for, the special use of the gods; in its ecclesiastical sense, specifically in a New Testament significance, "set aside for evil"—hence, cursed, excommunicated. The ecclesiastical use of the word "Anathema" in this particular sense presumably originated in Palestine in pre-Christian times (see Niddui). Only the postexilic forms of Anathema will be appropriately treated here. For a consideration of the Biblical forms, see Ban.

Derivation and Definition.

The Old Testament Scriptures know nothing of an ecclesiastical Anathema or ban, unless the notice in Ezra, x. 8 be excepted, which may be the starting-point for a theory that the progressive spirit of Jewish legislation in the time of the great scribe condemned the barbarism of putting excluded persons to death. According to that passage, only the property of the condemned person was *ḥerem*, that is to say, given over to total destruction; but the culprit himself was simply excluded, that is to say, forbidden to communicate with the members of the congregation of the diaspora. This chapter of Ezra warrants an inference, substantiated by many other historical evidences, that the constitutional conditions of the government of the returned exiles differed radically from those of the old royal régime. With the disappearance of the Davidic dynasty the Jews become a theocratic, subsequently a hierocratic, congregation, the members of which are to conform to certain spiritual regulations designed to fortify the newly established commonwealth. Remarkably enough, Ezra believed the territory itself to be under a species of ban (*niddah*); and its restoration to the dignity of the patrimony of YHWH required that it be purged from the impurities with which it had become permeated through contact with the foreign inhabitants and their idolatrous practises (Ezra, ix. 1, 12).

The Land Itself Under a Ban.

This declaration of the chronic impurity of the country itself gives the key to Ezra's twofold pronunciamento: politically, an excommunication of all foreigners who did not renounce their idolatry, and did not conform to the discipline of the religion of YHWH; spiritually, the introduction of a corrective measure to hold the Jewish tendencies toward paganism in check, and to further the growth of a pure monotheistic system unhindered by either the symbolism or the degrading practises of polytheistic religion. Ezra is the founder of the "congregation of Israel"—a community of worshipers of the one God—to the members of which, through the operation of a systematic discipline, idolatrous practises become abominable. This upbuilding of a spiritual fraternity required, doubtless, the inauguration of drastic measures, among which was the exclusion of all persons (men or women) tainted with paganism, or the closing of the territory to all persons who were not ready to subscribe unhesitatingly to the conditions imposed by the covenant of YHWH. Only in this way could the ban be removed from the land itself, which again became holy territory, the fit habitation for a holy and undefiled community (compare Ezra, ix. 2). Whether this "cutting off" of the Jewish members of the community, to prevent the growth of reprehensible practises, was already indicated in the Biblical form of ban, called *karet* (כרת), can not now be determined (compare Winer, "B. R." ii. 14, *s.v.* "Lebensstrafen").

The Ḥerem in Postexilic Times.

The Biblical form of the ḥerem changes, therefore, from the time of Ezra. In postexilic times it had been a grim, cruel measure of state, by which all persons falling under the ban were put to death and their property was destroyed. In the early centuries of the second Jewish commonwealth, founded upon theocratic lines, it becomes an expression of God's displeasure with all persons, Jew or pagan, who do not subordinate their personal conduct and tendencies to the discipline by which conduct, public and private, is henceforth to be regulated: it is an instrument of communal purification, a corrective measure designed to purge the community from all persons whose conduct, moral or political, is not in harmony with the constitution of the theocracy.

But later on, specifically after the community is subdivided into congregational bodies, under the rule of their own officers, the ḥerem or Anathema is designed to control the moral deportment and obedience of their members; acting as a check upon insubordination, proclaiming or threatening expulsion from all advantages derived from an integral membership in the covenant of God; yet operating beneficently in its self-declared reversible character, under which the authorities might take cognizance of the transgressor's repentance and restore him to his former place in the congregation and community (Mishnah Ta'anit, iii. 8). The ḥerem, then, becomes in the hands of the authorities an instrument for the promotion of personal conduct as well as the enforcement of public morality, a constitutional power designed to operate beneficently upon the growth of a virtuous community. Whether this power at any time might not become a source of danger or be converted into an arbitrary exercise of authority was indeed a very serious question.

The rise of the Jewish sects (see Essenes), the infusion of Hellenistic culture—which threatened to undermine Ezra's splendid work—the Maccabean revolt, and the subsequent unhappy political feuds which represent the struggle between theocrats (Pharisees) and hierocrats (Sadducees), or between the champions of a spiritual commonwealth and the votaries of a royalty not represented by the old dynasty—all these incidents helped, probably, to render the ḥerem an instrument of ecclesiastical discipline.

A Measure of Synagogal Discipline.

While there exists no exact historical basis for this gradual development of the institution of Anathema, it may fairly be assumed that it was introduced at the same time as the rise of the Synagogue. Much, of course, depends on the period to which this rise is assigned. If, as Zunz implies, the rise of the Synagogue is contemporaneous with the Maccabean period (Zunz, "Gottesdienstliche Vorträge," p. 3, Berlin, 1832; compare also Schürer, "Gesch." American ed., ii. 54), it might be safely assumed that, in its main features, the Anathema of the first and later centuries of the present era resembles the ḥerem of earlier, specifically the pre-Maccabean, times, in its general tendency to fortify the foundations of the covenant by imposing penalties upon heresy as well as upon defections from the ethics of private life. Heresy, in particular, was the great offense during the dominancy of the sects.

Ḥerem has already been defined.

Niddui, נדוי, Aramaic Root: נדא = Hebrew נדה = נדד, Isaiah lxvi. 5 מנדיכם in Pu'el form, to cut off, cast out, put under ban, anathematize; compare Buxtorf, "Lexicon Chaldaicum," under נדוי; Levy, "Chaldäisches Wörterbuch," under נדא; Jastrow, "Dict." under נדי; Kohut, "'Aruch Completum," under נדה (2).

Nezifah, Aramaic nezifutha נזיפותא, Root: נזף, to warn, to rebuke, hence to pronounce punishment or ban (נזוף, one who has been excluded from the congregation; compare Shab. 115*a*; compare Levy, "Chaldäisches Wörterbuch," *s.v.* נזף). The Synagogue of old was conducted by officials to whom, among other things, was entrusted the enforcement of religious and ethical discipline, to the end that the community might not lose the character and identity of "a congregation of the Lord." Doubtless, one of the instruments by which this discipline was enforced was the ḥerem or Anathema. Of this three forms are known: Ḥerem, Niddui, and Nezifah or Nezifuta; the last named having been, in all probability, introduced only in the second century of the common era as a disciplinary measure against the growing disrespect in the popular attitude toward the rabbis (M. Ḳ. 16*b*–17*a*; compare Hamburger, "R. B. T." vol. ii., *s.v.* "Bann").

For the further term *Shamta*, properly *Shammatta*, Aramaic שמתא, the meaning is obscure. In all probability it represents a general designation for every form of ecclesiastical excommunication. Levy's derivation ("Chaldäisches Wörterbuch," under שמתא) from שמדתא, with assimilation of *d* and *t*, is acceptable. Elias Levita's assertion ("Tishbi," under נדוי) that shammatta was the highest form of excommunication has often been declared groundless (compare, however, Winer, "Biblische Realencyclop." i. 136, *s.v.* "Bann"). For shammatta as a general form of Anathema, compare, for instance, M. Ḳ. 17*a*.

Of the three forms or degrees known, niddui and nezifah were corrective in character, involving a temporary expulsion for a fixed period, at the expiration of which the culprit, upon exhibition of proper repentance, was restored to communication with the congregation and to his wonted privileges. The first degree, ḥerem, the Anathema proper, was an expulsion for an indefinite term and represented the final punishment of an offender who had been repeatedly warned and corrected. The person so expelled was *muḥram* (compare *Anathema maran atha* in I Cor. xvi. 22. According to Graetz maranatha is a corrupt transcription of מוחרם אתה, "Thou art anathema"; compare Holtzmann, "Handkommentar zum Neuen Testament," pp. 173, 174, note).

Doubtless, the catalogue of offenses for which these three degrees were applied was well defined (compare the classification in Shulḥan 'Aruk Yoreh De'ah, *Niddui we-Ḥerem*, § 334, 43).

The Modus Operandi.

The modus operandi was to pronounce niddui upon an offender for the period of thirty days, when, having repented his conduct, the ban terminated. Persistence in the offense was punished with an extension of the ban for another thirty days, after which the sinner's contumacious conduct was finally punished with ḥerem, or excommunication, which, though indefinite, was revocable at the option of the authorities. The lesser ban, nezifah, was imposed for a period of seven days (*ib.* § 334, 2). In Babylonia there is an important modification—namely, that nezifah is imposed for one day only; niddui for seven days (compare M. Ḳ. 16*a*, 17*b*). The character of the offenses for which niddui and ḥerem were imposed permits a fair insight into the thorough discipline of rabbinical Judaism as it developed after the rise of the Synagogue, but more particularly after the destruction of the Temple and the dispersion of the Jews. Then the necessity for preserving Judaism became paramount. Thereupon was developed a rigid, uncompromising censorship of communal and domestic life, of public and private conduct, which, in its government of morals, became of the most far-reaching consequence. The doctrine of holiness was again urged as fundamental; and, next to obedience to God, implicit respect was to be shown to His law and to the authorities that had been appointed to administer it. While it does not appear that the Anathema was governed by fixed legal principles; while, in fact, the authorities could impose it without a determination of the verdict by unimpeachable testimony (*ib.* § 334, 43 gloss), this very latitude exhibits the spiritual authorities as being possessed of large powers, which were exercised for the conservation of the ethics of conduct. This makes the Anathema not only a punitive measure, but a protection against personal injustice or against immorality, whether of conduct or of profession.

Niddui, on Whom Pronounced.

The offenses for which niddui and ḥerem were pronounced comprise, generally, those committed, (1) against the authorities; (2) against morality and public decency; and, (3) against religion itself (compare Hamburger, *l.c.*). A few of these offenses may be enumerated here. Niddui was pronounced upon a person who did not respect the dignity and authority of the bet din or of an individual rabbi. Even after his death a scholar's name and reputation should not be criticized (compare Yer. M. Ḳ. iii. 81*a*, *b*; Ber. 19*a*). A messenger or representative of the bet din should always be received with honor; to treat him with contempt was an offense for which niddui was pronounced (Ḳid. 70*b*). A person who applied an insulting epithet to another, noticeably that of "slave," was put under ban (*ib.*). Niddui was also pronounced upon the following: a person who publicly despised the teachings of the rabbis (Mishnah 'Eduy. v. 6); or who was summoned to attend court and showed disrespect by appearing late, or by non-attendance (B. Ḳ. 112*b*); who did not obey an order of, or did not comply with the terms of a verdict pronounced by, the bet din (*ib.* 113*a*); who contumaciously refused to pay damages assessed against him (*ib.* 15*b*); who gave title of real estate to an idolater (*ib.* 114*a*); who desecrated the festal seasons by labor, even the second days, though the latter were founded on custom only (Pes. 52*a*); who pronounced God's name in vain, or who, in taking an oath, made exaggerated protestations (לשון הבאי; Ned. 7*b*), or whose misconduct created *ḥillul ha-Shem* (desecration of the Holy Name), that is to say, any misconduct or scandal that reflected upon or endangered the morality and religious character of the community (Yer. M. Ḳ. *l.c.*). Niddui was also pronounced upon one who was guilty of "putting a stumbling-block before the blind"—that is to say, one who dealt unfairly with another, or sought undue advantage in business (compare Rashi on Lev. xix. 14, M. Ḳ. 17*a*); who interfered with the public exercise of religious duty (Yer. M. Ḳ. *l.c.*); who was guilty of the distribution of unclean food (Sanh. 25*a*); upon a *shoḥet* (slaughterer) who refused to submit his knife to examination (Ḥul. 18*a*); upon a divorced couple in collusion to vitiate the consequences of the divorce (Ket. 28*a*); upon a rabbi who had fallen into evil repute (M. Ḳ. *l.c.*); and upon any one who had unjustly pronounced niddui upon an innocent person (*ib.*). These foregoing examples prove conclusively that Anathema, from the rabbinical standpoint, was designed to purify conduct and to preserve harmonious relations between the various members of the community—a discipline doubtless of the utmost importance from the time that the Jewish communities began to live the difficult life of the diaspora.

Ethical Aim of Anathema.

It may be concluded, therefore, that the rabbinical Anathema, in its developments, was designed to conserve the morality of the community. In the hands of the teachers of the Law it was applied, with scrupulous care, to protect the community against offenders. It was not hastily pronounced. The transgressor was repeatedly warned to mend his ways, to repent, or to make restitution. It was only after every mode of remonstrance had been exhausted, and the offender's pertinacity had become evident, that the corrective powers of the ḥerem were invoked. Three successive times—on Monday, on Thursday, and on the following Monday—the culprit was publicly exhorted. Only when his obduracy continued was the ban pronounced, in the offender's presence, with the formula: "*N. N. is excommunicated,*" or, in his absence, in the words: "Let *N. N. be excommunicated*" (Maimonides, "Yad ha-Ḥazaḳah; Hilkot Talmud Torah," vii.), without any statement of the reasons for which the Anathema was pronounced. In extreme cases, however, the reasons were publicly given; and then the ban was preceded by blowing the *shofar*. The ban could be removed by a rabbi or a college of three laymen (Maimonides, *ib.*).

Niddui and Ḥerem Discipline.

A person on whom nezifah was pronounced was required, for the duration of the ban—seven days in Palestine, one in Babylonia—to remain at home, and to abstain from all business and entertainment (compare Yoreh De'ah, *l.c.*). Any person on whom niddui was pronounced was treated with far greater severity. He was forbidden contact with every person excepting his wife and children; and it was forbidden to sit at meals with him, or to count him in the ritual number (*minyan*) requisite for prayers. He was permitted, however, to attend service, to study the Torah, or to attend the public lectures of the rabbis. A person over whom niddui was pronounced was required to don the habiliments of mourning. He was, moreover, forbidden to bathe, to cut his hair, and to wear footgear (the details of the discipline are given in Shulḥan 'Aruk Yoreh De'ah, § 334). The person who was punished with ḥerem was visited still more severely. In addition to the niddui regulations he was required to abstain from teaching, though he was permitted to study alone. He was forbidden to partake of any food except that necessary for sustenance. If he died while under the ban his tomb was marked with a stone, and all tokens of mourning were forbidden.

Whether Anathema operated as beneficently upon the excommunicated as was originally contemplated may well be questioned. With the growth of rabbinism its discipline became more concrete; and, so far as the ḥerem is concerned, it often put humiliation upon condemned persons out of proportion to their offenses. But it must not be forgotten that the necessity of preserving the morals of the community was paramount, and thus may often have led to harsher measures than each offense justified.

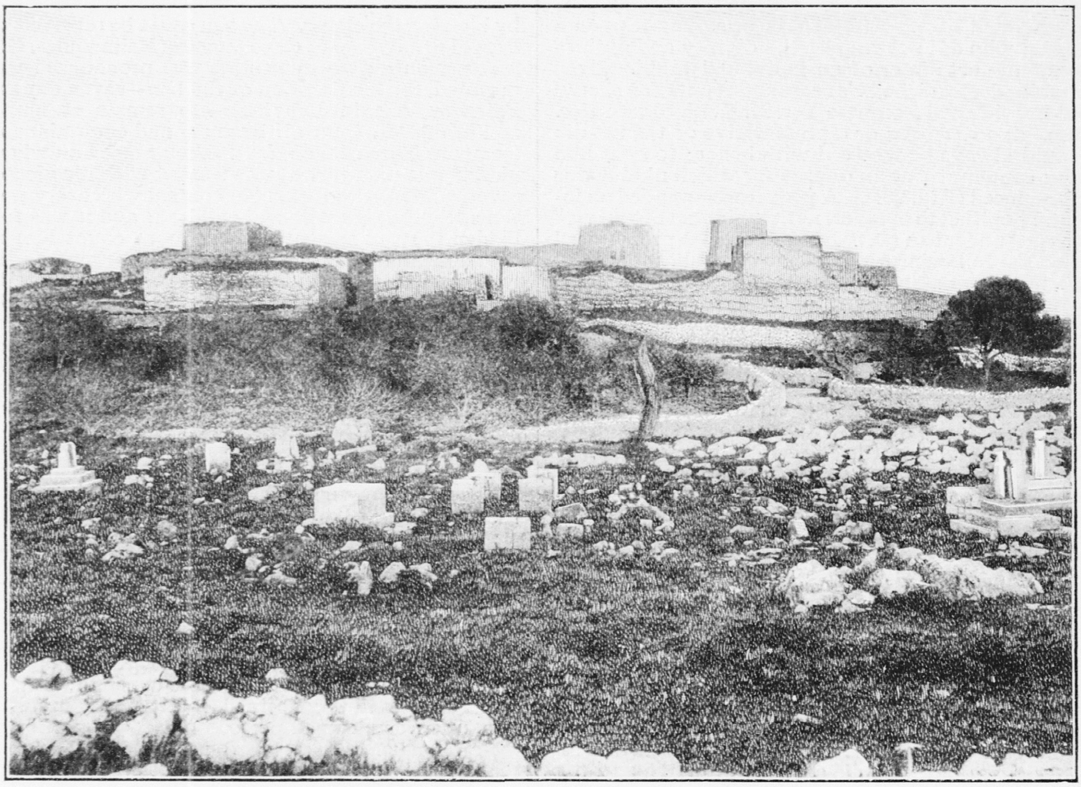
As Israel grew older in the diaspora, and as it came to look upon the Gentile peoples and their culture with indifference, not to say contempt, offenses against rigid rabbinical discipline were condemned more harshly than ever, and the right of excluding offenders was more frequently applied. Already in the times of the Mishnah there was rigid condemnation of teachers for their advancement of doctrines deemed heretical, and this rigorous enforcement of a consensus of opinion and teaching continued until recent times; though the ḥerem itself may not be pronounced wherever the Jewish community is subject to the civil and criminal codes of the nations of which they now constitute integral elements. See EXCOMMUNICATION.

B. T.* s.v. Bann; J. Wiesner, *Der Bann in Seiner Geschichtlichen Entwicklung auf dem Boden des Judenthums*, Leipsic, 1864.

J. V.

Some light on the origin and degrees of excommunication is cast by the account given in Josephus ("B. J." ii. 8, § 8) of the system of the Essenes:

"Those that are caught in any heinous sins they cast out of their society, and he who is thus separated from them does often die after a miserable manner; for as he is bound by the oath he hath taken, and by the customs he hath engaged in, he is not at liberty to partake of that food that he meets with elsewhere, but is forced to eat grass, and to punish his body with hunger till he perish; for which reason they receive many of them again, when they are at their last gasp, out of compassion to them, as thinking the miseries they have endured till they came to the very brink of death to be sufficient punishment for the sins they had been guilty of." Compare with this I Cor. v. 5: "To deliver such a one unto Satan for the destruction of the flesh, that the spirit may be saved in the day of the Lord Jesus," and I Cor. xvi. 22: "Anathema, Maran atha." The older generations anathematized with the Ineffable Name, and therefore the curse was effective: but later generations have forgotten the name, and the Anathema is of no effect (according to "Sefer Ḥasidim," § 1291). K.



General View of Modern Anathoth.

(From a photograph by the American Colony, Jerusalem.)

ANATHOTH: A town in the territory of Benjamin in Palestine, included among the original Levitical cities (Josh. xxi. 18; compare I Chron. vi. 60). It has been identified by Robinson with the modern village 'Anâta, about two and one-half miles northeast of Jerusalem. It was the home of Abiathar (I Kings, ii. 26) and of Jeremiah, the prophet (Jer. i. 1). It was also probably one of the towns occupied by the exiles who returned from captivity. Its importance was due largely to its superior commanding elevated location. See Anath. I. M. P.

ANATOLI BEN DAVID CASANI. See Casani.

ANATOLIO (ANATOLI, ANTOLI, or **BEN ANATOLIO), JACOB BEN ABBA MARI BEN SIMSON (SIMEON;** sometimes corrupted into **Abtalion):** Hebrew translator of Arabic scientific literature; flourished about 1194–1256 (see "Journal Asiatique," xiv. 34). Anatolio, as he is frequently briefly designated, certainly was of southern French extraction, though the theory of Steinschneider, following Zunz, that Marseilles was his native place, has been contested. Anatolio's literary activity was early stimulated by his learned associates and relations at Narbonne and Béziers. In fact, he distinguished himself so notably that the emperor Frederick II., the most genial and enlightened monarch of the time, invited him to come to Naples, and, under the emperor's auspices, to devote himself to his studies, particularly to the rendition of scientific Arabic literature into the more accessible Hebrew language. Thus it was at Naples that Anatolio passed his most fertile period of literary production, and from that city were issued the numerous translations bearing his name.

Invited to Naples by Frederick II.

Anatolio was the son-in-law—possibly also the brother-in-law—of Samuel ibn Tibbon, the well-known translator of Maimonides. Moses b. Samuel ibn Tibbon frequently refers to Anatolio as his uncle, which makes it likely that Samuel married Anatolio's sister, while Anatolio afterward married the daughter of the former. Owing to this intimate connection with the Ibn Tibbons, Anatolio was introduced to the philosophy of Maimonides, the study of which was such a great revelation to him that he, in after days, referred to it as the beginning of his intelligent and true comprehension of the Scriptures, while he frequently alluded to Ibn Tibbon as one of the two masters who had instructed and inspired him. His esteem for Maimonides knew no bounds: he placed him next to the Prophets, and with Maimonides' critics and detractors he exhibited little patience. He accordingly interprets the Bible and the Haggadah in a truly Maimonistic spirit, rationalizing the miracles and investing every possible passage in the ancient literature with philosophic and allegoric significance. As an allegorist who could read into the ancient documents the particular philosophical idiosyncrasies of his day, Anatolio deserves a place beside other allegoric and philosophical commentators, from Philo down; indeed, he may be regarded as a pioneer in the application of the Maimonistic manner to purposes of popular instruction. This work he began while still in his native land, on occasions of private and public festivities, such as weddings and other assemblies. Afterward he delivered Sabbath-afternoon sermons, in which he advocated the allegoric and philosophic method of Scriptural exegesis. This evoked the opposition of the anti-Maimonists, whose number was large in southern France; and probably Anatolio's departure for Sicily was hastened by the antagonism he encountered. But even at Naples Anatolio's views aroused the opposition of his Orthodox coreligionists. This treatment, together with several other unpleasant experiences at the royal court, seems to have caused him to entertain thoughts of suicide. He soon, however, recovered and wrote, for the benefit of his two sons, his "Malmad ha-Talmidim," a name which, involving a play on words, was intended to be both a "Teacher of the Disciples" and a "Goad to the Students."

Opposed by Anti-Maimonists.

The "Malmad," which was completed when its author was fifty-five years old, but was first published by the Meḳiẓe Nirdamim Society at Lyck in the year 1866, is really nothing but a volume of sermons, by which the author intended to stimulate study and to dispel intellectual blindness. As a curious specimen of his method, it may be mentioned that he regards the three stories of Noah's ark as symbolic of the three sciences mathematics, physics, and metaphysics. As such, the work is of some importance in the history of Jewish culture. Anatolio's ethical admonitions and spiritual meditations have value as portraying both the circumstances of the age and the character of the reforms aimed at by him.

Moral Fervor.

Anatolio is quite plain-spoken in the manner in which he states and defends his views, as well as in his criticisms of contemporary failings. For instance, he does not hesitate to reproach the rabbis of his day for their general neglect not only of the thorough study, but even of the obligatory perusal, of the Bible, charging them with a preference for Talmudic dialectics. He, likewise, deplores the contemporary degeneracy in the home life and the religious practises of his people, a circumstance which he thinks due largely to the imitation of surrounding manners. Scientific investigation he insists upon as an absolute necessity for the true comprehension of religion, despite the fact that his contemporaries regarded all the hours which he was accustomed to spend with his father-in-law, Samuel ibn Tibbon, in mathematical and philosophic study as mere waste of time.

The "Malmad."

The "Malmad" is divided into brief chapters, according to the weekly Scriptural portions. In it Anatolio manifests a wide acquaintance not only with the classic Jewish exegetes, but also with Plato, Aristotle, Averroes, and the Vulgate, as well as with a large number of Christian institutions, some of which he ventures to criticize, such as celibacy and monastic castigation, as well as certain heretics (compare 15*a*, 98*a*, 115*a*); and he repeatedly appeals to his readers for a broader cultivation of the classic languages and the profane branches of learning. He indignantly repudiates the fanatical view of some coreligionists that all non-Jews have no souls—a belief reciprocated by the Gentiles of the time. To Anatolio all men are, in truth, formed in the image of God, though the Jews stand under a particular obligation to further the true cognition of God simply by reason of their election—"the Greeks had chosen wisdom as their pursuit; the Romans, power; and the Jews, religiousness" (*l.c.* 103*b*). If, however, a non-Jew devotes himself to serious search after divine truth, his merit is so much the more signal; and whatever suggestion he may have to offer, no Jew dares refuse with levity.

Anatolio and Michael Scot.

An example of such intellectual catholicity was set by Anatolio himself; for, in the course of his "Malmad," he not only cites incidentally allegoric suggestions made to him by Frederick II., but several times—Güdemann has counted seventeen—he offers the exegetic remarks of a certain Christian savant of whose association he speaks most reverently, and whom, furthermore, he names as his second master besides Samuel ibn Tibbon. This Christian savant was identified by Senior Sachs as Michael Scot, who, like Anatolio, devoted himself to scientific work at the court of Frederick. Graetz even goes to the length of regarding Anatolio as identical with the Jew Andreas, who, according to Roger Bacon, assisted Michael Scot in his philosophic translations from the Arabic, seeing that Andreas might be a corruption of Anatolio. But Steinschneider will not admit the possibility of this conjecture, while Renan scarcely strengthens it by regarding "Andreas" as a possible northern corruption of "En Duran," which, he says, may have been the Provençal surname of Anatolio, since Anatolio, in reality, was but the name of his great-grandfather.

Anatolio's example of broad-minded study of Christian literature and intercourse with Christian scholars found many followers, as, for example, Moses ben Solomon of Salerno; and his work was an important factor in bringing the Jews of Italy into close contact with their Christian fellow students.

Anatolio a Translator.

The "Malmad," owing to its deep ethical vein, became, despite its Maimonistic heresies, a very popular book. It is rather as a translator that Anatolio deserves a distinguished place in the scientific realm; for it is he and Michael Scot who together, under the influence of Frederick II., opened to the western world the treasure-house of Arabic learning. Anatolio, in fact, was the first man to translate the commentaries of Averroes into Hebrew, thus opening a new era in the history of Aristotelian philosophy. Prior to translating Averroes' commentaries, Anatolio had occupied himself with the translation of astronomical treatises by the same writer and others; but at the instance of friends he turned his attention to logic and the speculative works, realizing and recommending the importance of logic, in particular, in view of the contemporary religious controversies. Thenceforth, his program was twofold, as he devoted himself to his work in astronomy in the mornings, and to logic in the evenings.

His principal translation embraced the first five books of Averroes' "intermediate" commentary on Aristotle's Logic, consisting of the Introduction of Porphyry and the four books of Aristotle on the Categories, Interpretation, Syllogism, and Demonstration. Anatolio probably commenced his work on the commentary while in Provence, though he must have finished the fifth book at Naples about 1231 or 1232. The conclusion of the commentary was never reached. Upon the ending of the first division he desired to go over the ground again, to acquire greater proficiency, and, for some reason unknown, he never resumed his task, which was completed by another after a lapse of eighty years.

Besides this, Anatolio translated, between the years 1231 and 1235, the following works: (1) The "Almagest of Ptolemy," from the Arabic, though probably the Greek or Latin title of this treatise was also familiar to him. Its Hebrew title is "Ḥibbur ha-Gadol ha-Nikra al-Magesti" (The Great Composition Called Almagest). (2) A "Compendium of Astronomy," by Averroes, a book which was unknown to the Christians of the Middle Ages, and of which neither a manuscript of the original nor a Latin translation has come down. Its Hebrew title is "Ḳizzur al-Magesti" (Compendium of the Almagest). (3) "The Elements of Astronomy," by Al-Fargani (Alfraganus); possibly translated from a Latin version. It was afterward rendered into Latin by Jacob Christmann (Frankfort, 1590) under the title of "Elementa Astronomica," which, in its turn, may have given rise to the Hebrew title of the treatise "Yesodot ha-Teḳunah," which is undoubtedly recent. (4) A treatise on the Syllogism, by Al-Farabi, from the Arabic. Its Hebrew title is "Sefer Heḳesh Ḳazar" (A Brief Treatise on the Syllogism).

Graetz also suggests the possibility of Anatolio, in conjunction with Michael Scot, having translated into Latin Maimonides' "Guide of the Perplexed"; but this suggestion has not yet been sufficiently proved (compare Steinschneider, "Hebr. Uebers." i. 433). Similarly, the anonymous commentary on the "Guide," called "Ruaḥ Ḥen," though sometimes attributed to Anatolio, can not definitely be established as his. Still, it is on an allusion in this work that Zunz, followed by Steinschneider, partly bases the hypothesis of Marseilles having been Anatolio's original home (compare Zunz, "Zur Gesch." p. 482; Renan-Neubauer, "Les Rabbins Français," p. 588; Steinschneider, "Cat. Bodl." col. 1180, and "Hebr. Bibl." xvii. 124).

Bibliography: The *Malmad ha-Talmidim* yields a great deal of information concerning the life and the time of its author. Consult particularly the preface, which is freely drawn upon in this article. H. G. E.

ANATOMY: The science dealing with the structure of organisms, especially that of the human body. The information given in the Bible concerning the parts of the human body is merely popular in character. Thus a point of human Anatomy seems to be given in the narrative of Jacob wrestling with the angel. There it is said that the angel touched Jacob's כף ירך (hollow of the thigh), and put it out of joint. . . . Therefore the children of Israel eat not of גיד הנשה ("the sinew that shrank") (Gen. xxxii. 25–33). The Hebrew word *gid*, which is translated in the A.V. "sinew," means also nerve. The circumstances clearly indicate the sinew of the nervus ischiadicus, the nerve extending through the thigh and leg to the ankle.

Earliest Mention in Bible.

Several members of the human body and of animals are mentioned in Ex. xxviii., xxix.; for example: לב (heart), מצח (brow), כתף (shoulder), חזה (breast), תנוך אזן (lobe of the ear), יד (hand), אצבע (finger), and בהן (thumb). In Ex. xxix. 17 the Hebrew term for dissecting is for the first time mentioned: "And thou shalt cut [dissect] the ram into sections." The word is נתח, from which is derived the modern Hebrew name for the science of Anatomy (חכמת הניתוח). Some of the visceral portions of the sacrifices are also given, such as קרב (inwards), יתרת (caul), כבד (liver), חלב (fat), כליות (kidneys). שוק (shoulder) and עור (skin) also occur.

A considerable number of parts of beasts and of birds are named in Lev. i. There the priests are commanded to cut up the sacrifices; to "flay the burnt offering and cut it in pieces . . . the head and the fat" (the word פדר means the fat that covers the intestines under the omentum). But if the sacrifice is a bird the priest is to pinch off (ומלק) the neck, and remove its crop (מראה) with its feathers (Lev. i. 14–16; v. 8). These anatomical parts, however, are only of the main organs, or those portions that the priest in sacrificing would naturally notice. There is no allusion to arteries, veins, or nerves.

"The apple of the eye" (iris) is mentioned in Deut. xxxii. 10. Lids, שמרות (keepers or preservers of the eye), are erroneously rendered in the A. V. (Ps. lxxvii. 5), "Thou holdest mine eyes waking." עפעפים (eyelids) occurs in Jer. ix. 17, *et passim*.

The laconic description of Job, x. 9–11 points to a merely rudimentary knowledge of embryology and the components of the human body. "Remember, I beseech thee, that thou hast made me as the clay. . . . Hast thou not poured me out as milk, and curdled me like cheese? Thou hast clothed me with skin and flesh, and hast fenced me [R. V., "and knit me together"] with bones and sinews [גידים]."

The allegorical picturing of the human body in decrepit old age as described in Eccl. xii. 2–6 alludes only to the outward members of man. However, the allegorical name טוחנות (grinders = molars) for שנים (teeth) seems to indicate that the writer possessed some knowledge of the classification and function of the various teeth. In the poetical description of the respective forms of the lovers in the Song of Solomon a few more names of organs of the human body occur, which are also referred to in other poetical or prophetic books of the Bible; for example, חך (palate) and רקה (temple) (Cant. ii. 3, vi. 7).

In Talmudic Times.

After Ezra's time the Hebrew sages took a step forward in the field of Anatomy. The Greco-Egyptian school at Alexandria, under the auspices of Ptolemy I. and his successor, Ptolemy Philadelphus, greatly influenced the Hebrew academics, and the medical knowledge of the Greeks gradually became the property of the Jewish physicians. The latter, judging from the discussions in various treatises, were well acquainted with most of the parts of the human body and even practised שליקה—that is, dissection of the same.

The rabbis declared that there were 248 members (bones) in the human body; namely, 40 in the tarsal region and the foot (30 + 10 = 40); 2 in the leg (the tibia and fibula); 6 in the knee (including the head of the femur, and the epiphyses of the tibia and fibula); 3 in the pelvis (ilium, ischium, and pubes); 11 ribs (the twelfth rib, owing to its diminutive size, was not counted); 30 in the hand (the carpal bones and the phalanges); 2 in the forearm (radius and ulna); 2 at the elbow (the olecranon and the head of the radius); 1 in the arm (humerus); 4 in the shoulder (clavicle, scapula, coracoid process, and acromion)—which makes 101 for each side of the body, or 202 for both—18 vertebræ; 9 in the head (cranium and face), 8 in the neck (7 vertebral and the os hyoides), 5 around the openings [sic] of the body (cartilaginous bones), and 6 in the key of the heart (the sternum) (Oh. i. 8). Bergel ("Studien," p. 7) has shown, however, that the true number would be 208. But the fact that the rabbis had advanced far enough to enumerate the bones at all shows a certain acquaintance with osteology.

An incident is related which shows that the disciples of R. Ishmael engaged in practical Anatomy:

"The disciples of Rabbi Ishmael once dissected the corpse of a harlot who had been condemned by the king to be burned. On close examination they discovered that the body had 252 members instead of 248. Rabbi Ishmael explained the discrepancy, and supported his reasonings with citations from Scripture. In addition to the ordinary number of 248 members found in the male body, that of the female has "two hinges and two doors," making four more parts (Bek. 45*a*).

Limitations of Knowledge.

However near the truth the Jewish sages were in their specification of the human bones, they were nevertheless in the dark in matters concerning lymphangeiology, splanchnology, etc. For instance, under the name of גידים they often included sinews, nerves, and even blood-vessels. Further, their knowledge of the construction of the urinary and generative organs was exceedingly faulty. They were, however, acquainted with the science of Anatomy as it was taught in those days. Many treatises—especially Ḥullin, Bekorot, Oholot, and Niddah—contain discussions upon the Anatomy and physiology of man and beast. The theories of the sages in matters of gynecology are interesting; even facts concerning the שליא (placenta) and אם (matrix) are discussed. The קנה (trachea), and ושט (esophagus) are often mentioned, as well as the ריאה (lungs), סמפונות (bronchi), מרה (gall), קרום של מוח (covering of the brain: meninges), שדרה (spinal cord), טחול (spleen), and many other internal parts. See Lewysohn, "Zoologie des Talmud," pp. 18–55.

The numerous discussions in connection with sacrificial precepts, uncleanliness, and purification, recorded in several treatises, demonstrate that the Talmudical sages were not behind the Gentile physicians in the field of medical science.

From the time when the Talmud was completed until after the death of Mohammed, little or no progress was made by the Jews in the various sciences. But with the advent of the califate, art and science revived and new seats of learning were opened. The students of the Jewish academies joined the Arabian and Moorish schools. The works of Hippocrates, Galen, and others were translated into Arabic, and not a few into Hebrew.

From these schools proceeded a large number of Hebrew savants who became distinguished in letters, philosophy, and science; but very little is known of their labors in Anatomy, possibly owing to the fact that the Arabs themselves had objections to Anatomy (Humboldt, "Cosmos," ii. 254). There must have been some experts in that branch of medical science; for the names of several skilled Jewish surgeons have been recorded, as, for instance, Samuel ibn Wakkar.

Israeli and Maimonides.

The foremost of all the Judæo-Arabian surgeons of that period (900) was Isaac Israeli of Kairwan. He was court physician to Abu Mohammed al Mahdi; yet among his works, which have been translated from the Arabic into Latin (published in Leyden, 1515), there is not a single treatise on Anatomy and only a few references to it.

The most eminent of all Jewish philosophers and physicians was Moses b. Maimon (Maimonides, 1135–1204). But even he, notwithstanding his many works, only touched on Anatomy, merely translating a few extracts from Galen, whom he considers his great authority (see Preface to Maimonides' "Pirḳe Mosheh" or "Sefer ha-Refuot," ed. Wilna, 1888, p. v.):

> "These chapters which I have composed I do not attribute to myself, but I have selected and collected them from the works of Galen, and from his sayings concerning the writings of Hippocrates. I have not quoted him verbatim, as I have done in my previous opuscula, having taken special care to elucidate those obscure passages in Galen, where, in his attempt to explain the theories of Hippocrates, the latter's words seem to be confounded with his own."

That Maimonides studied Anatomy and was an expert in it, is evident from his own words. In speaking of the nerves, etc., he says:

> "Those that are not acquainted with Anatomy think that nerves, arteries, etc., are the same; and were it not for the study of Anatomy in which we were busily engaged, we also should not know the difference."

In the folk-medicine of the Jews there was a rough enumeration of twelve members or parts of the body, with which were associated certain qualities of the mind or character, anger with the liver, hearing with the left nerve, and the like. These are found enumerated in the "Sefer Yeẓirah," and led in later cabalistic writings to the pictorial conception of Adam Ḳadmon (see Zunz, "Literaturgeschichte," p. 609).

The only other striking statement worthy of notice concerning the old Jewish system of Anatomy is that in the Zohar (cxxxvii. 33). The author (supposed to be Moses de Leon, about the end of the thirteenth century) says:

> "There are 248 members [איברין] in the human body, corresponding to the 248 precepts of the law, and to the 248 angels investing the Shekinah, whose names are the same as their master's. And there are also in the human body 365 sinews [גידין; under which vague term are included, as stated above, arteries, nerves, etc.], corresponding to the 365 negative laws, and representing the 365 days of the year. These are governed by 365 angels, one of whom is Samael himself, who represents the ninth day of the month of Ab [the fast commemorating the destruction of Jerusalem by the Romans]. The reason why the sinew of the thigh nerve [גיד הנשה] was forbidden was because it represents Samael [Satan], who is one of the 365 angels whose day is the Ninth of Ab."

Several attempts have been made by modern Hebrew writers to reconcile the "248 members" theory of the ancients with modern science. The most recent are "Maseket Nittuaḥ," by Schereschewski, and "ReMaḤ Ebarim" (the 248 members), by Katznellson.

ANAV, SALVATORE. See MAUTI.

ANAVIM, THE: The name of a sect or party. See HASIDIM.

ANAW (ענו = modest, meek; rendered in Italian: degli Mansi, Piatelli, Pietosi, Umani): The name of a Jewish family that settled in Italy, and which was originally resident at Rome. According to a family tradition, it was one of the four prominent Jewish families deported by Titus to Rome upon the destruction of the Temple of Jerusalem.

Traces of this family, which is still a flourishing one, may be found as far back as the middle of the tenth century; and between the eleventh and the fourteenth centuries some of its members were particularly prominent. One branch of the Anaws was the family of Bethel or De Synagoga (בית אל or מן הכנסת), prominent in Rome and its vicinity during the fourteenth century. They derived their name probably from Casadio (= House of God), their place of origin. By the middle of the fifteenth century this name had almost disappeared, and became incorporated anew with that of Anaw. The Bozecco family seems to have been an offshoot of the Bethel family. The following table gives the two important branches of the Anaws, and enumerates those among them who attained any importance. For fuller details see Vogelstein and Rieger, "Gesch. d. Juden in Rom," i. 456. See also BOZECCI and BETHELIDES in this Encyclopedia.

1. Abraham ben Joab Anaw: Member of the Rabbinical Board in Rome, 1007.

2. Jehiel Anaw: Son of No. 1; rabbi and principal of the Talmudic High School in Rome; died before 1070.

3. Daniel Anaw: Eldest son of the preceding; died before 1101. He was teacher at the Rabbinical High School, was in friendly intercourse with Christian scholars, and appears to have written a commentary upon the Order Zeraim of the Mishnah. Together with his brothers, he issued rabbinical decisions.

4. Daniel Anaw: Probably grandson of the preceding. According to Benjamin of Tudela, he was warden of the Jewish congregation in Rome together with Jehiel and Joab (No. 11) in the year 1166.

5. Daniel Anaw: Probably grandson of the last; Talmudist in Rome about 1250. His teacher was Benjamin b. Moses; and Benjamin b. Abraham was his pupil.

6. Jehiel Anaw: Son of No. 5; scribe in Rome, 1265.

7. Daniel Anaw: Son of No. 6; synagogal poet in Montalcino about 1300.

8. Nathan Anaw: Second son of Jehiel (No. 2); author of the 'Aruk.

9. Abraham Anaw: Third son of Jehiel (No. 2); teacher at the Talmudic High School in Rome; issued rabbinical decisions conjointly with his brothers, and with his brother Nathan established a synagogue in Rome, 1101.

10. Solomon Anaw: Son of No. 9; president of the Talmudic High School and of the Rabbinical Board in Rome about 1130. Some of his rabbinical decisions have been preserved.

11. Joab Anaw: Son of No. 10. In 1166, together with Jehiel and Daniel (No. 4), he was, according to Benjamin of Tudela, warden of the Jewish congregation. He was the friend and a patron of Abraham ibn Ezra.

12. Benjamin Anaw: Son of No. 11; died young, before 1145; a pupil of Ibn Ezra in Rome. To him the latter dedicated his commentary upon the Song of Solomon and Job.

13. Solomon b. Shabbethai Anaw: Great-grandson of Joab (No. 11), learned Talmudist in the second quarter of the thirteenth century, and the first Roman Jew of the thirteenth century who actively engaged in literary work. He was the teacher of Judah b. Benjamin (No. 25) and of Benjamin b. Abraham (No. 30). He wrote a commentary upon

---

* This Abraham is possibly a grandson of Nathan b. Jehiel's youngest brother Abraham, so that these two tables would be continuous.

† Joab's descendants are a branch of the Bethelides.

Ahai's "Sheiltot," which was completed by Judah b. Benjamin and to which Benjamin b. Abraham wrote glosses.

14. Shabbethai Anaw: Son of No. 13; rabbi in Rome toward the end of the thirteenth century. He delivered philosophical lectures, and was the intimate friend of Zerahiah b. Isaac b. Shealtiel of Barcelona, who translated philosophical works for him in Rome. In the dispute between Zerahiah and Hillel b. Samuel, he took the part of the former.

15. Joab b. Benjamin Anaw: Grandson of Solomon (No. 13), grammarian and Bible-exegete in Rome. He was active in 1280, and is mentioned, in 1304, as a teacher. Among his pupils were Jekuthiel b. Jehiel Anaw (No. 24) and Benjamin b. Judah Bozecco.

16. Mattathiah b. Shabbethai Anaw: Brother of Solomon (No. 13), Talmudist in Rome about 1240.

17. Shabbethai Anaw: Son of No. 16, father-in-law of Joab (No. 15).

18. Menahem b. Joab b. Solomon b. Shabbethai Anaw: Great-grandson of the preceding, a scribe in 1378 (Zunz, "Gesammelte Schriften," iii. 169).

19. Abraham b. Joab Anaw: Scribe and synagogal poet in Rome in the second half of the thirteenth century, a descendant of Jehiel (No. 2).

20. Paola Anaw: Daughter of No. 19, scribe in Rome, 1288–92. She married first Solomon b. Moses de Rossi, and after his death, about 1285, Jehiel b. Solomon. There were three sons by her first marriage, Immanuel, Jekuthiel, and Solomon; the last, born posthumously, died before 1330.

21. Benjamin and **(22) Abraham Anaw:** Sons of Jehiel; physicians and Talmudists in Rome at the beginning of the thirteenth century. Abraham was also rabbi there. See also ANAW, ABRAHAM B. JEHIEL.

23. Jehiel b. Jekuthiel Anaw: Grandson of Benjamin (No. 21), synagogal poet and scribe in Rome, 1260–89; author of a book on morals, entitled "Ma'alot ha-Middot" (Excellencies of Virtue).

24. Jekuthiel Anaw: Son of No. 23, scribe in Rome, 1280, and pupil of Joab b. Benjamin (No. 15).

25. Judah Anaw: Son of Benjamin (No. 21).

26. Zedekiah b. Benjamin Anaw: Brother of No. 25, learned Talmudist in Rome. He died at a very old age, some time after 1280. He was a pupil of Meir b. Moses in Rome and of Abigdor Cohen in Vienna. He was probably a partizan of Abraham Abulafia.

27. Menahem Ẓemaḥ b. Abraham Jacob Anaw: Grandson of Benjamin (No. 21), scribe in Rome and Frascati, 1322–26.

28. Menahem Anaw (the Pious): Son of Benjamin (No. 21), about 1290; physician in Rome. He occupied himself also with Talmudic studies and gave instruction.

29. Solomon b. Jehiel Anaw: Grandson of Abraham (No. 22), copyist in Rome, 1292–97.

30. Benjamin Anaw: See ANAW, BENJAMIN.

31. Moses Rofe Anaw: Son of No. 30, physician and Talmudist in Rome, 1292.

32. Moses Anaw: Son of Abraham (No. 22), Talmudist and synagogal poet in Rome in the middle of the thirteenth century.

33. Zedekiah b. Abraham Anaw: See ANAW, ZEDEKIAH B. ABRAHAM.

34. Solomon Anaw: Son of No. 33, scribe in Rome, 1288–1316.

35. Jehiel Anaw: Brother of No. 34, 1294.

36. Grandson of Zedekiah Anaw (No. 33): Name unknown; wrote a halakic work.

Other members of the family are:

37. Judah Anaw: About 1145.

38. Jehiel b. Solomon Anaw: Second husband of Paola (No. 20), in Rome, 1288.

39. Jehiel b. Joab Anaw: Pupil of Shabbethai b. Solomon (No. 14), in Rome.

40. Jehiel b. Nathan Anaw: 1289 (see Steinschneider, "Katalog der Hebräischen Handschriften in Berlin," i. 11).

41. Abraham b. Solomon Anaw: In Sulmona, 1419.

42. Joshua b. Solomon Anaw: Fifteenth century (Steinschneider, "Jüd. Literatur," p. 443).

43. Abraham Anaw: Secretary of the Jewish community in Rome, 1499.

44. Moses b. Samuel Anaw of Rome: Scribe in Reggio, 1503.

45. Abraham b. Jacob Anaw: Rabbi in Rome, 1536.

46. Judah b. Shabbethai Anaw: Rabbi and secretary of the congregation in Rome, 1530–54. He took part in the rabbinical conference at Ferrara in 1554; died before 1574.

47. Isaac Anaw: Son of No. 46, rabbi and secretary of the congregation in Rome, 1530–82.

48. Baruch b. Mordecai Anaw: (ממונה) "Fattore del Ghetto," or "Sindaco," Steward of the Ghetto, in Rome, 1568.

49. Baruch Anaw: Member of the governing board of the Jewish congregation in Rome, 1558 (possibly identical with the preceding).

50. Ḥayyun Anaw: Member of the governing body at Rome, 1558.

51. Rafael b. Isaac Anaw: In Ferrara and Cremona, sixteenth century (see Mortara, "Indice").

52. Isaiah Anaw: Talmudist in Günzburg, 1608 (ש"ות פלגי מים).

53. Joab (Dattilo) b. Baruch Anaw: Member of the Rabbinical Board in Rome, about 1700.

54. Phinehas Ḥai b. Menahem Anaw: Italian author of the eighteenth century; head of the Talmudic college at Ferrara. He wrote "Gibe'at Pinḥas" (Hill of Phinehas), containing responsa on various halakic subjects. The work, consisting of eight volumes, is still extant in manuscript in the Almanzi collection.

I. B.

55. Judah b. Mordecai Anaw: 1714 (Mortara, "Indice," p. 49).

56. Abraham b. Jacob Anaw: Rabbi and primary teacher in Rome; wrote a drama and a wedding ode; died 1782.

57. Jacob Anaw: Eighteenth and nineteenth centuries (Fürst, "Bibl. Jud." iii. 100).

58. Servadio b. Elijah Umano Anaw: Born 1815; died June 12, 1844. He was a teacher and wrote rabbinical works and decisions in Italian ("Mosè" [periodical], v. 305).

59. Isaac b. Elijah Anaw: Brother of No. 58, in Ferrara, 1882 ("Mosè," *ib.*).

60. Salvatore Anaw: Was employed in the finance department of the Roman republic in 1849.

61. Flaminio Anaw: Member of the commission to prepare a new constitution for the congregation in Rome in 1886 ("Vessillo Israelitico," 1886, p. 61).

62. Abraham Anaw: Owner of Bodleian manuscript No. 1069 (Neubauer, "Cat. Bodl. Hebr. MSS.").

63. Jekuthiel b. Judah Anaw: Scribe (Luzzatto, אגרות שד"ל, 669).

64. Judah b. Benjamin ha-Rofe (Anaw?) and **(65) Samuel,** his son: In Viterbo in May, 1362 (Munich MS. No. 268).

H. V.

ANAW, ABRAHAM BEN JEHIEL HA-ROFE: Physician and rabbi in Rome at the beginning of the thirteenth century. He was the father of Zedekiah, author of "Shibbole ha-Leḳeṭ," and of Benjamin, a liturgical poet.

Bibliography: Vogelstein and Rieger, *Gesch. d. Juden in Rom*, i. 291, 374 *et seq.*

ANAW, BENJAMIN B. ABRAHAM: A liturgical poet, Talmudist, and commentator of the thirteenth century; older brother of Zedekiah b. Abraham. Perhaps the most gifted and learned of his Roman contemporaries. Although chiefly a poet, Anaw possessed a thorough mastery of halakic literature, and diligently studied philology, mathematics, and astronomy. He wielded a keen, satirical pen. His poetical activity began in 1239, when the apostate Nicholas Donin assailed the Talmud and appealed to Pope Gregory IX. to order its destruction and the persecution of its students. Donin's agitation filled the Roman Jews with terror, and they seem to have appointed a day for fasting and prayer. At that time—and possibly for that fast-day—Anaw composed the penitential hymn אל מי אנוסה לעזרה, "To whom shall I flee for help"—an acrostic of twelve stanzas (published by the Society Meḳiẓe Nirdamim in "Ḳobeẓ 'al Yad," 1888). Donin's endeavors met meanwhile with great success. In June, 1239, several wagon-loads of Talmudic manuscripts were burned in Paris and Rome: at the latter place the Jewish cemetery was destroyed. These events stirred the poet to a bitter elegy אוחילה קירות לבי, "My heart is convulsed" (*ib.*), in which he deeply laments the fate of Israel and passionately appeals to God to avenge the desecration of the dead.

Anaw wrote numerous poems for the liturgy, which are embodied in part in the Roman Maḥzor, partly still extant in manuscript. He is the author of the following works: (1) משא גיא חזיון (The Burden of the Valley of Vision), a satirical poem directed against the arrogance of the wealthy and the nobility (Riva di Trento, 1560; reprinted, Lemberg, 1859, by M. Wolf, in his Hebrew chrestomathy, זמירות ישראל (Israel's Praises). (2) פי״ אלפביטין (Alphabetical Commentary), on the Aramaic pieces of the Pentecost liturgy. In this treatise he exhibits a knowledge of Italian, Latin, Greek, and Arabic. (3) "Sefer Yedidut" (Book of Friendship), a ritualistic work, which has disappeared. It is mentioned by Anaw in the preface to his abridgment of Eliezer ben Samuel's "Sefer Yereim." (4) "Sha'are 'Eẓ Ḥayyim" (The Gates Conducting to the Tree of Life), a work on practical ethics, in the form of moral sayings. The poem contains sixty-three strophes, arranged according to the letters of the alphabet. Each chapter deals with one virtue or one vice. Among the subjects treated are love, hospitality, faithfulness, cheating, thankfulness, shame, pride, charity. It was printed in Prague, 1598 (Zunz, "Z. G." p. 280), and reprinted in "Ḳobeẓ 'al Yad" (ed. Meḳiẓe Nirdamim, 1884, i. 71 *et seq.*). (5) Glosses to Rashi's commentary on the Bible and to Solomon b. Shabbethai's commentary on the "Sheëltot." (6) "Rules for Making a Calendar," in which he utilizes his mathematical and astronomical knowledge. This manuscript served several later writers on the same subject. Anaw was in correspondence with Abigdor Cohen, to whom he addressed numerous halakic questions. He himself gave many halakic decisions, which are referred to in his brother's work, "Shibbole ha-Leḳeṭ."

Despite his wide learning, Anaw remained a child of his age. He shared many of its superstitions, vigorously defended haggadic interpretations, and was strictly opposed to all changes in the liturgy. He even discussed with his brother Zedekiah the language of the angels.

M. B.

ANAW, ZEDEKIAH B. ABRAHAM: Author of ritualistic works; younger brother of Benjamin b. Abraham Anaw; lived at Rome in the thirteenth century; received his Talmudic training not only in Rome, but also in Germany, where he was the pupil of R. Jacob of Würzburg, and possibly also of Abigdor Cohen of Vienna. He owes his great reputation not to any original research, but to a compilation on the ritual to which he gave the title "Shibbole ha-Leḳeṭ" (Ears of Gleaning). It is divided into three hundred and seventy-two paragraphs, included in the following twelve sections, treating of the laws, regulations, and ceremonies relating to prayers, Sabbath, benedictions, new moon, feast of dedication, Purim, Passover, semi-holy days, fasts, New-year, Day of Atonement, and Tabernacles. Appended to the work are several treatises and responsa on miscellaneous religious and legal matters, such as circumcision, mourning rites, fringes, slaughtering, inheritance, and interest. As the title indicates, and as the author never fails to point out, the work was culled from many older authorities, such as "Halakot Gedolot," "Pardes," Alfasi, Isaac b. Abba Mari, Zerahiah ha-Levi, Isaiah di Trani, etc. To these extracts from other authorities the work owes its vogue. The preface, written in a pure and vigorous Hebrew, is introduced by a short acrostic.

But Zedekiah did not restrict himself to the mere work of a compiler. He systematized his material skilfully, gave it a concise as well as popular form, and judiciously discriminated between conflicting opinions and decisions, giving preference to those that seemed to him true. For this procedure he apologized modestly in his preface with an anecdote, in substantially the following terms: A philosopher, when asked how he dared to oppose the great men of the past, answered, "We fully acknowledge the greatness of our old authorities and the insignificance of ourselves. But we are in the position of pygmies that ride on the shoulders of giants. Pygmies though we are, we see farther than the giants when we use their knowledge and experience."

Additions to the "Shibbole ha-Leḳeṭ" were made by Zedekiah himself, in a work the title of which is no longer known: these additions also contain a large number of responsa. It is usually cited, however, as "Issur wa-Hetter" (Things Forbidden and Allowed), and has not yet been printed.

A complete edition of the "Shibbole ha-Leḳeṭ" was published by Solomon Buber in 1886 at Wilna. The editor wrote a comprehensive introduction to it, containing an analysis of the work. Abridgments of it were published much earlier: Venice (Daniel Bomberg), 1545; Dubnov, 1793; Salonica, 1795. Furthermore, it was plagiarized and published in a condensed form under the title "Tanya," or "Tanya Rabbati," which went through four editions: Mantua, 1514; Cremona, 1565; Zolkiev, 1800; Szydlikov, 1836. A third abridgment, entitled "Ma'aseh ha-Geonim" (The Work of Old Authorities), circulated in manuscript and is extant in the Bodleian Library, Oxford.

Anaw was in correspondence with Abigdor Cohen, Meir of Rothenburg, and Abraham ben Joseph of

Pesaro. Very often he mentions his senior contemporary, Isaiah di Trani (the Elder), to whose Bible commentary Anaw in 1297 wrote glosses.

ANBAL (AMBAL) THE JASSIN (OSSETE): Among the many foreigners who held positions at the court of Prince Andrei Bogolyubski, in Kiev, toward the end of the twelfth century, were two of Jewish origin: (1) Ephraim Moisich, or Moisievich, who had gained the prince's confidence; (2) Anbal the Jassin (the Ossete, from the Caucasus), his all-powerful "key-watch" (chamberlain). These two and Andrei's relative Kuchkov were the instigators and ringleaders of a conspiracy against the prince. They killed him in the night of June 29, 1174, and when his naked body lay exposed in the palace garden, a faithful servant implored Anbal to permit him to cover it, reminding him that he (Anbal) had come into the service of his master clothed in rags, and that it was by the latter's bounty that he was now wearing velvet. To this remonstrance Anbal lent a ready ear. Besides its historic interest, the incident is of importance as proving the existence of Jews from the Caucasus in Great Russia in the twelfth century.

ANCESTOR WORSHIP: The same homage and adoration paid to deceased parents and more remote ancestors as usually given to deities. Many anthropologists are of opinion that this was the original form of religion (H. Spencer, Lippert); the school represented by Stade and F. Schwally argues that it was the original religion of Israel before Jahvism was introduced by Moses and the Prophets. According to them, much of the priestly legislation was directed against the rites connected with Ancestor Worship. At present the view that the original religion of the Israelites was some form of Ancestor Worship is the only one that has been put forward scientifically or systematically, together with an explanation of the changes made by the later and true religion of Israel. Nevertheless arguments of some weight have been brought forward to show that this view of the original Israelitish religion is only slenderly based upon facts, and it seems desirable therefore to give a summary of the arguments for and against regarding Ancestor Worship as the original religion of Israel.

The school of Stade bases its belief as to the former existence of this worship in Israel on the following arguments:

I. Hebrew Views of the Nature of the Soul: According to Stade and his followers, these were identical with the animistic theory of savages, which regards the soul as a sort of immaterial breath or shadow in which the life of the body exists, but which can leave it for a time and inhabit other bodies of men or animals. The *nefesh* (generally rendered "soul") and *ruaḥ* (literally "wind," generally rendered "spirit") of the Hebrews are of this kind, either of which leaves a man when he dies (Gen. xxxv. 18; Ps. cxlvi. 4). The ruaḥ can go back to the body (Judges, xv. 19; I Sam. xxx. 12), just as in the animistic belief of savages. But the ruaḥ represents a more exalted state of the soul or spirit than the nefesh, and according to Stade was originally the spirit of the dead, which might be either good or bad, and could arouse men to exalted or to base passions. Jahvism transformed this view by restricting the ruaḥ to that of YHWH (*e.g.*, I Sam. x. 6; Judges, ix. 23).

II. Hebrew Views of the Life After Death: Several of the Psalms (xxx. 3, xlix. 16, lxxxvi. 13, cxvi. 3) speak of the nefesh being saved from Sheol; while other passages (Num. vi. 6, Lev. xxi. 11) speak of the nefesh of the dead. Sheol appears to be a place of assembly for all departed spirits (Job, xxx. 23), which are possibly to be identified with the *refaim* (often rendered "the shades"). The use of the expression, "to be gathered to one's fathers" (compare Gen. xv. 15, xxv. 8) would imply that these departed spirits were regarded chiefly as those of ancestors.

III. Mourning Customs: Several of these seem to be the same as those used in divine worship. Thus, to tear the clothes and to put ashes upon the head (II Sam. i. 11) are customs also employed in worship (Josh. vii. 6; compare Joel, ii. 12). The wearing of the *saḳ* or sackcloth (II Sam. iii. 31, xiv. 2) is likewise a usual accompaniment of fasting (Isa. lviii. 5). Cutting or shaving the hair is both a mark of mourning (Jer. xvi. 6) and a solemn sign of the end of the Nazarite's vow (Num. vi. 18). To go barefoot (Micah, i. 8) is a sign both of mourning and of recognition of the divine presence (Ex. iii. 5); fasting both a manifestation of mourning (II Sam. i. 12, iii. 35) and an act of divine worship. The assumption of the school of Stade is that these customs, originally signs of worship of ancestors, were afterward, by the Jahvistic reformation, transferred to the worship of the Deity. Further, contact with the dead makes things *tabu* or "holy," just as consecration to the Deity does.

IV. Burial Customs: Israelites in historic times appear to have usually buried their dead. But traces are found of burning them (thus I Sam. xxxi. 12; Amos, vi. 10; Josh. vii. 25); and it is suggested that this was because in the primitive religion of Israel the bodies of the dead were regarded as especially holy, and were therefore burned like the remnants of the offerings (Lev. iv. 12, 21). The later custom of burying the corpse was connected with the animistic belief that only thus could the spirit of the departed find rest. In early days the dead were buried in their own houses (I Sam. xxv. 1; compare I Sam. xxviii. 4; I Kings, ii. 34; II Chron. xxxiii. 20). This is held to have been for the purpose of worshiping their spirits, and was repudiated by the later Jahvistic legislation (Num. xix. 16). From Gen. xxxv. 20 and II Kings, xxiii. 17 it is concluded that it was customary to place monuments on the graves of the dead for purposes of worship.

V. Offerings to the Dead: In Jer. xvi. 6, 7 it seems to be implied that the mourning customs (lamenting, making incisions, shaving the hair, and tearing the garments) were observed for the sake of the dead, and that "the cup of consolation" offered to the mourner was offered "for his father or for his mother." Similarly in Deut. xxvi. 14, it seems to be implied that the Jahvistic legislation opposed doing certain things and giving certain things in honor of the dead. The same seems to be implied in Hosea, ix. 4; while gifts are brought directly to the dead as late as Tobit, iv. 17; Ecclus. (Sirach) vii. 32 *et seq.* (compare Abot, iii. 5). The mourning customs of shaving the hair and sprinkling blood are also regarded as offerings of hair and blood to the manes of the dead.

VI. Oracles and Incantations: In various passages of the Old Testament (Deut. xviii. 11, I Sam. xxviii. 11, Isa. viii. 19) mention is made of inquiry of the dead as to the future, thus treating them as oracles and divine personages. On two occasions the dead are termed "elohim" (I Sam. xxviii. 13, Isa. viii. 19, *Heb.*): the latter passage, "Should not a people seek unto their elohim, for the living to the dead?" is especially significant. In the incantation scene with the witch of En-dor, as soon as "Saul perceived that it was Samuel [I Sam. xxviii. 14], he stooped with his face to the ground, and bowed himself," a regular form of divine homage (see ADORATION).

VII. Honor to Parents: It is contended that in ancient Israel mourning was only for parents; and II Sam. xii. 15 *et seq.* is quoted in illustration. Men thus became remembered by the honor paid them by their descendants; hence Absalom deplored that he had no son to call upon his name (II Sam. xviii. 18).

VIII. Household Worship: There are signs that in early days there was a special worship of household gods which could not have been devoted to YHWH, the God of the nation, according to modern theories. They are supposed to be referred to as "elohim" in the passage (Ex. xxi. 4-6) when the servant who desired to remain in the household of his master forever must appear before the elohim (translated "judges" in A. V.), and have his ear bored through. It is contended that the Feast of Purim is a relic of household worship. The household gods thus worshiped are known as teraphim, which were Laban's elohim (Gen. xxxi. 30), and were heathen gods (Ezek. xxi. 26, Gen. xxxv. 2).

IX. Family Worship: Fustel de Coulanges has shown, in "La Cité Antique," that the social institutions of the Greeks and Romans were founded upon Ancestor Worship, the essence of which was to keep alive the holy fire on the household hearth on which to offer food for the departed spirits of ancestors. Membership of a family implied the right and duty of making such offering. Only males could offer; and, therefore, inheritance was solely through the agnates. Num. xxvii. shows that this was the custom with regard to inheritance in ancient Israel. The importance of heirs consisted in the posthumous nourishment to be offered by them alone, and this importance is shown to have existed in Israel by the custom of the LEVIRATE. The *patria potestas* of the father of the family was due to the fact that he was the household priest as well as the father. The Israelites, like the Greeks and Romans, had their family graves.

X. Ancestor Worship and the Tribes: Graves of the ancestors of the tribes, like that of Abraham at Hebron, and that of Joseph at Shechem, are found associated with worship which probably was originally Ancestor Worship. Some of the tribes seem named after Semitic gods; thus "Asher," the masculine form of "Ashera," Dan and Gad (the latter of which occurs in local names as "Baal Gad" and "Migdal Gad"). There are some indications that the Patriarchs were the subject of local worship; for instance, Jacob at Beth-el, Israel at Peniel, and Isaac at Beer-sheba. Hence the importance attached in the Old Testament to the places where the Patriarchs and heroes were buried; known graves being those of Abraham, Sarah, Rachel, Joseph, Aaron, Miriam, Joshua, Ibzan, Elon, Abdon, Tola, Jair, Jephthah, and Samson. In this connection it is a significant fact that the grave of Moses, the founder of Jahvism, was not known: this indicates that the Jahvistic legislation was against Ancestor Worship. Many of the patriarchal names were originally combinations with "El"; thus Jacob and Joseph are found in Egyptian lists under the form "Jacobel," "Josephel" (compare Ishmael, Jerahmeel, and Jephtahel). All these points seem to imply that clans and tribes were originally unified by a worship of ancestors, which worship was broken down by the national worship of YHWH.

To these arguments of Stade and his school the following replies have been recently given by Carl Grüneisen:

1. Nature of the Soul: The nefesh is regarded as being in the blood (Lev. xvii. 11, 14; Gen. ix. 4), and disappears entirely with it; and while the man lives, the nefesh is with him (II Sam. i. 9; Job, xxvii. 3). It is only the ruah which can remain after death.

2. Life After Death: The passages which speak of the nefesh being saved from Sheol really mean that the person's life is safe, and, therefore, that he is still alive; while the expression "nefesh met" (Num. vi. 6, Lev. xxi. 11) merely means "any corpse" (compare Num. xix. 11 with xix. 13). The shadows that inhabit Sheol are altogether different from the nefesh in the living body. Such shadowless beings are inconsistent with the idea of any supernatural power. The expression "to be gathered to one's fathers" is never used of burial, and could not be primitive, since it is inapplicable to a nomad tribe.

3. Mourning Customs: Some of these customs are not only used in mourning or divine worship, but in slavery, captivity in war, leprosy, etc. The customs are not so much holy as tabu. Both contact with divine things and transgression of the tabu make a person "unclean." The real explanation of mourning customs is that man thereby changes his ordinary appearance so as not to be recognized by the ghost of the departed (Frazer, "On Certain Burial Customs," in "Journal Anthropol. Inst." xv. 98 *et seq.*). This is connected with the custom of burning a lamp after a death to keep the ghost away, a custom which probably goes back to the tents of nomads, in which the duty of keeping a lamp continually burning passed over from father to son (Jer. xxv. 10; Prov. xiii. 9, xx. 20, xxiv. 20; Job, xviii. 6, xxi. 17).

4. Burial Customs: The instances of cremation in the Bible are exceptional; and the burials in houses mainly refer to royal palaces, seemingly to special mausoleums. The notion conceived of the shadowy dead is not likely to have led to divine worship of such beings.

5. Offerings to the Dead: The offerings referred to in Jer. xvi. 7 are for the sake of the mourners and not of the mourned. The "cup of consolation" obviously consoles the mourners, and was brought into the house of mourning because everything there was "unclean" and could not be used by the mourners. The "bread of mourners" mentioned in Hosea, ix. 4, and Deut. xxvi. 14 is not used in any sacrificial meal to the dead.

6. Oracles and Incantations: These do not imply the worship of the dead, but merely the belief in the existence of their shadows beyond the grave, and that they were consulted as oracles. The fact that Samuel's ghost was regarded by the witch of En-dor as elohim merely implies that she looked upon Samuel as something divine: the act of adoration is merely one of respect and honor—not necessarily of worship in the technical sense—and is given, not to the ghost as such, but to the personality of Samuel as soon as Saul recognizes who is speaking. Against the saying of Isa. viii. 19, it may be remarked that the ancestral ghost can not be the elohim of the people, but only of a family; besides "elohim" here should be translated "God" and the contrast made with the dead: "A people should consult its God and not its dead."

7. Honor to Parents: There are many instances of going into mourning for dead persons other than parents (Jacob for Joseph when he thought he had lost him, Gen. xxxvii. 34; compare I Kings, xiv. 13); widows mourning for their husbands (Gen. xxxviii. 14); the bride for her bridegroom (Joel, i. 8). Absalom did not wish a son to "call upon" his name, but to "keep it alive" in men's memory; and for that reason he raised a monument to himself. Obviously this monument could not "call upon" his name.

8. Household Worship: The elohim mentioned in Ex. xxi. could easily have been images of YHWH in Judges, xvii. "YHWH" became at an early period the God of the Israelitish family, as is shown by personal names like Jonathan, Joshua, and Abijah. Purim is far from being an early feast, being probably derived from Persia, and can not therefore be the survival of a family worship of the dead. The teraphim are only mentioned as strange gods in Gen. xxxi. and Ezek. xxi., and are elsewhere not divine or used in divine worship, but for the purpose of divination.

9. Family Worship: The Israelite family does not show so much analogy with that of ancient Rome as to oblige us to transfer the arguments of Fustel de Coulanges to ancient Israel. So far from the *patria potestas* being all-important, there are late traces of matriarchate, as, for instance, where the mother gives the name to the children, as so frequently occurs in Genesis. Laban regards Jacob, his sister's son, as his "brother," and as being "of his own flesh and blood." Adoption was frequent among Greeks and Romans in order to keep up the family worship; but it is practically unknown among the Jews. The paterfamilias alone could worship in classical lands; whereas Gideon could bring an offering to the angel (Judges, vi. 18 *et seq.*), though he was still in the house of his father. There are no signs of the reception of the wife into the family cult in ancient Israel, though inheritance is only through males as in Rome. Succession only through agnates does not always occur where Ancestor Worship exists, as, for example, in Egypt, where a daughter has the right to succeed. The need of descendants in Israel is not for the purpose of obtaining offerings to oneself, but to have as large a family as possible, probably for purposes of protection.

10. Ancestor Worship and the Tribes: If the tribe grew out of Ancestor Worship it must have come first as a family; whereas in nomad tribes, like the ancient Israelites, the clan comes first. In the family sacrifice of the Romans, there is no indication that the eponymous heroes of the clan were worshiped; so that the analogies from the graves of heroes are not an exact parallel. If ancestors had been worshiped, many proper names would have been found expressing such worship; but they do not occur. The local worship at Shechem, Hebron, etc., if it existed, must have been Canaanitish in nature, and could not have been derived from the nomadic period of the Israelites.

These objections of Grüneisen differ greatly in force. While he has deprived some of Stade's arguments, notably those relating to mourning and burial customs, of some of their weight, he leaves much unexplained with regard to offerings to the dead, oracles and incantations, and family worship. The amount of evidence offered by the Old Testament itself is not sufficient to afford a solution of the question, thus leaving it to be solved on general anthropological principles. At present the general trend of anthropological opinion on this subject is rather against than for Ancestor Worship as the primitive form of religion.

BIBLIOGRAPHY: For Stade's views see his *Gesch. des Volkes Israel*, i. 406 *et seq.*; for Schwally's, his *Das Leben nach dem Tode*, 1892. See also L. André, *Le Culte des Morts chez les Hebreux*, 1895; J. Frey, *Tod, Seelen-Glaube und Seelen-Kult im Alten Israel*, 1895. The above account is based upon C. Grüneisen, *Der Ahnenkultus und die Urreligion Israels*, Halle, 1900, which contains a full bibliography (pp. ix.-xv.).

J.

ANCHIAS (wrongly **Anchisas**), **JUAN DE:** Associate and first private secretary of the Inquisition in Spain (1485–90). He was understood to be especially familiar with the forms of wills and marriage contracts used by Maranos accused of Judaism. In 1507 he wrote, in Belchite, "Libro Verde de Aragon" (The Green Book of Aragon), a genealogy of the richest and most respected baptized Jews at the time of VICENTE FERRER. In 1623 Philip IV. of Spain commissioned the inquisitor-general, Andreas Pacheco, who, descended from Maranos himself, had collected and secreted all available copies of the "Libro Verde," to destroy them. A single copy, dating from the sixteenth century, is preserved in the Biblioteca Colombina, Seville. The manuscript was copied by Demetrio de los Rios for his brother, the historian José Amador de los Rios, who had discovered it; and in 1885 it was published in the "Revista de España," vol. xviii., which issue was forthwith confiscated and has remained proscribed until to-day. From this "Green Book" Francisco Mendoza y Bovadilla drew his material for the memorial that he presented to King Philip II., under the title "El Tizon de la Nobleza Española" (The Stain of the Spanish Nobility), and which has been often reprinted (Madrid, Barcelona, etc.).

M. K.

ANCIENT OF DAYS.—Biblical Data: A poetical epithet for God. It is an incorrect rendering of the Aramaic *'attiḳ yomin* (Dan. vii. 9) or *'attiḳ yomaya* (*ib.* vii. 13, 22), which should be translated "an aged one," "the aged one" (compare Dalman, "Die Worte Jesu," i. 194). "Ancient of Days" is used either to emphasize the contrast between the true God and the idols, the new gods (Judges, v. 8; Deut. xxxii. 17), or merely to express the venerable character of the being whose name the author hesitates to mention. From the above-cited passage in Daniel is borrowed the expression "re'esha mawa'el" (head of days) in the Book of Enoch xlvi. 1, and the description of the Son of Man in Rev. i. 14.

C. L.

——**In Rabbinical Literature:** This name of God, used only in Dan. vii. 9, 13, 22, in which He is described as having "the hair of his head [white] like pure wool," denotes the One who is from of old; that is, old compared with all created things, that are of yesterday. As stated by Pseudo-Saadia and other Jewish commentators, God is often depicted by the rabbis as the venerable sage (*Zaken*) invested with judicial authority, whose sternness is tempered by mildness of judgment. To the devotees of mystic lore, within whose circle the Book of Daniel and the entire apocalyptic literature originated, the name naturally suggested itself as an attribute of majesty combined with tenderness, since they regarded the title "Zaken" (the aged one) to mean the one invested with the highest dignity. Accordingly "Ancient of Days" remained with these a favorite name of God (Pes.

119*a*, B. B. 91*b*). It became, moreover, the standing name for God in the oldest portions of the Zohar, the ספרא דצניעותא (Book of Mystic Lore), in which the white, wool-like hair of the head became a prominent feature of the anthropomorphism of the Cabala. The following rational explanation of this anthropomorphic description of the Deity is given in Mek., Beshallaḥ Shirah (Ex. xv. 3), and Ḥag. 13*a*: "When represented as a warrior triumphant in battle, God appears as a fiery young hero; and in an assembly of the wise who seek truth and justice, He is depicted as a venerable sage, calm and majestic." K.

ANCONA: Ancient city of Italy, capital of a province bearing its name, situated on the Adriatic; said to have been founded by Syracusan refugees and to have been one of the first Italian cities to shelter a Jewish community, the records of which, however, begin only in the Middle Ages.

First Settlement of Jews.

From existing chronicles it appears that some were there during the fourteenth century, when the city was under a republican government, and a few more came from Germany in 1348. Here they dwelt in peace, enjoying perfect equality with the Christian inhabitants, and owning several schools, synagogues, and a cemetery. Somewhat later the authorities restricted the Jews to their ghetto and compelled the men to wear a yellow badge on their caps, and the women to wear corresponding tokens when they walked abroad. After Ancona had fallen under papal sway, Martin V., in 1429, with a view to increasing the commerce of the city and of the state, accorded many privileges to the Jews; and in 1494 they received permission to establish banks and to lend money at interest. It was at Ancona in 1529 that the pseudo-Messiah Molcho made his first appearance in Europe. In 1539 many Jews exiled from Naples, where they had three synagogues, settled in Ancona, and when Pope Paul III. (1534–49) offered them the freedom of the port, many others, particularly a number exiled from Spain, and designated as "Portuguese," came to live there. These immigrants, who had their own synagogue, entered into certain agreements with the magistrate of the city, which were approved by Pope Julius III. (1550–55); but, nevertheless, they were subjected to oppressive taxation and all sorts of impositions.

Persecution under Pope Paul IV.

Under Paul IV. (1555–59) the Jews were subjected to further oppression. By his direction they were deprived of valuable franchises, enclosed within the ghetto, subjected to further taxation, limited in their commerce to old clothing, prohibited from practising any art other than medicine, and this not among the Christians, and forbidden the use of their calendar. As a means of satisfying his feeling of hatred against the Spaniards, Paul IV. practised cruelty toward the Portuguese Jews; he sent an inhuman commissioner, a certain Cesare Galuaba, to Ancona with orders to incarcerate all who did not accept baptism and to condemn them to the stake. Thus terrorized, sixty-three renounced their faith. Twenty-three men and one woman, whose names have been handed down in chronicles, preferred death to apostasy, and these were all hanged together and afterward burnt on the Piazza della Mostra ("Shalshelet ha-Ḳabbalah" of Gedaliah ibn Yaḥya, and local records). (Compare D. Kaufmann, "Les Vingt-quatres Martyrs d'Ancona," in "Rev. Ét. Juives," xxxi. 222–230.) Thoroughly alarmed, many of the Jews fled. Prayers for the dead are still said, and the elegy composed by Jacob de Zano is still recited annually in the synagogues for these martyrs.

Mercantile Reprisal.

The Jews of the Levant planned a novel mode of vengeance against Ancona for its iniquitous treatment of the Jews, and well-nigh executed it. Many of the Maranos, during the reign of Pope Paul IV., had fled to Pesaro, and from there, probably upon the advice and promises of protection of Guido Ubaldo, duke of Urbino, had sent an envoy, Juda Faragi, with letters addressed to the Jews of the Levant, entreating the latter, in whose hands lay nearly all commerce with the Italian ports, to send all their merchandise to Pesaro, instead of directing it, as they had previously done, to Ancona. The welfare of this city would undoubtedly have been greatly impaired, if the Levantine Jews had kept the promise they at first gave in answer to the messages of the Maranos of Pesaro; but the Jews of Ancona themselves implored that no such action be taken. They shrewdly pointed out that the pope would wreak vengeance on all Jews in his state, as well as on the Maranos, therefore the ban pronounced on Paul IV. by most of the rabbis of Turkey was not stringently enforced. Guido Ubaldo, disappointed in his hopes of seeing Pesaro supersede Ancona in commercial importance, very soon after this expelled the Maranos from Pesaro (March, 1558). It is noteworthy that among those who had fled from Ancona during the activity of the Inquisition was Amato Lusitano, the famous physician. When Paul IV. had caused the arrest of all the Maranos of Ancona, Sultan Sulaiman II., upon the repeated entreaties of Doña Gracia Nasi and Don Joseph Nasi, sent a letter to him, March 9, 1556, requesting him to release such as were Turkish subjects, and intimating that a failure to comply with the request would bring reprisals of all sorts upon the Christians living in Turkey. Pius IV. saw himself accordingly obliged to release the Turkish Jews. Those Maranos of Ancona who could claim no protector other than the pope himself—about 100 in number—languished in dungeons. See "Rev. Ét. Juives," xvi. 66–71, xxxi. 231–239.

Pope Pius IV., who succeeded Paul in 1559, punished the perpetrators of this infamy, abolished the provisions of his predecessor, and in general ameliorated the condition of the Jews. But his successor reinstituted a period of severe oppression. In a bull issued by Pius V., however, and dated Feb. 26, 1659, the Jews of Ancona and of Rome are especially excepted from the general banishment from the Papal States ("Rev. Ét. Juives," x. 199).

Varying Fortunes—Emancipation.

In order to defray the expense of the public games, he imposed heavy taxes upon the Jews, to be paid both to the city and to the state; and, as a result of his action, about 1,000 families abandoned Ancona. The succeeding popes reduced the taxes, and soon afterward some of the Jews began to return. In order to improve the commercial condition of the Papal States, Clement VIII. showed extreme benevolence toward its Jewish inhabitants, but this attitude was not imitated by Alexander VIII. and Pius VI.

Under the French domination, in 1797, Napoleon substituted for the papal governor of Ancona a municipal council, which included among its members three Jews, Samson Costantini, David Morpurgo, and Ezechia Morpurgo. Then the gates of the ghetto were destroyed, and the children of the Jews were taught side by side with those of Christians. The clergy, however, excited the Christian populace to such a degree that on Jan. 10, 1798, they endeavored to set fire to the ghetto and sack it; the rioters were dispersed by the troops. But on their side two of the Jewish aldermen prevented the casting of the cathedral bells into cannon. The papal government was no sooner reestablished than the Jews were again fiercely assailed; even the wounded who had fought for their country were driven from the hospitals. In 1826 Pope Leo XII. caused the gate of the ghetto to be replaced, and the old-time persecutions were resumed, so that many of the Jews emigrated. On the night of April 2d of that year, Anna Costantini, a young girl, was torn from her family and forced into baptism. During the revolution of 1831 the gates of the ghetto were torn down, but in 1843 (June 24), in spite of the fact that the Jews of the city had contributed 12,900 scudi to do honor to the pope during his visit in 1841, an old decree was revived by Fra Vincenzo Soliva, Inquisitor of Ancona and other districts, forbidding Jews to reside or do business in any place where there was no ghetto, to employ Christian journeymen, to hire Christian servants, wet-nurses, or apprentices, to deal in books of any sort or in ecclesiastical robes, etc. But the public sentiment, in Italy, as well as in Europe generally, was so strongly against any rehabilitation of inquisitional restrictions against the Jews, that very soon after its promulgation the decree was suspended. It is believed that the immediate cause of the revival of these old restrictive measures was an entirely accidental occurrence: the Inquisitor, while passing through the streets of Ancona in a cariole driven by a Jew, was nearly hurled to the ground by the horse, which suddenly took fright. The Jew was accused of having intended to overturn the prelate, and imprisoned, and the agitation against the Jews soon became serious. Baron Charles Rothschild, of Naples, was among those who exerted their influence for the revocation of the decree.

The revolution of 1848 brought freedom to the Jews. Among the martyrs of Ancona in 1849, Giuseppe Camilla, a Jew, is mentioned. The oppressions under the clerical government that followed were less rigorous, and in 1860, in the name of Victor Emanuel, the Jews again obtained complete religious freedom, and the Jewish community of Ancona was constituted after the same manner as those of Piedmont. Since that date the history of the community has been uneventful.

Present Statistics.

Ancona contains, to-day, about 1,700 Jews in a population of about 30,000. They possess two places of worship for the Italian liturgy and one for the Levantine; an asylum for Jewish children, and a Talmud Torah, with an annex for girls, where instruction is given in the Jewish religion and in the Hebrew language. During 1890–99, 492 births and 369 deaths have taken place in the community. The greater number of the Jews in the city follow commercial pursuits, but many also have devoted themselves to the study of medicine, law, literature, and the arts and sciences. The following eleemosynary institutions flourish in Ancona: Ma'aseh ha-Ẓedeḳah, Gemilut Ḥasadim, and Biḳḳur Ḥolim u-Malbish 'Arumim.

Rabbis of Ancona.

The rabbinical chair of Ancona was always important in Italy, and several distinguished rabbis have occupied it. The first of these, whose name is recorded, was Ezekiel Provenzali, who officiated in the year 1670. Some of his decisions are found in "Paḥad Yizḥaḳ," others in the unpublished work of Rabbi Nathaniel ben Aaron Segre, "'Afar Ya'aḳob." His successor was Menahem Shulḥani, who exercised his functions in 1675. He was followed by Giosuè Raffaele Fermi, who flourished toward the end of the seventeenth century and in the beginning of the eighteenth, and compiled a collection of 318 rabbinical responses, now in the possession of Zadok Kahn, chief rabbi of France (described by M. G. Montefiore, "Rev. Ét. Juives," x. 183 *et seq.*). Giuseppe Fiammetta, a distinguished exegete, poet, and theologian, published a volume of prayers and hymns, entitled "Or Boḳer," and wrote two volumes of responsa, which are still unpublished; he died in 1730. His son-in-law, Samson Morpurgo, officiated for a time with Fiammetta, and afterward alone. Morpurgo was a celebrated physician, philosopher, and casuist, and published a work of theological responses; he died in 1740. Isaac Fiano of Rome (1752–1770); Ḥayyim Abraham Israel of Rhodes (1774–1785), author of "Bet Abraham" and "Amarot Ṭehorot"; Raphael Isaiah Azulai (1787–1826), who wrote many of the rabbinical responsa found in a work by his father, the well-known Ḥayyim Joseph Azulai—followed in succession. A contemporary of the last was the titulary rabbi, Jacob Samson Senigaglia, author of "Abir Ya'aḳob," "Mattat Elohim," and "Nezir Shimshon" (unpublished). After Azulai came David Vivanti (1829–1876), who left several manuscripts pertaining to literature and theology. His successor is Isaac Raffaello Tedeschi. The notables of modern Ancona are Leone Levi—a well-known lawyer, economist, and statistician, who wrote works which have been awarded prizes in Berlin and London—and Eugenio Camerini, a commentator on Dante.

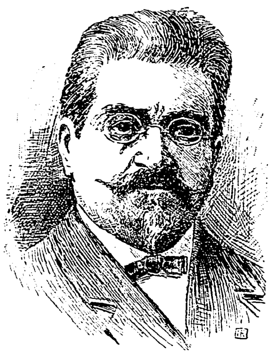
V. C.

ANCONA, ALESSANDRO D': Historian of Italian literature and philologist; born at Pisa (Tuscany), Feb. 20, 1835. He is the youngest of five brothers, all of whom have achieved fame in the careers they have chosen. Alessandro received his first education at a private school of Florence known as the "Istituto dei Padri di Famiglia," where he had as masters Nicolo Giorgetti and Cesare Scortabelli. Especial attention was there paid to literary disquisitions, and to Italian rhetoric and prosody, and the young D'Ancona devoted most of his energies to these latter subjects. At the age of fifteen he composed two short poems, elegies on the death of his teacher Giorgetti, which, although they bear many traces of youthful extravagance, are nevertheless excellent imitations of classical verse, both in form and meter. Three years later he demonstrated his knowledge of medieval Italian literary sources, his critical sense, and his scientific methods of investigation by writing an essay on Giovanni Domenico, or—as he is better known—Tommaso Campanella, the metaphysician and political reformer, a contemporary of Galileo.

His Political and Journalistic Activity.

The learning, and especially the political tendencies, expressed in this work drew upon the author the attention of the Liberal party in Tuscany, and when, after the suppression of the "Nazionale," Celestino Bianchi founded the "Genio," D'Ancona was invited by Bianchi and his coeditor Arcangeli to collaborate on this paper. He joined the staff, also, of that other propagandist journal, the "Spettatore Italiano." In 1855 he went to Turin, ostensibly to study law at the university, but in reality to act as secret agent between the two Liberal parties of Tuscany and Piedmont, and also between these and Count Cavour. He remained in Turin for three years, and D'Ancona's name soon became known in the advanced political circles of Italy. He was in close relations of friendship with Carlo Luigi Farini, and in the Società Nazionale (National Society) he represented Tuscany. When Cavour's compatriots decided to offer this statesman his bust by the sculptor Velo, it was Alessandro d'Ancona who was selected to make the presentation speech. A similar honor was conferred upon him at the close of the Crimean war, when the patriots of Tuscany presented General La Marmora with a sword. On the fall of the government of Leopold II. in Tuscany (April 27, 1859), D'Ancona set out for Florence—his former home—and arriving there assumed the humble post of secretary of the Second Army Corps of central Italy. But his friends soon found more suitable occupation for him; immediately after the treaty of Villafranca he was given the editorship of the advanced Liberal journal "La Nazione," which had been founded by Ricasoli and Salvagnuoli.



Alessandro d'Ancona.

In spite of all his political activity, D'Ancona still found time to pursue his philological studies, and, through the efforts of his friend Salvagnuoli, he was, in 1860, appointed deputy-professor of Italian literature at the university of his native town, Pisa. The official occupant of this chair, though he never actually lectured, was the celebrated critic De Sanctis, whose full successor D'Ancona became the year following. His entire work, after 1861, lay in the field of philology, his researches being directed to the origin and gradual development of Italian literature.

D'Ancona's position among the philologists of Italy is a most prominent one, and is to be measured not only by the actual importance of his works, but above all by the new standard, in scope and method, set by him and a few of his contemporaries, such as Carducci, Comparetti, and Mussafia. Before the advent of these men the study of the medieval Italian texts was, it is true, zealously pursued; but the criterion in the treatment of these texts was the individual eclecticism, the esthetic taste, or the private ends of the commentator. The scientific methods of philological investigation recently inaugurated in Germany were as yet unknown in Italy (though an exception must be made in the case of Emiliani-Giudici), and the "historical point of view" was entirely neglected by men of such erudition even as Fanfani and the poet Giacomo Leopardi. Especially was this the case with the most absorbing of topics in Italian literature, that of Dante. All those who had literary, political, or religious theories to defend or refute sought in Dante (and invariably found there) corroborative arguments (see especially Gabriele Rossetti, "Lo Spirito Antipapale").

As a Philologist.

Alessandro d'Ancona was in every way prepared to join the small circle of literary historians to whom this revolution in the methods of investigation was due. His first work, the study of the life and works of Campanella, already mentioned, though written when he was a mere youth, was a thorough, impartial disquisition upon the literary value, the political and religious ideas of the unfortunate Dominican. The essay paved the way for the work which D'Ancona published soon afterward, "Opere di Tommaso Campanella" (2 vols., Turin, 1854), the basis of all subsequent researches concerning Campanella. When, therefore, under the direction of F. Zambrini, the two serial publications of Old Italian texts were begun, the "Collezione di Antiche Scritture Inedite o Rare" (Collection of Old Works, either Unpublished or Rare; published by Nistri, at Pisa), and the "Scelta di Curiosità" (Collection of Curious Works; published at Bologna, by Romagnoli), D'Ancona was among the first contributors. In the former of these two collections there appeared his edition of Agostino Velletri's "Storia di Ginevra degli Almieri" (1863), a study of the Latin work, "Attila Flagellum Dei" (1864), and an essay on the Seven Wise Men ("Il Libro dei Sette Savi," 1864); and in the latter he published several medieval legends, among which may be here mentioned those of Judas Iscariot ("La Leggenda di Vergogna, e Quella di Giuda Iscariote," 1869) and of Adam and Eve ("La Leggenda d'Adamo ed Eva," 1870).

The philological researches pursued by D'Ancona comprise the whole field of early Italian literature. He entered into disquisitions on the various classes of the folk-lore material itself and its appearance and further development in Italy, as well as upon the form, popular or "learned," which the material finally assumed; but he studied, too, the individual works of the more cultured medieval writers. In 1875 he published a work on the early popular poetry of Italy, "Le Antiche Rime Volgari, Secondo la Lezione del Codice Vaticano 3193" (Ancient Popular Poems, from the Vatican Manuscript No. 3193; published at Bologna); in 1878 appeared another, "La Poesia Popolare Italiana" (Popular Italian Poetry; published at Leghorn); in 1881 he wrote his book on the popular songs of the province of Reggio ("Canti del Popolo Reggino," published at Naples); and finally, in 1889, he published still another work on the popular poetry of Italy ("Poemetti Popolari Italiani," published at Bologna), the various introductions to which "are written"—to use the words of another eminent philologist—"with as much science as taste" (see Gaston Paris, in "Romania," xviii. 508). An essay on a popular spiritual drama of Tuscany, a sort of "May-festival," which D'Ancona had written in 1869, gave rise to a more elaborate work concerning religious dramatic performances, or, as they are more popularly called, "mysteries," of Italy: "Sacre Rappresentazioni dei Secoli XIV., XV., e XVI." (Sacred Performances of the Fourteenth, Fifteenth, and Sixteenth Centuries; 3 vols., Florence, 1872); and this was followed, in 1877, by his work on the origin of Italian dramatic literature, which the author ascribes to these very religious plays ("Origine del Teatro in Italia," published at Florence). In this field of research may be classed also D'Ancona's work on the original sources of the "Novellino," where the author reviews all the "novella material" to be found in the ancient literatures of the world ("Fonti del Novellino," published in 1873); also his "Due Farse del Secolo XVI." (Two Farces of the Sixteenth Century; Bologna, 1882), a noteworthy addition to the history of Italian literature.

In the field of what is termed the "higher literary history"—in the study of belles-lettres—too, D'Ancona's work occupies a very important position. His contribution to the Dante literature, besides a few articles of minor length, consists of only two volumes, his edition of "Vita Nuova" (The New Life), Pisa, 1872 (2d ed., 1884), and his study of

As Literary Critic.

the pre-Dantesque vision literature, "I Precursori di Dante" (The Forerunners of Dante), Florence, 1874; but both of these works marked a new era in the treatment of the subject, and both are indispensable even at the present day for their wealth of information and their thoroughness of discussion. To the "Vita Nuova" D'Ancona appended his study of Beatrice, which he had first made known at Florence in the form of a lecture, and in this "essay" the author presents the first logical conception of Dante's famous personage, making of her an actual living being and not a mere phantom. From among the many studies by D'Ancona on single topics or individual writers of medieval Italy the most important are the following: "Il 'Contrasto' di Ciullo d'Alcamo" (The "Contrast" of [Vizen] Ciullo d'Alcamo; Bologna, 1874), which was inspired by the heated discussion among literary historians as to the exact form of this poet's name and that of the single poem he had composed. He resumed this subject on several occasions, and in 1884 published an essay the title of which suffices to indicate the change of opinion that had taken place in D'Ancona's views: "Il Contrasto di Cielo dal Camo" (The Contrast of Heaven by Camo; in "Studj sulla Letteratura Italiana de' Primi Secoli," Ancona, 1884; this work contains also a study on Jacopone di Todi); "Le Odi di Giuseppe Parini" (The Odes of Giuseppe Parini; Florence, 1884); "Il Tesoro di Brunetto Latino" (The Treasure, by Brunetto Latini; Rome, 1889).

Alessandro d'Ancona contributed to numerous learned periodicals, and much of his best work on medieval Italian literature is contained in shorter articles. Thus in the philological journal "Romania" (edited in Paris by Gaston Paris and Paul Meyer) he published a study on Cecco d'Angioglieri, and in the "Rivista Italiana" (published at Milan), an elaborate essay on Convenevole da Prato, the teacher of Petrarch—a theme that ten years later he resumed in the "Studj sulla Letteratura Italiana de' Primi Secoli," already mentioned. He collaborated also on the "Rivista di Filologia Romanza" and its sequel, the "Giornale di Filologia Romanza" (edited at Rome by Monaci), the "Giornale Storico della Letteratura Italiana," the "Propugnatore" of Bologna, the "Nuova Antologia," the "Rassegna Settemanale," etc. Several other interesting contributions of his to the study of medieval Italian lore appeared in occasional minor publications, as, for instance, in "per nozze" (or festive writings on the event of a friend's marriage).

Though D'Ancona's fame is due entirely to the part he took in the creation, in Italy, of a scientific school of literary history, and to the position he held as a student of romance philology, he by no means limited his studies to the literature of the Middle Ages, nor did he sever his connections with the political and social movements of the day. Not only do occasional passages in his philological works, by the directness of the remarks and the radical tendency of the ideas expressed, recall the former journalist of the "Nazionale" period, but upon several occasions as university professor he showed both the vivid interest he took in all national and local questions, and his earnest zeal in their solution. In a discourse at the opening of the University of Pisa for the year 1875, he chose as a theme the "Conception of Political Unity Throughout Italy" (Il Concetto dell' Unità Politica nei Paesi Italiani; Pisa, 1875). In the collection, too, of essays on various topics, published in two series under the title "Varietà Storiche e Letterarie" (Milan, 1883–85), there are several discussions of a political character, notably one on Charles Albert, and another entitled "Unity and Federation," on the Italian "liberation" literature of 1792–1814. In the same collection an essay, "Ugo Foscolo Judged by an Alienist," though intended as a protest against the grouping together of the "heroes of the assize courts and the gallows" with the sublime poet of the "Grazie," is in reality a criticism of the favorite theories of D'Ancona's friend Cesare Lombroso.

The work of D'Ancona in the field of modern literature is of wide scope. Worthy of special mention are his essays on "A Secretary of Alfieri" and "Alfred de Musset on Italy," both in the "Varietà Storiche e Letterarie" (2d series, pp. 147 *et seq.*, 185 *et seq.*), and the article in the "Nuova Antologia" for 1878 on the "Family of Giacomo Leopardi."

Alessandro d'Ancona still fills the chair of Italian literature at the University of Pisa, and occupies besides the position of vice-president and director of the Regia Scuola Normale Superiore of Pisa. He is a member of the Royal Academy of Sciences (class of moral sciences). Among his numerous pupils the two that have achieved the greatest distinction as philologists are Pio Rajna and Francesco d'Ovidio.

ANCONA, JACOB BEN ELIA D': Copyist; lived at the end of the fifteenth century. Steinschneider states ("Hebr. Bibl." xx. 126) that Ancona copied some anonymous commentaries on the "Ḳa'arat Kesef" of Ezobi and on the "Beḥinat 'Olam." The latter work bears the date of the 2d Adar, 5255 (1495). The Hebrew codex containing these commentaries is found in the Royal Library of Turin, and consists of forty-six folios.

ANDALUSIA: The largest of the ancient divisions of southern Spain, comprising the Moorish kingdoms of Seville, Cordova, and Granada, with the towns of Malaga, Lucena (Alicena), and several others. This most beautiful portion of the Iberian peninsula early attracted Jews, as it had earlier attracted the Phenicians. Jews, both those who were already settled there and those who served in their army, gave essential assistance to the followers of Islam when they conquered Spain. African Jews, under Kaula al-Yahudi, took part in the decisive battle near Xerez de la Frontera, 711. The captured cities of Cordova and Seville were entrusted by the conquerors to the care of Jews; and the latter, owing to its large Jewish population, became known as "Villa de Judíos" (Jews' City). The Jews, so long oppressed, were now allowed the fullest religious freedom by their new rulers. They lived under no civil disabilities whatever; and a poll-tax (*dhimmah*) was the only fiscal burden laid upon them.

Notwithstanding this, scarcely a decade later, many faithful Jews followed the pseudo-Messiah Serene; abandoning their goods and homes, which were confiscated to the public treasury. But when the wise and powerful Abd-er-Rahman III. (912–961)—to whom, it is said, a Jew had foretold his future fame and glory—established a strong Moorish kingdom in Spain, many Jews that had been suffering under the oppression of the Fatimite califs settled in Andalusia. Under Abd-er-Rahman the city of Cordova became the chief seat of learning in the

Good-Will of Abd-er-Raḥman.

West. He showed himself well disposed toward his Jewish subjects. Their trade, in silk especially, and their various industries contributed not a little to the prosperity of the kingdom; while their varied knowledge and cultivation of the Arabic tongue were of great assistance in the elevation and spread of science. Jews distinguished for culture and wealth were especially preferred by the califs as counselors and astrologers, and were appointed to such important posts as judges and secretaries of state (*ḳadi, ḥajib, katib*).

Abd-er-Raḥman's own physician was Ḥasdai ibn Shaprut, who, knowing Latin, became also confidential secretary—a post hitherto held by the abbot Samson—and rose to be his master's trusted counselor and a distinguished statesman. He conducted the calif's negotiations with the Greek and German empires, and also with several Christian Spanish rulers. Ḥasdai urged the establishment of a rabbinical college in the flourishing Jewish community of Cordova, with the fugitive scholar Moses ben Ḥanok (Enoch) at its head, which enabled the Spanish Jews to be independent of the Babylonian gaonate in matters of Jewish law. A dispute which arose upon the death of Moses ben Ḥanok as to the appointment of a successor to the office of rabbi was decided by the calif Al-Ḥakim II. in favor of Moses' son Ḥanok, and against Joseph ibn Abitur, a protégé of the silk-merchant Ibn Jau. This Abitur had translated the Mishnah into Arabic at Al-Ḥakim's request. After Al-Ḥakim's death all power was in the hands of the great *ḥajib* (chamberlain) Al-Mansur, who was very friendly to the Jews. Among other things, he appointed the wealthy Ibn Jau, who lived in princely style, as *nasi* (prince) and supreme judge over all the Jewish communities in the Andalusian califate. In true Oriental fashion, however, he very soon deposed him and threw him into prison.

First Persecution and Massacre.

The first disputed succession to the califate was the occasion of the first persecution of the Jews in Andalusia. When Al-Ḥakim's son was opposed by Sulaiman, Al-Mansur's successor, he sent an embassy, composed mainly of Cordovan Jews, to Count Raymond of Barcelona, asking for help. The angry Sulaiman swore revenge on the Jews, and many were slain in a massacre at Cordova; but many escaped to Saragossa, Seville, and Malaga. Among the fugitives was the learned philologist Samuel ha-Levi ibn Nagdela (or Nagrela), who settled in Malaga. His linguistic attainments and his calligraphy secured for him the influential post of private secretary and minister to Habus, the regent of the newly formed kingdom of Granada, which position he held for thirty years. On the death of Habus in 1037, his younger son Balkin, supported by many influential Jews, was to have succeeded to the throne; but he declined in favor of his elder brother Badis. The Jews who sided with Balkin (who was soon effectually put out of the way) had to flee, among them Joseph ibn Migash.

Samuel, who was loyal to Badis, retained his position and was made nasi and chief rabbi of the Jews in Granada, for which his profound Talmudic erudition especially qualified him. This was the golden age of the Jews of Granada; they were in all respects placed on the same footing as their Moorish fellow citizens. Samuel died in 1055, at a ripe age, and deeply venerated. His son Joseph, who succeeded him, was not so fortunate. Reared in luxury, he lacked all his father's modesty; his arrogance earned for him the hatred of the Moorish grandees; and on December 30, 1066, a terrible massacre of the Jews in Granada was organized, from which but few escaped. Joseph was among the slain. This was the first massacre of Jews on Spanish soil resulting from religious hatred. The era of Mohammedan supremacy in Spain had been of comparatively short duration. Small principalities were established from time to time, always with special provision for the government of the Jews, who, as heretofore, devoted themselves to the service of the state, and to science and art. A Jewish musician, Mansur, was held in high esteem by King Ḥakim. In Aragon there were Jewish lion-tamers; in Andalusia, Jewish foot-racers.

Conversion to Mohammedanism Averted.

The battle of Zalaca (1086), in which Jews were numerously represented in both Christian and Mohammedan armies, and which was won by the Almoravide Yusuf ibn Tashfin, had the most disastrous results for the Jews in Andalusia. Yusuf sought to compel the Jews of Lucena—one of the richest, oldest, and most respected communities of the califate of Cordova and possessing rabbinical colleges directed by Rabbis Isaac ibn Gayyat (Giat) and Isaac Alfasi—to embrace Mohammedanism. Calling a meeting of the representatives of the congregation, he announced that he had read in the book of the Cordovan writer Muserra that the Jews had promised to acknowledge Mohammed as prophet, and become Moslems, if their expected Messiah should not have arrived before the year 500 of the Hegira. This year had long gone by; and Yusuf insisted that they should now make good their promise. It took considerable exertion and an enormous sum of money to induce the ruler's vizier to secure the postponement of the decree.

Yusuf's son and successor, Ali, employed Jews again as farmers of the taxes, and many of them, such as the physicians Solomon ibn Almuallem and Abraham b. Meir ibn Kamnial, also Abu Isaac ibn Muhajar, became his prime ministers. Cordova, Seville, and Granada became anew centers of Jewish learning, under such rabbis as Baruch ibn Albalia, Joseph ibn Ẓaddiḳ, and Joseph ibn Migash, but only for a short time.

Under the Almohades.

Andalusia was severely scourged by African invaders. Abdalla ibn Tumart, a politico-religious fanatic in Morocco, was the founder of a sect that preached the absolute unity of God, without any conception of corporeality — called hence Almohades or Almuwaḥids—and preached it with fire and sword. After his death, Abd-al-Mu'min, another great fanatic, took the leadership and in the middle of the twelfth century conquered Cordova, with the greater part of Andalusia, consigning both Jews and Christians to the flames and to the spear. Beautiful synagogues were demolished, and the colleges at Lucena and Seville were closed. Abd-al-Mu'min's persecution lasted ten years (1146–1156). Many Jews were stripped of their possessions and sold as slaves; many others fled to Castile and Aragon; still others pretended to become Moslems. But there were not lacking brave Jews, like Aben Ruiz aben Dahri, who successfully resisted force with force, and liberated many of their coreligionists.

The battle of Muradal, or Navas de Tolosa, in 1212, broke the power of the Almohades. Cordova, Lucena, and a large portion of Andalusia fell into the hands of the king of Castile. When Ferdinand III. captured Seville, the Jews of the city delivered to him a costly silver key, engraved with Hebrew and Arabic inscriptions, which is still preserved among the relics of the Seville Cathedral. Moors thenceforward ruled over only the kingdom of Granada. The Jews lived among them, undisturbed and in perfect equality and security. Mohammed of Granada built a costly bath-house in his capital with the revenues derived from his Jewish and Christian subjects. Ismail, in 1316, laid a special tax upon the houses of Jews.

The Inquisition.

But in the year 1391 there began on Andalusian soil that general massacre of Jews which was to spread over all Spain; and it was in Seville that the Inquisition began its activity. In 1478, before the outbreak of the great war which was to put an end to the Moorish power in Spain, Jews were forbidden to dwell in Cordova, Seville, and other cities of Andalusia. After the capture of Malaga (1487), the Jews of that city withdrew; and on the fall of Granada, in 1462, Jews were allowed to depart unscathed from all towns and settlements of that kingdom. Andalusia, however, remained full of secret Jews after the edict of expulsion, and against these the Inquisition strove until the middle of the eighteenth century.

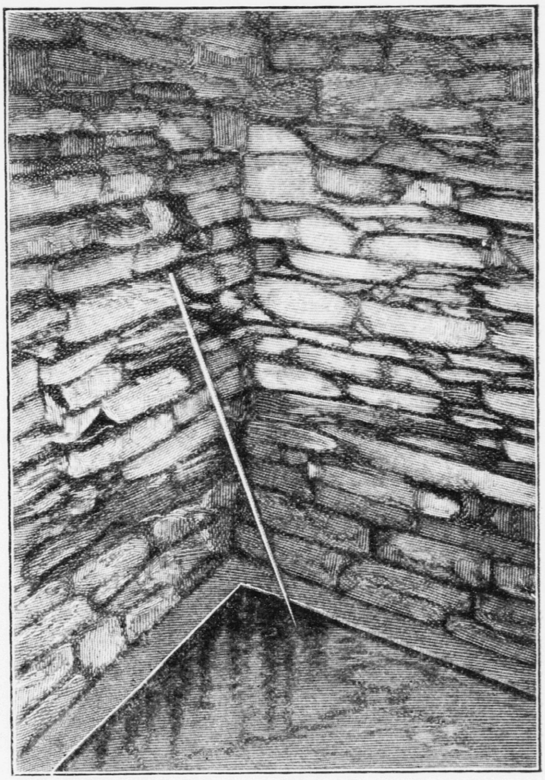
M. K.

ANDERNACH: An ancient city in the Prussian governmental district of Coblenz. From very early times a Jewish community was sheltered within its walls. About 1255–60 a certain Godelif, his wife Bela, and their son Moses, all of Andernach, are mentioned in the "Judenschreinsbuch" (Jewish archives) of Cologne. In 1286 Andernach was almost entirely destroyed, its houses and synagogues were demolished, and the Jews, who had taken refuge in the castle of the archbishop of Cologne, were expelled from the town. The archbishop, Siegfried von Westerburg, took pity on them, and for their protection issued (August 3, 1287) an award against the town and its burghers. As early as 1253 a Jew from Andernach acquired possession of a piece of ground in Cologne. From the following buildings and districts to which Jewish names are attached an idea can be gained of the size of the former community of Andernach: the synagogue, the Jewish cemetery on the Benn, the "Judengasse" (Jews' quarter) at the castle-gate, the "Judenthurm" (Jews' tower) between the sheep-gate and the church gate, and the "Judenberg." There was a "Judenbüchel." The wealth of the community is indicated by the large number of commercial papers that have been preserved.

Entrance to the Jewish Bath at Andernach.

(From a photograph.)



Interior of the Jewish Bath at Andernach.

(From a photograph.)

The most important building was the Jewish bath—the oldest of its kind now existing. The bath is almost entirely underground, and has the form of a four-cornered tower. It is covered by an arched roof, which extends 4½ feet above the courtyard, and upon which there is a superstructure. The well-built walls are of slate filled in with mortar. Along one of them a tolerably broad stairway leads outward from the side of the bath. The steps are of stone from Mendig. The interior of the building is divided into three sections by arches. The first of these divisions is 7 feet and the other two 10½ feet from the floor. Leading from the stairway into the two upper rooms are two inconvenient entrances, which still show where doors formerly stood. The lowest arched room originally had fairly wide apertures for the admission of light. The walls are built on oaken piles; and the depth of the hall is 36 feet. The descent to the basin is by wide steps; and the depth of the water, which fluctuates with the rising or falling of the Rhine, is never less than 2 feet.

In 1337 and 1349 the Jews of Andernach suffered from persecutions; but the date of their expulsion is not certain. In 1573 they made a successful attempt at resettling in the town; but their commercial privileges were restricted. About the close of the sixteenth century, in consequence of fighting in the surrounding villages, a great many Jews sought safety in the city, but were driven out in 1597. Again, at the time of the Thirty Years' war (1618–48), the Jews took refuge in Andernach. From 1655 to 1860 no Jews lived in the city; but in 1900 there were 22 Jews in a total population of 6,853.

A. F.

ANDI (ANDIES; Russian, **Andítzy):** One of the wild Lesghian tribes of the province of Tersk (Terek) and northern Daghestan. Like the Tabassarans and other Caucasian tribes, the Andi claim to be of Israelitish origin. They number about 20,000, and were conquered by Russia in June, 1845. The Andi language has not yet been fully investigated. It does not belong to the eastern group of the mountain languages of Caucasia, nor can it be classed as Semitic.

H. R.

ANDRADA, SALVADOR D': One of the earliest Jewish settlers in New York, his name being first encountered in 1655. He appears to have been more wealthy than most of his associates, was actively engaged in commerce, and was one of the leaders in the measures adopted to enforce the civil and political rights of the Jews during the Dutch period. He asserted the rights of the Jews to own real estate, and demanded the recognition of their privileges as Dutch citizens, of their right to equality in taxation, and to trade throughout the Dutch possessions in New Netherlands. His family name occurs in various connections in the seventeenth century among the Maranos settled in Brazil, Mexico, and the West Indies.

Bibliography: *Publications of the American Jewish Historical Society*, iii. 76, vi. 88.

M. J. K.

ANDRADE, ABRAHAM: French rabbi; born in the last quarter of the eighteenth century; died at Bordeaux, 1836. During the Reign of Terror (1793–94) his energy and eloquence prevented the erection of a guillotine in the market-place of St. Esprit (near Bayonne), and instead of the guillotine the town was adorned with a statue of Jean Jacques Rousseau. He was an active member of the Great Sanhedrin which met at Paris in 1807. While rabbi at St. Esprit he was elected "deputy of the Jewish nation" to the assembly of notables convoked by Napoleon I. in 1806. He was on the committee of nine charged with the organization of the Sanhedrin, and devoted himself in a serious and broad-minded spirit to the work of that body. In 1809 he was elevated to the office of chief rabbi of Bordeaux, in which position he remained till his death, maintaining friendly relations with the authorities of the Catholic Church.

I. L.

ANDRADE, VELOSINO JACOB DE: Physician; born in Pernambuco 1657, of Portuguese parents, who had, like many other Maranos, fled to Brazil after it had become a Dutch colony. When the Portuguese again took possession of Brazil, Andrade went to Holland, and became a successful medical practitioner at The Hague. He subsequently removed to Antwerp. He wrote a polemical work against Spinoza's philosophy entitled "Theologo Religioso Contra el Theologo Politico de B. de Espinosa," and translated Saul Morteira's "Torat Mosheh" into Portuguese under the title "Epitome de la Verdad de la Ley de Moyses." When Isaac Jaquelot, a minister of the Dutch Reformed Church in The Hague, published his work on the Messianic prophecies of the Old Testament, "Dissertations sur le Messie, où l'on Prouveaux Juifs, que Jésus Christ est le Messie Promis et Prédit dans l'Ancien Testament" (The Hague, 1699), Andrade wrote a defense of Judaism in six volumes under the title "Messias Restaurado Contra el Libro de M. Jaquelot, Intitulado: Dissertaciones Sobre el Messias" (The Restored Messiah, Against M. Jaquelot's Book, Entitled: A Dissertation Concerning the Messiah). It has remained in manuscript.

ANDREA DE MONTI. See Joseph Ẓarfati.

ANDREAS II. See Hungary.

ANDREAS: A legendary Jewish pope. According to an old Spanish document discovered among some penitential liturgies by Eliezer Ashkenazi, the editor of "Ṭa'am Zeḳenim" (Frankfort-on-the-Main, 1854), Andreas was a Jew who, upon becoming a Christian, distinguished himself so markedly as to become successively cardinal and pope. During his pontificate, it is alleged, a calumny was lodged against the Jews, as the result of which an outbreak of the populace was imminent. At the critical moment, however, the pope appeared on the scene and, by delivering a speech in favor of the Jews, he succeeded in subduing the popular passion. The Jews thereupon sent a delegation of their most prominent and learned men to bear to the pontiff the expression of their gratitude. In response the pope handed to the delegates a *seliḥah*, or penitential prayer, which he had composed in the sacred tongue, and which he now requested them to spread broadcast among all Jewish communities, and to have incorporated in their books of prayer. This they did. The prayer bore the pope's signature "Andreas," though in print one letter was inverted (compare "Ṭa'am Zeḳenim," p. 11, note, and Landshuth, "'Ammude ha-'Abodah," pp. 46 *et seq.*).

The legend of Andreas, which, in point of the liturgic authorship, is based upon the legends of Elijah and St. Peter, must be regarded as a variant of that peculiar story concerning a Jewish pope which found a wide circulation in the Jewries of the Middle Ages. That Andreas is in this case the name of the pope, while in other versions only his former Jewish name Elhanan appears, is no proof against the essential unity of the legend. Dating its origin from the beginning of the fourteenth century, as is most probable, the legend went through many phases of adaptation. It appeared, in almost complete mythical dress, in a Passover poem supposed to be composed by one of the oldest German *paitanim*, Simeon ben Isaac ben Abun the Great (or the Elder), who lived at Mayence about the year 1000. In the poem Simeon, whom popular genealogy was already eager to regard as a lineal descendant of King David, alludes quite incidentally to his son Elhanan. Elhanan—the legend runs—as a child is kidnaped by a Christian, who causes him to be baptized and to be given a good education. Owing to his energy and endowments, Elhanan rises very rapidly until he attains to the dignity of cardinal and, at length, to that of the papal chair. The new pope becomes the wonder of the world; and many princes and kings seek his counsel. The pope, however, grows sorely perplexed concerning his origin, seeing that, among the multitude of his distinguished visitors, there is none who would name himself as of his kin. This perplexity is aggravated by the doubts concerning the truth of the Christian religion which suddenly begin to assail the lonely pontiff. Ultimately he threatens his attendants with death unless they disclose to him the secret of his birth and descent. His subordinates then confess the truth, designating, however, his kidnaping as the will of God, who had chosen him that he might become the lord of all princes. The pope thereupon gives orders that Simeon, his father, be at once conveyed to him from Mayence. Upon the arrival of the latter he is minutely interrogated by the pope, who, in the course of the conversation, causes him to enumerate his children. Only after persistent pressure, however, is Simeon induced to tell the story of his lost child, Elhanan, and to mention several birthmarks on him. These serve to determine beyond doubt the self-identification of the pope. He discloses himself to his wonder-stricken parent, and expresses great anxiety to return to the faith of his fathers—a wish in which, of course, he is encouraged by Simeon. His conversion is told in tragic, if not somewhat melodramatic style. A convocation of the cardinals is ordered; the people are summoned to attend, and the pope addresses all from the top of a tower. In his address he denies the supernatural origin of Jesus and the truth of the Christian doctrines. The astounded bishops suppose that their lord has become insane; but he retorts that it is they who are insane in their beliefs. Thereupon he throws himself from the top of the tower and dies; and Simeon writes the Passover poem in his memory.

The Legend.

Of somewhat later origin is another version of this legend, which is extant in a Hebrew translation of a Judæo-German original, and which has the "Ma'asebuch" (The Book of Tales) as its source. According to this account Elhanan is stolen on a Sabbath by a Christian maidservant, or, according to others, by his teacher, a priest, while his parents are at the synagogue. He receives an ecclesiastical education and rises rapidly in hierarchic circles, until he becomes pope. All the while, however, he is perfectly cognizant of his origin and consanguinity, though the splendor and the majesty of his position keep him from disclosing his identity. Finally he is overcome by a craving to see his father, to which end he promulgates an edict of persecution against the Jews of Mayence, being certain that the latter would send delegates to him to plead for its revocation, and that then Simeon, as one of the most prominent men of his community, would doubtless be found. The pope does not miscalculate. In due time the delegates of the Jews of Mayence, headed by Simeon the Great (or the Elder), arrive at Rome. At first they impart the purpose of their pilgrimage to the Jews of Rome, who are fairly astounded at the contents of the edict, seeing that the pope has been renowned as the most generous pontiff within human memory, as well as a genuine friend of the Jews, whose counsel and society he is in the habit of seeking, playing chess regularly with some of them. Simeon then marvels at the cause of the cruel edict; but his astonishment is increased when, upon being given audience, he detects in the pope a quite rare degree of Jewish scholarship and acumen, manifested in the course of a religious discussion. The pope, moreover, invites Simeon to call in the evening for the purpose of playing chess with him. Then, again, Simeon, a noted chess-player, has great cause for wonderment at the pontiff's display of shrewdness and familiarity with the game. Gradually the religious discussion is resumed, as Simeon does not lose sight of his real purpose; and the pope, unable to contain himself longer, puts the mask aside. Of course he is anxious to return to the religion of his fathers; and his resolve is strengthened as his father points out to him the Jewish doctrine concerning the regenerative power of repentance. Simeon then returns to Mayence, bearing with him a repeal of the edict, while the pope stays at Rome long enough to compose an anti-Christian dissertation, which he charges all his successors to peruse. He then flees to Mayence too, where he lives as a pious Jew, while in Rome his fate remains forever unknown.

The Version of the "Ma'asebuch."

Even this version of the legend—which, as Steinschneider has pointed out, dates from a period when chess was a popular game among the Jews of Germany—is found with several variations. In one of these Simeon recognizes the pope as a Jew by a certain move (which would point at the recognized skill of the medieval Jews in the game); in another account the telltale move reveals the pope to Simeon as his son, for it is a trick he had taught him as a child; while in still another the pope is recognized by birthmarks on his hand and back.

Nor do the German versions exhaust the material of this legend. There is not only a Spanish modification of it, but also one in Arabic, in the latter of which Simeon Kayara takes the place of Simeon the Great as parent of the pope. The Spanish legend lays the scene at Barcelona, and makes Solomon ben Adret, the great rabbi, the father of the kidnaped child, who, being stolen by a priest, is educated in a monastery and in later years is elevated to the apostolic throne. On a certain occasion Solomon b. Adret heads a delegation to the papal court, when a birthmark on the pope's face reminds him of his lost son and causes him to burst out weeping. The pope insists upon being told the cause of this sudden emotion, which, when refusal becomes impossible, Solomon discloses. Somewhat agitated by this, the pontiff at once examines the monk who had reared him in the belief that he was the scion of a noble family exterminated in a family feud, and at length extorts the truth from him. The monk is imprisoned, or even executed, for his pains; while the last doubts of the pope as to his identity are set aside when Solomon, at his request, visits him again in the evening. His father convinces him without difficulty of the truth of the Jewish religion, and the pope determines to renounce Christianity. In order to avert suspicion, however, he waits six months, whereupon he bids his servants build a pyre in the market-place, delivers to a concourse of people a tirade against Christianity, and leaps into the flames. And, as the legend adds, even to this day they call him "the insane and heretical pope."

Spanish Version.

In the construction of this legend there are interwoven several historic occurrences. Despite the anachronism incidental to the coupling of the name of Simeon ben Isaac, who lived in the beginning of the eleventh century, with that of ANACLETUS II., who sat on the papal throne from 1130 to 1138, it is still quite probable that the legend, which originated some time in the fourteenth century, used the vague remembrance of Anacletus II., the pope of Jewish descent, intentionally, though Güdemann suggests the name of Alexander III. (1159–81), who was kindly disposed toward the Jews, as the prototype of the pope in this legend. It is also historically confirmed that Simeon the Elder was instrumental in averting some great catastrophe. In fine, the numerous forced conversions, of which the sons of pious rabbis were frequent victims, doubtless offered material for the legend. The son of R. Gershom, the celebrated contemporary of R. Simeon the Great, was such a convert, which, indeed, caused him to be regarded by some as the Jewish pope, and which may have been one of the causes of R. Gershom's ordinance, that a forced convert who has returned to Judaism be not rebuked for his transgression. Besides, the resemblance must be noted which this legend bears in several points to the legend of St. Peter, who also remains a Jew at heart despite his conversion, and who before his death composes two liturgical pieces which are embodied in the Jewish prayer-book.

ANDREAS BELTRAN. See BELTRAN.

ANDREAS, JOHANNES: Of Xativa; a convert to Christianity in the sixteenth century; his Jewish name is unknown. In his conversionist zeal he addressed a letter to the Jewish congregations of southern France, summoning them to accept Christianity (Paris, 1552). His works, originally written in Spanish, were translated into Italian by Domenico de Gaztela (Seville, 1537), and frequently reprinted (Leipsic, 1595; Venice, 1597; Utrecht, 1646). (Steinschneider, "Cat. Bodl." 4420). M. K.

ANDREAS LUCUAS. See CYRENE.

ANDREE, RICHARD: German ethnographer and geographer; since 1890 editor of "Globus"; born 1835 at Brunswick. In 1881 he produced "Zur Volkskunde der Juden," with a map of the distribution of the Jews throughout central Europe. Though written with something of an anti-Jewish bias, the book was the first attempt at a scientific account of the anthropometric and biostatic peculiarities of the Jews, regarded as a special race. It also gives an account of their customs and folk-lore as described in the works of travelers and ethnographers. In many respects it has not yet been superseded.

Andree's two series of "Ethnographische Parallelen" (Stuttgart, 1878, 1889) contain several parallels with Jewish customs, while his "Flutsagen" (Brunswick, 1891) has a tolerably complete collection of the "flood" legends current among savages.

J.

ANDREW: **1.** Commonly known as **Saint Andrew**; one of the twelve apostles of Jesus; brother of Simon Peter. Both Andrew and Peter were fishermen and natives of Bethsaida, on the Lake of Gennesareth (John, i. 44). According to the Gospel of John, Andrew was a disciple of John the Baptist and was present at the baptism of Jesus. He and Peter were the first to be summoned as apostles in the well-known expression, "Follow me, and I will make you fishers of men" (Matt. iv. 18–19). Andrew appears to have been in the inner circle of the disciples (Mark, xiii. 3; John, vi. 8, xii. 22). Christian tradition represents him to have been martyred at Patræ in Greece; and his arm was alleged to have been brought as a relic to Scotland by St. Regulus. It is owing to this fact that Andrew has become the patron saint of Scotland, and that the British flag contains a representation of the saltire cross, on which he is reported to have been crucified. **2.** A Jew of Crete who revolted against Rome in the time of Trajan ("Dio Cassius," lxviii. 32).

J.

ANDROGYNOS (Hermaphrodite): Rabbinical literature knows both the mythical and the real hermaphrodite: the former in the Haggadah, the latter in the Halakah. The notion of bisexuality must have been derived from Hellenic sources, as the Greek form of the word proves. The other form, "hermaphrodite," never occurs in rabbinical writings. The principle of the sexual generation of the world is not of Greek origin: its phallic character pointing to India as its birthplace. Plato, who shows much more intimate acquaintance with the Orient than is supposed, speaks in his "Symposion" (190 B) of three generations: the masculine, the feminine, and the androgynous, which had been created by "sun, earth, and moon respectively."

In the Haggadah.

Transmitted and developed through dualistic Gnosticism in the East, the notion of an androgynous creation was adopted by the Haggadists in order to reconcile the apparently conflicting statements of the Bible. In Gen. ii. 7 and 18 *et seq.*, the separate creations of man and of woman are described, while in chap. i. 27, "God created man in his own image, in the image of God created he him; male and female created he them," their creation is described as coincident. In connection with the latter verse the Midrash states (Gen. R. viii.): "Jeremiah, son of Eleazar, says: God created Adam androgynous, but Samuel, son of Naḥman, says, He created him 'double-faced,' then cutting him in twain and forming two backs, one to the one and the other to the second" (see Bacher, "Ag. Pal. Amor." i. 547, iii. 585). The same statement is given in Moses ha-Darshan's Bereshit Rabbati ("Pugio Fidei," p. 446, Paris, 1651). The difference in the interpretation is that, according to Jeremiah's opinion, Adam had both sexes, and was thus a real hermaphrodite in the old mythical sense, identical with that conception of Hermes in which he is understood to be the "logos alethinos," the son of Maya, the bisexual primeval man of the East. The Greek Hermaphroditus—represented by statues and on old gems, in which representations, however, bisexuality is scarcely indicated—has remained strange to the East and totally unknown to the Jews. In all the parallel passages in the Talmud, the opinion of Samuel b. Naḥman alone prevails, for we find regularly Adam דיו פרצופין (*bifrons*, double-fronted), as, for example: 'Er. 18*a*, Ber. 61*a*, etc. (Jastrow, "Dict." *s. v.*, p. 304, 1).

The opinion expressed by Jeremiah is, however, very old and wide-spread, for we find the fathers of the Christian Church at pains to refute this "Jewish fable"; Augustine writes against it in his commentary on Genesis, *ad loc.* ch. 22. Strabos, agreeing with Augustine, declares this opinion to be one of the "damnatæ Judæorum fabulæ." Others revive the question, and Sixtus Senensis in his "Bibliotheca Sacra" devotes to it a special chapter (ed. Colon. 1586, fol. 344, 345). An alchemic interpretation has been given to "Adam androgynus," by Guil. Menens, "Aurei Velleris libri tres, Theatrum chemicum," vol. v., p. 275, Argent., 1660.

In the Halakah.

In the halakic writings only "Androgynos" is used, never "duoprosopin" (bifrons), and always in the physiological sense of "bisexual." In the Mishnah Bikkurim, the whole of section iv. is devoted to the minute description of the legal position and abnormities of the Androgynos. In some particulars he is to be treated as a man, in others as a woman, as he partakes of both natures; not so the "ṭum-ṭum," an individual whose sex can not be determined. This Androgynos is a common figure in classical tradition. Pliny mentions him ("Historia Naturalis," vii. 34), and Gellius ("Noctes Atticæ," ix. 4, 16). Special attention was paid to the Androgynos in the old writers on physiognomy. Compare "Scriptores Physiognomonici Græci et Latini," ed. Foerster, Leipsic, 1893, under "Androgynos," in Index Græcus (ii. 368). For the further legal treatment of the Androgynos in Hebrew law, see Isaac Lampronti in his "Paḥad Yiẓḥaḳ," *s.v.*, and Löw, "Lebensalter." M. Ga.

ANDRONICUS COMNENUS: Byzantine emperor; born in 1113; assassinated at Constantinople in 1185; reigned in 1183–85. He wrote a book against the Jews and their religion, with the object of converting them to Christianity.

Bibliography: Le Beau, *Histoire du Bas-Empire*, book iv. ch. 22–25; Hertzberg, *Gesch. des Byzantinischen und Osmanischen Reiches*, pp. 318–328.

H. R.

ANDRONICUS, SON OF MESHULLAM or **MESSALAM:** Lived in the second century B.C. According to Josephus ("Ant." xiii. 3, § 4), he was the representative of the Jews in their religious dispute with the Samaritans, which was held before King Ptolemy VI. Philometor, about the year 150 B.C. Andronicus proved from the Scriptures the historic continuity of the Jewish high priests; and from the great respect which was accorded the Temple of Jerusalem even by the heathen kings of Asia, he demonstrated how utterly unjustified was the claim of the Samaritans that Mount Gerizim was the sacred place of worship for the Jews. Andronicus is said to have argued his case so successfully that the king ordered the execution of Sabbeus and Theodosius, the two champions of the Samaritans, this being the penalty agreed upon beforehand for the losing party. This latter point in the story, however, is so incredible that it casts a doubt upon the validity of the whole account.

ANECDOTES: One of the many links that help to bind Jews together throughout the world is the number of Anecdotes dealing with Jewish life and appealing to Jewish sentiment, and known in one form or another throughout Jewry. For the most part they are transmitted by word of mouth, and thus they form part of Jewish folk-lore. Few have been written down, though several of the best known have been utilized by Jewish novelists like Franzos and Zangwill, and others are adaptations or traditional renderings of Talmudic or midrashic legends. Still others give a Jewish turn to the mass of medieval folk-lore that spread throughout Europe (see Bidpai and Sindibad). These longer stories are generally known as *Ma'asiyot*, and have been collected in the various "Ma'asebücher." The more modern form of Jewish anecdote rarely extends to any great length or pretends to deal with romantic or legendary events. It is usually short and witty, with "a sting in its tail."

Most Jewish Anecdotes are steeped in expressions that render the stories pointless to all but those acquainted with Jewish technical terms. Addressed to a special audience, these Anecdotes embody terms known only in that particular sphere. Their subject-matter is mainly the foibles of the Jewish character, in much the same way that the weaknesses of common friends form so frequently a topic of conversation.

Jewish Anecdotes, when they deal with the Jew in his social aspect, naturally treat him almost exclusively in his mercantile dealings, and often give proof of the self-criticism exercised by the Jew in regard to his faults and foibles. Some of these stories give rise to proverbial sayings, the origin of which is often unknown to those using them.

Many Jewish Anecdotes, however, refer to certain typical figures of the Ghetto, most of whom are described at greater length in these pages. There is the Schnorrer, the professional beggar, whose differentia it is that he considers he is doing you a favor in allowing you to lend to the Lord through his personality. Another frequent hero in Ghetto anecdotage is the Shadḥan, or professional marriage-broker, who for a commission will find a suitable *parti* for a marriageable daughter of a rich man, or a wife for the merchant who desires to increase his capital by marriage.

The above examples from the various subjects of Jewish Anecdotes will perhaps sufficiently indicate the typical scope and intimate character that render them comprehensible only to hearers fully acquainted with Jewish life and customs. Other forms, because turning upon an application of some Biblical or Talmudic phrase in the original, would require an elaborate commentary to convey their point to an unlearned hearer. It is remarkable how wide-spread these stories are. The same anecdote, with merely local variations, may be heard in Wilna, Berlin, London, and New York. Jews, when meeting for the first time, often find one of these stories the readiest means of starting a conversation. Even if it be well known, it will lead to other Anecdotes perhaps not so familiar; and a friendliness toward both the anecdote and its narrator is at once aroused. It is clear, from the works of Alḥarizi and Immanuel Romi, that similar Anecdotes were current among Jews in the Middle Ages; and the early Yiddish literature evinces that the custom was prevalent in the German "Judengassen." At family gatherings it became usual for a certain licensed jester, known as the *badḥan* or *marshallik*, to enliven the proceedings by narrating Anecdotes. See Schnorrer, Shadḥan, and Shames.

Bibliography: Zangwill's *Children of the Ghetto* and *King of Schnorrers* are full of Anecdotes current in the London Ghetto; Tendlau's *Sagen und Legenden der Jüdischen Vorzeit* contains some of the best-known Talmudic stories; while others given in *Sippurim*, and the medieval *Ma'asiyot* are contained in the Ma'asebuch. Collections of Anecdotes exist in M. Kukilstein, *Anekdoten-Buch, 200 Sheine Witzen* (Yiddish), Wilna, 1893; Benzion Schles, *Siḥat Ḥullin shel Talmide Ḥakamim*, 2d ed., Warsaw, 1880.

J.

ANER.—Biblical Data: One of the three Amorite lords of the hill-country of western Palestine confederate with Abram (Gen. xiv. 13). When a fugitive announced the plunder of Sodom and Gomorrah by the kings of the east, Abram with the confederate lords, Mamre, Eshcol, and Aner, pursued and overtook the victorious army, and brought back the booty and the captives, among whom were Lot and his family (Gen. xiv. 16). It is noteworthy that Mamre is an early name for Hebron (Gen. xxiii. 19), that Eshcol was at a later time the name of a valley near Hebron (Num. xiii. 23, 24; Deut. i. 24), and that the original reading for Aner (Septuagint 'Αυνάν) may have been, as Cheyne suggests, Enau, a name which may refer to one of the six springs near Hebron.

I. M. P.

——**In Rabbinical Literature:** The Midrash, when treating of Aner (Gen. xviii. 1), states that, although an ally of Abraham and therefore a worthy man, yet he advised the latter against undergoing circumcision, saying: "Wilt thou, an old man of a hundred years, expose thyself to such pain?" Therefore, the angels, when visiting Abraham, avoided the domain of Aner, and sought Abraham while he was dwelling in the territory of Mamre, because the latter, unlike his elder brother, Aner, had said to Abraham: "It would be wrong to disobey the God who hath saved thee from the furnace [into which Nimrod had thrown him (see ABRAHAM, in midrashic literature)], from the kings, and from famine" (Gen. R. xlii. 8).

L. G.

ANGEL, ABRAHAM (surnamed **TSHELEBI**): A Turkish Talmudist and author who flourished at the beginning of the nineteenth century. He published "Pittuḥe Ḥotam" (Engraving of a Seal), Salonica, 1839, dealing with all questions left undecided in the Talmud, and which are marked by the word תיקו (let it stand!), and with those passages in the Pentateuch which contain the conjunction "also" (גם).

ANGEL, MEIR BEN ABRAHAM, of Belgrade: A renowned preacher who lived in the sixteenth and seventeenth centuries, and died in Safed (Palestine) after having traveled through Poland, Italy, and Greece. He wrote "Masoret ha-Berit" (Tradition of the Covenant), 700 homilies on texts strung together according to certain Masoretic lists, published at Cracow, in 1619. His "Masoret ha-Berit ha-Gadol," containing 1,650 homilies of the same character, was published at Mantua, in 1622. He also wrote an ethical work, "Ḳeshet Neḥushah" (Bow of Bronze), in verse alternating with rimed prose. He pictures a sort of moral combat in which the tendency to do ill is personified. This was published, about the year 1593, at Belvedere, near Constantinople, by Reyna, the widow of Joseph Nasi. He speaks of a commentary on Abot, which, however, seems not to have been published.

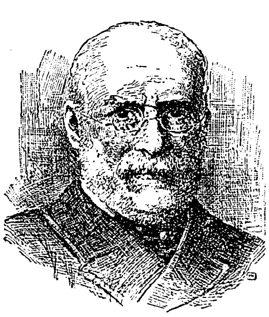
ANGEL, MOSES: Headmaster of the London Jews' Free School; born April 29, 1819, and died at London, in 1898. He received his early training at H. N. Solomon's boarding-school at Hammersmith and entered University College School at the age of fourteen; he completed his education at University College, London, with a brilliant academical record. After working some time as a bank-clerk, he turned his attention to teaching, and in 1840, on the retirement from the Jews' Free School of the headmaster (the Rev. H. A. Henry), Angel was appointed master of the Talmud Torah, the upper division of the school. There he aimed to secure a higher quality of education, and shortly afterward the management of the entire school was entrusted to him.

In this capacity his great administrative and pedagogic gifts soon wrought change in the entire morale of the institution, so that the Jews' Free School rapidly became one of the most comprehensive and best-managed elementary institutions in the United Kingdom. In 1853 it was placed under government inspection, and, at the yearly examinations which followed, the school never failed to elicit the warmest encomiums from the government inspector, while many tributes of appreciation were paid to Angel's great administrative and educational talents. Not content with promoting the welfare of the youthful scholars confided to his care, Angel, in 1853, undertook the training of the teachers in both departments of the school, organizing a system of university teaching for the school staff, whose reputation for skill and efficiency became so wide-spread that for more than a generation nearly every Jewish elementary teacher in the country owed his training, directly or indirectly, to Angel.

In 1883, when the school was enlarged and reconstructed, an assistant became necessary, and a vice-master was appointed, L. B. Abrahams. Until 1897 Angel occupied the post of headmaster, but resigned in that year for the less onerous position of principal, being succeeded in the headmastership by Abrahams.

Angel's remarkable personality left its imprint upon the progress of both the secular and religious educational development of the Anglo-Jewish community. At the time when, for want of proper methods and organization, the Jewish public educational system in England was of the crudest, Angel came forward as the needed administrator, and with untiring energy remedied this want of system in such degree, that his advice was subsequently sought even by the National Educational Department itself.



Moses Angel.
(From a photograph.)

He published: (1) A book entitled "The Law of Sinai and Its Appointed Times" (1858), being a commentary on the Pentateuch. (2) A series of articles entitled "The Pentateuch," written for the "Jewish Record." Angel was one of the first editors of the "Jewish Chronicle" in 1841, having been associated in that position with the Rev. David Meldola, *haham* of the Spanish and Portuguese congregation. Subsequently, he occasionally contributed articles and letters to the "Jewish Chronicle."

Bibliography: *Young Israel*, London, June, 1898; *Jew. Chron.* and *Jew. World*, September, 1898.

ANGEL, SHEMAIAH: Banker and philanthropist of Damascus; died in 1874. He was a great benefactor to his brethren in Syria and to the inhabitants of Damascus. After the suppression of the Druse outbreak in 1860 he distributed among the poor of all denominations in Damascus 3,000 Turkish pounds. At his own expense he provisioned for a time the Imperial troops in Damascus. In recognition of his services, the sultan Abd-ul-Aziz conferred upon him the Order of the Medjidie of the first class. His son, **Eleazar Angel,** who lives at Constantinople, follows the example set by his father.

ANGELO DI MANUELE. See Manuele.

ANGELOLOGY.—Biblical, Talmudical, and Post-Talmudical: Angelology is that branch of theology which treats of angels. Angels (from ἄγγελος = messenger, Greek equivalent of the Hebrew מלאך) are according to the usual conception superhuman beings dwelling in heaven, who, on occasion, reveal to man God's will and execute His commands. In one form or another, the belief in angels appears in the earliest stages of Jewish history, and continues to live in the spiritual world of the Jews and those professing the religions that sprang from Judaism; namely, Christianity and Mohammedanism. It can not be denied that the belief in such beings was also held by other peoples and other religions; but here the concern is only with Jewish Angelology, which can hardly be said to have ever been reduced to a complete system, such as is maintained by the Catholic Church (Oswald, "Angelologie, die Lehre von den Guten und Bösen Engeln im Sinne der Katholischen Kirche," Paderborn, 1883). To admit of a comprehensive survey of the historical development of Angelology, the subject may best be treated according to three periods: (1) the Biblical, (2) the Talmudical and Midrashic, and (3) the Medieval.

Denomination.

1. The Biblical Period: The Biblical name for angel, מלאך, meaning, according to derivation, simply "messenger," obtained the further signification of "angel" only through the addition of God's name, as מלאך יהוה, מלאך אלהים ("angel of the Lord," or "angel of God," Zech. xii. 8). Other appellations are בני אלהים, or בני אלים ("Sons of God." Gen. vi. 4; Job, i. 6 [R. V. v. 1]; Ps. xxix. 1 [R. V. margin]); and קדושים ("the Holy Ones" [perhaps equivalent to "fiery ones," "unapproachable"; see Holiness. K.], Ps. lxxxix. 6, 8 [R. V. 5, 7]).

Angels appear to man in the shape of human beings of extraordinary beauty, and are not at once recognized as angels (Gen. xviii. 2, xix. 5; Judges, vi. 17, xiii. 6; I Sam. xxix. 9); they fly through the air; they become invisible; sacrifices touched by them are consumed by fire; they disappear in sacrificial fire, like Elijah, who rode to heaven in a fiery chariot; and they appear in the flames of the thorn-bush (Gen. xvi. 13; Judges, vi. 21, 22; II Kings, ii. 11; Ex. iii. 2). They are pure and bright as heaven; consequently they are formed of fire and are encompassed by light (Job, xv. 15), as the Psalmist says (Ps. civ. 4, R. V.): "Who maketh winds his messengers; his ministers a flaming fire." Although they have intercourse with the daughters of men (Gen. vi.), and eat heavenly bread (Ps. lxxviii. 25), they are immaterial, not being subject to the limitations of time and space.

Appearance of Angels.

Though superhuman, they assume human form. This is the earliest conception. Gradually, and especially in post-Biblical times, they come to be bodied forth in a form corresponding to the nature of the mission to be fulfilled—generally, however, the human form. They bear drawn swords or destroying weapons in their hands—one carries an ink-horn by his side—and ride on horses (Num. xxii. 23, Josh. v. 13, Ezek. ix. 2, Zech. i. 8 *et seq.*). A terrible angel is the one mentioned in I Chron. xxi. 16, 30, as standing "between the earth and the heaven, having a drawn sword in his hand." In the Book of Daniel, probably written 165 B.C., reference is made to an angel "clothed in linen, whose loins were girded with fine gold of Uphaz: his body also was like the beryl, and his face as the appearance of lightning, and his eyes as lamps of fire, and his arms and his feet like in color to polished brass, and the voice of his words like the voice of a multitude" (Dan. x. 5, 6). It is an open question whether at that time angels were imagined to possess wings (Dan. ix. 21).

Angels are powerful and dreadful, endowed with wisdom and with knowledge of all earthly events, correct in their judgment, holy, but not infallible; for they strive with each other, and God has to make peace between them. When their duties are not punitive, angels are beneficent to man (Ps. ciii. 20, lxxviii. 25; II Sam. xiv. 17, 20, xix. 28; Zech. xiv. 5; Job, iv. 18, xxv. 2).

The number of angels is enormous. Jacob meets a host of angels; Joshua sees the "captain of the host of the Lord"; God sits on His throne, "all the host of heaven standing by him on his right hand and on his left"; the sons of God come "to present themselves before the Lord" (Gen. xxxii. 2; Josh. v. 14, 15; I Kings, xxii. 19; Job, i. 6, ii. 1; Ps. lxxxix. 6; Job, xxxiii. 23). The general conception is the one of Job (xxv. 3): "Is there any number of his armies?"

Though the older writings usually mention one angel of the Lord, embassies to men as a rule comprised several messengers. The inference, however, is not to be drawn that by מלאך יהוה God Himself or one particular angel was designated: the expression was given simply to God's power to accomplish through but one angel any deed, however wonderful.

Angels are referred to in connection with their special missions; as, for instance, the "angel which hath redeemed," "an interpreter," "the angel that destroyed," "messenger of the covenant," "angel of his presence," and "a band of angels of evil" (Gen. xlviii. 16; Job, xxxiii. 23; II Sam. xxiv. 16; Mal. iii. 1; Isa. lxiii. 9; Ps. lxxviii. 49, R. V.). When, however, the heavenly host is regarded in its most comprehensive aspect, a distinction may be made between *cherubim, seraphim, ḥayyot* ("living creatures"), *ofanim* ("wheels"), and *arelim* (the meaning of which term is unknown). God is described as riding on the cherubim and as "the Lord of hosts, who dwelleth between the cherubim"; while the latter guard the way of the tree of life (I Sam. iv. 4, Ps. lxxx. 2, Gen. iii. 24). The seraphim are described by Isaiah (vi. 2) as having six wings; and Ezekiel describes the ḥayyot (Ezek. i. 5 *et seq.*) and ofanim as heavenly beings who carry God's throne.

In post-Biblical times the heavenly hosts became more highly organized (possibly as early as Zechariah [iii. 9, iv. 10]; certainly in Daniel), and there came to be various kinds of angels, some even being provided with names, as will be shown below.
